- 3.1 Applied-for gTLD strings in ASCII must be composed of three or more visually distinct characters. Two-character ASCII strings are not permitted, to avoid conflicting with current and future country codes based on the ISO 3166-1 standard.
- 3.2 Applied-for gTLD strings in IDN scripts must be composed of two or more visually distinct characters in the script, as appropriate.<sup>5</sup> Note, however, that a two-character IDN string will not be approved if:
  - 3.2.1 It is visually similar to any one-character label (in any script); or
  - 3.2.2 It is visually similar to any possible two-character ASCII combination.

See the String Similarity review in subsection 2.2.1.1 for additional information on this requirement.

---

<sup>5</sup> Note that the Joint ccNSO-GNSO IDN Working Group (JIG) has made recommendations that this section be revised to allow for single-character IDN gTLD labels. See the JIG Final Report at <http://gns0.icann.org/drafts/jig-final-report-30mar11-en.pdf>. Implementation models for these recommendations are being developed for community discussion.

#### 2.2.1.4 Geographic Names Review

Applications for gTLD strings must ensure that appropriate consideration is given to the interests of governments or public authorities in geographic names. The requirements and procedure ICANN will follow in the evaluation process are described in the following paragraphs. Applicants should review these requirements even if they do not believe their intended gTLD string is a geographic name. All applied-for gTLD strings will be reviewed according to the requirements in this section, regardless of whether the application indicates it is for a geographic name.

##### 2.2.1.4.1 Treatment of Country or Territory Names<sup>6</sup>

Applications for strings that are country or territory names will not be approved, as they are not available under the New gTLD Program in this application round. A string shall be considered to be a country or territory name if:

- i. it is an alpha-3 code listed in the ISO 3166-1 standard.
- ii. it is a long-form name listed in the ISO 3166-1 standard, or a translation of the long-form name in any language.
- iii. it is a short-form name listed in the ISO 3166-1 standard, or a translation of the short-form name in any language.
- iv. it is the short- or long-form name association with a code that has been designated as “exceptionally reserved” by the ISO 3166 Maintenance Agency.
- v. it is a separable component of a country name designated on the “Separable Country Names List,” or is a translation of a name appearing on the list, in any language. See the Annex at the end of this module.
- vi. it is a permutation or transposition of any of the names included in items (i) through (v). Permutations include removal of spaces, insertion of punctuation, and addition or

---

<sup>6</sup> Country and territory names are excluded from the process based on advice from the Governmental Advisory Committee in recent communiqués providing interpretation of Principle 2.2 of the GAC Principles regarding New gTLDs to indicate that strings which are a meaningful representation or abbreviation of a country or territory name should be handled through the forthcoming ccPDP, and other geographic strings could be allowed in the gTLD space if in agreement with the relevant government or public authority.

removal of grammatical articles like “the.” A transposition is considered a change in the sequence of the long or short-form name, for example, “RepublicCzech” or “IslandsCayman.”

- vii. it is a name by which a country is commonly known, as demonstrated by evidence that the country is recognized by that name by an intergovernmental or treaty organization.

#### 2.2.1.4.2 *Geographic Names Requiring Government Support*

The following types of applied-for strings are considered geographic names and must be accompanied by documentation of support or non-objection from the relevant governments or public authorities:

1. An application for any string that is a representation, in any language, of the capital city name of any country or territory listed in the ISO 3166-1 standard.
2. An application for a city name, where the applicant declares that it intends to use the gTLD for purposes associated with the city name.

City names present challenges because city names may also be generic terms or brand names, and in many cases city names are not unique. Unlike other types of geographic names, there are no established lists that can be used as objective references in the evaluation process. Thus, city names are not universally protected. However, the process does provide a means for cities and applicants to work together where desired.

An application for a city name will be subject to the geographic names requirements (i.e., will require documentation of support or non-objection from the relevant governments or public authorities) if:

- (a) It is clear from applicant statements within the application that the applicant will use the TLD primarily for purposes associated with the city name; and

- (b) The applied-for string is a city name as listed on official city documents.<sup>7</sup>
3. An application for any string that is an exact match of a *sub-national place name*, such as a county, province, or state, listed in the ISO 3166-2 standard.
  4. An application for a string listed as a UNESCO region<sup>8</sup> or appearing on the “Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings” list.<sup>9</sup>

In the case of an application for a string appearing on either of the lists above, documentation of support will be required from at least 60% of the respective national governments in the region, and there may be no more than one written statement of objection to the application from relevant governments in the region and/or public authorities associated with the continent or the region.

Where the 60% rule is applied, and there are common regions on both lists, the regional composition contained in the “Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings” takes precedence.

An applied-for gTLD string that falls into any of 1 through 4 listed above is considered to represent a geographic name. In the event of any doubt, it is in the applicant’s interest to consult with relevant governments and public authorities and enlist their support or non-objection prior to submission of the application, in order to preclude possible objections and pre-address any ambiguities concerning the string and applicable requirements.

Strings that include but do not match a geographic name (as defined in this section) will not be considered geographic names as defined by section 2.2.1.4.2, and therefore will not require documentation of government support in the evaluation process.

---

<sup>7</sup> City governments with concerns about strings that are duplicates, nicknames or close renderings of a city name should not rely on the evaluation process as the primary means of protecting their interests in a string. Rather, a government may elect to file a formal objection to an application that is opposed by the relevant community, or may submit its own application for the string.

<sup>8</sup> See <http://www.unesco.org/new/en/unesco/worldwide/>.

<sup>9</sup> See <http://unstats.un.org/unsd/methods/m49/m49regin.htm>.

For each application, the Geographic Names Panel will determine which governments are relevant based on the inputs of the applicant, governments, and its own research and analysis. In the event that there is more than one relevant government or public authority for the applied-for gTLD string, the applicant must provide documentation of support or non-objection from all the relevant governments or public authorities. It is anticipated that this may apply to the case of a sub-national place name.

It is the applicant's responsibility to:

- identify whether its applied-for gTLD string falls into any of the above categories; and
- identify and consult with the relevant governments or public authorities; and
- identify which level of government support is required.

Note: the level of government and which administrative agency is responsible for the filing of letters of support or non-objection is a matter for each national administration to determine. Applicants should consult within the relevant jurisdiction to determine the appropriate level of support.

The requirement to include documentation of support for certain applications does not preclude or exempt applications from being the subject of objections on community grounds (refer to subsection 3.1.1 of Module 3), under which applications may be rejected based on objections showing substantial opposition from the targeted community.

#### ***2.2.1.4.3 Documentation Requirements***

The documentation of support or non-objection should include a signed letter from the relevant government or public authority. Understanding that this will differ across the respective jurisdictions, the letter could be signed by the minister with the portfolio responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister or President of the relevant jurisdiction; or a senior representative of the agency or department responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister. To assist the applicant in determining who the relevant government or public authority may be for a potential geographic name, the applicant may wish to consult with the relevant

Governmental Advisory Committee (GAC) representative.<sup>10</sup>

The letter must clearly express the government's or public authority's support for or non-objection to the applicant's application and demonstrate the government's or public authority's understanding of the string being requested and its intended use.

The letter should also demonstrate the government's or public authority's understanding that the string is being sought through the gTLD application process and that the applicant is willing to accept the conditions under which the string will be available, i.e., entry into a registry agreement with ICANN requiring compliance with consensus policies and payment of fees. (See Module 5 for a discussion of the obligations of a gTLD registry operator.)

A sample letter of support is available as an attachment to this module.

Applicants and governments may conduct discussions concerning government support for an application at any time. Applicants are encouraged to begin such discussions at the earliest possible stage, and enable governments to follow the processes that may be necessary to consider, approve, and generate a letter of support or non-objection.

It is important to note that a government or public authority is under no obligation to provide documentation of support or non-objection in response to a request by an applicant.

It is also possible that a government may withdraw its support for an application at a later time, including after the new gTLD has been delegated, if the registry operator has deviated from the conditions of original support or non-objection. Applicants should be aware that ICANN has committed to governments that, in the event of a dispute between a government (or public authority) and a registry operator that submitted documentation of support from that government or public authority, **ICANN will comply with a legally binding order** from a court in the jurisdiction of the government or public authority that has given support to an application.

#### *2.2.1.4.4 Review Procedure for Geographic Names*

A Geographic Names Panel (GNP) will determine whether each applied-for gTLD string represents a geographic

---

<sup>10</sup> See <https://gacweb.icann.org/display/gacweb/GAC+Members>

name, and verify the relevance and authenticity of the supporting documentation where necessary.

The GNP will review all applications received, not only those where the applicant has noted its applied-for gTLD string as a geographic name. For any application where the GNP determines that the applied-for gTLD string is a country or territory name (as defined in this module), the application will not pass the Geographic Names review and will be denied. No additional reviews will be available.

For any application where the GNP determines that the applied-for gTLD string is not a geographic name requiring government support (as described in this module), the application will pass the Geographic Names review with no additional steps required.

For any application where the GNP determines that the applied-for gTLD string is a geographic name requiring government support, the GNP will confirm that the applicant has provided the required documentation from the relevant governments or public authorities, and that the communication from the government or public authority is legitimate and contains the required content. ICANN may confirm the authenticity of the communication by consulting with the relevant diplomatic authorities or members of ICANN's Governmental Advisory Committee for the government or public authority concerned on the competent authority and appropriate point of contact within their administration for communications.

The GNP may communicate with the signing entity of the letter to confirm their intent and their understanding of the terms on which the support for an application is given.

In cases where an applicant has not provided the required documentation, the applicant will be contacted and notified of the requirement, and given a limited time frame to provide the documentation. If the applicant is able to provide the documentation before the close of the Initial Evaluation period, and the documentation is found to meet the requirements, the applicant will pass the Geographic Names review. If not, the applicant will have additional time to obtain the required documentation; however, if the applicant has not produced the required documentation by the required date (at least 90 calendar days from the date of notice), the application will be considered incomplete and will be ineligible for further review. The applicant may reapply in subsequent application rounds, if desired, subject to the fees and requirements of the specific application rounds.

If there is more than one application for a string representing a certain geographic name as described in this section, and the applications have requisite government approvals, the applications will be suspended pending resolution by the applicants. If the applicants have not reached a resolution by either the date of the end of the application round (as announced by ICANN), or the date on which ICANN opens a subsequent application round, whichever comes first, the applications will be rejected and applicable refunds will be available to applicants according to the conditions described in section 1.5.

However, in the event that a contention set is composed of multiple applications with documentation of support from the same government or public authority, the applications will proceed through the contention resolution procedures described in Module 4 when requested by the government or public authority providing the documentation.

If an application for a string representing a geographic name is in a contention set with applications for similar strings that have not been identified as geographical names, the string contention will be resolved using the string contention procedures described in Module 4.

## *2.2.2 Applicant Reviews*

---

Concurrent with the applied-for gTLD string reviews described in subsection 2.2.1, ICANN will review the applicant's technical and operational capability, its financial capability, and its proposed registry services. Those reviews are described in greater detail in the following subsections.

### *2.2.2.1 Technical/Operational Review*

In its application, the applicant will respond to a set of questions (see questions 24 – 44 in the Application Form) intended to gather information about the applicant's technical capabilities and its plans for operation of the proposed gTLD.

Applicants are not required to have deployed an actual gTLD registry to pass the Technical/Operational review. It will be necessary, however, for an applicant to demonstrate a clear understanding and accomplishment of some groundwork toward the key technical and operational aspects of a gTLD registry operation. Subsequently, each applicant that passes the technical evaluation and all other steps will be required to complete

a pre-delegation technical test prior to delegation of the new gTLD. Refer to Module 5, Transition to Delegation, for additional information.

### *2.2.2.2 Financial Review*

In its application, the applicant will respond to a set of questions (see questions 45-50 in the Application Form) intended to gather information about the applicant's financial capabilities for operation of a gTLD registry and its financial planning in preparation for long-term stability of the new gTLD.

Because different registry types and purposes may justify different responses to individual questions, evaluators will pay particular attention to the consistency of an application across all criteria. For example, an applicant's scaling plans identifying system hardware to ensure its capacity to operate at a particular volume level should be consistent with its financial plans to secure the necessary equipment. That is, the evaluation criteria scale with the applicant plans to provide flexibility.

### *2.2.2.3 Evaluation Methodology*

Dedicated technical and financial evaluation panels will conduct the technical/operational and financial reviews, according to the established criteria and scoring mechanism included as an attachment to this module. These reviews are conducted on the basis of the information each applicant makes available to ICANN in its response to the questions in the Application Form.

The evaluators may request clarification or additional information during the Initial Evaluation period. For each application, clarifying questions will be consolidated and sent to the applicant from each of the panels. The applicant will thus have an opportunity to clarify or supplement the application in those areas where a request is made by the evaluators. These communications will occur via TAS. Unless otherwise noted, such communications will include a 2-week deadline for the applicant to respond. Any supplemental information provided by the applicant will become part of the application.

It is the applicant's responsibility to ensure that the questions have been fully answered and the required documentation is attached. Evaluators are entitled, but not obliged, to request further information or evidence from an applicant, and are not obliged to take into account any information or evidence that is not made

available in the application and submitted by the due date, unless explicitly requested by the evaluators.

### **2.2.3 Registry Services Review**

---

Concurrent with the other reviews that occur during the Initial Evaluation period, ICANN will review the applicant's proposed registry services for any possible adverse impact on security or stability. The applicant will be required to provide a list of proposed registry services in its application.

#### **2.2.3.1 Definitions**

**Registry services** are defined as:

1. operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry zone servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by the registry agreement;
2. other products or services that the registry operator is required to provide because of the establishment of a consensus policy; and
3. any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator.

Proposed registry services will be examined to determine if they might raise significant stability or security issues. Examples of services proposed by existing registries can be found at <http://www.icann.org/en/registries/rsep/>. In most cases, these proposed services successfully pass this inquiry.

Registry services currently provided by gTLD registries can be found in registry agreement appendices. See <http://www.icann.org/en/registries/agreements.htm>.

A full definition of registry services can be found at <http://www.icann.org/en/registries/rsep/rsep.html>.

For purposes of this review, security and stability are defined as follows:

**Security** – an effect on security by the proposed registry service means (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or

resources on the Internet by systems operating in accordance with all applicable standards.

**Stability** – an effect on stability means that the proposed registry service (1) does not comply with applicable relevant standards that are authoritative and published by a well-established, recognized, and authoritative standards body, such as relevant standards-track or best current practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant standards-track or best current practice RFCs and relying on registry operator’s delegation information or provisioning services.

### 2.2.3.2 Customary Services

The following registry services are customary services offered by a registry operator:

- Receipt of data from registrars concerning registration of domain names and name servers
- Dissemination of TLD zone files
- Dissemination of contact or other information concerning domain name registrations (e.g., port-43 WHOIS, Web-based Whois, RESTful Whois)
- DNS Security Extensions

The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.

Any additional registry services that are unique to the proposed gTLD registry should be described in detail. Directions for describing the registry services are provided at [http://www.icann.org/en/registries/rsep/rrs\\_sample.html](http://www.icann.org/en/registries/rsep/rrs_sample.html).

### 2.2.3.3 TLD Zone Contents

ICANN receives a number of inquiries about use of various record types in a registry zone, as entities contemplate different business and technical models. Permissible zone contents for a TLD zone are:

- Apex SOA record.
- Apex NS records and in-bailiwick glue for the TLD’s DNS servers.

- NS records and in-balliwick glue for DNS servers of registered names in the TLD.
- DS records for registered names in the TLD.
- Records associated with signing the TLD zone (i.e., RRSIG, DNSKEY, NSEC, and NSEC3).

An applicant wishing to place any other record types into its TLD zone should describe in detail its proposal in the registry services section of the application. This will be evaluated and could result in an extended evaluation to determine whether the service would create a risk of a meaningful adverse impact on security or stability of the DNS. Applicants should be aware that a service based on use of less-common DNS resource records in the TLD zone, even if approved in the registry services review, might not work as intended for all users due to lack of application support.

#### *2.2.3.4 Methodology*

Review of the applicant's proposed registry services will include a preliminary determination of whether any of the proposed registry services could raise significant security or stability issues and require additional consideration.

If the preliminary determination reveals that there may be significant security or stability issues (as defined in subsection 2.2.3.1) surrounding a proposed service, the application will be flagged for an extended review by the Registry Services Technical Evaluation Panel (RSTEP), see <http://www.icann.org/en/registries/rsep/rstep.html>. This review, if applicable, will occur during the Extended Evaluation period (refer to Section 2.3).

In the event that an application is flagged for extended review of one or more registry services, an additional fee to cover the cost of the extended review will be due from the applicant. Applicants will be advised of any additional fees due, which must be received before the additional review begins.

#### *2.2.4 Applicant's Withdrawal of an Application*

---

An applicant who does not pass the Initial Evaluation may withdraw its application at this stage and request a partial refund (refer to subsection 1.5 of Module 1).

## 2.3 *Extended Evaluation*

---

An applicant may request an Extended Evaluation if the application has failed to pass the Initial Evaluation elements concerning:

- Geographic names (refer to subsection 2.2.1.4). There is no additional fee for an extended evaluation in this instance.
- Demonstration of technical and operational capability (refer to subsection 2.2.2.1). There is no additional fee for an extended evaluation in this instance.
- Demonstration of financial capability (refer to subsection 2.2.2.2). There is no additional fee for an extended evaluation in this instance.
- Registry services (refer to subsection 2.2.3). Note that this investigation incurs an additional fee (the Registry Services Review Fee) if the applicant wishes to proceed. See Section 1.5 of Module 1 for fee and payment information.

An Extended Evaluation does not imply any change of the evaluation criteria. The same criteria used in the Initial Evaluation will be used to review the application in light of clarifications provided by the applicant.

From the time an applicant receives notice of failure to pass the Initial Evaluation, eligible applicants will have 15 calendar days to submit to ICANN the Notice of Request for Extended Evaluation. If the applicant does not explicitly request the Extended Evaluation (and pay an additional fee in the case of a Registry Services inquiry) the application will not proceed.

### 2.3.1 *Geographic Names Extended Evaluation*

---

In the case of an application that has been identified as a geographic name requiring government support, but where the applicant has not provided sufficient evidence of support or non-objection from all relevant governments or public authorities by the end of the Initial Evaluation period, the applicant has additional time in the Extended Evaluation period to obtain and submit this documentation.

If the applicant submits the documentation to the Geographic Names Panel by the required date, the GNP will perform its review of the documentation as detailed in

section 2.2.1.4. If the applicant has not provided the documentation by the required date (at least 90 calendar days from the date of the notice), the application will not pass the Extended Evaluation, and no further reviews are available.

### ***2.3.2 Technical/Operational or Financial Extended Evaluation***

---

The following applies to an Extended Evaluation of an applicant's technical and operational capability or financial capability, as described in subsection 2.2.2.

An applicant who has requested Extended Evaluation will again access the online application system (TAS) and clarify its answers to those questions or sections on which it received a non-passing score (or, in the case of an application where individual questions were passed but the total score was insufficient to pass Initial Evaluation, those questions or sections on which additional points are possible). The answers should be responsive to the evaluator report that indicates the reasons for failure, or provide any amplification that is not a material change to the application. Applicants may not use the Extended Evaluation period to substitute portions of new information for the information submitted in their original applications, i.e., to materially change the application.

An applicant participating in an Extended Evaluation on the Technical / Operational or Financial reviews will have the option to have its application reviewed by the same evaluation panelists who performed the review during the Initial Evaluation period, or to have a different set of panelists perform the review during Extended Evaluation.

The Extended Evaluation allows an additional exchange of information between the evaluators and the applicant to further clarify information contained in the application. This supplemental information will become part of the application record. Such communications will include a deadline for the applicant to respond.

ICANN will notify applicants at the end of the Extended Evaluation period as to whether they have passed. If an application passes Extended Evaluation, it continues to the next stage in the process. If an application does not pass Extended Evaluation, it will proceed no further. No further reviews are available.

### ***2.3.3 Registry Services Extended Evaluation***

---

This section applies to Extended Evaluation of registry services, as described in subsection 2.2.3.

If a proposed registry service has been referred to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review, the RSTEP will form a review team of members with the appropriate qualifications.

The review team will generally consist of three members, depending on the complexity of the registry service proposed. In a 3-member panel, the review could be conducted within 30 to 45 calendar days. In cases where a 5-member panel is needed, this will be identified before the extended evaluation starts. In a 5-member panel, the review could be conducted in 45 calendar days or fewer.

The cost of an RSTEP review will be covered by the applicant through payment of the Registry Services Review Fee. Refer to payment procedures in section 1.5 of Module 1. The RSTEP review will not commence until payment has been received.

If the RSTEP finds that one or more of the applicant's proposed registry services may be introduced without risk of a meaningful adverse effect on security or stability, these services will be included in the applicant's registry agreement with ICANN. If the RSTEP finds that the proposed service would create a risk of a meaningful adverse effect on security or stability, the applicant may elect to proceed with its application without the proposed service, or withdraw its application for the gTLD. In this instance, an applicant has 15 calendar days to notify ICANN of its intent to proceed with the application. If an applicant does not explicitly provide such notice within this time frame, the application will proceed no further.

## ***2.4 Parties Involved in Evaluation***

---

A number of independent experts and groups play a part in performing the various reviews in the evaluation process. A brief description of the various panels, their evaluation roles, and the circumstances under which they work is included in this section.

### 2.4.1 Panels and Roles

---

The **String Similarity Panel** will assess whether a proposed gTLD string creates a probability of user confusion due to similarity with any reserved name, any existing TLD, any requested IDN ccTLD, or any new gTLD string applied for in the current application round. This occurs during the String Similarity review in Initial Evaluation. The panel may also review IDN tables submitted by applicants as part of its work.

The **DNS Stability Panel** will determine whether a proposed string might adversely affect the security or stability of the DNS. This occurs during the DNS Stability String review in Initial Evaluation.

The **Geographic Names Panel** will review each application to determine whether the applied-for gTLD represents a geographic name, as defined in this guidebook. In the event that the string is a geographic name requiring government support, the panel will ensure that the required documentation is provided with the application and verify that the documentation is from the relevant governments or public authorities and is authentic.

The **Technical Evaluation Panel** will review the technical components of each application against the criteria in the Applicant Guidebook, along with proposed registry operations, in order to determine whether the applicant is technically and operationally capable of operating a gTLD registry as proposed in the application. This occurs during the Technical/Operational reviews in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Financial Evaluation Panel** will review each application against the relevant business, financial and organizational criteria contained in the Applicant Guidebook, to determine whether the applicant is financially capable of maintaining a gTLD registry as proposed in the application. This occurs during the Financial review in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Registry Services Technical Evaluation Panel (RSTEP)** will review proposed registry services in the application to determine if they pose a risk of a meaningful adverse impact on security or stability. This occurs, if applicable, during the Extended Evaluation period.

Members of all panels are required to abide by the established Code of Conduct and Conflict of Interest guidelines included in this module.

#### *2.4.2 Panel Selection Process*

---

ICANN has selected qualified third-party providers to perform the various reviews, based on an extensive selection process.<sup>11</sup> In addition to the specific subject matter expertise required for each panel, specified qualifications are required, including:

- The provider must be able to convene – or have the capacity to convene - globally diverse panels and be able to evaluate applications from all regions of the world, including applications for IDN gTLDs.
- The provider should be familiar with the IETF IDNA standards, Unicode standards, relevant RFCs and the terminology associated with IDNs.
- The provider must be able to scale quickly to meet the demands of the evaluation of an unknown number of applications. At present it is not known how many applications will be received, how complex they will be, and whether they will be predominantly for ASCII or non-ASCII gTLDs.
- The provider must be able to evaluate the applications within the required timeframes of Initial and Extended Evaluation.

#### *2.4.3 Code of Conduct Guidelines for Panelists*

---

The purpose of the New gTLD Program (“Program”) Code of Conduct (“Code”) is to prevent real and apparent conflicts of interest and unethical behavior by any Evaluation Panelist (“Panelist”).

Panelists shall conduct themselves as thoughtful, competent, well prepared, and impartial professionals throughout the application process. Panelists are expected to comply with equity and high ethical standards while assuring the Internet community, its constituents, and the public of objectivity, integrity, confidentiality, and credibility. Unethical actions, or even the appearance of compromise, are not acceptable. Panelists are expected

---

<sup>11</sup> <http://newgtlds.icann.org/about/evaluation-panels-selection-process>

to be guided by the following principles in carrying out their respective responsibilities. This Code is intended to summarize the principles and nothing in this Code should be considered as limiting duties, obligations or legal requirements with which Panelists must comply.

**Bias** -- Panelists shall:

- not advance personal agendas or non-ICANN approved agendas in the evaluation of applications;
- examine facts as they exist and not be influenced by past reputation, media accounts, or unverified statements about the applications being evaluated;
- exclude themselves from participating in the evaluation of an application if, to their knowledge, there is some predisposing factor that could prejudice them with respect to such evaluation; and
- exclude themselves from evaluation activities if they are philosophically opposed to or are on record as having made generic criticism about a specific type of applicant or application.

**Compensation/Gifts** -- Panelists shall not request or accept any compensation whatsoever or any gifts of substance from the Applicant being reviewed or anyone affiliated with the Applicant. (Gifts of substance would include any gift greater than USD 25 in value).

If the giving of small tokens is important to the Applicant's culture, Panelists may accept these tokens; however, the total of such tokens must not exceed USD 25 in value. If in doubt, the Panelist should err on the side of caution by declining gifts of any kind.

**Conflicts of Interest** -- Panelists shall act in accordance with the "New gTLD Program Conflicts of Interest Guidelines" (see subsection 2.4.3.1).

**Confidentiality** -- Confidentiality is an integral part of the evaluation process. Panelists must have access to sensitive information in order to conduct evaluations. Panelists must maintain confidentiality of information entrusted to them by ICANN and the Applicant and any other confidential information provided to them from whatever source,

except when disclosure is legally mandated or has been authorized by ICANN. "Confidential information" includes all elements of the Program and information gathered as part of the process – which includes but is not limited to: documents, interviews, discussions, interpretations, and analyses – related to the review of any new gTLD application.

**Affirmation** -- All Panelists shall read this Code prior to commencing evaluation services and shall certify in writing that they have done so and understand the Code.

#### **2.4.3.1 Conflict of Interest Guidelines for Panelists**

It is recognized that third-party providers may have a large number of employees in several countries serving numerous clients. In fact, it is possible that a number of Panelists may be very well known within the registry / registrar community and have provided professional services to a number of potential applicants.

To safeguard against the potential for inappropriate influence and ensure applications are evaluated in an objective and independent manner, ICANN has established detailed Conflict of Interest guidelines and procedures that will be followed by the Evaluation Panelists. To help ensure that the guidelines are appropriately followed ICANN will:

- Require each Evaluation Panelist (provider and individual) to acknowledge and document understanding of the Conflict of Interest guidelines.
- Require each Evaluation Panelist to disclose all business relationships engaged in at any time during the past six months.
- Where possible, identify and secure primary and backup providers for evaluation panels.
- In conjunction with the Evaluation Panelists, develop and implement a process to identify conflicts and re-assign applications as appropriate to secondary or contingent third party providers to perform the reviews.

**Compliance Period** -- All Evaluation Panelists must comply with the Conflict of Interest guidelines beginning with the opening date of the Application Submission period and ending with the public announcement by ICANN of the

final outcomes of all the applications from the Applicant in question.

**Guidelines** -- The following guidelines are the minimum standards with which all Evaluation Panelists must comply. It is recognized that it is impossible to foresee and cover all circumstances in which a potential conflict of interest might arise. In these cases the Evaluation Panelist should evaluate whether the existing facts and circumstances would lead a reasonable person to conclude that there is an actual conflict of interest.

Evaluation Panelists and Immediate Family Members:

- Must not be under contract, have or be included in a current proposal to provide Professional Services for or on behalf of the Applicant during the Compliance Period.
- Must not currently hold or be committed to acquire any interest in a privately-held Applicant.
- Must not currently hold or be committed to acquire more than 1% of any publicly listed Applicant's outstanding equity securities or other ownership interests.
- Must not be involved or have an interest in a joint venture, partnership or other business arrangement with the Applicant.
- Must not have been named in a lawsuit with or against the Applicant.
- Must not be a:
  - Director, officer, or employee, or in any capacity equivalent to that of a member of management of the Applicant;
  - Promoter, underwriter, or voting trustee of the Applicant; or
  - Trustee for any pension or profit-sharing trust of the Applicant.

**Definitions--**

Evaluation Panelist: An Evaluation Panelist is any individual associated with the review of an application. This includes

any primary, secondary, and contingent third party Panelists engaged by ICANN to review new gTLD applications.

Immediate Family Member: Immediate Family Member is a spouse, spousal equivalent, or dependent (whether or not related) of an Evaluation Panelist.

Professional Services: include, but are not limited to legal services, financial audit, financial planning / investment, outsourced services, consulting services such as business / management / internal audit, tax, information technology, registry / registrar services.

#### ***2.4.3.2 Code of Conduct Violations***

Evaluation panelist breaches of the Code of Conduct, whether intentional or not, shall be reviewed by ICANN, which may make recommendations for corrective action, if deemed necessary. Serious breaches of the Code may be cause for dismissal of the person, persons or provider committing the infraction.

In a case where ICANN determines that a Panelist has failed to comply with the Code of Conduct, the results of that Panelist's review for all assigned applications will be discarded and the affected applications will undergo a review by new panelists.

Complaints about violations of the Code of Conduct by a Panelist may be brought to the attention of ICANN via the public comment and applicant support mechanisms, throughout the evaluation period. Concerns of applicants regarding panels should be communicated via the defined support channels (see subsection 1.4.2). Concerns of the general public (i.e., non-applicants) can be raised via the public comment forum, as described in Module 1.

#### ***2.4.4 Communication Channels***

---

Defined channels for technical support or exchanges of information with ICANN and with evaluation panels are available to applicants during the Initial Evaluation and Extended Evaluation periods. Contacting individual ICANN staff members, Board members, or individuals engaged by ICANN to perform an evaluation role in order to lobby for a particular outcome or to obtain confidential information about applications under review is not appropriate. In the interests of fairness and equivalent treatment for all applicants, any such individual contacts will be referred to the appropriate communication channels.

# DRAFT - New gTLD Program – Initial Evaluation and Extended Evaluation

Application is confirmed as complete and ready for evaluation during Administrative Completeness Check

**Background Screening**  
Third-party provider reviews applicant's background.

**Initial Evaluation – String Review**

**Initial Evaluation – Applicant Review**

**String Similarity**  
String Similarity Panel reviews applied-for strings to ensure they are not too similar to existing TLDs or Reserved Names.

**DNS Stability**  
All strings reviewed and in extraordinary cases, DNS Stability Panel may perform extended review for possible technical stability issues.

**Geographic Names**  
Geographic Names Panel determines if applied-for string is geographic name requiring government support.

**Technical and Operational Capability**  
Technical and Operational panel reviews applicant's answers to questions and supporting documentation.

**Financial Capability**  
Financial panel reviews applicant's answers to questions and supporting documentation.

**Registry Services**  
Preliminary review of applicant's registry services and referral to RSTEP for further review during Extended Evaluation where necessary

Panel compares all applied-for strings and creates contention sets.

Panel confirms supporting documentation where required.

ICANN will seek to publish contention sets prior to publication of full IE results.

Does applicant pass all elements of Initial Evaluation?

Applicant elects to pursue **Extended Evaluation?**

Extended Evaluation process

Does applicant pass all elements of Extended Evaluation?

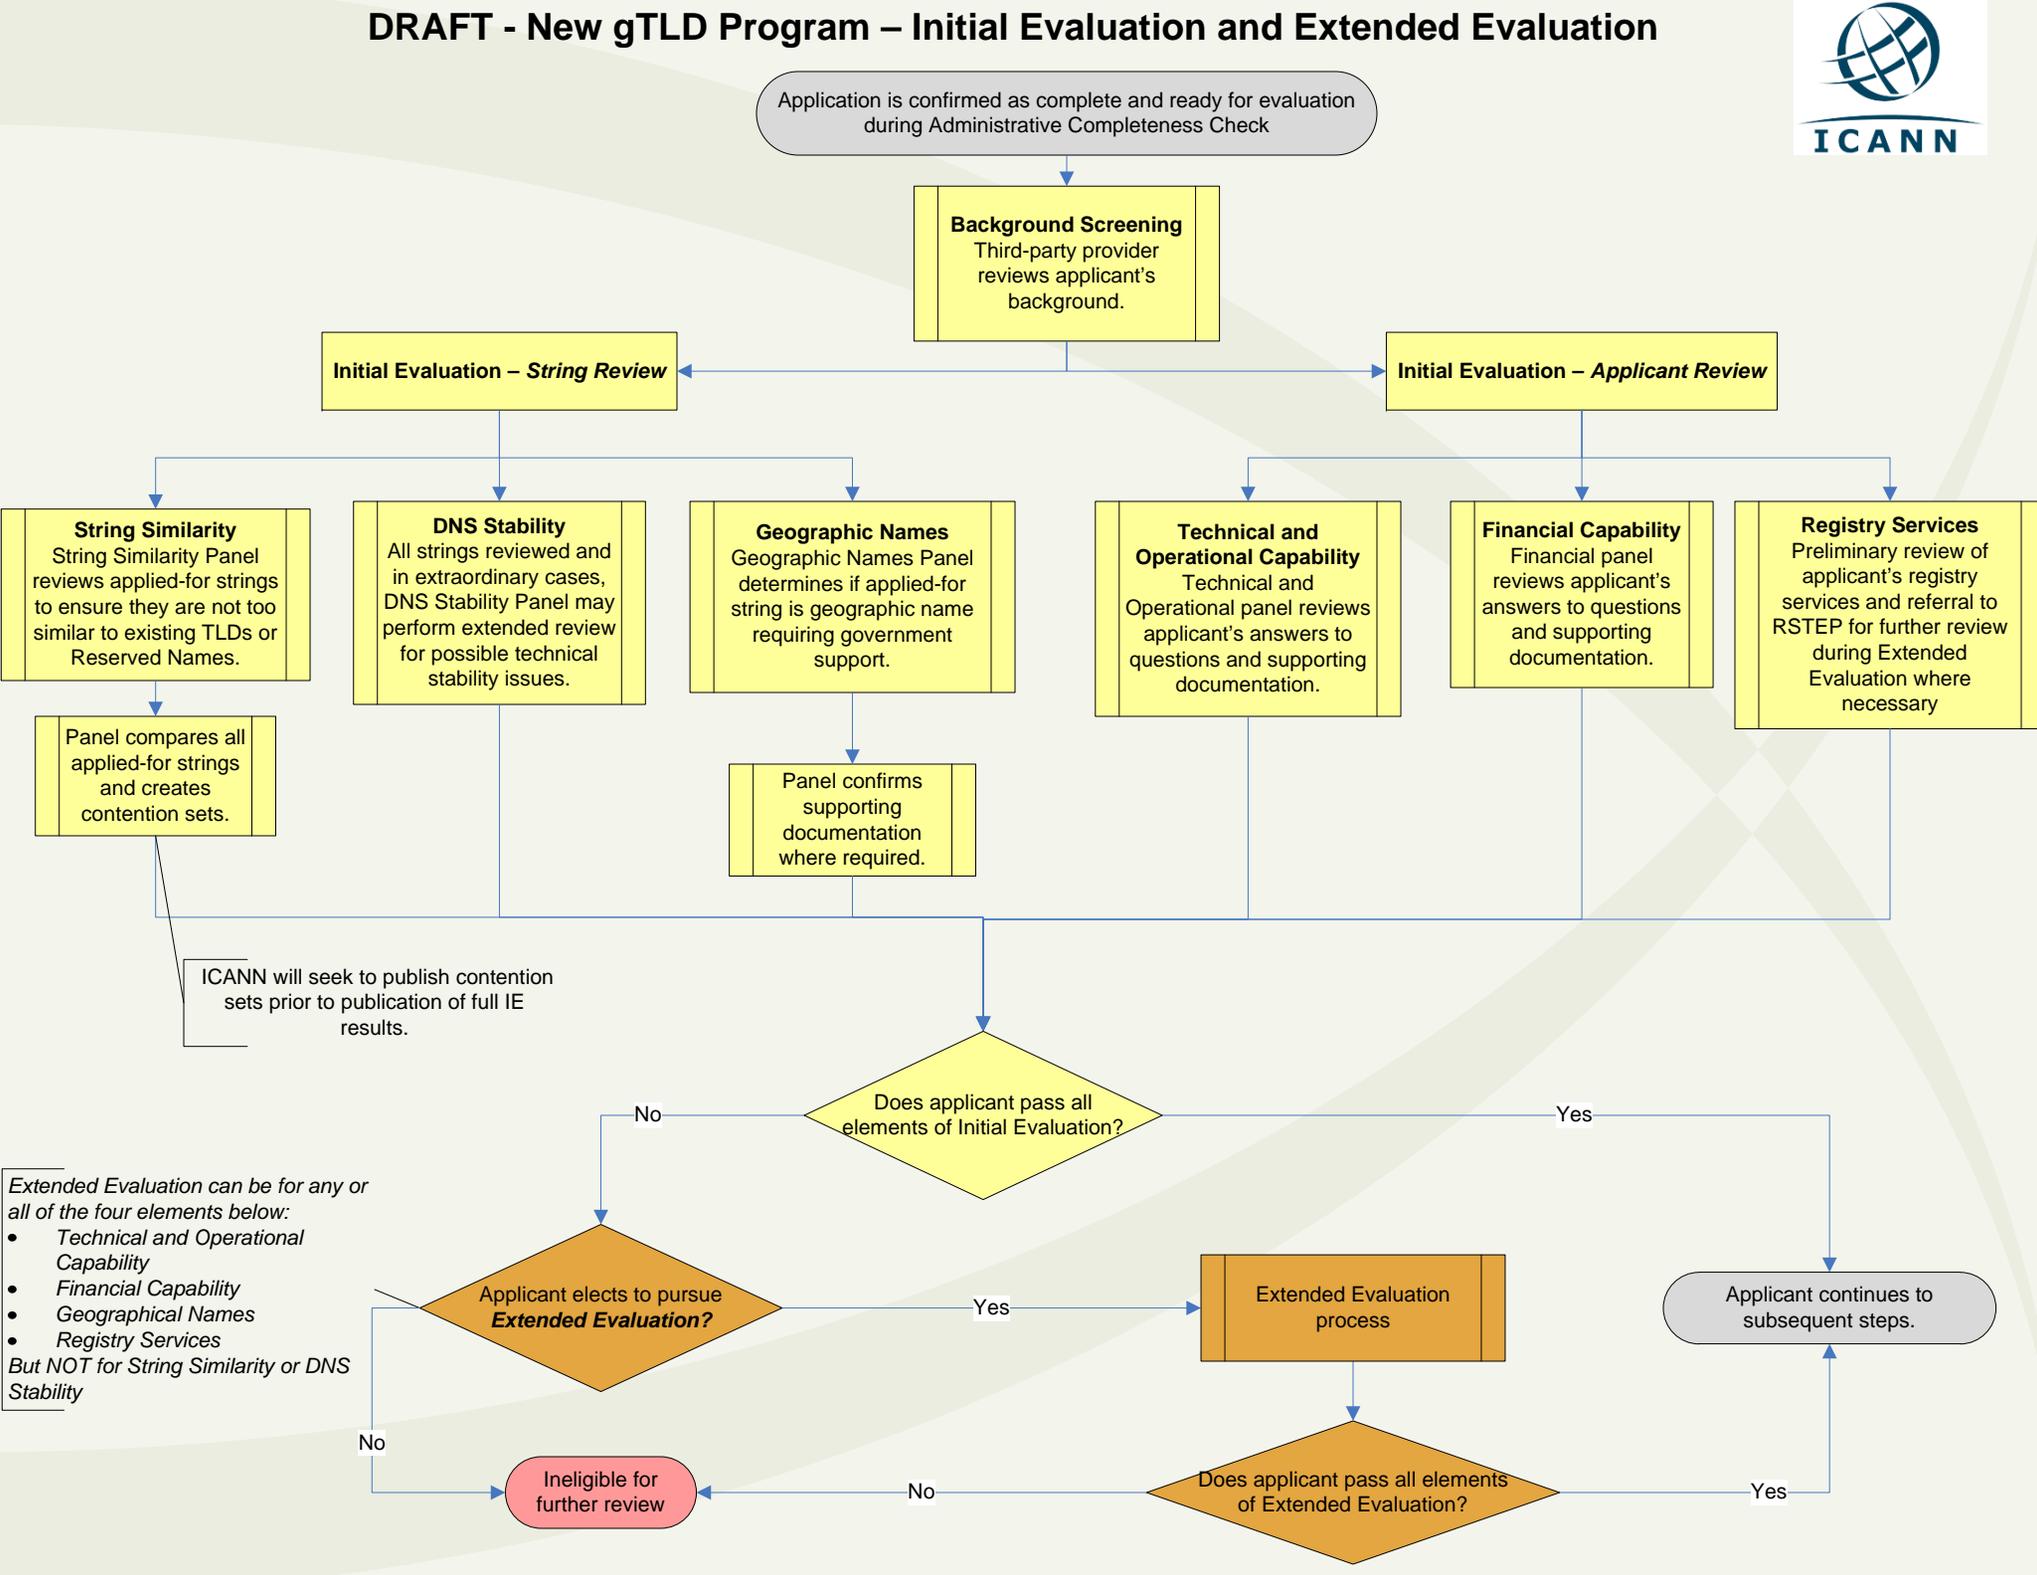

Applicant continues to subsequent steps.

Ineligible for further review

Extended Evaluation can be for any or all of the four elements below:

- Technical and Operational Capability
- Financial Capability
- Geographical Names
- Registry Services

But NOT for String Similarity or DNS Stability

## Annex: Separable Country Names List

gTLD application restrictions on country or territory names are tied to listing in property fields of the ISO 3166-1 standard. Notionally, the ISO 3166-1 standard has an “English short name” field which is the common name for a country and can be used for such protections; however, in some cases this does not represent the common name. This registry seeks to add additional protected elements which are derived from definitions in the ISO 3166-1 standard. An explanation of the various classes is included below.

Separable Country Names List

Code	English Short Name	Cl.	Separable Name

## Maintenance

A Separable Country Names Registry will be maintained and published by ICANN Staff.

Each time the ISO 3166-1 standard is updated with a new entry, this registry will be reappraised to identify if the changes to the standard warrant changes to the entries in this registry. Appraisal will be based on the criteria listing in the "Eligibility" section of this document.

Codes reserved by the ISO 3166 Maintenance Agency do not have any implication on this registry, only entries derived from normally assigned codes appearing in ISO 3166-1 are eligible.

If an ISO code is struck off the ISO 3166-1 standard, any entries in this registry deriving from that code must be struck.

## Eligibility

Each record in this registry is derived from the following possible properties:

- Class A:** The ISO 3166-1 English Short Name is comprised of multiple, separable parts whereby the country is comprised of distinct sub-entities. Each of these separable parts is eligible in its own right for consideration as a country name. For example, "Antigua and Barbuda" is comprised of "Antigua" and "Barbuda."
- Class B:** The ISO 3166-1 English Short Name (1) or the ISO 3166-1 English Full Name (2) contains additional language as to the type of country the entity is, which is often not used in common usage when referencing the country. For example, one such short name is "The Bolivarian Republic of Venezuela" for a country in common usage referred to as "Venezuela."
- \*\* Macedonia is a separable name in the context of this list; however, due to the ongoing dispute listed in UN documents between the Hellenic Republic (Greece) and the Former Yugoslav Republic of Macedonia over the name, no country will be afforded attribution or rights to the name "Macedonia" until the dispute over the name has been resolved. See <http://daccess-dds-ny.un.org/doc/UNDOC/GEN/N93/240/37/IMG/N9324037.pdf>.
- Class C:** The ISO 3166-1 Remarks column containing synonyms of the country name, or sub-national entities, as denoted by "often referred to as," "includes", "comprises", "variant" or "principal islands".

In the first two cases, the registry listing must be directly derivative from the English Short Name by excising words and articles. These registry listings do not include vernacular or other non-official terms used to denote the country.

Eligibility is calculated in class order. For example, if a term can be derived both from Class A and Class C, it is only listed as Class A.

## *Sample Letter of Government Support*

**[This letter should be provided on official letterhead]**

ICANN  
Suite 330, 4676 Admiralty Way  
Marina del Rey, CA 90292

Attention: New gTLD Evaluation Process

Subject: Letter for support for [TLD requested]

This letter is to confirm that [government entity] fully supports the application for [TLD] submitted to ICANN by [applicant] in the New gTLD Program. As the [Minister/Secretary/position] I confirm that I have the authority of the [x government/public authority] to be writing to you on this matter. [Explanation of government entity, relevant department, division, office, or agency, and what its functions and responsibilities are]

The gTLD will be used to [explain your understanding of how the name will be used by the applicant. This could include policies developed regarding who can register a name, pricing regime and management structures.] [Government/public authority/department] has worked closely with the applicant in the development of this proposal.

The [x government/public authority] supports this application, and in doing so, understands that in the event that the application is successful, [applicant] will be required to enter into a Registry Agreement with ICANN. In doing so, they will be required to pay fees to ICANN and comply with consensus policies developed through the ICANN multi-stakeholder policy processes.

[Government / public authority] further understands that, in the event of a dispute between [government/public authority] and the applicant, ICANN will comply with a legally binding order from a court in the jurisdiction of [government/public authority].

**[Optional]** This application is being submitted as a community-based application, and as such it is understood that the Registry Agreement will reflect the community restrictions proposed in the application. In the event that we believe the registry is not complying with these restrictions, possible avenues of recourse include the Registry Restrictions Dispute Resolution Procedure.

**[Optional]** I can advise that in the event that this application is successful [government/public authority] will enter into a separate agreement with the applicant. This agreement will outline the conditions under which we support them in the operation of the TLD, and circumstances under which we would withdraw that support. ICANN will not be a party to this agreement, and enforcement of this agreement lies fully with [government/public authority].

[Government / public authority] understands that the Geographic Names Panel engaged by ICANN will, among other things, conduct due diligence on the authenticity of this documentation. I would request that if additional information is required during this process, that [name and contact details] be contacted in the first instance.

Thank you for the opportunity to support this application.

Yours sincerely

Signature from relevant government/public authority

## *Evaluation Questions and Criteria*

Since ICANN was founded in 1998 as a not-for-profit, multi-stakeholder organization, one of its key mandates has been to promote competition in the domain name market. ICANN's mission specifically calls for the corporation to maintain and build on processes that will ensure competition and consumer interests – without compromising Internet security and stability. This includes the consideration and implementation of new gTLDs. It is ICANN's goal to make the criteria and evaluation as objective as possible.

While new gTLDs are viewed by ICANN as important to fostering choice, innovation and competition in domain registration services, the decision to launch these coming new gTLD application rounds followed a detailed and lengthy consultation process with all constituencies of the global Internet community.

Any public or private sector organization can apply to create and operate a new gTLD. However the process is not like simply registering or buying a second-level domain name. Instead, the application process is to evaluate and select candidates capable of running a registry, a business that manages top level domains such as, for example, .COM or .INFO. Any successful applicant will need to meet published operational and technical criteria in order to preserve Internet stability and interoperability.

### *I. Principles of the Technical and Financial New gTLD Evaluation Criteria*

- Principles of conservatism. This is the first round of what is to be an ongoing process for the introduction of new TLDs, including Internationalized Domain Names. Therefore, the criteria in this round require applicants to provide a thorough and thoughtful analysis of the technical requirements to operate a registry and the proposed business model.
- The criteria and evaluation should be as objective as possible.
  - With that goal in mind, an important objective of the new TLD process is to diversify the namespace, with different registry business models and target audiences. In some cases, criteria that are objective, but that ignore the differences in business models and target audiences of new registries, will tend to make the process exclusionary. For example, the business model for a registry targeted to a small community need not possess the same robustness in funding and technical infrastructure as a registry intending to compete with large gTLDs. Therefore purely objective criteria such as a requirement for a certain amount of cash on hand will not provide for the flexibility to consider different business models. The process must provide for an objective evaluation framework, but allow for adaptation according to the differing models applicants will present. Within that framework, applicant responses will be evaluated against the criteria in light of the proposed model.
  - Therefore the criteria should be flexible: able to scale with the overall business approach, providing that the planned approach is consistent and coherent, and can withstand highs and lows.

- Criteria can be objective in areas of registrant protection, for example:
  - Providing for funds to continue operations in the event of a registry failure.
  - Adherence to data escrow, registry failover, and continuity planning requirements.
- The evaluation must strike the correct balance between establishing the business and technical competence of the applicant to operate a registry (to serve the interests of registrants), while not asking for the detailed sort of information or making the judgment that a venture capitalist would. ICANN is not seeking to certify business success but instead seeks to encourage innovation while providing certain safeguards for registrants.
- New registries must be added in a way that maintains DNS stability and security. Therefore, ICANN asks several questions so that the applicant can demonstrate an understanding of the technical requirements to operate a registry. ICANN will ask the applicant to demonstrate actual operational technical compliance prior to delegation. This is in line with current prerequisites for the delegation of a TLD.
- Registrant protection is emphasized in both the criteria and the scoring. Examples of this include asking the applicant to:
  - Plan for the occurrence of contingencies and registry failure by putting in place financial resources to fund the ongoing resolution of names while a replacement operator is found or extended notice can be given to registrants,
  - Demonstrate a capability to understand and plan for business contingencies to afford some protections through the marketplace,
  - Adhere to DNS stability and security requirements as described in the technical section, and
  - Provide access to the widest variety of services.

## *II. Aspects of the Questions Asked in the Application and Evaluation Criteria*

The technical and financial questions are intended to inform and guide the applicant in aspects of registry start-up and operation. The established registry operator should find the questions straightforward while inexperienced applicants should find them a natural part of planning.

Evaluation and scoring (detailed below) will emphasize:

- How thorough are the answers? Are they well thought through and do they provide a sufficient basis for evaluation?
- Demonstration of the ability to operate and fund the registry on an ongoing basis:
  - Funding sources to support technical operations in a manner that ensures stability and security and supports planned expenses,
  - Resilience and sustainability in the face of ups and downs, anticipation of contingencies,
  - Funding to carry on operations in the event of failure.

- Demonstration that the technical plan will likely deliver on best practices for a registry and identification of aspects that might raise DNS stability and security issues.
- Ensures plan integration, consistency and compatibility (responses to questions are not evaluated individually but in comparison to others):
  - Funding adequately covers technical requirements,
  - Funding covers costs,
  - Risks are identified and addressed, in comparison to other aspects of the plan.

### *III. Scoring*

#### Evaluation

- The questions, criteria, scoring and evaluation methodology are to be conducted in accordance with the principles described earlier in section I. With that in mind, globally diverse evaluation panelists will staff evaluation panels. The diversity of evaluators and access to experts in all regions of the world will ensure application evaluations take into account cultural, technical and business norms in the regions from which applications originate.
- Evaluation teams will consist of two independent panels. One will evaluate the applications against the financial criteria. The other will evaluate the applications against the technical & operational criteria. Given the requirement that technical and financial planning be well integrated, the panels will work together and coordinate information transfer where necessary. Other relevant experts (e.g., technical, audit, legal, insurance, finance) in pertinent regions will provide advice as required.
- Precautions will be taken to ensure that no member of the Evaluation Teams will have any interest or association that may be viewed as a real or potential conflict of interest with an applicant or application. All members must adhere to the Code of Conduct and Conflict of Interest guidelines that are found in Module 2.
- Communications between the evaluation teams and the applicants will be through an online interface. During the evaluation, evaluators may pose a set of clarifying questions to an applicant, to which the applicant may respond through the interface.

Confidentiality: ICANN will post applications after the close of the application submission period. The application form notes which parts of the application will be posted.

#### Scoring

- Responses will be evaluated against each criterion. A score will be assigned according to the scoring schedule linked to each question or set of questions. In several questions, 1 point is the maximum score that may be awarded. In several other questions, 2 points are awarded for a response that exceeds requirements, 1 point is awarded for a response that meets requirements and 0 points are awarded for a response that fails to meet requirements. Each question must receive at least a score of "1," making each a "pass/fail" question.
- In the Continuity question in the financial section(see Question #50), up to 3 points are awarded if an applicant provides, at the application stage, a financial instrument that will guarantee ongoing registry operations in the event of a business failure. This extra

point can serve to guarantee passing the financial criteria for applicants who score the minimum passing score for each of the individual criteria. The purpose of this weighting is to reward applicants who make early arrangements for the protection of registrants and to accept relatively riskier business plans where registrants are protected.

- There are 21 Technical & Operational questions. Each question has a criterion and scoring associated with it. The scoring for each is 0, 1, or 2 points as described above. One of the questions (IDN implementation) is optional. Other than the optional questions, all Technical & Operational criteria must be scored a 1 or more or the application will fail the evaluation.
- The total technical score must be equal to or greater than 22 for the application to pass. That means the applicant can pass by:
  - Receiving a 1 on all questions, including the optional question, and a 2 on at least one mandatory question; or
  - Receiving a 1 on all questions, excluding the optional question and a 2 on at least two mandatory questions.

This scoring methodology requires a minimum passing score for each question and a slightly higher average score than the per question minimum to pass.

- There are six Financial questions and six sets of criteria that are scored by rating the answers to one or more of the questions. For example, the question concerning registry operation costs requires consistency between the technical plans (described in the answers to the Technical & Operational questions) and the costs (described in the answers to the costs question).
- The scoring for each of the Financial criteria is 0, 1 or 2 points as described above with the exception of the Continuity question, for which up to 3 points are possible. All questions must receive at least a 1 or the application will fail the evaluation.
- The total financial score on the six criteria must be 8 or greater for the application to pass. That means the applicant can pass by:
  - Scoring a 3 on the continuity criteria, or
  - Scoring a 2 on any two financial criteria.
- Applications that do not pass Initial Evaluation can enter into an extended evaluation process as described in Module 2. The scoring is the same.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
<b>Applicant Information</b>	1	Full legal name of the Applicant (the established entity that would enter into a Registry Agreement with ICANN)	Y	Responses to Questions 1 - 12 are required for a complete application. Responses are not scored.			
	2	Address of the principal place of business of the Applicant. This address will be used for contractual purposes. No Post Office boxes are allowed.	Y				
	3	Phone number for the Applicant's principal place of business.	Y				
	4	Fax number for the Applicant's principal place of business.	Y				
	5	Website or URL, if applicable.	Y				
<b>Primary Contact for this Application</b>	6	Name	Y	The primary contact is the individual designated with the primary responsibility for management of the application, including responding to tasks in the TLD Application System (TAS) during the various application phases. Both contacts listed should also be prepared to receive inquiries from the public.

		secretary, chief financial officer. Partners would be listed in the context of a partnership or other such form of legal entity.					
		(c) Enter the full name and contact information of all shareholders holding at least 15% of shares, and percentage held by each. For a shareholder entity, enter the principal place of business. For a shareholder individual, enter the date and country of birth and contact information (permanent residence).	Partial				
		(d) For an applying entity that does not have directors, officers, partners, or shareholders, enter the full name, date and country of birth, contact information (permanent residence), and position of all individuals having overall legal or executive responsibility for the applying entity.	Partial				
		(e) Indicate whether the applicant or any of the individuals named above: <ul style="list-style-type: none"> <li>i. within the past ten years, has been convicted of any crime related to financial or corporate governance activities, or has been judged by a court to have committed fraud or breach of fiduciary duty, or has been the subject of a judicial determination that is the substantive equivalent of any of these;</li> <li>ii. within the past ten years, has been disciplined by any government or industry regulatory body for conduct involving dishonesty or misuse of funds of others;</li> <li>iii. within the past ten years has been convicted of any willful tax-related fraud or willful evasion of tax liabilities;</li> <li>iv. within the past ten years has been convicted of perjury, forswearing, failing to cooperate with a law enforcement investigation, or making false statements to a law enforcement agency or representative;</li> <li>v. has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications or the Internet to facilitate the commission of crimes;</li> </ul>	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>vi. has ever been convicted of any crime involving the use of a weapon, force, or the threat of force;</p> <p>vii. has ever been convicted of any violent or sexual offense victimizing children, the elderly, or individuals with disabilities;</p> <p>viii. has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988;</p> <p>ix. has ever been convicted or successfully extradited for any offense described in the United Nations Convention against Transnational Organized Crime (all Protocols);</p> <p>x. has been convicted, within the respective timeframes, of aiding, abetting, facilitating, enabling, conspiring to commit, or failing to report any of the listed crimes (i.e., within the past 10 years for crimes listed in (i) - (iv) above, or ever for the crimes listed in (v) - (ix) above);</p> <p>xi. has entered a guilty plea as part of a plea agreement or has a court case in any jurisdiction with a disposition of Adjudicated Guilty or Adjudication Withheld (or regional equivalents) within the respective timeframes listed above for any of the listed crimes (i.e., within the past 10 years for crimes listed in (i) - (iv) above, or ever for the crimes listed in (v) - (ix) above);</p> <p>xii. is the subject of a disqualification imposed by ICANN and in effect at the time of this application.</p> <p>If any of the above events have occurred, please provide details.</p>					

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(f) Indicate whether the applicant or any of the individuals named above have been involved in any decisions indicating that the applicant or individual named in the application was engaged in cybersquatting, as defined in the Uniform Domain Name Dispute Resolution Policy (UDRP), Anti-cybersquatting Consumer Protection Act (ACPA), or other equivalent legislation, or was engaged in reverse domain name hijacking under the UDRP or bad faith or reckless disregard under the ACPA or equivalent legislation.	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook for details.			
		(g) Disclose whether the applicant or any of the individuals named above has been involved in any administrative or other legal proceeding in which allegations of intellectual property infringement relating to registration or use of a domain name have been made. Provide an explanation related to each such instance.	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook for details.			
		(h) Provide an explanation for any additional background information that may be found concerning the applicant or any individual named in the application, which may affect eligibility, including any criminal convictions not identified above.	N				
Evaluation Fee	12	(a) Enter the confirmation information for payment of the evaluation fee (e.g., wire transfer confirmation number).	N	<p>The evaluation fee is paid in the form of a deposit at the time of user registration, and submission of the remaining amount at the time the full application is submitted. The information in question 12 is required for each payment.</p> <p>The full amount in USD must be received by ICANN. Applicant is responsible for all transaction fees and exchange rate fluctuation.</p> <p>Fedwire is the preferred wire mechanism; SWIFT is also acceptable. ACH is not recommended as these funds will take longer to clear and could affect timing of the application processing.</p>			
		(b) Payer name	N				
		(c) Payer address	N				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(d) Wiring bank	N				
		(e) Bank address	N				
		(f) Wire date	N				
Applied-for gTLD string	13	Provide the applied-for gTLD string. If applying for an IDN, provide the U-label.	Y	Responses to Questions 13-17 are not scored, but are used for database and validation purposes.  The U-label is an IDNA-valid string of Unicode characters, including at least one non-ASCII character.			
	14	(a) If applying for an IDN, provide the A-label (beginning with "xn--").	Y				
		(b) If an IDN, provide the meaning, or restatement of the string in English, that is, a description of the literal meaning of the string in the opinion of the applicant.	Y				
		(c) If an IDN, provide the language of the label (both in English and as referenced by ISO-639-1).	Y				
		(d) If an IDN, provide the script of the label (both in English and as referenced by ISO 15924).	Y				
		(e) If an IDN, list all code points contained in the U-label according to Unicode form.	Y	For example, the string "HELLO" would be listed as U+0048 U+0065 U+006C U+006C U+006F.			
	15	(a) If an IDN, upload IDN tables for the proposed registry. An IDN table must include: <ol style="list-style-type: none"> <li>1. the applied-for gTLD string relevant to the tables,</li> <li>2. the script or language designator (as defined in BCP 47),</li> <li>3. table version number,</li> <li>4. effective date (DD Month YYYY), and</li> <li>5. contact name, email address, and phone number.</li> </ol> <p>Submission of IDN tables in a standards-based format is encouraged.</p>	Y	In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string. IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second level (see question 44).  IDN tables should be submitted in a machine-readable format. The model format described in Section 5 of RFC 4290 would be ideal. The format used by RFC 3743 is an acceptable alternative. Variant generation algorithms that are more complex (such as those with contextual rules) and cannot be expressed using these table formats should be specified in a			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				manner that could be re-implemented programmatically by ICANN. Ideally, for any complex table formats, a reference code implementation should be provided in conjunction with a description of the generation rules.			
		(b) Describe the process used for development of the IDN tables submitted, including consultations and sources used.	Y				
		(c) List any variants to the applied-for gTLD string according to the relevant IDN tables.	Y	Variant TLD strings will not be delegated as a result of this application. Variant strings will be checked for consistency and, if the application is approved, will be entered on a Declared IDN Variants List to allow for future allocation once a variant management mechanism is established for the top level. Inclusion of variant TLD strings in this application is for information only and confers no right or claim to these strings upon the applicant.			
	16	Describe the applicant's efforts to ensure that there are no known operational or rendering problems concerning the applied-for gTLD string. If such issues are known, describe steps that will be taken to mitigate these issues in software and other applications.	Y				
	17	<b>OPTIONAL.</b> Provide a representation of the label according to the International Phonetic Alphabet ( <a href="http://www.langsci.ucl.ac.uk/ipa/">http://www.langsci.ucl.ac.uk/ipa/</a> ).	Y	If provided, this information will be used as a guide to ICANN in communications regarding the application.			
<b>Mission/Purpose</b>	18	(a) Describe the mission/purpose of your proposed gTLD.	Y	The information gathered in response to Question 18 is intended to inform the post-launch review of the New gTLD Program, from the perspective of assessing the relative costs and benefits achieved in the expanded gTLD space.  For the application to be considered complete, answers to this section must be fulsome and sufficiently quantitative and detailed to inform future study on plans vs. results.  The New gTLD Program will be reviewed, as specified in section 9.3 of the Affirmation of			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				<p>Commitments. This will include consideration of the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion.</p> <p>The information gathered in this section will be one source of input to help inform this review. This information is not used as part of the evaluation or scoring of the application, except to the extent that the information may overlap with questions or evaluation areas that are scored.</p> <p>An applicant wishing to designate this application as community-based should ensure that these responses are consistent with its responses for question 20 below.</p>			
		(b) How do you expect that your proposed gTLD will benefit registrants, Internet users, and others?	Y	<p>Answers should address the following points:</p> <ul style="list-style-type: none"> <li>i. What is the goal of your proposed gTLD in terms of areas of specialty, service levels, or reputation?</li> <li>ii. What do you anticipate your proposed gTLD will add to the current space, in terms of competition, differentiation, or innovation?</li> <li>iii. What goals does your proposed gTLD have in terms of user experience?</li> <li>iv. Provide a complete description of the applicant's intended registration policies in support of the goals listed above.</li> <li>v. Will your proposed gTLD impose any measures for protecting the privacy or confidential information of registrants or users? If so, please describe any such</li> </ul>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				measures. Describe whether and in what ways outreach and communications will help to achieve your projected benefits.			
	18	(c) What operating rules will you adopt to eliminate or minimize social costs (e.g., time or financial resource costs, as well as various types of consumer vulnerabilities)? What other steps will you take to minimize negative consequences/costs imposed upon consumers?	Y	Answers should address the following points: <ul style="list-style-type: none"> <li>i. How will multiple applications for a particular domain name be resolved, for example, by auction or on a first-come/first-serve basis?</li> <li>ii. Explain any cost benefits for registrants you intend to implement (e.g., advantageous pricing, introductory discounts, bulk registration discounts).</li> <li>iii. Note that the Registry Agreement requires that registrars be offered the option to obtain initial domain name registrations for periods of one to ten years at the discretion of the registrar, but no greater than ten years. Additionally, the Registry Agreement requires advance written notice of price increases. Do you intend to make contractual commitments to registrants regarding the magnitude of price escalation? If so, please describe your plans.</li> </ul>			
Community-based Designation	19	Is the application for a community-based TLD?	Y	There is a presumption that the application is a standard application (as defined in the Applicant Guidebook) if this question is left unanswered.  The applicant's designation as standard or community-based cannot be changed once the application is submitted.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
	20	(a) Provide the name and full description of the community that the applicant is committing to serve. In the event that this application is included in a community priority evaluation, it will be scored based on the community identified in response to this question. The name of the community does not have to be formally adopted for the application to be designated as community-based.	Y	<p>Descriptions should include:</p> <ul style="list-style-type: none"> <li>• How the community is delineated from Internet users generally. Such descriptions may include, but are not limited to, the following: membership, registration, or licensing processes, operation in a particular industry, use of a language.</li> <li>• How the community is structured and organized. For a community consisting of an alliance of groups, details about the constituent parts are required.</li> <li>• When the community was established, including the date(s) of formal organization, if any, as well as a description of community activities to date.</li> <li>• The current estimated size of the community, both as to membership and geographic extent.</li> </ul>		<p>Responses to Question 20 will be regarded as firm commitments to the specified community and reflected in the Registry Agreement, provided the application is successful.</p> <p>Responses are not scored in the Initial Evaluation. Responses may be scored in a community priority evaluation, if applicable. Criteria and scoring methodology for the community priority evaluation are described in Module 4 of the Applicant Guidebook.</p>	
		(b) Explain the applicant's relationship to the community identified in 20(a).	Y	<p>Explanations should clearly state:</p> <ul style="list-style-type: none"> <li>• Relations to any community organizations.</li> <li>• Relations to the community and its constituent parts/groups.</li> <li>• Accountability mechanisms of the applicant to the community.</li> </ul>			
		(c) Provide a description of the community-based purpose of the applied-for gTLD.	Y	<p>Descriptions should include:</p> <ul style="list-style-type: none"> <li>• Intended registrants in the TLD.</li> <li>• Intended end-users of the TLD.</li> <li>• Related activities the applicant has carried out or intends to carry out in service of this purpose.</li> <li>• Explanation of how the purpose is of a lasting nature.</li> </ul>			
		(d) Explain the relationship between the applied-for gTLD string and the community identified in 20(a).	Y	<p>Explanations should clearly state:</p> <ul style="list-style-type: none"> <li>• relationship to the established name, if any, of the community.</li> <li>• relationship to the identification of community members.</li> <li>• any connotations the string may have beyond the community.</li> </ul>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(e) Provide a complete description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD. Policies and enforcement mechanisms are expected to constitute a coherent set.	Y	<p>Descriptions should include proposed policies, if any, on the following:</p> <ul style="list-style-type: none"> <li>• Eligibility: who is eligible to register a second-level name in the gTLD, and how will eligibility be determined.</li> <li>• Name selection: what types of second-level names may be registered in the gTLD.</li> <li>• Content/Use: what restrictions, if any, the registry operator will impose on how a registrant may use its registered name.</li> <li>• Enforcement: what investigation practices and mechanisms exist to enforce the policies above, what resources are allocated for enforcement, and what appeal mechanisms are available to registrants.</li> </ul>			
		(f) Attach any written endorsements for the application from established institutions representative of the community identified in 20(a). An applicant may submit written endorsements by multiple institutions, if relevant to the community.	Y	<p>At least one such endorsement is required for a complete application. The form and content of the endorsement are at the discretion of the party providing the endorsement; however, the letter must identify the applied-for gTLD string and the applying entity, include an express statement support for the application, and the supply the contact information of the entity providing the endorsement.</p> <p>Endorsements from institutions not mentioned in the response to 20(b) should be accompanied by a clear description of each such institution's relationship to the community.</p> <p>Endorsements presented as supporting documentation for this question should be submitted in the original language.</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Geographic Names	21	(a) Is the application for a geographic name?	Y	<p>An applied-for gTLD string is considered a geographic name requiring government support if it is: (a) the capital city name of a country or territory listed in the ISO 3166-1 standard; (b) a city name, where it is clear from statements in the application that the applicant intends to use the gTLD for purposes associated with the city name; (c) a sub-national place name listed in the ISO 3166-2 standard; or (d) a name listed as a UNESCO region or appearing on the "Composition of macro geographic (continental) or regions, geographic sub-regions, and selected economic and other groupings" list. See Module 2 for complete definitions and criteria.</p> <p>An application for a country or territory name, as defined in the Applicant Guidebook, will not be approved.</p>			
		(b) If a geographic name, attach documentation of support or non-objection from all relevant governments or public authorities.	N	<p>See the documentation requirements in Module 2 of the Applicant Guidebook.</p> <p>Documentation presented in response to this question should be submitted in the original language.</p>			
Protection of Geographic Names	22	Describe proposed measures for protection of geographic names at the second and other levels in the applied-for gTLD. This should include any applicable rules and procedures for reservation and/or release of such names.	Y	<p>Applicants should consider and describe how they will incorporate Governmental Advisory Committee (GAC) advice in their management of second-level domain name registrations. See "Principles regarding New gTLDs" at <a href="https://gacweb.icann.org/display/gacweb/New+gTLDs">https://gacweb.icann.org/display/gacweb/New+gTLDs</a>.</p> <p>For reference, applicants may draw on existing methodology developed for the reservation and release of country names in the .INFO top-level domain. See <a href="https://gacweb.icann.org/display/gacweb/New+gTLDs">https://gacweb.icann.org/display/gacweb/New+gTLDs</a>.</p> <p>Proposed measures will be posted for public comment as part of the application. However, note that procedures for release of geographic names at the second level must be separately approved according to</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				Specification 5 of the Registry Agreement. That is, approval of a gTLD application does not constitute approval for release of any geographic names under the Registry Agreement. Such approval must be granted separately by ICANN.			
Registry Services	23	<p>Provide name and full description of all the Registry Services to be provided. Descriptions should include both technical and business components of each proposed service, and address any potential security or stability concerns.</p> <p>The following registry services are customary services offered by a registry operator:</p> <ul style="list-style-type: none"> <li>A. Receipt of data from registrars concerning registration of domain names and name servers.</li> <li>B. Dissemination of TLD zone files.</li> <li>C. Dissemination of contact or other information concerning domain name registrations (e.g., port-43 WHOIS, Web-based Whois, RESTful Whois service).</li> <li>D. Internationalized Domain Names, where offered.</li> <li>E. DNS Security Extensions (DNSSEC).</li> </ul> <p>The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.</p> <p>Additional proposed registry services that are unique to the registry must also be described.</p>	Y	<p>Registry Services are defined as the following: (1) operations of the Registry critical to the following tasks: (i) the receipt of data from registrars concerning registrations of domain names and name servers; (ii) provision to registrars of status information relating to the zone servers for the TLD; (iii) dissemination of TLD zone files; (iv) operation of the Registry zone servers; and (v) dissemination of contact and other information concerning domain name server registrations in the TLD as required by the Registry Agreement; and (2) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy; (3) any other products or services that only a Registry Operator is capable of providing, by reason of its designation as the Registry Operator. A full definition of Registry Services can be found at <a href="http://www.icann.org/en/registries/rsep/rsep.html">http://www.icann.org/en/registries/rsep/rsep.html</a>.</p> <p>Security: For purposes of this Applicant Guidebook, an effect on security by the proposed Registry Service means (1) the unauthorized disclosure, alteration, insertion or destruction of Registry Data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with applicable standards.</p> <p>Stability: For purposes of this Applicant Guidebook, an effect on stability shall mean that the proposed Registry Service (1) is not compliant with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant Standards-Track or Best Current</p>		<p>Responses are not scored. A preliminary assessment will be made to determine if there are potential security or stability issues with any of the applicant's proposed Registry Services. If any such issues are identified, the application will be referred for an extended review. See the description of the Registry Services review process in Module 2 of the Applicant Guidebook. Any information contained in the application may be considered as part of the Registry Services review. If its application is approved, applicant may engage in only those registry services defined in the application, unless a new request is submitted to ICANN in accordance with the Registry Agreement.</p>	

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				Practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant Standards-Track or Best Current Practice RFCs and relying on Registry Operator's delegation information or provisioning.			
<b>Demonstration of Technical &amp; Operational Capability (External)</b>	24	<p>Shared Registration System (SRS) Performance: describe</p> <ul style="list-style-type: none"> <li>the plan for operation of a robust and reliable SRS. SRS is a critical registry function for enabling multiple registrars to provide domain name registration services in the TLD. SRS must include the EPP interface to the registry, as well as any other interfaces intended to be provided, if they are critical to the functioning of the registry. Please refer to the requirements in Specification 6 (section 1.2) and Specification 10 (SLA Matrix) attached to the Registry Agreement; and</li> <li>resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>A complete answer should include, but is not limited to:</p> <ul style="list-style-type: none"> <li>A high-level SRS system description;</li> <li>Representative network diagram(s);</li> <li>Number of servers;</li> <li>Description of interconnectivity with other registry systems;</li> <li>Frequency of synchronization between servers; and</li> <li>Synchronization scheme (e.g., hot standby, cold standby).</li> </ul> <p>A complete answer is expected to be no more than</p>	Y	<p>The questions in this section (24-44) are intended to give applicants an opportunity to demonstrate their technical and operational capabilities to run a registry. In the event that an applicant chooses to outsource one or more parts of its registry operations, the applicant should still provide the full details of the technical arrangements.</p> <p>Note that the resource plans provided in this section assist in validating the technical and operational plans as well as informing the cost estimates in the Financial section below.</p> <p>Questions 24-30(a) are designed to provide a description of the applicant's intended technical and operational approach for those registry functions that are outward-facing, i.e., interactions with registrars, registrants, and various DNS users. Responses to these questions will be published to allow review by affected parties.</p>	0-1	<p>Complete answer demonstrates:</p> <p>(1) a plan for operating a robust and reliable SRS, one of the five critical registry functions;</p> <p>(2) scalability and performance consistent with the overall business approach, and planned size of the registry;</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and</p> <p>(4) evidence of compliance with Specification 6 (section 1.2) to the Registry Agreement.</p>	<p><b>1 - meets requirements:</b> Response includes</p> <p>(1) An adequate description of SRS that substantially demonstrates the applicant's capabilities and knowledge required to meet this element;</p> <p>(2) Details of a well-developed plan to operate a robust and reliable SRS;</p> <p>(3) SRS plans are sufficient to result in compliance with Specification 6 and Specification 10 to the Registry Agreement;</p> <p>(4) SRS is consistent with the technical, operational and financial approach described in the application; and</p> <p>(5) Demonstrates that adequate technical resources are already on hand, or committed or readily available to carry out this function.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		5 pages. (As a guide, one page contains approximately 4000 characters).					
	25	<p>Extensible Provisioning Protocol (EPP): provide a detailed description of the interface with registrars, including how the applicant will comply with EPP in RFCs 3735 (if applicable), and 5730-5734.</p> <p>If intending to provide proprietary EPP extensions, provide documentation consistent with RFC 3735, including the EPP templates and schemas that will be used.</p> <p>Describe resourcing plans (number and description of personnel roles allocated to this area).</p> <p>A complete answer is expected to be no more than 5 pages. If there are proprietary EPP extensions, a complete answer is also expected to be no more than 5 pages per EPP extension.</p>	Y		0-1	<p>Complete answer demonstrates:</p> <p>(1) complete knowledge and understanding of this aspect of registry technical requirements;</p> <p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry; and</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section;</p> <p>(4) ability to comply with relevant RFCs;</p> <p>(5) if applicable, a well-documented implementation of any proprietary EPP extensions; and</p> <p>(6) if applicable, how proprietary EPP extensions are consistent with the registration lifecycle as described in Question 27.</p>	<p><b>1 - meets requirements:</b> Response includes</p> <p>(1) Adequate description of EPP that substantially demonstrates the applicant's capability and knowledge required to meet this element;</p> <p>(2) Sufficient evidence that any proprietary EPP extensions are compliant with RFCs and provide all necessary functionalities for the provision of registry services;</p> <p>(3) EPP interface is consistent with the technical, operational, and financial approach as described in the application; and</p> <p>(4) Demonstrates that technical resources are already on hand, or committed or readily available.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score 1.</p>
	26	<p>Whois: describe</p> <ul style="list-style-type: none"> <li>• how the applicant will comply with Whois specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement;</li> <li>• how the Applicant's Whois service will comply with RFC 3912; and</li> <li>• resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>A complete answer should include, but is not limited to:</p>	Y	The Registry Agreement (Specification 4) requires provision of Whois lookup services for all names registered in the TLD. This is a minimum requirement. Provision for Searchable Whois as defined in the scoring column is a requirement for achieving a score of 2 points.	0-2	<p>Complete answer demonstrates:</p> <p>(1) complete knowledge and understanding of this aspect of registry technical requirements, (one of the five critical registry functions);</p> <p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry;</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section;</p>	<p><b>2 – exceeds requirements:</b> Response meets all the attributes for a score of 1 and includes:</p> <p>(1) A Searchable Whois service: Whois service includes web-based search capabilities by domain name, registrant name, postal address, contact names, registrar IDs, and Internet Protocol addresses without arbitrary limit. Boolean search capabilities may be offered. The service shall include appropriate precautions to avoid abuse of this feature (e.g., limiting access to legitimate authorized users), and the application demonstrates compliance with any applicable</p>

		<p>operational, and financial approach described in the application.</p> <p>The critical functions of a registry which must be supported even if an applicant's business and/or funding fails are:</p> <p>(1) DNS resolution for registered domain names</p> <p>Applicants should consider ranges of volume of daily DNS queries (e.g., 0-100M, 100M-1B, 1B+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</p> <p>(2) Operation of the Shared Registration System</p> <p>Applicants should consider ranges of volume of daily EPP transactions (e.g., 0-200K, 200K-2M, 2M+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</p> <p>(3) Provision of Whois service</p> <p>Applicants should consider ranges of volume of daily Whois queries (e.g., 0-100K, 100k-1M, 1M+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics for both web-based and port-43 services.</p> <p>(4) Registry data escrow deposits</p> <p>Applicants should consider administration, retention, and transfer fees as well as daily deposit (e.g., full or incremental) handling. Costs may vary depending on the size of the files in escrow (i.e., the size of the registry</p>		<p>registry fails. Registrant needs are best protected by a clear demonstration that the basic registry functions are sustained for an extended period even in the face of registry failure. Therefore, this section is weighted heavily as a clear, objective measure to protect and serve registrants.</p> <p>The applicant has two tasks associated with adequately making this demonstration of continuity for critical registry functions. First, costs for maintaining critical registrant protection functions are to be estimated (Part a). In evaluating the application, the evaluators will adjudge whether the estimate is reasonable given the systems architecture and overall business approach described elsewhere in the application.</p> <p>The Continuing Operations Instrument (COI) is invoked by ICANN if necessary to pay for an Emergency Back End Registry Operator (EBERO) to maintain the five critical registry functions for a period of three to five years. Thus, the cost estimates are tied to the cost for a third party to provide the functions, not to the applicant's actual in-house or subcontracting costs for provision of these functions.</p> <p>Refer to guidelines at <a href="http://www.icann.org/en/announcements/announcement-3-23dec11-en.htm">http://www.icann.org/en/announcements/announcement-3-23dec11-en.htm</a> regarding estimation of costs. However, the applicant must provide its own estimates and explanation in response to this question.</p>		<p>fund on-going critical registry functions for registrants for a period of three years in the event of registry failure, default or until a successor operator can be designated. Evidence of financial wherewithal to fund this requirement prior to delegation. This requirement must be met prior to or concurrent with the execution of the Registry Agreement.</p>	<p>in place to provide for on-going operations for at least three years in the event of failure.</p> <p><b>1 - meets requirements:</b></p> <p>(1) Costs are commensurate with technical, operational, and financial approach as described in the application; and</p> <p>(2) Funding is identified and instrument is described to provide for on-going operations of at least three years in the event of failure.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score a 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>database).</p> <p>(5) Maintenance of a properly signed zone in accordance with DNSSEC requirements.</p> <p>Applicants should consider ranges of volume of daily DNS queries (e.g., 0-100M, 100M-1B, 1B+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</p> <p>List the estimated annual cost for each of these functions (specify currency used).</p> <p>A complete answer is expected to be no more than 10 pages.</p>					
		<p>(b) Applicants must provide evidence as to how the funds required for performing these critical registry functions will be available and guaranteed to fund registry operations (for the protection of registrants in the new gTLD) for a minimum of three years following the termination of the Registry Agreement. ICANN has identified two methods to fulfill this requirement:</p> <p><u>(i) Irrevocable standby letter of credit (LOC)</u> issued by a reputable financial institution.</p> <ul style="list-style-type: none"> <li>The amount of the LOC must be equal to or greater than the amount required to fund the registry operations specified above for at least three years. In the event of a draw upon the letter of credit, the actual payout would be tied to the cost of running those functions.</li> <li>The LOC must name ICANN or its designee as the beneficiary. Any funds paid out would be provided to the designee who is operating the required registry functions.</li> <li>The LOC must have a term of at least five years from the delegation of the TLD. The LOC may be structured with an annual expiration date if it contains an evergreen provision providing for annual extensions, without amendment, for an indefinite number of periods until the issuing bank informs the beneficiary of its final expiration or until the beneficiary releases the LOC as evidenced in writing. If the expiration date</li> </ul>	N	<p>Second (Part b), methods of securing the funds required to perform those functions for at least three years are to be described by the applicant in accordance with the criteria below. Two types of instruments will fulfill this requirement. The applicant must identify which of the two methods is being described. The instrument is required to be in place at the time of the execution of the Registry Agreement.</p> <p>Financial Institution Ratings: The instrument must be issued or held by a financial institution with a rating beginning with "A" (or the equivalent) by any of the following rating agencies: A.M. Best, Dominion Bond Rating Service, Egan-Jones, Fitch Ratings, Kroll Bond Rating Agency, Moody's, Morningstar, Standard &amp; Poor's, and Japan Credit Rating Agency.</p> <p>If an applicant cannot access a financial institution with a rating beginning with "A," but a branch or subsidiary of such an institution exists in the jurisdiction of the applying entity, then the instrument may be issued by the branch or subsidiary or by a local financial institution with an equivalent or higher rating to the branch or subsidiary.</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>occurs prior to the fifth anniversary of the delegation of the TLD, applicant will be required to obtain a replacement instrument.</p> <ul style="list-style-type: none"> <li>• The LOC must be issued by a reputable financial institution insured at the highest level in its jurisdiction. Documentation should indicate by whom the issuing institution is insured (i.e., as opposed to by whom the institution is rated).</li> <li>• The LOC will provide that ICANN or its designee shall be unconditionally entitled to a release of funds (full or partial) thereunder upon delivery of written notice by ICANN or its designee.</li> <li>• Applicant should attach an original copy of the executed letter of credit or a draft of the letter of credit containing the full terms and conditions. If not yet executed, the Applicant will be required to provide ICANN with an original copy of the executed LOC prior to or concurrent with the execution of the Registry Agreement.</li> <li>• The LOC must contain at least the following required elements: <ul style="list-style-type: none"> <li>○ Issuing bank and date of issue.</li> <li>○ Beneficiary: ICANN / 4676 Admiralty Way, Suite 330 / Marina del Rey, CA 90292 / US, or its designee.</li> <li>○ Applicant's complete name and address.</li> <li>○ LOC identifying number.</li> <li>○ Exact amount in USD.</li> <li>○ Expiry date.</li> <li>○ Address, procedure, and required forms whereby presentation for payment is to be made.</li> <li>○ Conditions: <ul style="list-style-type: none"> <li>▪ Partial drawings from the letter of credit may be made provided that such payment shall reduce the amount under the standby letter of credit.</li> <li>▪ All payments must be marked with the issuing bank name and the bank's standby letter of credit number.</li> <li>▪ LOC may not be modified, amended, or amplified by reference to any other document, agreement, or instrument.</li> <li>▪ The LOC is subject to the International Standby Practices (ISP 98) International Chamber of Commerce (Publication No. 590), or to an alternative standard that has been demonstrated to be reasonably equivalent.</li> </ul> </li> </ul> </li> </ul>		<p>If an applicant cannot access any such financial institutions, the instrument may be issued by the highest-rated financial institution in the national jurisdiction of the applying entity, if accepted by ICANN.</p> <p>Execution by ICANN: For any financial instruments that contemplate ICANN being a party, upon the written request of the applicant, ICANN may (but is not obligated to) execute such agreement prior to submission of the applicant's application if the agreement is on terms acceptable to ICANN. ICANN encourages applicants to deliver a written copy of any such agreement (only if it requires ICANN's signature) to ICANN as soon as possible to facilitate ICANN's review. If the financial instrument requires ICANN's signature, then the applicant will receive 3 points for question 50 (for the instrument being "secured and in place") only if ICANN executes the agreement prior to submission of the application. ICANN will determine, in its sole discretion, whether to execute and become a party to a financial instrument.</p> <p>The financial instrument should be submitted in the original language.</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>(ii) A <u>deposit into an irrevocable cash escrow account</u> held by a reputable financial institution.</p> <ul style="list-style-type: none"> <li>• The amount of the deposit must be equal to or greater than the amount required to fund registry operations for at least three years.</li> <li>• Cash is to be held by a third party financial institution which will not allow the funds to be commingled with the Applicant's operating funds or other funds and may only be accessed by ICANN or its designee if certain conditions are met.</li> <li>• The account must be held by a reputable financial institution insured at the highest level in its jurisdiction. Documentation should indicate by whom the issuing institution is insured (i.e., as opposed to by whom the institution is rated).</li> <li>• The escrow agreement relating to the escrow account will provide that ICANN or its designee shall be unconditionally entitled to a release of funds (full or partial) thereunder upon delivery of written notice by ICANN or its designee.</li> <li>• The escrow agreement must have a term of five years from the delegation of the TLD.</li> <li>• The funds in the deposit escrow account are not considered to be an asset of ICANN.</li> <li>• Any interest earnings less bank fees are to accrue to the deposit, and will be paid back to the applicant upon liquidation of the account to the extent not used to pay the costs and expenses of maintaining the escrow.</li> <li>• The deposit plus accrued interest, less any bank fees in respect of the escrow, is to be returned to the applicant if the funds are not used to fund registry functions due to a triggering event or after five years, whichever is greater.</li> <li>• The Applicant will be required to provide ICANN an explanation as to the amount of the deposit, the institution that will hold the deposit, and the escrow agreement for the account at the time of submitting an application.</li> <li>• Applicant should attach evidence of deposited funds in the escrow account, or evidence of provisional arrangement for deposit of funds. Evidence of deposited funds and terms of escrow agreement must be provided to ICANN prior to or concurrent with the execution of the Registry Agreement.</li> </ul>					

## Instructions: TLD Applicant – Financial Projections

The application process requires the applicant to submit two cash basis Financial Projections.

The first projection (Template 1) should show the Financial Projections associated with the Most Likely scenario expected. This projection should include the forecasted registration volume, registration fee, and all costs and capital expenditures expected during the start-up period and during the first three years of operations. Template 1 relates to Question 46 (Projections Template) in the application.

We also ask that applicants show as a separate projection (Template 2) the Financial Projections associated with a realistic Worst Case scenario. Template 2 relates to Question 49 (Contingency Planning) in the application.

For each Projection prepared, please include Comments and Notes on the bottom of the projection (in the area provided) to provide those reviewing these projections with information regarding:

1. Assumptions used, significant variances in Operating Cash Flows and Capital Expenditures from year-to-year;
2. How you plan to fund operations;
3. Contingency planning

As you complete Template 1 and Template 2, please reference data points and/or formulas used in your calculations (where appropriate).

## Section I – Projected Cash inflows and outflows

### Projected Cash Inflows

**Lines A and B.** Provide the number of forecasted registrations and the registration fee for years 1, 2, and 3. Leave the *Start-up* column blank. The start-up period is for cash costs and capital expenditures only; there should be no cash projections input to this column.

**Line C.** Multiply lines A and B to arrive at the *Registration Cash Inflow* for line C.

**Line D.** Provide projected cash inflows from any other revenue source for years 1, 2, and 3. For any figures provided on line D, please disclose the source in the *Comments/Notes* box of Section I. Note, do not include funding in Line D as that is covered in Section VI.

**Line E.** Add lines C and D to arrive at the total cash inflow.

### Projected Operating Cash Outflows

**Start up costs** - For all line items (F thru L) Please describe the total period of time this start-up cost is expected to cover in the *Comments/Notes* box.

**Line F.** Provide the projected labor costs for marketing, customer support, and technical support for start-up, year 1, year 2, and year 3. Note, other labor costs should be put in line *L (Other Costs)* and specify the type of labor and associated projected costs in the *Comments/Notes* box of this section.

**Line G.** *Marketing Costs* represent the amount spent on advertising, promotions, and other marketing activities. This amount should not include labor costs included in Marketing Labor (line *F*).

**Lines H through K.** Provide projected costs for facilities, G&A, interests and taxes, and Outsourcing for start-up as well as for years 1, 2, and 3. Be sure to list the type of activities that are being outsourced. You may combine certain activities from the same provider as long as an appropriate description of the services being combined is listed in the *Comments/Notes* box.

**Line L.** Provide any other projected operating costs for start-up, year 1, year 2, year 3. Be sure to specify the type of cost in the *Comments/Notes* box.

**Line M.** Add lines *F* through *L* to arrive at the total costs for line *M*.

**Line N.** Subtract line *E* from line *M* to arrive at the projected net operation number for line *N*.

## **Section IIa – Breakout of Fixed and Variable Operating Cash Outflows**

**Line A.** Provide the projected variable operating cash outflows including labor and other costs that are not fixed in nature. Variable operating cash outflows are expenditures that fluctuate in relationship with increases or decreases in production or level of operations.

**Line B.** Provide the projected fixed operating cash outflows. Fixed operating cash outflows are expenditures that do not generally fluctuate in relationship with increases or decreases in production or level of operations. Such costs are generally necessary to be incurred in order to operate the base line operations of the organization or are expected to be incurred based on contractual commitments.

**Line C –** Add lines *A* and *B* to arrive at total Fixed and Variable Operating Cash Outflows for line *C*. This must equal Total Operating Cash Outflows from Section I, Line *M*.

## **Section IIb – Breakout of Critical Registry Function Operating Cash Outflows**

**Lines A – E.** Provide the projected cash outflows for the five critical registry functions. If these functions are outsourced, the component of the outsourcing fee representing these functions must be separately identified and provided. These costs are based on the applicant's cost to manage these functions and should be calculated separately from the Continued Operations Instrument (COI) for Question 50.

**Line F.** If there are other critical registry functions based on the applicant's registry business model then the projected cash outflow for this function must be provided with a description added to the *Comment/Notes* box. This projected cash outflow may also be included in the 3-year reserve.

**Line G.** Add lines *A* through *F* to arrive at the Total Critical Registry Function Cash Outflows.

## Section III – Projected Capital Expenditures

**Lines A through C.** Provide projected hardware, software, and furniture & equipment capital expenditures for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

**Line D.** Provide any projected capital expenditures as a result of outsourcing. This should be included for start-up and years 1, 2, and 3. Specify the type of expenditure and describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box of Section III.

**Line E** – Please describe “other” capital expenditures in the *Comments/Notes* box.

**Line F.** Add lines A through E to arrive at the Total Capital Expenditures.

## Section IV – Projected Assets & Liabilities

**Lines A through C.** Provide projected cash, account receivables, and other current assets for start-up as well as for years 1, 2, and 3. For *Other Current Assets*, specify the type of asset and describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

**Line D.** Add lines A, B, C to arrive at the Total Current Assets.

**Lines E through G.** Provide projected accounts payable, short-term debt, and other current liabilities for start-up as well as for years 1, 2, and 3. For *Other Current Liabilities*, specify the type of liability and describe the total period of time the start-up up cost is expected to cover in the *Comments/Notes* box.

**Line H.** Ad lines E through G to arrive at the total current liabilities.

**Lines I through K.** Provide the projected fixed assets (PP&E), the 3-year reserve, and long-term assets for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

**Line L.** Ad lines I through K to arrive at the total long-term assets.

**Line M.** Provide the projected long-term debt for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box

## Section V – Projected Cash Flow

Cash flow is driven by *Projected Net Operations* (Section I), *Projected Capital Expenditures* (Section III), and *Projected Assets & Liabilities* (Section IV).

**Line A.** Provide the projected net operating cash flows for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

**Line B.** Provide the projected capital expenditures for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box of Section V.

**Lines C through F.** Provide the projected change in non-cash current assets, total current liabilities, debt adjustments, and other adjustments for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

**Line G.** Add lines A through F to arrive at the projected net cash flow for line H.

## **Section VI – Sources of Funds**

**Lines A & B.** Provide projected funds from debt and equity at start-up. Describe the sources of debt and equity funding as well as the total period of time the start-up is expected to cover in the *Comments/Notes* box. Please also provide evidence the funding (e.g., letter of commitment).

**Line C.** Add lines A and B to arrive at the total sources of funds for line C.

### **General Comments – Regarding Assumptions Used, Significant Variances Between Years, etc.**

Provide explanations for any significant variances between years (or expected in years beyond the timeframe of the template) in any category of costing or funding.

### **General Comments – Regarding how the Applicant Plans to Fund Operations**

Provide general comments explaining how you will fund operations. Funding should be explained in detail in response to question 48.

### **General Comments – Regarding Contingencies**

Provide general comments to describe your contingency planning. Contingency planning should be explained in detail in response to question 49.

TLD Applicant -- Financial Projections : **Sample**

In local currency (unless noted otherwise)

**Comments / Notes**

Provide name of local currency used.

Registration was forecasted based on recent market surveys which we have attached and discussed below. We do not anticipate significant increases in Registration Fees subsequent to year 3.

Other cash inflows represent advertising monies expected from display ads on our website.

Costs are further detailed and explained in response to question 47.

Provide a list and associated cost for each outsourced function:  
Outsourcing hot site to ABC Company, cost based on number of servers hosted and customer support  
Outsourced certain registry and other functions to ABC registry (applicant should list outsourced functions). Costs for each year are based on expected domains under management

Variable Costs:  
-Start Up equals all labor plus 75% of marketing.  
-Years 1 through 3 equal 75% of all labor plus 50% of Marketing, and 30% of G&A and Other Operating Costs  
Fixed Costs: equals Total Costs less Variable Costs

Check that I) C equals I) N.

Note: these are based on the applicant's cost to manage these functions and should be calculated separately from the Continued Operations Instrument (COI) for Question 50

Commensurate with Question 24  
Commensurate with Question 26  
Commensurate with Question 35  
Commensurate with Question 38  
Commensurate with Question 43

-Hardware & Software have a useful life of 3 years  
-Furniture & other equipment have a useful life of 5 years

List and describe each identifiable type of outsourcing.

Should equal amount calculated for Question 50

Principal payments on the line of credit with XYZ Bank will not be incurred until Year 5. Interest will be paid as incurred and is reflected in Sec. I) J.

The \$41k in Start Up Costs represents an offset of the Accounts Payable reflected in the Projected balance sheet. Subsequent years are based on changes in Current Liabilities where Prior Year is subtracted from the Current year.

See below for comments on funding. Revenues are further detailed and explained in response to question 48.

**General Comments (Notes Regarding Assumptions Used, Significant Variances Between Years, etc.):**

We expect the number of registrations to grow at approximately 30% per year with an increase in the registration fee of \$1 per year for the first three years. These volume assumptions are based on the attached (i) market data and (ii) published benchmark registry growth. Fee assumptions are aligned with the growth plan and anticipated demand based on the registration curve. We anticipate our costs will increase at a controlled pace over the first three years except for marketing costs which will be higher in the start-up and first year as we establish our brand name and work to increase registrations. Operating costs are supported by the attached (i) benchmark report for a basket of similar registries and (ii) a build-up of costs based on our current operations. Our capital expenditures will be greatest in the start-up phase and then our need to invest in computer hardware and software will level off after the start-up period. Capital expenses are based on contract drafts and discussions held with vendors. We have included and referenced the hardware costs to support the estimates. Our investment in Furniture and Equipment will be greatest in the start-up period as we build our infrastructure and then decrease in the following periods. Start-up: Our start-up phase is anticipated to comprise [X] months in line with benchmark growth curves indicated by prior start-ups and published market data. Our assumptions were derived from the attached support.

**Comments regarding how the Applicant plans to Fund operations:**

We have recently negotiated a line of credit with XYZ Bank (a copy of the fully executed line of credit agreement has been included with our application) and this funding will allow us to purchase necessary equipment and pay for employees and other Operating Costs during our start-up period and the first few years of operations. We expect that our business operation will be self funded (i.e., revenue from operations will cover all anticipated costs and capital expenditures) by the second half of our second year in operation; we also expect to become profitable with positive cash flow in year three.

**General Comments regarding contingencies:**

Although we expect to be cash flow positive by the end of year 2, the recently negotiated line of credit will cover our operating costs for the first 4 years of operation if necessary. We have also entered into an agreement with XYZ Co. to assume our registrants should our business model not have the ability to sustain itself in future years. Agreement with XYZ Co. has been included with our application. A full description of risks and a range of potential outcomes and impacts are included in our responses to Question 49. These responses have quantified the impacts of certain probabilities and our negotiated funding and action plans as shown, are adequate to fund our start-up phase.

# gTLD Applicant Guidebook

(v. 2012-01-11)

**Module 3**

11 January 2012

---

# Module 3

---

## Objection Procedures

This module describes two types of mechanisms that may affect an application:

- I. The procedure by which ICANN's Governmental Advisory Committee may provide GAC Advice on New gTLDs to the ICANN Board of Directors concerning a specific application. This module describes the purpose of this procedure, and how GAC Advice on New gTLDs is considered by the ICANN Board once received.
- II. The dispute resolution procedure triggered by a formal objection to an application by a third party. This module describes the purpose of the objection and dispute resolution mechanisms, the grounds for lodging a formal objection to a gTLD application, the general procedures for filing or responding to an objection, and the manner in which dispute resolution proceedings are conducted.

This module also discusses the guiding principles, or standards, that each dispute resolution panel will apply in reaching its expert determination.

All applicants should be aware of the possibility that a formal objection may be filed against any application, and of the procedures and options available in the event of such an objection.

### 3.1 GAC Advice on New gTLDs

---

ICANN's Governmental Advisory Committee was formed to consider and provide advice on the activities of ICANN as they relate to concerns of governments, particularly matters where there may be an interaction between ICANN's policies and various laws and international agreements or where they may affect public policy issues.

The process for GAC Advice on New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.

GAC members can raise concerns about any application to the GAC. The GAC as a whole will consider concerns

raised by GAC members, and agree on GAC advice to forward to the ICANN Board of Directors.

The GAC can provide advice on any application. For the Board to be able to consider the GAC advice during the evaluation process, the GAC advice would have to be submitted by the close of the Objection Filing Period (see Module 1).

GAC Advice may take one of the following forms:

- I. The GAC advises ICANN that it is the consensus of the GAC that a particular application should not proceed. This will create a strong presumption for the ICANN Board that the application should not be approved. The ICANN Board is also expected to provide a rationale for its decision if it does not follow the GAC Advice.
- II. The GAC advises ICANN that there are concerns about a particular application “dot-example.” The ICANN Board is expected to enter into dialogue with the GAC to understand the scope of concerns. The ICANN Board is also expected to provide a rationale for its decision.
- III. The GAC advises ICANN that an application should not proceed unless remediated. This will raise a strong presumption for the Board that the application should not proceed unless there is a remediation method available in the Guidebook (such as securing the approval of one or more governments), that is implemented by the applicant. If the issue identified by the GAC is not remediated, the ICANN Board is also expected to provide a rationale for its decision if the Board does not follow GAC advice.

Where GAC Advice on New gTLDs is received by the Board concerning an application, ICANN will publish the Advice and endeavor to notify the relevant applicant(s) promptly. The applicant will have a period of 21 calendar days from the publication date in which to submit a response to the ICANN Board.

ICANN will consider the GAC Advice on New gTLDs as soon as practicable. The Board may consult with independent experts, such as those designated to hear objections in the New gTLD Dispute Resolution Procedure, in cases where the issues raised in the GAC advice are pertinent to one of the subject matter areas of the objection procedures. The receipt of GAC advice will not toll the processing of any

application (i.e., an application will not be suspended but will continue through the stages of the application process).

## 3.2 *Public Objection and Dispute Resolution Process*

---

The independent dispute resolution process is designed to protect certain interests and rights. The process provides a path for formal objections during evaluation of the applications. It allows a party with standing to have its objection considered before a panel of qualified experts.

A formal objection can be filed only on four enumerated grounds, as described in this module. A formal objection initiates a dispute resolution proceeding. In filing an application for a gTLD, the applicant agrees to accept the applicability of this gTLD dispute resolution process. Similarly, an objector accepts the applicability of this gTLD dispute resolution process by filing its objection.

As described in section 3.1 above, ICANN's Governmental Advisory Committee has a designated process for providing advice to the ICANN Board of Directors on matters affecting public policy issues, and these objection procedures would not be applicable in such a case. The GAC may provide advice on any topic and is not limited to the grounds for objection enumerated in the public objection and dispute resolution process.

### 3.2.1 *Grounds for Objection*

---

A formal objection may be filed on any one of the following four grounds:

**String Confusion Objection** – The applied-for gTLD string is confusingly similar to an existing TLD or to another applied-for gTLD string in the same round of applications.

**Legal Rights Objection** – The applied-for gTLD string infringes the existing legal rights of the objector.

**Limited Public Interest Objection** – The applied-for gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under principles of international law.

**Community Objection** – There is substantial opposition to the gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.

The rationales for these objection grounds are discussed in the final report of the ICANN policy development process for new gTLDs. For more information on this process, see <http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-a-08aug07.htm>.

### 3.2.2 *Standing to Object*

Objectors must satisfy standing requirements to have their objections considered. As part of the dispute proceedings, all objections will be reviewed by a panel of experts designated by the applicable Dispute Resolution Service Provider (DRSP) to determine whether the objector has standing to object. Standing requirements for the four objection grounds are:

Objection ground	Who may object
String confusion	Existing TLD operator or gTLD applicant in current round. In the case where an IDN ccTLD Fast Track request has been submitted before the public posting of gTLD applications received, and the Fast Track requestor wishes to file a string confusion objection to a gTLD application, the Fast Track requestor will be granted standing.
Legal rights	Rightholders
Limited public interest	No limitations on who may file – however, subject to a “quick look” designed for early conclusion of frivolous and/or abusive objections
Community	Established institution associated with a clearly delineated community

#### 3.2.2.1 *String Confusion Objection*

Two types of entities have standing to object:

- An existing TLD operator may file a string confusion objection to assert string confusion between an applied-for gTLD and the TLD that it currently operates.
- Any gTLD applicant in this application round may file a string confusion objection to assert string confusion between an applied-for gTLD and the gTLD for which it has applied, where string confusion between the two applicants has not already been found in the Initial Evaluation. That is, an applicant does not have standing to object to another application with which it is already in a contention set as a result of the Initial Evaluation.

In the case where an existing TLD operator successfully asserts string confusion with an applicant, the application will be rejected.

In the case where a gTLD applicant successfully asserts string confusion with another applicant, the only possible outcome is for both applicants to be placed in a contention set and to be referred to a contention resolution procedure (refer to Module 4, String Contention Procedures). If an objection by one gTLD applicant to another gTLD application is unsuccessful, the applicants may both move forward in the process without being considered in direct contention with one another.

### 3.2.2.2 *Legal Rights Objection*

A rightsholder has standing to file a legal rights objection. The source and documentation of the existing legal rights the objector is claiming (which may include either registered or unregistered trademarks) are infringed by the applied-for gTLD must be included in the filing.

An intergovernmental organization (IGO) is eligible to file a legal rights objection if it meets the criteria for registration of a .INT domain name<sup>1</sup>:

- a) An international treaty between or among national governments must have established the organization; and
- b) The organization that is established must be widely considered to have independent international legal personality and must be the subject of and governed by international law.

The specialized agencies of the UN and the organizations having observer status at the UN General Assembly are also recognized as meeting the criteria.

### 3.2.2.3 *Limited Public Interest Objection*

Anyone may file a Limited Public Interest Objection. Due to the inclusive standing base, however, objectors are subject to a "quick look" procedure designed to identify and eliminate frivolous and/or abusive objections. An objection found to be manifestly unfounded and/or an abuse of the right to object may be dismissed at any time.

A Limited Public Interest objection would be manifestly unfounded if it did not fall within one of the categories that have been defined as the grounds for such an objection (see subsection 3.5.3).

---

<sup>1</sup> See also <http://www.iana.org/domains/int/policy/>.

A Limited Public Interest objection that is manifestly unfounded may also be an abuse of the right to object. An objection may be framed to fall within one of the accepted categories for Limited Public Interest objections, but other facts may clearly show that the objection is abusive. For example, multiple objections filed by the same or related parties against a single applicant may constitute harassment of the applicant, rather than a legitimate defense of legal norms that are recognized under general principles of international law. An objection that attacks the applicant, rather than the applied-for string, could be an abuse of the right to object.<sup>2</sup>

The quick look is the Panel's first task, after its appointment by the DRSP and is a review on the merits of the objection. The dismissal of an objection that is manifestly unfounded and/or an abuse of the right to object would be an Expert Determination, rendered in accordance with Article 21 of the New gTLD Dispute Resolution Procedure.

In the case where the quick look review does lead to the dismissal of the objection, the proceedings that normally follow the initial submissions (including payment of the full advance on costs) will not take place, and it is currently contemplated that the filing fee paid by the applicant would be refunded, pursuant to Procedure Article 14(e).

#### 3.2.2.4 Community Objection

Established institutions associated with clearly delineated communities are eligible to file a community objection. The community named by the objector must be a community strongly associated with the applied-for gTLD string in the application that is the subject of the objection. To qualify

---

<sup>2</sup> The jurisprudence of the European Court of Human Rights offers specific examples of how the term "manifestly ill-founded" has been interpreted in disputes relating to human rights. Article 35(3) of the European Convention on Human Rights provides: "The Court shall declare inadmissible any individual application submitted under Article 34 which it considers incompatible with the provisions of the Convention or the protocols thereto, manifestly ill-founded, or an abuse of the right of application." The ECHR renders reasoned decisions on admissibility, pursuant to Article 35 of the Convention. (Its decisions are published on the Court's website <http://www.echr.coe.int>.) In some cases, the Court briefly states the facts and the law and then announces its decision, without discussion or analysis. E.g., Decision as to the Admissibility of Application No. 34328/96 by Egbert Peree against the Netherlands (1998). In other cases, the Court reviews the facts and the relevant legal rules in detail, providing an analysis to support its conclusion on the admissibility of an application. Examples of such decisions regarding applications alleging violations of Article 10 of the Convention (freedom of expression) include: *Décision sur la recevabilité de la requête no 65831/01 présentée par Roger Garaudy contre la France* (2003); *Décision sur la recevabilité de la requête no 65297/01 présentée par Eduardo Fernando Alves Costa contre le Portugal* (2004).

The jurisprudence of the European Court of Human Rights also provides examples of the abuse of the right of application being sanctioned, in accordance with ECHR Article 35(3). See, for example, *Décision partielle sur la recevabilité de la requête no 61164/00 présentée par Gérard Duringer et autres contre la France et de la requête no 18589/02 contre la France* (2003).

for standing for a community objection, the objector must prove both of the following:

***It is an established institution*** – Factors that may be considered in making this determination include, but are not limited to:

- Level of global recognition of the institution;
- Length of time the institution has been in existence; and
- Public historical evidence of its existence, such as the presence of a formal charter or national or international registration, or validation by a government, inter-governmental organization, or treaty. The institution must not have been established solely in conjunction with the gTLD application process.

***It has an ongoing relationship with a clearly delineated community*** – Factors that may be considered in making this determination include, but are not limited to:

- The presence of mechanisms for participation in activities, membership, and leadership;
- Institutional purpose related to the benefit of the associated community;
- Performance of regular activities that benefit the associated community; and
- The level of formal boundaries around the community.

The panel will perform a balancing of the factors listed above, as well as other relevant information, in making its determination. It is not expected that an objector must demonstrate satisfaction of each and every factor considered in order to satisfy the standing requirements.

### ***3.2.3 Dispute Resolution Service Providers***

---

To trigger a dispute resolution proceeding, an objection must be filed by the posted deadline date, directly with the appropriate DRSP for each objection ground.

- The International Centre for Dispute Resolution has agreed to administer disputes brought pursuant to string confusion objections.

- The Arbitration and Mediation Center of the World Intellectual Property Organization has agreed to administer disputes brought pursuant to legal rights objections.
- The International Center of Expertise of the International Chamber of Commerce has agreed to administer disputes brought pursuant to Limited Public Interest and Community Objections.

ICANN selected DRSPs on the basis of their relevant experience and expertise, as well as their willingness and ability to administer dispute proceedings in the new gTLD Program. The selection process began with a public call for expressions of interest<sup>3</sup> followed by dialogue with those candidates who responded. The call for expressions of interest specified several criteria for providers, including established services, subject matter expertise, global capacity, and operational capabilities. An important aspect of the selection process was the ability to recruit panelists who will engender the respect of the parties to the dispute.

#### *3.2.4 Options in the Event of Objection*

---

Applicants whose applications are the subject of an objection have the following options:

The applicant can work to reach a settlement with the objector, resulting in withdrawal of the objection or the application;

The applicant can file a response to the objection and enter the dispute resolution process (refer to Section 3.2); or

The applicant can withdraw, in which case the objector will prevail by default and the application will not proceed further.

If for any reason the applicant does not file a response to an objection, the objector will prevail by default.

#### *3.2.5 Independent Objector*

---

A formal objection to a gTLD application may also be filed by the Independent Objector (IO). The IO does not act on behalf of any particular persons or entities, but acts solely in the best interests of the public who use the global Internet.

---

<sup>3</sup> See <http://www.icann.org/en/announcements/announcement-21dec07.htm>.

In light of this public interest goal, the Independent Objector is limited to filing objections on the grounds of Limited Public Interest and Community.

Neither ICANN staff nor the ICANN Board of Directors has authority to direct or require the IO to file or not file any particular objection. If the IO determines that an objection should be filed, he or she will initiate and prosecute the objection in the public interest.

**Mandate and Scope** - The IO may file objections against “highly objectionable” gTLD applications to which no objection has been filed. The IO is limited to filing two types of objections: (1) Limited Public Interest objections and (2) Community objections. The IO is granted standing to file objections on these enumerated grounds, notwithstanding the regular standing requirements for such objections (see subsection 3.1.2).

The IO may file a Limited Public Interest objection against an application even if a Community objection has been filed, and vice versa.

The IO may file an objection against an application, notwithstanding the fact that a String Confusion objection or a Legal Rights objection was filed.

Absent extraordinary circumstances, the IO is not permitted to file an objection to an application where an objection has already been filed on the same ground.

The IO may consider public comment when making an independent assessment whether an objection is warranted. The IO will have access to application comments received during the comment period.

In light of the public interest goal noted above, the IO shall not object to an application unless at least one comment in opposition to the application is made in the public sphere.

**Selection** – The IO will be selected by ICANN, through an open and transparent process, and retained as an independent consultant. The Independent Objector will be an individual with considerable experience and respect in the Internet community, unaffiliated with any gTLD applicant.

Although recommendations for IO candidates from the community are welcomed, the IO must be and remain independent and unaffiliated with any of the gTLD applicants. The various rules of ethics for judges and

international arbitrators provide models for the IO to declare and maintain his/her independence.

The IO's (renewable) tenure is limited to the time necessary to carry out his/her duties in connection with a single round of gTLD applications.

**Budget and Funding** – The IO's budget would comprise two principal elements: (a) salaries and operating expenses, and (b) dispute resolution procedure costs – both of which should be funded from the proceeds of new gTLD applications.

As an objector in dispute resolution proceedings, the IO is required to pay filing and administrative fees, as well as advance payment of costs, just as all other objectors are required to do. Those payments will be refunded by the DRSP in cases where the IO is the prevailing party.

In addition, the IO will incur various expenses in presenting objections before DRSP panels that will not be refunded, regardless of the outcome. These expenses include the fees and expenses of outside counsel (if retained) and the costs of legal research or factual investigations.

### 3.3 Filing Procedures

---

The information included in this section provides a summary of procedures for filing:

- Objections; and
- Responses to objections.

For a comprehensive statement of filing requirements applicable generally, refer to the New gTLD Dispute Resolution Procedure ("Procedure") included as an attachment to this module. In the event of any discrepancy between the information presented in this module and the Procedure, the Procedure shall prevail.

Note that the rules and procedures of each DRSP specific to each objection ground must also be followed.

- For a String Confusion Objection, the applicable DRSP Rules are the ICDR Supplementary Procedures for ICANN's New gTLD Program. These rules are available in draft form and have been posted along with this module.
- For a Legal Rights Objection, the applicable DRSP Rules are the WIPO Rules for New gTLD Dispute

Resolution. These rules are available and have been posted along with this module.

- For a Limited Public Interest Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce (ICC)<sup>4</sup>, as supplemented by the ICC as needed.
- For a Community Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce (ICC)<sup>5</sup>, as supplemented by the ICC as needed.

### 3.3.1 *Objection Filing Procedures*

---

The procedures outlined in this subsection must be followed by any party wishing to file a formal objection to an application that has been posted by ICANN. Should an applicant wish to file a formal objection to another gTLD application, it would follow these same procedures.

- All objections must be filed electronically with the appropriate DRSP by the posted deadline date. Objections will not be accepted by the DRSPs after this date.
- All objections must be filed in English.
- Each objection must be filed separately. An objector wishing to object to several applications must file a separate objection and pay the accompanying filing fees for each application that is the subject of an objection. If an objector wishes to object to an application on more than one ground, the objector must file separate objections and pay the accompanying filing fees for each objection ground.

Each objection filed by an objector must include:

- The name and contact information of the objector.
- A statement of the objector's basis for standing; that is, why the objector believes it meets the standing requirements to object.

---

<sup>4</sup> See <http://www.iccwbo.org/court/expertise/id4379/index.html>

<sup>5</sup> *Ibid.*

- A description of the basis for the objection, including:
  - A statement giving the specific ground upon which the objection is being filed.
  - A detailed explanation of the validity of the objection and why it should be upheld.
- Copies of any documents that the objector considers to be a basis for the objection.

Objections are limited to 5000 words or 20 pages, whichever is less, excluding attachments.

An objector must provide copies of all submissions to the DRSP associated with the objection proceedings to the applicant.

The DRSP will publish, and regularly update a list on its website identifying all objections as they are filed. ICANN will post on its website a notice of all objections filed once the objection filing period has closed.

### *3.3.2 Objection Filing Fees*

---

At the time an objection is filed, the objector is required to pay a filing fee in the amount set and published by the relevant DRSP. If the filing fee is not paid, the DRSP will dismiss the objection without prejudice. See Section 1.5 of Module 1 regarding fees.

Funding from ICANN for objection filing fees, as well as for advance payment of costs (see subsection 3.4.7 below) is available to the At-Large Advisory Committee (ALAC). Funding for ALAC objection filing and dispute resolution fees is contingent on publication by ALAC of its approved process for considering and making objections. At a minimum, the process for objecting to a gTLD application will require: bottom-up development of potential objections, discussion and approval of objections at the Regional At-Large Organization (RALO) level, and a process for consideration and approval of the objection by the At-Large Advisory Committee.

Funding from ICANN for objection filing fees, as well as for advance payment of costs, is available to individual national governments in the amount of USD 50,000 with the guarantee that a minimum of one objection per government will be fully funded by ICANN where requested. ICANN will develop a procedure for application and disbursement of funds.

Funding available from ICANN is to cover costs payable to the dispute resolution service provider and made directly to the dispute resolution service provider; it does not cover other costs such as fees for legal advice.

### ***3.3.3 Response Filing Procedures***

---

Upon notification that ICANN has published the list of all objections filed (refer to subsection 3.3.1), the DRSPs will notify the parties that responses must be filed within 30 calendar days of receipt of that notice. DRSPs will not accept late responses. Any applicant that fails to respond to an objection within the 30-day response period will be in default, which will result in the objector prevailing.

- All responses must be filed in English.
- Each response must be filed separately. That is, an applicant responding to several objections must file a separate response and pay the accompanying filing fee to respond to each objection.
- Responses must be filed electronically.

Each response filed by an applicant must include:

- The name and contact information of the applicant.
- A point-by-point response to the claims made by the objector.
- Any copies of documents that it considers to be a basis for the response.

Responses are limited to 5000 words or 20 pages, whichever is less, excluding attachments.

Each applicant must provide copies of all submissions to the DRSP associated with the objection proceedings to the objector.

### ***3.3.4 Response Filing Fees***

---

At the time an applicant files its response, it is required to pay a filing fee in the amount set and published by the relevant DRSP, which will be the same as the filing fee paid by the objector. If the filing fee is not paid, the response will be disregarded, which will result in the objector prevailing.

## ***3.4 Objection Processing Overview***

---

The information below provides an overview of the process by which DRSPs administer dispute proceedings that have

been initiated. For comprehensive information, please refer to the New gTLD Dispute Resolution Procedure (included as an attachment to this module).

### ***3.4.1 Administrative Review***

---

Each DRSP will conduct an administrative review of each objection for compliance with all procedural rules within 14 calendar days of receiving the objection. Depending on the number of objections received, the DRSP may ask ICANN for a short extension of this deadline.

If the DRSP finds that the objection complies with procedural rules, the objection will be deemed filed, and the proceedings will continue. If the DRSP finds that the objection does not comply with procedural rules, the DRSP will dismiss the objection and close the proceedings without prejudice to the objector's right to submit a new objection that complies with procedural rules. The DRSP's review or rejection of the objection will not interrupt the time limit for filing an objection.

### ***3.4.2 Consolidation of Objections***

---

Once the DRSP receives and processes all objections, at its discretion the DRSP may elect to consolidate certain objections. The DRSP shall endeavor to decide upon consolidation prior to issuing its notice to applicants that the response should be filed and, where appropriate, shall inform the parties of the consolidation in that notice.

An example of a circumstance in which consolidation might occur is multiple objections to the same application based on the same ground.

In assessing whether to consolidate objections, the DRSP will weigh the efficiencies in time, money, effort, and consistency that may be gained by consolidation against the prejudice or inconvenience consolidation may cause. The DRSPs will endeavor to have all objections resolved on a similar timeline. It is intended that no sequencing of objections will be established.

New gTLD applicants and objectors also will be permitted to propose consolidation of objections, but it will be at the DRSP's discretion whether to agree to the proposal.

ICANN continues to strongly encourage all of the DRSPs to consolidate matters whenever practicable.

### 3.4.3 *Mediation*

---

The parties to a dispute resolution proceeding are encouraged—but not required—to participate in mediation aimed at settling the dispute. Each DRSP has experts who can be retained as mediators to facilitate this process, should the parties elect to do so, and the DRSPs will communicate with the parties concerning this option and any associated fees.

If a mediator is appointed, that person may not serve on the panel constituted to issue an expert determination in the related dispute.

There are no automatic extensions of time associated with the conduct of negotiations or mediation. The parties may submit joint requests for extensions of time to the DRSP according to its procedures, and the DRSP or the panel, if appointed, will decide whether to grant the requests, although extensions will be discouraged. Absent exceptional circumstances, the parties must limit their requests for extension to 30 calendar days.

The parties are free to negotiate without mediation at any time, or to engage a mutually acceptable mediator of their own accord.

### 3.4.4 *Selection of Expert Panels*

---

A panel will consist of appropriately qualified experts appointed to each proceeding by the designated DRSP. Experts must be independent of the parties to a dispute resolution proceeding. Each DRSP will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing an expert for lack of independence.

There will be one expert in proceedings involving a string confusion objection.

There will be one expert, or, if all parties agree, three experts with relevant experience in intellectual property rights disputes in proceedings involving an existing legal rights objection.

There will be three experts recognized as eminent jurists of international reputation, with expertise in relevant fields as appropriate, in proceedings involving a Limited Public Interest objection.

There will be one expert in proceedings involving a community objection.

Neither the experts, the DRSP, ICANN, nor their respective employees, directors, or consultants will be liable to any party in any action for damages or injunctive relief for any act or omission in connection with any proceeding under the dispute resolution procedures.

### ***3.4.5 Adjudication***

---

The panel may decide whether the parties shall submit any written statements in addition to the filed objection and response, and may specify time limits for such submissions.

In order to achieve the goal of resolving disputes rapidly and at reasonable cost, procedures for the production of documents shall be limited. In exceptional cases, the panel may require a party to produce additional evidence.

Disputes will usually be resolved without an in-person hearing. The panel may decide to hold such a hearing only in extraordinary circumstances.

### ***3.4.6 Expert Determination***

---

The DRSPs' final expert determinations will be in writing and will include:

- A summary of the dispute and findings;
- An identification of the prevailing party; and
- The reasoning upon which the expert determination is based.

Unless the panel decides otherwise, each DRSP will publish all decisions rendered by its panels in full on its website.

The findings of the panel will be considered an expert determination and advice that ICANN will accept within the dispute resolution process.

### ***3.4.7 Dispute Resolution Costs***

---

Before acceptance of objections, each DRSP will publish a schedule of costs or statement of how costs will be calculated for the proceedings that it administers under this procedure. These costs cover the fees and expenses of the members of the panel and the DRSP's administrative costs.

ICANN expects that string confusion and legal rights objection proceedings will involve a fixed amount charged by the panelists while Limited Public Interest and

community objection proceedings will involve hourly rates charged by the panelists.

Within ten (10) calendar days of constituting the panel, the DRSP will estimate the total costs and request advance payment in full of its costs from both the objector and the applicant. Each party must make its advance payment within ten (10) calendar days of receiving the DRSP's request for payment and submit to the DRSP evidence of such payment. The respective filing fees paid by the parties will be credited against the amounts due for this advance payment of costs.

The DRSP may revise its estimate of the total costs and request additional advance payments from the parties during the resolution proceedings.

Additional fees may be required in specific circumstances; for example, if the DRSP receives supplemental submissions or elects to hold a hearing.

If an objector fails to pay these costs in advance, the DRSP will dismiss its objection and no fees paid by the objector will be refunded.

If an applicant fails to pay these costs in advance, the DRSP will sustain the objection and no fees paid by the applicant will be refunded.

After the hearing has taken place and the panel renders its expert determination, the DRSP will refund the advance payment of costs to the prevailing party.

### **3.5 Dispute Resolution Principles (Standards)**

---

Each panel will use appropriate general principles (standards) to evaluate the merits of each objection. The principles for adjudication on each type of objection are specified in the paragraphs that follow. The panel may also refer to other relevant rules of international law in connection with the standards.

The objector bears the burden of proof in each case.

The principles outlined below are subject to evolution based on ongoing consultation with DRSPs, legal experts, and the public.

### 3.5.1 *String Confusion Objection*

---

A DRSP panel hearing a string confusion objection will consider whether the applied-for gTLD string is likely to result in string confusion. String confusion exists where a string so nearly resembles another that it is likely to deceive or cause confusion. For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

### 3.5.2 *Legal Rights Objection*

---

In interpreting and giving meaning to GNSO Recommendation 3 (“Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law”), a DRSP panel of experts presiding over a legal rights objection will determine whether the potential use of the applied-for gTLD by the applicant takes unfair advantage of the distinctive character or the reputation of the objector’s registered or unregistered trademark or service mark (“mark”) or IGO name or acronym (as identified in the treaty establishing the organization), or unjustifiably impairs the distinctive character or the reputation of the objector’s mark or IGO name or acronym, or otherwise creates an impermissible likelihood of confusion between the applied-for gTLD and the objector’s mark or IGO name or acronym.

In the case where the objection is based on trademark rights, the panel will consider the following non-exclusive factors:

1. Whether the applied-for gTLD is identical or similar, including in appearance, phonetic sound, or meaning, to the objector’s existing mark.
2. Whether the objector’s acquisition and use of rights in the mark has been bona fide.
3. Whether and to what extent there is recognition in the relevant sector of the public of the sign corresponding to the gTLD, as the mark of the objector, of the applicant or of a third party.
4. Applicant’s intent in applying for the gTLD, including whether the applicant, at the time of application for the gTLD, had knowledge of the objector’s mark, or could not have reasonably been unaware of that mark, and including whether the applicant has

engaged in a pattern of conduct whereby it applied for or operates TLDs or registrations in TLDs which are identical or confusingly similar to the marks of others.

5. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the gTLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise by the objector of its mark rights.
6. Whether the applicant has marks or other intellectual property rights in the sign corresponding to the gTLD, and, if so, whether any acquisition of such a right in the sign, and use of the sign, has been bona fide, and whether the purported or likely use of the gTLD by the applicant is consistent with such acquisition or use.
7. Whether and to what extent the applicant has been commonly known by the sign corresponding to the gTLD, and if so, whether any purported or likely use of the gTLD by the applicant is consistent therewith and bona fide.
8. Whether the applicant's intended use of the gTLD would create a likelihood of confusion with the objector's mark as to the source, sponsorship, affiliation, or endorsement of the gTLD.

In the case where a legal rights objection has been filed by an IGO, the panel will consider the following non-exclusive factors:

1. Whether the applied-for gTLD is identical or similar, including in appearance, phonetic sound or meaning, to the name or acronym of the objecting IGO;
2. Historical coexistence of the IGO and the applicant's use of a similar name or acronym. Factors considered may include:
  - a. Level of global recognition of both entities;
  - b. Length of time the entities have been in existence;
  - c. Public historical evidence of their existence, which may include whether the objecting IGO has communicated its name or abbreviation under Article 6<sup>ter</sup> of the Paris Convention for the Protection of Industrial Property.

3. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the TLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise of the objecting IGO's name or acronym;
4. Whether and to what extent the applicant has been commonly known by the sign corresponding to the applied-for gTLD, and if so, whether any purported or likely use of the gTLD by the applicant is consistent therewith and bona fide; and
5. Whether the applicant's intended use of the applied-for gTLD would create a likelihood of confusion with the objecting IGO's name or acronym as to the source, sponsorship, affiliation, or endorsement of the TLD.

### ***3.5.3 Limited Public Interest Objection***

---

An expert panel hearing a Limited Public Interest objection will consider whether the applied-for gTLD string is contrary to general principles of international law for morality and public order.

Examples of instruments containing such general principles include:

- The Universal Declaration of Human Rights (UDHR)
- The International Covenant on Civil and Political Rights (ICCPR)
- The Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW)
- The International Convention on the Elimination of All Forms of Racial Discrimination
- Declaration on the Elimination of Violence against Women
- The International Covenant on Economic, Social, and Cultural Rights
- The Convention against Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment
- The International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families

- Slavery Convention
- Convention on the Prevention and Punishment of the Crime of Genocide
- Convention on the Rights of the Child

Note that these are included to serve as examples, rather than an exhaustive list. It should be noted that these instruments vary in their ratification status. Additionally, states may limit the scope of certain provisions through reservations and declarations indicating how they will interpret and apply certain provisions. National laws not based on principles of international law are not a valid ground for a Limited Public Interest objection.

Under these principles, everyone has the right to freedom of expression, but the exercise of this right carries with it special duties and responsibilities. Accordingly, certain limited restrictions may apply.

The grounds upon which an applied-for gTLD string may be considered contrary to generally accepted legal norms relating to morality and public order that are recognized under principles of international law are:

- Incitement to or promotion of violent lawless action;
- Incitement to or promotion of discrimination based upon race, color, gender, ethnicity, religion or national origin, or other similar types of discrimination that violate generally accepted legal norms recognized under principles of international law;
- Incitement to or promotion of child pornography or other sexual abuse of children; or
- A determination that an applied-for gTLD string would be contrary to specific principles of international law as reflected in relevant international instruments of law.

The panel will conduct its analysis on the basis of the applied-for gTLD string itself. The panel may, if needed, use as additional context the intended purpose of the TLD as stated in the application.

#### *3.5.4 Community Objection*

---

The four tests described here will enable a DRSP panel to determine whether there is substantial opposition from a

significant portion of the community to which the string may be targeted. For an objection to be successful, the objector must prove that:

- The community invoked by the objector is a clearly delineated community; and
- Community opposition to the application is substantial; and
- There is a strong association between the community invoked and the applied-for gTLD string; and
- The application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted. Each of these tests is described in further detail below.

**Community** – The objector must prove that the community expressing opposition can be regarded as a clearly delineated community. A panel could balance a number of factors to determine this, including but not limited to:

- The level of public recognition of the group as a community at a local and/or global level;
- The level of formal boundaries around the community and what persons or entities are considered to form the community;
- The length of time the community has been in existence;
- The global distribution of the community (this may not apply if the community is territorial); and
- The number of people or entities that make up the community.

If opposition by a number of people/entities is found, but the group represented by the objector is not determined to be a clearly delineated community, the objection will fail.

**Substantial Opposition** – The objector must prove substantial opposition within the community it has identified itself as representing. A panel could balance a number of factors to determine whether there is substantial opposition, including but not limited to:

- Number of expressions of opposition relative to the composition of the community;

- The representative nature of entities expressing opposition;
- Level of recognized stature or weight among sources of opposition;
- Distribution or diversity among sources of expressions of opposition, including:
  - Regional
  - Subsectors of community
  - Leadership of community
  - Membership of community
- Historical defense of the community in other contexts; and
- Costs incurred by objector in expressing opposition, including other channels the objector may have used to convey opposition.

If some opposition within the community is determined, but it does not meet the standard of substantial opposition, the objection will fail.

**Targeting** – The objector must prove a strong association between the applied-for gTLD string and the community represented by the objector. Factors that could be balanced by a panel to determine this include but are not limited to:

- Statements contained in application;
- Other public statements by the applicant;
- Associations by the public.

If opposition by a community is determined, but there is no strong association between the community and the applied-for gTLD string, the objection will fail.

**Detriment** – The objector must prove that the application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted. An allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a finding of material detriment.

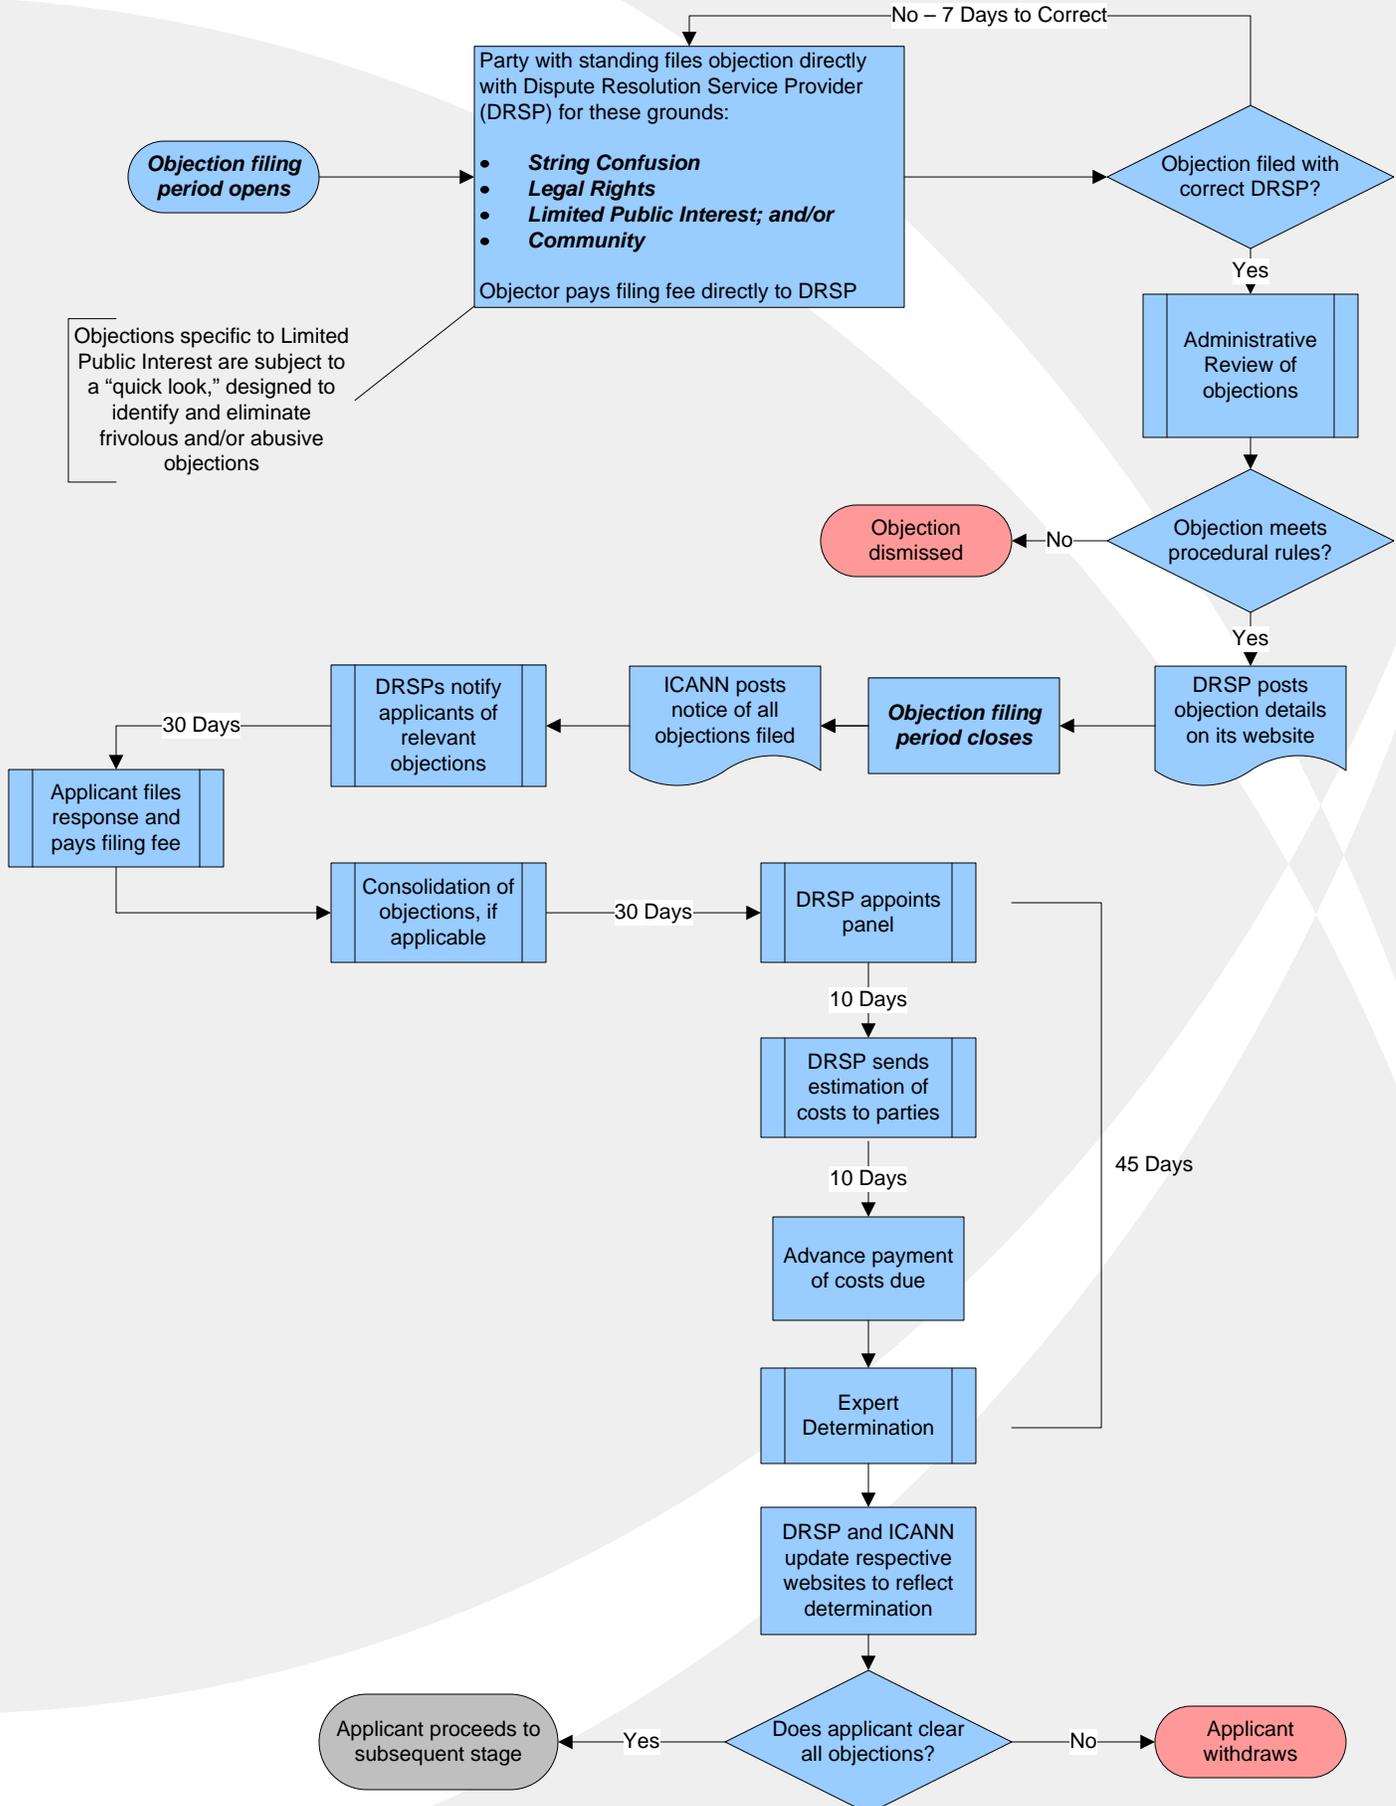

Factors that could be used by a panel in making this determination include but are not limited to:

- Nature and extent of damage to the reputation of the community represented by the objector that would result from the applicant's operation of the applied-for gTLD string;
- Evidence that the applicant is not acting or does not intend to act in accordance with the interests of the community or of users more widely, including evidence that the applicant has not proposed or does not intend to institute effective security protection for user interests;
- Interference with the core activities of the community that would result from the applicant's operation of the applied-for gTLD string;
- Dependence of the community represented by the objector on the DNS for its core activities;
- Nature and extent of concrete or economic damage to the community represented by the objector that would result from the applicant's operation of the applied-for gTLD string; and
- Level of certainty that alleged detrimental outcomes would occur.

If opposition by a community is determined, but there is no likelihood of material detriment to the targeted community resulting from the applicant's operation of the applied-for gTLD, the objection will fail.

The objector must meet all four tests in the standard for the objection to prevail.

# DRAFT - New gTLD Program – Objection and Dispute Resolution

---

# *Attachment to Module 3*

---

## *New gTLD Dispute Resolution Procedure*

These Procedures were designed with an eye toward timely and efficient dispute resolution. As part of the New gTLD Program, these Procedures apply to all proceedings administered by each of the dispute resolution service providers (DRSP). Each of the DRSPs has a specific set of rules that will also apply to such proceedings.

## NEW gTLD DISPUTE RESOLUTION PROCEDURE

### Article 1. ICANN's New gTLD Program

- (a) The Internet Corporation for Assigned Names and Numbers ("ICANN") has implemented a program for the introduction of new generic Top-Level Domain Names ("gTLDs") in the internet. There will be a succession of rounds, during which applicants may apply for new gTLDs, in accordance with terms and conditions set by ICANN.
- (b) The new gTLD program includes a dispute resolution procedure, pursuant to which disputes between a person or entity who applies for a new gTLD and a person or entity who objects to that gTLD are resolved in accordance with this New gTLD Dispute Resolution Procedure (the "Procedure").
- (c) Dispute resolution proceedings shall be administered by a Dispute Resolution Service Provider ("DRSP") in accordance with this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (d) By applying for a new gTLD, an applicant accepts the applicability of this Procedure and the applicable DRSP's Rules that are identified in Article 4(b); by filing an objection to a new gTLD, an objector accepts the applicability of this Procedure and the applicable DRSP's Rules that are identified in Article 4(b). The parties cannot derogate from this Procedure without the express approval of ICANN and from the applicable DRSP Rules without the express approval of the relevant DRSP.

### Article 2. Definitions

- (a) The "Applicant" or "Respondent" is an entity that has applied to ICANN for a new gTLD and that will be the party responding to the Objection.
- (b) The "Objector" is one or more persons or entities who have filed an objection against a new gTLD for which an application has been submitted.
- (c) The "Panel" is the panel of Experts, comprising one or three "Experts," that has been constituted by a DRSP in accordance with this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (d) The "Expert Determination" is the decision upon the merits of the Objection that is rendered by a Panel in a proceeding conducted under this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (e) The grounds upon which an objection to a new gTLD may be filed are set out in full in Module 3 of the Applicant Guidebook. Such grounds are identified in this Procedure, and are based upon the Final Report on the Introduction of New Generic Top-Level Domains, dated 7 August 2007, issued by the ICANN Generic Names Supporting Organization (GNSO), as follows:
  - (i) "String Confusion Objection" refers to the objection that the string comprising the potential gTLD is confusingly similar to an existing top-level domain or another string applied for in the same round of applications.
  - (ii) "Existing Legal Rights Objection" refers to the objection that the string comprising the potential new gTLD infringes the existing legal rights of others

that are recognized or enforceable under generally accepted and internationally recognized principles of law.

- (iii) “Limited Public Interest Objection” refers to the objection that the string comprising the potential new gTLD is contrary to generally accepted legal norms relating to morality and public order that are recognized under principles of international law.
- (iv) “Community Objection” refers to the objection that there is substantial opposition to the application from a significant portion of the community to which the string may be explicitly or implicitly targeted.
- (f) “DRSP Rules” are the rules of procedure of a particular DRSP that have been identified as being applicable to objection proceedings under this Procedure.

### **Article 3. Dispute Resolution Service Providers**

The various categories of disputes shall be administered by the following DRSPs:

- (a) String Confusion Objections shall be administered by the International Centre for Dispute Resolution.
- (b) Existing Legal Rights Objections shall be administered by the Arbitration and Mediation Center of the World Intellectual Property Organization.
- (c) Limited Public Interest Objections shall be administered by the International Centre for Expertise of the International Chamber of Commerce.
- (d) Community Objections shall be administered by the International Centre for Expertise of the International Chamber of Commerce.

### **Article 4. Applicable Rules**

- (a) All proceedings before the Panel shall be governed by this Procedure and by the DRSP Rules that apply to a particular category of objection. The outcome of the proceedings shall be deemed an Expert Determination, and the members of the Panel shall act as experts.
- (b) The applicable DRSP Rules are the following:
  - (i) For a String Confusion Objection, the applicable DRSP Rules are the ICDR Supplementary Procedures for ICANN’s New gTLD Program.
  - (ii) For an Existing Legal Rights Objection, the applicable DRSP Rules are the WIPO Rules for New gTLD Dispute Resolution.
  - (iii) For a Limited Public Interest Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce (ICC), as supplemented by the ICC as needed.
  - (iv) For a Community Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce (ICC), as supplemented by the ICC as needed.
- (c) In the event of any discrepancy between this Procedure and the applicable DRSP Rules, this Procedure shall prevail.

- (d) The place of the proceedings, if relevant, shall be the location of the DRSP that is administering the proceedings.
- (e) In all cases, the Panel shall ensure that the parties are treated with equality, and that each party is given a reasonable opportunity to present its position.

#### **Article 5. Language**

- (a) The language of all submissions and proceedings under this Procedure shall be English.
- (b) Parties may submit supporting evidence in its original language, provided and subject to the authority of the Panel to determine otherwise, that such evidence is accompanied by a certified or otherwise official English translation of all relevant text.

#### **Article 6. Communications and Time Limits**

- (a) All communications by the Parties with the DRSPs and Panels must be submitted electronically. A Party that wishes to make a submission that is not available in electronic form (e.g., evidentiary models) shall request leave from the Panel to do so, and the Panel, in its sole discretion, shall determine whether to accept the non-electronic submission.
- (b) The DRSP, Panel, Applicant, and Objector shall provide copies to one another of all correspondence (apart from confidential correspondence between the Panel and the DRSP and among the Panel) regarding the proceedings.
- (c) For the purpose of determining the date of commencement of a time limit, a notice or other communication shall be deemed to have been received on the day that it is transmitted in accordance with paragraphs (a) and (b) of this Article.
- (d) For the purpose of determining compliance with a time limit, a notice or other communication shall be deemed to have been sent, made or transmitted if it is dispatched in accordance with paragraphs (a) and (b) of this Article prior to or on the day of the expiration of the time limit.
- (e) For the purpose of calculating a period of time under this Procedure, such period shall begin to run on the day following the day when a notice or other communication is received.
- (f) Unless otherwise stated, all time periods provided in the Procedure are calculated on the basis of calendar days

#### **Article 7. Filing of the Objection**

- (a) A person wishing to object to a new gTLD for which an application has been submitted may file an objection ("Objection"). Any Objection to a proposed new gTLD must be filed before the published closing date for the Objection Filing period.
- (b) The Objection must be filed with the appropriate DRSP, using a model form made available by that DRSP, with copies to ICANN and the Applicant.
- (c) The electronic addresses for filing Objections (the specific addresses shall be made available once they are created by providers):
  - (i) A String Confusion Objection must be filed at: [●].

- (ii) An Existing Legal Rights Objection must be filed at: [●].
  - (iii) A Limited Public Interest Objection must be filed at: [●].
  - (iv) A Community Objection must be filed at: [●].
- (d) All Objections must be filed separately:
- (i) An Objector who wishes to object to an application on more than one ground must file separate objections with the appropriate DRSP(s).
  - (ii) An Objector who wishes to object to more than one gTLD must file separate objections to each gTLD with the appropriate DRSP(s).
- (e) If an Objection is filed with the wrong DRSP, that DRSP shall promptly notify the Objector of the error and that DRSP shall not process the incorrectly filed Objection. The Objector may then cure the error by filing its Objection with the correct DRSP within seven (7) days of receipt of the error notice, failing which the Objection shall be disregarded. If the Objection is filed with the correct DRSP within seven (7) days of receipt of the error notice but after the lapse of the time for submitting an Objection stipulation by Article 7(a) of this Procedure, it shall be deemed to be within this time limit.

## **Article 8. Content of the Objection**

- (a) The Objection shall contain, *inter alia*, the following information:
- (i) The names and contact information (address, telephone number, email address, etc.) of the Objector;
  - (ii) A statement of the Objector's basis for standing; and
  - (iii) A description of the basis for the Objection, including:
    - (aa) A statement of the ground upon which the Objection is being filed, as stated in Article 2(e) of this Procedure;
    - (bb) An explanation of the validity of the Objection and why the objection should be upheld.
- (b) The substantive portion of the Objection shall be limited to 5,000 words or 20 pages, whichever is less, excluding attachments. The Objector shall also describe and provide copies of any supporting or official documents upon which the Objection is based.
- (c) At the same time as the Objection is filed, the Objector shall pay a filing fee in the amount set in accordance with the applicable DRSP Rules and include evidence of such payment in the Objection. In the event that the filing fee is not paid within ten (10) days of the receipt of the Objection by the DRSP, the Objection shall be dismissed without prejudice.

## **Article 9. Administrative Review of the Objection**

- (a) The DRSP shall conduct an administrative review of the Objection for the purpose of verifying compliance with Articles 5-8 of this Procedure and the applicable DRSP Rules, and inform the Objector, the Applicant and ICANN of the result of its review within

fourteen (14) days of its receipt of the Objection. The DRSP may extend this time limit for reasons explained in the notification of such extension.

- (b) If the DRSP finds that the Objection complies with Articles 5-8 of this Procedure and the applicable DRSP Rules, the DRSP shall confirm that the Objection shall be registered for processing.
- (c) If the DRSP finds that the Objection does not comply with Articles 5-8 of this Procedure and the applicable DRSP Rules, the DRSP shall have the discretion to request that any administrative deficiencies in the Objection be corrected within five (5) days. If the deficiencies in the Objection are cured within the specified period but after the lapse of the time limit for submitting an Objection stipulated by Article 7(a) of this Procedure, the Objection shall be deemed to be within this time limit.
- (d) If the DRSP finds that the Objection does not comply with Articles 5-8 of this Procedure and the applicable DRSP Rules, and the deficiencies in the Objection are not corrected within the period specified in Article 9(c), the DRSP shall dismiss the Objection and close the proceedings, without prejudice to the Objector's submission of a new Objection that complies with this Procedure, provided that the Objection is filed within the deadline for filing such Objections. The DRSP's review of the Objection shall not interrupt the running of the time limit for submitting an Objection stipulated by Article 7(a) of this Procedure.
- (e) Immediately upon registering an Objection for processing, pursuant to Article 9(b), the DRSP shall post the following information about the Objection on its website: (i) the proposed string to which the Objection is directed; (ii) the names of the Objector and the Applicant; (iii) the grounds for the Objection; and (iv) the dates of the DRSP's receipt of the Objection.

## **Article 10. ICANN's Dispute Announcement**

- (a) Within thirty (30) days of the deadline for filing Objections in relation to gTLD applications in a given round, ICANN shall publish a document on its website identifying all of the admissible Objections that have been filed (the "Dispute Announcement"). ICANN shall also directly inform each DRSP of the posting of the Dispute Announcement.
- (b) ICANN shall monitor the progress of all proceedings under this Procedure and shall take steps, where appropriate, to coordinate with any DRSP in relation to individual applications for which objections are pending before more than one DRSP.

## **Article 11. Response to the Objection**

- (a) Upon receipt of the Dispute Announcement, each DRSP shall promptly send a notice to: (i) each Applicant for a new gTLD to which one or more admissible Objections have been filed with that DRSP; and (ii) the respective Objector(s).
- (b) The Applicant shall file a response to each Objection (the "Response"). The Response shall be filed within thirty (30) days of the transmission of the notice by the DRSP pursuant to Article 11(a).
- (c) The Response must be filed with the appropriate DRSP, using a model form made available by that DRSP, with copies to ICANN and the Objector.

- (d) The Response shall contain, inter alia, the following information:
  - (i) The names and contact information (address, telephone number, email address, etc.) of the Applicant; and
  - (ii) A point-by-point response to the statements made in the Objection.
- (e) The substantive portion of the Response shall be limited to 5,000 words or 20 pages, whichever is less, excluding attachments. The Applicant shall also describe and provide copies of any supporting or official documents upon which the Response is based.
- (f) At the same time as the Response is filed, the Applicant shall pay a filing fee in the amount set and published by the relevant DRSP (which shall be the same as the filing fee paid by the Objector) and include evidence of such payment in the Response. In the event that the filing fee is not paid within ten (10) days of the receipt of the Response by the DRSP, the Applicant shall be deemed to be in default, any Response disregarded and the Objection shall be deemed successful.
- (g) If the DRSP finds that the Response does not comply with Articles 11(c) and (d)(1) of this Procedure and the applicable DRSP Rules, the DRSP shall have the discretion to request that any administrative deficiencies in the Response be corrected within five (5) days. If the administrative deficiencies in the Response are cured within the specified period but after the lapse of the time limit for submitting a Response pursuant to this Procedure, the Response shall be deemed to be within this time limit.
- (g) If the Applicant fails to file a Response to the Objection within the 30-day time limit, the Applicant shall be deemed to be in default and the Objection shall be deemed successful. No fees paid by the Applicant will be refunded in case of default.

## **Article 12. Consolidation of Objections**

- (a) The DRSP is encouraged, whenever possible and practicable, and as may be further stipulated in the applicable DRSP Rules, to consolidate Objections, for example, when more than one Objector has filed an Objection to the same gTLD on the same grounds. The DRSP shall endeavor to decide upon consolidation prior to issuing its notice pursuant to Article 11(a) and, where appropriate, shall inform the parties of the consolidation in that notice.
- (b) If the DRSP itself has not decided to consolidate two or more Objections, any Applicant or Objector may propose the consolidation of Objections within seven (7) days of the notice given by the DRSP pursuant to Article 11(a). If, following such a proposal, the DRSP decides to consolidate certain Objections, which decision must be made within 14 days of the notice given by the DRSP pursuant to Article 11(a), the deadline for the Applicant's Response in the consolidated proceeding shall be thirty (30) days from the Applicant's receipt of the DRSP's notice of consolidation.
- (c) In deciding whether to consolidate Objections, the DRSP shall weigh the benefits (in terms of time, cost, consistency of decisions, etc.) that may result from the consolidation against the possible prejudice or inconvenience that the consolidation may cause. The DRSP's determination on consolidation shall be final and not subject to appeal.
- (d) Objections based upon different grounds, as summarized in Article 2(e), shall not be consolidated.

### **Article 13. The Panel**

- (a) The DRSP shall select and appoint the Panel of Expert(s) within thirty (30) days after receiving the Response.
- (b) Number and specific qualifications of Expert(s):
  - (i) There shall be one Expert in proceedings involving a String Confusion Objection.
  - (ii) There shall be one Expert or, if all of the Parties so agree, three Experts with relevant experience in intellectual property rights disputes in proceedings involving an Existing Legal Rights Objection.
  - (iii) There shall be three Experts recognized as eminent jurists of international reputation, one of whom shall be designated as the Chair. The Chair shall be of a nationality different from the nationalities of the Applicant and of the Objector, in proceedings involving a Limited Public Interest Objection.
  - (iv) There shall be one Expert in proceedings involving a Community Objection.
- (c) All Experts acting under this Procedure shall be impartial and independent of the parties. The applicable DRSP Rules stipulate the manner by which each Expert shall confirm and maintain their impartiality and independence.
- (d) The applicable DRSP Rules stipulate the procedures for challenging an Expert and replacing an Expert.
- (e) Unless required by a court of law or authorized in writing by the parties, an Expert shall not act in any capacity whatsoever, in any pending or future proceedings, whether judicial, arbitral or otherwise, relating to the matter referred to expert determination under this Procedure.

### **Article 14. Costs**

- (a) Each DRSP shall determine the costs for the proceedings that it administers under this Procedure in accordance with the applicable DRSP Rules. Such costs shall cover the fees and expenses of the members of the Panel, as well as the administrative fees of the DRSP (the "Costs").
- (b) Within ten (10) days of constituting the Panel, the DRSP shall estimate the total Costs and request the Objector and the Applicant/Respondent each to pay in advance the full amount of the Costs to the DRSP. Each party shall make its advance payment of Costs within ten (10) days of receiving the DRSP's request for payment and submit to the DRSP evidence of such payment. The respective filing fees paid by the Parties shall be credited against the amounts due for this advance payment of Costs.
- (c) The DRSP may revise its estimate of the total Costs and request additional advance payments from the parties during the proceedings.
- (d) Failure to make an advance payment of Costs:
  - (i) If the Objector fails to make the advance payment of Costs, its Objection shall be dismissed and no fees that it has paid shall be refunded.

- (ii) If the Applicant fails to make the advance payment of Costs, the Objection will be deemed to have been sustained and no fees that the Applicant has paid shall be refunded.
- (e) Upon the termination of the proceedings, after the Panel has rendered its Expert Determination, the DRSP shall refund to the prevailing party, as determined by the Panel, its advance payment(s) of Costs.

### **Article 15. Representation and Assistance**

- (a) The parties may be represented or assisted by persons of their choice.
- (b) Each party or party representative shall communicate the name, contact information and function of such persons to the DRSP and the other party (or parties in case of consolidation).

### **Article 16. Negotiation and Mediation**

- (a) The parties are encouraged, but not required, to participate in negotiations and/or mediation at any time throughout the dispute resolution process aimed at settling their dispute amicably.
- (b) Each DRSP shall be able to propose, if requested by the parties, a person who could assist the parties as mediator.
- (c) A person who acts as mediator for the parties shall not serve as an Expert in a dispute between the parties under this Procedure or any other proceeding under this Procedure involving the same gTLD.
- (d) The conduct of negotiations or mediation shall not, *ipso facto*, be the basis for a suspension of the dispute resolution proceedings or the extension of any deadline under this Procedure. Upon the joint request of the parties, the DRSP or (after it has been constituted) the Panel may grant the extension of a deadline or the suspension of the proceedings. Absent exceptional circumstances, such extension or suspension shall not exceed thirty (30) days and shall not delay the administration of any other Objection.
- (e) If, during negotiations and/or mediation, the parties agree on a settlement of the matter referred to the DRSP under this Procedure, the parties shall inform the DRSP, which shall terminate the proceedings, subject to the parties' payment obligation under this Procedure having been satisfied, and inform ICANN and the parties accordingly.

### **Article 17. Additional Written Submissions**

- (a) The Panel may decide whether the parties shall submit any written statements in addition to the Objection and the Response, and it shall fix time limits for such submissions.
- (b) The time limits fixed by the Panel for additional written submissions shall not exceed thirty (30) days, unless the Panel, having consulted the DRSP, determines that exceptional circumstances justify a longer time limit.

## **Article 18. Evidence**

In order to achieve the goal of resolving disputes over new gTLDs rapidly and at reasonable cost, procedures for the production of documents shall be limited. In exceptional cases, the Panel may require a party to provide additional evidence.

## **Article 19. Hearings**

- (a) Disputes under this Procedure and the applicable DRSP Rules will usually be resolved without a hearing.
- (b) The Panel may decide, on its own initiative or at the request of a party, to hold a hearing only in extraordinary circumstances.
- (c) In the event that the Panel decides to hold a hearing:
  - (i) The Panel shall decide how and where the hearing shall be conducted.
  - (ii) In order to expedite the proceedings and minimize costs, the hearing shall be conducted by videoconference if possible.
  - (iii) The hearing shall be limited to one day, unless the Panel decides, in exceptional circumstances, that more than one day is required for the hearing.
  - (iv) The Panel shall decide whether the hearing will be open to the public or conducted in private.

## **Article 20. Standards**

- (a) For each category of Objection identified in Article 2(e), the Panel shall apply the standards that have been defined by ICANN.
- (b) In addition, the Panel may refer to and base its findings upon the statements and documents submitted and any rules or principles that it determines to be applicable.
- (c) The Objector bears the burden of proving that its Objection should be sustained in accordance with the applicable standards.

## **Article 21. The Expert Determination**

- (a) The DRSP and the Panel shall make reasonable efforts to ensure that the Expert Determination is rendered within forty-five (45) days of the constitution of the Panel. In specific circumstances such as consolidated cases and in consultation with the DRSP, if significant additional documentation is requested by the Panel, a brief extension may be allowed.
- (b) The Panel shall submit its Expert Determination in draft form to the DRSP's scrutiny as to form before it is signed, unless such scrutiny is specifically excluded by the applicable DRSP Rules. The modifications proposed by the DRSP to the Panel, if any, shall address only the form of the Expert Determination. The signed Expert Determination shall be communicated to the DRSP, which in turn will communicate that Expert Determination to the Parties and ICANN.
- (c) When the Panel comprises three Experts, the Expert Determination shall be made by a majority of the Experts.

- (d) The Expert Determination shall be in writing, shall identify the prevailing party and shall state the reasons upon which it is based. The remedies available to an Applicant or an Objector pursuant to any proceeding before a Panel shall be limited to the success or dismissal of an Objection and to the refund by the DRSP to the prevailing party, as determined by the Panel in its Expert Determination, of its advance payment(s) of Costs pursuant to Article 14(e) of this Procedure and any relevant provisions of the applicable DRSP Rules.
- (e) The Expert Determination shall state the date when it is made, and it shall be signed by the Expert(s). If any Expert fails to sign the Expert Determination, it shall be accompanied by a statement of the reason for the absence of such signature.
- (f) In addition to providing electronic copies of its Expert Determination, the Panel shall provide a signed hard copy of the Expert Determination to the DRSP, unless the DRSP Rules provide for otherwise.
- (g) Unless the Panel decides otherwise, the Expert Determination shall be published in full on the DRSP's website.

## **Article 22. Exclusion of Liability**

In addition to any exclusion of liability stipulated by the applicable DRSP Rules, neither the Expert(s), nor the DRSP and its employees, nor ICANN and its Board members, employees and consultants shall be liable to any person for any act or omission in connection with any proceeding conducted under this Procedure.

## **Article 23. Modification of the Procedure**

- (a) ICANN may from time to time, in accordance with its Bylaws, modify this Procedure.
- (b) The version of this Procedure that is applicable to a dispute resolution proceeding is the version that was in effect on the day when the relevant application for a new gTLD is submitted.

International Centre for Dispute Resolution (ICDR)

Fees & Costs Schedule for String Confusion Objections  
(Fee Schedule)

May 20, 2010

Administrative Filing Fees (non-refundable)

- US \$2750 Filing Fee; per party; per objection.  
This amount is due on all objections filed.
- US \$1250<sup>1</sup> Case Service Fee; per party; per objection.  
This additional amount only becomes due if any type of hearing is conducted in accordance with Article 19 of the gTLD Dispute Resolution Procedures.

Neutral Panel Compensation (limited to one arbitrator)

- US \$6000<sup>2</sup> per objector/applicant.  
This is collected for all cases to be heard on documents only and includes all arbitrator expenses.
- US \$3000<sup>3</sup> per party.  
This is billed if any type of hearing is conducted.
  - Same amount billed for each additional day of hearing beyond one day.
  - Includes all travel time of the neutral.
  - Does not include travel expenses which will be billed separately

<sup>1</sup>See Article 19 of the gTLD Dispute Resolution Procedures.

<sup>2</sup>See Article 14(b) of the gTLD Dispute Resolution Procedures.

<sup>3</sup>See Article 14(c) of the gTLD Dispute Resolution Procedures.

International Centre for Dispute Resolution (ICDR)

Supplementary Procedures for String Confusion Objections  
(Rules)

10 January 2012

**Impartiality and Independence of Experts**

**Article 1**

1. Dispute Resolution Panelists, who shall be referred to as "Experts", acting under the New **gTLD DISPUTE RESOLUTION PROCEDURES** and these Rules shall be impartial and independent. Prior to accepting appointment, a prospective Expert shall disclose to the Dispute Resolution Service Provider (DRSP) any circumstance likely to give rise to justifiable doubts as to the Expert's impartiality or independence. If, at any stage during the proceedings, new circumstances arise that may give rise to such doubts, an Expert shall promptly disclose such circumstances to the parties and to the DRSP. Upon receipt of such information from an Expert or a party, the DRSP shall communicate it to the other parties and to the panel.
2. No party or anyone acting on its behalf shall have any *ex parte* communication relating to the case with any Expert.

**Challenge of Experts**

**Article 2**

1. A party may challenge any Expert whenever circumstances exist that give rise to justifiable doubts as to the Expert's impartiality or independence. A party wishing to challenge an Expert shall send notice of the challenge to the DRSP within 10 days after being notified of the appointment of the Expert or within 10 days after the circumstances giving rise to the challenge become known to that party.
2. The challenge shall state in writing the reasons for the challenge.
3. Upon receipt of such a challenge, the DRSP shall notify the other parties of the challenge. Upon review of the challenge the DRSP in its sole discretion shall make the decision on the challenge and advise the parties of its decision. The challenged Expert may also withdraw from office upon notice of the challenge.

## **Replacement of an Expert**

### **Article 3**

If an Expert withdraws after a challenge, or the DRSP sustains the challenge, or the DRSP determines that there are sufficient reasons to accept the resignation of an Expert, or an Expert dies, a substitute Expert shall be appointed pursuant to the provisions of Article 13 of the **gTLD Dispute Resolution Procedures**.

## **Waiver of Rules**

### **Article 4**

A party who knows that any provision of the Rules or requirement under the Rules has not been complied with, but proceeds with the arbitration without promptly stating an objection in writing thereto, shall be deemed to have waived the right to object.

## **Confidentiality**

### **Article 5**

Confidential information disclosed during the proceedings by the parties, counsel, or by witnesses shall not be divulged by an Expert or by the DRSP.

## **Interpretation of Rules**

### **Article 6**

The Expert shall interpret and apply these Rules insofar as they relate to its powers and duties. The DRSP shall interpret and apply all other Rules.

## **Exclusion of Liability**

### **Article 7**

1. Neither the International Centre for Dispute Resolution (ICDR), the American Arbitration Association (AAA), nor any Expert in a proceeding under the New gTLD Dispute Resolution Procedures and/or these Rules is a necessary or proper party in judicial proceedings relating to the Objection proceeding.

2. Parties to an Objection proceeding under the New gTLD Dispute Resolution Procedures and/or these Rules shall be deemed to have consented that neither the ICDR, the AAA, nor any Expert shall be liable to any party in any action for damages or injunctive relief for any act or omission in connection with any Objection proceeding under the gTLD Dispute Resolution Procedures and/or these Rules.

DRAFT

**World Intellectual Property Organization Schedule of Fees and Costs:  
New gTLD Pre-Delegation Legal Rights Objection Procedure**

(All amounts are in United States dollars)

*(This Schedule of Fees and Costs may be amended by WIPO in accordance with the WIPO Rules for New gTLD Dispute Resolution.)*

**DRSP Fee <sup>1</sup>**

	DRSP Fee
Single-Expert Panel	2,000
Three-Expert Panel	3,000

**Panel Fee <sup>2</sup>**

*Base Panel Fee for Single Objection to Single Application Dispute*

Single-Expert Panel	8,000
Three-Expert Panel	20,000 (Presiding Expert: 10,000; Co-Expert: 5,000)

*Panel Fee for Multiple Objections to Single Application: <sup>3</sup>  
60% of Regular Base Fee (to be paid per Objection filed)*

Single-Expert Panel	4,800
Three-Expert Panel	12,000 (Presiding Expert: 6,000; Co-Expert: 3,000)

*Panel Fee for Multiple Objections filed by Same Objector to Multiple Applications:  
80% of Regular Base Fee (to be paid per Objection filed)<sup>3</sup>*

Single-Expert Panel	6,400
Three-Expert Panel	16,000 (Presiding Expert: 8,000; Co-Expert: 4,000)

<sup>1</sup> See Articles 8(c) and 11(f) of the New gTLD Dispute Resolution Procedure.

<sup>2</sup> See Article 14 of the New gTLD Dispute Resolution Procedure.

<sup>3</sup> See Article 12 of the New gTLD Dispute Resolution Procedure.

World Intellectual Property Organization Schedule of Fees and Costs:  
New gTLD Pre-Delegation Legal Rights Objection Procedure

*All Other Scenarios*<sup>3</sup>

In all other scenarios, the DRSP shall determine the applicable fees in consultation with the Panel, taking into account the base fees stipulated above and the circumstances of the consolidated objections and applications.

**Additional Advance Payments**

Depending on the circumstances of the case, additional advance payments may be required to be made. In determining whether additional advance payments shall be required, the DRSP, in consultation with the Panel, may consider the following non-exclusive factors: the number of Applications and/or Objections to the TLD, the number of parties, the complexity of the dispute, the anticipated time required for rendering an Expert Determination, and the possible need for hearings, phone or video conferences, or additional pleading rounds.

**World Intellectual Property Organization  
Rules for New gTLD Dispute Resolution for Existing Legal Rights Objections  
("WIPO Rules for New gTLD Dispute Resolution")**

*(In effect as of June 20, 2011)*

**1. Scope of WIPO Rules for New gTLD Dispute Resolution in Relation to Procedure**

(a) Set out below are the applicable WIPO Rules for New gTLD Dispute Resolution for Existing Legal Rights Objections as referred to in Article 4 of the New gTLD Dispute Resolution Procedure ("Procedure") as approved by the Internet Corporation for Assigned Names and Numbers ("ICANN") on June 20, 2011. The WIPO Rules for New gTLD Dispute Resolution are to be read and used in connection with the Procedure which provides the basic framework for the four categories of objections (as referred to in Articles 2 and 4 of the Procedure) arising from Applications under ICANN's New gTLD Program.

(b) The version of the WIPO Rules for New gTLD Dispute Resolution applicable to a proceeding conducted under the Procedure is the version in effect on the day when the relevant Application for a new gTLD is submitted (as referred to in Article 23(b) of the Procedure).

**2. Definitions**

Terms defined in the Procedure shall have the same meaning in the WIPO Rules for New gTLD Dispute Resolution. Words used in the singular shall include the plural and *vice versa* as the context may require.

**3. Communications**

(a) Subject to Article 6 of the Procedure, except where otherwise agreed beforehand with the WIPO Arbitration and Mediation Center ("Center"), and subject to the discretion of any appointed Panel, any submission to the Center or to the Panel shall be made by electronic mail (email) using [arbiter.mail@wipo.int](mailto:arbiter.mail@wipo.int).

(b) In the event a party wishes to submit a hard copy or other non-electronic submission prior to Panel appointment, it shall first request leave to do so from the Center; the Center shall, in its sole discretion, then determine whether to accept the non-electronic submission. After Panel appointment, parties are referred to Article 6(a) of the Procedure.

#### **4. Submission of Objection and Response**

(a) In accordance with Articles 7 and 8 of the Procedure, the Objector shall transmit its Objection using the Objection Model Form set out in Annex A hereto and posted on the Center's website and shall comply with the Center's Filing Guidelines set out in Annex B hereto and posted on the Center's website.

(b) In accordance with Article 11 of the Procedure, the Applicant shall transmit its Response using the Response Model Form set out in Annex C hereto and posted on the Center's website and shall comply with the Center's Filing Guidelines set out in Annex B hereto and posted on the Center's website.

#### **5. Center Review of Objections**

(a) In accordance with Article 9 of the Procedure if an Objection is dismissed due to the Objector's failure to remedy an administrative deficiency, there shall be no refund of any DRSP Fee paid by the Objector pursuant to Article 14 of the Procedure and Paragraph 10 of the WIPO Rules for New gTLD Dispute Resolution.

(b) If an Objector submits a new Objection within ten (10) calendar days of closure of a proceeding as provided in Article 9(d) of the Procedure and Paragraph 5(a) of the WIPO Rules for New gTLD Dispute Resolution to remedy an administratively deficient Objection, such new Objection may be accompanied by a request for a DRSP Fee waiver, in whole or in part, for the Center's consideration in its sole discretion.

#### **6. Appointment of Case Manager**

(a) The Center shall advise the parties of the name and contact details of the Case Manager who shall be responsible for all administrative matters relating to the dispute and communications to the Panel.

(b) The Case Manager may provide administrative assistance to the parties or Panel, but shall have no authority to decide matters of a substantive nature concerning the dispute.

#### **7. Consolidation**

(a) In accordance with Article 12 of the Procedure, the Center may, where possible and practicable, and in its sole discretion, decide to consolidate Objections by appointing the same Panel to decide multiple Objections sharing certain commonalities. In the event of consolidation, the Panel shall render individual Expert Determinations for each Objection.

(b) A party may submit a consolidation request pursuant to Article 12(b) of the Procedure, or may oppose any consolidation request submitted. Any such opposition to a consolidation request shall be provided within seven (7) calendar days of the consolidation request. Any consolidation request or opposition thereto shall be limited to 1,500 words in length.

(c) In the case of consolidated Objections, the applicable reduced Panel fees are specified in Annex D hereto and posted on the Center's website.

(d) Pursuant to Article 12 of the Procedure, in weighing the benefits that may result from consolidation against the possible prejudice or inconvenience that consolidation may cause, the Center in reaching its decision concerning consolidation, may take into account, *inter alia*, the following non-exclusive factors:

- (i) Whether the Objections concern the same or similar TLD(s);
- (ii) Whether the same Objector files Objections concerning multiple TLD applications;
- (iii) Whether in any consolidation request, or opposition thereto, the Objector or Applicant relies on single or multiple mark(s);
- (iv) The scope of evidence relied on by an Objector or Applicant in any Objection or application;
- (v) Any other arguments raised in any consolidation request, or opposition thereto;
- (vi) Expert availability to accept appointment.

(e) The Center's decision on any consolidation of multiple Objections for Expert Determination by the same Panel is of an administrative nature and shall be final. The Center shall not be required to state reasons for its decision.

## **8. Panel Appointment Procedures**

(a) The Center will maintain and publish on its website a publicly-available List of Experts.

(b) Pursuant to Article 13(b)(ii) of the Procedure, there shall be a Single-Expert Panel unless all the Parties agree to the appointment of a Three-Expert Panel.

(c) In the event of a Single-Expert Panel, the Center shall in its sole discretion appoint an Expert from its List of Experts.

(d) In the event all the Parties agree to the appointment of a Three-Expert Panel, any such agreement shall be communicated to the Center within five (5) calendar days of the Center's receipt of the Response filed in accordance with Article 11 of the Procedure and Paragraph 4(b) of the WIPO Rules for New gTLD Dispute Resolution.

- (i) If Objections are not consolidated, and if the parties have communicated their agreement on the appointment of a Three-Expert Panel, within five (5) days of such communication each party shall separately submit to the Center (notwithstanding Article 6(b) of the Procedure) the names of three (3) candidates from the Center's List of Experts, in the order of their respective preference, for appointment by the Center as a Co-Expert. In the event none of a party's three (3) candidates is available for appointment as a Co-Expert, the Center shall appoint the Co-Expert in its sole discretion.

- (ii) In the event of consolidation in accordance with Paragraph 7 of the WIPO Rules for New gTLD Dispute Resolution, the Objectors or Applicants shall, as the case may be, jointly submit the names of the three (3) candidates from the Center's List of Experts in order of preference (i.e., one list on behalf of all Objector(s) and one list on behalf of all Applicant(s)). If the Objectors or Applicants as the case may be do not jointly agree on and submit the names of three (3) candidates within five (5) calendar days of the parties' communication to the Center on their agreement to the appointment of a Three-Expert Panel, the Center shall in its sole discretion appoint the Co-Experts.
- (iii) The third Expert, who shall be the Presiding Expert, shall absent exceptional circumstances be appointed by the Center from a list of five (5) candidates submitted by the Center to the parties. The Center's selection of a Presiding Expert shall be made in a manner that seeks to reasonably balance the preferences of each party as communicated to the Center within five (5) calendar days of the Center's communication of the list of candidates to the parties.
- (iv) Where any party fails to indicate its order of preference for the Presiding Expert to the Center, the Center shall nevertheless proceed to appoint the Presiding Expert in its sole discretion, taking into account any preferences of any other party.

## 9. Expert Impartiality and Independence

(a) In accordance with Article 13(c) of the Procedure, any prospective Expert shall, before accepting appointment, disclose to the Center and parties any circumstance that might give rise to justifiable doubt as to the Expert's impartiality or independence, or confirm in writing that no such circumstance exist by submitting to the Center a *Declaration of Impartiality and Independence* using the form set out in Annex E hereto and posted on the Center's website.

(b) If at any stage during a proceeding conducted under the Procedure, circumstances arise that might give rise to justifiable doubt as to an Expert's impartiality or independence, the Expert shall promptly disclose such circumstances to the parties and the Center.

(c) A party may challenge an Expert if circumstances exist which give rise to justifiable doubt as to the Expert's impartiality or independence. A party may challenge an Expert whom it has appointed or in whose appointment it concurred, only for reasons of which it becomes aware after the appointment has been made.

- (i) A party challenging an Expert shall send notice to the Center and the other party, stating the reasons for the challenge, within five (5) calendar days after being notified of that Expert's appointment or becoming aware of circumstances that it considers give rise to justifiable doubt as to that Expert's impartiality or independence.
- (ii) The decision on the challenge shall be made by the Center in its sole discretion. Such a decision is of an administrative nature and shall be final. The Center shall not be required to state reasons for its decision. In the event of an Expert's removal, the Center shall appoint a new Expert in accordance with the Procedure and these WIPO Rules for New gTLD Dispute Resolution.

## 10. Fees

(a) The applicable fees for the Procedure for Existing Legal Rights Objections are specified in Annex D hereto and posted on the Center's website.

(b) After the Expert Determination has been rendered or a proceeding conducted under the Procedure has been terminated, the Center shall provide an accounting to the parties of the payments received and, in consultation with any Panel, return any unexpended balance of the Panel Fee to the parties.

## 11. Confidentiality

(a) A party invoking the confidentiality of any information it wishes or is required to submit in any Existing Legal Rights Objection proceeding conducted under the Procedure, shall submit the request for confidentiality to the Center for the Panel's consideration, stating the reasons for which it considers the information to be confidential. If the Panel decides that the information is to be treated as confidential, it shall decide under which conditions and to whom the confidential information may in part or in whole be disclosed and shall require any person to whom the confidential information is to be disclosed to sign an appropriate confidentiality undertaking.

(b) Further to Article 6(b) of the Procedure, except in exceptional circumstances as decided by the Panel and in consultation with the parties and the Center, no party or anyone acting on its behalf shall have any *ex parte* communication with the Panel.

## 12. Mediation

Further to Article 16 of the Procedure, prior to the Panel rendering its Expert Determination in a proceeding conducted under the Procedure, the parties may inform the Center that they wish to participate in mediation to attempt to resolve the dispute and may request the Center to administer the mediation. In such event, unless both parties agree otherwise, the WIPO Mediation Rules shall apply *mutatis mutandis*. On request from the parties, and absent exceptional circumstances, the Center's mediation administration fee shall be waived.

## 13. Effect of Court Proceedings

(a) The Objector and Applicant shall include in any Objection or Response relevant information regarding any other legal proceedings concerning the TLD. In the event that a party initiates any legal proceedings during the pendency of a proceeding conducted under the Procedure, it shall promptly notify the Center.

(b) In the event of any legal proceedings initiated prior to or during a proceeding conducted under the Procedure, the Panel shall have the discretion to decide whether to suspend or terminate such proceeding under the Procedure, or to proceed to an Expert Determination.

#### **14. Termination**

(a) If, before the Panel renders an Expert Determination, it becomes unnecessary or impossible to continue a proceeding conducted under the Procedure for any reason, the Panel may in its discretion terminate the proceeding.

(b) If, prior to Panel appointment, it becomes unnecessary or impossible to continue a proceeding conducted under the Procedure for any reason, the Center in consultation with the parties and ICANN, may in its discretion terminate the proceeding.

#### **15. Amendments**

Subject to the Procedure, the Center may amend these WIPO Rules for New gTLD Dispute Resolution in its sole discretion.

#### **16. Exclusion of Liability**

Except in respect of deliberate wrongdoing, an Expert, the World Intellectual Property Organization, and the Center shall not be liable to any party or ICANN for any act or omission in connection with any proceeding conducted under the Procedure and the WIPO Rules for New gTLD Dispute Resolution.

# gTLD Applicant Guidebook

(v. 2012-01-11)

Module 4

11 January 2012

---

# Module 4

---

## *String Contention Procedures*

This module describes situations in which contention over applied-for gTLD strings occurs, and the methods available to applicants for resolving such contention cases.

### *4.1 String Contention*

---

String contention occurs when either:

1. Two or more applicants for an identical gTLD string successfully complete all previous stages of the evaluation and dispute resolution processes; or
2. Two or more applicants for similar gTLD strings successfully complete all previous stages of the evaluation and dispute resolution processes, and the similarity of the strings is identified as creating a probability of user confusion if more than one of the strings is delegated.

ICANN will not approve applications for proposed gTLD strings that are identical or that would result in user confusion, called contending strings. If either situation above occurs, such applications will proceed to contention resolution through either community priority evaluation, in certain cases, or through an auction. Both processes are described in this module. A group of applications for contending strings is referred to as a contention set.

(In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.)

#### *4.1.1 Identification of Contention Sets*

---

Contention sets are groups of applications containing identical or similar applied-for gTLD strings. Contention sets are identified during Initial Evaluation, following review of all applied-for gTLD strings. ICANN will publish preliminary contention sets once the String Similarity review is completed, and will update the contention sets as necessary during the evaluation and dispute resolution stages.

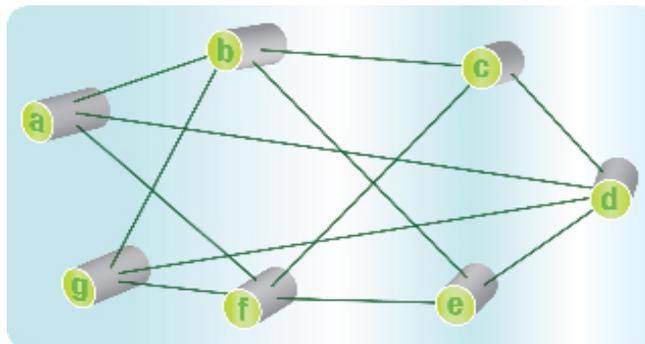

Applications for identical gTLD strings will be automatically assigned to a contention set. For example, if Applicant A and Applicant B both apply for .TLDSTRING, they will be identified as being in a contention set. Such testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. That is, two or more applicants whose applied-for strings or designated variants are variant strings according to an IDN table submitted to ICANN would be considered in direct contention with one another. For example, if one applicant applies for string A and another applies for string B, and strings A and B are variant TLD strings as defined in Module 1, then the two applications are in direct contention.

The String Similarity Panel will also review the entire pool of applied-for strings to determine whether the strings proposed in any two or more applications are so similar that they would create a probability of user confusion if allowed to coexist in the DNS. The panel will make such a determination for each pair of applied-for gTLD strings. The outcome of the String Similarity review described in Module 2 is the identification of contention sets among applications that have direct or indirect contention relationships with one another.

Two strings are in **direct contention** if they are identical or similar to one another. More than two applicants might be represented in a direct contention situation: if four different applicants applied for the same gTLD string, they would all be in direct contention with one another.

Two strings are in **indirect contention** if they are both in direct contention with a third string, but not with one another. The example that follows explains direct and indirect contention in greater detail.

In Figure 4-1, Strings A and B are an example of direct contention. Strings C and G are an example of indirect contention. C and G both contend with B, but not with one another. The figure as a whole is one contention set. A contention set consists of all applications that are linked by string contention to one another, directly or indirectly.

**Figure 4-1 – This diagram represents one contention set, featuring both directly and indirectly contending strings.**

While preliminary contention sets are determined during Initial Evaluation, the final configuration of the contention sets can only be established once the evaluation and dispute resolution process stages have concluded. This is because any application excluded through those processes might modify a contention set identified earlier.

A contention set may be augmented, split into two sets, or eliminated altogether as a result of an Extended Evaluation or dispute resolution proceeding. The composition of a contention set may also be modified as some applications may be voluntarily withdrawn throughout the process.

Refer to Figure 4-2: In contention set 1, applications D and G are eliminated. Application A is the only remaining application, so there is no contention left to resolve.

In contention set 2, all applications successfully complete Extended Evaluation and Dispute Resolution, so the original contention set remains to be resolved.

In contention set 3, application F is eliminated. Since application F was in direct contention with E and J, but E and J are not in contention with one other, the original contention set splits into two sets: one containing E and K in direct contention, and one containing I and J.

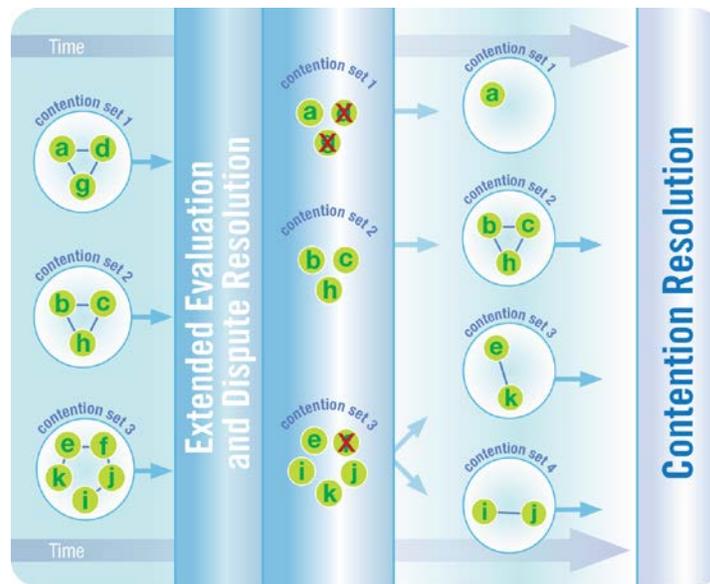

Figure 4-2 – Resolution of string contention cannot begin until all applicants within a contention set have completed all applicable previous stages.

The remaining contention cases must then be resolved through community priority evaluation or by other means, depending on the circumstances. In the string contention resolution stage, ICANN addresses each contention set to achieve an unambiguous resolution.

As described elsewhere in this guidebook, cases of contention might be resolved by community priority evaluation or an agreement among the parties. Absent that, the last-resort contention resolution mechanism will be an auction.

#### 4.1.2 Impact of String Confusion Dispute Resolution Proceedings on Contention Sets

If an applicant files a string confusion objection against another application (refer to Module 3), and the panel finds that user confusion is probable (that is, finds in favor of the objector), the two applications will be placed in direct contention with each other. Thus, the outcome of a dispute resolution proceeding based on a string confusion objection would be a new contention set structure for the relevant applications, augmenting the original contention set.

If an applicant files a string confusion objection against another application, and the panel finds that string

confusion does not exist (that is, finds in favor of the responding applicant), the two applications will not be considered in direct contention with one another.

A dispute resolution outcome in the case of a string confusion objection filed by another applicant will not result in removal of an application from a previously established contention set.

#### *4.1.3 Self-Resolution of String Contention*

---

Applicants that are identified as being in contention are encouraged to reach a settlement or agreement among themselves that resolves the contention. This may occur at any stage of the process, once ICANN publicly posts the applications received and the preliminary contention sets on its website.

Applicants may resolve string contention in a manner whereby one or more applicants withdraw their applications. An applicant may not resolve string contention by selecting a new string or by replacing itself with a joint venture. It is understood that applicants may seek to establish joint ventures in their efforts to resolve string contention. However, material changes in applications (for example, combinations of applicants to resolve contention) will require re-evaluation. This might require additional fees or evaluation in a subsequent application round. Applicants are encouraged to resolve contention by combining in a way that does not materially affect the remaining application. Accordingly, new joint ventures must take place in a manner that does not materially change the application, to avoid being subject to re-evaluation.

#### *4.1.4 Possible Contention Resolution Outcomes*

---

An application that has successfully completed all previous stages and is no longer part of a contention set due to changes in the composition of the contention set (as described in subsection 4.1.1) or self-resolution by applicants in the contention set (as described in subsection 4.1.3) may proceed to the next stage.

An application that prevails in a contention resolution procedure, either community priority evaluation or auction, may proceed to the next stage.

In some cases, an applicant who is not the outright winner of a string contention resolution process can still proceed. This situation is explained in the following paragraphs.

If the strings within a given contention set are all identical, the applications are in direct contention with each other and there can only be one winner that proceeds to the next step.

However, where there are both direct and indirect contention situations within a set, more than one string may survive the resolution.

For example, consider a case where string A is in contention with B, and B is in contention with C, but C is not in contention with A. If A wins the contention resolution procedure, B is eliminated but C can proceed since C is not in direct contention with the winner and both strings can coexist in the DNS without risk for confusion.

## ***4.2 Community Priority Evaluation***

---

Community priority evaluation will only occur if a community-based applicant selects this option. Community priority evaluation can begin once all applications in the contention set have completed all previous stages of the process.

The community priority evaluation is an independent analysis. Scores received in the applicant reviews are not carried forward to the community priority evaluation. Each application participating in the community priority evaluation begins with a score of zero.

### ***4.2.1 Eligibility for Community Priority Evaluation***

---

As described in subsection 1.2.3 of Module 1, all applicants are required to identify whether their application type is:

- Community-based; or
- Standard.

Applicants designating their applications as community-based are also asked to respond to a set of questions in the application form to provide relevant information if a community priority evaluation occurs.

Only community-based applicants are eligible to participate in a community priority evaluation.

At the start of the contention resolution stage, all community-based applicants within remaining contention sets will be notified of the opportunity to opt for a community priority evaluation via submission of a deposit by a specified date. Only those applications for which a deposit has been received by the deadline will be scored in the community priority evaluation. Following the evaluation, the deposit will be refunded to applicants that score 14 or higher.

Before the community priority evaluation begins, the applicants who have elected to participate may be asked to provide additional information relevant to the community priority evaluation.

#### ***4.2.2 Community Priority Evaluation Procedure***

---

Community priority evaluations for each eligible contention set will be performed by a community priority panel appointed by ICANN to review these applications. The panel's role is to determine whether any of the community-based applications fulfills the community priority criteria. Standard applicants within the contention set, if any, will not participate in the community priority evaluation.

If a single community-based application is found to meet the community priority criteria (see subsection 4.2.3 below), that applicant will be declared to prevail in the community priority evaluation and may proceed. If more than one community-based application is found to meet the criteria, the remaining contention between them will be resolved as follows:

- In the case where the applications are in indirect contention with one another (see subsection 4.1.1), they will both be allowed to proceed to the next stage. In this case, applications that are in direct contention with any of these community-based applications will be eliminated.
- In the case where the applications are in direct contention with one another, these applicants will proceed to an auction. If all parties agree and present a joint request, ICANN may postpone the auction for a three-month period while the parties attempt to reach a settlement before proceeding to auction. This is a one-time option; ICANN will grant no more than one such request for each set of contending applications.

If none of the community-based applications are found to meet the criteria, then all of the parties in the contention set (both standard and community-based applicants) will proceed to an auction.

Results of each community priority evaluation will be posted when completed.

Applicants who are eliminated as a result of a community priority evaluation are eligible for a partial refund of the gTLD evaluation fee (see Module 1).

### ***4.2.3 Community Priority Evaluation Criteria***

---

The Community Priority Panel will review and score the one or more community-based applications having elected the community priority evaluation against four criteria as listed below.

The scoring process is conceived to identify qualified community-based applications, while preventing both “false positives” (awarding undue priority to an application that refers to a “community” construed merely to get a sought-after generic word as a gTLD string) and “false negatives” (not awarding priority to a qualified community application). This calls for a holistic approach, taking multiple criteria into account, as reflected in the process. The scoring will be performed by a panel and be based on information provided in the application plus other relevant information available (such as public information regarding the community represented). The panel may also perform independent research, if deemed necessary to reach informed scoring decisions.

It should be noted that a qualified community application eliminates all directly contending standard applications, regardless of how well qualified the latter may be. This is a fundamental reason for very stringent requirements for qualification of a community-based application, as embodied in the criteria below. Accordingly, a finding by the panel that an application does not meet the scoring threshold to prevail in a community priority evaluation is not necessarily an indication the community itself is in some way inadequate or invalid.

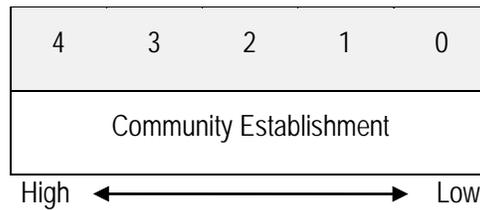

The sequence of the criteria reflects the order in which they will be assessed by the panel. The utmost care has been taken to avoid any “double-counting” - any negative aspect found in assessing an application for one criterion

should only be counted there and should not affect the assessment for other criteria.

An application must score at least 14 points to prevail in a community priority evaluation. The outcome will be determined according to the procedure described in subsection 4.2.2.

**Criterion #1: Community Establishment (0-4 points)**

A maximum of 4 points is possible on the Community Establishment criterion:

As measured by:

A. Delineation (2)

2	1	0
Clearly delineated, organized, and pre-existing community.	Clearly delineated and pre-existing community, but not fulfilling the requirements for a score of 2.	Insufficient delineation and pre-existence for a score of 1.

B. Extension (2)

2	1	0
Community of considerable size and longevity.	Community of either considerable size or longevity, but not fulfilling the requirements for a score of 2.	Community of neither considerable size nor longevity.

This section relates to the community as explicitly identified and defined according to statements in the application. (The implicit reach of the applied-for string is not

considered here, but taken into account when scoring Criterion #2, "Nexus between Proposed String and Community.")

### **Criterion 1 Definitions**

- "Community" - Usage of the expression "community" has evolved considerably from its Latin origin – "communitas" meaning "fellowship" – while still implying more of cohesion than a mere commonality of interest. Notably, as "community" is used throughout the application, there should be:  
(a) an awareness and recognition of a community among its members; (b) some understanding of the community's existence prior to September 2007 (when the new gTLD policy recommendations were completed); and (c) extended tenure or longevity—non-transience—into the future.
- "Delineation" relates to the membership of a community, where a clear and straight-forward membership definition scores high, while an unclear, dispersed or unbound definition scores low.
- "Pre-existing" means that a community has been active as such since before the new gTLD policy recommendations were completed in September 2007.
- "Organized" implies that there is at least one entity mainly dedicated to the community, with documented evidence of community activities.
- "Extension" relates to the dimensions of the community, regarding its number of members, geographical reach, and foreseeable activity lifetime, as further explained in the following.
- "Size" relates both to the number of members and the geographical reach of the community, and will be scored depending on the context rather than on absolute numbers - a geographic location community may count millions of members in a limited location, a language community may have a million members with some spread over the globe, a community of service providers may have "only" some hundred members although well spread over the globe, just to mention some examples - all these can be regarded as of "considerable size."

- "Longevity" means that the pursuits of a community are of a lasting, non-transient nature.

**Criterion 1 Guidelines**

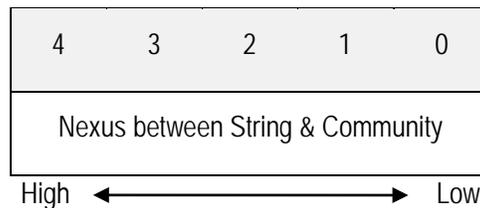

With respect to "Delineation" and "Extension," it should be noted that a community can consist of legal entities (for example, an association of suppliers of a particular service), of individuals (for example, a language community) or of a logical alliance of communities (for example, an international federation of national communities of a similar nature). All are viable as such, provided the requisite awareness and recognition of the community is at hand among the members. Otherwise the application would be seen as not relating to a real community and score 0 on both "Delineation" and "Extension."

With respect to "Delineation," if an application satisfactorily demonstrates all three relevant parameters (delineation, pre-existing and organized), then it scores a 2.

With respect to "Extension," if an application satisfactorily demonstrates both community size and longevity, it scores a 2.

**Criterion #2: Nexus between Proposed String and Community (0-4 points)**

A maximum of 4 points is possible on the Nexus criterion:

As measured by:

A. Nexus (3)

3	2	0
The string matches the name of the community or is a well-known short-form or abbreviation of the community	String identifies the community, but does not qualify for a score of 3.	String nexus does not fulfill the requirements for a score of 2.

3	2	0
---	---	---

name.

B. Uniqueness (1)

1	0
---	---

String has no other significant meaning beyond identifying the community described in the application.	String does not fulfill the requirement for a score of 1.
--	---

This section evaluates the relevance of the string to the specific community that it claims to represent.

**Criterion 2 Definitions**

- "Name" of the community means the established name by which the community is commonly known by others. It may be, but does not need to be, the name of an organization dedicated to the community.
- "Identify" means that the applied for string closely describes the community or the community members, without over-reaching substantially beyond the community.

**Criterion 2 Guidelines**

With respect to "Nexus," for a score of 3, the essential aspect is that the applied-for string is commonly known by others as the identification / name of the community.

With respect to "Nexus," for a score of 2, the applied-for string should closely describe the community or the community members, without over-reaching substantially beyond the community. As an example, a string could qualify for a score of 2 if it is a noun that the typical community member would naturally be called in the context. If the string appears excessively broad (such as, for example, a globally well-known but local tennis club applying for ".TENNIS") then it would not qualify for a 2.

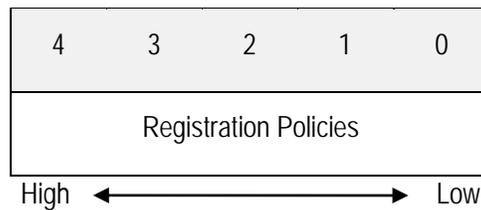

With respect to "Uniqueness," "significant meaning" relates to the public in general, with consideration of the community language context added.

"Uniqueness" will be scored both with regard to the community context and from a general point of view. For example, a string for a particular geographic location community may seem unique from a general perspective, but would not score a 1 for uniqueness if it carries another significant meaning in the common language used in the relevant community location. The phrasing "...beyond identifying the community" in the score of 1 for "uniqueness" implies a requirement that the string does identify the community, i.e. scores 2 or 3 for "Nexus," in order to be eligible for a score of 1 for "Uniqueness."

It should be noted that "Uniqueness" is only about the *meaning* of the string - since the evaluation takes place to resolve contention there will obviously be other applications, community-based and/or standard, with identical or confusingly similar strings in the contention set to resolve, so the string will clearly not be "unique" in the sense of "alone."

**Criterion #3: Registration Policies (0-4 points)**

A maximum of 4 points is possible on the Registration Policies criterion:

As measured by:

A. Eligibility (1)

<b>1</b>	<b>0</b>
Eligibility restricted to community members.	Largely unrestricted approach to eligibility.

B. Name selection (1)

1	0
Policies include name selection rules consistent with the articulated community-based purpose of the applied-for gTLD.	Policies do not fulfill the requirements for a score of 1.

C. Content and use (1)

1	0
Policies include rules for content and use consistent with the articulated community-based purpose of the applied-for gTLD.	Policies do not fulfill the requirements for a score of 1.

D. Enforcement (1)

1	0
Policies include specific enforcement measures (e.g. investigation practices, penalties, takedown procedures) constituting a coherent set with appropriate appeal mechanisms.	Policies do not fulfill the requirements for a score of 1.

This section evaluates the applicant's registration policies as indicated in the application. Registration policies are the conditions that the future registry will set for prospective registrants, i.e. those desiring to register second-level domain names under the registry.

### **Criterion 3 Definitions**

- "Eligibility" means the qualifications that entities or individuals must have in order to be allowed as registrants by the registry.
- "Name selection" means the conditions that must be fulfilled for any second-level domain name to be deemed acceptable by the registry.
- "Content and use" means the restrictions stipulated by the registry as to the content provided in and the use of any second-level domain name in the registry.
- "Enforcement" means the tools and provisions set out by the registry to prevent and remedy any breaches of the conditions by registrants.

### **Criterion 3 Guidelines**

With respect to "Eligibility," the limitation to community "members" can invoke a formal membership but can also be satisfied in other ways, depending on the structure and orientation of the community at hand. For example, for a geographic location community TLD, a limitation to members of the community can be achieved by requiring that the registrant's physical address is within the boundaries of the location.

With respect to "Name selection," "Content and use," and "Enforcement," scoring of applications against these sub-criteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The restrictions and corresponding enforcement mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.

**Criterion #4: Community Endorsement (0-4 points)**

4	3	2	1	0	
Community Endorsement					
High		←————→			Low

As measured by:

A. Support (2)

2	1	0
Applicant is, or has documented support from, the recognized community institution(s)/ member organization(s) or has otherwise documented authority to represent the community.	Documented support from at least one group with relevance, but insufficient support for a score of 2.	Insufficient proof of support for a score of 1.

B. Opposition (2)

2	1	0
No opposition of relevance.	Relevant opposition from one group of non-negligible size.	Relevant opposition from two or more groups of non-negligible size.

This section evaluates community support and/or opposition to the application. Support and opposition will be scored in relation to the communities explicitly addressed as stated in the application, with due regard for the communities implicitly addressed by the string.

**Criterion 4 Definitions**

- "Recognized" means the institution(s)/organization(s) that, through membership or otherwise, are clearly recognized by

the community members as representative of the community.

- "Relevance" and "relevant" refer to the communities explicitly and implicitly addressed. This means that opposition from communities not identified in the application but with an association to the applied-for string would be considered relevant.

#### **Criterion 4 Guidelines**

With respect to "Support," it follows that documented support from, for example, the only national association relevant to a particular community on a national level would score a 2 if the string is clearly oriented to that national level, but only a 1 if the string implicitly addresses similar communities in other nations.

Also with respect to "Support," the plurals in brackets for a score of 2, relate to cases of multiple institutions/organizations. In such cases there must be documented support from institutions/organizations representing a majority of the overall community addressed in order to score 2.

The applicant will score a 1 for "Support" if it does not have support from the majority of the recognized community institutions/member organizations, or does not provide full documentation that it has authority to represent the community with its application. A 0 will be scored on "Support" if the applicant fails to provide documentation showing support from recognized community institutions/community member organizations, or does not provide documentation showing that it has the authority to represent the community. It should be noted, however, that documented support from groups or communities that may be seen as implicitly addressed but have completely different orientations compared to the applicant community will not be required for a score of 2 regarding support.

To be taken into account as relevant support, such documentation must contain a description of the process and rationale used in arriving at the expression of support. Consideration of support is not based merely on the number of comments or expressions of support received.

When scoring "Opposition," previous objections to the application as well as public comments during the same application round will be taken into account and assessed

in this context. There will be no presumption that such objections or comments would prevent a score of 2 or lead to any particular score for “Opposition.” To be taken into account as relevant opposition, such objections or comments must be of a reasoned nature. Sources of opposition that are clearly spurious, unsubstantiated, made for a purpose incompatible with competition objectives, or filed for the purpose of obstruction will not be considered relevant.

### ***4.3 Auction: Mechanism of Last Resort***

---

It is expected that most cases of contention will be resolved by the community priority evaluation, or through voluntary agreement among the involved applicants. Auction is a tie-breaker method for resolving string contention among the applications within a contention set, if the contention has not been resolved by other means.

An auction will not take place to resolve contention in the case where the contending applications are for geographic names (as defined in Module 2). In this case, the applications will be suspended pending resolution by the applicants.

An auction will take place, where contention has not already been resolved, in the case where an application for a geographic name is in a contention set with applications for similar strings that have not been identified as geographic names.

In practice, ICANN expects that most contention cases will be resolved through other means before reaching the auction stage. However, there is a possibility that significant funding will accrue to ICANN as a result of one or more auctions.<sup>1</sup>

---

<sup>1</sup> The purpose of an auction is to resolve contention in a clear, objective manner. It is planned that costs of the new gTLD program will offset by fees, so any funds coming from a last resort contention resolution mechanism such as auctions would result (after paying for the auction process) in additional funding. Any proceeds from auctions will be reserved and earmarked until the uses of funds are determined. Funds must be used in a manner that supports directly ICANN's Mission and Core Values and also allows ICANN to maintain its not for profit status.

Possible uses of auction funds include formation of a foundation with a clear mission and a transparent way to allocate funds to projects that are of interest to the greater Internet community, such as grants to support new gTLD applications or registry operators from communities in subsequent gTLD rounds, the creation of an ICANN-administered/community-based fund for specific projects for the benefit of the Internet community, the creation of a registry continuity fund for the protection of registrants (ensuring that funds would be in place to support the operation of a gTLD registry until a successor could be found), or establishment of a security fund to expand use of secure protocols, conduct research, and support standards development organizations in accordance with ICANN's security and stability mission.

### 4.3.1 Auction Procedures

---

An auction of two or more applications within a contention set is conducted as follows. The auctioneer successively increases the prices associated with applications within the contention set, and the respective applicants indicate their willingness to pay these prices. As the prices rise, applicants will successively choose to exit from the auction. When a sufficient number of applications have been eliminated so that no direct contentions remain (i.e., the remaining applications are no longer in contention with one another and all the relevant strings can be delegated as TLDs), the auction will be deemed to conclude. At the auction's conclusion, the applicants with remaining applications will pay the resulting prices and proceed toward delegation. This procedure is referred to as an "ascending-clock auction."

This section provides applicants an informal introduction to the practicalities of participation in an ascending-clock auction. It is intended only as a general introduction and is only preliminary. The detailed set of Auction Rules will be available prior to the commencement of any auction proceedings. If any conflict arises between this module and the auction rules, the auction rules will prevail.

For simplicity, this section will describe the situation where a contention set consists of two or more applications for identical strings.

All auctions will be conducted over the Internet, with participants placing their bids remotely using a web-based software system designed especially for auction. The auction software system will be compatible with current versions of most prevalent browsers, and will not require the local installation of any additional software.

Auction participants ("bidders") will receive instructions for access to the online auction site. Access to the site will be password-protected and bids will be encrypted through SSL. If a bidder temporarily loses connection to the Internet, that bidder may be permitted to submit its bids in a given auction round by fax, according to procedures described

---

The amount of funding resulting from auctions, if any, will not be known until all relevant applications have completed this step. Thus, a detailed mechanism for allocation of these funds is not being created at present. However, a process can be pre-established to enable community consultation in the event that such funds are collected. This process will include, at a minimum, publication of data on any funds collected, and public comment on any proposed models.

in the auction rules. The auctions will generally be conducted to conclude quickly, ideally in a single day.

The auction will be carried out in a series of auction rounds, as illustrated in Figure 4-3. The sequence of events is as follows:

1. For each auction round, the auctioneer will announce in advance: (1) the start-of-round price, (2) the end-of-round price, and (3) the starting and ending times of the auction round. In the first auction round, the start-of-round price for all bidders in the auction will be USD 0. In later auction rounds, the start-of-round price will be its end-of-round price from the previous auction round.

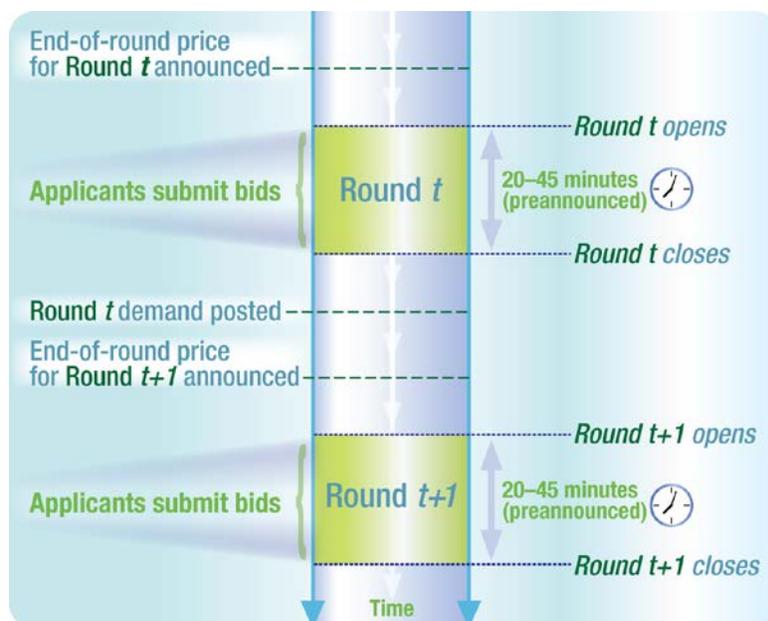

Figure 4-3 – Sequence of events during an ascending-clock auction.

2. During each auction round, bidders will be required to submit a bid or bids representing their willingness to pay within the range of intermediate prices between the start-of-round and end-of-round prices. In this way a bidder indicates its willingness to stay in the auction at all prices through and including the end-of-auction round price, or its wish to exit the auction at a price less than the end-of-auction round price, called the exit bid.
3. Exit is irrevocable. If a bidder exited the auction in a previous auction round, the bidder is not permitted to re-enter in the current auction round.

4. Bidders may submit their bid or bids at any time during the auction round.
5. Only bids that comply with all aspects of the auction rules will be considered valid. If more than one valid bid is submitted by a given bidder within the time limit of the auction round, the auctioneer will treat the last valid submitted bid as the actual bid.
6. At the end of each auction round, bids become the bidders' legally-binding offers to secure the relevant gTLD strings at prices up to the respective bid amounts, subject to closure of the auction in accordance with the auction rules. In later auction rounds, bids may be used to exit from the auction at subsequent higher prices.
7. After each auction round, the auctioneer will disclose the aggregate number of bidders remaining in the auction at the end-of-round prices for the auction round, and will announce the prices and times for the next auction round.
  - Each bid should consist of a single price associated with the application, and such price must be greater than or equal to the start-of-round price.
  - If the bid amount is strictly less than the end-of-round price, then the bid is treated as an exit bid at the specified amount, and it signifies the bidder's binding commitment to pay up to the bid amount if its application is approved.
  - If the bid amount is greater than or equal to the end-of-round price, then the bid signifies that the bidder wishes to remain in the auction at all prices in the current auction round, and it signifies the bidder's binding commitment to pay up to the end-of-round price if its application is approved. Following such bid, the application cannot be eliminated within the current auction round.
  - To the extent that the bid amount exceeds the end-of-round price, then the bid is also treated as a proxy bid to be carried forward to the next auction round. The bidder will be permitted to change the proxy bid amount in the next auction round, and the amount of the proxy bid will not constrain the bidder's ability to submit any valid bid amount in the next auction round.

- No bidder is permitted to submit a bid for any application for which an exit bid was received in a prior auction round. That is, once an application has exited the auction, it may not return.
  - If no valid bid is submitted within a given auction round for an application that remains in the auction, then the bid amount is taken to be the amount of the proxy bid, if any, carried forward from the previous auction round or, if none, the bid is taken to be an exit bid at the start-of-round price for the current auction round.
8. This process continues, with the auctioneer increasing the price range for each given TLD string in each auction round, until there is one remaining bidder at the end-of-round price. After an auction round in which this condition is satisfied, the auction concludes and the auctioneer determines the clearing price. The last remaining application is deemed the successful application, and the associated bidder is obligated to pay the clearing price.

Figure 4-4 illustrates how an auction for five contending applications might progress.

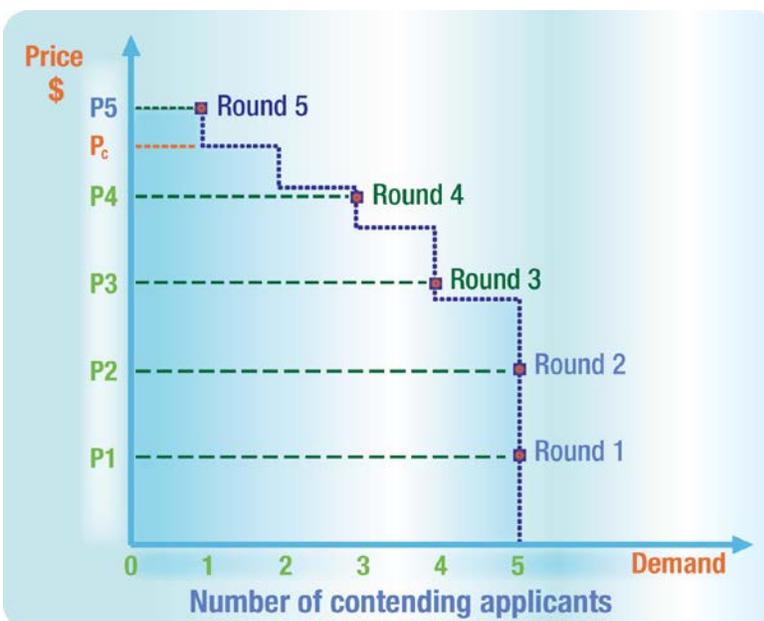

Figure 4-4 – Example of an auction for five mutually-contending applications.

- Before the first auction round, the auctioneer announces the end-of-round price  $P_1$ .
- During Auction round 1, a bid is submitted for each application. In Figure 4-4, all five bidders submit bids of at least  $P_1$ . Since the aggregate demand exceeds one, the auction proceeds to Auction round 2. The auctioneer discloses that five contending applications remained at  $P_1$  and announces the end-of-round price  $P_2$ .
- During Auction round 2, a bid is submitted for each application. In Figure 4-4, all five bidders submit bids of at least  $P_2$ . The auctioneer discloses that five contending applications remained at  $P_2$  and announces the end-of-round price  $P_3$ .
- During Auction round 3, one of the bidders submits an exit bid at slightly below  $P_3$ , while the other four bidders submit bids of at least  $P_3$ . The auctioneer discloses that four contending applications remained at  $P_3$  and announces the end-of-round price  $P_4$ .
- During Auction round 4, one of the bidders submits an exit bid midway between  $P_3$  and  $P_4$ , while the other three remaining bidders submit bids of at least  $P_4$ . The auctioneer discloses that three contending applications remained at  $P_4$  and announces the end-of-auction round price  $P_5$ .
- During Auction round 5, one of the bidders submits an exit bid at slightly above  $P_4$ , and one of the bidders submits an exit bid at  $P_c$  midway between  $P_4$  and  $P_5$ . The final bidder submits a bid greater than  $P_c$ . Since the aggregate demand at  $P_5$  does not exceed one, the auction concludes in Auction round 5. The application associated with the highest bid in Auction round 5 is deemed the successful application. The clearing price is  $P_c$ , as this is the lowest price at which aggregate demand can be met.

To the extent possible, auctions to resolve multiple string contention situations will be conducted simultaneously.

#### 4.3.1.1 Currency

For bids to be comparable, all bids in the auction will be submitted in any integer (whole) number of US dollars.

#### 4.3.1.2 Fees

A bidding deposit will be required of applicants participating in the auction, in an amount to be determined. The bidding deposit must be transmitted by wire transfer to a specified bank account specified by ICANN or its auction provider at a major international bank, to be received in advance of the auction date. The amount of the deposit will determine a bidding limit for each bidder: the bidding deposit will equal 10% of the bidding limit; and the bidder will not be permitted to submit any bid in excess of its bidding limit.

In order to avoid the need for bidders to pre-commit to a particular bidding limit, bidders may be given the option of making a specified deposit that will provide them with unlimited bidding authority for a given application. The amount of the deposit required for unlimited bidding authority will depend on the particular contention set and will be based on an assessment of the possible final prices within the auction.

All deposits from non-defaulting losing bidders will be returned following the close of the auction.

#### 4.3.2 Winning Bid Payments

---

Any applicant that participates in an auction will be required to sign a bidder agreement that acknowledges its rights and responsibilities in the auction, including that its bids are legally binding commitments to pay the amount bid if it wins (i.e., if its application is approved), and to enter into the prescribed registry agreement with ICANN— together with a specified penalty for defaulting on payment of its winning bid or failing to enter into the required registry agreement.

The winning bidder in any auction will be required to pay the full amount of the final price within 20 business days of the end of the auction. Payment is to be made by wire transfer to the same international bank account as the bidding deposit, and the applicant's bidding deposit will be credited toward the final price.

In the event that a bidder anticipates that it would require a longer payment period than 20 business days due to verifiable government-imposed currency restrictions, the bidder may advise ICANN well in advance of the auction and ICANN will consider applying a longer payment period to all bidders within the same contention set.

Any winning bidder for whom the full amount of the final price is not received within 20 business days of the end of an auction is subject to being declared in default. At their sole discretion, ICANN and its auction provider may delay the declaration of default for a brief period, but only if they are convinced that receipt of full payment is imminent.

Any winning bidder for whom the full amount of the final price is received within 20 business days of the end of an auction retains the obligation to execute the required registry agreement within 90 days of the end of auction. Such winning bidder who does not execute the agreement within 90 days of the end of the auction is subject to being declared in default. At their sole discretion, ICANN and its auction provider may delay the declaration of default for a brief period, but only if they are convinced that execution of the registry agreement is imminent.

### *4.3.3 Post-Default Procedures*

---

Once declared in default, any winning bidder is subject to immediate forfeiture of its position in the auction and assessment of default penalties. After a winning bidder is declared in default, the remaining bidders will receive an offer to have their applications accepted, one at a time, in descending order of their exit bids. In this way, the next bidder would be declared the winner subject to payment of its last bid price. The same default procedures and penalties are in place for any runner-up bidder receiving such an offer.

Each bidder that is offered the relevant gTLD will be given a specified period—typically, four business days—to respond as to whether it wants the gTLD. A bidder who responds in the affirmative will have 20 business days to submit its full payment. A bidder who declines such an offer cannot revert on that statement, has no further obligations in this context and will not be considered in default.

The penalty for defaulting on a winning bid will equal 10% of the defaulting bid.<sup>2</sup> Default penalties will be charged against any defaulting applicant's bidding deposit before the associated bidding deposit is returned.

---

<sup>2</sup> If bidders were given the option of making a specified deposit that provided them with unlimited bidding authority for a given application and if the winning bidder utilized this option, then the penalty for defaulting on a winning bid will be the lesser of the following: (1) 10% of the defaulting bid, or (2) the specified deposit amount that provided the bidder with unlimited bidding authority.

## 4.4 *Contention Resolution and Contract Execution*

---

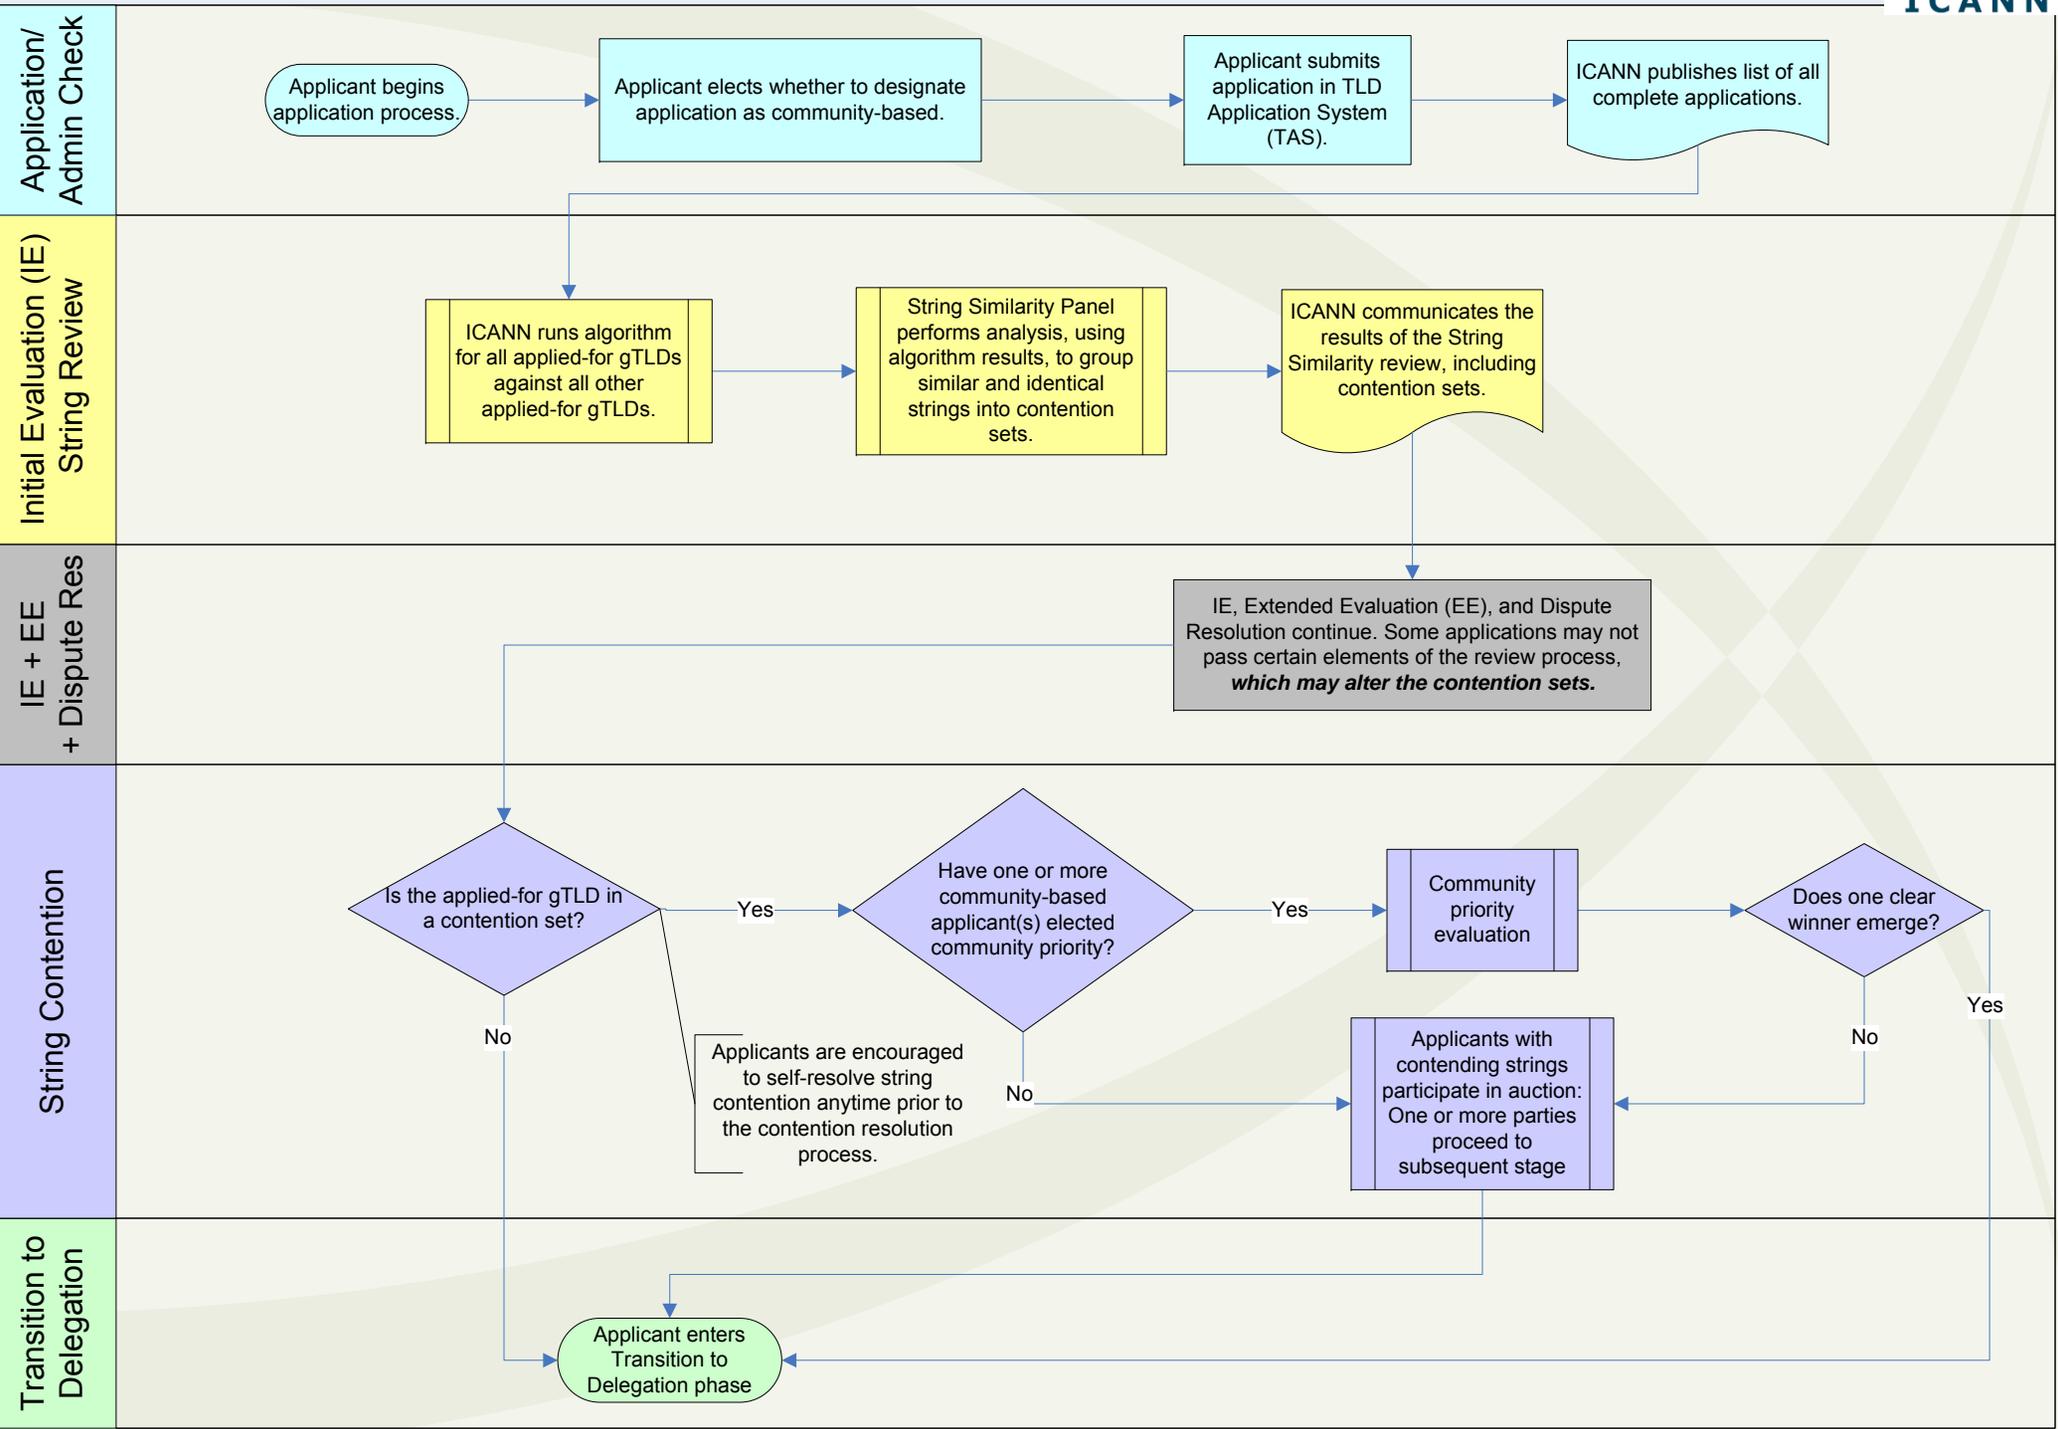

An applicant that has been declared the winner of a contention resolution process will proceed by entering into the contract execution step. (Refer to section 5.1 of Module 5.)

If a winner of the contention resolution procedure has not executed a contract within 90 calendar days of the decision, ICANN has the right to deny that application and extend an offer to the runner-up applicant, if any, to proceed with its application. For example, in an auction, another applicant who would be considered the runner-up applicant might proceed toward delegation. This offer is at ICANN's option only. The runner-up applicant in a contention resolution process has no automatic right to an applied-for gTLD string if the first place winner does not execute a contract within a specified time. If the winning applicant can demonstrate that it is working diligently and in good faith toward successful completion of the steps necessary for entry into the registry agreement, ICANN may extend the 90-day period at its discretion. Runner-up applicants have no claim of priority over the winning application, even after what might be an extended period of negotiation.

Module 5

11 January 2012

---

# Module 5

---

## *Transition to Delegation*

This module describes the final steps required of an applicant for completion of the process, including execution of a registry agreement with ICANN and preparing for delegation of the new gTLD into the root zone.

### *5.1 Registry Agreement*

---

All applicants that have successfully completed the evaluation process—including, if necessary, the dispute resolution and string contention processes—are required to enter into a registry agreement with ICANN before proceeding to delegation.

After the close of each stage in the process, ICANN will send a notification to those successful applicants that are eligible for execution of a registry agreement at that time.

To proceed, applicants will be asked to provide specified information for purposes of executing the registry agreement:

1. Documentation of the applicant's continued operations instrument (see Specification 8 to the agreement).
2. Confirmation of contact information and signatory to the agreement.
3. Notice of any material changes requested to the terms of the agreement.
4. The applicant must report: (i) any ownership interest it holds in any registrar or reseller of registered names, (ii) if known, any ownership interest that a registrar or reseller of registered names holds in the applicant, and (iii) if the applicant controls, is controlled by, or is under common control with any registrar or reseller of registered names. ICANN retains the right to refer an application to a competition authority prior to entry into the registry agreement if it is determined that the registry-registrar cross-ownership

arrangements might raise competition issues. For this purpose "control" (including the terms "controlled by" and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

To ensure that an applicant continues to be a going concern in good legal standing, ICANN reserves the right to ask the applicant to submit additional updated documentation and information before entering into the registry agreement.

ICANN will begin processing registry agreements one month after the date of the notification to successful applicants. Requests will be handled in the order the complete information is received.

Generally, the process will include formal approval of the agreement without requiring additional Board review, so long as: the application passed all evaluation criteria; there are no material changes in circumstances; and there are no material changes to the base agreement. There may be other cases where the Board requests review of an application.

Eligible applicants are expected to have executed the registry agreement within nine (9) months of the notification date. Failure to do so may result in loss of eligibility, at ICANN's discretion. An applicant may request an extension of this time period for up to an additional nine (9) months if it can demonstrate, to ICANN's reasonable satisfaction, that it is working diligently and in good faith toward successfully completing the steps necessary for entry into the registry agreement.

The registry agreement can be reviewed in the attachment to this module. Certain provisions in the agreement are labeled as applicable to governmental and intergovernmental entities only. Private entities, even if supported by a government or IGO, would not ordinarily be eligible for these special provisions.

All successful applicants are expected to enter into the agreement substantially as written. Applicants may request and negotiate terms by exception; however, this extends

the time involved in executing the agreement. In the event that material changes to the agreement are requested, these must first be approved by the ICANN Board of Directors before execution of the agreement.

ICANN's Board of Directors has ultimate responsibility for the New gTLD Program. The Board reserves the right to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community. Under exceptional circumstances, the Board may individually consider a gTLD application. For example, the Board might individually consider an application as a result of GAC Advice on New gTLDs or of the use of an ICANN accountability mechanism.

## *5.2 Pre-Delegation Testing*

---

Each applicant will be required to complete pre-delegation technical testing as a prerequisite to delegation into the root zone. This pre-delegation test must be completed within the time period specified in the registry agreement.

The purpose of the pre-delegation technical test is to verify that the applicant has met its commitment to establish registry operations in accordance with the technical and operational criteria described in Module 2.

The test is also intended to indicate that the applicant can operate the gTLD in a stable and secure manner. All applicants will be tested on a pass/fail basis according to the requirements that follow.

The test elements cover both the DNS server operational infrastructure and registry system operations. In many cases the applicant will perform the test elements as instructed and provide documentation of the results to ICANN to demonstrate satisfactory performance. At ICANN's discretion, aspects of the applicant's self-certification documentation can be audited either on-site at the services delivery point of the registry or elsewhere as determined by ICANN.

### *5.2.1 Testing Procedures*

---

The applicant may initiate the pre-delegation test by submitting to ICANN the Pre-Delegation form and accompanying documents containing all of the following information:

- All name server names and IPv4/IPv6 addresses to be used in serving the new TLD data;
- If using anycast, the list of names and IPv4/IPv6 unicast addresses allowing the identification of each individual server in the anycast sets;
- If IDN is supported, the complete IDN tables used in the registry system;
- A test zone for the new TLD must be signed at test time and the valid key-set to be used at the time of testing must be provided to ICANN in the documentation, as well as the TLD DNSSEC Policy Statement (DPS);
- The executed agreement between the selected escrow agent and the applicant; and
- Self-certification documentation as described below for each test item.

ICANN will review the material submitted and in some cases perform tests in addition to those conducted by the applicant. After testing, ICANN will assemble a report with the outcome of the tests and provide that report to the applicant.

Any clarification request, additional information request, or other request generated in the process will be highlighted and listed in the report sent to the applicant.

ICANN may request the applicant to complete load tests considering an aggregated load where a single entity is performing registry services for multiple TLDs.

Once an applicant has met all of the pre-delegation testing requirements, it is eligible to request delegation of its applied-for gTLD.

If an applicant does not complete the pre-delegation steps within the time period specified in the registry agreement, ICANN reserves the right to terminate the registry agreement.

### **5.2.2 Test Elements: DNS Infrastructure**

---

The first set of test elements concerns the DNS infrastructure of the new gTLD. In all tests of the DNS infrastructure, all requirements are independent of whether IPv4 or IPv6 is used. All tests shall be done both over IPv4 and IPv6, with reports providing results according to both protocols.

**UDP Support** -- The DNS infrastructure to which these tests apply comprises the complete set of servers and network infrastructure to be used by the chosen providers to deliver DNS service for the new gTLD to the Internet. The documentation provided by the applicant must include the results from a system performance test indicating available network and server capacity and an estimate of expected capacity during normal operation to ensure stable service as well as to adequately address Distributed Denial of Service (DDoS) attacks.

Self-certification documentation shall include data on load capacity, latency and network reachability.

Load capacity shall be reported using a table, and a corresponding graph, showing percentage of queries responded against an increasing number of queries per second generated from local (to the servers) traffic generators. The table shall include at least 20 data points and loads of UDP-based queries that will cause up to 10% query loss against a randomly selected subset of servers within the applicant's DNS infrastructure. Responses must either contain zone data or be NXDOMAIN or NODATA responses to be considered valid.

Query latency shall be reported in milliseconds as measured by DNS probes located just outside the border routers of the physical network hosting the name servers, from a network topology point of view.

Reachability will be documented by providing information on the transit and peering arrangements for the DNS server locations, listing the AS numbers of the transit providers or peers at each point of presence and available bandwidth at those points of presence.

**TCP support** -- TCP transport service for DNS queries and responses must be enabled and provisioned for expected load. ICANN will review the capacity self-certification documentation provided by the applicant and will perform TCP reachability and transaction capability tests across a

randomly selected subset of the name servers within the applicant's DNS infrastructure. In case of use of anycast, each individual server in each anycast set will be tested.

Self-certification documentation shall include data on load capacity, latency and external network reachability.

Load capacity shall be reported using a table, and a corresponding graph, showing percentage of queries that generated a valid (zone data, NODATA, or NXDOMAIN) response against an increasing number of queries per second generated from local (to the name servers) traffic generators. The table shall include at least 20 data points and loads that will cause up to 10% query loss (either due to connection timeout or connection reset) against a randomly selected subset of servers within the applicant's DNS infrastructure.

Query latency will be reported in milliseconds as measured by DNS probes located just outside the border routers of the physical network hosting the name servers, from a network topology point of view.

Reachability will be documented by providing records of TCP-based DNS queries from nodes external to the network hosting the servers. These locations may be the same as those used for measuring latency above.

**DNSSEC support** -- Applicant must demonstrate support for EDNS(0) in its server infrastructure, the ability to return correct DNSSEC-related resource records such as DNSKEY, RRSIG, and NSEC/NSEC3 for the signed zone, and the ability to accept and publish DS resource records from second-level domain administrators. In particular, the applicant must demonstrate its ability to support the full life cycle of KSK and ZSK keys. ICANN will review the self-certification materials as well as test the reachability, response sizes, and DNS transaction capacity for DNS queries using the EDNS(0) protocol extension with the "DNSSEC OK" bit set for a randomly selected subset of all name servers within the applicant's DNS infrastructure. In case of use of anycast, each individual server in each anycast set will be tested.

Load capacity, query latency, and reachability shall be documented as for UDP and TCP above.

### 5.2.3 Test Elements: Registry Systems

---

As documented in the registry agreement, registries must provide support for EPP within their Shared Registration System, and provide Whois service both via port 43 and a web interface, in addition to support for the DNS. This section details the requirements for testing these registry systems.

**System performance** -- The registry system must scale to meet the performance requirements described in Specification 10 of the registry agreement and ICANN will require self-certification of compliance. ICANN will review the self-certification documentation provided by the applicant to verify adherence to these minimum requirements.

**Whois support** -- Applicant must provision Whois services for the anticipated load. ICANN will verify that Whois data is accessible over IPv4 and IPv6 via both TCP port 43 and via a web interface and review self-certification documentation regarding Whois transaction capacity. Response format according to Specification 4 of the registry agreement and access to Whois (both port 43 and via web) will be tested by ICANN remotely from various points on the Internet over both IPv4 and IPv6.

Self-certification documents shall describe the maximum number of queries per second successfully handled by both the port 43 servers as well as the web interface, together with an applicant-provided load expectation.

Additionally, a description of deployed control functions to detect and mitigate data mining of the Whois database shall be documented.

**EPP Support** -- As part of a shared registration service, applicant must provision EPP services for the anticipated load. ICANN will verify conformance to appropriate RFCs (including EPP extensions for DNSSEC). ICANN will also review self-certification documentation regarding EPP transaction capacity.

Documentation shall provide a maximum Transaction per Second rate for the EPP interface with 10 data points corresponding to registry database sizes from 0 (empty) to the expected size after one year of operation, as determined by applicant.

Documentation shall also describe measures taken to handle load during initial registry operations, such as a land-rush period.

**IPv6 support** -- The ability of the registry to support registrars adding, changing, and removing IPv6 DNS records supplied by registrants will be tested by ICANN. If the registry supports EPP access via IPv6, this will be tested by ICANN remotely from various points on the Internet.

**DNSSEC support** -- ICANN will review the ability of the registry to support registrars adding, changing, and removing DNSSEC-related resource records as well as the registry's overall key management procedures. In particular, the applicant must demonstrate its ability to support the full life cycle of key changes for child domains. Inter-operation of the applicant's secure communication channels with the IANA for trust anchor material exchange will be verified.

The practice and policy document (also known as the DNSSEC Policy Statement or DPS), describing key material storage, access and usage for its own keys is also reviewed as part of this step.

**IDN support** -- ICANN will verify the complete IDN table(s) used in the registry system. The table(s) must comply with the guidelines in <http://iana.org/procedures/idn-repository.html>.

Requirements related to IDN for Whois are being developed. After these requirements are developed, prospective registries will be expected to comply with published IDN-related Whois requirements as part of pre-delegation testing.

**Escrow deposit** -- The applicant-provided samples of data deposit that include both a full and an incremental deposit showing correct type and formatting of content will be reviewed. Special attention will be given to the agreement with the escrow provider to ensure that escrowed data can be released within 24 hours should it be necessary. ICANN may, at its option, ask an independent third party to demonstrate the reconstitutability of the registry from escrowed data. ICANN may elect to test the data release process with the escrow agent.

## 5.3 Delegation Process

---

Upon notice of successful completion of the ICANN pre-delegation testing, applicants may initiate the process for delegation of the new gTLD into the root zone database.

This will include provision of additional information and completion of additional technical steps required for delegation. Information about the delegation process is available at <http://iana.org/domains/root/>.

## 5.4 Ongoing Operations

---

An applicant that is successfully delegated a gTLD will become a “Registry Operator.” In being delegated the role of operating part of the Internet’s domain name system, the applicant will be assuming a number of significant responsibilities. ICANN will hold all new gTLD operators accountable for the performance of their obligations under the registry agreement, and it is important that all applicants understand these responsibilities.

### 5.4.1 What is Expected of a Registry Operator

---

The registry agreement defines the obligations of gTLD registry operators. A breach of the registry operator’s obligations may result in ICANN compliance actions up to and including termination of the registry agreement. Prospective applicants are encouraged to review the following brief description of some of these responsibilities.

Note that this is a non-exhaustive list provided to potential applicants as an introduction to the responsibilities of a registry operator. For the complete and authoritative text, please refer to the registry agreement.

A registry operator is obligated to:

**Operate the TLD in a stable and secure manner.** The registry operator is responsible for the entire technical operation of the TLD. As noted in RFC 1591<sup>1</sup>:

“The designated manager must do a satisfactory job of operating the DNS service for the domain. That is, the actual management of the assigning of domain names, delegating subdomains and operating nameservers must be done with technical competence. This includes keeping

---

<sup>1</sup> See <http://www.rfc-editor.org/rfc/rfc1591.txt>

the central IR<sup>2</sup> (in the case of top-level domains) or other higher-level domain manager advised of the status of the domain, responding to requests in a timely manner, and operating the database with accuracy, robustness, and resilience.”

The registry operator is required to comply with relevant technical standards in the form of RFCs and other guidelines. Additionally, the registry operator must meet performance specifications in areas such as system downtime and system response times (see Specifications 6 and 10 of the registry agreement).

***Comply with consensus policies and temporary policies.***

gTLD registry operators are required to comply with consensus policies. Consensus policies may relate to a range of topics such as issues affecting interoperability of the DNS, registry functional and performance specifications, database security and stability, or resolution of disputes over registration of domain names.

To be adopted as a consensus policy, a policy must be developed by the Generic Names Supporting Organization (GNSO)<sup>3</sup> following the process in Annex A of the ICANN Bylaws.<sup>4</sup> The policy development process involves deliberation and collaboration by the various stakeholder groups participating in the process, with multiple opportunities for input and comment by the public, and can take significant time.

Examples of existing consensus policies are the Inter-Registrar Transfer Policy (governing transfers of domain names between registrars), and the Registry Services Evaluation Policy (establishing a review of proposed new registry services for security and stability or competition concerns), although there are several more, as found at <http://www.icann.org/en/general/consensus-policies.htm>.

gTLD registry operators are obligated to comply with both existing consensus policies and those that are developed in the future. Once a consensus policy has been formally adopted, ICANN will provide gTLD registry operators with notice of the requirement to implement the new policy and the effective date.

---

<sup>2</sup> IR is a historical reference to “Internet Registry,” a function now performed by ICANN.

<sup>3</sup> <http://gns0.icann.org>

<sup>4</sup> <http://www.icann.org/en/general/bylaws.htm#AnnexA>

In addition, the ICANN Board may, when required by circumstances, establish a temporary policy necessary to maintain the stability or security of registry services or the DNS. In such a case, all gTLD registry operators will be required to comply with the temporary policy for the designated period of time.

For more information, see Specification 1 of the registry agreement.

**Implement start-up rights protection measures.** The registry operator must implement, at a minimum, a Sunrise period and a Trademark Claims service during the start-up phases for registration in the TLD, as provided in the registry agreement. These mechanisms will be supported by the established Trademark Clearinghouse as indicated by ICANN.

The Sunrise period allows eligible rightsholders an early opportunity to register names in the TLD.

The Trademark Claims service provides notice to potential registrants of existing trademark rights, as well as notice to rightsholders of relevant names registered. Registry operators may continue offering the Trademark Claims service after the relevant start-up phases have concluded.

For more information, see Specification 7 of the registry agreement and the Trademark Clearinghouse model accompanying this module.

**Implement post-launch rights protection measures.** The registry operator is required to implement decisions made under the Uniform Rapid Suspension (URS) procedure, including suspension of specific domain names within the registry. The registry operator is also required to comply with and implement decisions made according to the Trademark Post-Delegation Dispute Resolution Policy (PDDRP).

The required measures are described fully in the URS and PDDRP procedures accompanying this module. Registry operators may introduce additional rights protection measures relevant to the particular gTLD.

**Implement measures for protection of country and territory names in the new gTLD.** All new gTLD registry operators are required to provide certain minimum protections for country and territory names, including an initial reservation requirement and establishment of applicable rules and

procedures for release of these names. The rules for release can be developed or agreed to by governments, the GAC, and/or approved by ICANN after a community discussion. Registry operators are encouraged to implement measures for protection of geographical names in addition to those required by the agreement, according to the needs and interests of each gTLD's particular circumstances. (See Specification 5 of the registry agreement).

**Pay recurring fees to ICANN.** In addition to supporting expenditures made to accomplish the objectives set out in ICANN's mission statement, these funds enable the support required for new gTLDs, including: contractual compliance, registry liaison, increased registrar accreditations, and other registry support activities. The fees include both a fixed component (USD 25,000 annually) and, where the TLD exceeds a transaction volume, a variable fee based on transaction volume. See Article 6 of the registry agreement.

**Regularly deposit data into escrow.** This serves an important role in registrant protection and continuity for certain instances where the registry or one aspect of the registry operations experiences a system failure or loss of data. (See Specification 2 of the registry agreement.)

**Deliver monthly reports in a timely manner.** A registry operator must submit a report to ICANN on a monthly basis. The report includes registrar transactions for the month and is used by ICANN for calculation of registrar fees. (See Specification 3 of the registry agreement.)

**Provide Whois service.** A registry operator must provide a publicly available Whois service for registered domain names in the TLD. (See Specification 4 of the registry agreement.)

**Maintain partnerships with ICANN-accredited registrars.** A registry operator creates a Registry-Registrar Agreement (RRA) to define requirements for its registrars. This must include certain terms that are specified in the Registry Agreement, and may include additional terms specific to the TLD. A registry operator must provide non-discriminatory access to its registry services to all ICANN-accredited registrars with whom it has entered into an RRA, and who are in compliance with the requirements. This includes providing advance notice of pricing changes to all

registrars, in compliance with the time frames specified in the agreement. (See Article 2 of the registry agreement.)

**Maintain an abuse point of contact.** A registry operator must maintain and publish on its website a single point of contact responsible for addressing matters requiring expedited attention and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. A registry operator must also take reasonable steps to investigate and respond to any reports from law enforcement, governmental and quasi-governmental agencies of illegal conduct in connection with the use of the TLD. (See Article 2 and Specification 6 of the registry agreement.)

**Cooperate with contractual compliance audits.** To maintain a level playing field and a consistent operating environment, ICANN staff performs periodic audits to assess contractual compliance and address any resulting problems. A registry operator must provide documents and information requested by ICANN that are necessary to perform such audits. (See Article 2 of the registry agreement.)

**Maintain a Continued Operations Instrument.** A registry operator must, at the time of the agreement, have in place a continued operations instrument sufficient to fund basic registry operations for a period of three (3) years. This requirement remains in place for five (5) years after delegation of the TLD, after which time the registry operator is no longer required to maintain the continued operations instrument. (See Specification 8 to the registry agreement.)

**Maintain community-based policies and procedures.** If the registry operator designated its application as community-based at the time of the application, the registry operator has requirements in its registry agreement to maintain the community-based policies and procedures it specified in its application. The registry operator is bound by the Registry Restrictions Dispute Resolution Procedure with respect to disputes regarding execution of its community-based policies and procedures. (See Article 2 to the registry agreement.)

**Have continuity and transition plans in place.** This includes performing failover testing on a regular basis. In the event that a transition to a new registry operator becomes necessary, the registry operator is expected to cooperate

by consulting with ICANN on the appropriate successor, providing the data required to enable a smooth transition, and complying with the applicable registry transition procedures. (See Articles 2 and 4 of the registry agreement.)

***Make TLD zone files available via a standardized process.***

This includes provision of access to the registry's zone file to credentialed users, according to established access, file, and format standards. The registry operator will enter into a standardized form of agreement with zone file users and will accept credential information for users via a clearinghouse. (See Specification 4 of the registry agreement.)

***Implement DNSSEC.*** The registry operator is required to sign the TLD zone files implementing Domain Name System Security Extensions (DNSSEC) in accordance with the relevant technical standards. The registry must accept public key material from registrars for domain names registered in the TLD, and publish a DNSSEC Policy Statement describing key material storage, access, and usage for the registry's keys. (See Specification 6 of the registry agreement.)

#### ***5.4.2 What is Expected of ICANN***

---

ICANN will continue to provide support for gTLD registry operators as they launch and maintain registry operations. ICANN's gTLD registry liaison function provides a point of contact for gTLD registry operators for assistance on a continuing basis.

ICANN's contractual compliance function will perform audits on a regular basis to ensure that gTLD registry operators remain in compliance with agreement obligations, as well as investigate any complaints from the community regarding the registry operator's adherence to its contractual obligations. See <http://www.icann.org/en/compliance/> for more information on current contractual compliance activities.

ICANN's Bylaws require ICANN to act in an open and transparent manner, and to provide equitable treatment among registry operators. ICANN is responsible for maintaining the security and stability of the global Internet, and looks forward to a constructive and cooperative relationship with future gTLD registry operators in furtherance of this goal.

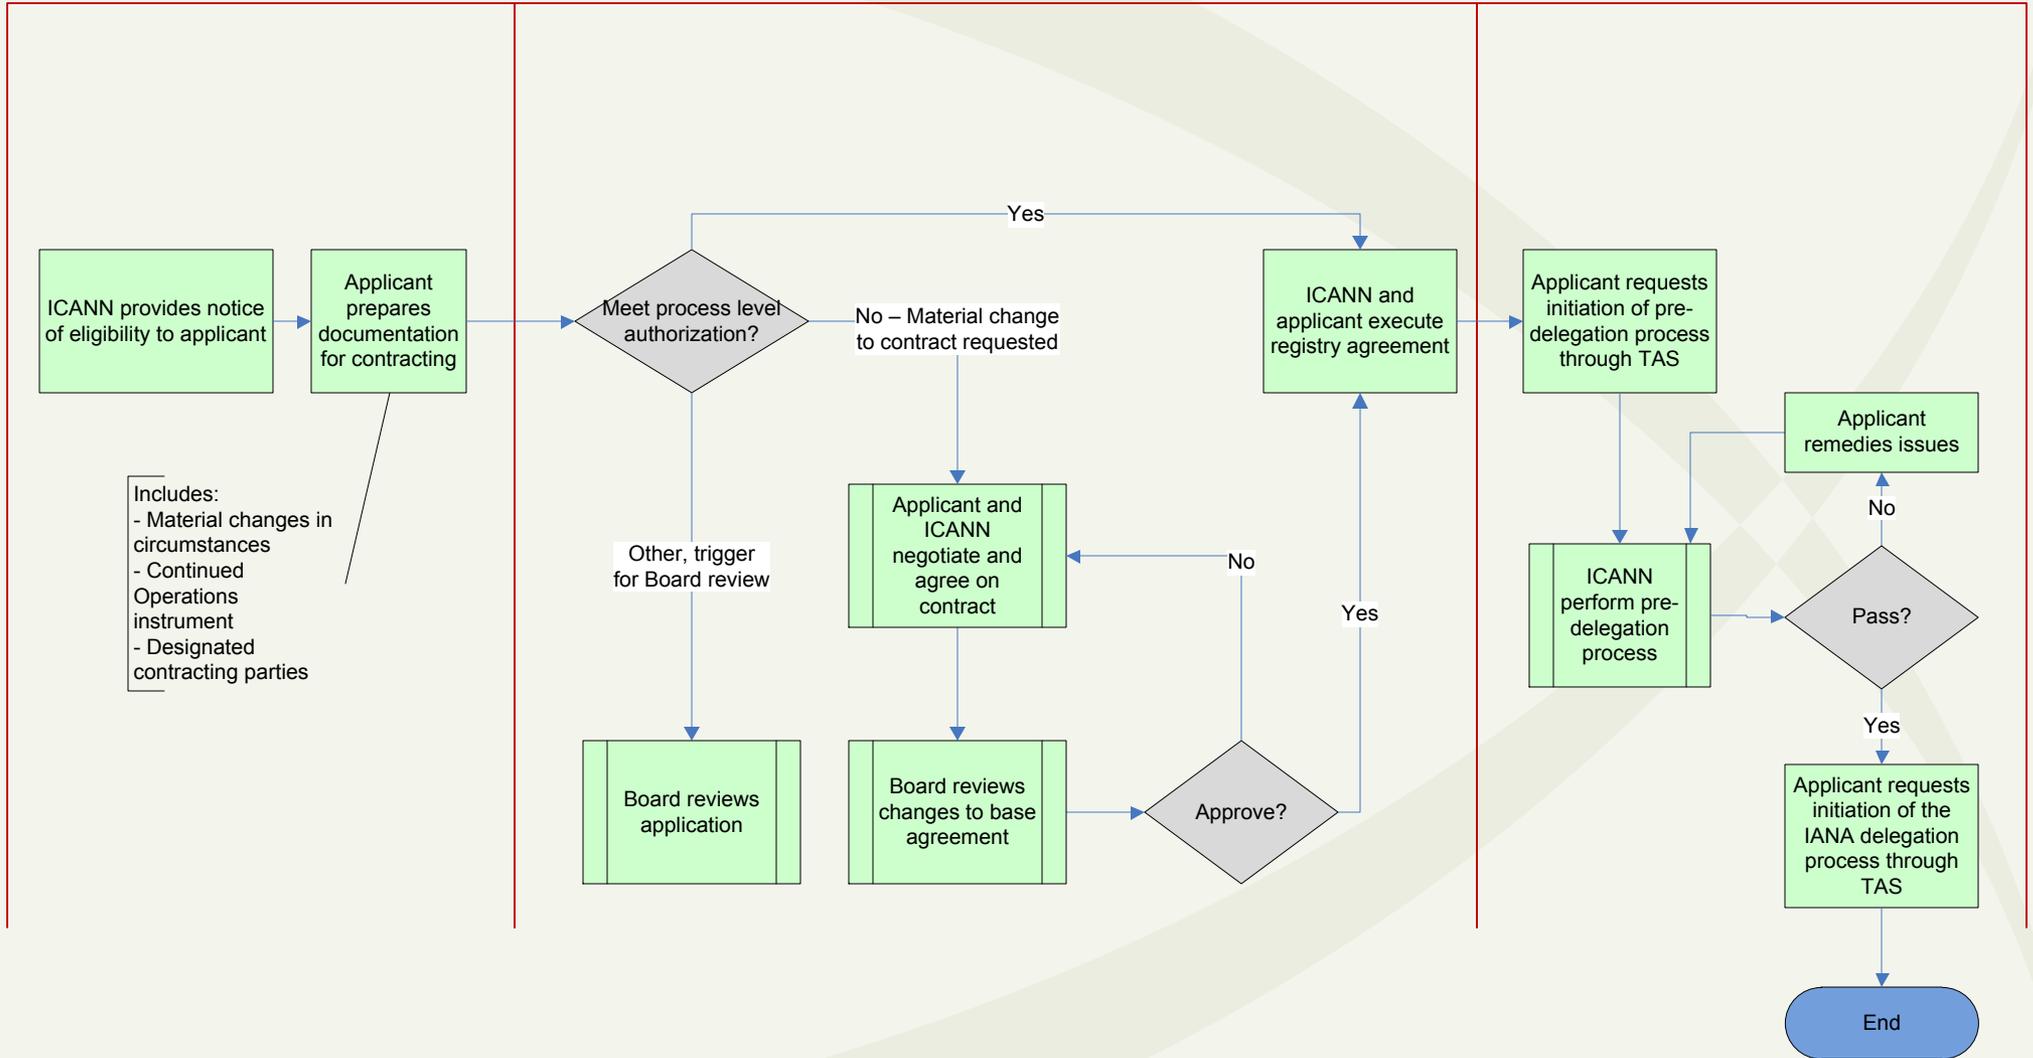

# Draft – New gTLD Program - Transition to Delegation

(Timeframes are estimates only)

## Applicant Doc Prep 1 Month

## Contracting – 1 day to 9 months

## Pre-Delegation Testing – 1 to 12 months

---

# *New gTLD Agreement*

---

This document contains the registry agreement associated with the Applicant Guidebook for New gTLDs.

Successful gTLD applicants would enter into this form of registry agreement with ICANN prior to delegation of the new gTLD. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process).

## REGISTRY AGREEMENT

This REGISTRY AGREEMENT (this “Agreement”) is entered into as of \_\_\_\_\_ (the “Effective Date”) between Internet Corporation for Assigned Names and Numbers, a California nonprofit public benefit corporation (“ICANN”), and \_\_\_\_\_, a \_\_\_\_\_ (“Registry Operator”).

### ARTICLE 1.

#### DELEGATION AND OPERATION OF TOP-LEVEL DOMAIN; REPRESENTATIONS AND WARRANTIES

**1.1 Domain and Designation.** The Top-Level Domain to which this Agreement applies is \_\_\_\_\_ (the “TLD”). Upon the Effective Date and until the end of the Term (as defined in Section 4.1), ICANN designates Registry Operator as the registry operator for the TLD, subject to the requirements and necessary approvals for delegation of the TLD and entry into the root-zone.

**1.2 Technical Feasibility of String.** While ICANN has encouraged and will continue to encourage universal acceptance of all top-level domain strings across the Internet, certain top-level domain strings may encounter difficulty in acceptance by ISPs and webhosters and/or validation by web applications. Registry Operator shall be responsible for ensuring to its satisfaction the technical feasibility of the TLD string prior to entering into this Agreement.

#### **1.3 Representations and Warranties.**

(a) Registry Operator represents and warrants to ICANN as follows:

(i) all material information provided and statements made in the registry TLD application, and statements made in writing during the negotiation of this Agreement, were true and correct in all material respects at the time made, and such information or statements continue to be true and correct in all material respects as of the Effective Date except as otherwise previously disclosed in writing by Registry Operator to ICANN;

(ii) Registry Operator is duly organized, validly existing and in good standing under the laws of the jurisdiction set forth in the preamble hereto, and Registry Operator has all requisite power and authority and obtained all necessary approvals to enter into and duly execute and deliver this Agreement; and

(iii) Registry Operator has delivered to ICANN a duly executed instrument that secures the funds required to perform registry functions for the TLD in the event of the termination or expiration of this Agreement (the “Continued Operations Instrument”), and such instrument is a binding obligation of the parties thereto, enforceable against the parties thereto in accordance with its terms.

(b) ICANN represents and warrants to Registry Operator that ICANN is a nonprofit public benefit corporation duly organized, validly existing and in good standing under the laws of the State of California, United States of America. ICANN has all requisite power and authority and obtained all necessary corporate approvals to enter into and duly execute and deliver this Agreement.

## ARTICLE 2.

### COVENANTS OF REGISTRY OPERATOR

Registry Operator covenants and agrees with ICANN as follows:

**2.1 Approved Services; Additional Services.** Registry Operator shall be entitled to provide the Registry Services described in clauses (a) and (b) of the first paragraph of Section 2.1 in the specification at [*see specification 6*] (“Specification 6”) and such other Registry Services set forth on Exhibit A (collectively, the “Approved Services”). If Registry Operator desires to provide any Registry Service that is not an Approved Service or is a modification to an Approved Service (each, an “Additional Service”), Registry Operator shall submit a request for approval of such Additional Service pursuant to the Registry Services Evaluation Policy at <http://www.icann.org/en/registries/rsep/rsep.html>, as such policy may be amended from time to time in accordance with the bylaws of ICANN (as amended from time to time, the “ICANN Bylaws”) applicable to Consensus Policies (the “RSEP”). Registry Operator may offer Additional Services only with the written approval of ICANN, and, upon any such approval, such Additional Services shall be deemed Registry Services under this Agreement. In its reasonable discretion, ICANN may require an amendment to this Agreement reflecting the provision of any Additional Service which is approved pursuant to the RSEP, which amendment shall be in a form reasonably acceptable to the parties.

**2.2 Compliance with Consensus Policies and Temporary Policies.** Registry Operator shall comply with and implement all Consensus Policies and Temporary Policies found at <http://www.icann.org/general/consensus-policies.htm>, as of the Effective Date and as may in the future be developed and adopted in accordance with the ICANN Bylaws, provided such future Consensus Policies and Temporary Policies are adopted in accordance with the procedure and relate to those topics and subject to those limitations set forth at [*see specification 1*]\* (“Specification 1”).

**2.3 Data Escrow.** Registry Operator shall comply with the registry data escrow procedures posted at [*see specification 2*]\*.

**2.4 Monthly Reporting.** Within twenty (20) calendar days following the end of each calendar month, Registry Operator shall deliver to ICANN reports in the format posted in the specification at [*see specification 3*]\*.

**2.5 Publication of Registration Data.** Registry Operator shall provide public access to registration data in accordance with the specification posted at [*see specification 4*]\* (“Specification 4”).

**2.6 Reserved Names.** Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall comply with the restrictions on registration of character strings set forth at [*see specification 5*]\* (“Specification 5”). Registry Operator may establish policies concerning the reservation or blocking of additional character strings within the TLD at its discretion. If Registry Operator is the registrant for any domain names in the Registry TLD (other than the Second-Level Reservations for Registry Operations from Specification 5), such registrations must be through an ICANN accredited registrar. Any such registrations will be considered Transactions (as defined in Section 6.1) for purposes of calculating the Registry-Level Transaction Fee to be paid to ICANN by Registry Operator pursuant to Section 6.1.

**2.7 Registry Interoperability and Continuity.** Registry Operator shall comply with the Registry Interoperability and Continuity Specifications as set forth in Specification 6.

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

**2.8 Protection of Legal Rights of Third Parties.** Registry Operator must specify, and comply with, a process and procedures for launch of the TLD and initial registration-related and ongoing protection of the legal rights of third parties as set forth in the specification at [*see specification 7*]\* (“Specification 7”). Registry Operator may, at its election, implement additional protections of the legal rights of third parties. Any changes or modifications to the process and procedures required by Specification 7 following the Effective Date must be approved in advance by ICANN in writing. Registry Operator must comply with all remedies imposed by ICANN pursuant to Section 2 of Specification 7, subject to Registry Operator’s right to challenge such remedies as set forth in the applicable procedure described therein. Registry Operator shall take reasonable steps to investigate and respond to any reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of the TLD. In responding to such reports, Registry Operator will not be required to take any action in contravention of applicable law.

**2.9 Registrars.**

(a) Registry Operator must use only ICANN accredited registrars in registering domain names. Registry Operator must provide non-discriminatory access to Registry Services to all ICANN accredited registrars that enter into and are in compliance with the registry-registrar agreement for the TLD; provided, that Registry Operator may establish non-discriminatory criteria for qualification to register names in the TLD that are reasonably related to the proper functioning of the TLD. Registry Operator must use a uniform non-discriminatory agreement with all registrars authorized to register names in the TLD. Such agreement may be revised by Registry Operator from time to time; provided, however, that any such revisions must be approved in advance by ICANN.

(b) If Registry Operator (i) becomes an Affiliate or reseller of an ICANN accredited registrar, or (ii) subcontracts the provision of any Registry Services to an ICANN accredited registrar, registrar reseller or any of their respective Affiliates, then, in either such case of (i) or (ii) above, Registry Operator will give ICANN prompt notice of the contract, transaction or other arrangement that resulted in such affiliation, reseller relationship or subcontract, as applicable, including, if requested by ICANN, copies of any contract relating thereto; provided, that ICANN will not disclose such contracts to any third party other than relevant competition authorities. ICANN reserves the right, but not the obligation, to refer any such contract, transaction or other arrangement to relevant competition authorities in the event that ICANN determines that such contract, transaction or other arrangement might raise competition issues.

(c) For the purposes of this Agreement: (i) “Affiliate” means a person or entity that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, the person or entity specified, and (ii) “control” (including the terms “controlled by” and “under common control with”) means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as an employee or a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

**2.10 Pricing for Registry Services.**

(a) With respect to initial domain name registrations, Registry Operator shall provide ICANN and each ICANN accredited registrar that has executed the registry-registrar agreement for the TLD advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying or other programs which had the effect of reducing the price charged to registrars, unless such refunds, rebates, discounts, product tying or other programs are of a limited

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

duration that is clearly and conspicuously disclosed to the registrar when offered) of no less than thirty (30) calendar days. Registry Operator shall offer registrars the option to obtain initial domain name registrations for periods of one to ten years at the discretion of the registrar, but no greater than ten years.

(b) With respect to renewal of domain name registrations, Registry Operator shall provide ICANN and each ICANN accredited registrar that has executed the registry-registrar agreement for the TLD advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying, Qualified Marketing Programs or other programs which had the effect of reducing the price charged to registrars) of no less than one hundred eighty (180) calendar days. Notwithstanding the foregoing sentence, with respect to renewal of domain name registrations: (i) Registry Operator need only provide thirty (30) calendar days notice of any price increase if the resulting price is less than or equal to (A) for the period beginning on the Effective Date and ending twelve (12) months following the Effective Date, the initial price charged for registrations in the TLD, or (B) for subsequent periods, a price for which Registry Operator provided a notice pursuant to the first sentence of this Section 2.10(b) within the twelve (12) month period preceding the effective date of the proposed price increase; and (ii) Registry Operator need not provide notice of any price increase for the imposition of the Variable Registry-Level Fee set forth in Section 6.3. Registry Operator shall offer registrars the option to obtain domain name registration renewals at the current price (i.e. the price in place prior to any noticed increase) for periods of one to ten years at the discretion of the registrar, but no greater than ten years.

(c) In addition, Registry Operator must have uniform pricing for renewals of domain name registrations (“Renewal Pricing”). For the purposes of determining Renewal Pricing, the price for each domain registration renewal must be identical to the price of all other domain name registration renewals in place at the time of such renewal, and such price must take into account universal application of any refunds, rebates, discounts, product tying or other programs in place at the time of renewal. The foregoing requirements of this Section 2.10(c) shall not apply for (i) purposes of determining Renewal Pricing if the registrar has provided Registry Operator with documentation that demonstrates that the applicable registrant expressly agreed in its registration agreement with registrar to higher Renewal Pricing at the time of the initial registration of the domain name following clear and conspicuous disclosure of such Renewal Pricing to such registrant, and (ii) discounted Renewal Pricing pursuant to a Qualified Marketing Program (as defined below). The parties acknowledge that the purpose of this Section 2.10(c) is to prohibit abusive and/or discriminatory Renewal Pricing practices imposed by Registry Operator without the written consent of the applicable registrant at the time of the initial registration of the domain and this Section 2.10(c) will be interpreted broadly to prohibit such practices. For purposes of this Section 2.10(c), a “Qualified Marketing Program” is a marketing program pursuant to which Registry Operator offers discounted Renewal Pricing, provided that each of the following criteria is satisfied: (i) the program and related discounts are offered for a period of time not to exceed one hundred eighty (180) calendar days (with consecutive substantially similar programs aggregated for purposes of determining the number of calendar days of the program), (ii) all ICANN accredited registrars are provided the same opportunity to qualify for such discounted Renewal Pricing; and (iii) the intent or effect of the program is not to exclude any particular class(es) of registrations (e.g., registrations held by large corporations) or increase the renewal price of any particular class(es) of registrations. Nothing in this Section 2.10(c) shall limit Registry Operator’s obligations pursuant to Section 2.10(b).

(d) Registry Operator shall provide public query-based DNS lookup service for the TLD (that is, operate the Registry TLD zone servers) at its sole expense.

## **2.11 Contractual and Operational Compliance Audits.**

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(a) ICANN may from time to time (not to exceed twice per calendar year) conduct, or engage a third party to conduct, contractual compliance audits to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement. Such audits shall be tailored to achieve the purpose of assessing compliance, and ICANN will (a) give reasonable advance notice of any such audit, which notice shall specify in reasonable detail the categories of documents, data and other information requested by ICANN, and (b) use commercially reasonable efforts to conduct such audit in such a manner as to not unreasonably disrupt the operations of Registry Operator. As part of such audit and upon request by ICANN, Registry Operator shall timely provide all responsive documents, data and any other information necessary to demonstrate Registry Operator's compliance with this Agreement. Upon no less than five (5) business days notice (unless otherwise agreed to by Registry Operator), ICANN may, as part of any contractual compliance audit, conduct site visits during regular business hours to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement.

(b) Any audit conducted pursuant to Section 2.11(a) will be at ICANN's expense, unless (i) Registry Operator (A) controls, is controlled by, is under common control or is otherwise Affiliated with, any ICANN accredited registrar or registrar reseller or any of their respective Affiliates, or (B) has subcontracted the provision of Registry Services to an ICANN accredited registrar or registrar reseller or any of their respective Affiliates, and, in either case of (A) or (B) above, the audit relates to Registry Operator's compliance with Section 2.14, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the portion of the audit related to Registry Operator's compliance with Section 2.14, or (ii) the audit is related to a discrepancy in the fees paid by Registry Operator hereunder in excess of 5% to ICANN's detriment, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the entirety of such audit. In either such case of (i) or (ii) above, such reimbursement will be paid together with the next Registry-Level Fee payment due following the date of transmittal of the cost statement for such audit.

(c) Notwithstanding Section 2.11(a), if Registry Operator is found not to be in compliance with its representations and warranties contained in Article 1 of this Agreement or its covenants contained in Article 2 of this Agreement in two consecutive audits conducted pursuant to this Section 2.11, ICANN may increase the number of such audits to one per calendar quarter.

(d) Registry Operator will give ICANN immediate notice of the commencement of any of the proceedings referenced in Section 4.3(d) or the occurrence of any of the matters specified in Section 4.3(f).

**2.12 Continued Operations Instrument.** Registry Operator shall comply with the terms and conditions relating to the Continued Operations Instrument set forth in the specification at [*see specification 8*].

**2.13 Emergency Transition.** Registry Operator agrees that in the event that any of the registry functions set forth in Section 6 of Specification 10 fails for a period longer than the emergency threshold for such function set forth in Section 6 of Specification 10, ICANN may designate an emergency interim registry operator of the registry for the TLD (an "Emergency Operator") in accordance with ICANN's registry transition process (available at \_\_\_\_\_) (as the same may be amended from time to time, the "Registry Transition Process") until such time as Registry Operator has demonstrated to ICANN's reasonable satisfaction that it can resume operation of the registry for the TLD without the reoccurrence of such failure. Following such demonstration, Registry Operator may transition back into operation of the registry for the TLD pursuant to the procedures set out in the Registry Transition Process,

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

provided that Registry Operator pays all reasonable costs incurred (i) by ICANN as a result of the designation of the Emergency Operator and (ii) by the Emergency Operator in connection with the operation of the registry for the TLD, which costs shall be documented in reasonable detail in records that shall be made available to Registry Operator. In the event ICANN designates an Emergency Operator pursuant to this Section 2.13 and the Registry Transition Process, Registry Operator shall provide ICANN or any such Emergency Operator with all data (including the data escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such Emergency Operator. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event that an Emergency Operator is designated pursuant to this Section 2.13. In addition, in the event of such failure, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

**2.14 Registry Code of Conduct.** In connection with the operation of the registry for the TLD, Registry Operator shall comply with the Registry Code of Conduct as set forth in the specification at [*see specification 9*].

**2.15 Cooperation with Economic Studies.** If ICANN initiates or commissions an economic study on the impact or functioning of new generic top-level domains on the Internet, the DNS or related matters, Registry Operator shall reasonably cooperate with such study, including by delivering to ICANN or its designee conducting such study all data reasonably necessary for the purposes of such study requested by ICANN or its designee, provided, that Registry Operator may withhold any internal analyses or evaluations prepared by Registry Operator with respect to such data. Any data delivered to ICANN or its designee pursuant to this Section 2.15 shall be fully aggregated and anonymized by ICANN or its designee prior to any disclosure of such data to any third party.

**2.16 Registry Performance Specifications.** Registry Performance Specifications for operation of the TLD will be as set forth in the specification at [*see specification 10*]\*. Registry Operator shall comply with such Performance Specifications and, for a period of at least one year, shall keep technical and operational records sufficient to evidence compliance with such specifications for each calendar year during the Term.

**2.17 Personal Data.** Registry Operator shall (i) notify each ICANN-accredited registrar that is a party to the registry-registrar agreement for the TLD of the purposes for which data about any identified or identifiable natural person (“Personal Data”) submitted to Registry Operator by such registrar is collected and used under this Agreement or otherwise and the intended recipients (or categories of recipients) of such Personal Data, and (ii) require such registrar to obtain the consent of each registrant in the TLD for such collection and use of Personal Data. Registry Operator shall take reasonable steps to protect Personal Data collected from such registrar from loss, misuse, unauthorized disclosure, alteration or destruction. Registry Operator shall not use or authorize the use of Personal Data in a way that is incompatible with the notice provided to registrars.

**2.18 [*Note: For Community-Based TLDs Only*] Obligations of Registry Operator to TLD Community.** Registry Operator shall establish registration policies in conformity with the application submitted with respect to the TLD for: (i) naming conventions within the TLD, (ii) requirements for registration by members of the TLD community, and (iii) use of registered domain names in conformity with the stated purpose of the community-based TLD. Registry Operator shall operate the TLD in a manner that allows the TLD community to discuss and participate in the development and modification of policies and practices for the TLD. Registry Operator shall establish procedures for the enforcement of registration policies for the TLD, and resolution of disputes concerning compliance with TLD registration

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

policies, and shall enforce such registration policies. Registry Operator agrees to implement and be bound by the Registry Restrictions Dispute Resolution Procedure as set forth at [*insert applicable URL*] with respect to disputes arising pursuant to this Section 2.18.]

### ARTICLE 3.

#### COVENANTS OF ICANN

ICANN covenants and agrees with Registry Operator as follows:

**3.1 Open and Transparent.** Consistent with ICANN’s expressed mission and core values, ICANN shall operate in an open and transparent manner.

**3.2 Equitable Treatment.** ICANN shall not apply standards, policies, procedures or practices arbitrarily, unjustifiably, or inequitably and shall not single out Registry Operator for disparate treatment unless justified by substantial and reasonable cause.

**3.3 TLD Nameservers.** ICANN will use commercially reasonable efforts to ensure that any changes to the TLD nameserver designations submitted to ICANN by Registry Operator (in a format and with required technical elements specified by ICANN at <http://www.iana.org/domains/root/> will be implemented by ICANN within seven (7) calendar days or as promptly as feasible following technical verifications.

**3.4 Root-zone Information Publication.** ICANN’s publication of root-zone contact information for the TLD will include Registry Operator and its administrative and technical contacts. Any request to modify the contact information for the Registry Operator must be made in the format specified from time to time by ICANN at <http://www.iana.org/domains/root/>.

**3.5 Authoritative Root Database.** To the extent that ICANN is authorized to set policy with regard to an authoritative root server system, ICANN shall use commercially reasonable efforts to (a) ensure that the authoritative root will point to the top-level domain nameservers designated by Registry Operator for the TLD, (b) maintain a stable, secure, and authoritative publicly available database of relevant information about the TLD, in accordance with ICANN publicly available policies and procedures, and (c) coordinate the Authoritative Root Server System so that it is operated and maintained in a stable and secure manner; provided, that ICANN shall not be in breach of this Agreement and ICANN shall have no liability in the event that any third party (including any governmental entity or internet service provider) blocks or restricts access to the TLD in any jurisdiction.

### ARTICLE 4.

#### TERM AND TERMINATION

**4.1 Term.** The term of this Agreement will be ten years from the Effective Date (as such term may be extended pursuant to Section 4.2, the “Term”).

**4.2 Renewal.**

(a) This Agreement will be renewed for successive periods of ten years upon the expiration of the initial Term set forth in Section 4.1 and each successive Term, unless:

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(i) Following notice by ICANN to Registry Operator of a fundamental and material breach of Registry Operator's covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement, which notice shall include with specificity the details of the alleged breach, and such breach has not been cured within thirty (30) calendar days of such notice, (A) an arbitrator or court has finally determined that Registry Operator has been in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (B) Registry Operator has failed to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court; or

(ii) During the then current Term, Registry Operator shall have been found by an arbitrator (pursuant to Section 5.2 of this Agreement) on at least three (3) separate occasions to have been in fundamental and material breach (whether or not cured) of Registry Operator's covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement.

(b) Upon the occurrence of the events set forth in Section 4.2(a) (i) or (ii), the Agreement shall terminate at the expiration of the then current Term.

#### **4.3 Termination by ICANN.**

(a) ICANN may, upon notice to Registry Operator, terminate this Agreement if: (i) Registry Operator fails to cure (A) any fundamental and material breach of Registry Operator's representations and warranties set forth in Article 1 or covenants set forth in Article 2, or (B) any breach of Registry Operator's payment obligations set forth in Article 6 of this Agreement, each within thirty (30) calendar days after ICANN gives Registry Operator notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court has finally determined that Registry Operator is in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (iii) Registry Operator fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(b) ICANN may, upon notice to Registry Operator, terminate this Agreement if Registry Operator fails to complete all testing and procedures (identified by ICANN in writing to Registry Operator prior to the date hereof) for delegation of the TLD into the root zone within twelve (12) months of the Effective Date. Registry Operator may request an extension for up to additional twelve (12) months for delegation if it can demonstrate, to ICANN's reasonable satisfaction, that Registry Operator is working diligently and in good faith toward successfully completing the steps necessary for delegation of the TLD. Any fees paid by Registry Operator to ICANN prior to such termination date shall be retained by ICANN in full.

(c) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator fails to cure a material breach of Registry Operator's obligations set forth in Section 2.12 of this Agreement within thirty (30) calendar days of delivery of notice of such breach by ICANN, or if the Continued Operations Instrument is not in effect for greater than sixty (60) consecutive calendar days at any time following the Effective Date, (ii) an arbitrator or court has finally determined that Registry Operator is in material breach of such covenant, and (iii) Registry Operator fails to cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(d) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator makes an assignment for the benefit of creditors or similar act, (ii) attachment, garnishment or similar proceedings are commenced against Registry Operator, which proceedings are a material threat to Registry Operator's ability to operate the registry for the TLD, and are not dismissed within sixty (60) days of their commencement, (iii) a trustee, receiver, liquidator or equivalent is appointed in place of Registry Operator or maintains control over any of Registry Operator's property, (iv) execution is levied upon any property of Registry Operator, (v) proceedings are instituted by or against Registry Operator under any bankruptcy, insolvency, reorganization or other laws relating to the relief of debtors and such proceedings are not dismissed within thirty (30) days of their commencement, or (vi) Registry Operator files for protection under the United States Bankruptcy Code, 11 U.S.C. Section 101 et seq., or a foreign equivalent or liquidates, dissolves or otherwise discontinues its operations or the operation of the TLD.

(e) ICANN may, upon thirty (30) calendar days' notice to Registry Operator, terminate this Agreement pursuant to Section 2 of Specification 7, subject to Registry Operator's right to challenge such termination as set forth in the applicable procedure described therein.

(f) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator knowingly employs any officer that is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such officer is not terminated within thirty (30) calendar days of Registry Operator's knowledge of the foregoing, or (ii) any member of Registry Operator's board of directors or similar governing body is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such member is not removed from Registry Operator's board of directors or similar governing body within thirty (30) calendar days of Registry Operator's knowledge of the foregoing.

(g) *[Applicable to intergovernmental organizations or governmental entities only.]*  
ICANN may terminate this Agreement pursuant to Section 7.14.

#### **4.4 Termination by Registry Operator.**

(a) Registry Operator may terminate this Agreement upon notice to ICANN if, (i) ICANN fails to cure any fundamental and material breach of ICANN's covenants set forth in Article 3, within thirty (30) calendar days after Registry Operator gives ICANN notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court has finally determined that ICANN is in fundamental and material breach of such covenants, and (iii) ICANN fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(b) Registry Operator may terminate this Agreement for any reason upon one hundred eighty (180) calendar day advance notice to ICANN.

**4.5 Transition of Registry upon Termination of Agreement.** Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, Registry Operator shall provide ICANN or any successor registry operator that may be designated by ICANN for the TLD in accordance with this Section 4.5 with all data (including the data

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process; provided, however, that if Registry Operator demonstrates to ICANN's reasonable satisfaction that (i) all domain name registrations in the TLD are registered to, and maintained by, Registry Operator for its own exclusive use, (ii) Registry Operator does not sell, distribute or transfer control or use of any registrations in the TLD to any third party that is not an Affiliate of Registry Operator, and (iii) transitioning operation of the TLD is not necessary to protect the public interest, then ICANN may not transition operation of the TLD to a successor registry operator upon the expiration or termination of this Agreement without the consent of Registry Operator (which shall not be unreasonably withheld, conditioned or delayed). For the avoidance of doubt, the foregoing sentence shall not prohibit ICANN from delegating the TLD pursuant to a future application process for the delegation of top-level domains, subject to any processes and objection procedures instituted by ICANN in connection with such application process intended to protect the rights of third parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable, regardless of the reason for termination or expiration of this Agreement.

*[Alternative Section 4.5 Transition of Registry upon Termination of Agreement text for intergovernmental organizations or governmental entities or other special circumstances:*

**“Transition of Registry upon Termination of Agreement.** Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, in connection with ICANN's designation of a successor registry operator for the TLD, Registry Operator and ICANN agree to consult each other and work cooperatively to facilitate and implement the transition of the TLD in accordance with this Section 4.5. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process. In the event ICANN determines to transition operation of the TLD to a successor registry operator, upon Registry Operator's consent (which shall not be unreasonably withheld, conditioned or delayed), Registry Operator shall provide ICANN or such successor registry operator for the TLD with any data regarding operations of the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator in addition to data escrowed in accordance with Section 2.3 hereof. In the event that Registry Operator does not consent to provide such data, any registry data related to the TLD shall be returned to Registry Operator, unless otherwise agreed upon by the parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable, regardless of the reason for termination or expiration of this Agreement.”]

**4.6 Effect of Termination.** Upon any expiration of the Term or termination of this Agreement, the obligations and rights of the parties hereto shall cease, provided that such expiration or termination of this Agreement shall not relieve the parties of any obligation or breach of this Agreement accruing prior to such expiration or termination, including, without limitation, all accrued payment obligations arising under Article 6. In addition, Article 5, Article 7, Section 2.12, Section 4.5, and this

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Section 4.6 shall survive the expiration or termination of this Agreement. For the avoidance of doubt, the rights of Registry Operator to operate the registry for the TLD shall immediately cease upon any expiration of the Term or termination of this Agreement.

## ARTICLE 5.

### DISPUTE RESOLUTION

**5.1 Cooperative Engagement.** Before either party may initiate arbitration pursuant to Section 5.2 below, ICANN and Registry Operator, following initiation of communications by either party, must attempt to resolve the dispute by engaging in good faith discussion over a period of at least fifteen (15) calendar days.

**5.2 Arbitration.** Disputes arising under or in connection with this Agreement, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in Los Angeles County, California. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, or (ii) the parties agree in writing to a greater number of arbitrators. In either case of clauses (i) or (ii) in the preceding sentence, the arbitration will be in front of three arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that in any arbitration in which ICANN is seeking punitive or exemplary damages, or operational sanctions, the hearing may be extended for one (1) additional calendar day if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. In the event the arbitrators determine that Registry Operator has been repeatedly and willfully in fundamental and material breach of its obligations set forth in Article 2, Article 6 or Section 5.4 of this Agreement, ICANN may request the arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations). In any litigation involving ICANN concerning this Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in Los Angeles County, California; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction.

[Alternative **Section 5.2 Arbitration** text for intergovernmental organizations or governmental entities or other special circumstances:

**“Arbitration.** Disputes arising under or in connection with this Agreement, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in Geneva, Switzerland, unless another location is mutually agreed upon by Registry Operator and ICANN. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, or (ii) the parties agree in writing to a greater number of arbitrators. In either case of clauses (i) or (ii) in the preceding sentence, the arbitration will be in front of three arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that in any arbitration in which ICANN is seeking punitive or exemplary damages, or operational sanctions, the hearing may be extended for one (1) additional calendar day if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. In the event the arbitrators determine that Registry Operator has been repeatedly and willfully in fundamental and material breach of its obligations set forth in Article 2, Article 6 or Section 5.4 of this Agreement, ICANN may request the arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations). In any litigation involving ICANN concerning this Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in Geneva, Switzerland, unless an another location is mutually agreed upon by Registry Operator and ICANN; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction."}]

**5.3 Limitation of Liability.** ICANN's aggregate monetary liability for violations of this Agreement will not exceed an amount equal to the Registry-Level Fees paid by Registry Operator to ICANN within the preceding twelve-month period pursuant to this Agreement (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any). Registry Operator's aggregate monetary liability to ICANN for breaches of this Agreement will be limited to an amount equal to the fees paid to ICANN during the preceding twelve-month period (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any), and punitive and exemplary damages, if any, awarded in accordance with Section 5.2. In no event shall either party be liable for special, punitive, exemplary or consequential damages arising out of or in connection with this Agreement or the performance or nonperformance of obligations undertaken in this Agreement, except as provided in Section 5.2. Except as otherwise provided in this Agreement, neither party makes any warranty, express or implied, with respect to the services rendered by itself, its servants or agents, or the results obtained from their work, including, without limitation, any implied warranty of merchantability, non-infringement or fitness for a particular purpose.

**5.4 Specific Performance.** Registry Operator and ICANN agree that irreparable damage could occur if any of the provisions of this Agreement was not performed in accordance with its specific terms. Accordingly, the parties agree that they each shall be entitled to seek from the arbitrator specific performance of the terms of this Agreement (in addition to any other remedy to which each party is entitled).

## ARTICLE 6.

### FEES

**6.1 Registry-Level Fees.** Registry Operator shall pay ICANN a Registry-Level Fee equal to (i) the Registry Fixed Fee of US\$6,250 per calendar quarter and (ii) the Registry-Level Transaction Fee. The Registry-Level Transaction Fee will be equal to the number of annual increments of an initial or renewal domain name registration (at one or more levels, and including renewals associated with transfers from one ICANN-accredited registrar to another, each a "Transaction"), during the applicable calendar quarter multiplied by US\$0.25; provided, however that the Registry-Level Transaction Fee shall not apply until and unless more than 50,000 Transactions have occurred in the TLD during any calendar quarter or any four calendar quarter period (the "Transaction Threshold") and shall apply to each Transaction that occurred during each quarter in which the Transaction Threshold has been met, but shall not apply to each quarter in which the Transaction Threshold has not been met. Registry Operator shall pay the Registry-

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Level Fees on a quarterly basis by the 20th day following the end of each calendar quarter (i.e., on April 20, July 20, October 20 and January 20 for the calendar quarters ending March 31, June 30, September 30 and December 31) of the year to an account designated by ICANN.

**6.2 Cost Recovery for RSTEP.** Requests by Registry Operator for the approval of Additional Services pursuant to Section 2.1 may be referred by ICANN to the Registry Services Technical Evaluation Panel ("RSTEP") pursuant to that process at <http://www.icann.org/en/registries/rsep/>. In the event that such requests are referred to RSTEP, Registry Operator shall remit to ICANN the invoiced cost of the RSTEP review within ten (10) business days of receipt of a copy of the RSTEP invoice from ICANN, unless ICANN determines, in its sole and absolute discretion, to pay all or any portion of the invoiced cost of such RSTEP review.

**6.3 Variable Registry-Level Fee.**

(a) If the ICANN accredited registrars (as a group) do not approve pursuant to the terms of their registrar accreditation agreements with ICANN the variable accreditation fees established by the ICANN Board of Directors for any ICANN fiscal year, upon delivery of notice from ICANN, Registry Operator shall pay to ICANN a Variable Registry-Level Fee, which shall be paid on a fiscal quarter basis, and shall accrue as of the beginning of the first fiscal quarter of such ICANN fiscal year. The fee will be calculated and invoiced by ICANN on a quarterly basis, and shall be paid by Registry Operator within sixty (60) calendar days with respect to the first quarter of such ICANN fiscal year and within twenty (20) calendar days with respect to each remaining quarter of such ICANN fiscal year, of receipt of the invoiced amount by ICANN. The Registry Operator may invoice and collect the Variable Registry-Level Fees from the registrars who are party to a registry-registrar agreement with Registry Operator (which agreement may specifically provide for the reimbursement of Variable Registry-Level Fees paid by Registry Operator pursuant to this Section 6.3); provided, that the fees shall be invoiced to all ICANN accredited registrars if invoiced to any. The Variable Registry-Level Fee, if collectible by ICANN, shall be an obligation of Registry Operator and shall be due and payable as provided in this Section 6.3 irrespective of Registry Operator's ability to seek and obtain reimbursement of such fee from registrars. In the event ICANN later collects variable accreditation fees for which Registry Operator has paid ICANN a Variable Registry-Level Fee, ICANN shall reimburse the Registry Operator an appropriate amount of the Variable Registry-Level Fee, as reasonably determined by ICANN. If the ICANN accredited registrars (as a group) do approve pursuant to the terms of their registrar accreditation agreements with ICANN the variable accreditation fees established by the ICANN Board of Directors for a fiscal year, ICANN shall not be entitled to a Variable-Level Fee hereunder for such fiscal year, irrespective of whether the ICANN accredited registrars comply with their payment obligations to ICANN during such fiscal year.

(b) The amount of the Variable Registry-Level Fee will be specified for each registrar, and may include both a per-registrar component and a transactional component. The per-registrar component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year. The transactional component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year but shall not exceed US\$0.25 per domain name registration (including renewals associated with transfers from one ICANN-accredited registrar to another) per year.

**6.4 Adjustments to Fees.** Notwithstanding any of the fee limitations set forth in this Article 6, commencing upon the expiration of the first year of this Agreement, and upon the expiration of each year thereafter during the Term, the then current fees set forth in Section 6.1 and Section 6.3 may be

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

adjusted, at ICANN's discretion, by a percentage equal to the percentage change, if any, in (i) the Consumer Price Index for All Urban Consumers, U.S. City Average (1982-1984 = 100) published by the United States Department of Labor, Bureau of Labor Statistics, or any successor index (the "CPI") for the month which is one (1) month prior to the commencement of the applicable year, over (ii) the CPI published for the month which is one (1) month prior to the commencement of the immediately prior year. In the event of any such increase, ICANN shall provide notice to Registry Operator specifying the amount of such adjustment. Any fee adjustment under this Section 6.4 shall be effective as of the first day of the year in which the above calculation is made.

**6.5 Additional Fee on Late Payments.** For any payments thirty (30) calendar days or more overdue under this Agreement, Registry Operator shall pay an additional fee on late payments at the rate of 1.5% per month or, if less, the maximum rate permitted by applicable law.

## ARTICLE 7.

### MISCELLANEOUS

#### 7.1 Indemnification of ICANN.

(a) Registry Operator shall indemnify and defend ICANN and its directors, officers, employees, and agents (collectively, "Indemnitees") from and against any and all third-party claims, damages, liabilities, costs, and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator's operation of the registry for the TLD or Registry Operator's provision of Registry Services, provided that Registry Operator shall not be obligated to indemnify or defend any Indemnitee to the extent the claim, damage, liability, cost or expense arose: (i) due to the actions or omissions of ICANN, its subcontractors, panelists or evaluators specifically related to and occurring during the registry TLD application process (other than actions or omissions requested by or for the benefit of Registry Operator), or (ii) due to a breach by ICANN of any obligation contained in this Agreement or any willful misconduct by ICANN. This Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties' respective obligations hereunder. Further, this Section shall not apply to any request for attorney's fees in connection with any litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court or arbitrator.

[Alternative **Section 7.1(a)** text for intergovernmental organizations or governmental entities:

"Registry Operator shall use its best efforts to cooperate with ICANN in order to ensure that ICANN does not incur any costs associated with claims, damages, liabilities, costs and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator's operation of the registry for the TLD or Registry Operator's provision of Registry Services, provided that Registry Operator shall not be obligated to provide such cooperation to the extent the claim, damage, liability, cost or expense arose due to a breach by ICANN of any of its obligations contained in this Agreement or any willful misconduct by ICANN. This Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties' respective obligations hereunder. Further, this Section shall not apply to any request for attorney's fees in connection with any

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court or arbitrator.”]

(b) For any claims by ICANN for indemnification whereby multiple registry operators (including Registry Operator) have engaged in the same actions or omissions that gave rise to the claim, Registry Operator’s aggregate liability to indemnify ICANN with respect to such claim shall be limited to a percentage of ICANN’s total claim, calculated by dividing the number of total domain names under registration with Registry Operator within the TLD (which names under registration shall be calculated consistently with Article 6 hereof for any applicable quarter) by the total number of domain names under registration within all top level domains for which the registry operators thereof are engaging in the same acts or omissions giving rise to such claim. For the purposes of reducing Registry Operator’s liability under Section 7.1(a) pursuant to this Section 7.1(b), Registry Operator shall have the burden of identifying the other registry operators that are engaged in the same actions or omissions that gave rise to the claim, and demonstrating, to ICANN’s reasonable satisfaction, such other registry operators’ culpability for such actions or omissions. For the avoidance of doubt, in the event that a registry operator is engaged in the same acts or omissions giving rise to the claims, but such registry operator(s) do not have the same or similar indemnification obligations to ICANN as set forth in Section 7.1(a) above, the number of domains under management by such registry operator(s) shall nonetheless be included in the calculation in the preceding sentence. [*Note: This Section 7.1(b) is inapplicable to intergovernmental organizations or governmental entities.*]

**7.2 Indemnification Procedures.** If any third-party claim is commenced that is indemnified under Section 7.1 above, ICANN shall provide notice thereof to Registry Operator as promptly as practicable. Registry Operator shall be entitled, if it so elects, in a notice promptly delivered to ICANN, to immediately take control of the defense and investigation of such claim and to employ and engage attorneys reasonably acceptable to ICANN to handle and defend the same, at Registry Operator’s sole cost and expense, provided that in all events ICANN will be entitled to control at its sole cost and expense the litigation of issues concerning the validity or interpretation of ICANN’s policies, Bylaws or conduct. ICANN shall cooperate, at Registry Operator’s cost and expense, in all reasonable respects with Registry Operator and its attorneys in the investigation, trial, and defense of such claim and any appeal arising therefrom, and may, at its own cost and expense, participate, through its attorneys or otherwise, in such investigation, trial and defense of such claim and any appeal arising therefrom. No settlement of a claim that involves a remedy affecting ICANN other than the payment of money in an amount that is fully indemnified by Registry Operator will be entered into without the consent of ICANN. If Registry Operator does not assume full control over the defense of a claim subject to such defense in accordance with this Section 7.2, ICANN will have the right to defend the claim in such manner as it may deem appropriate, at the cost and expense of Registry Operator and Registry Operator shall cooperate in such defense. [*Note: This Section 7.2 is inapplicable to intergovernmental organizations or governmental entities.*]

**7.3 Defined Terms.** For purposes of this Agreement, unless such definitions are amended pursuant to a Consensus Policy at a future date, in which case the following definitions shall be deemed amended and restated in their entirety as set forth in such Consensus Policy, Security and Stability shall be defined as follows:

(a) For the purposes of this Agreement, an effect on “Security” shall mean (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(b) For purposes of this Agreement, an effect on “Stability” shall refer to (1) lack of compliance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice Requests for Comments (“RFCs”) sponsored by the Internet Engineering Task Force; or (2) the creation of a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems operating in accordance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice RFCs, and relying on Registry Operator's delegated information or provisioning of services.

**7.4 No Offset.** All payments due under this Agreement will be made in a timely manner throughout the Term and notwithstanding the pendency of any dispute (monetary or otherwise) between Registry Operator and ICANN.

**7.5 Change in Control; Assignment and Subcontracting.** Neither party may assign this Agreement without the prior written approval of the other party, which approval will not be unreasonably withheld. Notwithstanding the foregoing, ICANN may assign this Agreement in conjunction with a reorganization or re-incorporation of ICANN to another nonprofit corporation or similar entity organized in the same legal jurisdiction in which ICANN is currently organized for the same or substantially the same purposes. For purposes of this Section 7.5, a direct or indirect change of control of Registry Operator or any material subcontracting arrangement with respect to the operation of the registry for the TLD shall be deemed an assignment. ICANN shall be deemed to have reasonably withheld its consent to any such a direct or indirect change of control or subcontracting arrangement in the event that ICANN reasonably determines that the person or entity acquiring control of Registry Operator or entering into such subcontracting arrangement (or the ultimate parent entity of such acquiring or subcontracting entity) does not meet the ICANN-adopted registry operator criteria or qualifications then in effect. In addition, without limiting the foregoing, Registry Operator must provide no less than thirty (30) calendar days advance notice to ICANN of any material subcontracting arrangements, and any agreement to subcontract portions of the operations of the TLD must mandate compliance with all covenants, obligations and agreements by Registry Operator hereunder, and Registry Operator shall continue to be bound by such covenants, obligations and agreements. Without limiting the foregoing, Registry Operator must also provide no less than thirty (30) calendar days advance notice to ICANN prior to the consummation of any transaction anticipated to result in a direct or indirect change of control of Registry Operator. Such change of control notification shall include a statement that affirms that the ultimate parent entity of the party acquiring such control meets the ICANN-adopted specification or policy on registry operator criteria then in effect, and affirms that Registry Operator is in compliance with its obligations under this Agreement. Within thirty (30) calendar days of such notification, ICANN may request additional information from Registry Operator establishing compliance with this Agreement, in which case Registry Operator must supply the requested information within fifteen (15) calendar days. If ICANN fails to expressly provide or withhold its consent to any direct or indirect change of control of Registry Operator or any material subcontracting arrangement within thirty (30) (or, if ICANN has requested additional information from Registry Operator as set forth above, sixty (60)) calendar days of the receipt of written notice of such transaction from Registry Operator, ICANN shall be deemed to have consented to such transaction. In connection with any such transaction, Registry Operator shall comply with the Registry Transition Process.

#### **7.6 Amendments and Waivers.**

(a) If ICANN determines that an amendment to this Agreement (including to the Specifications referred to herein) and all other registry agreements between ICANN and the Applicable

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Registry Operators (the “Applicable Registry Agreements”) is desirable (each, a “Special Amendment”), ICANN may submit a Special Amendment for approval by the Applicable Registry Operators pursuant to the process set forth in this Section 7.6, provided that a Special Amendment is not a Restricted Amendment (as defined below). Prior to submitting a Special Amendment for such approval, ICANN shall first consult in good faith with the Working Group (as defined below) regarding the form and substance of a Special Amendment. The duration of such consultation shall be reasonably determined by ICANN based on the substance of the Special Amendment. Following such consultation, ICANN may propose the adoption of a Special Amendment by publicly posting such amendment on its website for no less than thirty (30) calendar days (the “Posting Period”) and providing notice of such amendment by ICANN to the Applicable Registry Operators in accordance with Section 7.8. ICANN will consider the public comments submitted on a Special Amendment during the Posting Period (including comments submitted by the Applicable Registry Operators).

(b) If, within two (2) calendar years of the expiration of the Posting Period (the “Approval Period”), (i) the ICANN Board of Directors approves a Special Amendment (which may be in a form different than submitted for public comment) and (ii) such Special Amendment receives Registry Operator Approval (as defined below), such Special Amendment shall be deemed approved (an “Approved Amendment”) by the Applicable Registry Operators (the last date on which such approvals are obtained is herein referred to as the “Amendment Approval Date”) and shall be effective and deemed an amendment to this Agreement upon sixty (60) calendar days notice from ICANN to Registry Operator (the “Amendment Effective Date”). In the event that a Special Amendment is not approved by the ICANN Board of Directors or does not receive Registry Operator Approval within the Approval Period, the Special Amendment will have no effect. The procedure used by ICANN to obtain Registry Operator Approval shall be designed to document the written approval of the Applicable Registry Operators, which may be in electronic form.

(c) During the thirty (30) calendar day period following the Amendment Approval Date, Registry Operator (so long as it did not vote in favor of the Approved Amendment) may apply in writing to ICANN for an exemption from the Approved Amendment (each such request submitted by Registry Operator hereunder, an “Exemption Request”). Each Exemption Request will set forth the basis for such request and provide detailed support for an exemption from the Approved Amendment. An Exemption Request may also include a detailed description and support for any alternatives to, or a variation of, the Approved Amendment proposed by such Registry Operator. An Exemption Request may only be granted upon a clear and convincing showing by Registry Operator that compliance with the Approved Amendment conflicts with applicable laws or would have a material adverse effect on the long-term financial condition or results of operations of Registry Operator. No Exemption Request will be granted if ICANN determines, in its reasonable discretion, that granting such Exemption Request would be materially harmful to registrants or result in the denial of a direct benefit to registrants. Within ninety (90) calendar days of ICANN’s receipt of an Exemption Request, ICANN shall either approve (which approval may be conditioned or consist of alternatives to or a variation of the Approved Amendment) or deny the Exemption Request in writing, during which time the Approved Amendment will not amend this Agreement; provided, that any such conditions, alternatives or variations shall be effective and, to the extent applicable, will amend this Agreement as of the Amendment Effective Date. If the Exemption Request is approved by ICANN, the Approved Amendment will not amend this Agreement. If such Exemption Request is denied by ICANN, the Approved Amendment will amend this Agreement as of the Amendment Effective Date (or, if such date has passed, such Approved Amendment shall be deemed effective immediately on the date of such denial), provided that Registry Operator may, within thirty (30) calendar days following receipt of ICANN’s determination, appeal ICANN’s decision to deny the Exemption Request pursuant to the dispute resolution procedures set forth in Article 5. The Approved

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Amendment will be deemed not to have amended this Agreement during the pendency of the dispute resolution process. For avoidance of doubt, only Exemption Requests submitted by Registry Operator that are approved by ICANN pursuant to this Section 7.6(c) or through an arbitration decision pursuant to Article 5 shall exempt Registry Operator from any Approved Amendment, and no exemption request granted to any other Applicable Registry Operator (whether by ICANN or through arbitration) shall have any effect under this Agreement or exempt Registry Operator from any Approved Amendment.

(d) Except as set forth in this Section 7.6, no amendment, supplement or modification of this Agreement or any provision hereof shall be binding unless executed in writing by both parties, and nothing in this Section 7.6 shall restrict ICANN and Registry Operator from entering into bilateral amendments and modifications to this Agreement negotiated solely between the two parties. No waiver of any provision of this Agreement shall be binding unless evidenced by a writing signed by the party waiving compliance with such provision. No waiver of any of the provisions of this Agreement or failure to enforce any of the provisions hereof shall be deemed or shall constitute a waiver of any other provision hereof, nor shall any such waiver constitute a continuing waiver unless otherwise expressly provided. For the avoidance of doubt, nothing in this Section 7.6 shall be deemed to limit Registry Operator's obligation to comply with Section 2.2.

(e) For purposes of this Section 7.6, the following terms shall have the following meanings:

(i) "Applicable Registry Operators" means, collectively, the registry operators of the top-level domains party to a registry agreement that contains a provision similar to this Section 7.6, including Registry Operator.

(ii) "Registry Operator Approval" means the receipt of each of the following: (A) the affirmative approval of the Applicable Registry Operators whose payments to ICANN accounted for two-thirds of the total amount of fees (converted to U.S. dollars, if applicable) paid to ICANN by all the Applicable Registry Operators during the immediately previous calendar year pursuant to the Applicable Registry Agreements, and (B) the affirmative approval of a majority of the Applicable Registry Operators at the time such approval is obtained. For avoidance of doubt, with respect to clause (B), each Applicable Registry Operator shall have one vote for each top-level domain operated by such Registry Operator pursuant to an Applicable Registry Agreement.

(iii) "Restricted Amendment" means the following: (i) an amendment of Specification 1, (ii) except to the extent addressed in Section 2.10 hereof, an amendment that specifies the price charged by Registry Operator to registrars for domain name registrations, (iii) an amendment to the definition of Registry Services as set forth in the first paragraph of Section 2.1 of Specification 6, or (iv) an amendment to the length of the Term.

(iv) "Working Group" means representatives of the Applicable Registry Operators and other members of the community that ICANN appoints, from time to time, to serve as a working group to consult on amendments to the Applicable Registry Agreements (excluding bilateral amendments pursuant to Section 7.6(d)).

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

**7.7 No Third-Party Beneficiaries.** This Agreement will not be construed to create any obligation by either ICANN or Registry Operator to any non-party to this Agreement, including any registrar or registered name holder.

**7.8 General Notices.** Except for notices pursuant to Section 7.6, all notices to be given under or in relation to this Agreement will be given either (i) in writing at the address of the appropriate party as set forth below or (ii) via facsimile or electronic mail as provided below, unless that party has given a notice of change of postal or email address, or facsimile number, as provided in this agreement. All notices under Section 7.6 shall be given by both posting of the applicable information on ICANN's web site and transmission of such information to Registry Operator by electronic mail. Any change in the contact information for notice below will be given by the party within thirty (30) calendar days of such change. Notices, designations, determinations, and specifications made under this Agreement will be in the English language. Other than notices under Section 7.6, any notice required by this Agreement will be deemed to have been properly given (i) if in paper form, when delivered in person or via courier service with confirmation of receipt or (ii) if via facsimile or by electronic mail, upon confirmation of receipt by the recipient's facsimile machine or email server, provided that such notice via facsimile or electronic mail shall be followed by a copy sent by regular postal mail service within two (2) business days. Any notice required by Section 7.6 will be deemed to have been given when electronically posted on ICANN's website and upon confirmation of receipt by the email server. In the event other means of notice become practically achievable, such as notice via a secure website, the parties will work together to implement such notice means under this Agreement.

If to ICANN, addressed to:  
Internet Corporation for Assigned Names and Numbers  
4676 Admiralty Way, Suite 330  
Marina Del Rey, California 90292

Attention:

With a Required Copy to:
Email: (As specified from time to time.)

**7.9 Entire Agreement.** This Agreement (including those specifications and documents incorporated by reference to URL locations which form a part of it) constitutes the entire agreement of the parties hereto pertaining to the operation of the TLD and supersedes all prior agreements, understandings, negotiations and discussions, whether oral or written, between the parties on that subject.

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

**7.10 English Language Controls.** Notwithstanding any translated version of this Agreement and/or specifications that may be provided to Registry Operator, the English language version of this Agreement and all referenced specifications are the official versions that bind the parties hereto. In the event of any conflict or discrepancy between any translated version of this Agreement and the English language version, the English language version controls. Notices, designations, determinations, and specifications made under this Agreement shall be in the English language.

**7.11 Ownership Rights.** Nothing contained in this Agreement shall be construed as establishing or granting to Registry Operator any property ownership rights or interests in the TLD or the letters, words, symbols or other characters making up the TLD string.

**7.12 Severability.** This Agreement shall be deemed severable; the invalidity or unenforceability of any term or provision of this Agreement shall not affect the validity or enforceability of the balance of this Agreement or of any other term hereof, which shall remain in full force and effect. If any of the provisions hereof are determined to be invalid or unenforceable, the parties shall negotiate in good faith to modify this Agreement so as to effect the original intent of the parties as closely as possible.

**7.13 Court Orders.** ICANN will respect any order from a court of competent jurisdiction, including any orders from any jurisdiction where the consent or non-objection of the government was a requirement for the delegation of the TLD. Notwithstanding any other provision of this Agreement, ICANN's implementation of any such order will not be a breach of this Agreement.

*[Note: The following section is applicable to intergovernmental organizations or governmental entities only.]*

**7.14 Special Provision Relating to Intergovernmental Organizations or Governmental Entities.**

(a) ICANN acknowledges that Registry Operator is an entity subject to public international law, including international treaties applicable to Registry Operator (such public international law and treaties, collectively hereinafter the "Applicable Laws"). Nothing in this Agreement and its related specifications shall be construed or interpreted to require Registry Operator to violate Applicable Laws or prevent compliance therewith. The Parties agree that Registry Operator's compliance with Applicable Laws shall not constitute a breach of this Agreement.

(b) In the event Registry Operator reasonably determines that any provision of this Agreement and its related specifications, or any decisions or policies of ICANN referred to in this Agreement, including but not limited to Temporary Policies and Consensus Policies (such provisions, specifications and policies, collectively hereinafter, "ICANN Requirements"), may conflict with or violate Applicable Law (hereinafter, a "Potential Conflict"), Registry Operator shall provide detailed notice (a "Notice") of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy. In the event Registry Operator determines that there is Potential Conflict between a proposed Applicable Law and any ICANN Requirement, Registry Operator shall provide detailed Notice of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy.

(c) As soon as practicable following such review, the parties shall attempt to resolve the Potential Conflict by cooperative engagement pursuant to the procedures set forth in Section 5.1. In

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

addition, Registry Operator shall use its best efforts to eliminate or minimize any impact arising from such Potential Conflict between Applicable Laws and any ICANN Requirement. If, following such cooperative engagement, Registry Operator determines that the Potential Conflict constitutes an actual conflict between any ICANN Requirement, on the one hand, and Applicable Laws, on the other hand, then ICANN shall waive compliance with such ICANN Requirement (provided that the parties shall negotiate in good faith on a continuous basis thereafter to mitigate or eliminate the effects of such non-compliance on ICANN), unless ICANN reasonably and objectively determines that the failure of Registry Operator to comply with such ICANN Requirement would constitute a threat to the Security and Stability of Registry Services, the Internet or the DNS (hereinafter, an “ICANN Determination”). Following receipt of notice by Registry Operator of such ICANN Determination, Registry Operator shall be afforded a period of ninety (90) calendar days to resolve such conflict with an Applicable Law. If the conflict with an Applicable Law is not resolved to ICANN’s complete satisfaction during such period, Registry Operator shall have the option to submit, within ten (10) calendar days thereafter, the matter to binding arbitration as defined in subsection (d) below. If during such period, Registry Operator does not submit the matter to arbitration pursuant to subsection (d) below, ICANN may, upon notice to Registry Operator, terminate this Agreement with immediate effect.

(d) If Registry Operator disagrees with an ICANN Determination, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2, except that the sole issue presented to the arbitrator for determination will be whether or not ICANN reasonably and objectively reached the ICANN Determination. For the purposes of such arbitration, ICANN shall present evidence to the arbitrator supporting the ICANN Determination. If the arbitrator determines that ICANN did not reasonably and objectively reach the ICANN Determination, then ICANN shall waive Registry Operator’s compliance with the subject ICANN Requirement. If the arbitrators or pre-arbitral referee, as applicable, determine that ICANN did reasonably and objectively reach the ICANN Determination, then, upon notice to Registry Operator, ICANN may terminate this Agreement with immediate effect.

(e) Registry Operator hereby represents and warrants that, to the best of its knowledge as of the date of execution of this Agreement, no existing ICANN Requirement conflicts with or violates any Applicable Law.

(f) Notwithstanding any other provision of this Section 7.14, following an ICANN Determination and prior to a finding by an arbitrator pursuant to Section 7.14(d) above, ICANN may, subject to prior consultations with Registry Operator, take such reasonable technical measures as it deems necessary to ensure the Security and Stability of Registry Services, the Internet and the DNS. These reasonable technical measures shall be taken by ICANN on an interim basis, until the earlier of the date of conclusion of the arbitration procedure referred to in Section 7.14(d) above or the date of complete resolution of the conflict with an Applicable Law. In case Registry Operator disagrees with such technical measures taken by ICANN, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2 above, during which process ICANN may continue to take such technical measures. In the event that ICANN takes such measures, Registry Operator shall pay all costs incurred by ICANN as a result of taking such measures. In addition, in the event that ICANN takes such measures, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

# SPECIFICATION 1

## CONSENSUS POLICIES AND TEMPORARY POLICIES SPECIFICATION

### 1. Consensus Policies.

- 1.1. “*Consensus Policies*” are those policies established (1) pursuant to the procedure set forth in ICANN's Bylaws and due process, and (2) covering those topics listed in Section 1.2 of this document. The Consensus Policy development process and procedure set forth in ICANN's Bylaws may be revised from time to time in accordance with the process set forth therein.
- 1.2. Consensus Policies and the procedures by which they are developed shall be designed to produce, to the extent possible, a consensus of Internet stakeholders, including the operators of gTLDs. Consensus Policies shall relate to one or more of the following:
  - 1.2.1. issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, security and/or stability of the Internet or Domain Name System (“DNS”);
  - 1.2.2. functional and performance specifications for the provision of Registry Services;
  - 1.2.3. Security and Stability of the registry database for the TLD;
  - 1.2.4. registry policies reasonably necessary to implement Consensus Policies relating to registry operations or registrars;
  - 1.2.5. resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names); or
  - 1.2.6. restrictions on cross-ownership of registry operators and registrars or registrar resellers and regulations and restrictions with respect to registry operations and the use of registry and registrar data in the event that a registry operator and a registrar or registrar reseller are affiliated.
- 1.3. Such categories of issues referred to in Section 1.2 shall include, without limitation:
  - 1.3.1. principles for allocation of registered names in the TLD (e.g., first-come/first-served, timely renewal, holding period after expiration);
  - 1.3.2. prohibitions on warehousing of or speculation in domain names by registries or registrars;
  - 1.3.3. reservation of registered names in the TLD that may not be registered initially or that may not be renewed due to reasons reasonably related to (i) avoidance of confusion among or misleading of users, (ii) intellectual property, or (iii) the technical management of the DNS or the Internet (e.g., establishment of reservations of names from registration); and
  - 1.3.4. maintenance of and access to accurate and up-to-date information concerning domain name registrations; and procedures to avoid disruptions of domain name registrations due to suspension or termination of operations by a registry operator or a registrar, including procedures for allocation of responsibility for serving registered domain names in a TLD affected by such a suspension or termination.
- 1.4. In addition to the other limitations on Consensus Policies, they shall not:

- 1.4.1. prescribe or limit the price of Registry Services;
  - 1.4.2. modify the terms or conditions for the renewal or termination of the Registry Agreement;
  - 1.4.3. modify the limitations on Temporary Policies (defined below) or Consensus Policies;
  - 1.4.4. modify the provisions in the registry agreement regarding fees paid by Registry Operator to ICANN; or
  - 1.4.5. modify ICANN's obligations to ensure equitable treatment of registry operators and act in an open and transparent manner.
2. **Temporary Policies.** Registry Operator shall comply with and implement all specifications or policies established by the Board on a temporary basis, if adopted by the Board by a vote of at least two-thirds of its members, so long as the Board reasonably determines that such modifications or amendments are justified and that immediate temporary establishment of a specification or policy on the subject is necessary to maintain the stability or security of Registry Services or the DNS ("*Temporary Policies*").
- 2.1. Such proposed specification or policy shall be as narrowly tailored as feasible to achieve those objectives. In establishing any Temporary Policy, the Board shall state the period of time for which the Temporary Policy is adopted and shall immediately implement the Consensus Policy development process set forth in ICANN's Bylaws.
    - 2.1.1. ICANN shall also issue an advisory statement containing a detailed explanation of its reasons for adopting the Temporary Policy and why the Board believes such Temporary Policy should receive the consensus support of Internet stakeholders.
    - 2.1.2. If the period of time for which the Temporary Policy is adopted exceeds 90 days, the Board shall reaffirm its temporary adoption every 90 days for a total period not to exceed one year, in order to maintain such Temporary Policy in effect until such time as it becomes a Consensus Policy. If the one year period expires or, if during such one year period, the Temporary Policy does not become a Consensus Policy and is not reaffirmed by the Board, Registry Operator shall no longer be required to comply with or implement such Temporary Policy.
3. **Notice and Conflicts.** Registry Operator shall be afforded a reasonable period of time following notice of the establishment of a Consensus Policy or Temporary Policy in which to comply with such policy or specification, taking into account any urgency involved. In the event of a conflict between Registry Services and Consensus Policies or any Temporary Policy, the Consensus Policies or Temporary Policy shall control, but only with respect to subject matter in conflict.

## SPECIFICATION 2

### DATA ESCROW REQUIREMENTS

Registry Operator will engage an independent entity to act as data escrow agent (“*Escrow Agent*”) for the provision of data escrow services related to the Registry Agreement. The following Technical Specifications set forth in Part A, and Legal Requirements set forth in Part B, will be included in any data escrow agreement between Registry Operator and the Escrow Agent, under which ICANN must be named a third-party beneficiary. In addition to the following requirements, the data escrow agreement may contain other provisions that are not contradictory or intended to subvert the required terms provided below.

#### PART A – TECHNICAL SPECIFICATIONS

1. **Deposits.** There will be two types of Deposits: Full and Differential. For both types, the universe of Registry objects to be considered for data escrow are those objects necessary in order to offer all of the approved Registry Services.
  - 1.1 “**Full Deposit**” will consist of data that reflects the state of the registry as of 00:00:00 UTC on each Sunday.
  - 1.2 “**Differential Deposit**” means data that reflects all transactions that were not reflected in the last previous Full or Differential Deposit, as the case may be. Each Differential Deposit will contain all database transactions since the previous Deposit was completed as of 00:00:00 UTC of each day, but Sunday. Differential Deposits must include complete Escrow Records as specified below that were not included or changed since the most recent full or Differential Deposit (i.e., newly added or modified domain names).
2. **Schedule for Deposits.** Registry Operator will submit a set of escrow files on a daily basis as follows:
  - 2.1 Each Sunday, a Full Deposit must be submitted to the Escrow Agent by 23:59 UTC.
  - 2.2 The other six days of the week, the corresponding Differential Deposit must be submitted to Escrow Agent by 23:59 UTC.
3. **Escrow Format Specification.**
  - 3.1 **Deposit’s Format.** Registry objects, such as domains, contacts, name servers, registrars, etc. will be compiled into a file constructed as described in draft-arias-noguchi-registry-data-escrow, see [1]. The aforementioned document describes some elements as optional; Registry Operator will include those elements in the Deposits if they are available. Registry Operator will use the draft version available at the time of signing the Agreement, if not already an RFC. Once the specification is published as an RFC, Registry Operator will implement that specification, no later than 180 days after. UTF-8 character encoding will be used.
  - 3.2 **Extensions.** If a Registry Operator offers additional Registry Services that require submission of additional data, not included above, additional “extension schemas” shall be defined in a case by case base to represent that data. These “extension schemas” will be specified as described in [1]. Data related to the “extensions schemas” will be included in the deposit file described in section 3.1. ICANN and the respective Registry shall work together to agree on such new objects’ data escrow specifications.

4. **Processing of Deposit files.** The use of compression is recommended in order to reduce electronic data transfer times, and storage capacity requirements. Data encryption will be used to ensure the privacy of registry escrow data. Files processed for compression and encryption will be in the binary OpenPGP format as per OpenPGP Message Format - RFC 4880, see [2]. Acceptable algorithms for Public-key cryptography, Symmetric-key cryptography, Hash and Compression are those enumerated in RFC 4880, not marked as deprecated in OpenPGP IANA Registry, see [3], that are also royalty-free. The process to follow for a data file in original text format is:
- (1) The file should be compressed. The suggested algorithm for compression is ZIP as per RFC 4880.
  - (2) The compressed data will be encrypted using the escrow agent's public key. The suggested algorithms for Public-key encryption are Elgamal and RSA as per RFC 4880. The suggested algorithms for Symmetric-key encryption are TripleDES, AES128 and CAST5 as per RFC 4880.
  - (3) The file may be split as necessary if, once compressed and encrypted is larger than the file size limit agreed with the escrow agent. Every part of a split file, or the whole file if split is not used, will be called a processed file in this section.
  - (4) A digital signature file will be generated for every processed file using the Registry's private key. The digital signature file will be in binary OpenPGP format as per RFC 4880 [2], and will not be compressed or encrypted. The suggested algorithms for Digital signatures are DSA and RSA as per RFC 4880. The suggested algorithm for Hashes in Digital signatures is SHA256.
  - (5) The processed files and digital signature files will then be transferred to the Escrow Agent through secure electronic mechanisms, such as, SFTP, SCP, HTTPS file upload, etc. as agreed between the Escrow Agent and the Registry Operator. Non-electronic delivery through a physical medium such as CD-ROMs, DVD-ROMs, or USB storage devices may be used if authorized by ICANN.
  - (6) The Escrow Agent will then validate every (processed) transferred data file using the procedure described in section 8.
5. **File Naming Conventions.** Files will be named according to the following convention: {gTLD}\_{YYYY-MM-DD}\_{type}\_S{#}\_R{rev}.{ext} where:
- 5.1 {gTLD} is replaced with the gTLD name; in case of an IDN-TLD, the ASCII-compatible form (A-Label) must be used;
  - 5.2 {YYYY-MM-DD} is replaced by the date corresponding to the time used as a timeline watermark for the transactions; i.e. for the Full Deposit corresponding to 2009-08-02T00:00Z, the string to be used would be "2009-08-02";
  - 5.3 {type} is replaced by:
    - (1) "full", if the data represents a Full Deposit;
    - (2) "diff", if the data represents a Differential Deposit;
    - (3) "thin", if the data represents a Bulk Registration Data Access file, as specified in section 3 of Specification 4;
  - 5.4 {#} is replaced by the position of the file in a series of files, beginning with "1"; in case of a lone file, this must be replaced by "1".
  - 5.5 {rev} is replaced by the number of revision (or resend) of the file beginning with "0";
  - 5.6 {ext} is replaced by "sig" if it is a digital signature file of the quasi-homonymous file. Otherwise it is replaced by "ryde".

6. **Distribution of Public Keys.** Each of Registry Operator and Escrow Agent will distribute its public key to the other party (Registry Operator or Escrow Agent, as the case may be) via email to an email address to be specified. Each party will confirm receipt of the other party's public key with a reply email, and the distributing party will subsequently reconfirm the authenticity of the key transmitted via offline methods, like in person meeting, telephone, etc. In this way, public key transmission is authenticated to a user able to send and receive mail via a mail server operated by the distributing party. Escrow Agent, Registry and ICANN will exchange keys by the same procedure.
7. **Notification of Deposits.** Along with the delivery of each Deposit, Registry Operator will deliver to Escrow Agent and to ICANN a written statement (which may be by authenticated e-mail) that includes a copy of the report generated upon creation of the Deposit and states that the Deposit has been inspected by Registry Operator and is complete and accurate. Registry Operator will include the Deposit's "id" and "resend" attributes in its statement. The attributes are explained in [1].
8. **Verification Procedure.**
- (1) The signature file of each processed file is validated.
  - (2) If processed files are pieces of a bigger file, the latter is put together.
  - (3) Each file obtained in the previous step is then decrypted and uncompressed.
  - (4) Each data file contained in the previous step is then validated against the format defined in [1].
  - (5) If [1] includes a verification process, that will be applied at this step.  
If any discrepancy is found in any of the steps, the Deposit will be considered incomplete.
9. **References.**

## PART B – LEGAL REQUIREMENTS

1. **Escrow Agent.** Prior to entering into an escrow agreement, the Registry Operator must provide notice to ICANN as to the identity of the Escrow Agent, and provide ICANN with contact information and a copy of the relevant escrow agreement, and all amendment thereto. In addition, prior to entering into an escrow agreement, Registry Operator must obtain the consent of ICANN to (a) use the specified Escrow Agent, and (b) enter into the form of escrow agreement provided. ICANN must be expressly designated a third-party beneficiary of the escrow agreement. ICANN reserves the right to withhold its consent to any Escrow Agent, escrow agreement, or any amendment thereto, all in its sole discretion.
2. **Fees.** Registry Operator must pay, or have paid on its behalf, fees to the Escrow Agent directly. If Registry Operator fails to pay any fee by the due date(s), the Escrow Agent will give ICANN written notice of such non-payment and ICANN may pay the past-due fee(s) within ten business days after receipt of the written notice from Escrow Agent. Upon payment of the past-due fees by ICANN, ICANN shall have a claim for such amount against Registry Operator, which Registry Operator shall be required to submit to ICANN together with the next fee payment due under the Registry Agreement.
3. **Ownership.** Ownership of the Deposits during the effective term of the Registry Agreement shall remain with Registry Operator at all times. Thereafter, Registry Operator shall assign any such ownership rights (including intellectual property rights, as the case may be) in such Deposits to ICANN. In the event that during the term of the Registry Agreement any Deposit is released from escrow to ICANN, any intellectual property rights held by Registry Operator in the Deposits will automatically be licensed on a non-exclusive, perpetual, irrevocable, royalty-free, paid-up basis to ICANN or to a party designated in writing by ICANN.
4. **Integrity and Confidentiality.** Escrow Agent will be required to (i) hold and maintain the Deposits in a secure, locked, and environmentally safe facility, which is accessible only to authorized representatives of Escrow Agent, (ii) protect the integrity and confidentiality of the Deposits using commercially reasonable measures and (iii) keep and safeguard each Deposit for one year. ICANN and Registry Operator will be provided the right to inspect Escrow Agent's applicable records upon reasonable prior notice and during normal business hours. Registry Operator and ICANN will be provided with the right to designate a third-party auditor to audit Escrow Agent's compliance with the technical specifications and maintenance requirements of this Specification 2 from time to time.

If Escrow Agent receives a subpoena or any other order from a court or other judicial tribunal pertaining to the disclosure or release of the Deposits, Escrow Agent will promptly notify the Registry Operator and ICANN unless prohibited by law. After notifying the Registry Operator and ICANN, Escrow Agent shall allow sufficient time for Registry Operator or ICANN to challenge any such order, which shall be the responsibility of Registry Operator or ICANN; provided, however, that Escrow Agent does not waive its rights to present its position with respect to any such order. Escrow Agent will cooperate with the Registry Operator or ICANN to support efforts to quash or limit any subpoena, at such party's expense. Any party requesting additional assistance shall pay Escrow Agent's standard charges or as quoted upon submission of a detailed request.

5. **Copies.** Escrow Agent may be permitted to duplicate any Deposit, in order to comply with the terms and provisions of the escrow agreement.
6. **Release of Deposits.** Escrow Agent will make available for electronic download (unless otherwise requested) to ICANN or its designee, within twenty-four hours, at the Registry Operator's expense, all Deposits in Escrow Agent's possession in the event that the Escrow Agent receives a request from Registry Operator to effect such delivery to ICANN, or receives one of the following written notices by ICANN stating that:
- 6.1 the Registry Agreement has expired without renewal, or been terminated; or
  - 6.2 ICANN failed, with respect to (a) any Full Deposit or (b) five Differential Deposits within any calendar month, to receive, within five calendar days after the Deposit's scheduled delivery date, notification of receipt from Escrow Agent; (x) ICANN gave notice to Escrow Agent and Registry Operator of that failure; and (y) ICANN has not, within seven calendar days after such notice, received notice from Escrow Agent that the Deposit has been received; or
  - 6.3 ICANN has received notification from Escrow Agent of failed verification of a Full Deposit or of failed verification of five Differential Deposits within any calendar month and (a) ICANN gave notice to Registry Operator of that receipt; and (b) ICANN has not, within seven calendar days after such notice, received notice from Escrow Agent of verification of a remediated version of such Full Deposit or Differential Deposit; or
  - 6.4 Registry Operator has: (i) ceased to conduct its business in the ordinary course; or (ii) filed for bankruptcy, become insolvent or anything analogous to any of the foregoing under the laws of any jurisdiction anywhere in the world; or
  - 6.5 Registry Operator has experienced a failure of critical registry functions and ICANN has asserted its rights pursuant to Section 2.13 of the Registry Agreement; or
  - 6.6 a competent court, arbitral, legislative, or government agency mandates the release of the Deposits to ICANN.

Unless Escrow Agent has previously released the Registry Operator's Deposits to ICANN or its designee, Escrow Agent will deliver all Deposits to ICANN upon termination of the Registry Agreement or the Escrow Agreement.

7. **Verification of Deposits.**
- 7.1 Within twenty-four hours after receiving each Deposit or corrected Deposit, Escrow Agent must verify the format and completeness of each Deposit and deliver to ICANN a copy of the verification report generated for each Deposit. Reports will be delivered electronically, as specified from time to time by ICANN.
  - 7.2 If Escrow Agent discovers that any Deposit fails the verification procedures, Escrow Agent must notify, either by email, fax or phone, Registry Operator and ICANN of such nonconformity within twenty-four hours after receiving the non-conformant Deposit. Upon notification of such verification failure, Registry Operator must begin developing modifications, updates, corrections, and other fixes of the Deposit necessary for the Deposit to pass the verification procedures and deliver such fixes to Escrow Agent as promptly as possible.
8. **Amendments.** Escrow Agent and Registry Operator shall amend the terms of the Escrow Agreement to conform to this Specification 2 within ten (10) calendar days of any amendment or modification to this Specification 2. In the event of a conflict between this Specification 2 and the Escrow Agreement, this Specification 2 shall control.
9. **Indemnity.** Registry Operator shall indemnify and hold harmless Escrow Agent and each of its directors, officers, agents, employees, members, and stockholders ("Escrow Agent Indemnitees")

absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys' fees and costs, that may be asserted by a third party against any Escrow Agent Indemnitees in connection with the Escrow Agreement or the performance of Escrow Agent or any Escrow Agent Indemnitees thereunder (with the exception of any claims based on the misrepresentation, negligence, or misconduct of Escrow Agent, its directors, officers, agents, employees, contractors, members, and stockholders). Escrow Agent shall indemnify and hold harmless Registry Operator and ICANN, and each of their respective directors, officers, agents, employees, members, and stockholders ("Indemnitees") absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys' fees and costs, that may be asserted by a third party against any Indemnitee in connection with the misrepresentation, negligence or misconduct of Escrow Agent, its directors, officers, agents, employees and contractors.

## SPECIFICATION 3

### FORMAT AND CONTENT FOR REGISTRY OPERATOR MONTHLY REPORTING

Registry Operator shall provide one set of monthly reports per gTLD to \_\_\_\_\_ with the following content. ICANN may request in the future that the reports be delivered by other means and using other formats. ICANN will use reasonable commercial efforts to preserve the confidentiality of the information reported until three months after the end of the month to which the reports relate.

**1. Per-Registrar Transactions Report.** This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-transactions-yyyymm.csv”, where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields per registrar:

Field #	Field Name	Description
01	registrar-name	registrar's full corporate name as registered with IANA
02	iana-id	<a href="http://www.iana.org/assignments/registrar-ids">http://www.iana.org/assignments/registrar-ids</a>
03	total-domains	total domains under sponsorship
04	total-nameservers	total name servers registered for TLD
05	net-adds-1-yr	number of domains successfully registered with an initial term of one year (and not deleted within the add grace period)
06	net-adds-2-yr	number of domains successfully registered with an initial term of two years (and not deleted within the add grace period)
07	net-adds-3-yr	number of domains successfully registered with an initial term of three years (and not deleted within the add grace period)
08	net-adds-4-yr	number of domains successfully registered with an initial term of four years (and not deleted within the add grace period)
09	net-adds-5-yr	number of domains successfully registered with an initial term of five years (and not deleted within the add grace period)
10	net-adds-6-yr	number of domains successfully registered with an initial term of six years (and not deleted within the add grace period)
11	net-adds-7-yr	number of domains successfully registered with an initial term of seven years (and not deleted within the add grace period)

12	net-adds-8-yr	number of domains successfully registered with an initial term of eight years (and not deleted within the add grace period)
13	net-adds-9-yr	number of domains successfully registered with an initial term of nine years (and not deleted within the add grace period)
14	net-adds-10-yr	number of domains successfully registered with an initial term of ten years (and not deleted within the add grace period)
15	net-renews-1-yr	number of domains successfully renewed either automatically or by command with a new renewal period of one year (and not deleted within the renew grace period)
16	net-renews-2-yr	number of domains successfully renewed either automatically or by command with a new renewal period of two years (and not deleted within the renew grace period)
17	net-renews-3-yr	number of domains successfully renewed either automatically or by command with a new renewal period of three years (and not deleted within the renew grace period)
18	net-renews-4-yr	number of domains successfully renewed either automatically or by command with a new renewal period of four years (and not deleted within the renew grace period)
19	net-renews-5-yr	number of domains successfully renewed either automatically or by command with a new renewal period of five years (and not deleted within the renew grace period)
20	net-renews-6-yr	number of domains successfully renewed either automatically or by command with a new renewal period of six years (and not deleted within the renew grace period)
21	net-renews-7-yr	number of domains successfully renewed either automatically or by command with a new renewal period of seven years (and not deleted within the renew grace period)
22	net-renews-8-yr	number of domains successfully renewed either automatically or by command with a new renewal period of eight years (and not deleted within the renew grace period)
23	net-renews-9-yr	number of domains successfully renewed either

		automatically or by command with a new renewal period of nine years (and not deleted within the renew grace period)
24	net-renews-10-yr	number of domains successfully renewed either automatically or by command with a new renewal period of ten years (and not deleted within the renew grace period)
25	transfer-gaining-successful	transfers initiated by this registrar that were ack'd by the other registrar – either by command or automatically
26	transfer-gaining-nacked	transfers initiated by this registrar that were n'acked by the other registrar
27	transfer-losing-successful	transfers initiated by another registrar that this registrar ack'd – either by command or automatically
28	transfer-losing-nacked	transfers initiated by another registrar that this registrar n'acked
29	transfer-disputed-won	number of transfer disputes in which this registrar prevailed
30	transfer-disputed-lost	number of transfer disputes this registrar lost
31	transfer-disputed-nodecision	number of transfer disputes involving this registrar with a split or no decision
32	deleted-domains-grace	domains deleted within the add grace period
33	deleted-domains-nograce	domains deleted outside the add grace period
34	restored-domains	domain names restored from redemption period
35	restored-noreport	total number of restored names for which the registrar failed to submit a restore report
36	agp-exemption-requests	total number of AGP (add grace period) exemption requests
37	agp-exemptions-granted	total number of AGP (add grace period) exemption requests granted
38	agp-exempted-domains	total number of names affected by granted AGP (add grace period) exemption requests
39	attempted-adds	number of attempted (successful and failed) domain name create commands

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. The last line of each report shall include totals for each column across all registrars; the first field of this line shall read “Totals” while the second field shall be left empty in that line. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

**2. Registry Functions Activity Report.** This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-activity-yyyymm.csv”, where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields:

Field #	Field Name	Description
01	operational-registrars	number of operational registrars at the end of the reporting period
02	ramp-up-registrars	number of registrars that have received a password for access to OT&E at the end of the reporting period
03	pre-ramp-up-registrars	number of registrars that have requested access, but have not yet entered the ramp-up period at the end of the reporting period
04	zfa-passwords	number of active zone file access passwords at the end of the reporting period
05	whois-43-queries	number of WHOIS (port-43) queries responded during the reporting period
06	web-whois-queries	number of Web-based Whois queries responded during the reporting period, not including searchable Whois
07	searchable-whois-queries	number of searchable Whois queries responded during the reporting period, if offered
08	dns-udp-queries-received	number of DNS queries received over UDP transport during the reporting period
09	dns-udp-queries-responded	number of DNS queries received over UDP transport that were responded during the reporting period
10	dns-tcp-queries-received	number of DNS queries received over TCP transport during the reporting period
11	dns-tcp-queries-responded	number of DNS queries received over TCP transport that were responded during the reporting period
12	srs-dom-check	number of SRS (EPP and any other interface) domain name “check” requests responded during the reporting period
13	srs-dom-create	number of SRS (EPP and any other interface) domain name “create” requests responded during the reporting period
14	srs-dom-delete	number of SRS (EPP and any other interface) domain name “delete” requests responded during the reporting period
15	srs-dom-info	number of SRS (EPP and any other interface) domain name “info” requests responded during the reporting period
16	srs-dom-renew	number of SRS (EPP and any other interface) domain name

		“renew” requests responded during the reporting period
17	srs-dom-rgp-restore-report	number of SRS (EPP and any other interface) domain name RGP “restore” requests responded during the reporting period
18	srs-dom-rgp-restore-request	number of SRS (EPP and any other interface) domain name RGP “restore” requests delivering a restore report responded during the reporting period
19	srs-dom-transfer-approve	number of SRS (EPP and any other interface) domain name “transfer” requests to approve transfers responded during the reporting period
20	srs-dom-transfer-cancel	number of SRS (EPP and any other interface) domain name “transfer” requests to cancel transfers responded during the reporting period
21	srs-dom-transfer-query	number of SRS (EPP and any other interface) domain name “transfer” requests to query about a transfer responded during the reporting period
22	srs-dom-transfer-reject	number of SRS (EPP and any other interface) domain name “transfer” requests to reject transfers responded during the reporting period
23	srs-dom-transfer-request	number of SRS (EPP and any other interface) domain name “transfer” requests to request transfers responded during the reporting period
24	srs-dom-update	number of SRS (EPP and any other interface) domain name “update” requests (not including RGP restore requests) responded during the reporting period
25	srs-host-check	number of SRS (EPP and any other interface) host “check” requests responded during the reporting period
26	srs-host-create	number of SRS (EPP and any other interface) host “create” requests responded during the reporting period
27	srs-host-delete	number of SRS (EPP and any other interface) host “delete” requests responded during the reporting period
28	srs-host-info	number of SRS (EPP and any other interface) host “info” requests responded during the reporting period
29	srs-host-update	number of SRS (EPP and any other interface) host “update” requests responded during the reporting period
30	srs-cont-check	number of SRS (EPP and any other interface) contact “check” requests responded during the reporting period
31	srs-cont-create	number of SRS (EPP and any other interface) contact “create” requests responded during the reporting period

32	srs-cont-delete	number of SRS (EPP and any other interface) contact “delete” requests responded during the reporting period
33	srs-cont-info	number of SRS (EPP and any other interface) contact “info” requests responded during the reporting period
34	srs-cont-transfer-approve	number of SRS (EPP and any other interface) contact “transfer” requests to approve transfers responded during the reporting period
35	srs-cont-transfer-cancel	number of SRS (EPP and any other interface) contact “transfer” requests to cancel transfers responded during the reporting period
36	srs-cont-transfer-query	number of SRS (EPP and any other interface) contact “transfer” requests to query about a transfer responded during the reporting period
37	srs-cont-transfer-reject	number of SRS (EPP and any other interface) contact “transfer” requests to reject transfers responded during the reporting period
38	srs-cont-transfer-request	number of SRS (EPP and any other interface) contact “transfer” requests to request transfers responded during the reporting period
39	srs-cont-update	number of SRS (EPP and any other interface) contact “update” requests responded during the reporting period

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. The last line of each report shall include totals for each column across all registrars; the first field of this line shall read “Totals” while the second field shall be left empty in that line. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

## SPECIFICATION 4

### SPECIFICATION FOR REGISTRATION DATA PUBLICATION SERVICES

1. **Registration Data Directory Services.** Until ICANN requires a different protocol, Registry Operator will operate a WHOIS service available via port 43 in accordance with RFC 3912, and a web-based Directory Service at <whois.nic.TLD> providing free public query-based access to at least the following elements in the following format. ICANN reserves the right to specify alternative formats and protocols, and upon such specification, the Registry Operator will implement such alternative specification as soon as reasonably practicable.

1.1. The format of responses shall follow a semi-free text format outline below, followed by a blank line and a legal disclaimer specifying the rights of Registry Operator, and of the user querying the database.

1.2. Each data object shall be represented as a set of key/value pairs, with lines beginning with keys, followed by a colon and a space as delimiters, followed by the value.

1.3. For fields where more than one value exists, multiple key/value pairs with the same key shall be allowed (for example to list multiple name servers). The first key/value pair after a blank line should be considered the start of a new record, and should be considered as identifying that record, and is used to group data, such as hostnames and IP addresses, or a domain name and registrant information, together.

#### 1.4. Domain Name Data:

1.4.1. **Query format:** whois EXAMPLE.TLD

1.4.2. **Response format:**

```

Domain Name: EXAMPLE.TLD
Domain ID: D1234567-TLD

## 1.6. Nameserver Data:

1.6.1. **Query format:** whois "NS1.EXAMPLE.TLD" or whois "nameserver (IP Address)"

1.6.2. **Response format:**

Server Name: NS1.EXAMPLE.TLD  
 IP Address: 192.0.2.123  
 IP Address: 2001:0DB8::1  
 Registrar: Example Registrar, Inc.  
 WHOIS Server: whois.example-registrar.tld  
 Referral URL: http://www.example-registrar.tld  
 >>> Last update of WHOIS database: 2009-05-29T20:15:00Z <<<

1.7. The format of the following data fields: domain status, individual and organizational names, address, street, city, state/province, postal code, country, telephone and fax numbers, email addresses, date and times should conform to the mappings specified in EPP RFCs 5730-5734 so that the display of this information (or values return in WHOIS responses) can be uniformly processed and understood.

1.8. **Searchability.** Offering searchability capabilities on the Directory Services is optional but if offered by the Registry Operator it shall comply with the specification described in this section.

1.8.1. Registry Operator will offer searchability on the web-based Directory Service.

1.8.2. Registry Operator will offer partial match capabilities, at least, on the following fields: domain name, contacts and registrant's name, and contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.).

1.8.3. Registry Operator will offer exact-match capabilities, at least, on the following fields: registrar id, name server name, and name server's IP address (only applies to IP addresses stored by the registry, i.e., glue records).

1.8.4. Registry Operator will offer Boolean search capabilities supporting, at least, the following logical operators to join a set of search criteria: AND, OR, NOT.

1.8.5. Search results will include domain names matching the search criteria.

1.8.6. Registry Operator will: 1) implement appropriate measures to avoid abuse of this feature (e.g., permitting access only to legitimate authorized users); and 2) ensure the feature is in compliance with any applicable privacy laws or policies.

## 2. Zone File Access

### 2.1. Third-Party Access

2.1.1. **Zone File Access Agreement.** Registry Operator will enter into an agreement with any Internet user that will allow such user to access an Internet host server or servers designated by Registry Operator and download zone file data. The agreement will be standardized, facilitated and administered by a Centralized Zone Data Access Provider (the “CZDA Provider”). Registry Operator will provide access to zone file data per Section 2.1.3 and do so using the file format described in Section 2.1.4. Notwithstanding the foregoing, (a) the CZDA Provider may reject the request for access of any user that does not satisfy the credentialing requirements in Section 2.1.2 below; (b) Registry Operator may reject the request for access of any user that does not provide correct or legitimate credentials under Section 2.1.2 or where Registry Operator reasonably believes will violate the terms of Section 2.1.5. below; and, (c) Registry Operator may revoke access of any user if Registry Operator has evidence to support that the user has violated the terms of Section 2.1.5.

2.1.2. **Credentialing Requirements.** Registry Operator, through the facilitation of the CZDA Provider, will request each user to provide it with information sufficient to correctly identify and locate the user. Such user information will include, without limitation, company name, contact name, address, telephone number, facsimile number, email address, and the Internet host machine name and IP address.

2.1.3. **Grant of Access.** Each Registry Operator will provide the Zone File FTP (or other Registry supported) service for an ICANN-specified and managed URL (specifically, <TLD>.zda.icann.org where <TLD> is the TLD for which the registry is responsible) for the user to access the Registry’s zone data archives. Registry Operator will grant the user a non-exclusive, non-transferable, limited right to access Registry Operator’s Zone File FTP server, and to transfer a copy of the top-level domain zone files, and any associated cryptographic checksum files no more than once per 24 hour period using FTP, or other data transport and access protocols that may be prescribed by ICANN. For every zone file access server, the zone files are in the top-level directory called <zone>.zone.gz, with <zone>.zone.gz.md5 and <zone>.zone.gz.sig to verify downloads. If the Registry Operator also provides historical data, it will use the naming pattern <zone>-yyyymmdd.zone.gz, etc.

2.1.4. **File Format Standard.** Registry Operator will provide zone files using a sub-format of the standard Master File format as originally defined in RFC 1035, Section 5, including all the records present in the actual zone used in the public DNS. Sub-format is as follows:

1. Each record must include all fields in one line as: <domain-name> <TTL> <class> <type> <RDATA>.
2. Class and Type must use the standard mnemonics and must be in lower case.

3. TTL must be present as a decimal integer.
4. Use of /X and /DDD inside domain names is allowed.
5. All domain names must be in lower case.
6. Must use exactly one tab as separator of fields inside a record.
7. All domain names must be fully qualified.
8. No \$ORIGIN directives.
9. No use of "@" to denote current origin.
10. No use of "blank domain names" at the beginning of a record to continue the use of the domain name in the previous record.
11. No \$INCLUDE directives.
12. No \$TTL directives.
13. No use of parentheses, e.g., to continue the list of fields in a record across a line boundary.
14. No use of comments.
15. No blank lines.
16. The SOA record should be present at the top and (duplicated at) the end of the zone file.
17. With the exception of the SOA record, all the records in a file must be in alphabetical order.
18. One zone per file. If a TLD divides its DNS data into multiple zones, each goes into a separate file named as above, with all the files combined using tar into a file called <tld>.zone.tar.

**2.1.5. Use of Data by User.** Registry Operator will permit user to use the zone file for lawful purposes; provided that, (a) user takes all reasonable steps to protect against unauthorized access to and use and disclosure of the data, and (b) under no circumstances will Registry Operator be required or permitted to allow user to use the data to, (i) allow, enable, or otherwise support the transmission by e-mail, telephone, or facsimile of mass unsolicited, commercial advertising or solicitations to entities other than user's own existing customers, or (ii) enable high volume, automated, electronic processes that send queries or data to the systems of Registry Operator or any ICANN-accredited registrar.

**2.1.6. Term of Use.** Registry Operator, through CZDA Provider, will provide each user with access to the zone file for a period of not less than three (3) months. Registry Operator will allow users to renew their Grant of Access.

**2.1.7. No Fee for Access.** Registry Operator will provide, and CZDA Provider will facilitate, access to the zone file to user at no cost.

## **2.2 Co-operation**

**2.2.1. Assistance.** Registry Operator will co-operate and provide reasonable assistance to ICANN and the CZDA Provider to facilitate and maintain the efficient access of zone file data by permitted users as contemplated under this Schedule.

**2.3 ICANN Access.** Registry Operator shall provide bulk access to the zone files for the TLD to ICANN or its designee on a continuous basis in the manner ICANN may reasonably specify from time to time.

**2.4 Emergency Operator Access.** Registry Operator shall provide bulk access to the zone files for the TLD to the Emergency Operators designated by ICANN on a continuous basis in the manner ICANN may reasonably specify from time to time.

### 3. Bulk Registration Data Access to ICANN

**3.1. Periodic Access to Thin Registration Data.** In order to verify and ensure the operational stability of Registry Services as well as to facilitate compliance checks on accredited registrars, Registry Operator will provide ICANN on a weekly basis (the day to be designated by ICANN) with up-to-date Registration Data as specified below. Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for retrieval by ICANN.

**3.1.1. Contents.** Registry Operator will provide, at least, the following data for all registered domain names: domain name, domain name repository object id (roid), registrar id (IANA ID), statuses, last updated date, creation date, expiration date, and name server names. For sponsoring registrars, at least, it will provide: registrar name, registrar repository object id (roid), hostname of registrar Whois server, and URL of registrar.

**3.1.2. Format.** The data will be provided in the format specified in Specification 2 for Data Escrow (including encryption, signing, etc.) but including only the fields mentioned in the previous section, i.e., the file will only contain Domain and Registrar objects with the fields mentioned above. Registry Operator has the option to provide a full deposit file instead as specified in Specification 2.

**3.1.3. Access.** Registry Operator will have the file(s) ready for download as of 00:00:00 UTC on the day designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, though ICANN may request other means in the future.

**3.2. Exceptional Access to Thick Registration Data.** In case of a registrar failure, de-accreditation, court order, etc. that prompts the temporary or definitive transfer of its domain names to another registrar, at the request of ICANN, Registry Operator will provide ICANN with up-to-date data for the domain names of the losing registrar. The data will be provided in the format specified in Specification 2 for Data Escrow. The file will only contain data related to the domain names of the losing registrar. Registry Operator will provide the data within 2 business days. Unless otherwise agreed by Registry Operator and ICANN, the file will be made available for download by ICANN in the same manner as the data specified in Section 3.1. of this Specification.

## SPECIFICATION 5

### SCHEDULE OF RESERVED NAMES AT THE SECOND LEVEL IN GTLD REGISTRIES

Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall reserve (i.e., Registry Operator shall not register, delegate, use or otherwise make available such labels to any third party, but may register such labels in its own name in order to withhold them from delegation or use) names formed with the following labels from initial (i.e. other than renewal) registration within the TLD:

1. **Example. The label “EXAMPLE”** shall be reserved at the second level and at all other levels within the TLD at which Registry Operator makes registrations.
2. **Two-character labels.** All two-character labels shall be initially reserved. The reservation of a two-character label string may be released to the extent that Registry Operator reaches agreement with the government and country-code manager. The Registry Operator may also propose release of these reservations based on its implementation of measures to avoid confusion with the corresponding country codes.
3. **Tagged Domain Names.** Labels may only include hyphens in the third and fourth position if they represent valid internationalized domain names in their ASCII encoding (for example "xn--ndk061n").
4. **Second-Level Reservations for Registry Operations.** The following names are reserved for use in connection with the operation of the registry for the TLD. Registry Operator may use them, but upon conclusion of Registry Operator's designation as operator of the registry for the TLD they shall be transferred as specified by ICANN: NIC, WWW, IRIS and WHOIS.
5. **Country and Territory Names.** The country and territory names contained in the following internationally recognized lists shall be initially reserved at the second level and at all other levels within the TLD at which the Registry Operator provides for registrations:
  - 5.1. the short form (in English) of all country and territory names contained on the ISO 3166-1 list, as updated from time to time, including the European Union, which is exceptionally reserved on the ISO 3166-1 list, and its scope extended in August 1999 to any application needing to represent the name European Union  
<[http://www.iso.org/iso/support/country\\_codes/iso\\_3166\\_code\\_lists/iso-3166-1\\_decoding\\_table.htm#EU](http://www.iso.org/iso/support/country_codes/iso_3166_code_lists/iso-3166-1_decoding_table.htm#EU)>;
  - 5.2. the United Nations Group of Experts on Geographical Names, Technical Reference Manual for the Standardization of Geographical Names, Part III Names of Countries of the World; and
  - 5.3. the list of United Nations member states in 6 official United Nations languages prepared by the Working Group on Country Names of the United Nations Conference on the Standardization of Geographical Names;

provided, that the reservation of specific country and territory names may be released to the extent that Registry Operator reaches agreement with the applicable government(s), provided, further, that

Registry Operator may also propose release of these reservations, subject to review by ICANN's Governmental Advisory Committee and approval by ICANN.

## SPECIFICATION 6

### REGISTRY INTEROPERABILITY AND CONTINUITY SPECIFICATIONS

#### 1. Standards Compliance

1.1. **DNS.** Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to the DNS and name server operations including without limitation RFCs 1034, 1035, 1982, 2181, 2182, 2671, 3226, 3596, 3597, 4343, and 5966.

1.2. **EPP.** Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to the provisioning and management of domain names using the Extensible Provisioning Protocol (EPP) in conformance with RFCs 5910, 5730, 5731, 5732, 5733 and 5734. If Registry Operator implements Registry Grace Period (RGP), it will comply with RFC 3915 and its successors. If Registry Operator requires the use of functionality outside the base EPP RFCs, Registry Operator must document EPP extensions in Internet-Draft format following the guidelines described in RFC 3735. Registry Operator will provide and update the relevant documentation of all the EPP Objects and Extensions supported to ICANN prior to deployment.

1.3. **DNSSEC.** Registry Operator shall sign its TLD zone files implementing Domain Name System Security Extensions (“DNSSEC”). During the Term, Registry Operator shall comply with RFCs 4033, 4034, 4035, 4509 and their successors, and follow the best practices described in RFC 4641 and its successors. If Registry Operator implements Hashed Authenticated Denial of Existence for DNS Security Extensions, it shall comply with RFC 5155 and its successors. Registry Operator shall accept public-key material from child domain names in a secure manner according to industry best practices. Registry shall also publish in its website the DNSSEC Practice Statements (DPS) describing critical security controls and procedures for key material storage, access and usage for its own keys and secure acceptance of registrants’ public-key material. Registry Operator shall publish its DPS following the format described in “DPS-framework” (currently in draft format, see <http://tools.ietf.org/html/draft-ietf-dnsop-dnssec-dps-framework>) within 180 days after the “DPS-framework” becomes an RFC.

1.4. **IDN.** If the Registry Operator offers Internationalized Domain Names (“IDNs”), it shall comply with RFCs 5890, 5891, 5892, 5893 and their successors. Registry Operator shall comply with the ICANN IDN Guidelines at <http://www.icann.org/en/topics/idn/implementation-guidelines.htm>, as they may be amended, modified, or superseded from time to time. Registry Operator shall publish and keep updated its IDN Tables and IDN Registration Rules in the IANA Repository of IDN Practices as specified in the ICANN IDN Guidelines.

1.5. **IPv6.** Registry Operator shall be able to accept IPv6 addresses as glue records in its Registry System and publish them in the DNS. Registry Operator shall offer public IPv6 transport for, at least, two of the Registry’s name servers listed in the root zone with the corresponding IPv6 addresses registered with IANA. Registry Operator should follow “DNS IPv6 Transport Operational Guidelines” as described in BCP 91 and the recommendations and considerations described in RFC 4472. Registry Operator shall offer public IPv6 transport for its Registration Data Publication Services as defined in Specification 4 of this Agreement; e.g. Whois (RFC 3912), Web based Whois. Registry Operator shall offer public IPv6 transport for its Shared Registration System (SRS) to any Registrar, no later than six months after receiving the first request in writing from a gTLD accredited Registrar willing to operate with the SRS over IPv6.

## 2. Registry Services

2.1. **Registry Services.** “Registry Services” are, for purposes of the Registry Agreement, defined as the following: (a) those services that are operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry DNS servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by this Agreement; (b) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy as defined in Specification 1; (c) any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator; and (d) material changes to any Registry Service within the scope of (a), (b) or (c) above.

2.2. **Wildcard Prohibition.** For domain names which are either not registered, or the registrant has not supplied valid records such as NS records for listing in the DNS zone file, or their status does not allow them to be published in the DNS, the use of DNS wildcard Resource Records as described in RFCs 1034 and 4592 or any other method or technology for synthesizing DNS Resources Records or using redirection within the DNS by the Registry is prohibited. When queried for such domain names the authoritative name servers must return a “Name Error” response (also known as NXDOMAIN), RCODE 3 as described in RFC 1035 and related RFCs. This provision applies for all DNS zone files at all levels in the DNS tree for which the Registry Operator (or an affiliate engaged in providing Registration Services) maintains data, arranges for such maintenance, or derives revenue from such maintenance.

## 3. Registry Continuity

3.1. **High Availability.** Registry Operator will conduct its operations using network and geographically diverse, redundant servers (including network-level redundancy, end-node level redundancy and the implementation of a load balancing scheme where applicable) to ensure continued operation in the case of technical failure (widespread or local), or an extraordinary occurrence or circumstance beyond the control of the Registry Operator.

3.2. **Extraordinary Event.** Registry Operator will use commercially reasonable efforts to restore the critical functions of the registry within 24 hours after the termination of an extraordinary event beyond the control of the Registry Operator and restore full system functionality within a maximum of 48 hours following such event, depending on the type of critical function involved. Outages due to such an event will not be considered a lack of service availability.

3.3. **Business Continuity.** Registry Operator shall maintain a business continuity plan, which will provide for the maintenance of Registry Services in the event of an extraordinary event beyond the control of the Registry Operator or business failure of Registry Operator, and may include the designation of a Registry Services continuity provider. If such plan includes the designation of a Registry Services continuity provider, Registry Operator shall provide the name and contact information for such Registry Services continuity provider to ICANN. In the case of an extraordinary event beyond the control of the Registry Operator where the Registry Operator cannot be contacted, Registry Operator consents that ICANN may contact the designated Registry Services continuity provider, if one exists. Registry Operator shall conduct Registry Services Continuity testing at least once per year.

## 4. Abuse Mitigation

4.1. **Abuse Contact.** Registry Operator shall provide to ICANN and publish on its website its accurate contact details including a valid email and mailing address as well as a primary contact for handling inquiries related to malicious conduct in the TLD, and will provide ICANN with prompt notice of any changes to such contact details.

4.2. **Malicious Use of Orphan Glue Records.** Registry Operators shall take action to remove orphan glue records (as defined at <http://www.icann.org/en/committees/security/sac048.pdf>) when provided with evidence in written form that such records are present in connection with malicious conduct.

## **5. Supported Initial and Renewal Registration Periods**

5.1. **Initial Registration Periods.** Initial registrations of registered names may be made in the registry in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, initial registrations of registered names may not exceed ten (10) years.

5.2. **Renewal Periods.** Renewal of registered names may be made in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, renewal of registered names may not extend their registration period beyond ten (10) years from the time of the renewal.

## SPECIFICATION 7

### MINIMUM REQUIREMENTS FOR RIGHTS PROTECTION MECHANISMS

1. **Rights Protection Mechanisms.** Registry Operator shall implement and adhere to any rights protection mechanisms (“RPMs”) that may be mandated from time to time by ICANN. In addition to such RPMs, Registry Operator may develop and implement additional RPMs that discourage or prevent registration of domain names that violate or abuse another party’s legal rights. Registry Operator will include all ICANN mandated and independently developed RPMs in the registry-registrar agreement entered into by ICANN-accredited registrars authorized to register names in the TLD. Registry Operator shall implement in accordance with requirements established by ICANN each of the mandatory RPMs set forth in the Trademark Clearinghouse (posted at [url to be inserted when final Trademark Clearinghouse is adopted]), which may be revised by ICANN from time to time. Registry Operator shall not mandate that any owner of applicable intellectual property rights use any other trademark information aggregation, notification, or validation service in addition to or instead of the ICANN-designated Trademark Clearinghouse.

2. **Dispute Resolution Mechanisms.** Registry Operator will comply with the following dispute resolution mechanisms as they may be revised from time to time:

- a. the Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) and the Registration Restriction Dispute Resolution Procedure (RRDRP) adopted by ICANN (posted at [urls to be inserted when final procedure is adopted]). Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Registry Agreement) following a determination by any PDDRP or RRDRP panel and to be bound by any such determination; and
- b. the Uniform Rapid Suspension system (“URS”) adopted by ICANN (posted at [url to be inserted]), including the implementation of determinations issued by URS examiners.

## SPECIFICATION 8

### CONTINUED OPERATIONS INSTRUMENT

1. The Continued Operations Instrument shall (a) provide for sufficient financial resources to ensure the continued operation of the critical registry functions related to the TLD set forth in Section [\_\_] of the Applicant Guidebook posted at [url to be inserted upon finalization of Applicant Guidebook] (which is hereby incorporated by reference into this Specification 8) for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6<sup>th</sup>) anniversary of the Effective Date, and (b) be in the form of either (i) an irrevocable standby letter of credit, or (ii) an irrevocable cash escrow deposit, each meeting the requirements set forth in Section [\_\_] of the Applicant Guidebook posted at [url to be inserted upon finalization of Applicant Guidebook] (which is hereby incorporated by reference into this Specification 8). Registry Operator shall use its best efforts to take all actions necessary or advisable to maintain in effect the Continued Operations Instrument for a period of six (6) years from the Effective Date, and to maintain ICANN as a third party beneficiary thereof. Registry Operator shall provide to ICANN copies of all final documents relating to the Continued Operations Instrument and shall keep ICANN reasonably informed of material developments relating to the Continued Operations Instrument. Registry Operator shall not agree to, or permit, any amendment of, or waiver under, the Continued Operations Instrument or other documentation relating thereto without the prior written consent of ICANN (such consent not to be unreasonably withheld). The Continued Operations Instrument shall expressly state that ICANN may access the financial resources of the Continued Operations Instrument pursuant to Section 2.13 or Section 4.5 [*insert for government entity*: or Section 7.14] of the Registry Agreement.
2. If, notwithstanding the use of best efforts by Registry Operator to satisfy its obligations under the preceding paragraph, the Continued Operations Instrument expires or is terminated by another party thereto, in whole or in part, for any reason, prior to the sixth anniversary of the Effective Date, Registry Operator shall promptly (i) notify ICANN of such expiration or termination and the reasons therefor and (ii) arrange for an alternative instrument that provides for sufficient financial resources to ensure the continued operation of the Registry Services related to the TLD for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date (an “Alternative Instrument”). Any such Alternative Instrument shall be on terms no less favorable to ICANN than the Continued Operations Instrument and shall otherwise be in form and substance reasonably acceptable to ICANN.
3. Notwithstanding anything to the contrary contained in this Specification 8, at any time, Registry Operator may replace the Continued Operations Instrument with an alternative

instrument that (i) provides for sufficient financial resources to ensure the continued operation of the Registry Services related to the TLD for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date, and (ii) contains terms no less favorable to ICANN than the Continued Operations Instrument and is otherwise in form and substance reasonably acceptable to ICANN. In the event Registry Operation replaces the Continued Operations Instrument either pursuant to paragraph 2 or this paragraph 3, the terms of this Specification 8 shall no longer apply with respect to the original Continuing Operations Instrument, but shall thereafter apply with respect to such replacement instrument(s).

## SPECIFICATION 9

### Registry Operator Code of Conduct

1. In connection with the operation of the registry for the TLD, Registry Operator will not, and will not allow any parent, subsidiary, Affiliate, subcontractor or other related entity, to the extent such party is engaged in the provision of Registry Services with respect to the TLD (each, a “Registry Related Party”), to:
  - a. directly or indirectly show any preference or provide any special consideration to any registrar with respect to operational access to registry systems and related registry services, unless comparable opportunities to qualify for such preferences or considerations are made available to all registrars on substantially similar terms and subject to substantially similar conditions;
  - b. register domain names in its own right, except for names registered through an ICANN accredited registrar that are reasonably necessary for the management, operations and purpose of the TLD, provided, that Registry Operator may reserve names from registration pursuant to Section 2.6 of the Registry Agreement;
  - c. register names in the TLD or sub-domains of the TLD based upon proprietary access to information about searches or resolution requests by consumers for domain names not yet registered (commonly known as, "front-running");
  - d. allow any Affiliated registrar to disclose user data to Registry Operator or any Registry Related Party, except as necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such user data on substantially similar terms and subject to substantially similar conditions; or
  - e. disclose confidential registry data or confidential information about its Registry Services or operations to any employee of any DNS services provider, except as necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such confidential registry data or confidential information on substantially similar terms and subject to substantially similar conditions.
2. If Registry Operator or a Registry Related Party also operates as a provider of registrar or registrar-reseller services, Registry Operator will, or will cause such Registry Related Party to, ensure that such services are offered through a legal entity separate from Registry Operator, and maintain separate books of accounts with respect to its registrar or registrar-reseller operations.
3. Registry Operator will conduct internal reviews at least once per calendar year to

- ensure compliance with this Code of Conduct. Within twenty (20) calendar days following the end of each calendar year, Registry Operator will provide the results of the internal review, along with a certification executed by an executive officer of Registry Operator certifying as to Registry Operator's compliance with this Code of Conduct, via email to an address to be provided by ICANN. (ICANN may specify in the future the form and contents of such reports or that the reports be delivered by other reasonable means.) Registry Operator agrees that ICANN may publicly post such results and certification.
4. Nothing set forth herein shall: (i) limit ICANN from conducting investigations of claims of Registry Operator's non-compliance with this Code of Conduct; or (ii) provide grounds for Registry Operator to refuse to cooperate with ICANN investigations of claims of Registry Operator's non-compliance with this Code of Conduct.
  5. Nothing set forth herein shall limit the ability of Registry Operator or any Registry Related Party, to enter into arms-length transactions in the ordinary course of business with a registrar or reseller with respect to products and services unrelated in all respects to the TLD.
  6. Registry Operator may request an exemption to this Code of Conduct, and such exemption may be granted by ICANN in ICANN's reasonable discretion, if Registry Operator demonstrates to ICANN's reasonable satisfaction that (i) all domain name registrations in the TLD are registered to, and maintained by, Registry Operator for its own exclusive use, (ii) Registry Operator does not sell, distribute or transfer control or use of any registrations in the TLD to any third party that is not an Affiliate of Registry Operator, and (iii) application of this Code of Conduct to the TLD is not necessary to protect the public interest.

## SPECIFICATION 10

### REGISTRY PERFORMANCE SPECIFICATIONS

#### 1. Definitions

- 1.1. **DNS.** Refers to the Domain Name System as specified in RFCs 1034, 1035, and related RFCs.
- 1.2. **DNSSEC proper resolution.** There is a valid DNSSEC chain of trust from the root trust anchor to a particular domain name, e.g., a TLD, a domain name registered under a TLD, etc.
- 1.3. **EPP.** Refers to the Extensible Provisioning Protocol as specified in RFC 5730 and related RFCs.
- 1.4. **IP address.** Refers to IPv4 or IPv6 addresses without making any distinction between the two. When there is need to make a distinction, IPv4 or IPv6 is used.
- 1.5. **Probes.** Network hosts used to perform (DNS, EPP, etc.) tests (see below) that are located at various global locations.
- 1.6. **RDDS.** Registration Data Directory Services refers to the collective of WHOIS and Web-based WHOIS services as defined in Specification 4 of this Agreement.
- 1.7. **RTT.** Round-Trip Time or **RTT** refers to the time measured from the sending of the first bit of the first packet of the sequence of packets needed to make a request until the reception of the last bit of the last packet of the sequence needed to receive the response. If the client does not receive the whole sequence of packets needed to consider the response as received, the request will be considered unanswered.
- 1.8. **SLR.** Service Level Requirement is the level of service expected for a certain parameter being measured in a Service Level Agreement (SLA).

#### 2. Service Level Agreement Matrix

	Parameter	SLR (monthly basis)
<b>DNS</b>	DNS service availability	0 min downtime = 100% availability
	DNS name server availability	≤ 432 min of downtime (≈ 99%)
	TCP DNS resolution RTT	≤ 1500 ms, for at least 95% of the queries
	UDP DNS resolution RTT	≤ 500 ms, for at least 95% of the queries
	DNS update time	≤ 60 min, for at least 95% of the probes
<b>RDDS</b>	RDDS availability	≤ 864 min of downtime (≈ 98%)
	RDDS query RTT	≤ 2000 ms, for at least 95% of the queries
	RDDS update time	≤ 60 min, for at least 95% of the probes
<b>EPP</b>	EPP service availability	≤ 864 min of downtime (≈ 98%)
	EPP session-command RTT	≤ 4000 ms, for at least 90% of the commands
	EPP query-command RTT	≤ 2000 ms, for at least 90% of the commands
	EPP transform-command RTT	≤ 4000 ms, for at least 90% of the commands

Registry Operator is encouraged to do maintenance for the different services at the times and dates of statistically lower traffic for each service. However, note that there is no provision for planned outages or similar; any downtime, be it for maintenance or due to system failures, will be noted simply as downtime and counted for SLA purposes.

### 3. DNS

- 3.1. **DNS service availability.** Refers to the ability of the group of listed-as-authoritative name servers of a particular domain name (e.g., a TLD), to answer DNS queries from DNS probes. For the service to be considered available at a particular moment, at least, two of the delegated name servers registered in the DNS must have successful results from “**DNS tests**” to each of their public-DNS registered “**IP addresses**” to which the name server resolves. If 51% or more of the DNS testing probes see the service as unavailable during a given time, the DNS service will be considered unavailable.
- 3.2. **DNS name server availability.** Refers to the ability of a public-DNS registered “**IP address**” of a particular name server listed as authoritative for a domain name, to answer DNS queries from an Internet user. All the public DNS-registered “**IP address**” of all name servers of the domain name being monitored shall be tested individually. If 51% or more of the DNS testing probes get undefined/unanswered results from “**DNS tests**” to a name server “**IP address**” during a given time, the name server “**IP address**” will be considered unavailable.
- 3.3. **UDP DNS resolution RTT.** Refers to the **RTT** of the sequence of two packets, the UDP DNS query and the corresponding UDP DNS response. If the **RTT** is 5 times greater than the time specified in the relevant **SLR**, the **RTT** will be considered undefined.
- 3.4. **TCP DNS resolution RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the DNS response for only one DNS query. If the **RTT** is 5 times greater than the time specified in the relevant **SLR**, the **RTT** will be considered undefined.
- 3.5. **DNS resolution RTT.** Refers to either “**UDP DNS resolution RTT**” or “**TCP DNS resolution RTT**”.
- 3.6. **DNS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, until the name servers of the parent domain name answer “**DNS queries**” with data consistent with the change made. This only applies for changes to DNS information.
- 3.7. **DNS test.** Means one non-recursive DNS query sent to a particular “**IP address**” (via UDP or TCP). If DNSSEC is offered in the queried DNS zone, for a query to be considered answered, the signatures must be positively verified against a corresponding DS record published in the parent zone or, if the parent is not signed, against a statically configured Trust Anchor. The answer to the query must contain the corresponding information from the Registry System, otherwise the query will be considered unanswered. A query with a “**DNS resolution RTT**” 5 times higher than the corresponding SLR, will be considered unanswered. The possible results to a DNS test are: a number in milliseconds corresponding to the “**DNS resolution RTT**” or, undefined/unanswered.
- 3.8. **Measuring DNS parameters.** Every minute, every DNS probe will make an UDP or TCP “**DNS test**” to each of the public-DNS registered “**IP addresses**” of the name servers of the domain

name being monitored. If a “**DNS test**” result is undefined/unanswered, the tested IP will be considered unavailable from that probe until it is time to make a new test.

3.9. **Collating the results from DNS probes.** The minimum number of active testing probes to consider a measurement valid is 20 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

3.10. **Distribution of UDP and TCP queries.** DNS probes will send UDP or TCP “**DNS test**” approximating the distribution of these queries.

3.11. **Placement of DNS probes.** Probes for measuring DNS parameters shall be placed as near as possible to the DNS resolvers on the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

#### 4. **RDDS**

4.1. **RDDS availability.** Refers to the ability of all the RDDS services for the TLD, to respond to queries from an Internet user with appropriate data from the relevant Registry System. If 51% or more of the RDDS testing probes see any of the RDDS services as unavailable during a given time, the RDDS will be considered unavailable.

4.2. **WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the WHOIS response. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

4.3. **Web-based-WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the HTTP response for only one HTTP request. If Registry Operator implements a multiple-step process to get to the information, only the last step shall be measured. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

4.4. **RDDS query RTT.** Refers to the collective of “**WHOIS query RTT**” and “**Web-based-WHOIS query RTT**”.

4.5. **RDDS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, host or contact, up until the servers of the RDDS services reflect the changes made.

4.6. **RDDS test.** Means one query sent to a particular “**IP address**” of one of the servers of one of the RDDS services. Queries shall be about existing objects in the Registry System and the responses must contain the corresponding information otherwise the query will be considered unanswered. Queries with an **RTT** 5 times higher than the corresponding SLR will be considered as unanswered. The possible results to an RDDS test are: a number in milliseconds corresponding to the **RTT** or undefined/unanswered.

4.7. **Measuring RDDS parameters.** Every 5 minutes, RDDS probes will select one IP address from all the public-DNS registered “**IP addresses**” of the servers for each RDDS service of the TLD being monitored and make an “**RDDS test**” to each one. If an “**RDDS test**” result is

undefined/unanswered, the corresponding RDDS service will be considered as unavailable from that probe until it is time to make a new test.

4.8. **Collating the results from RDDS probes.** The minimum number of active testing probes to consider a measurement valid is 10 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

4.9. **Placement of RDDS probes.** Probes for measuring RDDS parameters shall be placed inside the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

## 5. EPP

5.1. **EPP service availability.** Refers to the ability of the TLD EPP servers as a group, to respond to commands from the Registry accredited Registrars, who already have credentials to the servers. The response shall include appropriate data from the Registry System. An EPP command with “**EPP command RTT**” 5 times higher than the corresponding SLR will be considered as unanswered. If 51% or more of the EPP testing probes see the EPP service as unavailable during a given time, the EPP service will be considered unavailable.

5.2. **EPP session-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a session command plus the reception of the EPP response for only one EPP session command. For the login command it will include packets needed for starting the TCP session. For the logout command it will include packets needed for closing the TCP session. EPP session commands are those described in section 2.9.1 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

5.3. **EPP query-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a query command plus the reception of the EPP response for only one EPP query command. It does not include packets needed for the start or close of either the EPP or the TCP session. EPP query commands are those described in section 2.9.2 of EPP RFC 5730. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

5.4. **EPP transform-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a transform command plus the reception of the EPP response for only one EPP transform command. It does not include packets needed for the start or close of either the EPP or the TCP session. EPP transform commands are those described in section 2.9.3 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

5.5. **EPP command RTT.** Refers to “**EPP session-command RTT**”, “**EPP query-command RTT**” or “**EPP transform-command RTT**”.

5.6. **EPP test.** Means one EPP command sent to a particular “**IP address**” for one of the EPP servers. Query and transform commands, with the exception of “create”, shall be about existing objects in the Registry System. The response shall include appropriate data from the Registry System. The possible results to an EPP test are: a number in milliseconds corresponding to the “**EPP command RTT**” or undefined/unanswered.

5.7. **Measuring EPP parameters.** Every 5 minutes, EPP probes will select one “**IP address**“ of the EPP servers of the TLD being monitored and make an “**EPP test**”; every time they should alternate between the 3 different types of commands and between the commands inside each category. If an “**EPP test**” result is undefined/unanswered, the EPP service will be considered as unavailable from that probe until it is time to make a new test.

5.8. **Collating the results from EPP probes.** The minimum number of active testing probes to consider a measurement valid is 5 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

5.9. **Placement of EPP probes.** Probes for measuring EPP parameters shall be placed inside or close to Registrars points of access to the Internet across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

6. **Emergency Thresholds**

The following matrix presents the Emergency Thresholds that, if reached by any of the services mentioned above for a TLD, would cause the Emergency Transition of the Critical Functions as specified in Section 2.13. of this Agreement.

<b>Critical Function</b>	<b>Emergency Threshold</b>
DNS service (all servers)	4-hour downtime / week
DNSSEC proper resolution	4-hour downtime / week
EPP	24-hour downtime / week
RDDS (WHOIS/Web-based WHOIS)	24-hour downtime / week
Data Escrow	Breach of the Registry Agreement caused by missing escrow deposits as described in Specification 2, Part B, Section 6.

7. **Emergency Escalation**

Escalation is strictly for purposes of notifying and investigating possible or potential issues in relation to monitored services. The initiation of any escalation and the subsequent cooperative investigations do not in themselves imply that a monitored service has failed its performance requirements.

Escalations shall be carried out between ICANN and Registry Operators, Registrars and Registry Operator, and Registrars and ICANN. Registry Operators and ICANN must provide said emergency operations departments. Current contacts must be maintained between ICANN and Registry Operators and published to Registrars, where relevant to their role in escalations, prior to any processing of an Emergency Escalation by all related parties, and kept current at all times.

7.1. **Emergency Escalation initiated by ICANN**

Upon reaching 10% of the Emergency thresholds as described in Section 6, ICANN’s emergency operations will initiate an Emergency Escalation with the relevant Registry Operator. An Emergency Escalation consists of the following minimum elements: electronic (i.e., email or SMS) and/or voice contact notification to the Registry Operator’s emergency operations department with detailed information concerning the issue being escalated, including evidence of monitoring failures, cooperative trouble-shooting of the monitoring failure between ICANN staff and the Registry Operator, and the

commitment to begin the process of rectifying issues with either the monitoring service or the service being monitoring.

### 7.2. Emergency Escalation initiated by Registrars

Registry Operator will maintain an emergency operations departments prepared to handle emergency requests from registrars. In the event that a registrar is unable to conduct EPP transactions with the Registry because of a fault with the Registry Service and is unable to either contact (through ICANN mandated methods of communication) the Registry Operator, or the Registry Operator is unable or unwilling to address the fault, the registrar may initiate an Emergency Escalation to the emergency operations department of ICANN. ICANN then may initiate an Emergency Escalation with the Registry Operator as explained above.

### 7.3. Notifications of Outages and Maintenance

In the event that a Registry Operator plans maintenance, they will provide related notice to the ICANN emergency operations department, at least, 24 hours ahead of that maintenance. ICANN's emergency operations department will note planned maintenance times, and suspend Emergency Escalation services for the monitored services during the expected maintenance outage period.

If Registry Operator declares an outage, as per their contractual obligations with ICANN, on services under SLA and performance requirements, it will notify the ICANN emergency operations department. During that declared outage, ICANN's emergency operations department will note and suspend Emergency Escalation services for the monitored services involved.

## 8. Covenants of Performance Measurement

- 8.1. **No interference.** Registry Operator shall not interfere with measurement **Probes**, including any form of preferential treatment of the requests for the monitored services. Registry Operator shall respond to the measurement tests described in this Specification as it would do with any other request from Internet users (for DNS and RDDS) or registrars (for EPP).
- 8.2. **ICANN testing registrar.** Registry Operator agrees that ICANN will have a testing registrar used for purposes of measuring the **SLRs** described above. Registry Operator agrees to not provide any differentiated treatment for the testing registrar other than no billing of the transactions. ICANN shall not use the registrar for registering domain names (or other registry objects) for itself or others, except for the purposes of verifying contractual compliance with the conditions described in this Agreement.

**TRADEMARK CLEARINGHOUSE**  
**11 JANUARY 2012**

**1. PURPOSE OF CLEARINGHOUSE**

- 1.1 The Trademark Clearinghouse is a central repository for information to be authenticated, stored, and disseminated, pertaining to the rights of trademark holders. ICANN will enter into an arms-length contract with service provider or providers, awarding the right to serve as a Trademark Clearinghouse Service Provider, i.e., to accept, authenticate, validate and facilitate the transmission of information related to certain trademarks.
- 1.2 The Clearinghouse will be required to separate its two primary functions: (i) authentication and validation of the trademarks in the Clearinghouse; and (ii) serving as a database to provide information to the new gTLD registries to support pre-launch Sunrise or Trademark Claims Services. Whether the same provider could serve both functions or whether two providers will be determined in the tender process.
- 1.3 The Registry shall only need to connect with one centralized database to obtain the information it needs to conduct its Sunrise or Trademark Claims Services regardless of the details of the Trademark Clearinghouse Service Provider's contract(s) with ICANN.
- 1.4 Trademark Clearinghouse Service Provider may provide ancillary services, as long as those services and any data used for those services are kept separate from the Clearinghouse database.
- 1.5 The Clearinghouse database will be a repository of authenticated information and disseminator of the information to a limited number of recipients. Its functions will be performed in accordance with a limited charter, and will not have any discretionary powers other than what will be set out in the charter with respect to authentication and validation. The Clearinghouse administrator(s) cannot create policy. Before material changes are made to the Clearinghouse functions, they will be reviewed through the ICANN public participation model.
- 1.6 Inclusion in the Clearinghouse is not proof of any right, nor does it create any legal rights. Failure to submit trademarks into the Clearinghouse should not be perceived to be lack of vigilance by trademark holders or a waiver of any rights, nor can any negative influence be drawn from such failure.

**2. SERVICE PROVIDERS**

- 2.1 The selection of Trademark Clearinghouse Service Provider(s) will be subject to predetermined criteria, but the foremost considerations will be the ability to store, authenticate, validate and disseminate the data at the highest level of technical stability

and security without interference with the integrity or timeliness of the registration process or registry operations.

2.2 Functions – Authentication/Validation; Database Administration. Public commentary has suggested that the best way to protect the integrity of the data and to avoid concerns that arise through sole-source providers would be to separate the functions of database administration and data authentication/validation.

2.2.1 One entity will authenticate registrations ensuring the word marks qualify as registered or are court-validated word marks or word marks that are protected by statute or treaty. This entity would also be asked to ensure that proof of use of marks is provided, which can be demonstrated by furnishing a signed declaration and one specimen of current use.

2.2.2 The second entity will maintain the database and provide Sunrise and Trademark Claims Services (described below).

2.3 Discretion will be used, balancing effectiveness, security and other important factors, to determine whether ICANN will contract with one or two entities - one to authenticate and validate, and the other to, administer in order to preserve integrity of the data.

2.4 Contractual Relationship.

2.4.1 The Clearinghouse shall be separate and independent from ICANN. It will operate based on market needs and collect fees from those who use its services. ICANN may coordinate or specify interfaces used by registries and registrars, and provide some oversight or quality assurance function to ensure rights protection goals are appropriately met.

2.4.2 The Trademark Clearinghouse Service Provider(s) (authenticator/validator and administrator) will be selected through an open and transparent process to ensure low costs and reliable, consistent service for all those utilizing the Clearinghouse services.

2.4.3 The Service Provider(s) providing the authentication of the trademarks submitted into the Clearinghouse shall adhere to rigorous standards and requirements that would be specified in an ICANN contractual agreement.

2.4.4 The contract shall include service level requirements, customer service availability (with the goal of seven days per week, 24 hours per day, 365 days per year), data escrow requirements, and equal access requirements for all persons and entities required to access the Trademark Clearinghouse database.

- 2.4.5 To the extent practicable, the contract should also include indemnification by Service Provider for errors such as false positives for participants such as Registries, ICANN, Registrants and Registrars.
- 2.5. Service Provider Requirements. The Clearinghouse Service Provider(s) should utilize regional marks authentication service providers (whether directly or through sub-contractors) to take advantage of local experts who understand the nuances of the trademark in question. Examples of specific performance criteria details in the contract award criteria and service-level-agreements are:
  - 2.5.1 provide 24 hour accessibility seven days a week (database administrator);
  - 2.5.2 employ systems that are technically reliable and secure (database administrator);
  - 2.5.3 use globally accessible and scalable systems so that multiple marks from multiple sources in multiple languages can be accommodated and sufficiently cataloged (database administrator and validator);
  - 2.5.4 accept submissions from all over the world - the entry point for trademark holders to submit their data into the Clearinghouse database could be regional entities or one entity;
  - 2.5.5 allow for multiple languages, with exact implementation details to be determined;
  - 2.5.6 provide access to the Registrants to verify and research Trademark Claims Notices;
  - 2.5.7 have the relevant experience in database administration, validation or authentication, as well as accessibility to and knowledge of the various relevant trademark laws (database administrator and authenticator); and
  - 2.5.8 ensure through performance requirements, including those involving interface with registries and registrars, that neither domain name registration timeliness, nor registry or registrar operations will be hindered (database administrator).

### **3. CRITERIA FOR TRADEMARK INCLUSION IN CLEARINGHOUSE**

- 3.1 The trademark holder will submit to one entity – a single entity for entry will facilitate access to the entire Clearinghouse database. If regional entry points are used, ICANN will publish an information page describing how to locate regional submission points. Regardless of the entry point into the Clearinghouse, the authentication procedures established will be uniform.
- 3.2 The standards for inclusion in the Clearinghouse are:
  - 3.2.1 Nationally or regionally registered word marks from all jurisdictions.
  - 3.2.2 Any word mark that has been validated through a court of law or other judicial proceeding.

- 3.2.3 Any word mark protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion.
  - 3.2.4 Other marks that constitute intellectual property.
  - 3.2.5 Protections afforded to trademark registrations do not extend to applications for registrations, marks within any opposition period or registered marks that were the subject of successful invalidation, cancellation or rectification proceedings.
- 3.3 The type of data supporting entry of a registered word mark into the Clearinghouse must include a copy of the registration or the relevant ownership information, including the requisite registration number(s), the jurisdictions where the registrations have issued, and the name of the owner of record.
- 3.4 Data supporting entry of a judicially validated word mark into the Clearinghouse must include the court documents, properly entered by the court, evidencing the validation of a given word mark.
- 3.5 Data supporting entry into the Clearinghouse of word marks protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion, must include a copy of the relevant portion of the statute or treaty and evidence of its effective date.
- 3.6 Data supporting entry into the Clearinghouse of marks that constitute intellectual property of types other than those set forth in sections 3.2.1-3.2.3 above shall be determined by the registry operator and the Clearinghouse based on the services any given registry operator chooses to provide.
- 3.7 Registrations that include top level extensions such as “icann.org” or “.icann” as the word mark will not be permitted in the Clearinghouse regardless of whether that mark has been registered or it has been otherwise validated or protected (e.g., if a mark existed for icann.org or .icann, neither will not be permitted in the Clearinghouse).
- 3.8 All mark holders seeking to have their marks included in the Clearinghouse will be required to submit a declaration, affidavit, or other sworn statement that the information provided is true and current and has not been supplied for an improper purpose. The mark holder will also be required to attest that it will keep the information supplied to the Clearinghouse current so that if, during the time the mark is included in the Clearinghouse, a registration gets cancelled or is transferred to another entity, or in the case of a court- or Clearinghouse-validated mark the holder abandons use of the mark, the mark holder has an affirmative obligation to notify the Clearinghouse. There will be penalties for failing to keep information current. Moreover, it is anticipated that there will be a process whereby registrations can be

removed from the Clearinghouse if it is discovered that the marks are procured by fraud or if the data is inaccurate.

- 3.9 As an additional safeguard, the data will have to be renewed periodically by any mark holder wishing to remain in the Clearinghouse. Electronic submission should facilitate this process and minimize the cost associated with it. The reason for periodic authentication is to streamline the efficiencies of the Clearinghouse and the information the registry operators will need to process and limit the marks at issue to the ones that are in use.

#### **4. USE OF CLEARINGHOUSE DATA**

- 4.1 All mark holders seeking to have their marks included in the Clearinghouse will have to consent to the use of their information by the Clearinghouse. However, such consent would extend only to use in connection with the stated purpose of the Trademark Clearinghouse Database for Sunrise or Trademark Claims services. The reason for such a provision would be to presently prevent the Clearinghouse from using the data in other ways without permission. There shall be no bar on the Trademark Clearinghouse Service Provider or other third party service providers providing ancillary services on a non-exclusive basis.
- 4.2 In order not to create a competitive advantage, the data in the Trademark Clearinghouse should be licensed to competitors interested in providing ancillary services on equal and non-discriminatory terms and on commercially reasonable terms if the mark holders agree. Accordingly, two licensing options will be offered to the mark holder: (a) a license to use its data for all required features of the Trademark Clearinghouse, with no permitted use of such data for ancillary services either by the Trademark Clearinghouse Service Provider or any other entity; or (b) license to use its data for the mandatory features of the Trademark Clearinghouse and for any ancillary uses reasonably related to the protection of marks in new gTLDs, which would include a license to allow the Clearinghouse to license the use and data in the Trademark Clearinghouse to competitors that also provide those ancillary services. The specific implementation details will be determined, and all terms and conditions related to the provision of such services shall be included in the Trademark Clearinghouse Service Provider's contract with ICANN and subject to ICANN review.
- 4.3 Access by a prospective registrant to verify and research Trademark Claims Notices shall not be considered an ancillary service, and shall be provided at no cost to the Registrant. Misuse of the data by the service providers would be grounds for immediate termination.

## **5. DATA AUTHENTICATION AND VALIDATION GUIDELINES**

- 5.1 One core function for inclusion in the Clearinghouse would be to authenticate that the data meets certain minimum criteria. As such, the following minimum criteria are suggested:
- 5.1.1 An acceptable list of data authentication sources, i.e. the web sites of patent and trademark offices throughout the world, third party providers who can obtain information from various trademark offices;
  - 5.1.2 Name, address and contact information of the applicant is accurate, current and matches that of the registered owner of the trademarks listed;
  - 5.1.3 Electronic contact information is provided and accurate;
  - 5.1.4 The registration numbers and countries match the information in the respective trademark office database for that registration number.
- 5.2 For validation of marks by the Clearinghouse that were not protected via a court, statute or treaty, the mark holder shall be required to provide evidence of use of the mark in connection with the bona fide offering for sale of goods or services prior to application for inclusion in the Clearinghouse. Acceptable evidence of use will be a signed declaration and a single specimen of current use, which might consist of labels, tags, containers, advertising, brochures, screen shots, or something else that evidences current use.

## **6. MANDATORY RIGHTS PROTECTION MECHANISMS**

All new gTLD registries will be required to use the Trademark Clearinghouse to support its pre-launch or initial launch period rights protection mechanisms (RPMs). These RPMs, at a minimum, must consist of a Trademark Claims service and a Sunrise process.

- 6.1 Trademark Claims service
- 6.1.1 New gTLD Registry Operators must provide Trademark Claims services during an initial launch period for marks in the Trademark Clearinghouse. This launch period must occur for at least the first 60 days that registration is open for general registration.
  - 6.1.2 A Trademark Claims service is intended to provide clear notice to the prospective registrant of the scope of the mark holder's rights in order to minimize the chilling effect on registrants (Trademark Claims Notice). A form that describes the required elements is attached. The specific statement by

prospective registrant warrants that: (i) the prospective registrant has received notification that the mark(s) is included in the Clearinghouse; (ii) the prospective registrant has received and understood the notice; and (iii) to the best of the prospective registrant's knowledge, the registration and use of the requested domain name will not infringe on the rights that are the subject of the notice.

6.1.3 The Trademark Claims Notice should provide the prospective registrant access to the Trademark Clearinghouse Database information referenced in the Trademark Claims Notice to enhance understanding of the Trademark rights being claimed by the trademark holder. These links (or other sources) shall be provided in real time without cost to the prospective registrant. Preferably, the Trademark Claims Notice should be provided in the language used for the rest of the interaction with the registrar or registry, but it is anticipated that at the very least in the most appropriate UN-sponsored language (as specified by the prospective registrant or registrar/registry).

6.1.4 If the domain name is registered in the Clearinghouse, the registrar (again through an interface with the Clearinghouse) will promptly notify the mark holders(s) of the registration after it is effectuated.

6.1.5 The Trademark Clearinghouse Database will be structured to report to registries when registrants are attempting to register a domain name that is considered an "or omitted; (b) only certain special characters contained within a trademark are spelled out with appropriate words describing it (@ and &); (c) punctuation or special characters contained within a mark that are unable to be used in a second-level domain name may either be (i) omitted or (ii) replaced by spaces, hyphens or underscores and still be considered identical matches; and (d) no plural and no "marks contained" would qualify for inclusion. Identical Match" with the mark in the Clearinghouse. "Identical Match" means that the domain name consists of the complete and identical textual elements of the mark. In this regard: (a) spaces contained within a mark that are either replaced by hyphens (and vice versa)

## 6.2 Sunrise service

6.2.1 Sunrise registration services must be offered for a minimum of 30 days during the pre-launch phase and notice must be provided to all trademark holders in the Clearinghouse if someone is seeking a sunrise registration. This notice will be provided to holders of marks in the Clearinghouse that are an Identical Match to the name to be registered during Sunrise.

6.2.2 Sunrise Registration Process. For a Sunrise service, sunrise eligibility requirements (SERs) will be met as a minimum requirement, verified by Clearinghouse data, and

incorporate a Sunrise Dispute Resolution Policy (SDRP).

- 6.2.3 The proposed SERs include: (i) ownership of a mark (that satisfies the criteria in section 7.2 below), (ii) optional registry elected requirements re: international class of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.
- 6.2.4 The proposed SDRP must allow challenges based on at least the following four grounds: (i) at time the challenged domain name was registered, the registrant did not hold a trademark registration of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the trademark registration on which the registrant based its Sunrise registration is not of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; or (iv) the trademark registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received.
- 6.2.5 The Clearinghouse will maintain the SERs, validate and authenticate marks, as applicable, and hear challenges.

## **7. PROTECTION FOR MARKS IN CLEARINGHOUSE**

The scope of registered marks that must be honored by registries in providing Trademarks Claims services is broader than those that must be honored by registries in Sunrise services.

- 7.1 For Trademark Claims services - Registries must recognize and honor all word marks that have been or are: (i) nationally or regionally registered; (ii) court-validated; or (iii) specifically protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion. No demonstration of use is required.
- 7.2 For Sunrise services - Registries must recognize and honor all word marks: (i) nationally or regionally registered and for which proof of use – which can be a declaration and a single specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse; or (ii) that have been court-validated; or (iii) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008.

## **8. COSTS OF CLEARINGHOUSE**

Costs should be completely borne by the parties utilizing the services. Trademark holders will pay to register the Clearinghouse, and registries will pay for Trademark Claims and Sunrise services. Registrars and others who avail themselves of Clearinghouse services will pay the Clearinghouse directly.

## TRADEMARK NOTICE

[In English and the language of the registration agreement]

You have received this Trademark Notice because you have applied for a domain name which matches at least one trademark record submitted to the Trademark Clearinghouse.

You may or may not be entitled to register the domain name depending on your intended use and whether it is the same or significantly overlaps with the trademarks listed below.

***Your rights to register this domain name may or may not be protected as noncommercial use or "fair use" by the laws of your country. [in bold italics or all caps]***

Please read the trademark information below carefully, including the trademarks, jurisdictions, and goods and service for which the trademarks are registered. Please be aware that not all jurisdictions review trademark applications closely, so some of the trademark information below may exist in a national or regional registry which does not conduct a thorough or substantive review of trademark rights prior to registration.

***If you have questions, you may want to consult an attorney or legal expert on trademarks and intellectual property for guidance.***

If you continue with this registration, you represent that, you have received and you understand this notice and to the best of your knowledge, your registration and use of the requested domain name will not infringe on the trademark rights listed below. The following [number] Trademarks are listed in the Trademark Clearinghouse:

1. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant: Trademark Registrant Contact:

[with links to the TM registrations as listed in the TM Clearinghouse]

2. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant:

Trademark Registrant Contact:

\*\*\*\*\* [with links to the TM registrations as listed in the TM Clearinghouse]

X. 1. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant: Trademark Registrant Contact:

**UNIFORM RAPID SUSPENSION SYSTEM (“URS”)  
11 JANUARY 2012**

**DRAFT PROCEDURE**

**1. Complaint**

1.1 Filing the Complaint

- a) Proceedings are initiated by electronically filing with a URS Provider a Complaint outlining the trademark rights and the actions complained of entitling the trademark holder to relief.
- b) Each Complaint must be accompanied by the appropriate fee, which is under consideration. The fees will be non-refundable.
- c) One Complaint is acceptable for multiple related companies against one Registrant, but only if the companies complaining are related. Multiple Registrants can be named in one Complaint only if it can be shown that they are in some way related. There will not be a minimum number of domain names imposed as a prerequisite to filing.

1.2 Contents of the Complaint

The form of the Complaint will be simple and as formulaic as possible. There will be a Form Complaint. The Form Complaint shall include space for the following:

- 1.2.1 Name, email address and other contact information for the Complaining Party (Parties).
- 1.2.2 Name, email address and contact information for any person authorized to act on behalf of Complaining Parties.
- 1.2.3 Name of Registrant (i.e. relevant information available from Whois) and Whois listed available contact information for the relevant domain name(s).
- 1.2.4 The specific domain name(s) that are the subject of the Complaint. For each domain name, the Complainant shall include a copy of the currently available Whois information and a description and copy, if available, of the offending portion of the website content associated with each domain name that is the subject of the Complaint.
- 1.2.5 The specific trademark/service marks upon which the Complaint is based and pursuant to which the Complaining Parties are asserting their rights to them, for which goods and in connection with what services.
- 1.2.6 A statement of the grounds upon which the Complaint is based setting forth facts showing that the Complaining Party is entitled to relief, namely:

1.2.6.1. that the registered domain name is identical or confusingly similar to a word mark: (i) for which the Complainant holds a valid national or regional registration and that is in current use; or (ii) that has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty in effect at the time the URS complaint is filed.

- a. Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use in commerce - was submitted to, and validated by, the Trademark Clearinghouse)
- b. Proof of use may also be submitted directly with the URS Complaint.

and

1.2.6.2. that the Registrant has no legitimate right or interest to the domain name; and

1.2.6.3. that the domain was registered and is being used in bad faith.

A non-exclusive list of circumstances that demonstrate bad faith registration and use by the Registrant include:

- a. Registrant has registered or acquired the domain name primarily for the purpose of selling, renting or otherwise transferring the domain name registration to the complainant who is the owner of the trademark or service mark or to a competitor of that complainant, for valuable consideration in excess of documented out-of pocket costs directly related to the domain name; or
- b. Registrant has registered the domain name in order to prevent the trademark holder or service mark from reflecting the mark in a corresponding domain name, provided that Registrant has engaged in a pattern of such conduct; or
- c. Registrant registered the domain name primarily for the purpose of disrupting the business of a competitor; or
- d. By using the domain name Registrant has intentionally attempted to attract for commercial gain, Internet users to Registrant's web site or other on-line location, by creating a likelihood of confusion with the complainant's mark as to the source, sponsorship, affiliation, or endorsement of Registrant's web site or location or of a product or service on that web site or location.

1.2.7 A box in which the Complainant may submit up to 500 words of explanatory free form text.

1.2.8. An attestation that the Complaint is not being filed for any improper basis and that there is a sufficient good faith basis for filing the Complaint.

## **2. Fees**

2.1 URS Provider will charge fees to the Complainant. Fees are thought to be in the range of USD 300 per proceeding, but will ultimately be set by the Provider.

2.2 Complaints listing fifteen (15) or more disputed domain names registered by the same registrant will be subject to a Response Fee which will be refundable to the prevailing party. Under no circumstances shall the Response Fee exceed the fee charged to the Complainant.

## **3. Administrative Review**

3.1 Complaints will be subjected to an initial administrative review by the URS Provider for compliance with the filing requirements. This is a review to determine that the Complaint contains all of the necessary information, and is not a determination as to whether a *prima facie* case has been established.

3.2 The Administrative Review shall be conducted within two (2) business days of submission of the Complaint to the URS Provider.

3.3 Given the rapid nature of this Procedure, and the intended low level of required fees, there will be no opportunity to correct inadequacies in the filing requirements.

3.4 If a Complaint is deemed non-compliant with filing requirements, the Complaint will be dismissed without prejudice to the Complainant filing a new complaint. The initial filing fee shall not be refunded in these circumstances.

## **4. Notice and Locking of Domain**

4.1 Upon completion of the Administrative Review, the URS Provider must immediately notify the registry operator (via email) ("Notice of Complaint") after the Complaint has been deemed compliant with the filing requirements. Within 24 hours of receipt of the Notice of Complaint from the URS Provider, the registry operator shall "lock" the domain, meaning the registry shall restrict all changes to the registration data, including transfer and deletion of the domain names, but the name will continue to resolve. The registry operator will notify the URS Provider immediately upon locking the domain name ("Notice of Lock").

4.2 Within 24 hours after receiving Notice of Lock from the registry operator, the URS Provider shall notify the Registrant of the Complaint, sending a hard copy of the Notice of Complaint to the addresses listed in the Whois contact information, and providing an electronic copy of the Complaint, advising of the locked status, as well as the potential

effects if the Registrant fails to respond and defend against the Complaint. Notices must be clear and understandable to Registrants located globally. The Notice of Complaint shall be in English and translated by the Provider into the predominant language used in the registrant's country or territory.

- 4.3 All Notices to the Registrant shall be sent through email, fax (where available) and postal mail. The Complaint and accompanying exhibits, if any, shall be served electronically.
- 4.4 The URS Provider shall also electronically notify the registrar of record for the domain name at issue via the addresses the registrar has on file with ICANN.

## **5. The Response**

- 5.1 A Registrant will have 14 calendar days from the date the URS Provider sent its Notice of Complaint to the Registrant to electronically file a Response with the URS Provider. Upon receipt, the Provider will electronically send a copy of the Response, and accompanying exhibits, if any, to the Complainant.
- 5.2 No filing fee will be charged if the Registrant files its Response prior to being declared in default or not more than thirty (30) days following a Determination. For Responses filed more than thirty (30) days after a Determination, the Registrant should pay a reasonable non-refundable fee for re-examination, plus a Response Fee as set forth in section 2.2 above if the Complaint lists twenty-six (26) or more disputed domain names against the same registrant. The Response Fee will be refundable to the prevailing party.
- 5.3 Upon request by the Registrant, a limited extension of time to respond may be granted by the URS Provider if there is a good faith basis for doing so. In no event shall the extension be for more than seven (7) calendar days.
- 5.4 The Response shall be no longer than 2,500 words, excluding attachments, and the content of the Response should include the following:
  - 5.4.1 Confirmation of Registrant data.
  - 5.4.2 Specific admission or denial of each of the grounds upon which the Complaint is based.
  - 5.4.3 Any defense which contradicts the Complainant's claims.
  - 5.4.4 A statement that the contents are true and accurate.
- 5.5 In keeping with the intended expedited nature of the URS and the remedy afforded to a successful Complainant, affirmative claims for relief by the Registrant will not be permitted except for an allegation that the Complainant has filed an abusive Complaint.
- 5.6 Once the Response is filed, and the URS Provider determines that the Response is compliant with the filing requirements of a Response (which shall be on the same day),

the Complaint, Response and supporting materials will immediately be sent to a qualified Examiner, selected by the URS Provider, for review and Determination. All materials submitted are considered by the Examiner.

- 5.7 The Response can contain any facts refuting the claim of bad faith registration by setting out any of the following circumstances:
- 5.7.1 Before any notice to Registrant of the dispute, Registrant's use of, or demonstrable preparations to use, the domain name or a name corresponding to the domain name in connection with a bona fide offering of goods or services; or
  - 5.7.2 Registrant (as an individual, business or other organization) has been commonly known by the domain name, even if Registrant has acquired no trademark or service mark rights; or
  - 5.7.3 Registrant is making a legitimate or fair use of the domain name, without intent for commercial gain to misleadingly divert consumers or to tarnish the trademark or service mark at issue.

Such claims, if found by the Examiner to be proved based on its evaluation of all evidence, shall result in a finding in favor of the Registrant.

- 5.8 The Registrant may also assert Defenses to the Complaint to demonstrate that the Registrant's use of the domain name is not in bad faith by showing, for example, one of the following:
- 5.8.1 The domain name is generic or descriptive and the Registrant is making fair use of it.
  - 5.8.2 The domain name sites are operated solely in tribute to or in criticism of a person or business that is found by the Examiner to be fair use.
  - 5.8.3 Registrant's holding of the domain name is consistent with an express term of a written agreement entered into by the disputing Parties and that is still in effect.
  - 5.8.4 The domain name is not part of a wider pattern or series of abusive registrations because the Domain Name is of a significantly different type or character to other domain names registered by the Registrant.
- 5.9 Other factors for the Examiner to consider:
- 5.9.1 Trading in domain names for profit, and holding a large portfolio of domain names, are of themselves not indicia of bad faith under the URS. Such conduct, however, may be abusive in a given case depending on the circumstances of the dispute. The Examiner must review each case on its merits.
  - 5.9.2 Sale of traffic (i.e. connecting domain names to parking pages and earning click-per-view revenue) does not in and of itself constitute bad faith under the URS.

Such conduct, however, may be abusive in a given case depending on the circumstances of the dispute. The Examiner will take into account:

5.9.2.1. the nature of the domain name;

5.9.2.2. the nature of the advertising links on any parking page associated with the domain name; and

5.9.2.3. that the use of the domain name is ultimately the Registrant's responsibility.

## **6. Default**

- 6.1 If at the expiration of the 14-day answer period (or extended period if granted), the Registrant does not submit an answer, the Complaint proceeds to Default.
- 6.2 In either case, the Provider shall provide Notice of Default via email to the Complainant and Registrant, and via mail and fax to Registrant. During the Default period, the Registrant will be prohibited from changing content found on the site to argue that it is now a legitimate use and will also be prohibited from changing the Whois information.
- 6.3 All Default cases proceed to Examination for review on the merits of the claim.
- 6.4 If after Examination in Default cases, the Examiner rules in favor of Complainant, Registrant shall have the right to seek relief from Default via de novo review by filing a Response at any time up to six months after the date of the Notice of Default. The Registrant will also be entitled to request an extension of an additional six months if the extension is requested before the expiration of the initial six-month period.
- 6.5 If a Response is filed after: (i) the Respondent was in Default (so long as the Response is filed in accordance with 6.4 above); and (ii) proper notice is provided in accordance with the notice requirements set forth above, the domain name shall again resolve to the original IP address as soon as practical, but shall remain locked as if the Response had been filed in a timely manner before Default. The filing of a Response after Default is not an appeal; the case is considered as if responded to in a timely manner.
- 6.5 If after Examination in Default case, the Examiner rules in favor of Registrant, the Provider shall notify the Registry Operator to unlock the name and return full control of the domain name registration to the Registrant.

## **7. Examiners**

- 7.1 One Examiner selected by the Provider will preside over a URS proceeding.
- 7.2 Examiners should have demonstrable relevant legal background, such as in trademark law, and shall be trained and certified in URS proceedings. Specifically, Examiners shall be provided with instructions on the URS elements and defenses and how to conduct the examination of a URS proceeding.

- 7.3 Examiners used by any given URS Provider shall be rotated to the extent feasible to avoid “forum or examiner shopping.” URS Providers are strongly encouraged to work equally with all certified Examiners, with reasonable exceptions (such as language needs, non-performance, or malfeasance) to be determined on a case by case analysis.

## **8. Examination Standards and Burden of Proof**

- 8.1 The standards that the qualified Examiner shall apply when rendering its Determination are whether:
- 8.1.2 The registered domain name is identical or confusingly similar to a word mark: (i) for which the Complainant holds a valid national or regional registration and that is in current use; or (ii) that has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty currently in effect and that was in effect at the time the URS Complaint is filed; and
- 8.1.2.1 Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse.
- 8.1.2.2 Proof of use may also be submitted directly with the URS Complaint.
- 8.1.2 The Registrant has no legitimate right or interest to the domain name; and
- 8.1.3 The domain was registered and is being used in a bad faith.
- 8.2 The burden of proof shall be clear and convincing evidence.
- 8.3 For a URS matter to conclude in favor of the Complainant, the Examiner shall render a Determination that there is no genuine issue of material fact. Such Determination may include that: (i) the Complainant has rights to the name; and (ii) the Registrant has no rights or legitimate interest in the name. This means that the Complainant must present adequate evidence to substantiate its trademark rights in the domain name (e.g., evidence of a trademark registration and evidence that the domain name was registered and is being used in bad faith in violation of the URS).
- 8.4 If the Examiner finds that the Complainant has not met its burden, or that genuine issues of material fact remain in regards to any of the elements, the Examiner will reject the Complaint under the relief available under the URS. That is, the Complaint shall be dismissed if the Examiner finds that evidence was presented or is available to the Examiner to indicate that the use of the domain name in question is a non-infringing use or fair use of the trademark.
- 8.5 Where there is any genuine contestable issue as to whether a domain name registration and use of a trademark are in bad faith, the Complaint will be denied, the URS proceeding will be terminated without prejudice, e.g., a UDRP, court proceeding or

another URS may be filed. The URS is not intended for use in any proceedings with open questions of fact, but only clear cases of trademark abuse.

- 8.6 To restate in another way, if the Examiner finds that all three standards are satisfied by clear and convincing evidence and that there is no genuine contestable issue, then the Examiner shall issue a Determination in favor of the Complainant. If the Examiner finds that any of the standards have not been satisfied, then the Examiner shall deny the relief requested, thereby terminating the URS proceeding without prejudice to the Complainant to proceed with an action in court of competent jurisdiction or under the UDRP.

## **9. Determination**

- 9.1 There will be no discovery or hearing; the evidence will be the materials submitted with the Complaint and the Response, and those materials will serve as the entire record used by the Examiner to make a Determination.
- 9.2 If the Complainant satisfies the burden of proof, the Examiner will issue a Determination in favor of the Complainant. The Determination will be published on the URS Provider's website. However, there should be no other preclusive effect of the Determination other than the URS proceeding to which it is rendered.
- 9.3 If the Complainant does not satisfy the burden of proof, the URS proceeding is terminated and full control of the domain name registration shall be returned to the Registrant.
- 9.4 Determinations resulting from URS proceedings will be published by the service provider in a format specified by ICANN.
- 9.5 Determinations shall also be emailed by the URS Provider to the Registrant, the Complainant, the Registrar, and the Registry Operator, and shall specify the remedy and required actions of the registry operator to comply with the Determination.
- 9.6 To conduct URS proceedings on an expedited basis, examination should begin immediately upon the earlier of the expiration of a fourteen (14) day Response period (or extended period if granted), or upon the submission of the Response. A Determination shall be rendered on an expedited basis, with the stated goal that it be rendered within three (3) business days from when Examination began. Absent extraordinary circumstances, however, Determinations must be issued no later than five (5) days after the Response is filed. Implementation details will be developed to accommodate the needs of service providers once they are selected. (The tender offer for potential service providers will indicate that timeliness will be a factor in the award decision.)

## **10. Remedy**

- 10.1 If the Determination is in favor of the Complainant, the decision shall be immediately transmitted to the registry operator.

- 10.2 Immediately upon receipt of the Determination, the registry operator shall suspend the domain name, which shall remain suspended for the balance of the registration period and would not resolve to the original web site. The nameservers shall be redirected to an informational web page provided by the URS Provider about the URS. The URS Provider shall not be allowed to offer any other services on such page, nor shall it directly or indirectly use the web page for advertising purposes (either for itself or any other third party). The Whois for the domain name shall continue to display all of the information of the original Registrant except for the redirection of the nameservers. In addition, the Whois shall reflect that the domain name will not be able to be transferred, deleted or modified for the life of the registration.
- 10.3 There shall be an option for a successful Complainant to extend the registration period for one additional year at commercial rates.
- 10.4 No other remedies should be available in the event of a Determination in favor of the Complainant.

## **11. Abusive Complaints**

- 11.1 The URS shall incorporate penalties for abuse of the process by trademark holders.
- 11.2 In the event a party is deemed to have filed two (2) abusive Complaints, or one (1) “deliberate material falsehood,” that party shall be barred from utilizing the URS for one-year following the date of issuance of a Determination finding a complainant to have: (i) filed its second abusive complaint; or (ii) filed a deliberate material falsehood.
- 11.3 A Complaint may be deemed abusive if the Examiner determines:
  - 11.3.1 it was presented solely for improper purpose such as to harass, cause unnecessary delay, or needlessly increase the cost of doing business; and
  - 11.3.2 (i) the claims or other assertions were not warranted by any existing law or the URS standards; or (ii) the factual contentions lacked any evidentiary support
- 11.4 An Examiner may find that Complaint contained a deliberate material falsehood if it contained an assertion of fact, which at the time it was made, was made with the knowledge that it was false and which, if true, would have an impact on the outcome on the URS proceeding.
- 11.5 Two findings of “deliberate material falsehood” shall permanently bar the party from utilizing the URS.
- 11.6 URS Providers shall be required to develop a process for identifying and tracking barred parties, and parties whom Examiners have determined submitted abusive complaints or deliberate material falsehoods.

- 11.7 The dismissal of a complaint for administrative reasons or a ruling on the merits, in itself, shall not be evidence of filing an abusive complaint.
- 11.8 A finding that filing of a complaint was abusive or contained a deliberate materially falsehood can be appealed solely on the grounds that an Examiner abused his/her discretion, or acted in an arbitrary or capricious manner.

## **12. Appeal**

- 12.1 Either party shall have a right to seek a de novo appeal of the Determination based on the existing record within the URS proceeding for a reasonable fee to cover the costs of the appeal. An appellant must identify the specific grounds on which the party is appealing, including why the appellant claims the Examiner's Determination was incorrect.
- 12.2 The fees for an appeal shall be borne by the appellant. A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint. The Appeal Panel, to be selected by the Provider, may request, in its sole discretion, further statements or documents from either of the Parties.
- 12.3 Filing an appeal shall not change the domain name's resolution. For example, if the domain name no longer resolves to the original nameservers because of a Determination in favor of the Complainant, the domain name shall continue to point to the informational page provided by the URS Provider. If the domain name resolves to the original nameservers because of a Determination in favor of the registrant, it shall continue to resolve during the appeal process.
- 12.4 An appeal must be filed within 14 days after a Determination is issued and any Response must be filed 14 days after an appeal is filed.
- 12.5 If a respondent has sought relief from Default by filing a Response within six months (or the extended period if applicable) of issuance of initial Determination, an appeal must be filed within 14 days from date the second Determination is issued and any Response must be filed 14 days after the appeal is filed.
- 12.6 Notice of appeal and findings by the appeal panel shall be sent by the URS Provider via e-mail to the Registrant, the Complainant, the Registrar, and the Registry Operator.
- 12.7 The Providers' rules and procedures for appeals, other than those stated above, shall apply.

## **13. Other Available Remedies**

The URS Determination shall not preclude any other remedies available to the appellant, such as UDRP (if appellant is the Complainant), or other remedies as may be available in a court of competition jurisdiction. A URS Determination for or against a party shall not prejudice the

party in UDRP or any other proceedings.

**14. Review of URS**

A review of the URS procedure will be initiated one year after the first Examiner Determination is issued. Upon completion of the review, a report shall be published regarding the usage of the procedure, including statistical information, and posted for public comment on the usefulness and effectiveness of the procedure.

**TRADEMARK POST-DELEGATION DISPUTE RESOLUTION PROCEDURE (TRADEMARK PDDRP)**  
**11 JANUARY 2012**

**1. Parties to the Dispute**

The parties to the dispute will be the trademark holder and the gTLD registry operator. ICANN shall not be a party.

**2. Applicable Rules**

2.1 This procedure is intended to cover Trademark post-delegation dispute resolution proceedings generally. To the extent more than one Trademark PDDRP provider ("Provider") is selected to implement the Trademark PDDRP, each Provider may have additional rules that must be followed when filing a Complaint. The following are general procedures to be followed by all Providers.

2.2 In the Registry Agreement, the registry operator agrees to participate in all post-delegation procedures and be bound by the resulting Determinations.

**3. Language**

3.1 The language of all submissions and proceedings under the procedure will be English.

3.2 Parties may submit supporting evidence in their original language, provided and subject to the authority of the Expert Panel to determine otherwise, that such evidence is accompanied by an English translation of all relevant text.

**4. Communications and Time Limits**

4.1 All communications with the Provider must be submitted electronically.

4.2 For the purpose of determining the date of commencement of a time limit, a notice or other communication will be deemed to have been received on the day that it is transmitted to the appropriate contact person designated by the parties.

4.3 For the purpose of determining compliance with a time limit, a notice or other communication will be deemed to have been sent, made or transmitted on the day that it is dispatched.

4.4 For the purpose of calculating a period of time under this procedure, such period will begin to run on the day following the date of receipt of a notice or other communication.

4.5 All references to day limits shall be considered as calendar days unless otherwise specified.

## 5. Standing

- 5.1 The mandatory administrative proceeding will commence when a third-party complainant (“Complainant”) has filed a Complaint with a Provider asserting that the Complainant is a trademark holder (which may include either registered or unregistered marks as defined below) claiming that one or more of its marks have been infringed, and thereby the Complainant has been harmed, by the registry operator’s manner of operation or use of the gTLD.
- 5.2 Before proceeding to the merits of a dispute, and before the Respondent is required to submit a substantive Response, or pay any fees, the Provider shall appoint a special one-person Panel to perform an initial “threshold” review (“Threshold Review Panel”).

## 6. Standards

For purposes of these standards, “registry operator” shall include entities directly or indirectly controlling, controlled by or under common control with a registry operator, whether by ownership or control of voting securities, by contract or otherwise where ‘control’ means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of an entity, whether by ownership or control of voting securities, by contract or otherwise.

### 6.1 Top Level:

A complainant must assert and prove, by clear and convincing evidence, that the registry operator’s affirmative conduct in its operation or use of its gTLD string that is identical or confusingly similar to the complainant’s mark, causes or materially contributes to the gTLD doing one of the following:

*(a) taking unfair advantage of the distinctive character or the reputation of the complainant's mark; or*

*(b) impairing the distinctive character or the reputation of the complainant's mark; or*

*(c) creating a likelihood of confusion with the complainant's mark.*

An example of infringement at the top-level is where a TLD string is identical to a trademark and then the registry operator holds itself out as the beneficiary of the mark.

### 6.2 Second Level

Complainants are required to prove, by clear and convincing evidence that, through the registry operator’s affirmative conduct:

*(a) there is a substantial pattern or practice of specific bad faith intent by the registry operator to profit from the sale of trademark infringing domain names; and*

*(b) the registry operator's bad faith intent to profit from the systematic registration of domain names within the gTLD that are identical or confusingly similar to the complainant's mark, which:*

*(i) takes unfair advantage of the distinctive character or the reputation of the complainant's mark; or*

*(ii) impairs the distinctive character or the reputation of the complainant's mark, or*

*(iii) creates a likelihood of confusion with the complainant's mark.*

In other words, it is not sufficient to show that the registry operator is on notice of possible trademark infringement through registrations in the gTLD. The registry operator is not liable under the PDDRP solely because: (i) infringing names are in its registry; or (ii) the registry operator knows that infringing names are in its registry; or (iii) the registry operator did not monitor the registrations within its registry.

A registry operator is not liable under the PDDRP for any domain name registration that: (i) is registered by a person or entity that is unaffiliated with the registry operator; (ii) is registered without the direct or indirect encouragement, inducement, initiation or direction of any person or entity affiliated with the registry operator; and (iii) provides no direct or indirect benefit to the registry operator other than the typical registration fee (which may include other fees collected incidental to the registration process for value added services such as enhanced registration security).

An example of infringement at the second level is where a registry operator has a pattern or practice of actively and systematically encouraging registrants to register second level domain names and to take unfair advantage of the trademark to the extent and degree that bad faith is apparent. Another example of infringement at the second level is where a registry operator has a pattern or practice of acting as the registrant or beneficial user of infringing registrations, to monetize and profit in bad faith.

## **7. Complaint**

### **7.1 Filing:**

The Complaint will be filed electronically. Once the Administrative Review has been completed and the Provider deems the Complaint to be in compliance, the Provider will electronically serve the Complaint and serve a paper notice on the registry operator that is the subject of the Complaint ("Notice of Complaint") consistent with the contact information listed in the Registry Agreement.

### **7.2 Content:**

**7.2.1** The name and contact information, including address, phone, and email address, of the Complainant, and, to the best of Complainant's knowledge, the name and address of the current owner of the registration.

- 7.2.2 The name and contact information, including address, phone, and email address of any person authorized to act on behalf of Complainant.
- 7.2.3 A statement of the nature of the dispute, and any relevant evidence, which shall include:
- (a) The particular legal rights claim being asserted, the marks that form the basis for the dispute and a short and plain statement of the basis upon which the Complaint is being filed.
  - (b) A detailed explanation of how the Complainant's claim meets the requirements for filing a claim pursuant to that particular ground or standard.
  - (c) A detailed explanation of the validity of the Complaint and why the Complainant is entitled to relief.
  - (d) A statement that the Complainant has at least 30 days prior to filing the Complaint notified the registry operator in writing of: (i) its specific concerns and specific conduct it believes is resulting in infringement of Complainant's trademarks and (ii) its willingness to meet to resolve the issue.
  - (e) An explanation of how the mark is used by the Complainant (including the type of goods/services, period and territory of use – including all on-line usage) or otherwise protected by statute, treaty or has been validated by a court or the Clearinghouse.
  - (f) Copies of any documents that the Complainant considers to evidence its basis for relief, including evidence of current use of the Trademark at issue in the Complaint and domain name registrations.
  - (g) A statement that the proceedings are not being brought for any improper purpose.
  - (h) A statement describing how the registration at issue has harmed the trademark owner.
- 7.3 Complaints will be limited 5,000 words and 20 pages, excluding attachments, unless the Provider determines that additional material is necessary.
- 7.4 At the same time the Complaint is filed, the Complainant will pay a non-refundable filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within 10 days of the receipt of the Complaint by the Provider, the Complaint will be dismissed without prejudice.

## **8. Administrative Review of the Complaint**

- 8.1 All Complaints will be reviewed by the Provider within five (5) business days of submission to the Provider to determine whether the Complaint contains all necessary information and complies with the procedural rules.
- 8.2 If the Provider finds that the Complaint complies with procedural rules, the Complaint will be deemed filed, and the proceedings will continue to the Threshold Review. If the Provider finds that the Complaint does not comply with procedural rules, it will electronically notify the Complainant of such non-compliance and provide the Complainant five (5) business days to submit an amended Complaint. If the Provider does not receive an amended Complaint within the five (5) business days provided, it will dismiss the Complaint and close the proceedings without prejudice to the Complainant's submission of a new Complaint that complies with procedural rules. Filing fees will not be refunded.
- 8.3 If deemed compliant, the Provider will electronically serve the Complaint on the registry operator and serve the Notice of Complaint consistent with the contact information listed in the Registry Agreement.

## **9. Threshold Review**

- 9.1 Provider shall establish a Threshold Review Panel, consisting of one panelist selected by the Provider, for each proceeding within five (5) business days after completion of Administrative Review and the Complaint has been deemed compliant with procedural rules.
- 9.2 The Threshold Review Panel shall be tasked with determining whether the Complainant satisfies the following criteria:
  - 9.2.1 The Complainant is a holder of a word mark that: (i) is nationally or regionally registered and that is in current use; or (ii) has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty at the time the PDDRP complaint is filed;
    - 9.2.1.1 Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse
    - 9.2.1.2 Proof of use may also be submitted directly with the Complaint.
  - 9.2.2 The Complainant has asserted that it has been materially harmed as a result of trademark infringement;
  - 9.2.3 The Complainant has asserted facts with sufficient specificity that, if everything the Complainant asserted is true, states a claim under the Top Level Standards herein  
OR

The Complainant has asserted facts with sufficient specificity that, if everything the Complainant asserted is true, states a claim under the Second Level Standards herein;

- 9.2.4 The Complainant has asserted that: (i) at least 30 days prior to filing the Complaint the Complainant notified the registry operator in writing of its specific concerns and specific conduct it believes is resulting in infringement of Complainant's trademarks, and its willingness to meet to resolve the issue; (ii) whether the registry operator responded to the Complainant's notice of specific concerns; and (iii) if the registry operator did respond, that the Complainant attempted to engage in good faith discussions to resolve the issue prior to initiating the PDDRP.
- 9.3 Within ten (10) business days of date Provider served Notice of Complaint, the registry operator shall have the opportunity, but is not required, to submit papers to support its position as to the Complainant's standing at the Threshold Review stage. If the registry operator chooses to file such papers, it must pay a filing fee.
- 9.4 If the registry operator submits papers, the Complainant shall have ten (10) business days to submit an opposition.
- 9.5 The Threshold Review Panel shall have ten (10) business days from due date of Complainant's opposition or the due date of the registry operator's papers if none were filed, to issue Threshold Determination.
- 9.6 Provider shall electronically serve the Threshold Determination on all parties.
- 9.7 If the Complainant has not satisfied the Threshold Review criteria, the Provider will dismiss the proceedings on the grounds that the Complainant lacks standing and declare that the registry operator is the prevailing party.
- 9.8 If the Threshold Review Panel determines that the Complainant has standing and satisfied the criteria then the Provider will commence the proceedings on the merits.

## **10. Response to the Complaint**

- 10.1 The registry operator must file a Response to each Complaint within forty-five (45) days after the date of the Threshold Review Panel Declaration.
- 10.2 The Response will comply with the rules for filing of a Complaint and will contain the name and contact information for the registry operator, as well as a point-by-point response to the statements made in the Complaint.
- 10.3 The Response must be filed with the Provider and the Provider must serve it upon the Complainant in electronic form with a hard-copy notice that it has been served.

- 10.4 Service of the Response will be deemed effective, and the time will start to run for a Reply, upon confirmation that the electronic Response and hard-copy notice of the Response was sent by the Provider to the addresses provided by the Complainant.
- 10.5 If the registry operator believes the Complaint is without merit, it will affirmatively plead in its Response the specific grounds for the claim.

## **11. Reply**

- 11.1 The Complainant is permitted ten (10) days from Service of the Response to submit a Reply addressing the statements made in the Response showing why the Complaint is not “without merit.” A Reply may not introduce new facts or evidence into the record, but shall only be used to address statements made in the Response. Any new facts or evidence introduced in a Response shall be disregarded by the Expert Panel.
- 11.2 Once the Complaint, Response and Reply (as necessary) are filed and served, a Panel will be appointed and provided with all submissions.

## **12. Default**

- 12.1 If the registry operator fails to respond to the Complaint, it will be deemed to be in default.
- 12.2 Limited rights to set aside the finding of default will be established by the Provider, but in no event will they be permitted absent a showing of good cause to set aside the finding of default.
- 12.3 The Provider shall provide notice of Default via email to the Complainant and registry operator.
- 12.4 All Default cases shall proceed to Expert Determination on the merits.

## **13. Expert Panel**

- 13.1 The Provider shall establish an Expert Panel within 21 days after receiving the Reply, or if no Reply is filed, within 21 days after the Reply was due to be filed.
- 13.2 The Provider shall appoint a one-person Expert Panel, unless any party requests a three- member Expert Panel. No Threshold Panel member shall serve as an Expert Panel member in the same Trademark PDDRP proceeding.
- 13.3 In the case where either party requests a three-member Expert Panel, each party (or each side of the dispute if a matter has been consolidated) shall select an Expert and the two selected Experts shall select the third Expert Panel member. Such selection shall be made pursuant to the Providers rules or procedures. Trademark PDDRP panelists within a Provider shall be rotated to the extent feasible.

- 13.4 Expert Panel member must be independent of the parties to the post-delegation challenge. Each Provider will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing a panelist for lack of independence.

**14. Costs**

- 14.1 The Provider will estimate the costs for the proceedings that it administers under this procedure in accordance with the applicable Provider rules. Such costs will be estimated to cover the administrative fees of the Provider, the Threshold Review Panel and the Expert Panel, and are intended to be reasonable.
- 14.2 The Complainant shall be required to pay the filing fee as set forth above in the “Complaint” section, and shall be required to submit the full amount of the Provider estimated administrative fees, the Threshold Review Panel fees and the Expert Panel fees at the outset of the proceedings. Fifty percent of that full amount shall be in cash (or cash equivalent) to cover the Complainant’s share of the proceedings and the other 50% shall be in either cash (or cash equivalent), or in bond, to cover the registry operator’s share if the registry operator prevails.
- 14.3 If the Panel declares the Complainant to be the prevailing party, the registry operator is required to reimburse Complainant for all Panel and Provider fees incurred. Failure to do shall be deemed a violation of the Trademark PDDRP and a breach of the Registry Agreement, subject to remedies available under the Agreement up to and including termination.

**15. Discovery**

- 15.1 Whether and to what extent discovery is allowed is at the discretion of the Panel, whether made on the Panel’s own accord, or upon request from the Parties.
- 15.2 If permitted, discovery will be limited to that for which each Party has a substantial need.
- 15.3 In extraordinary circumstances, the Provider may appoint experts to be paid for by the Parties, request live or written witness testimony, or request limited exchange of documents.
- 15.4 At the close of discovery, if permitted by the Expert Panel, the Parties will make a final evidentiary submission, the timing and sequence to be determined by the Provider in consultation with the Expert Panel.

**16. Hearings**

- 16.1 Disputes under this Procedure will be resolved without a hearing unless either party requests a hearing or the Expert Panel determines on its own initiative that one is necessary.

- 16.2 If a hearing is held, videoconferences or teleconferences should be used if at all possible. If not possible, then the Expert Panel will select a place for hearing if the Parties cannot agree.
- 16.3 Hearings should last no more than one day, except in the most extraordinary circumstances.
- 16.4 All dispute resolution proceedings will be conducted in English.

**17. Burden of Proof**

The Complainant bears the burden of proving the allegations in the Complaint; the burden must be by clear and convincing evidence.

**18. Remedies**

- 18.1 Since registrants are not a party to the action, a recommended remedy cannot take the form of deleting, transferring or suspending registrations (except to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator).
- 18.2 Recommended remedies will not include monetary damages or sanctions to be paid to any party other than fees awarded pursuant to section 14.
- 18.3 The Expert Panel may recommend a variety of graduated enforcement tools against the registry operator if it the Expert Panel determines that the registry operator is liable under this Trademark PDDRP, including:
  - 18.3.1 Remedial measures for the registry to employ to ensure against allowing future infringing registrations, which may be in addition to what is required under the registry agreement, except that the remedial measures shall not:
    - (a) Require the Registry Operator to monitor registrations not related to the names at issue in the PDDRP proceeding; or
    - (b) Direct actions by the registry operator that are contrary to those required under the Registry Agreement;
  - 18.3.2 Suspension of accepting new domain name registrations in the gTLD until such time as the violation(s) identified in the Determination is(are) cured or a set period of time;

OR,

- 18.3.3 In extraordinary circumstances where the registry operator acted with malice, providing for the termination of a Registry Agreement.

- 18.4 In making its recommendation of the appropriate remedy, the Expert Panel will consider the ongoing harm to the Complainant, as well as the harm the remedies will create for other, unrelated, good faith domain name registrants operating within the gTLD.
- 18.5 The Expert Panel may also determine whether the Complaint was filed “without merit,” and, if so, award the appropriate sanctions on a graduated scale, including:
  - 18.5.1 Temporary bans from filing Complaints;
  - 18.5.2 Imposition of costs of registry operator, including reasonable attorney fees; and
  - 18.5.3 Permanent bans from filing Complaints after being banned temporarily.
- 18.6 Imposition of remedies shall be at the discretion of ICANN, but absent extraordinary circumstances, those remedies will be in line with the remedies recommended by the Expert Panel.

## **19. The Expert Panel Determination**

- 19.1 The Provider and the Expert Panel will make reasonable efforts to ensure that the Expert Determination is issued within 45 days of the appointment of the Expert Panel and absent good cause, in no event later than 60 days after the appointment of the Expert Panel.
- 19.2 The Expert Panel will render a written Determination. The Expert Determination will state whether or not the Complaint is factually founded and provide the reasons for that Determination. The Expert Determination should be publicly available and searchable on the Provider’s web site.
- 19.3 The Expert Determination may further include a recommendation of specific remedies. Costs and fees to the Provider, to the extent not already paid, will be paid within thirty (30) days of the Expert Panel’s Determination.
- 19.4 The Expert Determination shall state which party is the prevailing party.
- 19.5 While the Expert Determination that a registry operator is liable under the standards of the Trademark PDDRP shall be taken into consideration, ICANN will have the authority to impose the remedies, if any, that ICANN deems appropriate given the circumstances of each matter.

## **20. Appeal of Expert Determination**

- 20.1 Either party shall have a right to seek a de novo appeal of the Expert Determination of liability or recommended remedy based on the existing record within the Trademark PDDRP proceeding for a reasonable fee to cover the costs of the appeal.
- 20.2 An appeal must be filed with the Provider and served on all parties within 20 days after an Expert Determination is issued and a response to the appeal must be filed within 20

days after the appeal. Manner and calculation of service deadlines shall in consistent with those set forth in Section 4 above, "Communication and Time Limits."

- 20.3 A three-member Appeal Panel is to be selected by the Provider, but no member of the Appeal Panel shall also have been an Expert Panel member.
- 20.4 The fees for an appeal in the first instance shall be borne by the appellant.
- 20.5 A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint.
- 20.6 The Appeal Panel may request at its sole discretion, further statements or evidence from any party regardless of whether the evidence pre-dates the filing of the Complaint if the Appeal Panel determines such evidence is relevant.
- 20.7 The prevailing party shall be entitled to an award of costs of appeal.
- 20.8 The Providers rules and procedures for appeals, other than those stated above, shall apply.

## **21. Challenge of a Remedy**

- 21.1 ICANN shall not implement a remedy for violation of the Trademark PDDRP for at least 20 days after the issuance of an Expert Determination, providing time for an appeal to be filed.
- 21.2 If an appeal is filed, ICANN shall stay its implementation of a remedy pending resolution of the appeal.
- 21.3 If ICANN decides to implement a remedy for violation of the Trademark PDDRP, ICANN will wait ten (10) business days (as observed in the location of its principal office) after notifying the registry operator of its decision. ICANN will then implement the decision unless it has received from the registry operator during that ten (10) business-day period official documentation that the registry operator has either: (a) commenced a lawsuit against the Complainant in a court of competent jurisdiction challenging the Expert Determination of liability against the registry operator, or (b) challenged the intended remedy by initiating dispute resolution under the provisions of its Registry Agreement. If ICANN receives such documentation within the ten (10) business day period, it will not seek to implement the remedy in furtherance of the Trademark PDDRP until it receives: (i) evidence of a resolution between the Complainant and the registry operator; (ii) evidence that registry operator's lawsuit against Complainant has been dismissed or withdrawn; or (iii) a copy of an order from the dispute resolution provider selected pursuant to the Registry Agreement dismissing the dispute against ICANN whether by reason of agreement of the parties or upon determination of the merits.

- 21.4 The registry operator may challenge ICANN's imposition of a remedy imposed in furtherance of an Expert Determination that the registry operator is liable under the PDDRP, to the extent a challenge is warranted, by initiating dispute resolution under the provisions of its Registry Agreement. Any arbitration shall be determined in accordance with the parties' respective rights and duties under the Registry Agreement. Neither the Expert Determination nor the decision of ICANN to implement a remedy is intended to prejudice the registry operator in any way in the determination of the arbitration dispute. Any remedy involving a termination of the Registry Agreement must be according to the terms and conditions of the termination provision of the Registry Agreement.
- 21.5 Nothing herein shall be deemed to prohibit ICANN from imposing remedies at any time and of any nature it is otherwise entitled to impose for a registry operator's non-compliance with its Registry Agreement.

**22. Availability of Court or Other Administrative Proceedings**

- 22.1 The Trademark PDDRP is not intended as an exclusive procedure and does not preclude individuals from seeking remedies in courts of law, including, as applicable, review of an Expert Determination as to liability.
- 22.2 In those cases where a Party submits documented proof to the Provider that a Court action involving the same Parties, facts and circumstances as the Trademark PDDRP was instituted prior to the filing date of the Complaint in the Trademark PDDRP, the Provider shall suspend or terminate the Trademark PDDRP.

**REGISTRY RESTRICTIONS DISPUTE RESOLUTION PROCEDURE (RRDRP)<sup>1</sup>**  
**11 JANUARY 2012**

**1. Parties to the Dispute**

The parties to the dispute will be the harmed established institution and the gTLD registry operator. ICANN shall not be a party.

**2. Applicable Rules**

2.1 This procedure is intended to cover these dispute resolution proceedings generally. To the extent more than one RRDRP provider (“Provider”) is selected to implement the RRDRP, each Provider may have additional rules and procedures that must be followed when filing a Complaint. The following are the general procedure to be followed by all Providers.

2.2 In any new community-based gTLD registry agreement, the registry operator shall be required to agree to participate in the RRDRP and be bound by the resulting Determinations.

**3. Language**

3.1 The language of all submissions and proceedings under the procedure will be English.

3.2 Parties may submit supporting evidence in their original language, provided and subject to the authority of the RRDRP Expert Panel to determine otherwise, that such evidence is accompanied by an English translation of all relevant text.

**4. Communications and Time Limits**

4.1 All communications with the Provider must be filed electronically.

4.2 For the purpose of determining the date of commencement of a time limit, a notice or other communication will be deemed to have been received on the day that it is transmitted to the appropriate contact person designated by the parties.

4.3 For the purpose of determining compliance with a time limit, a notice or other communication will be deemed to have been sent, made or transmitted on the day that it is dispatched.

---

<sup>1</sup> Initial complaints that a Registry has failed to comply with registration restrictions shall be processed through a Registry Restriction Problem Report System (RRPRS) using an online form similar to the Whois Data Problem Report System (WDPRS) at InterNIC.net. A nominal processing fee could serve to decrease frivolous complaints. The registry operator shall receive a copy of the complaint and will be required to take reasonable steps to investigate (and remedy if warranted) the reported non-compliance. The Complainant will have the option to escalate the complaint in accordance with this RRDRP, if the alleged non-compliance continues. Failure by the Registry to address the complaint to complainant’s satisfaction does not itself give the complainant standing to file an RRDRP complaint.

4.4 For the purpose of calculating a period of time under this procedure, such period will begin to run on the day following the date of receipt of a notice or other communication.

4.5 All references to day limits shall be considered as calendar days unless otherwise specified.

## **5. Standing**

5.1 The mandatory administrative proceeding will commence when a third-party complainant (“Complainant”) has filed a Complaint with a Provider asserting that the Complainant is a harmed established institution as a result of the community-based gTLD registry operator not complying with the registration restrictions set out in the Registry Agreement.

5.2 Established institutions associated with defined communities are eligible to file a community objection. The “defined community” must be a community related to the gTLD string in the application that is the subject of the dispute. To qualify for standing for a community claim, the Complainant must prove both: it is an established institution, and has an ongoing relationship with a defined community that consists of a restricted population that the gTLD supports.

5.3 Complainants must have filed a claim through the Registry Restriction Problem Report System (RRPRS) to have standing to file an RRDRP.

5.4 The Panel will determine standing and the Expert Determination will include a statement of the Complainant’s standing.

## **6. Standards**

6.1 For a claim to be successful, the claims must prove that:

6.1.1 The community invoked by the objector is a defined community;

6.1.2 There is a strong association between the community invoked and the gTLD label or string;

6.1.3 The TLD operator violated the terms of the community-based restrictions in its agreement;

6.1.4 There is a measureable harm to the Complainant and the community named by the objector.

## **7. Complaint**

7.1 Filing:

The Complaint will be filed electronically. Once the Administrative Review has been completed and the Provider deems the Complaint to be in compliance, the Provider will electronically serve the Complaint and serve a hard copy and fax notice on the registry operator consistent with the contact information listed in the Registry Agreement.

7.2 Content:

- 7.2.1 The name and contact information, including address, phone, and email address, of the Complainant, the registry operator and, to the best of Complainant's knowledge, the name and address of the current owner of the registration.
- 7.2.2 The name and contact information, including address, phone, and email address of any person authorized to act on behalf of Complainant.
- 7.2.3 A statement of the nature of the dispute, which must include:
  - 7.2.3.1 The particular registration restrictions in the Registry Agreement with which the registry operator is failing to comply; and
  - 7.2.3.2 A detailed explanation of how the registry operator's failure to comply with the identified registration restrictions has caused harm to the complainant.
- 7.2.4 A statement that the proceedings are not being brought for any improper purpose.
- 7.2.5 A statement that the Complainant has filed a claim through the RRPRS and that the RRPRS process has concluded.
- 7.2.6 A statement that Complainant has not filed a Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) complaint relating to the same or similar facts or circumstances.

7.3 Complaints will be limited to 5,000 words and 20 pages, excluding attachments, unless the Provider determines that additional material is necessary.

7.4 Any supporting documents should be filed with the Complaint.

7.5 At the same time the Complaint is filed, the Complainant will pay a filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within 10 days of the receipt of the Complaint by the Provider, the Complaint will be dismissed without prejudice to the Complainant to file another complaint.

## **8. Administrative Review of the Complaint**

8.1 All Complaints will be reviewed within five (5) business days of submission by panelists designated by the applicable Provider to determine whether the Complainant has complied with the procedural rules.

- 8.2 If the Provider finds that the Complaint complies with procedural rules, the Complaint will be deemed filed, and the proceedings will continue. If the Provider finds that the Complaint does not comply with procedural rules, it will electronically notify the Complainant of such non-compliance and provide the Complainant five (5) business days to submit an amended Complaint. If the Provider does not receive an amended Complaint within the five (5) business days provided, it will dismiss the Complaint and close the proceedings without prejudice to the Complainant's submission of a new Complaint that complies with procedural rules. Filing fees will not be refunded if the Complaint is deemed not in compliance.
- 8.3 If deemed compliant, the Provider will electronically serve the Complaint on the registry operator and serve a paper notice on the registry operator that is the subject of the Complaint consistent with the contact information listed in the Registry Agreement.

## **9. Response to the Complaint**

- 9.1 The registry operator must file a response to each Complaint within thirty (30) days of service the Complaint.
- 9.2 The Response will comply with the rules for filing of a Complaint and will contain the names and contact information for the registry operator, as well as a point by point response to the statements made in the Complaint.
- 9.3 The Response must be electronically filed with the Provider and the Provider must serve it upon the Complainant in electronic form with a hard-copy notice that it has been served.
- 9.4 Service of the Response will be deemed effective, and the time will start to run for a Reply, upon electronic transmission of the Response.
- 9.5 If the registry operator believes the Complaint is without merit, it will affirmatively plead in its Response the specific grounds for the claim.
- 9.6 At the same time the Response is filed, the registry operator will pay a filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within ten (10) days of the receipt of the Response by the Provider, the Response will be deemed improper and not considered in the proceedings, but the matter will proceed to Determination.

## **10 Reply**

- 10.1 The Complainant is permitted ten (10) days from Service of the Response to submit a Reply addressing the statements made in the Response showing why the Complaint is not "without merit." A Reply may not introduce new facts or evidence into the record, but shall only be used to address statements made in the Response. Any new facts or evidence introduced in a Response shall be disregarded by the Expert Panel.
- 10.2 Once the Complaint, Response and Reply (as necessary) are filed and served, a Panel will be appointed and provided with all submissions.

## **11. Default**

- 11.1 If the registry operator fails to respond to the Complaint, it will be deemed to be in default.
- 11.2 Limited rights to set aside the finding of default will be established by the Provider, but in no event will it be permitted absent a showing of good cause to set aside the finding of Default.
- 11.3 The Provider shall provide Notice of Default via email to the Complainant and registry operator.
- 11.4 All Default cases shall proceed to Expert Determination on the merits.

## **12. Expert Panel**

- 12.1 The Provider shall select and appoint a single-member Expert Panel within (21) days after receiving the Reply, or if no Reply is filed, within 21 days after the Reply was due to be filed.
- 12.2 The Provider will appoint a one-person Expert Panel unless any party requests a three-member Expert Panel.
- 12.3 In the case where either party requests a three-member Expert Panel, each party (or each side of the dispute if a matter has been consolidated) shall select an Expert and the two selected Experts shall select the third Expert Panel member. Such selection shall be made pursuant to the Provider's rules or procedures. RRDRP panelists within a Provider shall be rotated to the extent feasible.
- 12.4 Expert Panel members must be independent of the parties to the post-delegation challenge. Each Provider will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing an Expert for lack of independence.

## **13. Costs**

- 13.1 The Provider will estimate the costs for the proceedings that it administers under this procedure in accordance with the applicable Provider Rules. Such costs will cover the administrative fees, including the Filing and Response Fee, of the Provider, and the Expert Panel fees, and are intended to be reasonable.
- 13.2 The Complainant shall be required to pay the Filing fee as set forth above in the "Complaint" section, and shall be required to submit the full amount of the other Provider-estimated administrative fees, including the Response Fee, and the Expert Panel fees at the outset of the proceedings. Fifty percent of that full amount shall be in cash (or cash equivalent) to cover the Complainant's share of the proceedings and the other 50% shall be in either cash (or cash equivalent), or in bond, to cover the registry operator's share if the registry operator prevails.

- 13.3 If the Panel declares the Complainant to be the prevailing party, the registry operator is required to reimburse Complainant for all Panel and Provider fees incurred, including the Filing Fee. Failure to do so shall be deemed a violation of the RRDRP and a breach of the Registry Agreement, subject to remedies available under the Agreement up to and including termination.
- 13.4 If the Panel declares the registry operator to be the prevailing party, the Provider shall reimburse the registry operator for its Response Fee.

#### **14. Discovery/Evidence**

- 14.1 In order to achieve the goal of resolving disputes rapidly and at a reasonable cost, discovery will generally not be permitted. In exceptional cases, the Expert Panel may require a party to provide additional evidence.
- 14.2 If permitted, discovery will be limited to that for which each Party has a substantial need.
- 14.3 Without a specific request from the Parties, but only in extraordinary circumstances, the Expert Panel may request that the Provider appoint experts to be paid for by the Parties, request live or written witness testimony, or request limited exchange of documents.

#### **15. Hearings**

- 15.1 Disputes under this RRDRP will usually be resolved without a hearing.
- 15.2 The Expert Panel may decide on its own initiative, or at the request of a party, to hold a hearing. However, the presumption is that the Expert Panel will render Determinations based on written submissions and without a hearing.
- 15.3 If a request for a hearing is granted, videoconferences or teleconferences should be used if at all possible. If not possible, then the Expert Panel will select a place for hearing if the parties cannot agree.
- 15.4 Hearings should last no more than one day, except in the most exceptional circumstances.
- 15.5 If the Expert Panel grants one party's request for a hearing, notwithstanding the other party's opposition, the Expert Panel is encouraged to apportion the hearing costs to the requesting party as the Expert Panel deems appropriate.
- 15.6 All dispute resolution proceedings will be conducted in English.

#### **16. Burden of Proof**

The Complainant bears the burden of proving its claim; the burden should be by a preponderance of the evidence.

## **17. Recommended Remedies**

- 17.1 Since registrants of domain names registered in violation of the agreement restriction are not a party to the action, a recommended remedy cannot take the form of deleting, transferring or suspending registrations that were made in violation of the agreement restrictions (except to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator).
- 17.2 Recommended remedies will not include monetary damages or sanctions to be paid to any party other than fees awarded pursuant to section 13.
- 17.3 The Expert Panel may recommend a variety of graduated enforcement tools against the registry operator if the Expert Panel determines that the registry operator allowed registrations outside the scope of its promised limitations, including:
- 17.3.1 Remedial measures, which may be in addition to requirements under the registry agreement, for the registry to employ to ensure against allowing future registrations that do not comply with community-based limitations; except that the remedial measures shall not:
- (a) Require the registry operator to monitor registrations not related to the names at issue in the RRDRP proceeding, or
  - (b) direct actions by the registry operator that are contrary to those required under the registry agreement
- 17.3.2 Suspension of accepting new domain name registrations in the gTLD until such time as the violation(s) identified in the Determination is(are) cured or a set period of time;
- OR,
- 17.3.3 In extraordinary circumstances where the registry operator acted with malice providing for the termination of a registry agreement.
- 17.3 In making its recommendation of the appropriate remedy, the Expert Panel will consider the ongoing harm to the Complainant, as well as the harm the remedies will create for other, unrelated, good faith domain name registrants operating within the gTLD.

## **18. The Expert Determination**

- 18.1 The Provider and the Expert Panel will make reasonable efforts to ensure that the Expert Determination is rendered within 45 days of the appointment of the Expert Panel and absent good cause, in no event later than 60 days after the appointment of the Expert Panel.
- 18.2 The Expert Panel will render a written Determination. The Expert Determination will state whether or not the Complaint is factually founded and provide the reasons for its

Determination. The Expert Determination should be publicly available and searchable on the Provider's web site.

- 18.3 The Expert Determination may further include a recommendation of specific remedies. Costs and fees to the Provider, to the extent not already paid, will be paid within thirty (30) days of the Expert Determination.
- 18.4 The Expert Determination shall state which party is the prevailing party.
- 18.5 While the Expert Determination that a community-based restricted gTLD registry operator was not meeting its obligations to police the registration and use of domains within the applicable restrictions shall be considered, ICANN shall have the authority to impose the remedies ICANN deems appropriate, given the circumstances of each matter.

## **19. Appeal of Expert Determination**

- 19.1 Either party shall have a right to seek a de novo appeal of the Expert Determination based on the existing record within the RDRP proceeding for a reasonable fee to cover the costs of the appeal.
- 19.2 An appeal must be filed with the Provider and served on all parties within 20 days after an Expert Determination is issued and a response to the appeal must be filed within 20 days after the appeal. Manner and calculation of service deadlines shall in consistent with those set forth in Section 4 above, "Communication and Time Limits."
- 19.3 A three-member Appeal Panel is to be selected by the Provider, but no member of the Appeal Panel shall also have been an Expert Panel member.
- 19.4 The fees for an appeal in the first instance shall be borne by the appellant.
- 19.5 A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint.
- 19.6 The Appeal Panel may request at its sole discretion, further statements or evidence from any party regardless of whether the evidence pre-dates the filing of the Complaint if the Appeal Panel determines such evidence is relevant.
- 19.7 The prevailing party shall be entitled to an award of costs of appeal.
- 19.8 The Providers rules and procedures for appeals, other than those stated above, shall apply.

## **20. Breach**

- 20.1 If the Expert determines that the registry operator is in breach, ICANN will then proceed to notify the registry operator that it is in breach. The registry operator will be given the opportunity to cure the breach as called for in the Registry Agreement.

- 20.2 If registry operator fails to cure the breach then both parties are entitled to utilize the options available to them under the registry agreement, and ICANN may consider the recommended remedies set forth in the Expert Determination when taking action.
- 20.3 Nothing herein shall be deemed to prohibit ICANN from imposing remedies at any time and of any nature it is otherwise entitled to impose for a registry operator's non-compliance with its Registry Agreement.

**21. Availability of Court or Other Administrative Proceedings**

- 21.1 The RRDRP is not intended as an exclusive procedure and does not preclude individuals from seeking remedies in courts of law, including, as applicable, review of an Expert Determination as to liability.
- 21.2 The parties are encouraged, but not required to participate in informal negotiations and/or mediation at any time throughout the dispute resolution process but the conduct of any such settlement negotiation is not, standing alone, a reason to suspend any deadline under the proceedings.

# gTLD Applicant Guidebook

(v. 2012-01-11)

Module 6

11 January 2012

---

# Module 6

---

## *Top-Level Domain Application - Terms and Conditions*

By submitting this application through ICANN's online interface for a generic Top Level Domain (gTLD) (this application), applicant (including all parent companies, subsidiaries, affiliates, agents, contractors, employees and any and all others acting on its behalf) agrees to the following terms and conditions (these terms and conditions) without modification. Applicant understands and agrees that these terms and conditions are binding on applicant and are a material part of this application.

1. Applicant warrants that the statements and representations contained in the application (including any documents submitted and oral statements made and confirmed in writing in connection with the application) are true and accurate and complete in all material respects, and that ICANN may rely on those statements and representations fully in evaluating this application. Applicant acknowledges that any material misstatement or misrepresentation (or omission of material information) may cause ICANN and the evaluators to reject the application without a refund of any fees paid by Applicant. Applicant agrees to notify ICANN in writing of any change in circumstances that would render any information provided in the application false or misleading.
2. Applicant warrants that it has the requisite organizational power and authority to make this application on behalf of applicant, and is able to make all agreements, representations, waivers, and understandings stated in these terms and conditions and to enter into the form of registry agreement as posted with these terms and conditions.
3. Applicant acknowledges and agrees that ICANN has the right to determine not to proceed with any and all applications for new gTLDs, and that there is no assurance that any additional gTLDs will be created. The decision to review, consider and approve an application to establish one or more

gTLDs and to delegate new gTLDs after such approval is entirely at ICANN's discretion. ICANN reserves the right to reject any application that ICANN is prohibited from considering under applicable law or policy, in which case any fees submitted in connection with such application will be returned to the applicant.

4. Applicant agrees to pay all fees that are associated with this application. These fees include the evaluation fee (which is to be paid in conjunction with the submission of this application), and any fees associated with the progress of the application to the extended evaluation stages of the review and consideration process with respect to the application, including any and all fees as may be required in conjunction with the dispute resolution process as set forth in the application. Applicant acknowledges that the initial fee due upon submission of the application is only to obtain consideration of an application. ICANN makes no assurances that an application will be approved or will result in the delegation of a gTLD proposed in an application. Applicant acknowledges that if it fails to pay fees within the designated time period at any stage of the application review and consideration process, applicant will forfeit any fees paid up to that point and the application will be cancelled. Except as expressly provided in this Application Guidebook, ICANN is not obligated to reimburse an applicant for or to return any fees paid to ICANN in connection with the application process.
5. Applicant shall indemnify, defend, and hold harmless ICANN (including its affiliates, subsidiaries, directors, officers, employees, consultants, evaluators, and agents, collectively the ICANN Affiliated Parties) from and against any and all third-party claims, damages, liabilities, costs, and expenses, including legal fees and expenses, arising out of or relating to: (a) ICANN's or an ICANN Affiliated Party's consideration of the application, and any approval rejection or withdrawal of the application; and/or (b) ICANN's or an ICANN Affiliated Party's reliance on information provided by applicant in the application.

6. Applicant hereby releases ICANN and the ICANN Affiliated Parties from any and all claims by applicant that arise out of, are based upon, or are in any way related to, any action, or failure to act, by ICANN or any ICANN Affiliated Party in connection with ICANN's or an ICANN Affiliated Party's review of this application, investigation or verification, any characterization or description of applicant or the information in this application, any withdrawal of this application or the decision by ICANN to recommend, or not to recommend, the approval of applicant's gTLD application. APPLICANT AGREES NOT TO CHALLENGE, IN COURT OR IN ANY OTHER JUDICIAL FORA, ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION, AND IRREVOCABLY WAIVES ANY RIGHT TO SUE OR PROCEED IN COURT OR ANY OTHER JUDICIAL FORA ON THE BASIS OF ANY OTHER LEGAL CLAIM AGAINST ICANN AND ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES AND ACCEPTS THAT APPLICANT'S NONENTITLEMENT TO PURSUE ANY RIGHTS, REMEDIES, OR LEGAL CLAIMS AGAINST ICANN OR THE ICANN AFFILIATED PARTIES IN COURT OR ANY OTHER JUDICIAL FORA WITH RESPECT TO THE APPLICATION SHALL MEAN THAT APPLICANT WILL FOREGO ANY RECOVERY OF ANY APPLICATION FEES, MONIES INVESTED IN BUSINESS INFRASTRUCTURE OR OTHER STARTUP COSTS AND ANY AND ALL PROFITS THAT APPLICANT MAY EXPECT TO REALIZE FROM THE OPERATION OF A REGISTRY FOR THE TLD; PROVIDED, THAT APPLICANT MAY UTILIZE ANY ACCOUNTABILITY MECHANISM SET FORTH IN ICANN'S BYLAWS FOR PURPOSES OF CHALLENGING ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES THAT ANY ICANN AFFILIATED PARTY IS AN EXPRESS THIRD PARTY BENEFICIARY OF THIS SECTION 6 AND MAY ENFORCE EACH PROVISION OF THIS SECTION 6 AGAINST APPLICANT.
  
7. Applicant hereby authorizes ICANN to publish on ICANN's website, and to disclose or publicize in any other manner, any materials submitted to, or obtained or generated by, ICANN and the ICANN Affiliated Parties in connection with the application, including evaluations, analyses and any other

materials prepared in connection with the evaluation of the application; provided, however, that information will not be disclosed or published to the extent that this Applicant Guidebook expressly states that such information will be kept confidential, except as required by law or judicial process. Except for information afforded confidential treatment, applicant understands and acknowledges that ICANN does not and will not keep the remaining portion of the application or materials submitted with the application confidential.

8. Applicant certifies that it has obtained permission for the posting of any personally identifying information included in this application or materials submitted with this application. Applicant acknowledges that the information that ICANN posts may remain in the public domain in perpetuity, at ICANN's discretion. Applicant acknowledges that ICANN will handle personal information collected in accordance with its gTLD Program privacy statement <http://newgtlds.icann.org/en/applicants/agb/program-privacy>, which is incorporated herein by this reference. If requested by ICANN, Applicant will be required to obtain and deliver to ICANN and ICANN's background screening vendor any consents or agreements of the entities and/or individuals named in questions 1-11 of the application form necessary to conduct these background screening activities. In addition, Applicant acknowledges that to allow ICANN to conduct thorough background screening investigations:
  - a. Applicant may be required to provide documented consent for release of records to ICANN by organizations or government agencies;
  - b. Applicant may be required to obtain specific government records directly and supply those records to ICANN for review;
  - c. Additional identifying information may be required to resolve questions of identity of individuals within the applicant organization;

- d. Applicant may be requested to supply certain information in the original language as well as in English.
9. Applicant gives ICANN permission to use applicant's name in ICANN's public announcements (including informational web pages) relating to Applicant's application and any action taken by ICANN related thereto.
10. Applicant understands and agrees that it will acquire rights in connection with a gTLD only in the event that it enters into a registry agreement with ICANN, and that applicant's rights in connection with such gTLD will be limited to those expressly stated in the registry agreement. In the event ICANN agrees to recommend the approval of the application for applicant's proposed gTLD, applicant agrees to enter into the registry agreement with ICANN in the form published in connection with the application materials. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed draft agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process). Applicant may not resell, assign, or transfer any of applicant's rights or obligations in connection with the application.
11. Applicant authorizes ICANN to:
  - a. Contact any person, group, or entity to request, obtain, and discuss any documentation or other information that, in ICANN's sole judgment, may be pertinent to the application;
  - b. Consult with persons of ICANN's choosing regarding the information in the application or otherwise coming into ICANN's possession, provided, however, that ICANN will use reasonable efforts to ensure that such persons maintain the confidentiality of information in the application that this Applicant Guidebook expressly states will be kept confidential.

12. For the convenience of applicants around the world, the application materials published by ICANN in the English language have been translated into certain other languages frequently used around the world. Applicant recognizes that the English language version of the application materials (of which these terms and conditions is a part) is the version that binds the parties, that such translations are non-official interpretations and may not be relied upon as accurate in all respects, and that in the event of any conflict between the translated versions of the application materials and the English language version, the English language version controls.
13. Applicant understands that ICANN has a long-standing relationship with Jones Day, an international law firm, and that ICANN intends to continue to be represented by Jones Day throughout the application process and the resulting delegation of TLDs. ICANN does not know whether any particular applicant is or is not a client of Jones Day. To the extent that Applicant is a Jones Day client, by submitting this application, Applicant agrees to execute a waiver permitting Jones Day to represent ICANN adverse to Applicant in the matter. Applicant further agrees that by submitting its Application, Applicant is agreeing to execute waivers or take similar reasonable actions to permit other law and consulting firms retained by ICANN in connection with the review and evaluation of its application to represent ICANN adverse to Applicant in the matter.
14. ICANN reserves the right to make reasonable updates and changes to this applicant guidebook and to the application process, including the process for withdrawal of applications, at any time by posting notice of such updates and changes to the ICANN website, including as the possible result of new policies that might be adopted or advice to ICANN from ICANN advisory committees during the course of the application process. Applicant acknowledges that ICANN may make such updates and changes and agrees that its application will be subject to any such updates and changes. In the event that Applicant has completed and submitted its application prior to

such updates or changes and Applicant can demonstrate to ICANN that compliance with such updates or changes would present a material hardship to Applicant, then ICANN will work with Applicant in good faith to attempt to make reasonable accommodations in order to mitigate any negative consequences for Applicant to the extent possible consistent with ICANN's mission to ensure the stable and secure operation of the Internet's unique identifier systems.

# TLD Application: Registry Operator's Fitness Disclosure

15 August 2000

---

## Registry Operator's Fitness Disclosure

The following disclosures are hereby made on behalf of the registry operator.

H1. Within the past ten years, has any current director, officer, or manager of the registry operator (a) been convicted of any felony; (b) been convicted of any misdemeanor related to financial activities; (c) been judged by a court to have committed fraud or breach of fiduciary duty, or (d) been the subject of a judicial determination that is similar or related to any of these?

[INSTRUCTION: Answer "yes" or "no."]

H2. Within the past ten years, has the registry operator itself (a) been convicted of any felony; (b) been convicted of any misdemeanor related to financial activities; (c) been judged by a court to have committed fraud or breach of fiduciary duty, or (d) been the subject of a judicial determination that is similar or related to any of these?

[INSTRUCTION: Answer "yes" or "no."]

H3. Within the past ten years, has any current director, officer, or manager of the registry operator been disciplined by any government or by any organization of which he or she was a member for conduct involving dishonesty or misuse of funds of others?

[INSTRUCTION: Answer "yes" or "no."]

H4. Within the past ten years has the registry operator itself been disciplined by any government or by any organization of which it was a member for conduct involving dishonesty or misuse of funds of others?

[INSTRUCTION: Answer "yes" or "no."]

H5. Is any director, officer, or manager of the registry operator currently involved in any judicial or regulatory proceeding that could result in a conviction, judgment, determination, or discipline of the type specified in items [H1](#) or [H3](#)?  
[INSTRUCTION: Answer "yes" or "no."]

H6. Is the registry operator itself currently involved in any judicial or regulatory proceeding that could result in a conviction, judgment, determination, or discipline of the type specified in items [H2](#) or [H4](#)?  
[INSTRUCTION: Answer "yes" or "no."]

H7. Within the past three years, has any current director, officer, or manager of the registry operator been adjudged to be bankrupt or insolvent?  
[INSTRUCTION: Answer "yes" or "no."]

H8. Has the registry operator itself ever been adjudged to be bankrupt or insolvent?  
[INSTRUCTION: Answer "yes" or "no."]

H9. If the response to any of [H1](#) through [H8](#) is affirmative, please provide complete details on separate sheets of paper attached to this disclosure.  
[INSTRUCTION: Please attach one or more sheets with complete details.]

By signing this fitness disclosure, the undersigned certifies that he or she has authority to do so on behalf of the registry operator. On his or her own behalf and on behalf of the registry operator, the undersigned certifies that all information contained in this fitness disclosure, and all documents attached to this disclosure, is true and accurate to the best of his/her/its knowledge and information. The undersigned and the registry operator understand that any material misstatement or misrepresentation will reflect negatively on any application of which this disclosure is a part and may cause cancellation of any delegation of a top-level domain based on such an application.

## New Generic Top-Level Domains

ICANN APPLICANT GUIDEBOOK NAMING SERVICES PORTAL GLOBAL SUPPORT

---

### NEW GTLD REVEAL DAY - APPLIED-FOR STRINGS

#### **New Top-Level Domain Name Applications Revealed**

#### **Historic Milestone for the Internet's Domain Name System**

The Internet Corporation for Assigned Names and Numbers (ICANN) today revealed who has applied for which generic Top-Level Domain (gTLD) names in what is expected to become the largest expansion in the history of the Internet's Domain Name System.

A total of 1,930 new gTLD applications were received during the application period of the new generic Top-Level Domain program.

"We are standing at the cusp of a new era of online innovation," said Rod Beckstrom, President and Chief Executive Officer. "That means new businesses, new marketing tools, new jobs, and new ways to link communities and share information."

Beckstrom made the comments during a London news conference, where it was revealed which organizations have applied for which specific domain names.

Senior Vice President Kurt Pritz noted that the applications will now be subject to a public comment and objection period, and a rigorous, objective and independent evaluation system.

"A 60-day comment period begins today, allowing anyone in the world to submit comments on any application, and the evaluation panels will consider them," said Pritz. "If anyone objects to an application and believes they have the grounds to do so, they can file a formal objection to the application. And they will have seven months to do that."

Of the 1,930 applications received:

- 66 are geographic name applications.
- 116 applications are for Internationalized Domain Names, or IDNs, for strings in scripts such as Arabic, Chinese, and Cyrillic.

Applications were received from 60 countries and territories, broken down by ICANN's geographic regions;

- 911 from North America.
- 675 from Europe.
- 303 are from Asia-Pacific.

- 24 from Latin America and the Caribbean.
- 17 from Africa.

Beckstrom noted that the applications from Latin America/Caribbean and Africa would be the first gTLDs ever from those regions.

He also pointed out that the new gTLD program is the result of seven years of international consultation and debate among a wide variety of Internet stakeholders.

## INTERNATIONAL CENTRE FOR DISPUTE RESOLUTION

## New gTLD String Confusion Panel

---

Re: ICDR Case Nos. 50 504 221 13 and 50 504 246 13 (Consolidated)

Web.com Group, Inc., Objector

and

Vistaprint Limited, Applicant

String: <.webs>

---

**Expert Determination****The Parties**

The Objector is Web.com Group, Inc., 12808 Gran Bay Parkway, West Jacksonville, Florida 32258 U.S.A., represented by Steven C. Sereboff, Esq., SoCal IP Law Group LLP, 310 North Westlake Boulevard, Suite 120, Westlake Village, California 91362 U.S.A.

The Applicant is Vistaprint Limited, 22 Victoria Street, Canon's Court, Hamilton, Bermuda, BAHAMAS, HM12, represented by Flip Petillion, Advocaat, Crowell & Moring, Rue Joseph Stevens 7, Brussels, 1000, BELGIUM.

**The New gTLD Objected To**

The new gTLD string applied for and objected to is <.webs>.

**Prevailing Party**

The Objector has prevailed, and the Objection is sustained.

**The New gTLD String Confusion Process**

In June 2011, the Internet Corporation for Assigned Names and Numbers ("ICANN") approved the gTLD Applicant Guidebook ("Guidebook"), regarding applications for new generic top level domains ("gTLDs"). Module 3 of the Guidebook, Objection Procedures ("Module 3"), addresses, *inter alia*, dispute resolution procedures when

a third party files an objection to an application. Attachment to Module 3, New gTLD Dispute Resolution Procedure (“Attachment to Module 3”), provides for procedures that “apply to all proceedings administered by each of the dispute resolution service providers (DRSP).”

Article 1(b) of Attachment to Module 3 states: “The new gTLD program includes a dispute resolution procedure, pursuant to which disputes between a person or entity who applies for a new gTLD and a person or entity who objects to that gTLD are resolved in accordance with this New gTLD Dispute Resolution Procedure . . . .”

There are four separate grounds on which an objection to an application of a new gTLD may be made.<sup>1</sup> One of these grounds is the string confusion objection, in which “[t]he applied-for gTLD string is confusingly similar to an existing TLD or to another applied-for gTLD string in the same round of applications.”<sup>2</sup> Article 3(a) of Attachment to Module 3 states that “String Confusion Objections shall be administered by the International Centre for Dispute Resolution.” In accordance with this mandate, on January 10, 2012, the International Centre for Dispute Resolution (“ICDR”) issued its Supplementary Procedures for String Confusion Objections (“ICDR Procedures”).

### **Procedural History of This Case**

The ICDR has informed the Panel of the following history.

The Objector filed this String Confusion Objection, with annexes thereto, on March 13, 2013. Pursuant to Paragraph 3.4.2 of Module 3, and Article 12 of Attachment to Module 3, the ICDR consolidated the two cases, on May 6, 2013. On May 23, 2013, the Applicant/Respondent filed its Response and annexes thereto. On June 28, 2013, the ICDR appointed a panelist for an Expert Determination. On July 19, 2013, the Objector submitted its Objector’s Reply to Applicant’s Response, with annexes thereto. On July 31, 2013, the Applicant submitted a statement objecting to the Objector’s supplemental filing, to which the Objector responded, on August 5, 2013. On August 8, 2013, the appointed panelist acknowledged receipt of the Objector’s Reply to Applicant’s Response and the parties’ respective statements dated July 31, and August 5, 2013, and instructed, “Under Article 17 of [Attachment to Module 3], I hereby authorize Applicant to submit a surreply, not to exceed 5 pages, and any additional annexes, no later than 6 September 2013.” The Applicant filed its Surreply and annexes thereto, on August 29, 2013.

---

<sup>1</sup> Module 3 ¶ 3.2.1; Attachment to Module 3 art. 2(e).

<sup>2</sup> Module 3 ¶ 3.2.1. Likewise, Article 2(e)(i) of Attachment to Module 3 provides: “String Confusion Objection’ refers to the objection that the string comprising the potential gTLD is confusingly similar to an existing top-level domain or another string applied for in the same round of applications.”

On October 1, 2013, under Article 2 of the ICDR Procedures, the ICDR removed the initial panelist. On October 14, 2013, the ICDR, under Article 3 of the ICDR Procedures, appointed a replacement panelist. On November 4, 2013, the ICDR removed the second panelist.

On November 20, 2013, the ICDR appointed Professor Ilhyung Lee to serve as the Panel, with notice to counsel for both parties. Before the appointment, the Panel stated that it has no disclosure of any circumstances that would likely give rise to justifiable doubts as to the Panel's impartiality or independence, as required by Article 1 of the ICDR Procedures, and to ensure compliance with the Guidebook.<sup>3</sup>

### **Basis for Objector's Standing to Object Based on String Confusion**

Paragraph 3.2.2 of Module 3 requires that an objector must satisfy the standing requirement in order for its objection to be considered. Regarding standing for a string confusion objection, Paragraph 3.2.2.1 states in relevant part,

Any gTLD applicant in this application round may file a string confusion objection to assert string confusion between an applied-for gTLD and the gTLD for which it has applied, where string confusion between the two applicants has not already been found in the Initial Evaluation. That is, an applicant does not have standing to object to another application with which it is already in a contention set as a result of the Initial Evaluation.

Here, Web.com Group, Inc., the Objector, is an applicant for the gTLD string <.web>. In the Initial Evaluation, ICANN placed the Objector's <.web> gTLD in String Contention Set 222, and the Applicant's <.webs> gTLD in String Contention Set 223.

The Objector has satisfied the standing requirement.

### **Parties' Contentions**

#### **A. The Objector**

The Objector asserts principally that it has standing to file this String Confusion Objection, and that it has met its burden of proving that the Applicant's applied-for gTLD <.webs> is likely to result in string confusion, under Paragraph 3.5.1 of Module 3. In summary, the Objector states:

WEB and WEBS are merely the plural and singular forms of the same word. As a result the two strings are virtually indistinguishable in sight, sound and meaning such that there is a strong likelihood that average, reasonable

---

<sup>3</sup> Module 3 ¶ 3.4.4; Attachment to Module 3 art. 13(c).

Internet users would be confused or deceived if the two strings were delegated.<sup>4</sup>

In addition, the Objector:

>states that confusion is “especially acute for non-native English speakers”, who “commonly confuse plural and singular word forms or omit the plural all together”, and also notes that “the vast majority of Internet users are non-native English speakers”;<sup>5</sup>

>relies on the conclusions of an expert with “a doctoral degree in linguistics (morphophonology)”,<sup>6</sup> who stated that the average reasonable Internet user “may or may not notice the extra ‘s’ on the end. This is particularly true in the context of an Internet gTLD, which will appear to the Internet user at the end of a longer letter string that incorporates at the very least a second-level domain name that is the focus of what the Internet user is searching to find”;<sup>7</sup>

>refers also to its expert’s conclusions:

In my opinion “web” and “webs” fall into a category where there is more likelihood of confusion between them than there might be with other noun/noun + plural morpheme words, given the similarities in orthography, phonology and concept, particularly as these terms are already used interchangeably in some contexts.

For this reason, there is a high likelihood of confusion in the minds of the “average, reasonable Internet user,” who would be viewing these nearly identical letter strings as top-level domain names at the end of longer URL strings that contain material which is more important to and more easily distinguishable for the typical user.<sup>8</sup>

---

<sup>4</sup> Objector’s String Confusion Objection at 3 [hereinafter Objection].

<sup>5</sup> *Id.* at 5 (emphasis in original). In this regard, the Objector relies on its linguistics expert, who reported that less than 14% of the Internet users in the world are from English-speaking countries. Objector’s Reply to Applicant’s Response Annex R1 at 3 [hereinafter Annex R1].

<sup>6</sup> Annex R1, *supra* note 5, at 1.

<sup>7</sup> *Id.* at 3.

<sup>8</sup> *Id.* at 5. The Objector’s linguistics expert also offered a sharp critique of the report submitted by her counterpart on the Applicant’s side, stating, among other things, that the Applicant’s expert is “an expert in French linguistics. . . . The average, reasonable Internet user probably does not speak French.” *Id.* at 4.

>points to “abundant evidence of actual confusion between WEBS and WEB”, including confusion by U.S. law enforcement agencies, the Applicant’s own customers, and the Applicant itself;<sup>9</sup> and

>refers to numerous court decisions and decisions under the Uniform Domain Name Dispute Resolution Policy that have found confusing similarity between singular and plural forms of the same noun.

## **B. The Applicant**

The Applicant contends principally that the Objector has failed to meet its burden of proving that the Applicant’s applied-for <.webs> is likely to result in string confusion. In addition, the Applicant states, *inter alia*, that:

\*the <.webs> and <.web> strings are different, visually, aurally, and in meaning:

Visually, the ‘S’ is a clear differentiator because it is positioned at the end of the short word (which gives it priority in the processing of word recognition) and it has the function to indicate the plural, which is a regular plural.<sup>10</sup>

[A]urally, the strings are different. . . . [B]oth ‘webs’ and ‘web’ consist of completely regular patterns and are spelled out exactly as they sound. In other words, all letters are clearly pronounced in both words, which makes the words clearly recognizable and distinct from one another.<sup>11</sup>

The strings have a different meaning. ‘Web’ refers to the world wide web or to a network or silken structure created by a spider . . . , whereas ‘webs’ has no particular meaning and could be anything. On Wikipedia, ‘webs’ is used for the Applicant’s web hosting services, a radio station and a 2003 sci-fi movie . . . . ‘Web’ on the other hand has a clear dictionary meaning . . . .<sup>12</sup>

---

<sup>9</sup> Objection at 7-8.

<sup>10</sup> Applicant’s Response at 9.

<sup>11</sup> *Id.* at 10.

<sup>12</sup> *Id.*

\*“[t]he difference between the .WEBS and .WEB strings is grounded in the character ‘S’ present in the first and not part of the second. In linguistic terms, the character ‘S’ is manifestly distinct”;<sup>13</sup>

\*the Objector failed to produce any evidence in support of the argument “that the vast majority of Internet users are non-native English speakers and that non-English speakers commonly confuse plural and singular word forms or omit the plural altogether”, and also asks, “[H]ow can the Objector (without any evidence) know what a non-native English speaker sees and not, or what he distinguishes and she does not?”;<sup>14</sup>

\*there is no evidence of actual confusion;

\*“ICANN’s String Similarity Assessment Tool provides a low similarity rate”, and when comparing <.webs> and <.web>, the “similarity rate is 72%[,] . . . which is much lower than the similarity rate of various TLDs that currently co-exist”;<sup>15</sup>

\*“neither the String Similarity Panel nor ICANN (who endorses the determinations by the String Similarity Panel) were of the opinion that the .WEBS and .WEB strings are so similar that they would create a probability of user confusion if allowed to coexist in the DNS”;<sup>16</sup>

\*in addition to the Objector, there are six other applicants for the <.web> gTLD, and none of these applicants has filed a string confusion objection against the Applicant;<sup>17</sup>

\*given that there are multiple applicants for the Objector’s applied-for gTLD <.web>, while there are no other applicants for <.webs> other than the Applicant, “The Objector has realized that it faces a challenge in obtaining the delegation of the .WEB extension,” and “[t]he Objector’s sole motive in filing the objection is to prevent a potential competitor, who does not have the

---

<sup>13</sup> *Id.* at 8.

<sup>14</sup> *Id.* at 11.

<sup>15</sup> *Id.* at 6. The Applicant further states, “The 72% similarity is also much lower than the 88% similarity between the applied-for .ACCOUNTANTS and .ACCOUNTANT or the 84% similarity between the applied-for .COUPONS and .COUPON . . . . The applicants for these strings did not file a string confusion objection.” *Id.*

<sup>16</sup> *Id.* at 7.

<sup>17</sup> *Id.* at 3.

intention to create goodwill in the Objector's name, from entering the gTLD market";<sup>18</sup>

\*"the Objector seeks to use the string confusion objection to limit competition. Such use of the objection proceedings directly conflicts with the purpose of ICANN's new gTLD program";<sup>19</sup>

\*the Applicant uses the <webs.com> domain name for the Applicant's business of providing "free website creation tools and hosting services", while the Objector uses its <web.com> domain name for "web site development services," the two parties "have co-existed for many years without any problem",<sup>20</sup> and "[t]he Objector has never instituted a formal challenge to the WEBS.COM domain name";<sup>21</sup>

\*while the Objector and a third party agreed that there was no likelihood of confusion between the Objector's WEB.COM and the third party's WEB.COM, and having "enjoyed long coexistence without any known instances of actual confusion", "it is impossible to understand how the Objector can agree to coexistence between WEB.COM and WEB.COM and yet object to a coexistence between WEB and WEBS";<sup>22</sup> and

\*"[w]hereas the letter 'S' in 'WEBS.COM' makes 'WEBS.COM' clearly differ from 'WEB.COM', the difference between a 'WEBS' TLD and a 'WEB' TLD is even greater. As a TLD will always come at the end of the domain name syntax, the distinctive letter 'S' will always appear at the end, making this last letter more significant."<sup>23</sup>

The Applicant also relies on the findings of an expert, a professor "in linguistics and language teaching methodology",<sup>24</sup> who made the following findings:

Exterior letters serve as visual clues for word recognition. The first and last letters of a word have been shown to be more salient than the rest of the

---

<sup>18</sup> *Id.* at 11.

<sup>19</sup> *Id.* at 4.

<sup>20</sup> *Id.* at 2.

<sup>21</sup> *Id.* at 7.

<sup>22</sup> *Id.*

<sup>23</sup> *Id.* at 7-8.

<sup>24</sup> *Id.* at 8.

letters and to receive priority in processing. Readers can recognize a word even when its interior letters are scrambled.

....

In the case of 'web' and 'webs', completely regular patterns allow for a one-to-one mapping of spelling to sound. In other words, a word that consists of completely regular patterns is spelled out exactly as it sounds. The sound of the word easily translates into the spelling of the word and *vice versa*. Words consisting of completely regular patterns facilitate word recognition.

....

[T]here is an extremely limited number of words that could be generated by changing only one single letter in 'webs' and 'web'. In other words, 'webs' and 'web' have a limited number of orthographic neighbors. Words with a high number of orthographic neighbors are more difficult to recognize and have an inhibitory effect when reading, as evidence by eye-fixation patterns. Words with fewer orthographic neighbors are more easily recognizable.

....

[A] reader will first decompose the word 'webs' into meaningful units. 'Webs' is composed of two meaningful units, namely 'web' and the plural marker '-s'. 'Web' only has one meaningful unit.<sup>25</sup>

---

<sup>25</sup> *Id.* at 8-9. The Applicant also responds to the assertion made by the Objector's expert that the Applicant's expert is an expert in *French* linguistics:

The Objector claims that [the Applicant's expert] is a professor of French linguistics and language pedagogy and that he would therefore not be qualified to express an opinion on the meaning of English words such as webs and webs [sic].

While it is correct that [the Applicant's expert] teaches French linguistics, he has been building relevant and profound expertise in various domains of Applied Linguistics for many years. In this respect, he has performed in-depth analysis of various West-European languages, including English. At the same time, he has also built strong expertise in General Linguistics, which gave him a thorough understanding and comprehension of the mechanisms that form the basis of the functioning of the human language. . . .

In contrast, the consultant that was hired by the Objector and who wrote the "criticism" of [the Applicant's linguistics expert's] opinion, has only published very modestly and almost exclusively in conference proceedings, *i.e.*, with high acceptance rates and not systematically with double-blind peer review . . . . This, in combination with the fact that, ever since her doctoral thesis (carried out many years ago), she has been active in consultancy rather than in an academic

The Applicant refers to the Expert Determinations issued in string confusion objections involving the applied-for gTLD strings, <.cars>, <.tvs>, and <.hotels>, in which each of the three panels separately concluded that there was no likelihood of string confusion.<sup>26</sup>

## Discussion and Findings

The Panel issues this Expert Determination, under Paragraph 3.4.6 of Module 3.

Before turning to the merits, the Panel pauses to commend counsel for both parties for their zealous representation and comprehensive argument.

The Guidebook governs here. Paragraph 3.5.1 of Module 3 instructs that “[a] DRSP panel hearing a string confusion objection will consider whether the applied-for gTLD string is likely to result in string confusion”, and further guides:

[i] String confusion exists where a string so nearly resembles another that it is likely to deceive or cause confusion. [ii] For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.<sup>27</sup>

The Objector bears the burden of proof.<sup>28</sup>

---

environment, . . . probably explains why her opinion does not contain a single reference to scientific literature.

Applicant’s Surreply at 1.

<sup>26</sup> Applicant’s Surreply at 4. The Applicant submitted full copies of the three Expert Determinations. *Id.* Annexes 79 (*Charleston Road Registry Inc. v. Koko Castle, LLC*, ICDR Case No. 50 504 233 13 (Aug. 7, 2013) (<.cars>)), 80 (*Verisign Switzerland SA v. T V Sundram Iyengar & Sons Limited*, ICDR Case No. 50 504 257 13 (Aug. 8, 2013) (<.tvs>)), 81 (*HOTEL Top-Level-Domain S.a.r.l v. Booking.com B.V.*, ICDR Case No. 50 504 237 13 (Aug. 8, 2013) (<.hotels>)). The Panel will discuss herein these and other Expert Determinations of interest.

<sup>27</sup> Module 3 ¶ 3.5.1. *See* Attachment to Module 3 art. 2(e)(i) (“‘String Confusion Objection’ refers to the objection that the string comprising the potential gTLD is confusingly similar to an existing top-level domain or another string applied for in the same round of applications.”).

<sup>28</sup> Module 3 ¶ 3.5; Attachment to Module 3 art. 20(c).

[i] *String confusion exists where a string so nearly resembles another that it is likely to deceive or cause confusion.*

Module 2 of the Guidebook, Evaluation Procedures, explains that the String Similarity Review by the String Similarity Panel during the Initial Evaluation entails a “preliminary comparison” of the applied-for gTLD with other strings, a “visual similarity check”.<sup>29</sup> But during the formal string confusion objection stage, the objection “is not limited to visual similarity. Rather, confusion based on any type of similarity (including visual, aural, or similarity of meaning) may be claimed by an objector.”<sup>30</sup>

The Panel concludes that the <.webs> string so nearly resembles <.web> -- visually, aurally and in meaning -- that it is likely to cause confusion. A contrary conclusion, the Panel is simply unable to reach. The Applicant’s <.webs> is visually identical to the Objector’s <.web>, except for the letter “s” at the end of “.web”. When read aloud, the words in the two strings also sound the same, again with only the phonetic “s” at the end of “web” distinguishing the two. Regarding the meaning of “web”, the Panel is not entirely unsympathetic to the Applicant’s argument that “web” commonly refers to the world wide web, and as such, it is not normally a word where the plural form would be used. Nevertheless, “web” is also used in the context of, for example, a “spider web”, and “webs” is the plural of “web”. Considering all of the indicia of similarity, the Panel determines that the resemblance between <.webs> and <.web> is likely to cause confusion.

The nature of the difference between the two strings is significant. In the Panel’s view, the addition of “s” to the end of “.web” resulting in another string would lead to confusion, whereas the addition of a different letter to the end of another three-letter noun may not. For example, there is a distinction between “web” and “webs”, on the one hand, and “tub” and “tuba”, on the other.

[ii] *For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.*

The Guidebook requires that in order for the string confusion objection to be sustained, the likelihood of confusion between the two gTLDs must be (a) probable,

---

<sup>29</sup> Module 2 ¶ 2.2.1.1.

<sup>30</sup> Module 2 ¶ 2.2.1.1.3. Paragraph 2.2.1.1 elaborates on the nature of the similarity review at the Initial Evaluation in relation to the review during the string confusion objection phase: “The visual similarity check that occurs during Initial Evaluation is intended to augment the objection and dispute resolution process (see Module 3, Dispute Resolution Procedures) that addresses all types of similarity.”

not merely possible (b) in the mind of the average, reasonable Internet user. The Guidebook does not define “average, reasonable Internet user”. It appears to be ICANN’s intention to allow individual panelists to determine the likely perceptions of such Internet user. Nor does the Guidebook elaborate on the distinction between probability and possibility of confusion, other than the text relied on by the Applicant (and all applicants in string confusion objections) that “[m]ere association, in the sense that the string brings another string to mind, is insufficient”.<sup>31</sup>

The Panel concludes that given the similarity of <.webs> and <.web> as discussed above, it is probable, and not merely possible, that confusion will arise in the mind of the average, reasonable Internet user. This is not a case of “mere association”. A more apt example of mere association between two strings would be the hypothetical gTLD <.twoweb>, which would likely “bring to mind” another hypothetical gTLD <.oneweb>. In contrast, the presence of <.webs> in the same net that also includes <.web>, and vice versa, requires Internet users actively to differentiate between the two.

In reaching its decision, the Panel has the benefit of reviewing the ten previously issued Expert Determinations (as of this date) stemming from string confusion objections involving precisely the same situation seen in this Objection, i.e., where the gTLD objected to is the plural form of the objector’s gTLD, indicated by the addition of the letter “s” to the end of the objector’s string.<sup>32</sup> All of these determinations are publicly available on the ICDR Internet site.<sup>33</sup> The determinations resolved objections to the following seven applied-for gTLDs: <.cars> (three separate decisions<sup>34</sup>), <.games>,<sup>35</sup> <.hotels>,<sup>36</sup> <.pets> (two separate

---

<sup>31</sup> Module 3 ¶ 3.5.1.

<sup>32</sup> Not included in this list are the decisions involving <.hoteles> and <.hoteis>, in which the party that applied for <.hotel> filed separate string confusion objections.

<sup>33</sup> International Centre for Dispute Resolution, *ICANN New gTLD Program: ICDR Dispute Resolution Process - String Confusion Objections*, at <[http://images.go.adr.org/Web/AmericanArbitrationAssociation/%7Bdf3f46b6-4c35-4bd1-a428-7c70d7dbe53b%7D\\_ICANN\\_DRP\\_StringConfusion\\_Objections.pdf](http://images.go.adr.org/Web/AmericanArbitrationAssociation/%7Bdf3f46b6-4c35-4bd1-a428-7c70d7dbe53b%7D_ICANN_DRP_StringConfusion_Objections.pdf)>.

<sup>34</sup> *Charleston Road Registry Inc. v. Koko Castle, LLC*, ICDR Case No. 50 504 233 13 (Aug. 7, 2013) (Panelist Paul E. Mason); *Charleston Road Registry Inc. v. DERCars, LLC*, ICDR Case No. 50 504 234 13 (Aug. 27, 2013) (Panelist John A.M. Judge); *Charleston Road Registry Inc. v. Uniregistry, Corp.*, ICDR Case No. 50 504 238 13 (Oct. 10, 2013) (Panelist Hon. Neil Anthony Brown QC).

<sup>35</sup> *Charleston Road Registry Inc. v. Foggy Beach, LLC*, ICDR Case No. 50 504 243 13 (Sep. 19, 2013) (Panelist Earl A. Cherniak, Q.C.).

decisions<sup>37</sup>), <.sports>,<sup>38</sup> <.tours>,<sup>39</sup> and <.tvs>.<sup>40</sup> These decisions are not binding on the Panel, but are of interest, in that they may offer persuasive reasoning and analysis.

#### *Decisions in accord*

The Panel's determination herein finding similarity and probable confusion between the Applicant's <.webs> and the Objector's <.web> is consistent with the result in six of the reported "plural form" Expert Determinations, those involving: <.cars> (but just one of the three cases<sup>41</sup>), <.games>,<sup>42</sup> <.pets> (both cases<sup>43</sup>), <.sports>,<sup>44</sup> and <.tours>.<sup>45</sup> In each of these decisions, the panelist determined that the applicant's plural form string was confusingly similar, visually, aurally, and in meaning, to the objector's string in singular form, and that confusion was probable.

#### *Contrary decisions*

The Panel acknowledges that there are determinations involving the plural form of the objector's string, in which the panelist decided that the objector did not meet its burden of proving likelihood of string confusion, and thus dismissed the objection.

---

<sup>36</sup> *HOTEL Top-Level-Domain S.a.r.l v. Booking.com B.V.*, ICDR Case No. 50 504 237 13 (Aug. 8, 2013) (Panelist Bruce W. Belding).

<sup>37</sup> *Charleston Road Registry Inc. v. John Island, LLC*, ICDR Case No. 50 504 274 13 (Aug. 14, 2013) (Panelist Richard W. Page) [hereinafter *John Island, LLC*]; *Afilias Limited v. John Island, LLC*, ICDR Case No. 50 504 219 13 (Oct. 20, 2013) (Panelist Urs Laeuchli) [hereinafter *Afilias Limited*].

<sup>38</sup> *SportAccord v. Steel Edge LLC*, ICDR Case No. 50 504 210 13 (Aug. 20, 2013) (Panelist M. Scott Donahey).

<sup>39</sup> *Charleston Road Registry Inc. v. Sugar Station, LLC*, ICDR Case No. 50 504 275 13 (Aug. 16, 2013) (Panelist Robert M. Nau).

<sup>40</sup> *Verisign Switzerland SA v. T V Sundram Iyengar & Sons Limited*, ICDR Case No. 50 504 257 13 (Aug. 8, 2013) (Panelist Stephen S. Strick).

<sup>41</sup> *DERCars, LLC*. As to the other two cases, see *infra* note 48.

<sup>42</sup> *Foggy Beach, LLC*.

<sup>43</sup> *John Island, LLC; Afilias Limited*.

<sup>44</sup> *SportAccord*.

<sup>45</sup> *Sugar Station, LLC*.

These four cases involve (1) <.tvs>,<sup>46</sup> (2) <.hotels>,<sup>47</sup> and the other two decisions involving (3) and (4) <.cars>.<sup>48</sup> As indicated above, the Applicant relies on three of these determinations.<sup>49</sup> The Panel offers the following observations in regard to these decisions.

(1) *Verisign Switzerland SA v. T V Sundram Iyengar & Sons Limited*, ICDR Case No. 50 504 257 13 (Aug. 8, 2013) (<.tvs>).

In the determination involving the <.tvs> gTLD, the panelist relied on “the analysis of the thirteen factors . . . derived from [*Application of E.I. DuPont DeNemours & Co.* 50]”.<sup>51</sup> In *DuPont DeNemours*, a U.S. court looked to the multiple factors to assess the likelihood of confusion between the applicant’s trademark “RALLY” for “a combination polishing, glazing and cleaning agent for use on automobiles”, and the previously registered “RALLY” for “an all-purpose detergent.”<sup>52</sup> Initially, the Panel questions whether the factors to be considered when “testing for likelihood of confusion under Sec. 2(d)”<sup>53</sup> of the Lanham Act should be the test for determining

---

<sup>46</sup> *Verisign Switzerland SA*.

<sup>47</sup> *HOTEL Top-Level-Domain S.a.r.l.*

<sup>48</sup> *Koko Castle, LLC; Uniregistry, Corp.* To state it explicitly, there are three string confusion objection cases, all filed by Charleston Road Registry Inc. (which had applied for the <.car> gTLD), challenging the application of <.cars> by three separate parties. Panelists Paul E. Mason and The Honourable Neil Anthony Brown QC separately determined that the respective applicant’s <.cars> was not confusing with the objector’s <.car>, while Panelist John A.M. Judge reached the opposite conclusion, *DERCars, LLC*. Thus, conflicting determinations resulted in the objections to the very same gTLD. As to this circumstance, Panelist Brown QC observed:

[I]t is difficult for the Expert to decide how ICANN might deal with the potential conflicts . . . , but the process is ICANN’s, it has control over the entirety of the process, it seems to have contemplated that some such problem may arise during the process and it is ICANN’s role to manage the remainder of the process. Indeed, the parties are bound by ICANN’s process[;] they have agreed to it by virtue of taking part in it . . . .

*Uniregistry, Corp.* at 7.

<sup>49</sup> See *supra* text accompanying note 26.

<sup>50</sup> 476 F.2d 1357 (C.C.P.A. 1973).

<sup>51</sup> *Verisign Switzerland SA* at 5.

<sup>52</sup> 476 F.2d at 1359.

<sup>53</sup> *Id.* at 1361. The thirteen factors are:

likelihood of confusion between two gTLD strings -- <.webs> and <.web>.<sup>54</sup> Moreover, assuming, but only *arguendo*, that the *DuPont DeNemours* factors are pertinent in assessing string confusion, some of the factors do not weigh in the Applicant's favor. In the <.tvs> determination, the panel noted as a matter of factual background that the applicant's "TVS Brand was created over 100 years ago, [and] is a well known brand, . . . with global revenues of US\$7 Billion in Financial Year 2012-13."<sup>55</sup> This, as well as other descriptions of the string objected to in *Verisign Switzerland SA*, is simply inapt in the present case.

---

- (1) The similarity or dissimilarity of the marks in their entireties as to appearance, sound, connotation and commercial impression.
- (2) The similarity or dissimilarity and nature of the goods or services as described in an application or registration or in connection with which a prior mark is in use.
- (3) The similarity or dissimilarity of established, likely-to-continue trade channels.
- (4) The conditions under which and buyers to whom sales are made, i. e. "impulse" vs. careful, sophisticated purchasing.
- (5) The fame of the prior mark (sales, advertising, length of use).
- (6) The number and nature of similar marks in use on similar goods.
- (7) The nature and extent of any actual confusion.
- (8) The length of time during and conditions under which there has been concurrent use without evidence of actual confusion.
- (9) The variety of goods on which a mark is or is not used (house mark, "family" mark, product mark).
- (10) The market interface between applicant and the owner of a prior mark:
  - (a) a mere "consent" to register or use.
  - (b) agreement provisions designed to preclude confusion, i. e. limitations on continued use of the marks by each party.
  - (c) assignment of mark, application, registration and good will of the related business.
  - (d) laches and estoppel attributable to owner of prior mark and indicative of lack of confusion.
- (11) The extent to which applicant has a right to exclude others from use of its mark on its goods.
- (12) The extent of potential confusion, i. e., whether *de minimis* or substantial.
- (13) Any other established fact probative of the effect of use.

*Id.*

<sup>54</sup> Two panelists have commented on the applicability of trademark law decisions on string confusion objections: "Trademark law standards do not entirely fit here . . ., because the Objector's string <.CAR> is generic and hence ineligible for trademark protection", *Koko Castle, LLC* at 5 (Panelist Mason); "for purposes of this St[r]ing Confusion Objection, the decisions . . . of American trademark law involved different standards and will not be applied", *John Island, LLC* at 10 (Panelist Page).

<sup>55</sup> *Verisign Switzerland SA* at 4.

(2) *HOTEL Top-Level-Domain S.a.r.l v. Booking.com B.V.*, ICDR Case No. 50 504 237 13 (Aug. 8, 2013) (<.hotels>).

In the string confusion objection involving the <.hotels> gTLD, the panelist stated that “it [is] undisputed that the words ‘hotel’ and ‘hotels’ are similar, with only the addition of an ‘s’ differentiating them visually”.<sup>56</sup> He nevertheless concluded that the strings are “sufficiently visually and aurally different for string confusion purposes.”<sup>57</sup> The panelist explained: “I find persuasive [i] the degrees of similarity or dissimilarity between the strings by use of the String Similarity Assessment Tool . . ., [ii] that ICANN did not put the applications for .HOTEL and .HOTELS in the same contention set . . ., and [iii] the analysis and conclusions of the independent expert retained by Applicant.”<sup>58</sup>

First, ICANN’s String Similarity Assessment Tool, while relevant in the Panel’s consideration, is not determinative in resolving a string confusion objection.<sup>59</sup> Second, regarding the relevance of ICANN not placing two applied-for strings in the same contention set, as one panelist in a previous string confusion objection noted, an applicant’s gTLD application is not entitled to “an evidentiary presumption of acceptability because it passed through the initial ICANN visual similarity tool tests.”<sup>60</sup> Rather, “the Objection process is an independent review process.”<sup>61</sup> Third, this Panel has considered, and found not persuasive, the opinions of the Applicant’s linguistics expert urging dissimilarity between <.webs> and <.web>.

<sup>56</sup> *HOTEL Top-Level-Domain S.a.r.l* at 3.

<sup>57</sup> *Id.* at 4.

<sup>58</sup> *Id.*

<sup>59</sup> See *DERCars, LLC* at 29.

<sup>60</sup> *Koko Castle, LLC* at 5 (Panelist Mason).

<sup>61</sup> *Id.* In this regard, Module 2 provides:

An application for a string that is found too similar to another applied-for gTLD string will be placed in a contention set.

An application that passes the String Similarity review is still subject to objection by an existing TLD operator or by another gTLD applicant in the current application round. That process requires that a string confusion objection be filed by an objector having the standing to make such an objection. Such category of objection is not limited to visual similarity. Rather, confusion based on any type of similarity (including visual, aural, or similarity of meaning) may be claimed by an objector. . . .

Module 2 ¶ 2.2.1.1.3.

As previously noted, in a string confusion objection against the <.cars> gTLD, Panelist John A.M. Judge determined that confusion was probable and sustained the objection.<sup>62</sup> But in two other objections brought by the same objector against the very same <.cars> string, both panelists separately determined that there was *no* likelihood of confusion.

(3) *Charleston Road Registry Inc. v. Koko Castle, LLC*, ICDR Case No. 50 504 233 13 (Aug. 7, 2013) (<.cars>).

In the first of the two, Panelist Mason stated that regarding visual similarity, there was “adequate evidence to show that ‘CAR’ and ‘CARS’ do not have a high probability of being confused visually. This is partly because the ICANN visual similarity tool test assigned a similarity score of only 72%, in comparison with other string pairs with more distinct meanings having much higher similarity scores.”<sup>63</sup> But Panelist Judge, faced with the same 72% algorithmic score, determined that the score “supports the finding that the burden of proving likely confusion on a balance of probabilities has been met.”<sup>64</sup> Likewise, in two other string confusion objections that also involved a 72% score (for <.pets> and <.pet>), Panelists Richard W. Page and Urs Laeuchli separately characterized the score as “high”.<sup>65</sup> Panelists Judge, Page and Laeuchli all found likelihood of string confusion, and sustained the objection. The 72% figure is the same algorithmic score seen in the present Objection.

In *Koko Castle, LLC*, the panelist wrote, “There . . . does appear to be visual ‘peaceful coexistence’ at the secondary domain name level between singular and plural names. Applicant has presented evidence that singular and plural websites have existed together commercially without much internet user confusion between them.”<sup>66</sup> In this vein, the Applicant here argues that the Applicant’s <webs.com> domain name has co-existed with the Objector’s <web.com>. Yet the Panel questions whether this consideration, alone or in combination with others, is relevant in this determination.

Ultimately, Panelist Mason concluded that “[the] Objector has not met its heavy burden of proving that there is a probability, not just a possibility, of aural and/or visual similarity between the strings <.CAR> and <.CARS>, as opposed to mere

---

<sup>62</sup> *DERCars, LLC*. See *supra* note 48.

<sup>63</sup> *Koko Castle, LLC* at 5 (emphasis added).

<sup>64</sup> *DERCars, LLC* at 29.

<sup>65</sup> *John Island, LLC* at 10 (Panelist Page); *Afilias Limited* at 4 (Panelist Laeuchli).

<sup>66</sup> *Koko Castle, LLC* at 5-6.

association between them.”<sup>67</sup> Regardless of whether ICANN intended the burden on string confusion objectors to be heavy or otherwise, this Panel reaches a different conclusion regarding probable confusion for the strings <.webs> and <.web>.

(4) *Charleston Road Registry Inc. v. Uniregistry, Corp.*, ICDR Case No. 50 504 238 13 (Oct. 10, 2013) (<.cars>).

In the second determination involving <.cars> in which the string confusion objection was dismissed, the panelist ultimately concluded that “the string <.cars> is not confusingly similar to the string <.car>.”<sup>68</sup> Given that the panelist’s task was “to place itself in the position of the average, reasonable internet user and to assess whether such a person would probably be confused by the proposed string”,<sup>69</sup> he wrote, “Users will recognize that one of the strings is singular and one of them is plural and that that difference means that they should regard the two strings as different, as they are.”<sup>70</sup> Specifically,

the reader and the user will appreciate the fact that the two words that constitute the strings, “cars” and “car”, are separate words, with distinct meanings, with each of them being capable of being given their own function, namely that the former invokes cars in general and as a group, while the latter clearly invokes the concept of a single entity and that there is no reason why they should be understood as regarded as being used, in the internet context, in anything other than those distinct meanings.<sup>71</sup>

The panelist also noted that Internet users of today are

very well aware that, on the internet, small differences in spelling and meaning are significant and that they mean different things . . . . Internet users have become increasingly aware of such differences and are now mature and sophisticated enough to realize it, when they are being presented with such differences; indeed, internet users are so astute to such matters that they now look for them to ensure as best they can that they are not being misle[]d or deceived. There will therefore, in the opinion of the Expert, be no

<sup>67</sup> *Id.* at 6 (emphasis added).

<sup>68</sup> *Uniregistry, Corp.* at 10 (¶¶ 14, 17) (in original).

<sup>69</sup> *Id.* at 9 (¶ 9).

<sup>70</sup> *Id.* at 10 (¶ 15).

<sup>71</sup> *Id.* at 11 (¶ 19(a)).

probability of user confusion if the two strings are delegated into the root zone.<sup>72</sup>

The Panel is unable to concur with the above descriptions, and perceptions, of Internet users generally. As an aside, it is a fair question to ask, if the above quoted text amounts to the rule, whether, as a practical matter, any string confusion objection could prevail under the Guidebook. In all events, the Panel determines that the Applicant's <.webs> string so nearly resembles the Objector's <.web> in a number of respects that it is probable that confusion will arise in the human mind of the average, reasonable Internet user.

The Panel has considered the Applicant's many arguments, including those emphasizing: the absence of previous litigation between the parties, the Objector's alleged motives in filing this Objection, the absence of objections by other applicants for the <.web> gTLD, and the alleged anti-competitive effect. Under the governing Guidebook and the applicable principles, these arguments carry little weight.<sup>73</sup>

Per the Guidebook, "The Objector bears the burden of proving that its Objection should be sustained in accordance with the applicable standards."<sup>74</sup> The Objector has met this burden.

### **Determination**

The Objector has prevailed, and the String Confusion Objection is sustained.

January 24, 2014

Panel/Objection Background Screening

Ground:

Subject: Public Comment re Directi Group (1 of 6)

Comment Submission 26 September 2012 at 23:29:09 UTC

Date:

Comment: In addition to our previous submission, due to space limitations in the comment field, we have divided our Public Comment and will post it in six separate sections.

Public Comment re Directi Group (1 of 6)

We represent Karsten Manufacturing Corporation, the owner of the famous PING trademark and the parent company of the applicant which has filed App. No. 1-1833-90242 to run the <.ping> registry. We are writing concerning the thinly veiled attempt by

Directi, which has formed new entities to apply for thirty-one new gTLDs, to make an end-run around the ICANN's clearly stated applicant requirements. Specifically, we draw ICANN's attention to the above-referenced applications (each an "Application") filed by a newly-formed company (each a "NewCo"). Research into publicly available documents has confirmed that each NewCo (with the exception of the NewCo applicant entity for .web[1]) is controlled by Bhavin Turakhia, an individual who also controls Directi, whose service "PrivacyProtect.org" has been the losing Respondent in more than sixty recent Uniform Domain Name Dispute Resolution Policy ("UDRP") proceedings.

Given the significant fiduciary and legal responsibilities associated with operating a gTLD, ICANN has established a set of requirements in the "gTLD Applicant Guidebook" ("Guidebook") that, absent "extraordinary circumstances," forbid applicants with a history of adverse UDRP decisions from applying for new gTLDs. Each of Bhavin Turakhia's applications thus raise two simple questions:

1. Should a party who has been the named respondent in dozens of adverse UDRP decisions be permitted to thwart the Guidebook's prohibitions by forming new companies to serve as the applicant entity for a new gTLD?
2. Is providing a "privacy service" whereby the service provider does not disclose customer information even when a UDRP is filed against a customer's domain name an "extraordinary" circumstance such that an exception to the Guidebook's applicant restrictions should be granted?

For the reasons outlined in detail herein, it is clear that the answer to both questions presented is unequivocally "no." Any applicant who has engaged in a pattern of disqualifying activities under the Guidebook's policies cannot evade ICANN's well-reasoned process by simply filing new gTLD applications through a newly formed company they control. Simply put, each Application referenced above and each NewCo must be automatically disqualified.

[1] While the NewCo applicant entity for the .web application (DotWeb Inc.) does not list Bhavin Turakhia as the founder of DotWeb Inc., NewCo's Application for .web states that DotWeb Inc. is a "wholly owned subsidiary" of Directi. Because Bhavin Turakhia controls Directi, which in turn holds DotWeb Inc., the fact that Bhavin Turakhia is not listed as the founder of DotWeb Inc. does not impact the analysis. DotWeb Inc., like all of the other NewCos, should be disqualified as a gTLD applicant for the reasons outlined herein.

Panel/Objection Background Screening

Ground:

Subject: Public Comment re Directi Group (2 of 6)

Comment Submission 26 September 2012 at 23:32:07 UTC

Date:

Comment: Public Comment re Directi Group (2 of 6)

I. The Applicant

Each Application must be disqualified because each NewCo was founded or is otherwise controlled by Mr. Bhavin Turakhia, an individual who controls a company that has been the losing respondent in dozens of UDRP proceedings. As detailed in each Application, NewCo “is a wholly owned subsidiary within the Directi Group” (“Directi”). Indeed, each

Application makes clear that NewCo intends to “outsource[] our Abuse and Compliance functions to the Directi Group and our Abuse and Compliance desk will be staffed as a cost center by [Directi].” Mr. Bhavin Turakhia controls both NewCo (as evidenced by each Application) and Directi, as evidenced by the true and correct copy of a Capital IQ report identifying Directi’s officers attached hereto as Exhibit 1.

As reported in the Washington Post article attached hereto as Exhibit 2 and as confirmed by Directi in the blog post attached hereto as Exhibit 3, Directi is also the owner of a service called PrivacyProtect.org. As detailed herein, PrivacyProtect.org has lost dozens of UDRP proceedings in the past several years. At bottom, PrivacyProtect.org and NewCo are all under the common control of Mr. Bhavin Turakhia. Because Bhavin Turakhia’s company has been the named respondent in dozens of adverse UDRP decisions, any company under Mr. Turakhia’s control is an ineligible applicant for a new gTLD. Directi, each NewCo, and PrivacyProtect.org are all collectively referred to herein as “Applicant,” because all of these entities are under the common control of Bhavin Turakhia.

There is little doubt from Directi’s own public statement that all of the mentioned activities are run as a “group.” For example, in an article written by Applicant titled, “Directi Group Applies for Thirty-one Top-Level Domain Strings in the ICANN Process,” Applicant states:

“Directi Group, a global leader in Internet products and Web services, today announced its ambitious effort to secure Top-Level Domains (TLDs) under ICANN’s program to expand the Internet’s addressing system. Under its new brand – Radix – Directi has committed over \$30 million on the application of 31 strings comprising several generic and mass market names.”

See Directi Group Applies for Thirty-one Top-Level Domain Strings in the ICANN Process, RADIX, May 31, 2012, <http://radixregistry.com/radix-applies-for-31-strings-newgtlds.php> (a copy of which is attached hereto as Exhibit 4).

Any argument by Applicant that it should be allowed to form a separate entity to apply for a new gTLD in order to avoid its history of adverse UDRP decisions is unavailing. It is clear that the Guidebook does not permit formation of new entities in order to thwart the consensus of the ICANN community.

Comment: Am I missing something here?

How is a company like Google with a global dominance in the indexing & ranking of websites as well as in online advertising being allowed to operate as a domain name administrator and registry controlling a multitude of generic domain name extensions?

Infinite word combinations of .blog

Infinite word combinations of .game

Infinite word combinations of .car

Infinite word combinations of .ads

Infinite word combinations of .store

Infinite word combinations of .music

Infinite word combinations of .diy

Etc

Etc

Etc.....

Google will have these new websites to administer, register, then

rank in their search engine & put ads on??!!

.fyi

“generic keywords” in a domain name are a very important ranking factor in Google’s own, proprietary, ranking formula.

fyi.fyi

Google is already under investigation from the FTC, the EU, Argentina & South Korea for using it’s dominant position in web search to drive Internet users toward other Google products, services, and websites at the expense of its rivals.

.and (oops! I can’t use this, Google owns it)

.inaddition

There is currently much talk/debate/evidence that Google deems certain domain extensions as “spammy” & automatically ranks them lower. What about the ranking of the multitude of rival domain extensions produced under this program?

The fault isn’t with Google for “applying” for these, it is ICANN’s program that is allowing this to happen and therefore a program that is outrageously flawed & misguided.

I’m all for more consumer choice in domain names, however domain name administration/registration should be at arms length.

I could go on, but I assume this will be only be read & reviewed by the same committee or panel or whatever that voted for this tld expansion to begin with. Or a similar internally elected one using the same modus operandi.

.lastly

5,000 Euros for filing an “official objection” is completely outrageous. The internet belongs to everyone & everyone should be able to have their concerns, opinions, objections voiced especially in something as far-reaching & important as this.

.end (oops! I need 185K to apply to use this)

Ivan Smirnov

Subject: DPML's Impact on Financials

Comment Submission: 25 September 2012 at 21:53:08 UTC

Date:

Comment: Recently there have been some comments about potential issues with the Donuts Domain Protected Marks List or DPML. People have pointed out the problem with strings like ING and ER and the real potential for blocking legitimate registrations from others, including brand owners, whose own trademarks incorporate those terms. It's impossible in 3500 characters to show the breadth and depth of the problems with the DPML but if you look beyond the concerns about brands being able to register their trademarks to the problem of the DPML preventing anyone from registering ANY names, it quickly shows that the DPML is not well thought out and should not be allowed.

If the DPML allowed the protection of "IN" or any domain incorporating "IN", for which there are dozens of nationally recognized trademarks across the globe, what would the impact be? If applied to current .com registrations, over 20 million existing registrations would have been denied. That's 20% of all names registered. For "ER" the TV show example raised by another commentator - over 19 million existing registrations denied. With two separate, two letter trademarks, the DPML would prevent the registration of almost 40% of all registration in the .com zone.

If General Electric, now known as GE registers GE, they single handedly could prevent the registration of 4.9 million domain names in .com, 388,000 in .info and over 106,000 in.biz. AT&T could block 724,000 .com and 48,000 .info registrations while HP would block over 300,000 .com registrations.

If the DPML has the potential to eliminate so many domains names from registration, one has to wonder 1) why would Donuts do this as it unnecessarily damages the registration potentials for their TLD and 2) did they account for this impact in their financial projections?

When it comes to the mission and purpose of this TLD, Donuts says all the right things. It wants to operate the TLD in an above board manner that protects the rights of registrants. But do they also realize that the DPML would prevent completely legitimate registration of domains having nothing to do with registered trademarks in the clearinghouse? The DPML eliminates a significant portion of the market who might want to register names across their 307 TLDs.

As for the financials, since those are confidential, it is ultimately up to the evaluators to see if the impacts pointed out in this post and by others have been accurately captured and reflected in the domain name registration projections that make up their answers to Questions 45-50. Did Donuts do a market assessment that eliminated hundreds of thousands of potential registrations? Did their worst case projections include severely depressed registration levels because of the by catch effect of the DPML?

Donuts has done an impressive job in assembling their applications and bid vehicle. Raising \$100 million is no small feat and they are to be commended for that. But did they factor in the significant impact that the DPML, which is proving very popular among brand owners, would have on registration, volumes and revenue projections? These are the questions evaluators should be asking. If I was an investor who contributed to that war chest, I would be doing the same.

Subject: second level blocking

Comment Submission 8 August 2012 at 08:01:41 UTC

Date:

Comment: While we of course support enhanced fair competition, we call on the evaluators to ensure the maintenance of a clean Internet space by impressing on the new registries the importance of not accepting second level names within their gTLDs that may be confusingly similar to our trade marks, especially from applicants believed to be registering in bad faith. To avoid consumer confusion and the wasted resources of needless dispute resolution procedures, legal actions and defensive registrations (none of which benefit consumers), as well as proving to the entire community that the registries do wish to act in good faith in a clean space, we request that new registries develop

“blocked” lists of brand names that should not be registered absent evidence of good faith. Such lists could take the form of “white lists” at the second level that could only be lifted if requested by and for the brand owner.

Ground:

Subject: Rights Protection Mechanisms

Comment Submission 7 August 2012 at 21:09:23 UTC

Date:

Comment: After a preliminary evaluation of this application, Tiffany & Co. is of the opinion that the inclusion of additional safeguards would improve the operation of this applied-for new gTLD based upon the proposed mission and purpose cited in this application. While there is no one-size-fits-all solution regarding Rights Protection Mechanisms given the diverse range of proposed applications received by ICANN, Tiffany believes that there are some potential best practices that have begun to emerge in connection with applications received. For example, over 400 applications have incorporated some type of perpetual block mechanism or Domain Protected Marks List (DPML).

By submitting this comment, Tiffany wishes to highlight the need for the ICANN community to engage in an ongoing discussion regarding appropriate proactive safeguards in new gTLD applications.

## Work Efforts

The GAC regularly considers a broad range of public policy issues impacting the DNS and other matters regarding the functions of ICANN. This work can result in consensus advice for the ICANN Board or public comment guidance to the ICANN community. This part of the website shares information related to those ongoing topics and activities.

THE MANAGEMENT OF INTERNET NAMES AND ADDRESSES:  
INTELLECTUAL PROPERTY ISSUES

Final Report  
of the  
WIPO Internet Domain Name Process  
*<http://wipo2.wipo.int>*

April 30, 1999

*The World Intellectual Property Organization (WIPO)* is an organization founded through a treaty by States, which has 171 States of the World as members. The member States established the Organization as the vehicle for promoting the protection, dissemination and use of intellectual property throughout the world for economic, cultural and social development.

The Organization provides services both to its Member States and to the individuals and enterprises that are constituent of those States.

The services provided by WIPO to its member States include the provision of a forum for the development and implementation of intellectual property policies internationally through treaties and other policy instruments.

The services provided to the private sector by WIPO include the administration of systems that make it possible to obtain protection for patents, trademarks, industrial designs and geographical indications in multiple countries through a single international procedure.

The operations of WIPO are financed as to 88 per cent by fees generated by the Organization for the services it renders to the private sector, and as to the remaining 12 per cent by contributions made by the Member States.

World Intellectual Property Organization (WIPO)  
34, chemin des Colombettes  
P.O. Box 18  
1211 Geneva 20  
Switzerland

## SUMMARY OF CONTENTS

### Executive Summary

	Paragraph Numbers
1. The Internet, Domain Names and the WIPO Process .....	1 to 44
The Internet.....	1 to 3
The Domain Name System.....	4 to 9
The Transmutation of Domain Names .....	10
Intellectual Property .....	11 to 13
The Process for the Reorganization of the Management of the Domain Name System .....	14 to 21
The Interface Between the Domain Name System and Intellectual Property: The WIPO Process .....	22 to 25
The Mechanics of the WIPO Process .....	26 to 31
Stages .....	26 to 29
Modalities.....	30
Panel of Experts .....	31
Guiding Principles in the Formulation of Recommendations in the WIPO Process .....	32 to 37
The Scope of the WIPO Recommendations: Their Relevance to ccTLDs.....	38 to 43
The Submission of the WIPO Report.....	44
2. Avoiding Disjunction Between Cyberspace and the Rest of the World: Practices Designed to Minimize Conflicts Arising out of Domain Name Registrations .....	45 to 128

Annexes

- I. Panel of Experts Appointed by WIPO
- II. List of Governments, Organizations and Persons Submitting Formal Comments
- III. Statistical Information Concerning Participation in the WIPO Process
- IV. Policy on Dispute Resolution for Abusive Domain Name Registrations
- V. Rules for Administrative Procedure Concerning Abusive Domain Names Registrations
- VI. Policy for Domain Name Exclusions
- VII. Rules for Panel Procedure Concerning Domain Name Exclusions
- VIII. Application of Recommendations to ccTLDs
- IX. Report on ccTLD Questionnaire and Responses
- X. List of States Party to the Paris Convention for the Protection of Industrial Property
- XI. List of States Party to the World Trade Organization (WTO) and Bound by the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS Agreement)

## EXECUTIVE SUMMARY

### Background

Domain names are the human-friendly form of Internet addresses. While designed to serve the function of enabling users to locate computers in an easy manner, domain names have acquired a further significance as business identifiers and, as such, have come into conflict with the system of business identifiers that existed before the arrival of the Internet and that are protected by intellectual property rights.

The tension between domain names, on the one hand, and intellectual property rights, on the other hand, have led to numerous problems that raise challenging policy questions. These policy questions have new dimensions that are a consequence of the intersection of a global, multipurpose medium, the Internet, with systems designed for the physical, territorial world.

On the proposal of the Government of the United States of America, and with the approval of its Member States, WIPO has since July 1998 undertaken an extensive international process of consultations (“the WIPO Process”). The purpose of the WIPO Process was to make recommendations to the corporation established to manage the domain name system, the Internet Corporation for Assigned Names and Numbers (ICANN), on certain questions arising out of the interface between domain names and intellectual property rights. Seventeen consultation meetings were held in 15 different cities throughout the world in the course of the WIPO Process, and written submissions were received from 334 governments, intergovernmental organizations, professional associations, corporation and individuals.

An Interim Report containing draft recommendations was issued in December 1998 as part of the WIPO Process. The present document constitutes the Final Report. It is being submitted to ICANN and to the Member States of WIPO. The main recommendations in the Final Report are summarized below.

### Best Practices for Registration Authorities

- (i) The adoption of a number of improved, standard practices for registrars with authority to register domain names in the generic top-level domains (gTLDs) will reduce the tension that exists between domain names and intellectual property rights.
- (ii) In particular, the collection and availability of accurate and reliable contact details of domain name holders is an essential tool for facilitating the protection of intellectual property rights on a borderless and otherwise anonymous medium. Such contact details provide the principal means by which intellectual property owners can go about the process of enforcing their rights.

(iii) Where it is shown that contact details are inaccurate and unreliable and that contact cannot be established with a domain name holder through them, a third party should have the right to serve a notification to this effect on the responsible registrar. Upon independent verification of the impossibility of establishing contact, the registrar should be required to cancel the domain name registration.

(iv) In the WIPO Interim Report, it was suggested that consideration be given to the introduction of a non-commercial, use-restricted domain, where the contact details of domain name holders would not be publicly available, as a means of allaying the concerns of those who consider that the public availability of contact details may lead to intrusions of privacy. In the Final Report, it is concluded that this idea requires further consideration, elaboration and consultation in a separate process before any recommendation can be made on it.

#### Administrative Procedure Concerning Abusive Domain Name Registrations

(v) ICANN should adopt a dispute-resolution policy under which a uniform administrative dispute-resolution procedure is made available for domain name disputes in all gTLDs. In the Interim Report, it was recommended that domain name applicants should be required to submit to the procedure in respect of any intellectual property dispute arising out of a domain name registration. The Final Report recommends that the scope of the administrative procedure be limited to cases of bad faith, abusive registration of domain names that violate trademark rights (“cybersquatting,” in popular terminology). Domain name holders would thus be required to submit to the administrative procedure only in respect of allegations that they are involved in cybersquatting, which was universally condemned throughout the WIPO Process as an indefensible activity that should be suppressed.

(vi) The administrative procedure would be quick, efficient, cost-effective and conducted to a large extent on-line. Determinations under it would be limited to orders for the cancellation or transfer of domain name registrations and the allocation of the costs of the procedure (not including attorneys’ fees) against the losing party. Determinations would be enforced by registration authorities under the dispute-resolution policy.

#### Exclusions for Famous and Well-known Marks

(vii) Famous and well-known marks have been the special target of predatory and parasitical practices on the part of a small, but active, minority of domain name registrants. A mechanism should be introduced whereby the owner of a famous or well-known mark can obtain an exclusion in some or all gTLDs for the name of the mark where the mark is famous or well-known on a widespread geographical basis and across different classes of goods or services. The effect of the exclusion would be to prohibit any person other than the owner of the famous or well-known mark from registering the mark as a domain name.

(viii) The exclusion mechanism gives expression in cyberspace to the special protection that is established for famous and well-known marks in the Paris Convention for the Protection of Industrial Property and the TRIPS Agreement.

(ix) Since an exclusion would cover only the exact name of the famous or well-known mark, and since experience shows that cybersquatters typically register many close variations of famous or well-known marks, an exclusion, once granted, should give rise to an evidentiary presumption in the administrative procedure. The effect of the evidentiary presumption would be to place the burden of proving justification for the use of a domain name on the domain name holder where the domain name is identical or misleadingly similar to the famous or well-known mark and the domain name is being used in a way that is likely to damage the interests of the owner of the mark.

#### New gTLDs

(x) The evidence shows that the experience of the last five years in gTLDs has led to numerous instances of abusive domain name registrations and, consequently, to consumer confusion and an undermining of public trust in the Internet. It has also led to the necessity for intellectual property owners to invest substantial human and financial resources in defending their interests. This arguably wasteful diversion of economic resources can be averted by the adoption of the improved registration practices, administrative dispute-resolution procedure and exclusion mechanism recommended in the Final Report of the WIPO Process.

(xi) In view of past experience, intellectual property owners are very apprehensive about the introduction of new gTLDs and the possible repetition in the new gTLDs of that experience.

(xii) Many issues other than intellectual property protection are involved in the formulation of a policy on the introduction of new gTLDs. Insofar as intellectual property is concerned, it is believed that the introduction of new gTLDs may be envisaged on the condition that the recommendations of the WIPO Final Report with respect to improved registration practices, dispute resolution and an exclusion mechanism for famous and well-known marks are adopted, and on the further condition that any new gTLDs are introduced in a slow and controlled manner that allows for experience with the new gTLDs to be monitored and evaluated.

#### First Steps and Outstanding Issues

The recommendations of the Final Report of the WIPO Process have been directed at the most egregious problems between intellectual property and domain names and at obtaining effective solutions to those problems. Other issues remain outstanding and require further reflection and consultation. Amongst these other issues are:

- (a) as signaled above, the exploration of the feasibility of introducing a non-commercial, use-restricted domain where contact details of domain name holders might not be readily available publicly;
- (b) the problem of bad faith, abusive domain name registrations that violate intellectual property rights other than trademarks or service marks, for example, geographical indications and personality rights;
- (c) the problem of bad faith, abusive domain name registrations of the names and acronyms of international intergovernmental organizations that are protected against use and registration as trademarks by the Paris Convention; and
- (d) the problem of bad faith, abusive domain name registrations of International Nonproprietary Names selected by the World Health Organization for the identification of specific pharmaceutical substances under single, globally available names in order to protect the safety of patients.

---

## 1. THE INTERNET, DOMAIN NAMES AND THE WIPO PROCESS

### THE INTERNET

1. The Internet can be very simply described as a, or the, network of networks. That simple technical description, however, lacks the eloquence to speak of the profound ways in which the Internet is affecting the way in which we communicate with each other, the way we express ourselves, the way we learn, the way we do business and the way in which we interact culturally. Given the fundamental changes that we sense are underway, we have difficulty in placing faith in a simple definition of technical function.

2. We are not yet at the stage of being able to articulate adequately what exactly the Internet is as a social phenomenon and why it is changing us. We can, however, point to certain features of the Internet that indicate that it is a distinct and profound phenomenon. Six such features can be mentioned:

(i) The Internet is something that increasingly large numbers of people throughout the world find an interest in being connected to. From 1990 to 1997, the estimated number of Internet users grew from around one million to around 70 million.<sup>1</sup> While the United States of America still accounts for the large majority of Internet users,<sup>2</sup> the rest of the world can hardly be described as disinterested. Between 1993 and 1996, the number of Internet hosts in Europe increased by about 600 per cent.<sup>3</sup> Over the same period, the growth in Internet hosts in Africa and Asia amounted to about 840 per cent for each region.<sup>4</sup>

(ii) It is increasingly an affordable and relatively low-cost matter to become connected to the Internet and thus to be able to participate in the advantages that it offers. The telecommunications infrastructure is improving constantly and the cost of computer equipment continues to decrease. The estimated worldwide installed base of PCs in the home and in education increased from about 36 million units in 1992 to 118 million units in 1997.<sup>5</sup> The Internet is a popular, rather than elitist, medium.

(iii) Reflecting this popular character, the Internet is multifunctional. Digital technology permits all forms of expression—text, sound and images—to be expressed in binary notation. The World Wide Web, a key component of the Internet, has provided the graphical interface and hypertext linking protocols to enable all such expressions to be shared on the Internet. In consequence, the purposes for which the Internet is now used encompass the full range of human activity: research, education, social communication, politics, entertainment and commerce.

(iv) The Internet does not have a central point of authority and control. Compared to other social institutions, it has developed in a spontaneous and autochthonous manner. Its technical development has been guided by protocols established through participatory decision-making processes by bodies such as the Internet Engineering Task Force (IETF) and its subcommittees, and the Internet Assigned Numbers Authority (IANA). There has not

---

been, however, a central rule-making entity that has exercised comprehensive legislative authority over the Internet.

(v) The Internet is multijurisdictional. Users can access it from any place on earth. Because of packet-switching technology, information may travel through various countries or jurisdictions in order to reach its destination.<sup>6</sup> It is a global medium transposed on the historical system of separate physical jurisdictions.

(vi) The Internet is unspecifically regulated. It is affected by legislation and regulations that apply generally within the various jurisdictions of the world. But for the most part, until now, there have been few exercises of national legislative authority specifically directed at the Internet and no international legislative instruments specifically designed to regulate the Internet.

3. These special features of the Internet entail several consequences for the formulation of policy in relation to any facet of the Internet's operation. The multijurisdictional and multifunctional nature of the Internet mean that, inevitably, many different interests in many different parts of the world will be concerned with any endeavor to formulate specific policies. Special care needs to be exercised to ensure that any policy developed for one interest or function does not impact unduly on, or interfere unduly with, other interests or functions.

## THE DOMAIN NAME SYSTEM

4. The domain name system (DNS) serves the central function of facilitating users' ability to navigate the Internet. It does so with the aid of two components; the domain name and its corresponding Internet Protocol (IP) number. A domain name is the human-friendly address of a computer that is usually in a form that is easy to remember or to identify, such as `www.wipo.int`. An IP number is the unique underlying numeric address, such as `192.91.247.53`. Distributed databases contain the lists of domain names and their corresponding IP numeric addresses and perform the function of mapping the domain names to their IP numeric addresses for the purpose of directing requests to connect computers on the Internet. The DNS is structured in a hierarchical manner which allows for the decentralized administration of name-to-address mapping. This last new characteristic has provided the basis for the remarkable speed at which new computers can be added to the Internet, while ensuring their accurate name resolution.

5. The DNS has been administered by IANA, pursuant to principles that were described in Request for Comments (RFC) 1591 of March 1994.<sup>7</sup> The DNS operates on the basis of a hierarchy of names. At the top are the top-level domains, which are usually divided into two categories: the generic top-level domains (gTLDs) and the country code top-level domains (ccTLDs).

6. There are, at present, seven gTLDs. Three of these are open, in the sense that there are no restrictions on the persons or entities that may register names in them. These three gTLDs

---

are *.com*, *.net* and *.org*. The other four gTLDs are restricted, in the sense that only certain entities meeting certain criteria may register names in them. They are *.int*, which is restricted to use by international organizations; *.edu*, which is restricted to use by four-year, degree-granting colleges and universities; *.gov*, which is restricted to use by agencies of the federal government of the United States of America; and *.mil*, which is restricted to use by the military of the United States of America.

7. There are at present 243 ccTLDs. Each of these domains bears a two-letter country code derived from Standard 3166 of the International Organization for Standardization (ISO 3166),<sup>8</sup> for example *.au* (Australia), *.br* (Brazil), *.ca* (Canada), *.eg* (Egypt), *.fr* (France), *.jp* (Japan) and *.za* (South Africa). Some of these domains are open, in the sense that there are no restrictions on the persons or entities who may register in them. Others are restricted, in that only persons or entities satisfying certain criteria (for example, domicile within the territory) may register names in them.

8. Functionally, there is no distinction between the gTLDs and the ccTLDs. A domain name registered in a ccTLD provides exactly the same connectivity as a domain name registered in a gTLD. Nor can it be said that the gTLDs are open, whereas the ccTLDs are restricted. As mentioned, there are open gTLDs and ccTLDs, which contain no restrictions on use, and restricted gTLDs and ccTLDs, which restrict use to persons or entities meeting certain criteria.

9. At the date of publication of this Report, nearly 7.2 million domain names have been registered worldwide.<sup>9</sup> Of these, approximately 1.8 million have been registered in the ccTLDs. The approximate weekly volume of new registrations is 21,000.

## THE TRANSMUTATION OF DOMAIN NAMES

10. Domain names were intended to perform a technical function in a manner that was convenient to human users of the Internet. They were intended to provide addresses for computers that were easy to remember and to identify without the need to resort to the underlying IP numeric address. Precisely because they are easy to remember and to identify, however, domain names have come to acquire a supplementary existence as business or personal identifiers. As commercial activities have increased on the Internet, domain names have become part of the standard communication apparatus used by businesses to identify themselves, their products and their activities. Advertisements appearing in the media now routinely include a domain name address, along with other means of identification and communication, such as the corporate name, trademark and telephone and facsimile numbers. But, whereas the telephone and facsimile numbers consist of an anonymous string of numbers without any other significance, the domain name, because of its purpose of being easy to remember and to identify, often carries an additional significance which is connected with the name or mark of a business or its product or services.

---

## INTELLECTUAL PROPERTY

11. Intellectual property consists in a series of rights in intellectual creations and in certain forms of identifiers. Generally speaking, there are two main policy bases that underlie intellectual property rights. The first is the policy of encouraging new intellectual creations. This is the main policy basis of patents, industrial designs and copyright. A patent, an industrial design or a copyright confers an exclusive right on the owner, for a finite period, to prevent others from exploiting its subject matter—an invention, a design or a literary or artistic work. The exclusive right enables the owner to recover a reward for originality and investment in the creation of originality, and thus serves as an incentive to further investment in the development of new intellectual creations. The second main policy basis is the orderly functioning of the market through the avoidance of confusion and deception. This is the main policy basis of trademarks, rights in geographical indications and protection against unfair competition. A trademark enables consumers to identify the source of a product, to link the product with its manufacturer in widely distributed markets. The exclusive right to the use of the mark, which may be of indefinite duration, enables the owner to prevent others from misleading consumers into wrongly associating products with an enterprise from which they do not originate.

12. Intellectual property has become a central element in economic and cultural policy in a world in which the source of wealth is increasingly intellectual, as opposed to physical, capital and in which markets are distributed across the globe. By becoming members of WIPO, 171 States have subscribed to the importance of promoting the protection of intellectual property. Many of these have also adhered to some or all of the 16 other multilateral treaties administered by WIPO, which establish international frameworks for each of the rights that make up intellectual property or systems for obtaining protection in multiple countries. In addition, the 134 States that are members of the World Trade Organization (WTO) have subscribed to a comprehensive, complementary code of intellectual property protection in the Agreement on the Trade-Related Aspects of Intellectual Property Rights (the TRIPS Agreement).

13. The discipline of intellectual property is concerned not simply with the establishment of rights, but also with the definition of the proper scope of those rights and their relation with other areas of public policy. It is concerned thus, for example, with defining the boundary between unfair and unjustified misappropriation of another's intellectual creations or business identifiers, on the one hand, and fair use or justified experimental and non-commercial use, on the other hand. It is equally concerned, for example, with regulating any areas of tension between competition policy and intellectual property policy. This definition of the proper scope of intellectual property rights and their relation to other areas of public policy is the subject of case law and legislation that have been developed over many decades throughout the world.

---

## THE PROCESS FOR THE REORGANIZATION OF THE MANAGEMENT OF THE DOMAIN NAME SYSTEM

14. The organization and management of the DNS has been the subject of intensive discussions throughout the world over the past two and a half years. These discussions have been motivated by a desire to institutionalize the functions associated with the management of the DNS in a manner which will permit the system to accommodate the growing volume of traffic on the Internet and to be administered in a stable, reliable, competitive and open way, taking into account the interests of all Internet stakeholders.

15. An early stage in the discussions was the work of the International Ad Hoc Committee (IAHC), which culminated in the publication on February 4, 1997, of a final report containing recommendations for the administration and management of gTLDs.<sup>10</sup> The recommendations were directed at enhancing the administration and operation of the gTLDs and balancing concerns for stable operations, continued growth, business opportunities and legal constraints.

16. On July 1, 1997, as part of his Administration's Framework for Global Electronic Commerce, the President of the United States of America, William Clinton, instructed the United States Secretary of Commerce to privatize the DNS in a manner that increased competition and facilitated international participation in its management. The United States Department of Commerce issued a Request for Comments on the administration of the DNS on July 2, 1997. In this document, public input was sought on issues relating to the overall framework of the DNS administration, the creation of new top-level domains, policies for domain name registrars, and trademark issues.

17. On the basis of comments received, on January 30, 1998, the National Telecommunications and Information Administration (NTIA), an agency of the United States Department of Commerce, issued for comment *A Proposal to Improve the Technical Management of Internet Names and Addresses* (the "Green Paper").<sup>11</sup> The Green Paper proposed for discussion a number of measures relating to the administration of the DNS, including the creation by the private sector of a new corporation located in the United States of America and managed by a globally and functionally representative Board of Directors.

18. Following the closure of the comment period, NTIA issued, on June 5, 1998, its *Statement of Policy on the Management of Internet Names and Addresses* (the "White Paper").<sup>12</sup> The White Paper confirmed the call contained in the Green Paper for the creation of a new, private, not-for-profit corporation responsible for coordinating specific DNS functions for the benefit of the Internet as a whole. It noted:

"The U.S. Government is committed to a transition that will allow the private sector to take leadership for DNS management. Most commenters shared this goal. While international organizations may provide specific expertise or act as advisors to the new corporation, the U.S. continues to believe, as do most commenters, that neither national governments acting as sovereigns nor intergovernmental organizations acting as representatives of governments should participate in management of Internet names

and addresses. Of course, national governments now have, and will continue to have, authority to manage or establish policy for their own ccTLDs.”

19. Following the publication of the White Paper, a process occurred which resulted in the formation of the Internet Corporation for Assigned Names and Numbers (ICANN). By-laws have been established for ICANN, and an Interim Chairman, an Interim President and CEO, and an Interim Board of Directors have been appointed as a result of the process and the international discussions that accompanied it. The by-laws, the composition of the Interim Board and other pertinent documentation concerning ICANN can be found at ICANN’s website, [www.icann.org](http://www.icann.org).<sup>13</sup>

20. Since its formation, ICANN has been systematically addressing the various tasks that need to be accomplished under the White Paper’s mandate. The various actions undertaken and meetings held in this regard are referenced on ICANN’s website. One such task, corresponding to the general policy objective established for the transition of introducing competition in the administration of domain name registrations, was the establishment of a policy for the accreditation of registrars, with a view to accrediting five registrars, on a testbed basis, who would be authorized to receive and process applications for domain name registrations in the .com, .net and .org domains. The registry administrator for these domains will continue to be Networks Solutions Inc. (NSI), which to date has performed the functions of both sole registrar and registry administrator for these domains under various contractual authorities. In February 1999, ICANN published for comment “Guidelines for Accreditation of Internet Domain Name Registrars and for the Selection of Registrars for the Shared Registry System Testbed for .COM, .NET and .ORG Domains.” In response to public comments that the guidelines should be “as lightweight as possible,”<sup>14</sup> ICANN introduced certain changes to the draft guidelines and, at its Board meeting in Singapore on March 4, 1999, adopted a “Statement of Registrar Accreditation Policy.”<sup>15</sup> This Statement includes a number of provisions that reflect coordination and consistency with the recommendations that were contained in the Interim Report of the WIPO Internet Domain Name Process (“The Management of Internet Names and Addresses: Intellectual Property Issues”).<sup>16</sup> Furthermore, the Statement indicates that the Registrar Accreditation Policy which it establishes may be reviewed following ICANN’s consideration of the present (final) WIPO Report.<sup>17</sup>

21. Most recently, on April 21, 1999, ICANN announced the five companies that were selected to participate in the initial testbed phase of the Shared Registry System for the .com, .net and .org domains.<sup>18</sup> The testbed phase is expected to continue for two months until the end of June, at which time an additional 29 companies are expected to be accredited to open up competition in registration services.

---

## THE INTERFACE BETWEEN THE DOMAIN NAME SYSTEM AND INTELLECTUAL PROPERTY: THE WIPO PROCESS

22. One consistent thread in the fabric of discussions and consultations concerning the management of the DNS has been the interface between domain names as addresses on the Internet and intellectual property or, more specifically, trademarks and other recognized rights of identity as they had existed in the world before the arrival of the Internet. It has become apparent to all that a considerable amount of tension has unwittingly been created between, on the one hand, addresses on the Internet in a human-friendly form which carry the power of connotation and identification and, on the other hand, the recognized rights of identification in the real world, consisting of trademarks and other rights of business identification, the developing field of personality rights, whether attaching to real or fictional characters, and geographical indications. One system—the DNS—is largely privately administered and gives rise to registrations that result in a global presence, accessible from anywhere in the world. The other system—the intellectual property rights system—is publicly administered on a territorial basis and gives rise to rights that are exercisable only within the territory concerned. In this respect, the intersection of the DNS and the intellectual property system is but one example of a larger phenomenon: the intersection of a global medium in which traffic circulates without cognizance of borders with historical, territorially based systems that emanate from the sovereign authority of the territory.

23. The tension that exists between the nature of the two systems has been exacerbated by a number of predatory and parasitical practices that have been adopted by some to exploit the lack of connection between the purposes for which the DNS was designed and those for which intellectual protection exists. These practices include the deliberate, bad faith registration as domain names of well-known and other trademarks in the hope of being able to sell the domain names to the owners of those marks, or simply to take unfair advantage of the reputation attached to those marks.

24. The IAHC recommendations took note of the tension that existed between domain names and intellectual property rights and included specific procedures designed to resolve conflicts between the two. The White Paper of the United States Government confined its specific recommendations to the desirable features of the management of the DNS and to the transition of that management to the new corporation. In respect of intellectual property, the White Paper contained the following passage:

“The U.S. Government will seek international support to call upon the World Intellectual Property Organization (WIPO) to initiate a balanced and transparent process, which includes the participation of trademark holders and members of the Internet community who are not trademark holders, to (1) develop recommendations for a uniform approach to resolving trademark/domain name disputes involving cyberpiracy (as opposed to conflicts between trademark holders with legitimate competing rights), (2) recommend a process for protecting famous trademarks in the generic top level domains, and (3) evaluate the effects, based on studies conducted by independent organizations, such as the National Research Council of the National Academy of Sciences, of adding new gTLDs and related dispute resolution procedures on trademark

and intellectual property holders. These findings and recommendations could be submitted to the board of the new corporation for its consideration in conjunction with its development of registry and registrar policy and the creation and introduction of new gTLDs.”

25. Since the publication of the White Paper, WIPO has received the approval of its Member States<sup>19</sup> to conduct, and has undertaken, the international process called for in the White Paper.

## THE MECHANICS OF THE WIPO PROCESS

### Stages

26. The WIPO Internet Domain Name Process comprised three stages.

27. The first stage was concerned with obtaining consensus on the issues to be addressed in the WIPO Process, the procedures to be used and the timetable in which the Process would take place. To this end a Request for Comments (WIPO RFC-1) was issued on July 8, 1998, with a deadline for receipt of comments of August 24, 1998. WIPO RFC-1 detailed as the terms of reference for the Process the three issues mentioned in the White Paper, namely, uniform dispute resolution procedures, a mechanism for the protection of famous marks and the evaluation of the effects on intellectual property rights of adding new gTLDs. It added a further term of reference, which WIPO considered to be appropriate in the context, namely, dispute prevention or practices in the administration of the DNS that are designed to reduce the incidence of conflict between domain names and intellectual property rights. Sixty-six governments, intergovernmental organizations, professional associations, corporations and individuals provided comments in response to WIPO RFC-1.<sup>20</sup>

28. The second stage of the WIPO Process consisted of seeking comments and consulting on the issues defined after consideration of the comments received on WIPO RFC-1. To this end, a second Request for Comments (WIPO RFC-2) was issued on September 16, 1998, with a deadline for receipt of comments of November 6, 1998. Seventy-two governments, intergovernmental organizations, professional associations, corporations and individuals provided comments in response to WIPO RFC-2.<sup>21</sup> Another important part of the second stage was the holding of regional consultation meetings in order to discuss and to receive comments on the issues under consideration. A total of 848 persons attended those regional consultation meetings. Some 155 of them made presentations and interventions. The schedule of meetings held was as follows:

First Series of Regional Consultations  
(October to November 1998)

<u>Regional Consultation</u>	<b>Participation (approx.)</b>	<b>Presentations/ Interventions</b>
San Francisco, California, United States of America	35	22
Brussels, Belgium	98	13
Washington, DC, United States of America	45	15
Mexico City, Mexico	85	12
Cape Town, South Africa	30	12
Asunción, Paraguay	160	18
Tokyo, Japan	75	8
Hyderabad, India	69	10
Budapest, Hungary	85	10
Cairo, Egypt	86	20
Sydney, Australia	80	15
<b>Total</b>	<b>848</b>	<b>155</b>

29. The third stage of the WIPO Process consisted of the publication, on December 23, 1998, of an Interim Report containing interim recommendations, which were, in turn, opened to comments, in the form of a third Request for Comments (WIPO RFC-3). By the date of the closure of the period for comments, March 19, 1999, 196 governments, intergovernmental organizations, professional associations, corporations and individuals had provided comments in response to WIPO RFC-3.<sup>22</sup> In addition, a second round of regional consultation meetings was held to discuss and to receive comments on the Interim Report. A total of 416 persons attended the second round of regional consultation meetings. Some 77 of them made presentations and interventions. The schedule of meetings held was as follows:

Second Series of Regional Consultations  
(January to March 1999)

Regional Consultation	Participation (approx.)	Presentations/ Interventions
Toronto, Canada	48	11
Singapore	80	14
Rio de Janeiro, Brazil	51	4
Dakar, Senegal	117	10
Brussels, Belgium	50	13
Washington, DC, United States of America	70	25
<b>Total</b>	<b>416</b>	<b>77</b>

Modalities

30. In conducting the Process, WIPO has used three modalities to solicit participation from the widest international range of interested parties:

(i) WIPO established a website (<http://wipo2.wipo.int>) in English, French and Spanish as a primary vehicle for communication concerning the WIPO Process. In addition to the publication of information and documents concerning the WIPO Process, the website contained a facility for interested persons to register in order to receive communications relating to developments in the WIPO Process. Some 1,358 persons or organizations from 74 countries registered under the facility.<sup>23</sup> The website also contained the text of all comments received in response to the three Requests for Comments issued (WIPO RFC-1, RFC-2 and RFC-3). It further established an open listserv discussion forum. The list, which was not moderated, was intended to allow interested parties to discuss freely the widest possible range of questions arising in connection with the WIPO Process. Contributions to the listserv were not formally considered as comments in response to RFCs. The number of subscribers to the listserv, at the date of this Report, was 420.<sup>24</sup>

(ii) Since the Internet is a global medium but access to it is not universal, WIPO also published in paper form each Request for Comments that it issued and sent these to the governments and industrial property offices of each of its member States, as well as to each non-governmental organization that was accredited as an observer with WIPO.

(iii) As mentioned above, WIPO has also sought to complement the Internet- and paper-based consultations with meetings organized in various venues throughout the regions of the world.

### Panel of Experts

31. In order to assist it in the conduct of the Process, WIPO established a panel of experts to advise it in the formulation of recommendations. The composition of the panel was determined in an endeavor to achieve both a geographical balance of representation and a balance of sectoral interests in the Internet. The names and affiliations of the members of the panel are given in Annex I. WIPO wishes to place on record its deep gratitude to the members of the panel for their advice and untiring efforts to assist constructively in developing workable and acceptable recommendations on dealing with the interface between domain names and intellectual property. This Report remains nevertheless the responsibility of WIPO and does not necessarily imply that each expert subscribes to every recommendation contained in it.

### GUIDING PRINCIPLES IN THE FORMULATION OF RECOMMENDATIONS IN THE WIPO PROCESS

32. Before moving, in the remainder of the Report, to the issues considered in the WIPO Process and to the recommendations made in relation to those issues, the methodological principles which have guided the formulation of the recommendations should be made explicit. There are five such principles.

33. Recognizing the global nature of the Internet and the diverse range of purposes for which it is used, WIPO has endeavored to design a process which was international and which allowed for participation by all sectors interested in the use and future development of the Internet. While the mandate of WIPO relates to intellectual property protection, it is recognized that intellectual property cannot be considered in isolation in the context of a multifunctional global medium.

34. It is further recognized that the goal of this WIPO Process is not to create new rights of intellectual property, nor to accord greater protection to intellectual property in cyberspace than that which exists elsewhere. Rather, the goal is to give proper and adequate expression to the existing, multilaterally agreed standards of intellectual property protection in the context of the new, multijurisdictional and vitally important medium of the Internet and the DNS that is responsible for directing traffic on the Internet.<sup>25</sup> The WIPO Process seeks to find procedures that will avoid the unwitting diminution or frustration of agreed policies and rules for intellectual property protection.

35. Conversely, it is not intended that the means of according proper and adequate protection to agreed standards of intellectual property should result in a diminution in, or

---

otherwise adversely affect, the enjoyment of other agreed rights, such as the rights guaranteed in the Universal Declaration of Human Rights.<sup>26</sup>

36. The central importance of the Internet and its capacity to serve the diverse interests of a rapidly expanding body of users is fundamental. A constant consideration has therefore been to ensure that the recommendations of the WIPO Process are practical and do not interfere with the functionality of the Internet by imposing unreasonable constraints on the high-volume and automated operations of domain name registration authorities.

37. The dynamic nature of the technologies that underlie the expansion and development of the Internet is also recognized. The WIPO Process also aimed to ensure that its recommendations do not in any way condition or affect the future technological development of the Internet.

#### THE SCOPE OF THE WIPO RECOMMENDATIONS: THEIR RELEVANCE TO ccTLDs

38. In the WIPO Interim Report, as well as in paragraphs 6, 7 and 8 above, a distinction is drawn between “open” TLDs (whether gTLDs or ccTLDs), in which there are no restrictions on the persons or entities who may register in them, and “restricted” TLDs, in which only persons or entities satisfying certain criteria, such as domicile in the relevant territory, may register domain names. In the Interim Report, it was also suggested that, while the recommendations of the WIPO process were limited to the gTLDs, they were potentially applicable to all open TLDs in which domain names may be registered without restriction and in which domain names may be bought and sold.<sup>27</sup>

39. The comments made on the distinction drawn between “open” and “restricted” TLDs were divided. Certain parties were favorable to the distinction and considered it to be helpful as a means of indicating the functional similarities between gTLDs and ccTLDs and, in consequence, the similarity of the problems that may be encountered in respect of the interface between domain names and intellectual property rights.<sup>28</sup> Others regarded the distinction as loose and lacking in definitional precision because of the variety of conditions that apply to registrations in the ccTLDs.<sup>29</sup> Some parties, furthermore, considered the distinction to be dangerous, as it could be used for purposes other than solutions to problems arising out of the interface between domain names and intellectual property rights and as a means of limiting the operations of ccTLDs.<sup>30</sup> Our views on the purpose and usefulness of this distinction, after consideration of the comments received, are set out in the ensuing paragraphs.

40. The purpose of the distinction between “open” and “restricted” TLDs was to draw attention to the fundamental and crucial feature of the Internet as a global medium. A domain name registration, whether in a gTLD or a ccTLD, gives rise to a global presence. Many of the difficulties encountered in dealing with the interface between domain names and intellectual property rights arise from this fact. As pointed out above, intellectual property rights are territorially based and can be enforced only within the territory for which they are granted. A domain name registered in one country can (but does not necessarily) form the

---

basis for activities in another country in which a territorially limited intellectual property right, granted under a legislatively sanctioned system, exists. The domain name can (but does not necessarily) lead to consumer confusion and deception and can (but does not necessarily) infringe the territorially limited intellectual property right. In consequence, the protection and enforcement of recognized territorially limited intellectual property rights can be jeopardized by activities originating under a domain name registration in another jurisdiction, which can create practical difficulties both in relation to the assessment of whether the intellectual property right is being violated and in relation to the enforcement of the intellectual property right against infringing activities.

41. Where restrictions apply to the persons or entities that can register in a TLD, those restrictions may (but do not necessarily) provide means for reducing the tension between domain names and territorially based intellectual property rights. For example, if one of the restrictions that is applied is domicile in the territory to which a ccTLD relates, the enforcement of any pertinent intellectual property right that is infringed by the domain name can be facilitated by the connection to jurisdiction, and thus amenability to legal process, that the restriction of domicile imposes. Or, for example, if the restriction applicable to the TLD defines carefully the type of entity that can register in the TLD, such as the requirement in .int that the registrant be an international organization, this restriction may operate to reduce the potential for conflict between domain names and intellectual property rights, since it removes the possibility for commercial entities to register in the domain. We do not recommend that restrictions be introduced in respect of TLDs, but merely draw attention to the fact that restrictions can have an effect on the relationship between domain names and intellectual property rights.

42. Where there are no restrictions that apply on registrations in a TLD, the potential for conflict between domain names and intellectual property rights is heightened. Functionally, in such a case, whether the TLD is a gTLD or a ccTLD, registrations of domain names can give rise to the same sort of problems concerning the interface between domain names and intellectual property rights. Our intention in drawing the distinction between “open” and “restricted” TLDs was simply to highlight the fact that the problems arising between domain names and intellectual property rights in unrestricted domains are similar. Given the commonality of these problems, it follows that any comprehensive solution to the problems encountered between domain names and intellectual property rights would be most effective if applied in such a way as to recognize the global nature of the Internet and the global presence given by a domain name registration. The concept of a tax haven is well known. A ccTLD may be operated in such a way as to become an intellectual property piracy haven; that is, it may be administered outside the recognized system of international protection for intellectual property and, thereby, increase transaction costs for the enforcement of intellectual property rights and reduce the efficiency of the international intellectual property system.

43. WIPO recognizes that the recommendations contained in this Report are intended to apply only to the gTLDs. It also recognizes the international nature of the Internet and offers the recommendations contained in the present Report also for the consideration of those administrators of ccTLDs that wish to take cognizance of the responsibility that follows from

the global presence given by a domain name registration. In response to the specific request of certain administrators of ccTLDs, Annex VIII contains detailed guidance on which recommendations in the present Report WIPO considers are potentially useful to ccTLDs, in order to ensure a comprehensive and efficient solution to the problems arising out of the interface between domain names and intellectual property rights. It is, obviously, for the administrators of the ccTLDs to consider whether or not they wish to adopt any of those recommendations.

## THE SUBMISSION OF THE WIPO REPORT

44. The present Report will, in accordance with the mandate conferred upon WIPO, be submitted to the Board of the Internet Corporation for Assigned Names and Numbers (ICANN) for its consideration. The Report will also be submitted to the Member States of WIPO for their consideration.

## 2. AVOIDING DISJUNCTION BETWEEN CYBERSPACE AND THE REST OF THE WORLD: PRACTICES DESIGNED TO MINIMIZE CONFLICTS ARISING OUT OF DOMAIN NAME REGISTRATIONS

45. It is a truism that things happen quickly on the Internet. The increase in the number of persons desiring to have a recognized and easily located presence on the Internet is but one example. The estimated number of domain name registrations has increased from approximately 100,000 at the start of 1995 to about 7.2 million at the present time.

46. The DNS was designed for its own internal purposes: to ensure connectivity in a technically coherent manner and to do so in a way which was simple and easy for human users to understand and use. Over the same period as the DNS has demonstrated its outstanding success in achieving its design objectives, however, it has become a victim of its own success as the applications of the Internet have expanded into all spheres of activity and as enterprises and persons have begun to include their domain names in the standard identification apparatus that they use for the purposes of business and social communication.

47. In addressing the way in which to deal with the consequent conflicts that have arisen between domain names and other recognized forms of identifiers that are protected by intellectual property, the great majority of commentators in the WIPO Process have considered that the starting point should be the avoidance, rather than the resolution, of conflicts. Insofar as practical, an endeavor should be made to avoid having two autonomous systems that live in ignorance of each other—the DNS in cyberspace, and the intellectual property system of identifiers as developed before the arrival of the Internet.

48. It seems clear that the two systems have hitherto operated without sufficient attention to each other. Up until the date of this Report, in the open gTLDs, users could be assured of a simple, fast and relatively inexpensive process for the registration of a domain name on a first-come, first-served basis. There has been no requirement that the applicant justify use of a particular name; no verification process for any contact details provided; no provision for the settling of disputes when they arise; and no requirement that any payment be tendered and confirmed before the domain name holder begins to use the name. These registration practices have led to instances of registrations that may be considered to be abusive.<sup>31</sup>

49. On the other hand, the same practices have played a very positive role in establishing low entry barriers—making domain name registration fast and easy, thereby encouraging the rapid growth of the Internet,<sup>32</sup> new entrepreneurial uses of websites, and fostering the acceptance by businesses and consumers of the Internet as a vital new medium for an expanding digital marketplace. In endeavoring to avoid disjunction between the DNS and existing intellectual property rights, therefore, care must be exercised not to impede unduly the functionality of a low cost and highly efficient system with proven successes.

50. In Chapter 2 of the WIPO Interim Report published in WIPO RFC-3, draft recommendations were made on a number of domain name registration practices designed to

---

reduce the disjunction between the DNS and intellectual property rights and thus to minimize resulting conflicts. The draft recommendations were made for the purpose of soliciting further discussion and initiating further consultation before being finalized.

51. In general, the comments that WIPO has received support the draft recommendations in the Interim Report. The approach of establishing best practices to reduce tension was endorsed by the vast majority of commentators. The differences of opinion that emerged did not concern this general approach, but rather the details of the implementation of the approach. The greatest differences of opinion concerned specifically the question of the provision of contact details by domain name applicants and the availability of such contact details. Here, as indicated below, there was a broad division of opinion between, on the one hand, those who considered the continued unrestricted availability of contact details to be essential for the suppression of deliberate violations of intellectual property rights, as well as for the support of other recognized public policies such as the avoidance of fraudulent commercial practices, consumer protection and the protection of minors, and, on the other hand, those who emphasized the multifunctional nature of the Internet and who feared that the continued unrestricted availability of contact details would facilitate the invasion of privacy and the harassment of political dissidents, with a consequent erosion of civil liberties.

52. The large measure of support for the approach of introducing practices designed to reduce tension between the DNS and intellectual property rights has been reflected in the adoption of many of the practices recommended in the WIPO Interim Report in ICANN's Statement of Registrar Accreditation Policy of March 4, 1999.

53. In the ensuing part of this Chapter, the draft recommendations of the Interim Report are re-visited in light of the comments received on that Interim Report. References are included as to the way in which the draft recommendations have been taken up in ICANN's Statement of Registrar Accreditation Policy. The final recommendations are divided into three parts:

- best practices for registration authorities;
- measures to deal with inaccurate and unreliable information; and
- the problem of uniqueness: technical measures for coexistence of similar names.

## BEST PRACTICES FOR REGISTRATION AUTHORITIES<sup>33</sup>

### Formal Domain Name Registration Agreement

54. The domain name registration agreement defines the rights and responsibilities of the registration authority, on the one hand, and the domain name applicant, on the other hand. It is through the terms of this contract that certain practical measures can be introduced to alleviate some of the problems that have arisen from the interface between Internet domain names and intellectual property rights. In the WIPO Interim Report, it was recommended that the contractual relationship between a domain name registrant and a registration authority be fully reflected in an electronic or paper registration agreement.

55. Commentators expressed broad support for this recommendation.<sup>34</sup>

56. Certain commentators<sup>35</sup> pointed out that the legal framework governing the validity of electronic contracts was not fully developed throughout the world. Some jurisdictions have moved to ensure that the validity of electronic contracts is specifically recognized through legislation,<sup>36</sup> but the swiftness of the advent of electronic commerce is such that legal certainty is not uniform throughout the world. It is the intention of ICANN to enhance the geographical availability of domain name registration services.<sup>37</sup> It would be desirable to ensure that, where the validity of electronic contracts is uncertain in the jurisdiction of an accredited registrar, the registration agreement is reflected in a paper document, since, as indicated below, this agreement will serve as the basis on which registrars may take certain actions in respect of a domain name registration (for example, if the policy is adopted as recommended below, cancelling a registration because of false or unreliable contact details).<sup>38</sup>

*57. It is recommended that the contractual relationship between a domain name registrant and the registrar in open gTLDs be fully reflected in an electronic or, where it is not certain that electronic contracts are legally enforceable in the jurisdiction of the registrar, paper registration agreement.*

#### Contact Details of Domain Name Holders

58. As indicated above, the collection and availability of contact details concerning domain name registrants was the area of the draft recommendations of the WIPO Interim Report that generated the greatest division of opinion. Few commentators did not recognize the complexity of striking an appropriate balance between the various interests involved. The divergences of opinion related not to the non-recognition of opposing interests, but to the weight to be attached to those interests.

59. One body of opinion placed greater weight on the importance of contact details,<sup>39</sup> in the context of a borderless and powerful medium, as a means, if not the only means, of translating public policies recognized in the world outside the Internet to the virtual world. They emphasized the difficulty of enforcement on the Internet brought about by its global character, the lack of a central point of authority and control and the fact that transactions and other interaction between persons take place without personal contact and often across distances that span national borders. They favored, in general, the collection and, ultimately, the availability of accurate and reliable contact details as a condition of presence on, and participation in, the medium through a domain name registration.

60. The opposing body of opinion tended to place greater weight on the potential of the Internet as a means of social communication and political expression that offered unparalleled opportunities for promoting civil liberties. Whether viewed from the perspective of the

---

collection or the availability of contact details, they considered anonymity in relation to a domain name registration to be a legitimate choice that should be provided or preserved.<sup>40</sup>

61. We do not consider that any valid analogy exists for the issues posed by this question. Some argued that anonymity is permitted with respect to telephone listings and that this provided an appropriate precedent for a domain name registration. We do not consider the situations to be comparable. A telephone number facilitates connectivity with one other person, unless a group consents to dial into, or by linked to, a conference call. The telephone is a unimedium. A domain name gives global connectivity and allows for multimedia transmissions.

62. Both of the two general perspectives have validity and draw upon sound foundations in international and national law and policy in the world outside the Internet. It is the Internet that causes their collision to be dramatic and that requires difficult choices to be made.

63. As signalled in the WIPO Interim Report, we consider that the choices are made less difficult, although never easy, by breaking down the larger dichotomy of publicity and anonymity into a series of smaller issues that can offer some accommodation of the various interests falling either side of the larger dividing line. Those smaller issues are the collection of contact details by registration authorities as a condition of registration; the scope of information concerning contact details that should be collected; the availability of contact details; the possibility of a non-commercial, use-restricted gTLD as a way of meeting concerns for anonymity as a safeguard to civil liberties; and other safeguards against misuse of publicly available contact details.

### The Collection of Contact Details

64. In the WIPO Interim Report, it was recommended that the domain name registration agreement contain a requirement that the domain name applicant provide certain specified contact details. The collection (as opposed to the availability) of contact details by registrars is the least controversial aspect of the discussion on contact details. We consider that it is essential for the legitimate protection and enforcement of intellectual property rights, as well as for many other public policies recognized in the law, that contact details be collected. Without accurate and reliable contact details, the task of assigning responsibility for activities on the Internet is vastly complicated. Other means of assigning responsibility for activities on the Internet do exist. Where it is sought to enforce a criminal law, for example, the apparatus of the State can be activated to use tracing and other measures to determine the origin of activities, although, even here, the cross-border nature of the Internet complicates the task. In respect of civil law enforcement, however, the task of activating the apparatus of the State to identify responsibility for activities is more difficult.

65. ICANN's Statement of Registrar Accreditation Policy adopts the draft recommendation in the WIPO Interim Report and requires registrars to oblige domain name applicants to provide accurate and reliable contact details.<sup>41</sup>

*66. It is recommended that the provision of accurate and reliable contact details be a condition of registration of a domain name imposed by the domain name registration agreement.*

### Scope of Contact Details to be Provided

67. In the WIPO Interim Report, it was recommended that the domain name applicant should provide accurate and reliable contact details consisting of its name; postal address; e-mail address; telephone number; facsimile number (if available); and, where the applicant is an organization, association or corporation, the name of an authorized person for contact purposes. Most commentators<sup>42</sup> agreed that these data represented the appropriate scope of contact details. ICANN's Statement of Registrar Accreditation Policy requires registrars to obtain from domain name applicants these data, as well as certain technical contact information which is beyond the scope of consideration for the purposes of intellectual property protection. Three items relating to contact details, however, gave rise to differences of opinion.

68. The first item was the nature of the postal address required to be supplied. Some commentators, particularly those representing small business, considered that a post office box should constitute a sufficient post address, without reference to a street location. Others considered that the street location was necessary, especially for service of process (initiation of litigation), and stated that experience indicated that postal addresses consisting of post office boxes were often used by those who deliberately infringed intellectual property rights.<sup>43</sup> ICANN's Statement of Registrar Accreditation Policy leaves open this question, specifying merely that a postal address must be provided.<sup>44</sup> Since voice telephone and facsimile numbers are to be provided, and since a street address can be as easily misrepresented as a post office box, we consider that the requirement of a street address is unnecessary, especially in view of the large number of small enterprises operating their businesses with the use of a post office box.

69. The second item was the possibility of requiring the domain name applicant to designate an agent for the service of process. In the WIPO Interim Report, it was stated that such requirement seemed unnecessarily burdensome for the large majority of bona fide domain name applicants and that the provision of accurate and reliable contact details appeared to be a sufficient safeguard of the interests of intellectual property owners without the need for requiring further legal formalities at the stage of registration. Most commentators agreed with this view, although some major organizations representing intellectual property owners maintained that the requirement of designating an agent for service of process would be useful. We do not consider that there is sufficient support for the latter view to change the draft recommendation that the designation of an agent for service of process should not be obligatory.

70. The third item concerned the possibility of allowing a domain name holder to remain anonymous on condition that it supplied the contact details of a designated agent or trusted third party instead. The WIPO Interim Report requested further comments on this possibility. Business groups and intellectual property owners almost universally opposed the idea.<sup>45</sup> Some commentators, however, considered that a pseudonymous registration should be allowed on condition that contact details are provided to a trusted third party.<sup>46</sup>

71. It was pointed out that there are a number of Internet Service Providers (ISPs) and other entities that provide the facility for persons wishing to remain anonymous to use sub-domains under a domain which the ISP operates. It was suggested that this possibility allows for an adequate safeguard of the interests of those persons who might fear violation of their civil liberties in having to supply contact details to a registrar.<sup>47</sup> We consider that the existence of this possibility makes it unnecessary to provide any separate facility for a domain name applicant to designate an agent whose contact details would be supplied instead of the contact details of the applicant. In the open gTLDs, since it is intended that registration services be available on a geographically widespread basis, the use of a designated agent could lead to abuses, since the agent could be located in a jurisdiction that is an intellectual property haven or is inaccessible to normal legal processes.

72. It is also noted that ICANN's Statement of Registrar Accreditation Policy recognizes the practice of ISPs in licensing domains to those that might wish to remain anonymous.<sup>48</sup> We endorse the approach adopted in ICANN's Policy in this respect, which requires an ISP that licenses the use of a domain to accept liability for harm caused by the use of the domain, unless it promptly discloses the identity of the licensee to any party providing reasonable evidence of such harm. An ISP licensing a domain thus accepts responsibility either for the harm caused by a licensee or for assisting third parties in remedying such harm.

*73. It is recommended that the domain name registration agreement contain a requirement that the domain name applicant provide accurate and reliable contact details consisting of:*

- the full name of the applicant;*
- the applicant's postal address, including street address or post office box, city, State or Province, postal code and country;*
- the applicant's e-mail address;*
- the applicant's voice telephone number;*
- the applicant's facsimile number, if available;*
- where the applicant is an organization, association or corporation, the name of an authorized person (or office) for*

*administrative or legal contact purposes.*<sup>49</sup>

### The Availability of Contact Details

74. The WIPO Interim Report recommended that contact details of all domain name holders should be made publicly available and requested further comments on the means of access to those contact details and, in particular, on whether access should be unrestricted or through a form of filter.

75. The majority of commentators considered that the public availability of contact details of domain name holders was a key to the enforcement of intellectual property rights and strongly opposed any restrictions on the availability of data concerning those contact details.<sup>50</sup> The majority of commentators also expressed themselves to be against filtered access to contact details,<sup>51</sup> arguing that filters would add an administrative burden without any commensurately greater protection of privacy. In addition, most commentators that addressed the point were opposed to any requirement of notifying a domain name holder of any search performed on a database containing the holder's contact details, considering such a requirement to be a way of shielding infringers and possibly obstructing intellectual property owners in defending their rights.<sup>52</sup> As noted above, however, certain commentators argued against the public availability of contact details on the grounds of the protection of privacy.<sup>53</sup>

76. It is noted that ICANN's Statement of Registrar Accreditation Policy requires accredited registrars to provide public access on a real-time basis (such as by way of a Whois service) to the contact details which it is recommended, above, be required to be provided by a domain name registrant.<sup>54</sup>

77. We consider that, for as long as the open gTLDs (.com, .net and .org) remain undifferentiated, in the sense that there is no use restriction on holders of registrations in those domains, the continued public availability of contact details is essential. The undifferentiated nature of the current open gTLDs means that any form of commercial activity can take place under a domain name registration in those gTLDs. In the commercial sphere, it is widely recognized that the publication of contact details is necessary for the responsible operation of a business.<sup>55</sup> It thus seems appropriate, in this context, that contact details of registrants be publicly available in order to ensure that there is a straightforward means of applying the developed body of law concerning commercial practices. In addition, we consider that this requirement should apply to any new gTLDs, unless and until a policy is developed for a non-commercial use-restricted domain. We do not recommend the creation of such a domain at this stage, but discuss further its potential below.

78. We consider that certain safeguards exist to protect those concerned about the invasion of civil liberties by the public availability of contact details. One such safeguard is, as mentioned above, the licensing of a domain from an ISP which accepts responsibility for harm done on its domain or for assisting in remedying such harm. Other safeguards are discussed below.

79. We make no recommendations concerning the nature of the searchable database in which contact details should be made publicly available. It is considered that this is an issue relating to technical coordination, which thus falls outside this scope of the WIPO Process and is for the consideration of ICANN in establishing relationships between registry administrators, registrars and itself. In addition, any policy on the nature of a searchable database needs to take into account technological developments and not condition those developments. We note only that, for the purposes of ensuring adequate protection of intellectual property rights (amongst other rights), all contact details of domain name holders in the open gTLDs should be publicly available in real time.

80. The contact details that should be made available are those which it is recommended above must be provided by a domain name holder. In accordance with the observations of certain commentators, it is also recommended that the date of the registration of a domain name should be made available together with those contact details. ICANN's Statement of Registrar Accreditation Policy requires, in this respect, that the expiration date of a registration be made available.<sup>56</sup> The availability of the date of registration is useful as a means of protecting the interests of both the domain name holder and any third party that considers its rights to have been violated. For example, the date of the registration of a domain name may indicate that the domain name holder has established use of a name before any corresponding use or registration of that name as a trademark by a third party. In addition, as discussed in Chapter 3, it is recommended that an indication appear that the domain name holder has voluntarily opted to submit to arbitration in respect of any intellectual property dispute arising out of the domain name registration, where this is the case.

*81. It is recommended that contact details of all holders of domain names in all open gTLDs be made publicly available in real time. It is further recommended that those contact details should consist of the data specified in paragraph 73 above, the date of registration of the domain name and, where applicable, an indication that the domain name holder has voluntarily agreed to submit to arbitration in respect of any intellectual property dispute arising out of the domain name registration.*

82. In the WIPO Interim Report, the importance of maintaining up-to-date contact details for domain name holders was recognized. It was pointed out that the currency of contact details could be verified at the time of re-registration of a domain name and that the

cancellation of a registration for failure to pay the re-registration fee after a second notice or reminder appeared to be a sufficient check on the currency of contact details. ICANN's Statement of Registrar Accreditation Policy, in this respect, obliges accredited registrars to require domain name holders to promptly update contact details during the term of the registration.<sup>57</sup> The Policy also provides that a domain name holder's wilful failure promptly to update information on contact details to the registrar shall constitute a material breach of the domain name registration agreement and be a basis for cancellation of the registration. The approach of ICANN on this question constitutes an improvement on the WIPO draft recommendations. In applying to wilful failure to update contact details, it provides an additional safeguard against those who might deliberately and in bad faith register domain names in violation of intellectual property rights and who might change contact details during the term of registration in order to avoid detection. This question is taken up again, below, in the section on the cancellation of registrations for false or inadequate information.

#### The Possibility of a Non-Commercial Use-Restricted Domain Where Anonymity May be Permitted

83. In the WIPO Interim Report, it was suggested that consideration be given to differentiation between commercial and non-commercial domains and to the application of differing registration conditions to any non-commercial domain.<sup>58</sup> It was suggested that such differentiation might provide a means of accommodating the interests of those concerned that the availability of contact details might lead to an erosion of civil liberties.

84. The reactions of commentators to this suggestion were mixed. Some found the approach to be constructive and considered that it might help in accommodating the conflicting legitimate interests of Internet users.<sup>59</sup> Many commentators were skeptical about the practicality of such a distinction.<sup>60</sup> Others were vehemently opposed to the introduction of non-commercial domains with relaxed registration conditions, particularly relating to contact details, and believed that such domains would operate as safe havens for predatory activities.<sup>61</sup>

85. We believe that this question requires further study and consultation and that its implications go beyond intellectual property protection, although intellectual property protection is one of the central issues involved in the question. We do not believe that the idea should be abandoned, but we suggest that ICANN consider initiating a further process on this question. Pending any such further process, the following preliminary observations are offered in respect of the issues involved in the question:

(i) Further consideration needs to be given to the way in which the distinction between commercial and non-commercial is conceptualized. The distinction between commercial and non-commercial is insufficiently precise as a basis for allowing anonymity. For example, the free and unauthorized distribution of proprietary software or copyrighted music or films is not a commercial activity and could take place in a non-commercial domain without violating a restriction against commercial activity in such a domain. However, the owners of software, music or films have a legitimate interest in being able to contact the

---

registrants of domain names under which such unauthorized distributions take place, and anonymity would obstruct them from doing so. Instead of distinguishing between commercial and non-commercial, therefore, a better approach might be to envisage for any domain with different registration requirements that the uses or activities permitted in such a domain be carefully and precisely delineated by way of a series of use restrictions (for example, prohibition of any commercial activity, prohibition of any activity in violation of intellectual property laws, etc.).

(ii) The nature of the differences in registration conditions needs to be carefully considered and expressed. It would need to be decided what contact details should be provided by a domain name holder, under what circumstances and upon the basis of what information or evidence any contact details could be released, and to which class of persons.

(iii) The introduction of a use-restricted domain would change the nature of open gTLDs that has prevailed until now from one in which domain name holders choose themselves the domain that they consider to be appropriate without being bound to conform their activities to the description of the chosen domain, to one in which, at least for the use-restricted domain, holders would be bound to abide by restrictions on the type of activity in which they could engage in the domain. A mechanism for enforcing those use restrictions would need to be developed. In this respect, a take-down mechanism has been suggested, whereby, upon the production of evidence of violation of a use restriction, the registrar would be obliged to cancel or suspend the domain name registration. This mechanism requires, however, further consideration and elaboration in this context to ensure that it could not be used abusively to suppress legitimate activity.

(iv) The introduction of a use-restricted domain needs also to be considered in the context of ICANN's overall policy for differentiation in the gTLDs and for the introduction of new gTLDs.

*86. It is recommended that further consideration be given to the introduction of one or several use-restricted, non-commercial domains as a means of accommodating privacy concerns and that ICANN consider the possibility of initiating a separate process and consultation on this question.*

#### Other Safeguards Against Misuse of Published Contact Details—Proper Notice and Consent

87. Apart from the possibility of a non-commercial, use-restricted domain, the concerns of those who fear erosion of civil liberties through the continued public availability of contact details of domain name holders can be, to some extent, alleviated by limiting the purposes for which data on contact details can be processed.

88. It was recommended in the WIPO Interim Report that the domain name registration should make it clear that contact details are collected and made available only for a limited purpose.<sup>62</sup> Many commentators<sup>63</sup> considered such a requirement to be an essential safeguard, and ICANN's Statement of Registrar Accreditation Policy has adopted it<sup>64</sup> in requiring registrars to provide notice to each domain name holder stating the purposes for which data are collected from the applicant concerning natural persons and the intended recipients or categories of recipients of such data.

89. In the WIPO Interim Report, the limited purpose of the collection and availability of contact details was described as the purposes of the transaction of registration and of facilitating contact with the domain name holder where there is an allegation of infringement of an intellectual property right. A number of commentators argued that this description was too narrow, insofar as other legitimate reasons existed for seeking access to the contact details beyond the allegation of infringement of intellectual property rights (for example, a third party may wish to have the contact details of a domain name holder to explore the possibility of a voluntary transfer of the registration for consideration, or to explore cooperation in respect of a website). The objective of the limitation of purpose is to prevent practices that might constitute an unwarranted intrusion into the domain name holder's privacy, such as data mining, where an attempt is made to download significant parts of a database, spamming or unsolicited advertising. ICANN's Statement of Registrar Accreditation Policy does not delimit the purposes for which data may be collected and made available, but requires notification of the purposes that a registrar defines, and consent by the domain name applicant to those purposes. We endorse this approach, which emphasizes proper notice and consent as the safeguards to privacy.

90. *It is recommended that:*

*(i) contact details be collected and made available for limited purposes;*

*(ii) the domain name registration agreement describe and provide clear notice of the purposes of the collection and availability of contact details and the domain name applicant consent to collection and availability for such purposes; and*

*(iii) registrars adopt reasonable measures to prevent predatory use of data beyond the stated purposes in the domain name registration agreement, such as the mining of a database for contact details of domain name holders for use in advertising or sales promotion.*

---

### Requirements of Use

91. The possibility of including in the domain name registration agreement a requirement that the applicant state that it has a bona fide intention to use the domain name was discussed in the WIPO Interim Report.<sup>65</sup> No recommendation for the inclusion of such a requirement was made in the Interim Report, because of the absence of agreed standards as to what constitutes use and the difficulty of verifying whether use has occurred. Further comments on the issue were requested.

92. Many commentators agreed that statements of use were of limited value in the context of the DNS.<sup>66</sup> Some representatives of the intellectual property community, however, believed that a requirement of a statement of intention to use, together with a representation that the domain name was not being registered for the sole purpose of re-sale, would help discourage domain name abuse.<sup>67</sup>

93. It is difficult to see how any requirement of a statement of intention to use or representation that a registration was not for the sole purpose of re-sale could be effectively enforced. Furthermore, there are circumstances in which it might be considered to be entirely legitimate to register a domain name and to hold it without “use” for an indefinite period. An individual might, for example, wish to register a domain name corresponding to his or her child’s name without intending that it be used until some future date. Rather than requiring that an intention to use be stated, we consider that evidence of registration without any use, particularly in relation to a number of domain names that correspond to the intellectual property rights of others, is pertinent for the purpose of assessing whether registrations should be cancelled because they are abusive. Non-use, especially coupled with offers to re-sell and other appropriate evidence, is better dealt with in the context of the administrative procedure for cancellation of abusive registrations discussed in the next chapter, than by encumbering the registration procedure.

*94. It is not recommended that the domain name registration agreement contain a statement of bona fide intention to use a domain name.*

### Payment for Registration

95. Several vices are perceived as flowing from the lack of rigor that has prevailed in enforcing the requirement of payment of the registration fee for a domain name. Non-enforcement of the requirement can lead to the hoarding of names which, by virtue of the first-come, first-served principle of registration, places the registrant in a position to offer the names for sale to others who might have rights or interests in the names. In the WIPO Interim Report, it was recommended that a domain name should not be activated by a registration authority unless it was satisfied that payment of the registration fee had been received.<sup>68</sup> This draft recommendation received the support of virtually all commentators.<sup>69</sup> It has also been reflected in ICANN’s Statement of Registrar Accreditation Policy, which, in its most recent

amended form, suggests that charge to a credit card or other mechanisms providing reasonable assurances of payment will be considered sufficient.<sup>70</sup>

*96. It is recommended that a domain name not be activated by the registrar unless and until it is satisfied that payment of the registration fee has been received.*

### Re-registration Fees

97. In the WIPO Interim Report it was recommended that domain name registrations be for a limited period and subject to the payment of a re-registration fee, and that failure to pay the re-registration fee within the time specified in a second notice or reminder should result in the cancellation of the registration.<sup>71</sup> There was wide support for this recommendation, which was perceived as a useful measure to ensure that registrations are maintained by those with an interest in maintaining an active site and to avoid the hoarding of registrations for speculative purposes.<sup>72</sup>

*98. It is recommended that all domain name registrations be for limited periods and be subject to the payment of a re-registration fee and that failure to pay the re-registration fee within the time specified in a second notice or reminder result in the cancellation of the registration.*

### Waiting Periods

99. The possibility of a waiting period prior to the activation of a domain name registration has been discussed throughout the whole period during which the re-organization of the DNS has been under discussion. The purpose of such a waiting period would be to allow those who oppose the registration of a domain name on the basis that it constitutes an infringement of their rights the opportunity to take measures to stop the activation of the domain name. A waiting period has, however, been perceived as being at odds with one of the great strengths of the Internet, namely, the speed with which activity can occur.

100. In the WIPO Interim Report, it was recommended that a waiting period should not be required prior to the activation of a domain name.<sup>73</sup> The clear majority of commentators agreed with this position.<sup>74</sup> A number of them emphasized that a waiting period would not only cause delay, but could also drive up the cost of the registration of domain names.

101. In the Interim Report, it was also suggested that the concerns of those who favored a waiting period could be addressed through an expedited alternative dispute-resolution procedure for suspension of a domain name registration. This possibility is discussed in the next chapter, which deals with dispute resolution.

*102. It is not recommended that waiting periods be required prior to the activation of the domain name.*

### Searches Prior to Registration

103. The WIPO Interim Report recommended that the performance of a prior search for potentially conflicting trademarks should not be a condition for obtaining a domain name registration.<sup>75</sup> Almost unanimously, commentators agreed with this recommendation, whether searches were to be required to be carried out by the registration authorities or by the domain name applicants themselves.<sup>76</sup> Particularly in an international context, the requirement of searches prior to the registration of a domain name was generally considered to be unrealistic and conducive to unnecessary delays in the registration process.<sup>77</sup>

104. At the same time, many commentators stressed the importance of encouraging voluntary domain name and trademark searches,<sup>78</sup> on the part of prospective domain name applicants, to verify that the domain name that they intend to register was unencumbered and did not infringe upon the intellectual property rights of any third party.<sup>79</sup> It was noted that a range of commercial and public search services existed for both domain names and trademarks.<sup>80</sup> These commentators urged the inclusion, in the domain name application, of language encouraging voluntary searches.

*105. It is not recommended that domain name registrations be made conditional upon a prior search of potentially conflicting trademarks, but it is recommended that the domain name application contain appropriate language encouraging the applicant to undertake voluntarily such a search.*

### Representations in the Domain Name Registration Agreement

106. The WIPO Interim Report recommended that the domain name registration agreement should contain a representation by the applicant that, to the best of its knowledge and belief, the registration of the domain name does not interfere with or infringe the intellectual property rights of another party and a representation that the information provided by the applicant is true and accurate.<sup>81</sup> The purpose of such representations is to alert domain name applicants to the possibility of conflicting rights of intellectual property owners and to contribute to the reduction of tension between domain name registrations and intellectual property rights.<sup>82</sup> The representations serve the ancillary purposes of protecting the registration authority from liability for contributory infringement and, where furnished inaccurately and in deliberate bad faith with knowledge of their inaccuracy, of providing a basis for liability or breach of contract on the part of the domain name holder.

107. This recommendation received broad support.<sup>83</sup> Certain commentators, however, were of the view that the representation would place an unreasonable burden on domain name registrants, since it was virtually impossible for them to verify on a worldwide basis whether a registration would be infringing.<sup>84</sup> We consider that this latter view does not take into account the nature of the representation. It is not an unqualified representation that a domain name registration does not infringe the intellectual property rights of others. It is a representation that the registration does not, to the best of the applicant's knowledge and belief, infringe the intellectual property rights of others.

108. ICANN's Statement of Registrar Accreditation Policy requires a representation from the domain name applicant that extends beyond the intellectual property rights of third parties.<sup>85</sup> It requires the applicant to represent that, to the best of its knowledge and belief, neither the registration nor the manner in which it is directly or indirectly used infringes the legal rights of a third party. We consider this formulation to be superior to the one contained in the WIPO Interim Report. We confine our final recommendation, however, to the scope of the WIPO Process, namely, intellectual property rights, while recognizing the additional concerns which ICANN is addressing in its broader formulation.

*109. It is recommended that the domain name registration agreement contain the following representations:*

*(i) a representation that, to the best of the applicant's knowledge and belief, neither the registration of the domain name nor the manner in which it is to be directly or indirectly used infringes the intellectual property rights of another party; and*

*(ii) a representation that the information provided by the domain name applicant is true and accurate.*

### Submission to Jurisdiction and to Alternative Dispute Resolution Procedures

110. Chapter 3 discusses the question of litigation and dispute resolution and makes certain recommendations in relation to each. Since these recommendations, if adopted, require implementation by agreement at the stage of the conclusion of the registration agreement, their consequence for the content of the registration agreement is recorded here.

*111. It is recommended that the registration agreement contain an agreement on the part of the domain name applicant to submit to the jurisdiction of particular courts, as detailed in*

---

*Chapter 3, and to submit to the alternative dispute-resolution procedure detailed in Chapter 3.*

## MEASURES TO DEAL WITH INACCURATE AND UNRELIABLE INFORMATION

112. In the WIPO Interim Report, three measures were discussed as means of dealing with contact details that proved to be inaccurate and unreliable.

### Verification of Contact Details by the Registrar

113. The Interim Report recognized that registrars should not be burdened with the task of verifying in any comprehensive way the accuracy and reliability of the contact details of domain name holders, since this would be likely to lead to unnecessary additional time and cost in the registration process.<sup>86</sup> It requested, however, further comments on two automated devices for achieving a measure of verification: (i) the use of on-line data validation mechanisms in real time to ensure that a minimum of details were provided, and (ii) the automatic sending of an e-mail communication to the domain name applicant to verify the operational status of the e-mail address given by it.

114. These measures were considered by commentators to be useful and to reflect good practices for automated registration systems. Some commentators suggested further that the format of a US zip code could be automatically validated and correlated to the area codes provided for voice telephone and facsimile numbers, and that e-mails could be sent periodically to the accounts provided by domain name holders to verify their continued currency.<sup>87</sup>

115. We consider that the additional suggestions indicate that the range of automated solutions for data verification is extensive and is likely to evolve further. We therefore confine our recommendation to the encouragement of the use by registrars of such data verification procedures in the registration process.

*116. It is recommended that registrars should be encouraged to adopt reasonable automated procedures to verify data submitted by domain name applicants, such as on-line data validation mechanisms and the sending of a confirmation e-mail to the accounts provided by domain name applicants.*

---

Requirement that Inaccurate and Unreliable Contact Details Constitute a Material Breach of the Domain Name Registration Agreement

117. In the Interim Report, it was pointed out that the purpose of requiring the provision of contact details would be frustrated if no sanction existed for the provision of inaccurate and unreliable information which did not permit contact to be established with the domain name holder. The appropriate sanction in such circumstances is the cancellation of the registration. In order to provide the basis for the imposition of this sanction, it was recommended that the domain name registration agreement contain an agreed term that inaccurate and unreliable information in the agreement should constitute a material breach of the contract and be a basis for cancellation of the domain name by the registrar.

118. Commentators broadly supported this recommendation.<sup>88</sup> ICANN's Statement of Registrar Accreditation Policy adopts the recommendation, with the additions that the wilful provision of inaccurate or unreliable information or the wilful failure promptly to update information shall constitute a material breach of the registration agreement and be a basis for cancellation of the registration.<sup>89</sup> We consider the addition relating to the failure to update information to be an improvement of the draft recommendation in the WIPO Interim Report. We think that the requirement that the provision of inaccurate or unreliable information, or the failure to update it, be wilful is, however, problematic. In the next section, it is recommended that a procedure should be available to cancel registrations where contact cannot be established with the domain name holder. We think that the efficiency of this procedure would be jeopardized if it were necessary to show that the inaccuracy or unreliability of information resulted from the wilful behavior of the domain name holder. We think also that the domain name holder is protected against abuse of this procedure and cancellation for merely clerical errors or oversights, since it is unlikely that clerical errors or oversights would cause all the information provided to be inaccurate or unreliable so that it was impossible to contact the domain name holder.

*119. It is recommended that the domain name registration agreement contain a term making the provision of inaccurate or unreliable information by the domain name holder, or the failure to update information, a material breach of the registration agreement and a basis for cancellation of the registration by the registration authority.*

Procedure for Cancellation of Registrations where Contact Cannot be Established

120. In the WIPO Interim Report, the means of implementing a sanction for breach of the domain name registration agreement through the provision of inaccurate and unreliable contact details were discussed. Two possibilities were considered: first, an adjudicated procedure in which an independent neutral would render a decision upon a complaint by an interested third party that the third party was unable to establish contact with a domain name

---

holder because the contact details were inaccurate and unreliable; and, secondly, a notification procedure to the registrar, which, upon verification by the registrar of the inability to establish contact with the domain name holder, would cancel the registration.

121. The majority of commentators supported the notification and take-down procedure. Some commentators cautioned that it should be applied reasonably in order to avoid domain name holders being penalized through inadvertence (for example, during an absence on vacation).<sup>90</sup> We agree with these latter concerns, but consider that it will be a rare instance that all contact details are considered inaccurate and unreliable owing to vacation. Nevertheless, it is entirely appropriate that proper safeguards exist to ensure that the procedure is not abused.

122. It is considered that the procedure for cancellation of a domain name registration should be available only where a third party serves a notification upon the registrar alleging: (i) that the domain name registration infringes an intellectual property right; and (ii) that contact cannot be established with the domain name holder because the contact details are inaccurate and unreliable. The notification should include the following elements:

- The notification should be in writing and have an electronic or physical signature by the third party complainant;
- The notification should include the third party's own contact details, including name, postal address, voice telephone number, facsimile number and e-mail address;
- The notification should include a statement that the third party has a good faith belief that the registration and use of the domain name infringes its intellectual property right;
- The notification should identify the domain name and the contact details that were relied upon to attempt to contact the domain name holder;
- The notification should include a statement that the third party has made reasonable efforts over a reasonable period of time to contact the domain name holder using the contact details that were supplied by the domain name holder in the application (postal address, voice telephone number, facsimile number and e-mail address); and
- The notification should include a statement that the third party has a good faith belief that: (i) the contact details are inaccurate and unreliable, and (ii) no response from the domain name holder will be forthcoming within a reasonable period.

Upon receipt of the notification, the registrar should independently endeavor to contact the domain name holder using the contact details that have been supplied. If the registrar is

unable to establish contact within a reasonable period of time, the domain name registration should be automatically cancelled.

*123. It is recommended that a take-down procedure be implemented whereby, upon service of a notification by an interested third party containing the details set out in paragraph 122, above, and upon independent verification of the unreliability of the contact details in question, the registrar would be required to cancel the corresponding domain name registration.*

#### THE PROBLEM OF UNIQUENESS: TECHNICAL MEASURES FOR COEXISTENCE OF SIMILAR NAMES

124. For operational reasons, a domain name is a unique address. This characteristic creates the difficulty that common words that form part of marks can be coveted as domain names by a number of different persons or enterprises. The difficulty is exacerbated in undifferentiated domains, since similar marks with common elements can coexist in relation to different classes of goods or services without confusion, whereas only one of the owners may use the mark or the common element alone as a domain name in a large undifferentiated domain. Examples of such common elements are “national,” “united” or generic descriptions like “telecom.”<sup>91</sup>

125. There are several means that can be used to overcome the difficulty of uniqueness. Directory and listing services assist in ensuring that an interested person can locate the exact address that it is seeking, and many commentators supported the further development of such services.<sup>92</sup> The gateway or portal page is also a measure that finds widespread support.<sup>93</sup> Under such a gateway, a list of names using a common element is produced with links to the various addresses and information to distinguish the addresses and their owners from each other.<sup>94</sup> These measures are deployed under the INternet ONE system,<sup>95</sup> a directory service with a shared name depository, which enables entities sharing common elements in domain names to coexist on the Internet.

126. Measures which allow coexistence while providing users with the information to distinguish between the owners of the similar names represent a viable and useful way of reducing conflict. They are, however, voluntary measures that parties can choose as a means of resolving an intractable shared desire for the same name. They can also constitute a recommended solution for the consideration of such parties within the context of litigation or an alternative dispute resolution procedure such as mediation.

127. The WIPO Interim Report noted that there was resistance to making such measures compulsory.<sup>96</sup> No recommendation was made for their compulsory adoption. This position was broadly supported in the comments received on the Interim Report.<sup>97</sup> Many owners of

marks clearly wish to preserve their unique identity and do not wish to countenance sharing it, even through a portal, with another.

*128. It is not recommended that portals, gateway pages or other such measures be compulsory in the event of competing claims to common elements of an address, but users are encouraged to consider carefully the advantages of such measures as means of finding a solution to a good faith shared desire to use common elements of marks as domain names.*

---

<sup>31</sup> See Comment of Government of India, Department of Industrial Development: Ministry of Industry (November 6, 1998 – RFC-2); Comment of International Intellectual Property Alliance (November 6, 1998 – RFC-2); Comment of Ms. Sally Abel of International Trademark Association (San Francisco Consultation); Comment of MARQUES (November 6, 1998 – RFC-2); Comment of Motion Picture Association of America (November 6, 1998 – RFC-2); Comment of Mr. Krishna of Andhra Pradesh Technology Services (Hyderabad Consultation); Comment of Ms. Shelley Hebert of Stanford University (San Francisco Consultation); Comment of Ms. Marilyn Cade of AT&T (Washington Consultation – 1998); Comment of Ms. Sarah Deutsch of Bell Atlantic (Washington Consultation - 1998); Comment of The Chanel Company (November 4, 1998 – RFC-2); Comment of Ms. Anne Gundelfinger of Intel (San Francisco Consultation); Comment of Mr. Neil Smith of Limbach & Limbach (San Francisco Consultation); Comment of Ms. Susan Anthony of MCI Worldcom (Washington Consultation – 1998); Comment of Viacom (October 1, 1998 – RFC-2). See also the discussion in Chapter 5.

<sup>32</sup> As of the date of this Report, there are more than 7,180,000 domain names registered, including approximately 4,500,000 in the top-level domain .com alone. New domain name registrations in all top-level domains are running at a rough average of over 21,000 per week. Further information and statistics about domain name registrations are available at the website of NetNames Ltd., (see <http://www.netnames.com>).

<sup>33</sup> “Registration authority” is used to refer to those entities that are involved in the day-to-day administration and management of certain portions of the domain name system (DNS), and in particular are concerned with: (i) the delegation or assignment of portions of the name space commonly known as the second-level (or sub-) domains of top-level domains, or (ii) registering domain names and dealing directly with domain name applicants. The term “registration authority” as used in this Report may encompass in certain contexts the “registry” and the “registrar,” as those terms are used in the White Paper. WIPO takes no position on the appropriate division of administrative and management responsibilities among the chain of authorities in the DNS, as this is a subject properly for ICANN’s consideration.

<sup>34</sup> See Comment of European Community and its Member States (March 19, 1999 – RFC-3); Comment of KPMG (March 23, 1999 – RFC-3); Comment of MCI WorldCom (March 19, 1999 – RFC-3); Comment of British Telecommunications (March 19, 1999 – RFC-3); Comment of Time Warner (March 13, 1999 – RFC-3); Comment of American Intellectual Property Law Association (March 12, 1999 – RFC-3); Comment of European Internet Service Providers Association (March 12, 1999 – RFC-3); Comment of America Online (March 12, 1999 – RFC-3); Comment of International Trademark Association (March 12, 1999 – RFC-3); Comment of Markenverband (March 4, 1999 – RFC-3). The recommendation is also reflected in ICANN’s Statement of Registrar Accreditation Policy, in which it is provided that the registrar must require all domain name applicants to enter an electronic or paper registration agreement (See ICANN Statement of Registrar Accreditation Policy, Art. III.J.7 (March 4, 1999), at [http://www.icann.org/policy\\_statement.html](http://www.icann.org/policy_statement.html)).

<sup>35</sup> See Comment of International Chamber of Commerce (March 18, 1999 – RFC-3); Comment of AT&T (March 17, 1999 – RFC-3); Comment of Bell Atlantic (February 26, 1999 – RFC-3).

### 3. RESOLVING CONFLICTS IN A MULTIJURISDICTIONAL WORLD WITH A GLOBAL MEDIUM: A UNIFORM DISPUTE-RESOLUTION POLICY

129. As indicated in the previous Chapter, there is widespread support for the adoption of a number of practices in the administration of domain name registrations as a means of reducing friction between such registrations and intellectual property rights. There also appears to be widespread support, however, for the view that those practices should not interfere with the functionality of the DNS as a cheap, high-speed, high-volume system for obtaining an Internet address. For this reason, as mentioned previously, such measures as requiring registration authorities to search applications against previously registered trademarks, which might reduce friction even further, attracted little or no support.

130. While the vast majority of domain names are registered in good faith for legitimate reasons, even with enhanced practices designed to reduce tension, disputes are inevitable. Not more than five years ago, before graphical Internet browsers became popular<sup>98</sup> and there was little or no commercial activity on the Internet, a trademark infringement stemming from the registration and use of a domain name was not regarded as a serious issue. As long as no significant business activity was taking place on the Internet, any potential for harm was offset by the near invisibility of the network – at least when compared to infringements in mainstream media such as television, the press and billboards. This changed, however, when business investments, advertising and other activities increased on the Internet, and companies began to realize the problems that may occur when a website using their trademark as a domain name was operated in an infringing manner without permission. Disputes have now become numerous, while mechanisms for their settlement, outside of litigation, are neither satisfactory nor sufficiently available.<sup>99</sup>

131. Intellectual property right owners have made it clear throughout the WIPO Process that they are incurring significant expenditures to protect and enforce their rights in relation to domain names.<sup>100</sup> Existing mechanisms for resolving conflicts between trademark owners and domain name holders are often viewed as expensive, cumbersome and ineffective. The sheer number of instances precludes many trademark owners from filing multiple suits in one or more national courts. Moreover, registration authorities have frequently been named as parties to the dispute in litigation, exposing them to potential liability and further complicating their task of running the domain name registration process.

132. Disputes over domain name registrations and intellectual property rights present a number of special characteristics:

(i) Because a domain name gives rise to a global presence, the dispute may be multijurisdictional in several senses. The global presence may give rise to alleged infringements in several jurisdictions, with the consequence that several different national courts may assert jurisdiction, or that several independent actions must be brought because separate intellectual property titles in different jurisdictions are concerned.

---

(ii) Because of the number of gTLDs and ccTLDs and because each gives the same access to global presence, essentially the same dispute may manifest itself in many TLDs. This would be the case, for example, if a person sought and obtained abusive registrations in many TLDs of a name which was the subject of corresponding trademark registrations held throughout the world by a third party. In order to deal with the problem, the intellectual property owner may need to undertake multiple court actions throughout the world.<sup>101</sup>

(iii) In view of the ease and speed with which a domain name registration may be obtained, and in view of the speed of communication on the Internet and the global access to the Internet that is possible, the need to resolve a domain name dispute may often be urgent.<sup>102</sup>

(iv) A considerable disjunction exists between, on the one hand, the cost of obtaining a domain name registration, which is relatively cheap, and, on the other hand, the economic value of the damage that can be done as a result of such a registration and the cost to the intellectual property owner of remedying the situation through litigation, which may be slow and very expensive in some countries.

(v) The registration authority has often been joined in domain name disputes because of its role in the technical management of the domain name.<sup>103</sup>

133. Because of the special features of domain name disputes, considerable support has been expressed for the development of expeditious and inexpensive dispute-resolution procedures, which are comprehensive in the sense of providing a single means of resolving a dispute with multiple jurisdictional manifestations.<sup>104</sup> At the same time, discussions and consultations have revealed a natural level of discomfort in placing complete trust in a system which is new and which has the capacity to affect valued rights.<sup>105</sup> There has been, in consequence, in some quarters, a reluctance to abandon all possibilities of resort to litigation as a result of the adoption of new procedures, at least in the first stage before experience of a new system.

134. In the WIPO Interim Report, it was stated that, in considering options for dispute resolution, the draft recommendations of that report were guided by the overall consideration of finding a balance between, on the one hand, the preservation of the long-tried right to seek redress through litigation, and, on the other hand, the desire to proceed to develop a workable system that can fairly, expeditiously and cheaply resolve the new type of disputes that arise as a consequence of the arrival of the Internet. The majority of commentators found this formulation to be too broad insofar as the draft recommendations suggested that domain name applicants be required to submit to a mandatory administrative dispute-resolution procedure in respect of any intellectual property dispute arising out of the domain name registration.<sup>106</sup> In particular, those commentators considered, in relation to such a comprehensive procedure:

(i) that it might unfairly expose domain name applicants acting in good faith to costs in responding to complaints brought against them;

(ii) that it might lead to the harassment of domain name holders acting in good faith by trademark owners seeking to acquire a domain name that is being used in a way which did not infringe the trademark owner's rights ("reverse domain name hijacking");

(iii) that it would be preferable to commence a new procedure in a less ambitious way and with reference to disputes concerning the known and certain forms of offensive behavior, rather than with respect to all forms of disputes;

(iv) that, in opening the procedure to all forms of dispute, the Interim Report failed to address specifically the most egregious problem, namely, the problem of "cybersquatting" or deliberate, bad faith, abusive registrations of domain names in violation of others' rights;

(v) that, because of the lack of international harmonization in the application of trademark laws, it would be preferable, at least initially, to avoid mandatory submission to the procedure in respect of disputes over competing, good faith rights to the use of a name.

135. In view of the weight of opinion against mandatory submission to an administrative procedure in respect of any intellectual property dispute arising out of a domain name registration, the final recommendations of the WIPO Process contain two major changes in respect of the suggested administrative dispute-resolution procedure:

(i) First, the scope of the procedure is limited so that it is available only in respect of deliberate, bad faith, abusive, domain name registrations or "cybersquatting" and is not applicable to disputes between parties with competing rights acting in good faith.

(ii) Secondly, the notion of an abusive domain name registration is defined solely by reference to violations of trademark rights and not by reference to violations of other intellectual property rights, such as personality rights.

136. The discussion and the recommendations in the remainder of this Chapter are organized under the following headings:

- achievable amelioration to the use of court litigation as a means of resolving disputes;
- guiding principles in the design of the administrative dispute-resolution policy;
- mandatory administrative procedure for abusive registrations;
- the availability of voluntary arbitration; and
- the role of mediation.

---

## COURT LITIGATION

137. Court litigation is governed by the civil law of sovereign States. The WIPO Process, which will result in recommendations to the private, not-for-profit corporation that will manage the DNS (ICANN), is not properly concerned with matters that fall within the purview of those civil laws, except insofar as those laws, in accordance with recognized international principles, leave open areas of choice.

### Preservation of the Right to Litigate

138. The first area of such choice, where the recommendations of the Process might have an influence, is the abandonment of the right to litigation in respect of a dispute, which is recognized in the majority of countries as the effect of agreeing to submit a dispute to arbitration. That effect of an arbitration agreement is recognized in the arbitration laws of countries and in the obligations assumed by more than one hundred countries by becoming party to the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards of 1958 (the New York Convention).<sup>107</sup> If submission to arbitration by domain name applicants in respect of any dispute relating to the domain name registration were, for example, to be a requirement of the domain name registration agreement, the effect would be to require the domain name applicant to abandon the right to litigate such a dispute if called to arbitration by the other party to the dispute. As mentioned above, however, the discussions and consultations in the WIPO Process indicated considerable reluctance to subscribe to such a solution, at least in the initial stage of the new management of the DNS.<sup>108</sup>

139. The WIPO Interim Report recommended that any dispute-resolution system alternative to litigation that might be adopted for domain name disputes should not deny the parties to the dispute access to court litigation. This recommendation met with the support of virtually all commentators.<sup>109</sup>

*140. It is recommended that any dispute-resolution system, which is alternative to litigation and to which domain name applicants are required to submit, should not deny the parties to the dispute access to court litigation.*

### Submission to Jurisdiction

141. A second area of choice, based on widely accepted principles, is the choice of submission to the jurisdiction of the courts in one or more locations for the resolution of a dispute. There has been broad support throughout the WIPO Process for requiring the domain name applicant to exercise such a choice in the domain name registration agreement in order to create greater certainty in relation to the venue in which litigation can be brought, and in order to ensure a venue in a country in which intellectual property rights are respected.<sup>110</sup>

142. While a submission to jurisdiction can create greater certainty, it should not have the effect of imposing the exclusive possibility of litigation in venues that are perhaps remotely connected to the allegedly infringing activity that is taking place through a domain name or to the location of the domain name applicant. Furthermore, a submission to jurisdiction by the domain name applicant should not inhibit a third party's freedom to seek to obtain jurisdiction over a domain name holder in any location where there may be an independent and sufficient nexus to support local jurisdictional requirements. On this basis, an agreement to submit to jurisdiction in a domain registration agreement should be without prejudice to the possibility of establishing jurisdiction under normally applicable law and should not exclude that possibility. The effect of an agreement to submit to particular jurisdictions in the domain name registration agreement would thus be to forgo the possibility of contesting the jurisdiction of courts over a dispute arising out of the domain name registration in those particular locations.

143. The question arises as to which locations ought to be so designated in the submission to jurisdiction by the domain name applicant in the domain name registration. Several possibilities have been mentioned in this respect, namely, the location of the registry, the location of the domain name database, the location of the registrar and the location of the "A" root server.<sup>111</sup> It is considered that the choice of appropriate venue should, on the one hand, strike the right balance between the interests of the domain name holder and any potential third party complainant, and, on the other hand, be consistent with fundamental concerns of fairness, which provide the foundation for existing jurisdictional principles.<sup>112</sup>

144. In the WIPO Interim Report, it was recommended that the domain name applicant should be required, in the domain name registration agreement, to submit, without prejudice to other potentially applicable jurisdictions, to the jurisdiction of (i) the country of domicile of the applicant, and (ii) the country where the registration authority was located. Comments expressed on this recommendation were divided between those who considered that it did not go sufficiently far in attributing possible jurisdiction,<sup>113</sup> and those who considered that it was too extensive in attributing jurisdiction.<sup>114</sup> In the former category were those who considered that domain name applicants should also be required to submit to jurisdiction at the locations of the registry and of the "A" root server. Those in the latter category were concerned by the ambiguity of the expression "registration authority," a term used in the Interim Report to include both registrars and registries in deference to the decisions that ICANN was yet to take on the structure of registrar and registry services. Certain other commentators misread the recommendation, thinking that it sought to attribute exclusive jurisdiction to the locations of the domicile of the applicant and the registration authority, even where jurisdiction could be asserted and attributed on the basis of an independent nexus elsewhere.<sup>115</sup>

145. ICANN's Statement of Registrar Accreditation Policy contains a provision on jurisdiction that is substantially similar to the draft recommendations in the WIPO Interim Report. It requires domain name applicants to submit to the jurisdiction of the courts of the location (i) of the applicant's domicile, and (ii) of the registrar (as opposed to registration authority).<sup>116</sup>

146. We agree with the formulation in ICANN’s Statement of Registrar Accreditation Policy, subject to the reservation that, until such time as registrars are accredited on a widespread geographical basis, the submission to jurisdiction in the location of the registrar may work to the inconvenience of applicants located in countries distant from accredited registrars. This situation is, however, expected to be transient and short-lived. Moreover, such applicants always have the possibility of seeking a domain name registration in a ccTLD if they are uncomfortable with the requirement of submission to jurisdiction in the location of the registrar.

*147. It is recommended that the domain name applicant be required, in the domain name registration agreement, to submit, without prejudice to other potentially applicable jurisdictions, to the jurisdiction of the courts of:*

*(i) the country of domicile of the domain name applicant; and*

*(ii) the country where the registrar is located.<sup>117</sup>*

#### GUIDING PRINCIPLES FOR THE DESIGN OF THE ADMINISTRATIVE DISPUTE-RESOLUTION POLICY

148. While, as mentioned above, there is general agreement that the right to litigate a domain name dispute should be preserved, court litigation may have several limitations as a means of dealing with such disputes. In particular, because of the multijurisdictional character of many such disputes, court actions in several countries may be necessary in order to obtain an effective solution.<sup>118</sup> In addition, in some countries, the court system suffers from dysfunction, with the consequence that decisions cannot be obtained within a period of time which is commensurate with the speed with which damage can be done by virtue of an infringing domain name. As indicated above, the cost of litigation stands in stark contrast to the cost of obtaining a domain name registration. Finally, there is a possibility that, with a number of different courts in several countries being involved with domain name disputes, inconsistent decisions may be given or inconsistent principles concerning the relationship between domain names and intellectual property rights may emerge from such decisions.

149. In addition to the perceived limitations of litigation, a number of commentators have expressed dissatisfaction with current dispute-resolution policies in the gTLDs.<sup>119</sup> One of their important deficiencies results from their reliance on the ability of the parties to produce certain trademark certificates, without any review of the question of use of the domain name and alleged infringement. These policies are seen as not sufficiently allowing for the

---

consideration of all legitimate rights and interests of the parties (which are not necessarily reflected in a trademark certificate), opening the door to unjust results, including for those who are not trademark owners.<sup>120</sup> In light of these difficulties, a substantial majority of commentators favored the adoption of a form of administrative dispute-resolution more suited to the proper review and consideration of the rights and interests of all parties involved in a dispute.<sup>121</sup>

150. Taking into account these perceived limitations of litigation and current dispute-resolution policies, as well as the comments expressed throughout the WIPO Process concerning the desirable features of the administrative procedure, the recommendations that follow in the remaining part of this Chapter concerning the administrative procedure have been based upon the following principles:

(i) The procedure should permit the parties to resolve a dispute expeditiously and at a low cost.

(ii) The procedure should allow all relevant rights and interests of the parties to be considered and ensure procedural fairness for all concerned parties.

(iii) The procedure should be uniform or consistent across all open gTLDs. If different procedures were available in different domains, there might be a danger of some domains, where procedures are weaker or do not lead to binding, enforceable decisions, becoming havens for abusive registrations. Uniform or consistent procedures, however, do not necessarily mean that the dispute-resolution service provider must be the same for all procedures.

(iv) As indicated above, the availability of the administrative procedure should not preclude resort to court litigation by a party.<sup>122</sup> In particular, a party should be free to initiate litigation by filing a claim in a competent national court instead of initiating the administrative procedure, if this is the preferred course of action, and should be able to seek a de novo review of a dispute that has been the subject of the administrative procedure.

(v) While it is desirable that the use of the administrative procedure should lead to the construction of a body of consistent principles that may provide guidance for the future, the determinations of the procedure should not have (and cannot have) the effect of binding precedent in national courts. It would be up to the courts of each country to determine what weight they wish to attach to determinations made under the procedure.

(vi) In order to ensure the speedy resolution of disputes, the remedies available in the procedure should be restricted to the status of the domain name registration itself and should not, thus, include monetary damages or rulings concerning the validity of trademarks.<sup>123</sup>

(vii) The determination resulting from the procedure should, upon notification, be directly enforced by the relevant registration authority by making, if necessary, appropriate changes to the domain name database.

(viii) Registration authorities should not be involved in the administration of the procedure,<sup>124</sup> other than by implementing determinations made in it (and, perhaps, by supplying any requested factual information about the domain name registration to the dispute-resolution neutral or tribunal).<sup>125</sup>

(ix) A decision by a court of competent jurisdiction, in a country that is party to the Paris Convention for the Protection of Industrial Property<sup>126</sup> or bound by the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS Agreement),<sup>127</sup> which is at variance with a determination resulting from the procedure should, subject to the application of normal principles for the enforcement of judgements, prevail over the administrative determination.

151. Based on these principles, the remaining part of this Chapter recommends that:

(i) A uniform administrative procedure for the cancellation of bad faith domain names registered in deliberate abuse of trademark rights should be available in all open gTLDs.

(ii) Arbitration and mediation, each of which is described and discussed, have a role and should be considered as valuable procedures for the resolution of domain name disputes. However, for different reasons in respect of each procedure, it is recommended that neither should be a mandatory part of a dispute-resolution policy for registration authorities. Rather, they should be available for parties to choose on an optional basis, where they consider the circumstances of a dispute appropriate for the use of such procedures.

#### MANDATORY ADMINISTRATIVE PROCEDURE CONCERNING ABUSIVE REGISTRATIONS

152. The present section recommends that a mandatory administrative procedure be adopted uniformly across open gTLDs. It discusses the means of implementing the procedure, its desirable features and its administration.

153. The administrative procedure proposed is an adjudicatory procedure where the neutral decision-maker appointed for the dispute would have the power to impose a binding decision on the parties. The scope of the procedure would be limited to cases of abusive registrations (or cybersquatting), as defined below, and would not be available for disputes between parties with competing rights acting in good faith. The procedure would allow for a neutral venue in the context of disputes that are often international in nature, and would be conducted in accordance with procedural rules laws which take account of the various legal procedural traditions around the world. The procedure would not exclude the jurisdiction of the courts. A party would be able to pursue a claim in a national court, or seek the ruling of a national court in respect of matters that had already been submitted to the administrative dispute-resolution procedure. It is to be hoped, however, that with experience and time, confidence will be built up in the credibility and consistency of decisions made under the

---

procedure, so that the parties would resort less and less to litigation. The decisions taken under the procedure would be made available publicly.

#### Uniform Availability of the Procedure in the Open gTLDs

154. In the WIPO Interim Report, it was recommended that the administrative dispute-resolution procedure should be available uniformly in all open TLDs. Subject to reservations concerning the scope of the procedure, which have been discussed above and are further dealt with below, this recommendation received wide support.<sup>128</sup>

155. Some commentators sought clarification as to the meaning of “uniform.” We mean the following in this respect:

(i) The procedure should be available in all open gTLDs. The possible adoption of the procedure in open ccTLDs is discussed in Annex VIII. At least in the open gTLDs, the non-availability of the procedure in any gTLD would lead to uneven protection for intellectual property rights and could cause any gTLD in which the procedure was not available to become a haven for predatory practices in respect of intellectual property rights.

(ii) The scope of the procedure and the procedural rules pursuant to which it is conducted should be the same in all open gTLDs. Again, differences in the scope of the procedure in the open gTLDs could lead to uneven protection for intellectual property rights.

156. We discuss below the means of implementing the procedure uniformly in the open gTLDs, where it is recommended that a uniform policy on administrative dispute-resolution be adopted by ICANN and that domain name applicants be required to submit to the administrative procedure under that policy. ICANN’s Statement of Registrar Accreditation Policy envisages the possibility of requiring domain name holders to submit to such a policy.<sup>129</sup>

*157. It is recommended that a policy to make available a uniform administrative dispute-resolution procedure be adopted for all open gTLDs.*

#### Mandatory Nature of the Procedure

158. In the WIPO Interim Report, it was recommended that the administrative procedure be mandatory in the sense that each domain name applicant would, in the domain name registration agreement, be required to submit to the procedure if a claim was initiated against it by a third party. If submission to the procedure were to be optional for applicants, it was considered that the adoption of the procedure would not result in significant improvement on the present situation, since those persons who register domain names in bad faith in abuse of the intellectual property rights of others would be unlikely to choose to submit to a procedure that was cheaper and faster than litigation, but would instead prefer to leave the legitimate

---

owners of intellectual property rights with the possibility only of initiating court litigation, with its attendant costs and delays.

159. Most commentators supported the mandatory nature of the procedure,<sup>130</sup> although a number expressed a preference for a voluntary procedure. Furthermore, as signaled in the Interim Report, concerns were raised that mandatory submission to a comprehensive procedure covering all intellectual property disputes relating to a domain name registration might raise questions in certain jurisdictions regarding validity and enforceability, particularly in light of consumer protection laws, due process considerations and the fact that such a submission purports to create rights for a party who is not privy to the domain name registration agreement.

160. It is considered that concerns about the mandatory nature of the procedure can be greatly alleviated, if not removed entirely, by confining the scope of the procedure to abusive registrations or cybersquatting, as proposed in the next section of this Chapter. Since the procedure would apply only to egregious examples of deliberate violation of well-established rights, the danger of innocent domain name applicants acting in good faith being exposed to the expenditure of human and financial resources through being required to participate in the procedure is removed.

161. Since the procedure will apply only to abusive registrations or “cybersquatting,” we consider that it is essential that the procedure be mandatory. It is highly unlikely that those responsible for such activities would ever submit to the procedure on a voluntary basis.

*162. It is recommended that the domain registration agreement require the applicant to submit to the administrative dispute-resolution procedure whose scope is defined in the next section.*

### The Scope of the Administrative Procedure

163. The WIPO Interim Report discussed in detail the respective advantages and disadvantages of, on the one hand, applying the administrative procedure to any intellectual property dispute arising out of a domain name registration and, on the other hand, limiting the application of the procedure to clear cases of abusive registrations of domain names or “cybersquatting.” The description of those advantages and disadvantages will not be repeated here.

164. The views of commentators on the desirable scope of the administrative procedure were divided. Certain commentators favored the broad approach of opening the procedure to any intellectual property dispute with respect to a domain name registration.<sup>131</sup> In general, they favored the development of a body of administrative law that would, through the procedure, provide an effective international enforcement mechanism for intellectual property rights as an alternative to expensive and time-consuming multijurisdictional litigation.

165. The preponderance of views, however, was in favor of restricting the scope of the procedure, at least initially, in order to deal first with the most offensive forms of predatory practices and to establish the procedure on a sound footing. Two limitations on the scope of the procedure were, as indicated above, favored by these commentators.

166. The first limitation would confine the availability of the procedure to cases of deliberate, bad faith abusive registrations. The definition of such abusive registrations is discussed in the next section.

167. The second limitation would define abusive registration by reference only to trademarks and service marks. Thus, registrations that violate trade names, geographical indications or personality rights would not be considered to fall within the definition of abusive registration for the purposes of the administrative procedure. Those in favor of this form of limitation pointed out that the violation of trademarks (and service marks) was the most common form of abuse and that the law with respect to trade names, geographical indications and personality rights is less evenly harmonized throughout the world, although international norms do exist requiring the protection of trade names<sup>132</sup> and geographical indications.<sup>133</sup>

168. We are persuaded by the wisdom of proceeding firmly but cautiously and of tackling, at the first stage, problems which all agree require a solution. It was a striking fact that in all the 17 consultation meetings held throughout the world in the course of the WIPO Process, all participants agreed that “cybersquatting” was wrong. It is in the interests of all, including the efficiency of economic relations, the avoidance of consumer confusion, the protection of consumers against fraud, the credibility of the domain name system and the protection of intellectual property rights, that the practice of deliberate abusive registrations of domain names be suppressed. There is evidence that this practice extends to the abuse of intellectual property rights other than trademarks and service marks,<sup>134</sup> but we consider that it is premature to extend the notion of abusive registration beyond the violation of trademarks and service marks at this stage. After experience has been gained with the operation of the administrative procedure and time has allowed for an assessment of its efficacy and of the problems, if any, which remain outstanding, the question of extending the notion of abusive registration to other intellectual property rights can always be re-visited.

*169. It is recommended that the scope of the administrative procedure be limited to the abusive registration of domain names, as defined in the next section.*

#### The Definition of Abusive Registration (“Cybersquatting”)

170. Before considering in the next paragraph the definition of abusive registration that it is recommended be applied in the administrative procedure, some explanation should be given of the suggested terminology. In popular terms, “cybersquatting” is the term most frequently used to describe the deliberate, bad faith abusive registration of a domain name in violation of

---

rights in trademarks and service marks. However, precisely because of its popular currency, the term has different meanings to different people. Some people, for example, include “warehousing,” or the practice of registering a collection of domain names corresponding to trademarks with the intention of selling the registrations to the owners of the trademarks, within the notion of cybersquatting, while others distinguish between the two terms. Similarly, some consider “cyberpiracy” to be interchangeable with “cybersquatting,” whereas we consider that the former term relates to violation of copyright in the content of websites, rather than to abusive domain name registrations. Because of the elastic meaning of cybersquatting in popular terminology, we have therefore chosen to use a different term—abusive registration of a domain name—in order to attribute to it a more precise meaning.

171. The definition of abusive registration that we recommend be applied in the administrative procedure is as follows:

(1) The registration of a domain name shall be considered to be abusive when all of the following conditions are met:

(i) the domain name is identical or misleadingly similar to a trade or service mark in which the complainant has rights; and

(ii) the holder of the domain name has no rights or legitimate interests in respect of the domain name; and

(iii) the domain name has been registered and is used in bad faith.

(2) For the purposes of paragraph (1)(iii), the following, in particular, shall be evidence of the registration and use of a domain name in bad faith:

(a) an offer to sell, rent or otherwise transfer the domain name to the owner of the trade or service mark, or to a competitor of the owner of the trade or service mark, for valuable consideration; or

(b) an attempt to attract, for financial gain, Internet users to the domain name holder’s website or other on-line location, by creating confusion with the trade or service mark of the complainant; or

(c) the registration of the domain name in order to prevent the owner of the trade or service mark from reflecting the mark in a corresponding domain name, provided that a pattern of such conduct has been established on the part of the domain name holder; or

(d) the registration of the domain name in order to disrupt the business of a competitor.

172. The cumulative conditions of the first paragraph of the definition make it clear that the behavior of innocent or good faith domain name registrants is not to be considered abusive. For example, a small business that had registered a domain name could show,

---

through business plans, correspondence, reports, or other forms of evidence, that it had a bona fide intention to use the name in good faith. Domain name registrations that are justified by legitimate free speech rights or by legitimate non-commercial considerations would likewise not be considered to be abusive. And, good faith disputes between competing right holders or other competing legitimate interests over whether two names were misleadingly similar would not fall within the scope of the procedure.

173. We consider that the definition given in the preceding paragraph draws on solid foundations in international and national law and in case law.<sup>135</sup>

174. Insofar as international law is concerned, it is noted that both the Paris Convention for the Protection of Industrial Property, to which 154 States are party, and the TRIPS Agreement, by which 134 States are bound, establish obligations for the protection of trademarks. In addition, Article 10*bis* of the Paris Convention establishes an obligation to provide protection against unfair competition. It provides as follows:

“(1) The countries of the Union are bound to assure to nationals of such countries effective protection against unfair competition.

“(2) Any act of competition contrary to honest practices in industrial or commercial matters constitutes an act of unfair competition.

“(3) The following in particular shall be prohibited:

1. all acts of such a nature as to create confusion by any means whatever with the establishment, the goods, or the industrial or commercial activities, of a competitor;
2. false allegations in the course of trade of such a nature as to discredit the establishment, the goods, or the industrial or commercial activities, of a competitor;
3. indications or allegations the use of which in the course of trade is liable to mislead the public as to the nature, the manufacturing process, the characteristics, the suitability for their purpose, or the quantity, of the goods.”

Article 10*ter*(1) of the Paris Convention requires contracting States to assure nationals of other contracting States “appropriate legal remedies effectively to repress all the acts referred to in Articles 9, 10, and 10*bis*.”

175. The case law which has developed in the application of national laws for the protection of trademarks and service marks and for protection against unfair competition also supports the prohibition of the predatory and parasitical practices that would be caught under the definition of abusive registration given above.

176. In applying the definition of abusive registration given above in the administrative procedure, the panel of decision-makers appointed in the procedure shall, to the extent necessary, make reference to the law or rules of law that it determines to be applicable in view

---

of the circumstances of the case. Thus, for example, if the parties to the procedure were resident in one country, the domain name was registered through a registrar in that country and the evidence of the bad faith registration and use of the domain name related to activity in the same country, it would be appropriate for the decision-maker to refer to the law of the country concerned in applying the definition.

*177. It is recommended that:*

*(i) the merits of a complaint under the administrative procedure be decided in accordance with the definition of abusive registration of a domain name set out in paragraph 171, above; and*

*(ii) in applying the definition of abusive registration, the panel of decision-makers shall, to the extent necessary, apply the law or rules of law that it determines to be appropriate in view of all the circumstances of the case.*

### Implementation of the Procedure

178. It is suggested that the administrative procedure be implemented through the adoption by ICANN of a Policy on Dispute Resolution for Abusive Domain Name Registrations. The suggested Policy is set out in Annex IV.

179. At the level of individual domain name holders, as mentioned above, the Policy would be implemented through the domain name registration agreement, which would require the domain name holder to submit to the administrative procedure if a complaint for abusive registration is brought against the holder by a third party.

### Procedural Rules

180. The procedure would be conducted in accordance with procedural rules, which are set out in Annex V. The aim of such rules is twofold: (i) to ensure due process or fairness in the conduct in the procedure so that each party has an equal and adequate opportunity to present its case; and (ii) to inform the parties how the procedure will be conducted, what they will be required to do, when they will be required to do it and what the powers of the decision-maker are. Thus, procedural rules will deal typically with the documentation that the parties are expected to produce, the time limits within which they must produce it, who the decision-maker will be and how he or she will be appointed, what remedies may be granted by the decision-maker and who will supervise the administration of the procedures.

181. The procedural rules are designed to be international, in the sense that they take account of differing legal procedural traditions; simple to follow, since domain name applicants will be required to submit to them; and uniformly applicable, regardless of the dispute-resolution service provider that administers the procedure. The main features of the rules, which take into account the comments made on the discussion of those features in the WIPO Interim Report, are described in the ensuing paragraphs.

#### Remedies Available under the Procedure

182. It has been apparent throughout the WIPO Process that there is a general desire to have a simple and efficient procedure. Moreover, the mandatory requirement that applicants submit to the procedure demands that domain name applicants should be able to understand easily the potential consequences of their submission to the procedure.

183. For these reasons, it seems appropriate that the remedies that could be awarded by the neutral decision-maker be limited to the status of the domain name registration itself and actions in respect of that registration.<sup>136</sup> In other words, monetary damages to compensate for any loss or injury incurred by the owner of an intellectual property as a result of a domain name registration should not be available under the procedure. Such a restrictive approach to remedies would underline the nature of the procedure as an administrative one, directed at the efficient administration of the DNS, which is intended to be complementary to other existing mechanisms, whether arbitration or court procedures. The approach would also accommodate the preferences of a number of commentators for an ADR procedure that was compatible with available judicial remedies.

184. An approach in which remedies were limited to that status of the domain name registration would mean that the remedies available under the procedure would be the cancellation of the domain name registration and its transfer to the third party complainant. Broad support was expressed in favor of these remedies in the comments received by WIPO.<sup>137</sup>

185. The Interim Report requested comments on whether the decision-makers in the procedure should have the power to order other measures concerning the status of the domain name registration that might remove the grounds of the dispute, such as the modification of the domain name registration, re-assignment of the domain name to a different TLD, or the maintenance of a gateway or portal page or other indexing mechanism. Although several commentators were in favor of vesting power in the decision-makers to impose such remedies,<sup>138</sup> most commentators were opposed to such power, considering that such measures might affect the broader business interests and strategies of the parties involved in the dispute and, thus, require careful consideration.<sup>139</sup> While decision-makers could always recommend such alternative measures to the parties involved, they should be implemented only pursuant to voluntary agreement.

186. The question of the initial payment of the costs of the proceedings is discussed below. The ultimate responsibility for the payment of costs is an important control mechanism in

---

relation to the procedure, particularly since the procedure would be limited to cases of abusive registration. If the procedure were available at no cost, frivolous and groundless actions, or actions designed to harass a party, would be encouraged. Similarly, if responsibility for the payment of costs always rested with the complaining party, there would be no disincentive for a bad faith applicant to proceed to try its luck with an abusive registration of a domain name. It is considered, therefore, that the decision-maker should have the discretion, in the decision, to allocate responsibility for payment of the costs of the procedure (which are detailed below) to the winning party, after consideration of all the circumstances of the case. (This discretion would also allow the decision-maker to allocate the costs among the parties in accordance with some other appropriate apportionment.)<sup>140</sup>

187. A number of commentators expressed anxiety about the power of the decision-maker to allocate costs to the winning party. Since the scope of the procedure is now limited to cases of abusive registration, we expect that the power to allocate costs will be broadly supported.

*188. It is recommended that the remedies available under the administrative procedure be limited to:*

*(i) the cancellation of the domain name registration;*

*(ii) the transfer of the domain name registration to the third party complainant;  
and*

*(iii) the allocation of the responsibility for payment of the costs of the proceedings.*

### Expedited Procedure for Suspension of a Domain Name

189. A number of commentators were in favor of the possibility of an expedited application under the administrative procedure, whereby a complainant could obtain a suspension of a domain name registration on short notice pending a final decision on the merits. We consider that the limitation of the scope of the administrative procedure to cases of abusive registration makes this possibility unnecessary. Instead, it is recommended below that all cases should be processed in an expedited manner within a short time frame. In addition, in keeping with the desires to commence the procedure on well-known and well-tried grounds and to have a simple, easily understood procedure, we think that it would be preferable not to add an additional sort of procedure, which might be confusing to domain name holders, at the outset.

---

### Consolidation of Different Claims

190. A number of commentators indicated that one of the difficulties in dealing with domain name disputes was the sheer number of instances in which their rights may be allegedly violated.<sup>141</sup> For example, the trademark “INTEL” might be the subject of an allegedly infringing registration of the domain name “INTLE” or “INTTEL,” or any number of other minor variations producing the same phonetic result. The consequence is that, in order to protect the mark effectively, the owner is obliged to undertake a multiplicity of actions.<sup>142</sup>

191. One legal method for dealing with a multiplicity of similar actions is to permit the consolidation of such actions into one procedure. The question arises, however, as to the extent to which such consolidation should be permitted. Here, several points of reference could be considered in determining the scope of possible consolidation:

(i) the consolidation of all actions brought by the same complainant in respect of domain name registrations held by the same holder in the same TLD that are alleged to infringe the same or different trademark rights;

(ii) the consolidation of all actions brought by the same complainant in respect of domain name registrations held by the same holder in different TLDs that are alleged to infringe the same or different trademark rights; and

(iii) the consolidation of all actions brought by the same complainant in respect of domain name registrations held by different holders in the same or different TLDs that are alleged to infringe the same or different trademark rights.

192. The WIPO Interim Report recommended that the procedural rules provide for the possibility of consolidating, into one procedure, all claims by the same (or affiliated) party in respect of the same domain name holder where the claims relate to the alleged infringement of the same or different intellectual property rights through domain name registrations in any TLD. This recommendation received widespread support, particularly as a means of dealing efficiently with abusive registrations of domain names. Many commentators considered also that consolidation should be permitted in respect of claims against different domain name holders, provided that the complainant was the same party.<sup>143</sup> They drew attention to the fact that abusive registrations often target one mark or group of marks and that the registrations can be placed in the name of different individuals or companies which might be related in business dealings. We consider that this form of consolidation is difficult to achieve legally, since each respondent should legally have a full opportunity to distinguish its own case from that of legally separate persons. However, a de facto consolidation can be achieved by organizing for panels to determine cases in batches (for example, once a week or once a month, as the demand might dictate). Such a method of organizing panels would also have distinct cost advantages and is discussed below.

*193. It is recommended that the procedural rules for the administrative dispute-resolution procedure provide for the possibility of*

---

*consolidating, into one procedure, all claims by the same party in respect of the same domain name holder where the claims relate to the alleged infringement of the same or different trademark or service mark rights through abusive domain name registrations in any open gTLD.*

### Relationship with National Courts

194. The relationship between the administrative procedure and the jurisdiction of the courts has been discussed in the previous sections of this Report. The recommendations made, in this regard, in the Interim Report were widely supported.

195. Several commentators sought clarification of the effect on the procedure if litigation were commenced after the initiation of the administrative procedure. We consider that the best approach in these circumstances is to leave the panel the discretion to decide, in light of the circumstances, whether to suspend the administrative procedure or to continue. The panel will be best placed to assess the impact of the initiation of the litigation. It may be, for example, that the litigation is commenced in a distant jurisdiction, with an arguably dubious nexus to the circumstances of the case, as a delaying tactic.

*196. It is recommended that:*

*(i) The availability of the administrative procedure should not preclude a complainant from filing a claim in the relevant national court instead of initiating the administrative procedure, if this is deemed to be a preferred course of action.*

*(ii) The determinations flowing from the administrative procedure would not, as such, have weight of binding precedent under national judicial systems.*

*(iii) The parties to a dispute should have the ability to go to the national courts to initiate litigation, even after the completion of the administrative procedure.*

*(iv) If a party initiates court litigation during the administrative procedure and the administrative claim is not withdrawn, the administrative panel shall have the discretion*

---

*to consider whether to suspend the administrative procedure or to proceed to a determination.*

*(v) A decision by a court of competent jurisdiction, that is contrary to a determination resulting from the administrative procedure should, subject to the application of principles for the enforcement of judgments, override the administrative determination.*

### Time Limitation for Bringing Claims

197. The WIPO Interim Report recommended that a time bar to the bringing of claims in respect of domain names (for example, a bar on claims where the domain name registration has been unchallenged for a designated period of years) should not be introduced. It was considered that such a measure would not take into account that the underlying use of a domain name may evolve over time (with the consequence that the use of a domain name may become infringing through, for example, the offering for sale of goods of a different sort to those previously offered on the website); that any related intellectual property rights held by the domain name holder may lapse; and that a time bar would in any event be undesirable in cases of bad faith.

198. The comments received on this question by WIPO were addressed to an administrative procedure with comprehensive jurisdiction over all intellectual property disputes relating to domain name registrations. Since the scope of the procedure is now limited to cases of bad faith, abusive registrations, we consider that the interim recommendation should apply with more force. It is usual for time bars in legal proceedings not to be applicable to cases of bad faith.

*199. It is not recommended that claims under the administrative procedure be subject to a time limitation.*

### Length of Proceedings

200. Commentators universally viewed it as important that the administrative procedure be capable of providing determinations with speed and efficiency.<sup>144</sup> The nature of the Internet demands such characteristics of dispute-resolution procedures. For example, an abusive registration of a domain name may block another with the legitimate right to presence on the Internet under that domain name in respect of a product that is about to be launched or an international event that is about to occur.<sup>145</sup> Similarly, the damage that is being done by an

---

abusive registration of a domain name may be extensive by virtue of global access to which the registration gives rise, so that it becomes urgent to limit that damage.

201. It is imperative, therefore, that the procedural rules for the administrative procedure be designed so as to ensure that decisions are taken in a timely manner. In the WIPO Interim Report it was recommended that final determinations on claims should be made within two months of the initiation of the procedure. Many commentators agreed with this time frame,<sup>146</sup> others considered that it was too long,<sup>147</sup> and yet others cautioned that all parties should be given adequate notice and time for preparation.<sup>148</sup>

202. We consider that the organization of panels so that cases can be determined in batches will greatly facilitate the efficiency with which determinations can be made. Such a method of organization would overcome delays produced by decision-makers in different locations considering cases at a differential rate and would focus panels on the task. On this basis, we recommend the indicative time limit for determinations in the next paragraph as a suggested maximum.

*203. It is recommended that the procedural rules provide for final determinations on claims to be made within forty-five days of the initiation of the procedure.*

#### Appointment of Decision-Maker

204. The quality of decisions emerging from the administrative procedure will depend in large part on the quality of the decision-makers appointed for cases. In this respect, the panel of neutral decision-makers maintained by dispute-resolution service providers will be an important reference point for the selection of those service providers that may be authorized to administer the procedure. The panel should include persons having appropriate experience in domain names, intellectual property rights (including all the issues that operate to place limitations on the scope of such rights), litigation and alternative dispute-resolution.

205. The Interim Report raised the question whether cases should be handled by a single decision-maker, or a panel of three persons. Varying views were expressed on the question, as is usual on this question, reflecting broadly concerns, on the one hand, for efficiency and speed, which favor a single decision-maker, and, on the other hand, for balance and breadth of experience, which favor a three-person panel.

206. Since the scope of the procedure is limited to cases of abusive registration, we consider a three-person panel to be appropriate, especially since the organization of panels to make determinations on batches of cases will permit cost savings and thus limit the extra cost that a multiple-person panel might otherwise cause.

*207. It is recommended that a panel of three decision-makers be appointed to conduct the procedure and make the determination.*

---

208. The WIPO Interim Report recommended that the procedural rules should allow for party participation in the appointment of decision-makers, reflecting common practice in international arbitration proceedings. That recommendation was made, however, with a view to an administrative procedure with comprehensive jurisdiction for intellectual property disputes between parties acting in good faith. Since the scope of the procedure is limited to cases of bad faith, abusive registrations, we consider that party participation in the selection of decision-makers is inappropriate. In order to give some assurance to parties as to the quality of decision-makers, however, we encourage dispute-resolution service providers to publish the names and details of the qualifications and experience of the decision-makers who may be appointed to panels.

*209. It is recommended that the procedural rules for the administrative procedure provide for the appointment of the panel of decision-makers by the institution administering the procedure (dispute-resolution service provider). Such administering institutions are encouraged to publish on the Internet the list of persons who may be appointed to panels and details of their qualifications and experience.*

#### The Use of On-Line Facilities to Conduct the Procedure

210. Most commentators expressed interest in or enthusiasm for the use on-line facilities to conduct the administrative procedure.<sup>149</sup> Other commentators expressed hesitation about this possibility,<sup>150</sup> while a number underlined the need for adequate security and authentication features.<sup>151</sup>

211. The use of on-line facilities in the context of domain name disputes seems particularly appropriate for the following reasons:

(i) The Internet has created new opportunities for parties to communicate and to engage in transactions at great distance. At the same time, the potential for disputes arising out of such communications or transactions between parties that are physically remote from each other has been increased. On-line facilities can eliminate the barrier of distance.

(ii) Speed is equal to distance divided by time. The elimination of the barrier of distance by the Internet and the use of the Internet as the medium for resolving disputes will increase the speed with which the dispute-resolution process can be conducted.

(iii) Many domain name disputes may be capable of being resolved by reference to documents only, that is, without the necessity of hearing witnesses or receiving oral arguments in a physical hearing.

(iv) Since the dispute concerns domain names, assumptions can be made about the parties to the dispute having the requisite technical facilities to participate in the on-line resolution of the dispute.

(v) Some parties involved in domain name disputes may not have had significant exposure to legal proceedings and their attendant formalities. Enabling parties to initiate a claim (or to respond thereto) by accessing a website and completing electronic forms which guide them through the various stages of the process may be expected to reduce entry barriers to the administrative dispute-resolution procedure and make that procedure more accessible.

212. Recognizing that the use of on-line facilities causes some hesitancy, we would propose that secure on-line facilities be used to allow parties to file all pleadings in the procedure.

213. Several dispute-resolution service providers are working on the development of on-line systems for administering dispute resolution, as well as courts in a number of countries. The WIPO Arbitration and Mediation Center has developed such an on-line system, which is Internet-based. Digital communication tools have been designed to allow the parties to file requests by completing electronic forms and to exchange information on-line through secure channels. The parties and the decision-maker are able to communicate electronically also through audio and video facilities, where these are available to them. The system also includes such functions as automatic notifications, an electronic fee system, secure facilities for the on-line exchange and reading of documents, and back-end databases to support the logging and archiving of submissions.

*214. It is recommended that provision be made in the procedural rules for the secure electronic filing of all pleadings in cases.*

#### Enforcement and Publication of Determinations

215. Commentators in favor of an administrative policy for the resolution of domain name disputes universally supported the need for the determinations of the dispute-resolution procedure to be directly enforced.<sup>152</sup> The possibility of such direct enforcement exists through the registration authorities and, indeed, constitutes one of the major reasons why an administrative procedure could be made workable and efficient in respect of domain name disputes.

216. In order to implement the direct enforcement of determinations by registration authorities, it would be necessary to ensure that registration authorities agree to do so. ICANN's Statement of Registrar Accreditation Policy provides for adherence by registrars to any policy or procedure for dispute resolution established by ICANN.<sup>153</sup> In addition, it would

---

be desirable to make explicit in the domain name registration agreement that the domain name applicant agrees, in submitting to the administrative procedure, that the procedure may determine the applicant's rights with respect to the registration of the domain name and that any determination made in the procedure may be directly enforced by the relevant registration authorities.

217. Direct enforcement of determinations by registration authorities would, however, be subject to a contrary order from a court with jurisdiction over the registration authority. In this connection, several commentators were of the opinion that there should be a minimum period of time between the issuance of the administrative determination and its implementation by the registration authorities, in order to provide a losing party with the opportunity to file suit in a national court to suspend implementation of the determination and ultimately to obtain a reversal. A period of seven days is proposed for this purpose. If, however, no court order is obtained during this time, the decision would be communicated to the registration authority to take immediate effect and continue to have such effect, unless and until a contrary order is given to the registration authority by a court of competent jurisdiction.

218. Several commentators also expressed concern about the threat of litigation being brought against the registration authorities that would implement any changes to the status of a domain name.<sup>154</sup> To minimize this concern, domain name registration agreements should make clear, in addition to the terms noted in the paragraphs above, that the applicant agrees that the relevant registration authorities (e.g., the registrar, registry administrator and registry) shall have no liability for acting in accordance with their enforcement responsibilities in relation to the administrative procedure.

219. Several commentators were of the view that efforts should be made to promote the development of a body of persuasive precedents concerning domain name disputes through the administrative dispute-resolution procedure. It was considered that such a body of precedents would enhance the predictability of the dispute-resolution system and contribute to the development of a coherent framework for domain names.<sup>155</sup> To this end, it would be desirable that all determinations resulting from the administrative dispute-resolution process be made publicly available by being posted on a website.

220. *It is recommended that:*

(i) *registration authorities agree to implement determinations made under the administrative-dispute resolution policy, such implementation taking effect seven days after the issuance of the administrative determination;*

(ii) *the domain name registration agreement contain a provision that, in submitting to the administrative*

*dispute-resolution procedure, a domain name applicant agrees that the procedure may determine the applicant's rights with respect to the registration of the domain name and that any determination made in the procedure may be directly enforced by the relevant registration authorities;*

*(iii) the domain name registration agreement contain a provision that the applicant agree that the registration authorities shall have no liability for acting in accordance with their enforcement responsibilities in relation to the administrative procedure; and*

*(iv) the determinations made under the administrative dispute-resolution procedure be published on a website.*

### Appeals

221. The Interim Report requested further comments on whether a centralized appeal process from determinations in the administrative process should be established. While a number of commentators were in favor of incorporating appeal procedures in the administrative mechanism, the majority were not.<sup>156</sup> As the administrative procedure in any event would allow the parties to resort to the national courts after the issuance of a determination, an appeal process would be redundant and unnecessarily complicated for a procedure that is meant to be as streamlined and efficient as possible.

*222. It is not recommended that a centralized appeal process from determinations in the administrative procedure be established.*

### Costs

223. The administrative procedure will entail the following elements: (i) an administration fee to be paid to the institution administering the process (the dispute-resolution service provider); (ii) the fee to be paid to the panel of decision-makers; and (iii) the expenses that may be incurred in relation to the proceedings (e.g., telecommunication charges, etc.).

224. The fee for the panel will be the most significant cost component. It is imperative for the quality of the determinations resulting from the process that the decision-makers have the required degree of expertise and experience. Furthermore, it is important to engage the decision-maker's professional responsibility, as he or she will be taking important decisions

---

affecting the rights and interests of the parties. The organization of meetings for processing batches of cases, however, will enable these fees to be spread over a number of cases.

225. It is suggested that the administration and decision-maker's fees should be set freely by the dispute-resolution service providers that may be mandated to administer the procedure. Allowing the institutions to set their own rates should stimulate competition and ultimately benefit the public.

226. In general, in alternative dispute-resolution proceedings, parties are normally expected to advance an equal share of the anticipated costs of the proceedings. This practice may not be the most appropriate approach, however, for the administrative procedure. Under this procedure, the domain name holder would submit to the procedure through a standard clause in the domain name registration agreement. It may be difficult in these circumstances to require the holder to advance, at the outset of the procedure, what may be viewed as a substantial sum of money. It is, therefore, proposed that the third party complainant should be required to pay the initial administration fee, as well as the full advance payment of the fees allocated for the panel and any anticipated expenses. However, as recommended above, the panel would have discretion, in the determination, to decide on the allocation of these costs of the procedure among the parties in light of all the circumstances of the dispute and the result. Such costs should not, however, include any attorney's fees that the parties may incur in participating in the procedure.

227. *It is recommended that:*

*(i) dispute-resolution service providers should be free to determine the level of their administration fee and the fee payable to the panel; and*

*(ii) the third party complainant should be required to pay, at the commencement of the procedure, the administrative fee and an advance on the other costs of the procedure, with the decision-maker having the power to decide, in the determination, on the allocation of ultimate responsibility for that fee and those costs among the parties.*

### Dispute-Resolution Service Providers

228. It will be necessary to designate, in the clause providing for submission to the administrative dispute-resolution procedure in the domain name registration agreement, the administering authority or dispute-resolution service provider. It is suggested that a list of several well known and well respected institutions be designated in the domain name registration agreement. The institutions to feature on such a list must be chosen on the basis

---

of: (i) the international character of the institution; (ii) the quality of the list of neutrals or decision-makers maintained by the institution and, in particular, whether it contains persons with appropriate experience in respect of domain names, intellectual property and technical matters concerning the Internet; (iii) the likelihood that the institution will continue to be available to offer its services; and (iv) the facilities that the institution provides for the on-line administration of disputes.

## THE AVAILABILITY OF VOLUNTARY ARBITRATION

229. Arbitration is a private adjudicatory procedure, modeled on court litigation, in which the arbitrator has the power to impose a binding decision on the parties in respect of the dispute submitted to arbitration. The procedure is conducted in accordance with procedural rules established by the dispute-resolution service provider (the arbitration center) and under the supervisory guidance of the courts in respect of the arbitration procedure and its relationship to the law.

230. Arbitration takes place within a well-established international legal framework. Under that framework, the law recognizes the choice of parties to submit a dispute to arbitration as excluding the jurisdiction of the court in respect of the dispute. The arbitral award (the decision of the arbitrator) is not just binding, but also final, in the sense that the courts will not entertain an appeal on the merits of the dispute. Arbitral awards are enforceable relatively easily internationally by virtue of the New York Convention.

231. In arbitration, the parties may choose the applicable law pursuant to which the merits of the dispute will be decided. Their freedom of choice may be limited by certain mandatory laws that cannot be excluded (for example, parties cannot exclude the application of criminal law that might be applicable). If the parties fail themselves to choose the applicable law, the arbitrator will designate and apply the appropriate applicable law. It is possible, even common, for several applicable laws to be applied depending on the circumstances of the dispute (for example, where several different national trademarks are in question, questions relating to those trademarks will be assessed in accordance with the respective national laws under which the trademarks have been registered).

232. Arbitration has a number of distinct advantages in the context of domain name disputes. It provides a single procedure for resolving multijurisdictional disputes (as opposed to recourse to several different national court actions). It is a procedure that has been developed to be international, taking into account the various legal traditions around the world. It is also a procedure which offers the parties the choice of a neutral venue, language and law, so that neither is necessarily favored by familiarity with its own local laws, institutions and customs, as may be the case in national litigation involving a foreigner. Arbitration offers the parties more autonomy in the choice of procedures and laws, as well as in their choice of the arbitrator or decision-maker, than litigation. It also offers a comprehensive solution, in that the arbitrator is typically empowered to grant the interim and final remedies that are available under the law.

233. In WIPO RFC-2, comments were requested on the desirability of making arbitration a mandatory feature of a dispute-resolution policy in the sense that domain name applicants would be required, in the domain name registration agreement, to submit to arbitration in respect of any disputes concerning the domain name if called upon to do so by a third party complainant. Commentators expressed three reservations concerning arbitration as a mandatory procedure.<sup>157</sup> First, the effect of arbitration in excluding resort to the courts was, as mentioned above, not generally favored. Secondly, the finality of the arbitration award caused hesitation. And thirdly, the normal feature of arbitration as a confidential procedure between the parties to a dispute in which the award is not published, unless the parties agree to such publication, was considered disadvantageous in the present context. It was felt that consistency in decision-making and the development of appropriate principles for the resolution of domain name disputes was of great importance and militated in favor of the publication of ADR decisions wherever possible.

234. The WIPO Interim Report thus recommended that submission to arbitration by a domain name applicant should not be mandatory. However, in view of the advantages of arbitration, it recommended that a provision should be included in the domain name registration agreement allowing applicants to submit, on an optional basis, to arbitration in respect of any dispute in relation to the domain name. Most commentators supported this recommendation.

*235. It is recommended that the domain name registration agreement contain a provision for a domain name applicant to submit, on an optional basis, to arbitration in respect of any dispute in relation to the domain name.*

236. It is necessary, in a clause submitting to arbitration, to designate the procedural rules in accordance with which the arbitration will be conducted. The designation of such rules also determines who the administering authority or dispute-resolution service provider will be. In this respect, commentators expressed the view that, since one of the advantages of arbitration is the choice that it allows to parties, there should not be one exclusive dispute-resolution service provider. On the other hand, it is to be noted that there are well over one hundred arbitration centers around the world and, for the sake of providing some guidance to applicants, as well as for consistency in decision-making, it might be desirable to limit the available range of arbitration centers that may be designated in the domain name registration agreement to a selected list of dispute-resolution service providers. The choice of the institutions that would feature on that list is for a party other than WIPO to decide, since the WIPO Arbitration and Mediation Center acts as a dispute-resolution service provider. The choice could be made by registrars (which would allow local languages to be used) or by registrars upon advice from ICANN. It is suggested that the choice be made taking into account: (i) the international character of the arbitration center, that is, whether it offers services for international or purely local disputes; (ii) the rules of the arbitration center; (iii) the quality of the list of neutrals or arbitrators maintained by the arbitration center and, in particular, whether it contains persons with appropriate experience in respect of domain

names and intellectual property; and (iv) the continuity of the arbitration center, in the sense that the center must be in existence at a later date when called upon to administer a dispute.

237. Many domain name disputes may be capable of being resolved by reference only to documents; that is, it may often not be necessary to hear witnesses or to receive oral arguments in a physical hearing. This feature, coupled with the fact that domain name disputes arise out of the use of the Internet, makes it appropriate to consider the possibility of conducting an arbitration procedure on-line. The features of an on-line system for dispute-resolution, and its advantages, are discussed above, where a positive recommendation is made for the consideration of the use of on-line facilities for the administrative procedure for cancellation of abusive registrations.

238. The same considerations concerning the possibilities of conducting an on-line procedure apply to arbitration. In particular, given that parties to a dispute may be located in different parts of the world, it is considered that an on-line procedure should also be particularly advantageous as a means of containing the costs of the dispute-resolution procedure in the context of arbitration.<sup>158</sup>

*239. It is recommended that the clauses in the domain name registration agreement, which provide for an applicant to submit, at its option, to arbitration, envisage that the arbitration procedure take place on-line.*

## THE ROLE OF MEDIATION

240. Mediation is an extension of direct negotiations between parties to a dispute in which a neutral third party acts as intermediary to facilitate those negotiations and assists in finding a solution that is satisfactory to both parties. It is a non-binding procedure in two senses: (i) the parties are not obliged to remain engaged in the procedure, but may leave it at any stage; and (ii) the mediator, as a facilitator, has no decision-making power and, thus, cannot impose a decision on the parties. Since mediation is not an adjudicative procedure, but a process for obtaining a negotiated settlement acceptable to both parties, there is no applicable law in accordance with which the dispute is decided. The parties are free to choose their own reference points for reaching a mutually acceptable solution, which, typically, will include their commercial interests, the legal merits of the case, and the cost of resort to other means of resolving the dispute.

241. Mediation has undoubtedly some potential applications and advantages in the context of domain name disputes.<sup>159</sup> It is especially well suited to domain name disputes which involve intractable legal issues. For example, there might be a domain name registration held by a person who owns an identical trademark in one country, while there is another party with an identical trademark registered in another country. Similarly, there might be a domain name consisting of the initials of the name of a corporation that is well known in one country, while there is another corporation with the same initials to its name that is well known in another

country. In each of the foregoing situations, it is envisageable that each of the parties might bring a successful action in its own jurisdiction (that is, the jurisdiction in which it has a trademark registration or in which its business operations are located). The procedure of mediation may, in these circumstances, be an attractive way of resolving the dispute, since the process of facilitating negotiations can give rise to a creative solution which satisfies the commercial interests of both parties, but which cannot necessarily be imposed by law (e.g., a gateway page shared by the parties could be agreed upon).

242. There is a significant disadvantage, however, to mediation in the context of domain name disputes. It is a procedure that relies upon the good faith engagement of both parties for success. Since it is non-binding and either party can abandon the procedure at any stage, it is of little or no value in disputes concerning bad faith abusive registrations where it is unlikely that the holder of the abusive registration will cooperate.

243. Given that the utility of mediation may be limited to good faith disputes where there are serious interests on each side, it was recommended in the WIPO Interim Report that it would not be desirable to incorporate mediation as part of a mandatory dispute-resolution policy for domain name disputes. Mediation is always available for parties to choose, in the same way that they might choose to negotiate directly, without the assistance of a mediator, in order to find a solution to a dispute. Including specific reference to the possibility of mediation in the domain name registration agreement might unnecessarily complicate the agreement or confuse applicants. We confirm this recommendation in the present Report.

*244. While parties with good faith disputes are encouraged to consider the advantages of mediation as a means of resolving the dispute, it is not recommended that a submission to mediation, whether optional or mandatory, be incorporated in the domain name registration agreement.*

---

<sup>98</sup> Netscape Communications Corporation, which provided the first widely used commercial Internet browser, was founded in April 1994 by Dr. James H. Clark and Marc Andreessen, who created the NCSA Mosaic software whose graphical user interface simplified Internet navigation (see <http://home.netscape.com/company/about/backgrounder.html#market>).

<sup>99</sup> See the discussion in Chapter 5.

<sup>100</sup> See Comment of Ms. Shelley Hebert of Stanford University (San Francisco Consultation); Comment of Ms. Marilyn Cade of AT&T (Washington Consultation – 1998); Comment of Ms. Sarah Deutsch of Bell Atlantic (Washington Consultation – 1999); Comment of Ms. Anne Gundelfinger of Intel (San Francisco Consultation); Comment of Ms. Susan Anthony of MCI Worldcom (Washington Consultation – 1998); Comment of Mr. Gregory Phillips of Johnson & Hatch for Porsche (San Francisco Consultation); Comment of Viacom (October 1, 1998 – RFC-2); Comment of Mr. Nils Montan of Warner Bros. (San Francisco Consultation).

<sup>101</sup> In order to avoid this possibility, a significant number of trademark owners have registered their mark as a domain name in many TLDs around the world. The cost of so doing is relatively inexpensive (under

---

US\$10,000) but the practice has been criticized by some commentators in the WIPO Process as unnecessarily clogging the name space.

<sup>102</sup> This may be particularly true in view of the possible increased popularity of the connected website and the tendency of users to cache, bookmark and hypertextlink frequently used Internet addresses.

<sup>103</sup> Cf. Lockheed Martin, 985 F. Supp. at 967 (Network Solutions, Inc. (NSI) was joined as defendant because it had registered the domain names in question. The court found that NSI was not liable, *inter alia*, because its acceptance of domain name registrations “is connected with their technical function to designate computers on the Internet, not with their trademark function to identify the source or goods and services”).

<sup>133</sup> *Ibid.*

<sup>134</sup> See Comment of the *Fédération des syndicats de producteurs de Châteauneuf-du-Pape* (March 24, 1999 – RFC-3).

<sup>135</sup> This note contains a listing of authorities illustrating the development of law in the area of domain names registration and use, and related allegations of trademark infringement.

See, British Telecommunications Plc. v. Virgin Enterprises Ltd., J. Sainsbury plc, Ladbroke Group Plc. v. One in a Million Ltd. and Ors., (Court of Appeal, Civil Division, 23 July 1998) (see <http://www.nic.uk/news/oiam-appeal-judgement.html>) (court affirmed the grant of an injunction to prevent use of

---

domain names by the defendant for a fraudulent purpose); Panavision International, L.P. v. Toeppen No. 97-55467 (9th Cir. April 1998) (court determined that registration of others' trademarks as domain names, followed by attempts to sell them, constitutes 'commercial use' under United States Law); Toys R'Us, Inc. v. Eli Abir and Web Site Management, (1997, U.S. Dist. LEXIS 22431 (1997)) (court granted an injunction on the grounds of trademark infringement, to prevent the defendants' use of the domain name "toysareus.com," including to solicit international business or seeking to sell the domain name to foreign purchasers for use in foreign markets).

See Brookfield Communications, Inc., v. West Coast Entertainment Corporation, CV-98-09074-CRM (9th Cir. April 22, 1999); Washington Speakers Bureau, Inc. v. Leading Authorities, Inc., E.D. VA, No. 98-634-A, February 2, 1999 (court held that the defendant's domain name "washington-speakers.com," constituted a colorable imitation of the plaintiff's trademark, "Washington Speakers Bureau," such that it was likely to confuse consumers as to the source or sponsorship of the defendant's business); Cardservice International, Inc. v. McGee, (950 F. Supp 737 (E.D. Va. 1997) (court found trademark infringement to have occurred where one entity registered a domain name which was misleadingly similar to another trademark, in order to trade off the goodwill in the trademark); Epson, District Court of Dusseldorf (34 191/96, April 4, 1997) (court held that even though the domain name holder had not used the name "epson.de" for e-mail or a web page, there was a concrete risk that he would do so later and stated that, to establish a likelihood of confusion, it was irrelevant what kind of products or services were offered on the web site, because the products to be compared were the web sites as such, regardless of the content of the web site); Sté Coopérative Agricole Champagne Céréale c/ J.G., (TGI de Versailles, Ord. Référé., April 14, 1998) (see [http://www.legalis.net/legalnet/judicaire/tgi\\_versailles\\_0498.htm](http://www.legalis.net/legalnet/judicaire/tgi_versailles_0498.htm)) (Tribunal found that the use of the *dénomination sociale* of a company by another entity working in the same field created a risk of confusion); Commune d'Elancourt c/ Loic L., TGI de Versailles, Ord. Référé., October 22, 1998, (see [http://www.legalis.net/legalnet/judicaire/tgi\\_versailles\\_0498.htm](http://www.legalis.net/legalnet/judicaire/tgi_versailles_0498.htm)) (Tribunal found that a site named "Elancourt Bienvenue à Elancourt" caused confusion with the site of the City of Elancourt "Ville d'Elancourt", and ordered the individual to cease using the former denomination); Yahoo!Inc. v Akash Arora & Anor., High Court of New Delhi, February 19, 1999 (I.A., No.10115/1998 in Suit No.2469/1998) (court passed judgment in favor of the owners of the search engine Yahoo, against the registration and use by another entity of the domain name "Yahooindia.com").

See Planned Parenthood Federation of America, Inc. v. Richard Bucci, d/b/a Catholic Radio, 1997, U.S. Dist. LEXIS 3338 (1997) (court granted an injunction against the use of a domain name similar to the trademark of the Planned Parenthood organization, after balancing the interest in protection of free speech and the right to make political statements, against the likelihood of confusion from the use of a domain name).

See Citroen, District Court of Frankfurt, January 7, 1997 (2-06 0 711/96) (court granted a preliminary injunction to prevent an entity that did not own the trademark from registering "citroen.de" as a domain name); Honda, District Court of Frankfurt, April 4, 1997, (2/06 0 194/97) (court granted a preliminary injunction against an entity that had registered "honda.de" as a domain name); Heidelberg, Munich District Court, 1996, CR 353 (court stated that a computer company's use of the name "heidelberg.de" caused confusion and harmed the interests of the City of Heidelberg, and that the fact that the City of Heidelberg could use an alternate domain name was irrelevant because the domain name holder had no legitimate right to the name "Heidelberg"); *c.f.* case of Pitman Training, Ltd. v. Nominet UK, [1997] F.S.R. 797 (see <http://www.nic.uk/news/index.html>) (court, in a dispute over the right to use the domain name "pitman.co.uk," considered the competing legitimate interests of two companies trading under the name "Pitman" in different jurisdictions and determined the dispute on the basis of the first-come, first-served principle).

See Oggi Advertising, Ltd. v. McKenzie and Ors, CP147/98, (unreported, Baragwanath J., High Court of Auckland, June 5, 1998) (see <http://aardvark.co.nz/n357.htm>) (court ordered the reassignment of a domain name on the basis that the defendant had conspired to pass off its goods as the plaintiff's, appropriate the plaintiff's reputation and prevent the plaintiff from exploiting its intellectual property).

See Tractebel, Court of Appeal of Brussels, April 1, 1998 (see [http://www.droit-technologie.org/articles/domain\\_name\\_grabbing\\_arret.pdf](http://www.droit-technologie.org/articles/domain_name_grabbing_arret.pdf)) (court held that the registration of a domain name by a third party, thereby preventing the owner of the trade name from registering its corresponding domain name, constituted an act of unfair competition).

#### 4. THE PROBLEM OF NOTORIETY: FAMOUS AND WELL-KNOWN MARKS

245. Fame brings with it attention in many forms, amongst them imitation, by those who wish to benefit from its perceived advantages; association, on the part of those who wish to share in its perceived benefits; and criticism, by those who wish to question the status given to the one who enjoys fame. Not surprisingly, therefore, on the open and efficient medium of communication that the Internet is, fame attracts attention and provokes various forms of reactions.

246. In the commercial area, fame is most often manifested in reputation, and reputation is most often attached to the expression of identity of the enterprise: its trademarks. Famous and well-known marks have been the special target of a variety of predatory and parasitical practices on the Internet. The consultations held throughout the WIPO Process and the submissions made in them have confirmed the singular nature of these predatory and parasitical practices with respect to famous and well-known marks.<sup>160</sup>

247. Because of the special attention that fame attracts, famous and well-known marks have for a long time been considered in intellectual property laws to warrant special protection, over and above that accorded to other, ordinary marks. That special protection is well established in widely accepted international agreements on the multilateral level.

248. In the WIPO Interim Report, it was recommended that the international norms for the protection of famous and well-known marks should be given expression in the DNS through a mechanism whereby the owner of a famous or well-known mark could obtain an exclusion prohibiting any third party from registering the mark as a domain name.

249. The proposed mechanism for exclusions was widely supported in the commercial and intellectual property sectors as an appropriate means of reflecting established international principles in the DNS. Many commentators from these sectors viewed exclusions as an indispensable safeguard in relation to the expansion of the DNS through the addition of new gTLDs. They feared the repetition of the experience of the last five years, in which the owners of famous and well-known marks have had to invest large amounts of human and financial resources in defending their marks against abusive domain name registrations.<sup>161</sup>

250. On the other hand, a number of commentators opposed having any mechanism for exclusions. They regarded exclusions as extending the protection accorded to famous and well-known marks and feared the erosion of the DNS through the removal of large numbers of names from its ambit. They considered that the owners of famous and well-known marks had sufficient resources to defend their interests without a systemic mechanism for that purpose.<sup>162</sup>

251. In this Final Report, WIPO maintains the essence of the recommendations contained in the Interim Report, namely, that a mechanism for granting exclusions to famous and

---

well-known marks should be established. The basis for the final recommendations and their details are set out in the remainder of this Chapter.

## INTERNATIONAL PROTECTION OF FAMOUS AND WELL-KNOWN MARKS

252. The international protection of famous and well-known marks is recognized in two multilateral treaties: the Paris Convention for the Protection of Industrial Property (the Paris Convention), to which 154 States are party,<sup>163</sup> and the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS Agreement), by which 134 States are bound.<sup>164</sup>

253. The protection of famous and well-known marks in the Paris Convention is provided for in Article *6bis*, section (1) of which provides as follows:

“The countries of the Union undertake, ex officio if their legislation so permits, or at the request of an interested party, to refuse or to cancel the registration, and to prohibit the use, of a trademark which constitutes a reproduction, an imitation, or a translation, liable to create confusion, of a mark considered by the competent authority of the country of registration or use to be well known in that country as being already the mark of a person entitled to the benefits of this Convention and used for identical or similar goods. These provisions shall also apply when the essential part of the mark constitutes a reproduction of any such well-known mark or an imitation liable to create confusion therewith.”<sup>165</sup>

254. Four features of the protection provided for in Article *6bis* of the Paris Convention may be noted:

(i) The protection accorded to famous and well-known marks is a protection against the registration and use of a trademark that constitutes a reproduction, imitation or translation, liable to create confusion, of a well-known or famous mark or an essential part of such a mark.

(ii) The protection in Article *6bis* extends only to trademarks, that is marks that are used in respect of goods, and does not extend to service marks which are used in respect of services. By virtue of the Trademark Law Treaty (TLT), however, the provisions of the Paris Convention relating to trademarks are extended to service marks.<sup>166</sup> The TLT was concluded only in 1994 and, while an increasing number of States are manifesting their interest in becoming party to the TLT,<sup>167</sup> at the present date only 22 States are party to it.

(iii) The protection extends to registration or use in respect of identical or similar goods. This feature is usually known as the “principle of specialty,” a principle of trademark law under which protection for a trademark extends only to the same or similar goods as are covered by the registration or use of the trademark.

(iv) Article *6bis* is silent on what constitutes a well-known mark. The appreciation of whether a mark is well known is left to the “competent authority” of the country where the illegitimate registration or use occurs.

255. The provisions of Article *6bis* of the Paris Convention are confirmed and extended by the TRIPS Agreement. Article 16.2 and 16.3 contain the following provisions:

“2. Article *6bis* of the Paris Convention (1967) shall apply, *mutatis mutandis*, to services. In determining whether a trademark is well-known, Members shall take account of the knowledge of the trademark in the relevant sector of the public, including knowledge in the Member concerned which has been obtained as a result of the promotion of the trademark.

“3. Article *6bis* of the Paris Convention (1967) shall apply, *mutatis mutandis*, to goods or services which are not similar to those in respect of which a trademark is registered, provided that use of that trademark in relation to those goods or services would indicate a connection between those goods or services and the owner of the registered trademark and provided that the interests of the owner of the registered trademark are likely to be damaged by such use.”

256. Three features of Article 16.2 and 16.3 of the TRIPS Agreement may be noted:

(i) Article 16.2 builds on the work of the TLT in extending the protection of Article *6bis* of the Paris Convention to famous and well-known service marks.

(ii) Article 16.2 of the TRIPS Agreement provides a non-exhaustive guide to the competent authorities of countries in appreciating whether a mark is well known. In this respect it provides that, in “determining whether a trademark is well known, Members shall take account of the knowledge of the trademark in the relevant sector of the public, including knowledge in the Member concerned which has been obtained as a result of the promotion of the trademark.”

(iii) Article 16.3 of the TRIPS Agreement provides for protection that extends beyond the normal protection under the principle of specialty. It provides for the protection under Article *6bis* of the Paris Convention to apply to goods and services which are not similar to those in respect of which a trademark is registered on two conditions: first, that the use of the allegedly infringing mark in relation to those other goods or services would indicate a connection between those other goods or services and the owner of the famous mark, and, secondly, that the interests of the owner of the famous mark are likely to be damaged by such use. This extended protection reflects a distinction that is made in many national laws between, on the one hand, famous marks, which represent that class of well-known marks that are so famous that they require protection against infringing use in respect of any goods or services, and, on the other hand, well-known marks, which require protection against

---

infringing registration or use in respect of the same or similar goods or services for which the well-known mark is registered or used. The terminology and practice relating to this distinction differ somewhat around the world.<sup>168</sup> For this reason, in this Chapter, except where a distinction is deliberately made, the collective term “famous and well-known marks” is used, since it is in any case agreed that well-known marks are the subject of a special form of international protection.

#### THE IMPLEMENTATION OF PROTECTION FOR FAMOUS AND WELL-KNOWN MARKS IN CYBERSPACE

257. In considering how the international protection for famous and well-known marks can be given expression in respect of domain names, there are four areas of conceptual difficulty that need to be borne in mind.

258. First, it is to be noted that the provisions of the Paris Conventions and the TRIPS Agreement are directed at the protection of famous and well-known marks against the registration or use of other infringing marks. Domain names, of course, are not the same thing as marks and are used for many purposes other than the identification of a producer or seller of goods or services. They are, however, also used as a means of identifying goods and services with the producer or seller of those goods and services.

259. Secondly, the protection of famous and well-known marks under the Paris Convention and the TRIPS Agreement extends to those countries where the competent authority considers that the mark is famous or well-known. Where is where in a gTLD?

260. Thirdly, while there is an international obligation to accord protection to famous and well-known marks, there is not an established treaty definition of what constitutes such a mark. It is left to the appreciation of the competent authority in the country where protection is asserted. As noted, however, Article 16.2 of the TRIPS Agreement provides some guidance as to the criteria that such a competent authority must take into account in forming its appreciation. In addition, such criteria have been developed in national case law and regulatory practices and decisions around the world.

261. Fourthly, while the protection of famous marks has increasingly been implemented at the national level by laws directed at prohibiting any use of famous marks by third parties that dilutes the integrity and reputation of such marks, the protection of well-known marks exists often only in respect of the registration or use of a confusingly similar mark in relation to the same goods or services as those for which the well-known mark is registered or used. At the present time, the gTLDs are largely undifferentiated. Insofar as some differentiation does exist, there is no enforcement mechanism to ensure that those who have registered domain names in open gTLDs confine their use of the domain name to the broad purposes of the gTLD.<sup>169</sup> Thus, one can have a domain name registered in .com without undertaking any commercial activity, or a domain name registered in .net while undertaking commercial

---

activity that is completely unrelated to the provision of Internet or network services. There is a lack of connection between the **underlying** theoretical foundations of differentiation in the registration and use of trademarks and differentiation in the registration and use of domain names, since differentiation is intended to serve a different purpose in each case.

262. We consider that the administrative procedure in respect of bad faith, abusive registrations of domain names, which was discussed in the previous chapter, should provide an efficient means for suppressing many of the predatory and parasitical practices to which famous and well-known marks are subject. The administrative procedure is, however, rightly available to all and does not give expression to the separate international protection that already exists for famous and well-known marks. The ensuing part of this Chapter addresses two mechanisms designed for this purpose, which seek to take into account the conceptual problems in implementing protection for famous and well-known marks discussed above and the comments received throughout the WIPO Process. The two mechanisms are:

(i) a mechanism for obtaining and enforcing an exclusion of the use of a famous or well-known mark; and

(ii) an evidentiary device for ensuring that the protection afforded by an exclusion can be extended to misleadingly similar, as well as the same, domain name registrations.

#### MECHANISM FOR EXCLUSION OF FAMOUS AND WELL-KNOWN MARKS IN OPEN gTLDs

263. The main thrust of the two bodies of opposing views on the establishment of an exclusive mechanism is summarized above. The preponderance of views favored the establishment of the mechanism and, both for this reason and because it seems correct in principle that famous and well-known marks are recognized in international law as being subject to special protection, the recommendation in favor of the mechanism is being maintained. We also consider that it could be highly economically wasteful, in view of the experience in the existing open gTLDs over the past five years, to add new open gTLDs without any safeguard against the grabbing or the squatting of famous and well-known marks by unauthorized parties in those new open gTLDs. Nevertheless, there were two comments or criticisms that were frequently voiced by the opponents of an exclusion mechanism that, in the interests of transparency and fairness in the Process, need to be articulated and addressed.

264. The first such comment stems from the fear of the erosion of the domain name space.<sup>170</sup> Here, some commentators expressed anxiety about the lowering of standards for obtaining an exclusion over time, with the result that exclusions would be granted for less than famous or well-known marks and that the total number of exclusions would be in the tens of thousands. These commentators pressed for quantitative limitations on exclusions in order to give assurances against the erosion of the domain name space. Two such quantitative limitations were, in particular, suggested.

---

265. The first was a suggested quantitative threshold number of trademark registrations around the world which would need to be shown in order to qualify for the right to request an exclusion. For example, an applicant could be required to show 50 trademark registrations in order to be able to proceed with an application for an exclusion.

266. While we sympathize with the desire to ensure that standards for assessing whether a mark is famous or well-known are not lowered, we consider a quantitative entry criterion in terms of numbers of registrations to be wrong in principle. A mark is famous or well-known because of its notoriety or reputation, not because of the number of countries in which it is registered. It is for this reason that both the Paris Convention and the TRIPS Agreement establish protection for well-known marks whether or not they are registered in the country in which the protection is asserted. A mark may be famous or well-known even if not registered in numerous countries. A mark may also not be famous or well-known even if registered in over 100 countries of the world.

267. Criteria for the assessment of whether a mark is famous or well-known are given below. One of those criteria is the “duration and geographical area of any registrations, and/or applications for registration, of the mark, to the extent that they reflect use or recognition of the mark.” It is considered that this criterion (in conjunction with the other criteria) deal appropriately with the role of numbers of registrations: they are one of the indications to be taken into account in assessing notoriety and reputation, not a fixed standard.

268. The second quantitative limitation suggested was in the form of a quota of exclusions that could be granted. For example, the quota might be established at 2,000 and no more than that number of exclusions could be granted. The quota might be reviewed from time to time in light of experience.

269. We appreciate that the absence of a single list of famous and well-known marks causes apprehension as to the number of such marks. But we consider that a quota could operate in an entirely arbitrary manner. The selection of the level of the quota would, for a start, be arbitrary. The level could work arbitrarily against marks which become suddenly famous, whose owners might be prejudiced by the previous filling of the quota. Such marks do exist. If the mention of a so-called “lifestyle” drug which received great publicity in the last two years, or the mention of a very popular website associated with the sale of books, brings a name automatically to the mind of the reader, these might be examples. Furthermore, rather than control the standard for assessing famous or well-known marks, we think that a quota may have the opposite effect: it might cause a rush on the part of all and sundry to obtain an exclusion rapidly before the quota is filled and prompt a deluge of applications.

270. The second comment frequently voiced by opponents of exclusions was that exclusions extended the existing protection available for famous and well-known marks; that, in other words, they created new law.<sup>171</sup> The main basis for this argument seems to be that the “protection” afforded by an exclusion extends across an undifferentiated space. As mentioned above, our view is not that exclusions extend such protection, but that they give expression to it in the DNS.

271. Protection for well-known marks, however, affixes, in the first place, to infringing marks that are used in respect of the same goods or services as those for which the well-known mark is registered or used. By virtue of Article 16.3 of the TRIPS Agreement, and corresponding provisions in national laws, it extends beyond similar goods or services to other goods or services provided that the use of the infringing mark in relation to those other goods or services would indicate a connection between those goods or services and the owner of the famous mark, and provided that the interests of the owner of the famous mark are likely to be damaged by such use. An exclusion for a famous or well-known mark would constitute a form of protection that applies more broadly than simply protection for the goods or services in relation to which a well-known mark is registered or used. This consequence seems unavoidable while the open gTLDs are undifferentiated as to activity, or, at least, for as long as any differentiation is not practically enforced.

272. A further basis for the criticism that exclusions would extend existing protection might be that the gTLDs are not geographically specific and that an exclusion thus operates across an undifferentiated physical space, whereas protection for famous and well-known marks exists only in those jurisdictions in which they are famous or well-known. On the other hand, a domain name registration gives global access, including in all those places where a mark is famous or well-known.

273. These are difficult questions. If they were to be resolved on a case-by-case basis, the assessment of the activities, if any, performed on a website would give an answer to the questions whether a domain name registration of a famous or well-known mark indicates a connection between goods or services dealt with on the website and the owner of the mark, whether the interests of the owner are thereby damaged, and whether the integrity or reputation of the mark is thereby adversely affected. An exclusion assumes an answer to those questions or, at least, suggests that the potential for action created by a domain name registration is too dangerous, in the light of experience of the use of that potential, to allow.

274. We consider that the best safeguards against the fears of the opponents of exclusions are twofold. First, discipline and rigor in relation to the criteria for assessment of entitlement to an exclusion, which are discussed below, are required on the part of all and, particularly, the panels which will be responsible for that assessment and the owners of marks. It must be understood that not any mark will qualify. Secondly, in view of the undifferentiated geographical space of the gTLDs, it is considered that, in order to qualify for an exclusion, a mark should be famous or well-known across a widespread geographical area and across different classes of goods and services. The policy that may ultimately be adopted in relation to the structure of any new gTLDs may require a review of the last point. To take one example, if 500 new gTLDs were created (and it is not suggested that this is a possibility), the degree of differentiation and the means, if any, of enforcing compliance with domain descriptions (such as “com” or “net”) may warrant that exclusions be granted also to marks that are only well-known for goods or services corresponding to those domain descriptions. This is not the case at the moment, however.

*275. It is recommended that a mechanism be established before the introduction of any new*

*open gTLDs whereby exclusions can be obtained and enforced for marks that are famous or well-known across a widespread geographical area and across different classes of goods and services.*

#### Brief Description of the Mechanism for Exclusions

276. It is suggested that the mechanism should function by way of administrative panels of experts, appointed from time to time, in response to applications from the owners of allegedly famous or well-known marks, to make determinations on whether an exclusion should be granted in respect of a particular mark in some or all open gTLDs. As indicated below, it is suggested that the administration of the panels be centralized. An internationally representative list of persons who would serve on the panels should be drawn up and the names and qualifications of those persons should be published. In response to a particular application, an ad hoc panel of three persons from the list would be appointed to make the determination. The costs of the procedure, in both instances, would be borne by the applicant for the exclusion, since it is the applicant that stands to gain the benefit of an exclusion and, thus, the expression in the domain name space of the special protection afforded to the applicant's famous or well-known mark. An exclusion would be granted in respect of either some or all open gTLDs and would be granted indefinitely. However, third parties would be free to apply to have an exclusion cancelled in respect of any of the gTLDs for which it was granted (for example, if an exclusion were granted for all open gTLDs, it is conceivable that a third party might prove a legitimate interest in being able to register a domain name, as an exception to the general exclusion, in one particular gTLD). In the case of applications brought by third parties to cancel an exclusion, it is suggested that the costs of the procedure be borne by that third party. The exclusion would be granted only in relation to a string that is identical to the famous or well-known mark. Furthermore, the exclusion mechanism would apply only to new open gTLDs. Finally, exclusions that are granted under the mechanism would not have any retroactive effect, i.e., if a party had registered a string as a domain name in relation to which an exclusion is later granted to another party, the first party's domain name would remain unaffected by the exclusion (but the other party could seek to obtain its cancellation through the administrative dispute-resolution procedure). These proposed features have received wide support among the commentators favoring the establishment of an exclusion mechanism.

#### Implementation of the Mechanism

277. In order to implement the mechanism for obtaining and enforcing exclusions, it would be necessary for a policy to be adopted by ICANN allowing for such exclusions and providing, through the chain of contractual authorities from ICANN to registration authorities, for the direct enforcement by registration authorities of any exclusion granted under the mechanism.

278. *It is recommended that:*

(i) *ICANN adopt a policy providing for a mechanism for obtaining and enforcing exclusions in open gTLDs for famous and well-known marks; and*

(ii) *Registration authorities agree, in the chain of contractual authorities from ICANN, to implement determinations made for exclusions of famous and well-known marks in gTLDs.*

#### Procedural Considerations

279. The mechanism for obtaining and enforcing exclusions for famous and well-known marks should have the same characteristics as the administrative procedure insofar as the procedure should be expeditious, conducted, as far as possible, on-line and lead to determinations that are directly enforced within the DNS. There are, however, three differences from the administrative procedure that should be adopted with respect to the mechanism for obtaining and enforcing exclusion for famous and well-known marks:

(i) Since the potential result of the mechanism (an exclusion), as opposed to the result of the administrative procedure, affects third parties (indeed, all users of the domain name space would be prevented from registering a domain name corresponding to the exclusion), it is considered that notice of an application for an exclusion and the determination should be made publicly available by being posted on a website.

(ii) Again, since the potential result of the mechanism affects all users of the domain name space, provision should be made in the mechanism for the participation of any third party with a legitimate interest (for example, a competing interest in the use of the name) in the proceedings. Such participation could take the form of allowing an interested third party to file a submission in favor of or against the granting of an exclusion.

(iii) In contrast to the recommendation concerning competition in dispute-resolution service providers for the administrative procedure, it is considered that there are distinct advantages in centralization of the administration of the mechanism for obtaining and enforcing exclusions for eligible famous and well-known marks. It would be of advantage to interested users of the domain name space to be able to access one website where information about all actions concerning applications for exclusions and all information on exclusions granted or refused is available. Consistency in decision making will be of paramount importance and, in this respect, there seems to be an advantage in the maintenance of a published, centralized list of well-qualified decision-makers, as opposed to allowing different lists of decision-makers to determine whether exclusions should be granted. WIPO would,

consistently with its mandate, be available to provide the centralized administration of the mechanism.

280. *It is recommended that the mechanism for obtaining and enforcing exclusions provide for:*

(i) *publication of any application for an exclusion and all determinations on a centralized website;*

(ii) *the maintenance of a published list of well-qualified decision-makers and the appointment of ad hoc panels of three persons from that list to make determinations in respect of any particular application;*

(iii) *the participation of interested third parties in proceedings on an application for an exclusion; and*

(iv) *the centralized administration of the procedure.*

#### Relationship of Determinations to the Status of Marks Outside Cyberspace

281. In the WIPO Interim Report, it was recommended that determinations on granting or refusing exclusions of famous and well-known marks should be made only for the purposes of the efficient administration of the DNS. Any determination to grant or refuse an application for an exclusion, therefore, should carry no implication for the status of the mark that is the subject of the application as a famous or well-known mark more generally. Determinations would thus not be binding either on national or regional industrial property offices or on national courts. This recommendation received wide support among commentators.<sup>172</sup>

282. *It is recommended that determinations on applications for exclusions for famous or well-known marks should have no binding effect on national or regional industrial property offices or national courts in their implementation of international norms for the protection of famous and well-known marks.*

---

Criteria for Making Determinations

283. As mentioned above, international norms provide for the protection of famous and well-known marks, but leave the appreciation of what constitutes such a mark to the competent national authority. The TRIPS Agreement, in Article 16.2, advances this situation by requiring competent national authorities that are bound by the TRIPS Agreement to take into account, in the assessment of whether a mark is well-known, “the knowledge of the trademark in the relevant sector of the public, including knowledge in the [country] concerned which has been obtained as a result of the promotion of the trademark.”

284. Work on the determination of a list of factors that should be taken into account in determining whether a mark is well-known has been undertaken under the auspices of WIPO over the past several years in a Committee of Experts on Well-Known Marks and, more recently, in the successor to that body, the Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications (the WIPO SCT). At its last meeting, in March 1999, the WIPO SCT adopted the following list of factors as the recommended non-exhaustive criteria to be considered in determining whether a mark is well known:<sup>173</sup>

“(a) In determining whether a mark is a well-known mark, the competent authority shall take into account any circumstances from which it may be inferred that the mark is well known.

“(b) In particular, the competent authority shall consider information submitted to it with respect to factors from which it may be inferred that the mark is, or is not, well known, including, but not limited to, information concerning the following:

- “1. the degree of knowledge or recognition of the mark in the relevant sector of the public;
- “2. the duration, extent and geographical area of any use of the mark;<sup>174</sup>
- “3. the duration, extent and geographical area of any promotion of the mark, including advertising or publicity and the presentation, at fairs or exhibitions, of the goods and/or services to which the mark applies;<sup>175</sup>
- “4. the duration and geographical area of any registrations, and/or any applications for registration, of the mark, to the extent that they reflect use or recognition of the mark;
- “5. the record of successful enforcement of rights in the mark, in particular, the extent to which the mark was recognized as well known by courts or other competent authorities; and
- “6. the value associated with the mark.”

285. The list of non-exhaustive factors in paragraph (b) in the preceding text was drawn up with reference to well-known marks in general and without particular reference to problems encountered through domain name registrations. In order to accommodate the specificities of the protection of famous and well-known marks in relation to domain names, it is suggested that a further factor be added to the list given in the preceding paragraph:

“7. evidence of the mark being the subject of attempts by non-authorized third parties to register the same or misleadingly similar names as domain names.”

286. The foregoing list of factors were recommended, in the WIPO Interim Report, as the basis on which decisions on applications for exclusions of famous or well-known marks should be taken. This recommendation was well received by those commentators who favored a mechanism for exclusions.<sup>176</sup> Certain of them, however, considered that they were too judicial in nature and that simpler, quantitative measures capable of easy administrative application would be preferable.<sup>177</sup> We consider, however, that careful consideration needs to be given to determinations on exclusions, which will have effect indefinitely, even if this means that the processing time for applications for exclusions is slowed as a consequence.

*287. It is recommended that decisions on applications for exclusions of famous or well-known marks in open TLDs be taken on the basis of all the circumstances of the application and, in particular, the non-exhaustive list of factors set out in paragraph 284, above, together with the further factor set out in paragraph 285 above.*

#### EVIDENTIARY PRESUMPTION RESULTING FROM AN EXCLUSION

288. As a means of giving expression to the protection of famous and well-known marks, exclusions suffer from an important limitation. They provide protection only for the exact name of the famous or well-known mark. They are thus not effective against close phonetic and spelling variations of the famous or well-known mark that are registered as domain names in bad faith in an endeavor to benefit from the reputation of the famous or well-known mark.<sup>178</sup> In respect of such close variations, the owner of the famous or well-known mark would be obliged, even after obtaining an exclusion, to resort to either litigation or the administrative procedure in order to seek to cancel or otherwise remedy the damage being done by the close variation that is registered as a domain name.

289. In order to reduce the impact of this limitation, the WIPO Interim Report recommended that consideration be given to the introduction of an evidentiary presumption resulting from the granting of an exclusion which would operate in claims brought under the administrative procedure by the holder of the exclusion against the holders of domain names that were allegedly identical or misleadingly similar. The presumption would work in the following way. The holder of an exclusion for a famous or well-known mark would be required, in any

administrative dispute-resolution procedure initiated by it, to show: (i) that a domain name was identical or misleadingly similar to the mark that is the subject of the exclusion; and (ii) that the domain name was being used in a way that was likely to damage the interests of the owner of the mark that was the subject of the exclusion. Upon such a showing, the burden of proof in the procedure would shift to the domain name registrant to justify that its registration of the domain name was in good faith and to show why that registration should not be cancelled. If the domain name registrant were unable to make such a showing, the registration would be cancelled. The evidentiary presumption would be available in respect of any gTLD in which an exclusion had been obtained.

290. Commentators who were in favor of the exclusion mechanism supported this recommendation. Those who opposed exclusions viewed the proposal as an illustration of the way in which the rights of trademark owners would be extended to the detriment of other Internet users, for example, those exercising rights of free speech. Since it is now proposed that the scope of the administrative procedure be limited to cases of abusive registration, we consider that the interests of those exercising recognized rights of free speech are not likely to be affected in any way adversely by the evidentiary presumption. It is recalled that the definition of abusive registration of a domain name, which it is recommended, above, be applied in the administrative procedure, requires that the holder of a domain name have “no rights or legitimate interests” in respect of the domain name before the registration of the domain can be considered abusive.

*291. It is recommended that the granting of an exclusion give rise to an evidentiary presumption, in favor of the holder of an exclusion, in the administrative procedure in such a way that, upon showing that the respondent held a domain name that was the same as, or misleadingly similar to, the mark that was the subject of an exclusion and that the use of the domain name was likely to damage the interests of the holder of the exclusion, the respondent would have the burden of justifying the registration of the domain name.*

#### OTHER FORMS OF EXCLUSIONS

292. Two comments were submitted on the WIPO Interim Report by intergovernmental organizations, which are specialized agencies of the United Nations, that request that certain classes of names and abbreviations be assimilated to famous and well-known marks and eligible for exclusions in the open gTLDs.

293. The first comment was submitted by the International Telecommunication Union (ITU), which pointed out that the names and acronyms of a number of intergovernmental

---

organizations had been registered as domain names by speculators. Numerous variations of “United Nations” have, for example, been registered by third parties, and the domain names *itu.com* and *wipo.com* had also been registered and were being offered to sale by the same party.

294. The need for protection of the names and acronyms of international intergovernmental organizations from unauthorized commercial exploitation is recognized internationally in Article 6*ter* of the Paris Convention for the Protection of Industrial Property and through the TRIPS Agreement. Article 6*ter* of the Paris Convention requires the 154 countries party to that Convention “to refuse or to invalidate the registration, and to prohibit by appropriate measures the use, without the authorization by the competent authorities, either as trademarks or as elements of trademarks,” of the abbreviations and names of international intergovernmental organizations, where these have been communicated to WIPO.

295. The second comment was submitted by the World Health Organization (WHO), which has the constitutional mandate to develop, establish and promote international standards with respect to biological, pharmaceutical and similar products. Pursuant to WHO resolution 3.11 on Nonproprietary Names for Pharmaceutical Substances (adopted in May 1950 by the Third World Health Assembly), the Organization collaborates closely with national nomenclature committees to select a single, nonproprietary name of worldwide acceptability for each active substance used in pharmaceutical preparations. In this regard, WHO has been made responsible for selecting and promoting the protection of International Nonproprietary Names (INN) for Pharmaceutical Substances, in coordination with national authorities worldwide.

296. The underlying reason for ensuring that no party can claim any proprietary rights in INNs is to protect the safety of patients by allowing them to identify a specific pharmaceutical substance under one single, globally available name. After their selection, INNs are adopted by the national authorities of WHO Member States, which means that such INNs may not, in principle, be registered as trademarks. INNs are published in the following official languages: English, French, Latin, Russian and Spanish.

297. Although – as opposed to trademarks – INNs are in the public domain, WHO considers it important that their free availability is used exclusively for its intended purpose in the public interest, i.e., for the identification of a specific pharmaceutical substance. The Organization is therefore concerned to learn that – like trademarks – INNs have been registered as domain names.

298. The predatory or parasitical use of the names or acronyms of international intergovernmental organizations as domain names is clearly offensive to the States that have established those organizations. Where the domain name is used as an identifier for commercial purposes, it offends the policy upon which Article 6*ter* of the Paris Convention is based, which is to prohibit the use of those organizations’ names or acronyms as trademarks or elements of trademarks.

299. The predatory or parasitical use of INNs as domain names offends a carefully established public health and safety policy by attributing to the domain name holders rights

---

that are increasingly akin to proprietary rights, since the registrations of domain names are effectively bought and sold through transfer agreements.

300. We consider that there are two ways of dealing with the problem. The first way would be through the extension of the exclusion mechanism. In the case of the names and acronyms of international intergovernmental organizations, the exclusion mechanism would seem appropriate, especially since litigation in the courts of one particular member country is not, in general, considered appropriate as a means of enforcing a treaty-established status. In order to avoid the attribution of any form of proprietary rights to INNs, the exclusion mechanism could also be appropriate for INNs.

301. The second way of dealing with the problem would be through the extension of the definition of abusive domain name registration to include abuse of the names and acronyms of international intergovernmental organizations and of INNs.

302. We consider that both possible solutions warrant very serious consideration. It is recognized that it is outside the scope of the present WIPO Process to recommend an immediate solution, since the terms of reference of that Process, in their relevant part, were directed at dispute resolution for intellectual property violations and a mechanism for protecting famous and well-known marks. We believe that the questions should, however, be the subject of further reflection and consultation by ICANN with a view to achieving a suitable solution, especially before the introduction of any new gTLDs which would be likely to compound existing problems.

*303. It is recommended that ICANN initiate a process designed to address the problem of the abusive registration of the names and acronyms of international intergovernmental organizations and of International Nonproprietary Names (INNs) before the introduction of any new gTLDs.*

5. NEW GENERIC TOP-LEVEL DOMAINS:  
SOME CONSIDERATIONS FROM THE PERSPECTIVE OF  
INTELLECTUAL PROPERTY

304. The final term of reference of the WIPO Internet Domain Name Process is to evaluate the effects of adding new gTLDs and related dispute-resolution procedures on trademark and intellectual property holders, such evaluation being informed also by studies conducted by independent organizations.<sup>179</sup>

305. The recent history of the question of adding new gTLDs goes back to May 1996, when Dr. Jon Postel proposed in an Internet-Draft the creation of up to 50 domain name registries, each of which would have the exclusive right to register domain names in up to three new top-level domains, for a total of 150 potential new top-level domains.<sup>180</sup> A revised draft in June 1996<sup>181</sup> received the approval of the Internet Society's (ISOC) Board of Trustees, and the work in this area was soon thereafter taken up by the International Ad Hoc Committee (IAHC). The IAHC, which was organized at the initiative of ISOC and IANA, issued a final report, as noted earlier, on February 4, 1997, calling for the creation of seven new top-level domains.<sup>182</sup>

306. In January 1998, in its Green Paper,<sup>183</sup> the United States Government, through the Department of Commerce and the National Telecommunications and Information Administration (NTIA), sought, in cooperation with IANA, to scale down expectations to five new gTLDs, which would be introduced during the transition period for privatizing the management of Internet names and addresses. Comments on the Green Paper from the international community ultimately led the United States Government to conclude in its White Paper that it would not recommend the immediate implementation of new gTLDs, but that this decision should be left to the new, globally representative corporation to be based on international input.<sup>184</sup>

THE DIVERSITY OF VIEWS AND PERSPECTIVES

307. It is not a secret that the questions of whether, how and when new gTLDs should be added have attracted a diversity of views, if not sharply divided views. At one end of the spectrum, certain Internet constituencies have maintained that the Internet should be an open system and that, at least in principle, any person should be able to introduce a new top-level domain, leaving the market to be the ultimate arbiter of its success. At the other end of the spectrum, some stakeholders have expressed strongly the view that no new gTLDs should be added, at least at this stage. Among the reasons in support of this latter position is a belief that there is currently no demonstrated need for additional name space and that adding new gTLDs will aggravate intellectual property problems and create consumer confusion. Proponents of this position also maintain that the availability of approximately 250 under-utilized country code domains should in any event provide the necessary space for additional

growth, and that it may be more constructive to adopt measures to encourage use of these country code domains, rather than to dwell upon the need for new gTLDs.

308. Still others have taken a position that falls between the two described in the preceding paragraph. They observe that the Internet has experienced enormous growth precisely because few restrictions have been imposed on new initiatives, and that it would be misguided to ignore this when considering the introduction of new gTLDs. At the same time, those tending to this view recognize that the Internet has now developed into the central medium for electronic commerce, while at the same time being a diversified global medium supporting instantaneous communications and a wide range of other applications. They believe that it would be imprudent to expand suddenly and drastically the name space, as it would be impossible to foresee the consequences of such action. Instead, they suggest that the need for reliability and stability requires that the generic name space be expanded at a controlled pace, which allows the opportunity to observe the effects of such expansion and to draw appropriate conclusions that will serve to guide long-term policy.

309. One of the explanations for the diversity of views held in relation to the question of the creation of new gTLDs is the diversity of issues involved in developing a coordinated policy on that question and, consequently, the diversity of perspectives that may be brought to bear on it. The differentiation of the generic name space can be an instrument for many policy objectives.

310. In addition to the intellectual property perspective, there are technical, commercial, marketing and other legal ways of viewing the question:

(i) The technical perspective is apparent in the critical need for the DNS to continue to work with operational accuracy, stability, robustness and efficiency. A number of commenters in the on-going discussions have reflected this point as a first principle: do no harm.<sup>185</sup> While some in the Internet engineering community believe that the DNS can support an unlimited number of top-level domains without encountering problems, others have noted that an immediate large increase in the number of gTLDs may lead into technically unknown territory.<sup>186</sup> In this general context, the recently announced participation of five companies to act as registrars in the initial testbed phase of the new competitive Shared Registry System (SRS) for the .com, .net and .org domains represents an effort to assess, under controlled conditions, the reliability and robustness of the SRS technology used to allow multiple registrars to accept registrations in the existing open gTLDs.

(ii) The commercial perspective has focused on questions of competition and other commercial considerations. The move to introduce new gTLDs was, at least in part, motivated by the desire to increase competition in gTLD registration activities. The situation in which one entity acted on an exclusive basis as the registration authority for the most commercially successful gTLDs was viewed as requiring attention in this regard.<sup>187</sup> Others, however, have urged that creating new business opportunities for a new set of registration authorities is not a sufficient reason for creating top-level domains. In any event, competition is now being introduced, as mentioned above, through the participation of competing registrars in the existing open gTLDs.

(iii) The marketing perspective has focused on the role of top-level domains in sending signals to the Internet user (e.g., .com denotes the premier international commercial space). This perspective is not limited to the gTLDs. Certain ccTLDs, owing to their associated ISO 3166 country code, are being marketed and used very much like de facto gTLDs.<sup>188</sup> This trend merits careful monitoring. The ability of certain TLDs to transmit signals effectively to Internet users is a characteristic that distinguishes the functionality of a top-level domain from the classifications used in traditional trademark systems. While trademark classes are administrative devices which, as such, are not used as marketing tools, top-level domains play a more active role for the intellectual property owner and the Internet user. Any policy on the introduction of new gTLDs must take this into account and appropriately consider that certain top-level domains may be deemed more valuable than others, in line with their respective market-signaling power.

(iv) A variety of legal perspectives, in addition to intellectual property, have also entered into the picture, for example, competition law, consumer protection law, privacy law and the protection of minors. It has, for example, been suggested that differentiation in the generic name space might be used as a means of controlling activities considered harmful to minors.

311. As the WIPO Interim Report noted, in view of the variety of issues and perspectives involved in the formation of a policy on the creation of new gTLDs, it goes without saying that the intellectual property perspective is not the only one to be taken into account. In considering the formulation of recommendations concerning the addition of new gTLDs, therefore, the approach has been adopted of assessing what the past experience of intellectual property owners has been in relation to problems encountered in the current gTLDs, and using that experience as a basis for recommending how the particular interests of intellectual property owners can be accommodated within an overall policy on the creation of new gTLDs.

#### ILLUSTRATIONS OF PROBLEMS ENCOUNTERED BY HOLDERS OF INTELLECTUAL PROPERTY RIGHTS IN EXISTING gTLDs

312. Numerous comments and extensive testimony were provided at the regional consultations throughout the WIPO Process on the nature and extent of the problems encountered by intellectual property owners in respect of domain names. A number of illustrations of such problems are provided in this section. It is recognized that much of the evidence presented was anecdotal in nature and that few comprehensive analyses supported by empirical evidence are available.<sup>189</sup> Nonetheless, the widely held view in the trademark community, based on the many experiences of those who have participated in the WIPO Process, is that the problems encountered are extensive, particularly for the owners of famous and well-known marks, and that these problems have been growing, in part because of increased activity in the country code domains.<sup>190</sup> A summary of those experiences is given in the next paragraphs.

---

### Lack of Visibility of the Full Extent of Problems

313. A significant number of disputes apparently never rise to the level of being reported. A large proportion may remain unresolved, or may be resolved informally pursuant to a settlement between the parties. A study commissioned by MARQUES, the Association of European Trade Mark Owners, for the purposes of the WIPO Process, found that 85 percent of those participating had experienced infringement on the Internet of their own or their clients' intellectual property. Moreover, 60 percent of those responding had negotiated for the purchase of their domain name through informal means. The same study concluded that a large number of cases simply remain unresolved. An additional comprehensive study was undertaken by the International Association for the Protection of Industrial Property (AIPPI). Published in May 1998, the study contains reports from the numerous national groups of the AIPPI that have focused, in particular, on the problems of the confusion that has arisen as a result of the interface between domain names and trademarks, and on how domain names can, when used in particular ways, infringe the rights of mark owners.<sup>191</sup>

314. This latter point was also emphasized by speakers at WIPO's regional consultations. One commenter indicated that "for each reported case, Panavision, Spice Girls, Burger King, British Telecom, there are a myriad of others that have to be resolved outside the court room, but at significant cost to the companies and to the consumers who buy their brand of products."<sup>192</sup> As to the informal means by which the problems are often resolved, another speaker stated that:

"There is a fair market in cyberpirated marks. When I was in private practice, representing a client with many well-known famous trademarks for consumer products that you and I use everyday, the client was approached by a cyberpirate who said 'I will sell this to you for 4000 dollars.' The client's marketing department wanted that name and they wanted it now and they said 'OK, I can have it now for 4000 dollars or I can have it way later for God knows how much you are going to charge me.' So, from a business point of view, it is easier to just engage in the private transaction and pay the 4000 dollars."<sup>193</sup>

### Focus on Clear Cases of Abuse

315. It would appear from the comments that the priority concern of the trademark community does not relate to conflicts between parties who claim to have competing legitimate rights in the name (for example, different companies with the same trademark in different product lines or operating in different areas of the world), but focuses on cases of clear abuse, often directed at famous and well-known marks. Owners of such marks have indicated that, in some cases, they are confronted with hundreds of such instances at any given time. A speaker at one regional consultation stated that "in less than a year, we have already had 579 matters in the existing gTLDs."<sup>194</sup> Another alluded to similar experiences:

“We are encountering the same kind of volume that others are encountering and that is cases in the volume of 15 to 20 per month. In one particular case, someone registered ‘ATTT.com,’ which linked to a pornographic site. While this area may seem perhaps obscure to some, it is taken very seriously by those of us who have the brand recognition of the commercial players that are in this room... Among the other examples are the registration of ‘AT-T.com,’ ‘ATTT.net,’ ‘ATTworldnet.net,’ ‘ATTwirelesservices.com,’ ‘ATTcellular.com,’ ‘ATTweb.com,’ ‘ATTonline.com,’ ‘ATTnetwork.net,’ ‘ATTTCI.com, .net, .org,’ it goes on and on. We do think that it is important so, when we talk about volume, we think it is there and increasing...”<sup>195</sup>

316. Another speaker representing a large corporation explained that they had been confronted by “several hundred Internet domain names that have been registered throughout the world using Porsche or a variation of Porsche [and that] the variations on domain names using Porsche is virtually endless, and is limited only by one’s imagination.” Some of the domain names in question were registered under the registrant name “Misspellers Rescue Company.”<sup>196</sup>

317. Emphasizing the gamesmanship that is sometimes involved, still another speaker stated: “I probably have to send claim letters out and pursue people on a majority of the motion picture titles that we are coming out with and we have recently confirmed that there are growing numbers of people who watch the MPAA [Motion Picture Association of America], so that they can register domain name sites as soon as the MPAA registers our titles, which is months and months before those movies appear.”<sup>197</sup>

#### Predatory and Parasitical Practices

318. One clear source of the problems has been those persons who register domain names that are identical or similar to trademarks, with a view to selling them at a profit to the trademark owner. As a variation of this practice, one speaker explained: “One of the more interesting twists on speculation however was an offer within the past year...to purchase domain names containing well-known trademarks of our direct competitors. We were not interested, of course, but passed on the information to our competitors...”<sup>198</sup> Other persons have registered domain names that are identical or similar to trademarks in order to create the false impression that the owner of the mark in some way endorses the goods or services the third party offers:

“In this instance the direct competitor has registered as domain names a slight, de minimis, non-substantive variation of several of our well-known and heavily advertised trademarks. These domain names are connected to the competitor’s website advertising directly competitive services. A consumer viewing the competitor’s website has no way of knowing that the services offered at that site are not our services.”<sup>199</sup>

319. Another speaker similarly testified that “[she has] received innumerable calls from such users, who are just confused on how they are to use the Internet to find our sites because they are misdirected so regularly.”<sup>200</sup>

320. Still others have registered domain names not to cause any confusion regarding the source or origin of the goods or services offered, but in an effort to attract increased traffic to their own websites to tarnish the reputation of a mark. Certain persons have also made it a practice to register domain names corresponding to trademarks in order to hoard them, thus intentionally frustrating the trademark owner's desire to reflect its mark in a domain name. The following example was presented at a regional consultation as an egregious example of the actual problems encountered:

“In this particular instance I am referring to use of a second-level domain name for a porn[ographic] site where the domain name is made up of another's trademark, usually a well-known one, sometimes with an extremely minor variation on, or a misspelling of, the well-known mark... The current examples I have brought today are three domain names that currently are active. They are the [www.intle.com](http://www.intle.com) domain name; as you can see the l and the e are transposed, the [www.pentium2.com](http://www.pentium2.com) domain name and the [pentium3.com](http://pentium3.com) domain name... The third one is...not only a porn site but a cybersquatter. You come to the first page of [pentium3.com](http://pentium3.com) and you are instructed to click here ‘to see some fine ass nude celeb photos.’ If you do click there, it takes you to those photos. The other place that you can click on the front page indicates that the domain is for sale, ‘please click here for details,’ at which point you get to a page that...says ‘hello, you seem to have an intuitive mind like me. Just imagine how many hits this page will have when Pentium ships their new P III chips sometime next year. I am already getting 30 hits with no promotion at all. I am getting offers left and right for this site, so right now I am going to the highest bidder format. Current highest bid is \$9,350...’ So, he is basically soliciting bids for the site on a theory that, when Intel ships Pentium III next year, this would become a very valuable site to Intel.”<sup>201</sup>

#### Need for Improvement in Registration Practices

321. Domain name registration practices in the gTLDs appear to have caused the occurrence of some of these problems. The relative ease with which the activity in question can occur, the frequent inability to identify the party at its source, the volume of abusive practices, the ubiquitous nature and the increasing globalization of Internet use together are claimed to challenge the ability of trademark owners to effectively police and enforce their rights. As explained by one speaker:

“In my opinion, in the past several years, there has really been an inordinate amount of time, energy and money spent by my company keeping the domain name register clear of names registered by others incorporating our famous trademarks... I know, for example, that in my legal budget in 1998 I am spending more money on Internet-related issues than I am on consumer products piracy in the United States, and that really is unbalanced in my view.”<sup>202</sup>

322. The lack of reliable contact details often is highlighted as a major obstacle in the resolution of the problem:

“As a trademark owner, [we have] the responsibility to track down domain name registrants one by one to assert [our] trademark rights. And here I would add...that we often do find that the registrant's information that is provided on Whois through Internic is completely unreliable. In many cases when I, personally, called those telephone numbers they don't get answered, they are inactive, they are out of service, etc. E-mail addresses are likewise very hit-and-miss on that activity. And that is the source of information that we have to rely on. So, if that information is inaccurate, then our next step would have to be to hire a private investigator to go and actually seek out that individual or that entity and try to find them. Once we have done that, the next step is to file individual challenges with Internic with the results and timing of those challenges being very uncertain. And again, we have to do this one by one by one. The proliferation of these registrations, which are now averaging several per week, mean that staff time and legal costs required to pursue these infringements are growing exponentially while the array of activities engaged in by infringers increases almost daily.”<sup>203</sup>

### Resort to Defensive Practices

323. While numerous instances have been brought to WIPO's attention where trademark holders, particularly owners of famous and well-known marks, have been the victim of domain name abuse, a number of other commentators have observed that trademark holders have resorted to defensive practices that those commentators find undesirable. This may occur in situations where a trademark holder, relying on its trademark registrations, seeks to interfere with the rights of a domain name holder who obtained the domain name under legitimate circumstances and does not use it in a way that would justify a claim of trademark infringement or dilution.<sup>204</sup> It has been argued that the potential for consumer confusion has been ostensibly absent in some cases because of sectoral or geographical differences between the operations under a domain name and those under the trademark. Several commentators have stated that these sorts of practices, which have come to be called “reverse domain name hijacking,” have detrimental effects on individuals and small business.

324. Some of the instances in which such domain name hijacking is alleged to have occurred include challenges to the following domain names: epix.com, cds.com, ajax.com, dci.com, ty.com, earth.com, juno.com, and, involving non-commercial domain name holders, pokey.org and veronica.org.<sup>205</sup> In one case, *Roadrunner v. Network Solutions*, the holder of the domain name “roadrunner.com,” a small Internet-based business, resorted to legal action to defend its right to use the domain name after it was challenged by the owners of the registered trademark “Road Runner.”<sup>206</sup> Commentators have emphasized the need for the domain name system to accommodate the diverse nature of the Internet's users—who may register domain names for commercial, as well as political and social purposes<sup>207</sup>—and to ensure individuals' freedom of communication.<sup>208</sup> These conflicts may be seen as a consequence of the global reach of the Internet, where the rights of a trademark holder in one territory must coexist with the legitimate rights of other trademark holders or Internet users, employing the same or similar names, in different jurisdictions and for different uses.<sup>209</sup>

325. Commentators have also emphasized that the suspension, transfer or cancellation of a domain name held by a small business owner could irrevocably damage its commercial interests.<sup>210</sup> In this connection, evidence was put forward of the growing reliance of small businesses on the commercial advantages of the Internet.<sup>211</sup> Testimony was also given regarding alleged unfair business practices involving demands upon domain names.<sup>212</sup> A number of commentators emphasized the need to ensure that any recommended administrative dispute-resolution procedure would not allow potential reverse domain name hijackers to expose small businesses to unjustified threats of proceedings<sup>213</sup> that might impose such high costs or risks of drastic remedies that they are coerced into relinquishing their domain names:

“One dispute was recently brought to my attention. A small Internet provider has received a domain name challenge from another company that is located on the other side of the United States and it is in a completely different business. They have already spent \$40,000 to defend themselves and the case hasn't even gone to trial yet. I am talking about a company with six employees. Now, if my company, when I had six employees and had about 1,000 customers, struggling to keep up the growth, having to decide daily between paying our employees and buying new equipment, had then to face such a challenge, we would probably just have gone under.”<sup>214</sup>

326. Concerns about the inadvertent impact on small businesses and individuals are one of the factors that has been considered in revising the recommendation in the WIPO Interim Report so as to restrict the scope of the administrative procedure to cases of bad faith, abusive domain name registrations. However, one outcome of this limitation is that domain name holders may continue to be threatened by court proceedings and will be unable to use the efficient and inexpensive administrative procedure to protect their domain names against such alleged reverse domain name hijackers.

327. Some of the same commentators also disapprove of the practice by certain trademark holders of registering their marks in all top-level domains, thereby frustrating any third party's legitimate desire to use the same name in one of the domains for unrelated or non-commercial purposes. A speaker at a regional consultation gave the following example:

“...if we take [name].com, '[name]' is for some unknown reason registered in all ccTLDs. Now, if one is wanting to contact the [company], you will use the domain [name].com. I see no benefit in [the company] effectively registering in all ccTLDs. Because what they are doing effectively is blocking out potentially other legitimate companies who have a right to trade under the name...from their national TLDs and possibly the new gTLDs.”<sup>215</sup>

#### International Scope of Problems

328. The problems encountered are not confined to the United States of America, but occur also in other regions and are likely to increase with the expanding use of the Internet around

the world. A speaker at the regional consultation in India stated that “[In India], cases have been reported where domain names similar to prominent trademarks or names of famous personalities, like Amitabh Bachan, Sunil Gavaskar and so on, are usurped by Internet users as domain names.”<sup>216</sup> Another speaker at the same consultation further stated:

“[E]ven in a country like India, which has just begun its journey on the information superhighway, we have already begun to encounter things like ‘Internet Property Auction.’ Names sites have already been picked up and resold to the original owners, including BJP, which is the ruling party in India today, Srivansan, Times of India, VHP, ABCL, Tata, ONGC,... ITC Hotels Ltd, Welcome Net Ltd, ...State Bank of India and a host of other corporates, which reads like a Who's Who. The minimum auction bid here is stated as US\$1500, ...and the time of closing of the bid is five days thereafter—it is May 12, 12.00hrs GMT.”<sup>217</sup>

#### Dissatisfaction with Current gTLD Dispute-Resolution Policies

329. Network Solutions Inc. (NSI) has a Domain Name Dispute Policy<sup>218</sup> to be applied to disputes between domain name registrants and third parties. While some commentators have expressed satisfaction with the NSI Policy as a means of providing swift and effective relief for trademark owners, others believe it is flawed in several important respects.

330. One of the major difficulties alluded to by commentators results from what is perceived as the Policy’s overly “mechanical” approach to the resolution of disputes. The Policy relies heavily on the ability of the parties to produce certain trademark certificates in support of their respective positions, without any review of the use of the domain name and alleged infringement. As such, it is stated that the Policy does not sufficiently allow for the consideration of all legitimate rights and interests of the parties (which are not necessarily reflected in a trademark certificate).<sup>219</sup> This concern has been emphasized, in particular, by those who are not trademark owners and who believe that the Policy represents an unwarranted extension of trademark rights, as it may grant a complainant the effect of a preliminary injunction without requiring it to show a likelihood of success on the merits.

331. NSI understandably wishes to avoid situations where it would have to decide upon disputes by weighing all the relevant facts and circumstances, thereby assuming the role of a de facto arbiter or judge. This underscores the need for courts or independent neutrals to resolve disputes instead of the registration authorities themselves, and illustrates well the limits of any active involvement that such authorities should have in the resolution of domain name disputes.

332. Another problem raised concerning the NSI Policy is the requirement that a complainant must produce a trademark registration that is identical to the second-level domain name subject to the dispute. This has resulted in what has been described by commentators as frustrating situations where the NSI Policy could not be relied upon to obtain relief for trademarks that are virtually, but not perfectly, identical to the domain name. For instance, the owner of the trademark consisting of the word “CHANEL BOUTIQUE”

accompanied by the CC monogram could not apply the NSI Policy against a person who had registered the string chanel-boutique.com.<sup>220</sup> Similarly, the owner of the mark “PLAYSTATION” faced the same problem in connection with the domain name playstations.com.<sup>221</sup>

333. Even when the NSI Policy applies, the result that it offers is to place the domain name on “hold.” Consequently, a trademark owner who has obtained relief under the Policy is still required to resort to court or arbitration to obtain the cancellation or transfer of the domain name. This two-tiered approach adds a further level of complexity to the dispute resolution process and, by insisting on a court decision or arbitral award for the final disposition of the case, requires a complainant to expend significant resources to resolve what are often simple cases of manifest abuse.

#### REGISTRATION PRACTICES AND PROCEDURES IN COUNTRY CODE TOP-LEVEL DOMAINS

334. In addition to continuing efforts to identify problems in the existing gTLDs, the WIPO Interim Report suggested that it would be useful to attempt to identify how practices in the ccTLDs are influencing the protection of intellectual property rights. In December 1997, a point was reached where more domain names were registered by organizations or individuals based in countries other than the United States of America than by the same entities located in that country.<sup>222</sup> This internationalization of the Internet is also reflected in the increasing number of domain name registrations in the country domains. While the public in the United States of America has made only limited use of “.us” and, instead, has universally favored the gTLDs, users in other countries have availed themselves to a much larger degree of the opportunities offered by the ccTLDs.<sup>223</sup> At the time of publication of the Interim Report, out of a total of more than 4,800,000 domains registered worldwide, over 1,400,000 were registered in the ccTLDs, with “.de” (Germany), “.uk” (United Kingdom) and “.dk” (Denmark) containing the largest numbers.<sup>224</sup> Now, just four months later, there are approximately 1,860,000 registrations in the ccTLDs,<sup>225</sup> and it is expected that the pace of registrations in these domains will continue to increase.

335. The differing approaches taken with regard to the management of the name space in the ccTLDs, and the related experience gained by the registration authorities, their clients and third parties, constitute a valuable source of information. With this in mind, WIPO has supplemented its consultations with a questionnaire directed to the administering authorities for 35 representative ccTLDs, which were selected on the basis of the number of their domain name registrations (both large and small) and their geographic representation. The questionnaire, which was sent out in January 1999, was intended to review the impact on intellectual property of the practices and procedures adopted by ccTLD registration authorities, and their experiences with any domain name disputes. The results obtained from responses to the questionnaire are set out in Annex IX and summarized in the ensuing paragraphs.

336. The survey revealed great diversity in the registration and operating practices of the participating ccTLDs. The responses also indicated that ccTLD administrators have had to develop practices on their own and that this has sometimes been a burden, particularly for the smaller ccTLDs and those in developing countries. In this respect, a number of registration authorities indicated they had expended considerable time and resources (e.g., the cost of legal services) to devise registration rules and procedures to address problems they had encountered.

337. Although virtually all of the participating ccTLDs (88 percent) indicated that they register names on a first-come, first-served basis, most (71 percent) also indicated that they operate “restricted” domains which impose limitations—such as the requirement of domicile, no transfer of a domain name registration, limiting the number of domains which any one applicant may register, or requiring official certification from a national authority—that, in effect, mitigate the potential problems arising from a first-come, first-served system. It was felt that these restrictions, as well as some of the procedural steps used, have created a regulated domain space that limits the potential number of registrations. Thus, some ccTLD administrators operating under such restrictions indicated that they are now in the process of revising their practices to establish a more open system, which might also lead to an increase in the occurrence of problems and disputes.

338. Other measures, such as using a formalized registration agreement, representing the accuracy of the information in the registration agreement and that the registration of the domain name does not infringe the intellectual property rights of a third party, were widely implemented by the administrators surveyed. It is notable that only 12 percent of the ccTLDs required payment of a fee before activation of a domain name registration, a practice that would go a long way towards preventing abuses. It is also notable that a majority of the ccTLDs (54 percent) indicated that they take steps, such as testing e-mail addresses on-line or requiring companies to present certifications of registration from the national authorities, to verify an applicant’s identity or that the contact details are correct. In addition, most of the ccTLDs (71 percent) require that such contact details must be kept up-to-date. Although 83 percent of the ccTLDs will make the contact details of registrants available in some circumstances, 46 percent of ccTLDs take some steps to protect confidentiality (such as contractual use undertakings). The use of indemnity statements and contractual undertakings by applicants is seen as an important underpinning for future action by registration authorities to rectify the register.

339. The questionnaire revealed that there is no coherent approach to dispute resolution among ccTLD administrators, although an informal conciliation role is often assumed in an effort to prevent disputes from escalating into litigation. The registration authorities indicated they are wary of becoming involved in dispute resolution and unaware of the full extent of the problems in their domains. At the same time, the implementation of remedies, such as cancellation or transfer, was viewed as an effective measure in almost all domains (with the notable exception of those domains (for example, .jp) where transfer is prohibited). Finally, it was observed that a number of ccTLDs operate an informal system of exclusions for famous marks within the ccTLD.

---

## CONCLUSIONS, SUGGESTIONS AND REFLECTIONS

340. On the basis of the evidence presented so far in the WIPO Process, it may be concluded that intellectual property owners have experienced very considerable difficulties in ensuring the protection of their intellectual property rights in the existing gTLDs.

341. It is considered that the problems encountered by intellectual property owners in the existing gTLDs would be greatly ameliorated, without adverse impact upon legitimate practices, if:

- the recommendations made in Chapter 2 in relation to domain name registration procedures were adopted;
- an administrative procedure concerning abusive registrations of domain names, as recommended in Chapter 3, were adopted; and
- the measures recommended in Chapter 4 for the protection of famous and well-known marks were implemented.

342. We confirm the provisional recommendation in the WIPO Interim Report that, with these improved practices and procedures, not only would problems in the existing gTLDs be reduced significantly, but also it would be possible to contemplate the introduction of new gTLDs from an intellectual property perspective. However, such new gTLDs would need to be introduced in a slow and controlled manner in such a way that experience with the proposed improved practices and procedures can be monitored.<sup>226</sup> That experience will be the arbiter of whether the proposed improved practices and procedures do indeed result in a significant reduction of the problems that have been encountered by intellectual property owners.

*343. It is concluded that, on condition that the proposed improved practices for domain name registrations, the proposed administrative dispute-resolution procedure and the proposed measures for the protection of famous and well-known marks and for the suppression of abusive registrations of domain names are all adopted, new gTLDs can be introduced, provided that they are introduced in a slow and controlled manner which takes account of the efficacy of the proposed new practices and procedures in reducing existing problems.*

### Differentiation

344. In addition to reference to experience as a means of controlling any perceived harmful effects of introducing new gTLDs, as discussed above, consideration could also be given to

---

differentiation as a means of accommodating both the interests of intellectual property owners and those of other constituencies in the addition of new gTLDs.

345. It is clear that many Internet constituencies highlight the importance of the Internet as a non-commercial communications network, and are therefore concerned that any overzealous implementation of measures proposed for the protection of intellectual property may result in significant limitations on other important rights and interests.

346. The WIPO Interim Report signaled that one approach to bridging the differences in views between those with differing conceptions of the use of the Internet might be to acknowledge the multi-dimensional use of the Internet (and domain names) by introducing a differentiation in the name space between commercial and non-commercial domains.<sup>227</sup> As indicated in Chapter 2 above, it is considered that this approach requires further reflection, elaboration and consultation. We add, at this stage, only that, if any non-commercial domain were introduced, the desirability of extending exclusions for famous and well-known marks to such a domain would also need to be carefully considered.

#### The Impact of New Navigational Measures

347. Current controversies regarding the DNS and trademarks find their origin in the mnemonic function of domain names. For the general public, easy-to-remember domain names are among the primary navigation tools for the Internet, as they permit direct and convenient access to websites.

348. Recent technological developments, however, may impact on the future relevance of domain names. Keyword systems, which have started to make their appearance, offer the potential to substantially reduce user reliance on domain names as Internet signposts. While various systems are available now, each with its own technical characteristics, they have one feature in common: to access a website, a user no longer needs to enter the site's domain name in the browser location or address field. Instead, a keyword may yield the same navigational result.<sup>228</sup>

349. Depending on their market acceptance, degree of use and navigational accuracy, keywords, in addition to domain names, may increasingly be relied upon to perform the function of locating businesses and their brands on the Internet. However, the same landrush mentality that applied to domain names may take hold in this area as well, as commercial and other interests seek to arrogate valuable keywords for themselves. The practices and procedures on the basis of which persons or organizations obtain keywords and the manner in which keyword systems operate may well cause difficulties similar to those now encountered in relation to domain names.

350. While some of the systems allow parties to share the same keyword,<sup>229</sup> other systems do not permit this.<sup>230</sup> The inability to share a keyword, similar to the DNS uniqueness requirement, may lead to conflicts between persons or enterprises coveting common words that form part of marks as keywords. Furthermore, the fact that certain systems allow generic

terms (such as “golf”, “car”, “book”)<sup>231</sup> to be employed as keywords may further complicate matters, as it undercuts the keyword’s core functionality, namely, the identification of a website with a reasonable degree of particularity. The grounds and procedures for the attribution of keywords may, if not properly conceived, lead to problems similar to those that have resulted from less than optimal domain name registration practices.<sup>232</sup>

351. Potential concerns are well illustrated by way of the following example. Several businesses, located in various regions of the world, have registered domain names with the common element “telecom” in each. The list includes SymmetriCom, Inc. (www.telecom.com), Telecom UK Ltd. (www.telecom.co.uk), TWX Telecommunications GmbH (www.telecom.de), Telecom s.r.l. (www.telecom.it), Telstra Corporation Ltd. (www.telecom.com.au) and Swisscom (www.telecom.ch). Nonetheless, some of the currently available keyword systems direct a user entering the keyword “telecom” only to the website of SymmetricCom, Inc., without any reference to the other companies.<sup>233</sup> Depending on how widely these particular systems are used, this may impact on the companies’ visibility on the Internet. Potential concerns in this respect are reinforced by the fact that certain keyword systems are incorporated into and interoperate with the most popular Internet browsers, further leveraging the marketing power of the keywords registered therein.

352. Only the future can tell to what extent the debate may shift from domain names to keywords, and market acceptance of keyword navigation systems will play a determining role in this respect. However, many of the same positions and arguments heard in the domain name controversy may resurface.<sup>234</sup>

---

<sup>179</sup> See WIPO RFC-2, paragraphs 19-23; United States Government White Paper, Section 8; and the recently agreed Memorandum of Understanding between the United States Department of Commerce and ICANN (MoU), in which ICANN agrees to:

“[c]ollaborate on the design, development and testing of a plan for creating a process that will consider the possible expansion of the number of gTLDs. The designed process should consider and take into account the following:

...

“d. Recommendations regarding trademark/domain name policies set forth in the Statement of Policy [White Paper]; recommendations made by the World Intellectual Property Organization (WIPO) concerning: (i) the development of a uniform approach to resolving trademark/domain name disputes involving cyberspiracy; (ii) a process for protecting famous trademarks in the generic top level domains; (iii) the effects of adding new gTLDs and related dispute resolution procedures on trademark and intellectual property holders; and recommendations made by other independent organizations concerning trademark/domain name issues.” (Article V.C.9.d.).

The MoU provides that the following factors should also be taken into account: the potential impact of new gTLDs on the Internet root server system and Internet stability; the creation and implementation of minimum

---

criteria for new and existing gTLD registries; and potential consumer benefits/costs associated with establishing a competitive environment for gTLD registries (Article V.C.9.a.-c.).

<sup>180</sup> The Postel Internet-Draft is referenced at <http://www.iiia.org/lists/newdom/1996q2/0259.html> in the Newdom listserver archive.

<sup>181</sup> The Revised Internet-Draft is referenced at <http://www.iiia.org/lists/newdom/1996q2/0289.html> in the Newdom listserver archive.

<sup>182</sup> See <http://www.gtld-mou.org/draft-iahc-recommend-oo.html>.

<sup>183</sup> Proposed Rule for the Improvement of the Technical Management of Internet Names and Addresses, Docket No. 980212036-8036-01 (January 30, 1998) (the Green Paper).

<sup>184</sup> The White Paper (Section 7) provided the following policy guidance on adding new TLDs:

“At least in the short run, a prudent concern for the stability of the system suggests that expansion of gTLDs proceed at a deliberate and controlled pace to allow for evaluation of the impact of the new gTLDs and well-reasoned evolution of the domain space. New top level domains could be created to enhance competition and to enable the new corporation to evaluate the functioning, in the new environment, of the root server system and the software systems that enable shared registration.”

<sup>185</sup> This principle of doing no harm was most recently stated by President Clinton on November 30, 1998, in a speech addressing progress in electronic commerce.

<sup>186</sup> See, the Internet Architecture Board’s Comment on the Green Paper, paragraph 2 (February 23, 1998). For example, the addition of very large numbers of TLDs (for example, allowing arbitrary domains to be established for any and all interested parties) could cause scaling and implementation problems in the current DNS due to the potential flattening of the domain name lookup process.

<sup>187</sup> See, in this respect, Amendment No. 11 to the Cooperation Agreement between NSI and the United States Department of Commerce, which entered into force on October 7, 1998 (NCR-9218742). This agreement provides in relevant part that: “In order to create an environment conducive to the development of robust competition among domain name registrars, NSI will, either directly or by contract, develop a protocol and associated software supporting a system that permits multiple registrars to provide registration services within the gTLDs for which NSI now acts as a registry (Shared Registration System).”

<sup>188</sup> The recent bidding for the top-level domain “.tv,” which is the ISO 3166 two-letter code for Tuvalu, illustrates the commercial potential that some would attribute to such country domains. It was reported that one of the bidders promised US\$ 50 million in advance for the contract to administer the domain. See Andrew Raskin, “Buy This Domain,” *WIRED* (September 9, 1998) ([http://www.wired.com/wired/archive/6.09/tuvalu\\_pr.html](http://www.wired.com/wired/archive/6.09/tuvalu_pr.html)).

<sup>189</sup> One analysis was presented as a comment to WIPO RFC-1 by Mr. Milton Mueller, Associate Professor at Syracuse University School of Information Studies (USA). With respect to the incidence of domain name disputes involving intellectual property, the Mueller study concludes that, on the basis of statistical evidence, actual infringement cases constitute a very small number in the gTLDs. A critique of this study was submitted as a comment to WIPO RFC-2 by Mr. Jacob Jacoby, Professor at the Leonard Stern Graduate School of Business, New York University (USA), and Mr. Leon B. Kaplan, President of Princeton Research and Consulting Center Inc. (Princeton, NJ, USA). The Jacoby and Kaplan critique takes issue with the Mueller study on the basis that there is no scientifically defensible basis for the conclusions contained therein.

<sup>190</sup> Network Solutions Inc., the registration authority for the nearly 4,500,000 names registered in the open gTLDs, has indicated that it has received approximately 5,400 trademark-related complaints resulting in the

---

application of its Dispute Resolution Policy in approximately 2,600 instances. While the number of disputes which have been brought to NSI's attention is low in relation to the total number of domain name registrations in these gTLDs, considered absolutely these numbers nevertheless represent a significant level of conflicts.

<sup>191</sup> See *Intellectual Property on the Internet: A Report Commissioned by MARQUES* (the Association of European Trade Mark Owners), was based on a mail survey in which responses from 60 entities were received from 24 countries in Africa, Asia, Europe, Latin America and North America. The majority of respondees were directors, heads of trademark departments or partners of law firms specializing in intellectual property. See also International Association for the Protection of Industrial Property, Group Reports Q143: Internet Domain Names, Trademarks and Trade Names, XXXVII<sup>th</sup> Congress, Rio de Janeiro, 1998 (Yearbook 1998/VI).

<sup>192</sup> See Comment of Ms. Sally Abel of International Trademark Association (San Francisco Consultation).

<sup>193</sup> See Comment of Ms. Susan Anthony of MCI Worldcom (Washington Consultation – 1998).

<sup>197</sup> See Comment of Ms. Michelena Hallie of Viacom (Washington Consultation – 1998).

<sup>198</sup> See Comment of Ms. Susan Anthony of MCI Worldcom (Washington Consultation – 1998).

<sup>199</sup> *Ibid.*

<sup>200</sup> See Comment of Ms. Michelena Hallie of Viacom (Washington Consultation – 1998).

<sup>201</sup> See Comment of Ms. Anne Gundelfinger of Intel (San Francisco Consultation).

<sup>202</sup> See Comment of Mr. Nils Montan of Warner Bros. (San Francisco Consultation).

<sup>203</sup> See Comment of Ms. Shelley Hebert of Stanford University (San Francisco Consultation).

<sup>204</sup> See Comment of Electronic Frontier Foundation (November 6, 1998 - RFC-2).

<sup>205</sup> Pokey.org and Veronica.org were domain names registered in the names of children, for their non-commercial use, but were identical to an existing trademark and therefore apparently frustrated the trademark owners' desire to register the coinciding domain name. See Comment of Ms. Ellen Rony (Washington Consultation - 1999).

<sup>206</sup> In that case, Roadrunner Computer Systems, which had used the domain name for two years to market their Internet services, challenged NSI's dispute resolution policy after the trademark owners invoked the policy to assert their right to use the domain name. The suit was dismissed after NSI agreed not to disrupt Roadrunner's use of the domain name in the absence of a court order. See Roadrunner Computer Systems, Inc. v. Network Solutions, Inc. No. 96-413-A (E.D. Va. complaint filed March 26, 1996), dismissed (June 21, 1996) (at <http://www.patents.com/nsicpt.sht>).

<sup>209</sup> See Comment of Mr. Rocky Cabagnet (March 18, 1999 - RFC-3).

<sup>210</sup> See Comment of Government of United States of America, Office of Advocacy U.S. Small Business Administration (March 19, 1999 - RFC-3); Comment of Mr. Eric Menge (Washington Consultation – 1999); Comment of Mr. Michael Doughney (Washington Consultation – 1999).

<sup>211</sup> See Comment of Mr. Eric Menge (Washington Consultation – 1999), who described the reliance of small businesses on the Internet, stating that, as of November 1998, 41 percent of all small and mid-size businesses in the USA have a website, and 22 percent of those businesses use the Internet to sell goods and services (Washington Consultation - 1999).

<sup>212</sup> Comment of Davis & Schroeder that "[n]inety percent of the demands my small clients get from big companies no longer even make a pretense of there being any real trademark issue, they just say 'I went to register my trademark as a domain name and found that you were using it - give it to me!'" See also Comment of gjohnson@season.com (March 19, 1999 - RFC-3); Comment of Mr. Peter Rony (March 15, 1999 - RFC-3).

<sup>213</sup> See Comment of Government of Australia (March 30, 1999 - RFC-3); Comment of ACM and the Internet Society (March 25, 1999 - RFC-3); Comment of DNRC (March 20, 1999 - RFC-3); Comment of Mr. Kurt Opsahl & Co-Signatories (March 19, 1999 - RFC-3); Comment of Mr. Milton Mueller (Washington Consultation - 1999); Comment of Ms. Shari Steele (Washington Consultation - 1999); Comment of Mr. Michael Doughney (Washington Consultation – 1999).

<sup>214</sup> Comment of Mr. Michael Doughney (Washington Consultation - 1999).

<sup>215</sup> See Comment of Mr. Paul Kane of Internet Computer Bureau (Brussels Consultation – 1998). See also Comment of Electronic Frontier Foundation (November 6, 1998 - RFC-2).

<sup>216</sup> See Comment of the Government of India, Department of Industrial Development: Ministry of Industry, (November 6, 1998 - RFC-2).

<sup>217</sup> See Comment by Mr. Krishna of Andhra Pradesh Technology Services, State Government of Andhra Pradesh (Hyderabad Consultation).

<sup>218</sup> See Network Solutions Domain Name Dispute Policy (Revision 03) (effective February 25, 1998), at <http://www.internic.net/domaininfo/internic-domain-6.html>.

<sup>219</sup> On the other hand, NSI's Policy does require that the third party complainant's notice "clearly state that the complainant believes the registration and use of the disputed domain name violates the trademark rights of the complainant; the notice must also clearly allege the factual and legal bases for the belief." (Section 8(b)).

<sup>220</sup> See Comment of The Chanel Company (November, 4 1998 - RFC-2).

<sup>221</sup> See Comment of International Intellectual Property Alliance (November 6, 1998 - RFC-2).

<sup>223</sup> For instance, the large majority of European organizations have registered their domain names with one of the ccTLD registries.

<sup>224</sup> Statistics referred to in this section were made available by NetNames Ltd. at <http://www.netnames.com>.

<sup>225</sup> *Ibid.*

---

<sup>226</sup> See Comment of European Community and its Member States (November 3, 1998 - RFC-2); Comment of American Intellectual Property Law Association (November 6, 1998 - RFC-2); Comment of European Brands Association (AIM) (November 5, 1998 - RFC-2); Comment of Ms. Marilyn Cade of AT&T (Washington Consultation – 1998); Comment of Ford Global Technologies (November 14, 1998 - RFC-2); Comment of Mr. Roger Cochetti of IBM (Washington Consultation – 1998)

<sup>227</sup> See Comment of MARQUES (November 6, 1998 - RFC-2); Comment of Mr. Neil Smith of Limbach and Limbach (San Francisco Consultation); Comment of Mr. Keith Gymer (Brussels Consultation – 1999); Comment of Mr. Nethri (Hyderabad Consultation); Comment of Mr. Martin Schwimmer (November 11, 1998 - RFC-2).

<sup>228</sup> For instance, the latest releases of Netscape's browser include a feature called "Internet Keywords." A user wishing to access, for example, the website of BankAmerica Corporation would no longer be required to enter "<http://www.bofa.com>" in a browser, but simply "*bank of america*."

<sup>229</sup> The INternet ONE system permits such coexistence, as illustrated by <http://www.lloyds.io>. When a user enters a keyword that is shared by several parties in this system, a screen will appear listing all such parties together with their description, and a link to their respective websites.

<sup>230</sup> Centraal's RealName system requires keywords to be unique; see <http://company.realnames.com/WhatAreRealNames/GeneralFAQ.html>.

<sup>231</sup> In Netscape's system, entering the keyword "book" directs the user to the Barnes & Noble on-line book store at <http://www.book.com>. Centraal's RealName system in principle does not accept generic terms, see <http://company.realnames.com/WhatAreRealNames/GeneralFAQ.html>.

<sup>232</sup> Compare, for instance, the policies of Netscape (at <http://home.netscape.com/escapes/keywords/faq.html>), Internet One (at <http://www.io.io/rules.html>), and Centraal (at <http://company.realnames.com/WhatAreRealNames/GeneralFAQ.html>); see also Estee Lauder, Inc. et al. v. the Fragrance Counter, Inc. et al. (S.D.N.Y., No. 99 Civil 382) (plaintiffs allege that keywords registered by the Fragrance Counter with Excite infringe their trademarks) (pending).

<sup>233</sup> Similarly entering the keyword "golf" in the same systems, directs the user to the website of one company located in the United States ([www.golf.com](http://www.golf.com)), while several other companies exist that have used the word "golf" as a domain name, including one in the United Kingdom ([www.golf.co.uk](http://www.golf.co.uk)), Germany ([www.golf.de](http://www.golf.de)), the Netherlands ([www.golf.nl](http://www.golf.nl)), Australia ([www.golf.com.au](http://www.golf.com.au)), etc.

<sup>234</sup> See, e.g., C. Oakes, "The Next Net Name Battle," WIRED (July 20, 1998) (at <http://www.wired.com/news/news/technology/story/13820.html>), and G. Venditto, "Netscape's Quiet Power Grab," Internet World (August 24, 1998) (at <http://www.internetworld.com/print/1998/08/24/opinion/19980824-target.html>).

Contact Information Redacted

## **Proof of Legal Establishment**

### **8(a). Legal form of the Applicant**

Société à Responsabilité Limitée (Sàrl)

### **8(b). State the specific national or other jurisdiction that defines the type of entity identified in 8(a).**

Switzerland

### **8(c). Attach evidence of the applicant's establishment.**

Attachments are not displayed on this form.

### **9(a). If applying company is publicly traded, provide the exchange and symbol.**

**9(b). If the applying entity is a subsidiary, provide the parent company.**

VeriSign Switzerland SA

**9(c). If the applying entity is a joint venture, list all joint venture partners.**

Not applicable.

## **Applicant Background**

**11(a). Name(s) and position(s) of all directors**

Daniel Blättler	Gérant (Manager)
Romain Jean-Pierre Cholat	Gérant (Manager) & President

**11(b). Name(s) and position(s) of all officers and partners**

Daniel Blättler	Gérant (Manager)
Romain Jean-Pierre Cholat	Gérant (Manager) & President

**11(c). Name(s) and position(s) of all shareholders holding at least 15% of shares**

VeriSign Switzerland SA	Not Applicable
-------------------------	----------------

**11(d). For an applying entity that does not have directors, officers, partners, or shareholders: Name(s) and position(s) of all individuals having legal or executive responsibility**

## **Applied-for gTLD string**

**13. Provide the applied-for gTLD string. If an IDN, provide the U-label.**

קום

**14(a). If an IDN, provide the A-label (beginning with "xn--").**

xn--9dbq2a

**14(b). If an IDN, provide the meaning or restatement of the string in English, that is, a description of the literal meaning of the string in the opinion of the applicant.**

Transliteration of com

**14(c). If an IDN, provide the language of the label (in English).**

Hebrew

**14(c). If an IDN, provide the language of the label (as referenced by ISO-639-1).**

he

**14(d). If an IDN, provide the script of the label (in English).**

Hebrew

**14(d). If an IDN, provide the script of the label (as referenced by ISO 15924).**

Hebr

**14(e). If an IDN, list all code points contained in the U-label according to Unicode form.**

U+05E7 U+05D5 U+05DD

**15(a). If an IDN, Attach IDN Tables for the proposed registry.**

Attachments are not displayed on this form.

**15(b). Describe the process used for development of the IDN tables submitted, including consultations and sources used.**

Verisign will leverage its mature shared registration system to provide services for the HEBREW\_TRANSLITERATION\_OF\_COM gTLD. Verisign's registration software is in compliance with all current IDN standards, including ICANN's IDN Guidelines, as well as The Internationalized Domain Names in Applications (IDNA 2008) specification, published by the IETF as RFC 5891.

The IDN tables provided herein represent Unicode characters allowed for registration by Verisign's software. The data in these tables come from three categories of source material.

1. Openly available language standards, published in RFC and other formats, by appropriate authorities.
2. The Unicode Standard, specifically definitions of written scripts as defined by this well-known specification.
3. ICANN's own IDN Implementation Guidelines, which provide some special rules for domain registration, especially code points not appropriate for the DNS.

#### Attached IDN Tables

Per ICANN's requirement, "IDN tables should be submitted in a machine-readable format. The model format described in Section 5 of RFC 4290 would be ideal." Of the formats that the TAS tool accepts, there are no machine readable formats available for upload. The best format for machine readable, RFC 4290 compliant, text would be the open standard ASCII text format of .txt. Upon inquiring with ICANN applicants were told to submit the IDN tables in an .xls or .pdf format. All of the IDN tables attached to this application are available in the machine readable open standard ASCII text format of .txt. In order to meet the 5 attachment per question limit and the 5MB size per file, we have divided the Language and Script files into five files that accommodate the size of the tables. As such we have attached 4 .pdf files, and one .xls file. The single Excel file contains the one script file for Han which far exceeded the 5MB limit in .pdf but is offered here in .xls format. Again, all IDN tables are available for ICANN's review in the required RFC 4290 compliant machine readable open standard ASCII text format of .txt outlined in the application; however, due to limitations in the TAS tool accommodations have been made.

### **15(c). List any variant strings to the applied-for gTLD string according to the relevant IDN tables.**

N/A

### **16. Describe the applicant's efforts to ensure that there are no known operational or rendering problems concerning the applied-for gTLD string. If such issues are known, describe steps that will be taken to mitigate these issues in software and other applications.**

Having successfully operated TLDs for more than 16 years and having used IDNs in our registries since 2000, Verisign has deep knowledge and understanding of potential operational or rendering problems associated with TLDs and IDN strings.

Verisign operates the HEBREW\_TRANSLITERATION\_OF\_COM gTLD in compliance with the most recently approved versions of the ICANN IDN Guidelines and RFC application protocol, currently RFC 5891, Internationalized Domain Names in Applications (IDNA 2008).

Bi-directional rules for impacted scripts, outlined in RFC 5893 (Right-to-Left Scripts for IDNA), specify the relevant rules for the HEBREW\_TRANSLITERATION\_OF\_COM gTLD.

**17. (OPTIONAL) Provide a representation of the label according to the International Phonetic Alphabet (<http://www.langsci.ucl.ac.uk/ipa/>).**

'koom

## Mission/Purpose

**18(a). Describe the mission/purpose of your proposed gTLD.**

1 MISSION AND PURPOSE OF PROPOSED GTLD

The primary mission of the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD is to improve the user experience by offering a fully internationalized domain name (IDN) that includes a transliteration of .com. This gTLD is intended to serve users whose primary language is based in Hebrew script. For the first time in the history of the Domain Name System (DNS), internationalized generic top-level domains (gTLDs) create the capability for speakers of non-Latin-based languages to access the DNS entirely in their native script. Offering HEBREW\_TRANSLITERATION\_OF\_.COM represents a critical step toward implementing that functionality. Verisign's vision is to improve usability of domain names for users of major scripts around the world. Registrants and Internet users will be able to use their native script, if desired, to take advantage of their domain name's functionality, ubiquity, and stability.

**18(b). How do you expect that your proposed gTLD will benefit registrants, Internet users, and others?**

2 BENEFIT TO REGISTRANTS, INTERNET USERS, AND OTHERS

As of this writing, more than 800,000 internationalized second-level domain names are registered in .com, including approximately 12,000 in Hebrew. The HEBREW\_TRANSLITERATION\_OF\_.COM gTLD, along with the other proposed IDN transliterations of .com, provide an immediate benefit to registrants of those names by giving them the opportunity to register IDN second-level domain names as "IDN.IDN" domain names. That is, registrants can use their preferred script in both the second-level domain name and the gTLD name. Doing so improves these domain names' functionality and accessibility to speakers of non-Latin-based languages.

We anticipate that the availability of the HEBREW\_TRANSLITERATION\_OF\_.COM will greatly increase the appeal and value of internationalized addresses in Israel. Expanding the accessibility and functionality of these domain names to users worldwide is the primary benefit of all internationalized transliterations of .com.

Finally, we anticipate that HEBREW\_TRANSLITERATION\_OF\_.COM will increase choice and competition in Israel and elsewhere by giving local users the option of registering their domain name with an established, trusted gTLD in their own language. Potential registrants in Israel currently have limited choices if they want to register an IDN.IDN domain name in a gTLD that is recognized across Hebrew-speaking regions. The HEBREW\_TRANSLITERATION\_OF\_.COM gTLD creates an attractive new option for these users.

More specifically, the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD benefits the following groups:

Registrants: As discussed above, current .com registrants with second-level .com IDNs in

Hebrew can greatly expand the functionality and reach of their existing registered addresses by the availability of IDN.IDN domain names entirely in Hebrew script. In addition, new registrants, whether Israel or elsewhere, who seek entirely Hebrew addresses, have the option of registering their IDN.IDN domain names in a globally recognized domain.

Internet Users: The HEBREW\_TRANSLITERATION\_OF\_.COM gTLD significantly increases the ubiquity and functionality of .com for users around the world, particularly those in Israel. For the first time, Hebrew speakers could access a transliteration of .com addresses entirely in their native script. Verisign is committed to ensuring that the domain name experience remains consistent to all users, in every major script, everywhere in the world. This commitment supports the vision of "One World. One Internet." that infuses ICANN's global efforts.

## 2.1 Business Goals

Our goal is for HEBREW\_TRANSLITERATION\_OF\_.COM to operate as a best-in-class IDN registry. Although the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD is distinct from the .com gTLD in the DNS, we plan to provide a similar high quality of service that users of .com have come to expect.

The first step in this process is to ensure that, like .com, HEBREW\_TRANSLITERATION\_OF\_.COM operates at the highest level of availability, stability, and security. The HEBREW\_TRANSLITERATION\_OF\_.COM gTLD is rooted in the same world-class infrastructure that supports .com and .net at the highest level of operational excellence. Users and registrants have extremely high expectations of .com, and we leverage the full capability of our infrastructure and operational expertise to ensure that HEBREW\_TRANSLITERATION\_OF\_.COM meets these expectations from the moment of its launch.

The initial target audience for HEBREW\_TRANSLITERATION\_OF\_.COM is the registrants of the approximately 12,000 IDN second-level addresses in .com. These registrants will have the opportunity to register their IDN.com addresses as IDN. HEBREW\_TRANSLITERATION\_OF\_.COM addresses.

The secondary target market for HEBREW\_TRANSLITERATION\_OF\_.COM is the current registrants of ASCII domain name addresses who may be doing business in Israel or other regions with a high number of Hebrew speakers. The HEBREW\_TRANSLITERATION\_OF\_.COM gTLD provides these registrants a ready-made solution to localize their online identity while still maintaining the continuity of their .com addresses.

Finally, we are committed to working with registrars to perform outreach in Israel and elsewhere to reach potential new registrants who are interested in establishing a new HEBREW\_TRANSLITERATION\_OF\_.COM domain name.

## 2.2. Competition, Differentiation, and Innovation Goals

Hebrew speakers currently have limited options for registering IDN.IDN domain names. The HEBREW\_TRANSLITERATION\_OF\_.COM gTLD introduces competition and choice for registrants in Israel by providing them with an option that—while new—also carries the trust, reliability, and accessibility of an established global brand.

What differentiates HEBREW\_TRANSLITERATION\_OF\_.COM from other potential market entrants for Hebrew IDN gTLDs is that it represents a localized representation of a domain that many users already know and trust, .com. In addition, HEBREW\_TRANSLITERATION\_OF\_.COM is the best available phonetic representation of ".com" in Hebrew. The IDN's brand is the brand of a globally recognized domain, operated by a globally recognized provider.

## 2.3 User Experience Goals

Verisign's goal for HEBREW\_TRANSLITERATION\_OF\_.COM is to deliver a user experience as similar to the current experience of .com as possible. Verisign operates the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD at the same high level of security, stability, and

availability as .com, allowing registrars to enjoy the same high service levels that Verisign provides for all of the domains we operate.

We helped organize and are deeply involved in the IDN Software Developers Consortium (IDNSDC), which is committed to improving the functionality and accessibility of IDNs to users. We continue to engage significantly in the IDNSDC to complement the IDN initiatives being driven by ICANN and to help drive adoption of IDN capabilities in standard client software.

## 2.4 Registration Policies

The registration policies for HEBREW\_TRANSLITERATION\_OF\_.COM follow closely the existing IDN registration policies for .com. The Verisign Shared Registration System (SRS) allows the creation of IDNs that contain Unicode supported non-ASCII scripts. We have developed a policy for IDN registrations specifying permissible and prohibited code points. The policy is implemented in the following five rules. IDNs that adhere to these five rules are considered valid registrations.

### 2.4.1. Internet Engineering Task Force (IETF) Standards

The IDNA2008 specification defines rules and algorithms that permit/prohibit Unicode points in IDN registrations. We comply with all of the RFC documents that comprise the IDNA2008 standard.

### 2.4.2. Restrictions on Specific Languages

All IDN registrations require a three-letter Language Tag. HEB, for instance, is for the Hebrew language. If the Language Tag associated with the registration is in our Language Tag Table, we have a List of Included Characters for that language. The requested IDN must be entirely contained within this List of Included Characters. If even one code point from the IDN is not a valid character for this language, the registration is rejected.

### 2.4.3. Restriction on Commingling of Scripts

If the Language Tag specified in the IDN registration is not in the approved list of Language Tags located on our website, and so does not have a List of Included Characters, then we apply an alternate restriction to prevent commingling of different scripts in a single domain.

The Unicode Standard defines a set of Unicode Scripts (<http://www.unicode.org/Public/6.0.0/ucd/Scripts.txt>) by assigning each code point exactly one Unicode script value. As a rule, Verisign rejects the commingling of code points from different Unicode scripts. That is, if an IDN contains code points from two or more Unicode scripts, then that IDN registration is rejected. For example, a character from the Latin script cannot be used in the same IDN with any Cyrillic character. All code points within an IDN must come from the same Unicode script. This is done to prevent confusable code points from appearing in the same IDN.

Again, this rule only applies to languages for which there is not a strictly defined List of Included Characters. For example, the FRE Language Tag, indicating the French language, does not have a strict List of Included Characters, and so the commingling rule applies. All code points in a French domain must come from a single script.

2.4.4. The Verisign SRS also adheres to ICANN's Guidelines for the Implementation of Internationalized Domain Names. Section 5 of the document outlines characters that are allowed by the IETF standard, but should be prohibited for IDN registration.

### 2.4.5. Special Characters

There are two (Unicode characters whose latest definitions are not backward compatible with previous versions of the IDNA Standard. The Latin Sharp S and Greek Final Sigma were previously mapped to alternate characters. Clients and registries that comply with the older standard would, for instance, map a Latin Sharp S into two lowercase Latin letter S characters. This mapping is irreversible. The latest version of the IDNA standard does not apply this mapping. So, whereas the Latin Sharp S was previously prohibited (mapped into other characters), the latest standard allows registries to accept this character at their own discretion.

Because these changes are not backward compatible, Verisign has elected to continue to

disallow these two characters until a clear and fair approach to their registration has been reached and communicated.

Additional information about our registration policies and approach to rights protection is available in our response to Question 29, Rights Protection Mechanisms.

## 2.5 Measures to Protect Privacy and Confidentiality

We limit information collection from registrants to ICANN mandated data points required in the registration of a domain name, and use this data solely for the purpose of publishing to the publicly available Whois service. Whois Terms of Use are available on our website.

## 2.6 Outreach and Communications

### Registrar Outreach

Many of our registrars have marketed and supported IDNs at the second-level of the .com TLD for more than ten years. Well-established registrars have provided IDN communications and customer service in markets where IDNs provide the highest level of benefit. We have sought advice from registrars and actively communicated the planned approach for launching IDNs at the top-level in regular meetings with the registrar channel. We continue to work closely with registrars not only to prepare for the Sunrise, Trademark Claims service, and general launch periods, but also to reach existing and prospective registrants who are interested in realizing the benefits of IDNs.

### Registrant and End-User Outreach

We augment our existing IDN web content with launch planning information and additional online resources for the IDN.IDN transliterations of .com. This web content includes details on the benefits of IDNs, and our approach to protect intellectual property and enhance end-user ubiquity. The full launch plan addresses Sunrise and Trademark Claims services, general launch through the registrar channel, and localized content for the initial launch markets. The IDN Software Developer's Consortium (IDNSDC)

To complement the IDN initiatives being driven by ICANN, we have organized a consortium to facilitate adoption of IDN capabilities in standard client software. The IDNSDC works with domain name industry stakeholders and application developers to bring greater awareness to existing client-side application challenges so that registrars in communication with their domain name registrants may fully understand usability issues.

## **18(c). What operating rules will you adopt to eliminate or minimize social costs?**

### 3 OPERATING RULES TO MINIMIZE SOCIAL COSTS

Verisign follows the standards and procedures in the Applicant Guidebook to ensure the stable, secure, and successful launch and operation of the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD. The registration policies described in Section 2.4 ensure that all HEBREW\_TRANSLITERATION\_OF\_.COM addresses comply with Internet standards, and ensure ICANN guidelines are put in place to reduce end-user confusion and security-related issues.

Our implementation of Language Tags and the restrictions on script commingling are intended to minimize the risk of misuse of IDN domain names for activities such as phishing.

#### 3.1 Resolution of Multiple Applications

During the Sunrise phase of the HEBREW\_TRANSLITERATION\_OF\_.COM launch, the registry accepts only applications with a valid identifier from the Trademark Clearinghouse. If multiple applications are received for the same domain name, the registry uses a first-come/first-served

policy to determine the registrant.

During the general availability of the domain name, we continue to employ a first-come/first-served policy. Therefore, multiple requests for the same domain name result in a successful registration for the first request while subsequent requests will return a Not Available status.

### 3.2 Cost Benefits for Registrants

The introduction of IDN gTLDs, including HEBREW\_TRANSLITERATION\_OF\_.COM, introduces competition and choice to registrants interested in localizing their online identities to better reach non-English speaking end users.

### 3.3 Contractual Commitments Regarding Price Escalation

We provide to registrars at least six months' written notice of any increase to domain name registration fees.

## 4 OTHER STEPS TO MINIMIZE NEGATIVE CONSEQUENCES/COSTS IMPOSED UPON CONSUMERS

We have implemented extensive abuse prevention and rights protection mechanisms, as outlined in the response to Question 28, Abuse Prevention and Mitigation, and Question 29, Rights Protection Mechanisms.

# Community-based Designation

## 19. Is the application for a community-based TLD?

No

**20(a). Provide the name and full description of the community that the applicant is committing to serve.**

**20(b). Explain the applicant's relationship to the community identified in 20(a).**

**20(c). Provide a description of the community-based purpose of the applied-for gTLD.**

**20(d). Explain the relationship between the applied-for gTLD string and the community identified in 20(a).**

**20(e). Provide a description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD.**

**20(f). Attach any written endorsements from institutions/groups representative of the community identified in 20(a).**

Attachments are not displayed on this form.

## Geographic Names

**21(a). Is the application for a geographic name?**

No

## Protection of Geographic Names

**22. Describe proposed measures for protection of geographic names at the second and other levels in the applied-for gTLD.**

The Verisign registry solution provides a mechanism for reserving second-level domain names that prevents them from being registered. This functionality includes a list of strings that the system will not allow to be registered. Strings can be added and removed from this list as needed.

For the protection of geographic names for the HEBREW\_TRANSLITERATION\_OF\_COM gTLD, the country and territory names contained in the following internationally recognized lists shall be blocked initially:

\* The short form (in English) of all country and territory names, including the European Union, contained on the International Organization for Standardization (ISO) 3166-1 list:

[http://www.iso.org/iso/support/country\\_codes/iso\\_3166\\_code\\_lists/iso-3166-1\\_decoding\\_table.htm#EU](http://www.iso.org/iso/support/country_codes/iso_3166_code_lists/iso-3166-1_decoding_table.htm#EU)

\* The United Nations Group of Experts on Geographical Names (UNGEGN), Technical Reference Manual for the Standardization of Geographical Names, Part III Names of Countries of the World:

<http://unstats.un.org/unsd/geoinfo/UNGEGN/publications.html>

\* The list of United Nations member states, in six official United Nations languages, prepared by the Working Group on Country Names of the United Nations Conference on the Standardization of Geographical Names. The most recent list of country names approved by the Working Group was submitted on behalf of UNGEGN for the Ninth UN Conference on the Standardization of Geographical Names in August

As new versions of these three internationally recognized lists are published, Verisign will update the list of names reserved by the Verisign registry system to reflect any changes.

In addition to providing protection for geographic names, this reserved name functionality will be used to reserve other names specifically ineligible for delegation. For example, Section 2.2.1.2.3 of the Applicant Guidebook lists strings associated with the International Olympic Committee and the International Red Cross and Red Crescent organizations to be prohibited from delegation per the Government Advisory Committee (GAC) request.

All the strings on these lists as well as any others put forth by the GAC and approved by ICANN will be included in the list of reserved names.

There are no plans at this time to release any of the reserved names. If, however, Verisign intends to release any of the names at a future date, we will follow the appropriate procedures, outlined in Section 5 of Specification 5, on the release of reserved names.

## Registry Services

### 23. Provide name and full description of all the Registry Services to be provided.

#### 1 CUSTOMARY REGISTRY SERVICES

Verisign provides a comprehensive system and physical security solution that is designed to ensure a TLD is protected from unauthorized disclosure, alteration, insertion, or destruction of registry data. Our system addresses all areas of security including information and policies, security procedures, the systems development lifecycle, physical security, system hacks, break-ins, data tampering, and other disruptions to operations. Our operational environments not only meet the security criteria specified in our customer contractual agreements, thereby preventing unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with applicable standards, but also are subject to multiple independent assessments as detailed in the response to Question 30, Security Policy. Our physical and system security methodology follows a mature, ongoing lifecycle that was developed and implemented many years before the development of the industry standards with which we currently comply. Please see the response to Question 30, Security Policy, for details of the security features of our registry services.

Verisign's registry services comply with relevant standards and best current practice RFCs published by the Internet Engineering Task Force (IETF), including all successor standards, modifications, or additions relating to the DNS and name server operations including without limitation RFCs 1034, 1035, 1982, 2181, 2182, 2671, 3226, 3596, 3597, 3901, 4343, and 4472. Moreover, our Shared Registration System (SRS) supports the following IETF Extensible Provisioning Protocol (EPP) specifications, where the Extensible Markup Language (XML) templates and XML schemas are defined in RFC 3915, 5730, 5731, 5732, 5733, and 5734. By strictly adhering to these RFCs, we help ensure our registry services do not create a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems. Besides our leadership in authoring RFCs for EPP, Domain Name System Security Extensions (DNSSEC), and other DNS services, we have created and contributed to several now well-established IETF standards and are a regular and long-standing participant in key Internet standards forums.

Figure 23-1 (see Attachment VRSN\_.comHebrew\_Q23 Figures for all figures in this response) summarizes the technical and business components of those registry services, customarily offered by a registry operator (i.e., Verisign), that support this application. These services are currently operational and support both large and small Verisign-managed registries. We provide customary registry services in the same manner as we provide these services for our existing gTLD.

Through these established registry services, we have proven our ability to operate a reliable and low-risk registry that supports millions of transactions per day. We are unaware of any potential security or stability concern related to any of these services.

Registry services defined by this application are not intended to be offered in a manner unique to the new generic top-level domain (gTLD) nor are any proposed services unique to this application's registry.

As further evidence of Verisign's compliance with ICANN mandated security and stability requirements, we allocate the applicable RFCs to each of the five customary registry services (items A - E above). For each registry service, we also provide evidence in Figure 23-2 of our RFC compliance and include relevant ICANN prior-service approval actions.

#### 1.1 Critical Operations of the Registry

##### I. Receipt of Data from Registrars Concerning Registration of Domain Names and Name Servers

See Item A in Figure 23-1 and Figure 23-2.

##### ii. Provision to Registrars Status Information Relating to the Zone Servers

Verisign registry services provisions to registrars status information relating to zone servers for the TLD. The services also allow a domain name to be updated with client Hold, server Hold status, which removes the domain name server details from zone files. This ensures that DNS queries of the domain name are not resolved temporarily. When these hold statuses are removed, the name server details are written back to zone files and DNS queries are again resolved. Figure 23-3 describes the domain name status information and zone insertion indicator provided to registrars. The zone insertion indicator determines whether the name server details of the domain name exist in the zone file for a given domain name status. Verisign also has the capability to withdraw domain names from the zone file in near-real time by changing the domain name statuses upon request by customers, courts, or legal authorities as required.

##### iii. Dissemination of TLD Zone Files

See Item B in Figure 23-1 and Figure 23-2.

##### iv. Operation of the Registry Zone Servers

As a company, Verisign operates zone servers and serves DNS resolution from 76 geographically distributed resolution sites located in North America, South America, Africa, Europe, Asia, and Australia. Currently, 17 DNS locations are designated primary sites, offering greater capacity than smaller sites comprising the remainder of the Verisign constellation. We also use Any cast techniques and regional Internet resolution sites to expand coverage, accommodate emergency or surge capacity, and support system availability during maintenance procedures. We operate the gTLD from a minimum of eight of our primary sites (two on the East Coast of the United States, two on the West Coast of the United States, two in Europe, and two in Asia) and expand resolution sites based on traffic volume and patterns. Further details of the geographic diversity of our zone servers are provided in the response to Question 34, Geographic Diversity. Moreover, additional details of our zone servers are provided in the response to Question 32, Architecture and the response to Question 35, DNS Service.

##### v. Dissemination of Contact and Other Information Concerning Domain Name Server Registrations

See Item C in Figure 23-1 and Figure 23-2.

## 2 OTHER PRODUCTS OR SERVICES THE REGISTRY OPERATOR IS REQUIRED TO PROVIDE BECAUSE OF THE ESTABLISHMENT OF A CONSENSUS POLICY

Verisign is a proven supporter of ICANN's consensus-driven, bottom-up policy development process whereby community members identify a problem, initiate policy discussions, and generate a solution that produces effective and sustained results. Verisign currently provides all of the products or services (collectively referred to as services) that the registry operator is required to provide because of the establishment of a Consensus Policy. For the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD, we implement these services using the same proven processes and procedures currently in-place for all registries under our management. Furthermore, we execute these services on computing platforms comparable to those of other registries under our management. Our extensive experience with consensus policy required services and our proven processes to implement these services greatly minimize any potential risk to Internet security or stability. Details of these services are provided in the following subsections. It shall be noted that consensus policy services required of registrars (e.g., Whois Reminder, Expired Domain) are not included in this response. This exclusion is in accordance with the direction provided in the question's Notes column to address registry operator services.

### 2.1 Inter-Registrar Transfer Policy (IRTP)

#### Technical Component

In compliance with the IRTP consensus policy, we have designed our registration systems to systematically restrict the transfer of domain names within 60 days of the initial create date. In addition, we have implemented EPP and "AuthInfo" code functionality, which is used to further authenticate transfer requests. The registration system has been designed to enable compliance with the five-day Transfer grace period and includes the following functionality:

- \* Allows the losing registrar to proactively 'ACK' or acknowledge a transfer prior to the expiration of the five-day Transfer grace period
- \* Allows the losing registrar to proactively 'NACK' or not acknowledge a transfer prior to the expiration of the five-day Transfer grace period
- \* Allows the system to automatically ACK the transfer request once the five-day Transfer grace period has passed if the losing registrar has not proactively ACK'd or NACK'd the transfer request.

#### Business Component

All requests to transfer a domain name to a new registrar are handled according to the procedures detailed in the IRTP. Dispute proceedings arising from a registrar's alleged failure to abide by this policy may be initiated by any ICANN-accredited registrar under the Transfer Dispute Resolution Policy. Our compliance office serves as the first-level dispute resolution provider pursuant to the associated Transfer Dispute Resolution Policy. As needed Verisign is available to offer policy guidance as issues arise.

#### Security and Stability Concerns

We are unaware of any impact, caused by the service, on throughput, response time, consistency, or coherence of the responses to Internet servers or end-user systems. By implementing the IRTP in accordance with ICANN policy, security is enhanced as all transfer commands are authenticated using the AuthInfo code prior to processing.

#### ICANN Prior Approval

We have been in compliance with the IRTP since November 2004.

#### Unique to the TLD

This service is not provided in a manner unique to the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD.

### 2.2 Add Grace Period (AGP) Limits Policy

#### Technical Component

Our registry system monitors registrars' Add grace period deletion activity and provides reporting that permits us to assess registration fees upon registrars that have exceeded the AGP thresholds stipulated in the AGP Limits Policy. Further, we accept and evaluate all exemption requests received from registrars and determine whether the exemption request

meets the exemption criteria. We maintain all AGP Limits Policy exemption request activity so that this material may be included within our Monthly Registry Operator Report to ICANN.

Registrars that exceed the limits established by the policy may submit exemption requests to us for consideration. Our compliance office reviews these exemption requests in accordance with the AGP Limits Policy and renders a decision. Upon request, we submit associated reporting on exemption request activity to support reporting in accordance with established ICANN requirements.

#### Business Component

The Add grace period (AGP) is restricted for any gTLD operator that has implemented an AGP. Specifically, for each operator:

\* During any given month, an operator may not offer any refund to an ICANN-accredited registrar for any domain names deleted during the AGP that exceed (i) 10% of that registrar's net new registrations (calculated as the total number of net adds of one-year through ten-year registrations as defined in the monthly reporting requirement of Operator Agreements) in that month, or (ii) fifty (50) domain names, whichever is greater, unless an exemption has been granted by an operator.

\* Upon the documented demonstration of extraordinary circumstances, a registrar may seek from an operator an exemption from such restrictions in a specific month. The registrar must confirm in writing to the operator how, at the time the names were deleted, these extraordinary circumstances were not known, reasonably could not have been known, and were outside the registrar's control. Acceptance of any exemption will be at the sole and reasonable discretion of the operator; however "extraordinary circumstances" that reoccur regularly for the same registrar will not be deemed extraordinary.

In addition to all other reporting requirements to ICANN, we identify each registrar that has sought an exemption, along with a brief description of the type of extraordinary circumstance and the action, approval, or denial that the operator took.

#### Security and Stability Concerns

We are unaware of any impact, caused by the policy, on throughput, response time, consistency, or coherence of the responses to Internet servers or end-user systems.

#### ICANN Prior Approval

We have had experience with this policy since its implementation in April 2009.

#### Unique to the TLD

This service is not provided in a manner unique to the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD.

### 2.3 Registry Services Evaluation Policy (RSEP)

#### Technical Component

We adhere to all RSEP submission requirements. We have followed the process many times and are fully aware of the submission procedures, the type of documentation required, and the evaluation process that ICANN adheres to.

#### Business Component

In accordance with ICANN procedures detailed on the ICANN RSEP website (<http://www.icann.org/en/registries/rsep/>), all gTLD registry operators are required to follow this policy when submitting a request for new registry services.

#### Security and Stability Concerns

As part of the RSEP submission process, we identify any potential security and stability concerns in accordance with RSEP stability and security requirements. We never launch services without satisfactory completion of the RSEP process and resulting approval.

#### ICANN Prior Approval

Not applicable.

#### Unique to the TLD

gTLD RSEP procedures are not implemented in a manner unique to the

HEBREW\_TRANSLITERATION\_OF\_.COM gTLD.

3 PRODUCTS OR SERVICES ONLY A REGISTRY OPERATOR IS CAPABLE OF PROVIDING BY REASON OF ITS DESIGNATION AS THE REGISTRY OPERATOR

We have developed a Registry-Registrar Two-Factor Authentication Service that complements traditional registration and resolution registry services. In accordance with direction provided in Question 23, Verisign details below the technical and business components of the service, identifies any potential threat to registry security or stability, and lists previous interactions with

ICANN to approve the operation of the service. The Two-Factor Authentication Service is currently operational, supporting multiple registries under ICANN's purview.

We are unaware of any competition issue that may require the registry service(s) listed in this response to be referred to the appropriate governmental competition authority or authorities with applicable jurisdiction. ICANN previously approved the service(s), at which time it was determined that either the service(s) raised no competitive concerns or any applicable concerns related to competition were satisfactorily addressed.

### 3.1 Two-Factor Authentication Service

#### Technical Component

The Registry-Registrar Two-Factor Authentication Service is designed to improve domain name security and assist registrars in protecting the accounts they manage. As part of the service, dynamic one-time passwords (OTPs) augment the user names and passwords currently used to process update, transfer, and/or deletion requests. These one-time passwords enable transaction processing to be based on requests that are validated both by "what users know" (i.e., their user name and password) and "what users have" (i.e., a two-factor authentication credential with a one-time-password).

Registrars can use the OTP when communicating directly with Verisign's Customer Service department as well as when using the registrar portal to make manual updates, transfers, and/or deletion transactions. The Two-Factor Authentication Service is an optional service offered to registrars that execute the Registry-Registrar Two-Factor Authentication Service Agreement.

#### Business Component

There is no charge for the Registry-Registrar Two-Factor Authentication Service. It is enabled only for registrars that wish to take advantage of the added security provided by the service.

#### Security and Stability Concerns

We are unaware of any impact, caused by the service, on throughput, response time, consistency, or coherence of the responses to Internet servers or end-user systems. The service is intended to enhance domain name security, resulting in increased confidence and trust by registrants.

#### ICANN Prior Approval

ICANN approved the same Two-Factor Authentication Service for Verisign's use on .com and .net on 10 July 2009 (RSEP Proposal 2009004) and for .name on 16 February 2011 (RSEP Proposal 2011001).

#### Unique to the TLD

This service is not provided in a manner unique to the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD.

## Demonstration of Technical & Operational Capability

### 24. Shared Registration System (SRS) Performance

## 1.1 High-Level Shared Registration System (SRS) System Description

Verisign provides and operates a robust and reliable SRS that enables multiple registrars to provide domain name registration services in the top-level domain (TLD). Our proven reliable SRS serves approximately 915 registrars, and as a company, we have averaged more than 140 million registration transactions per day. The SRS provides a scalable, fault-tolerant platform for the delivery of gTLDs through the use of a central customer database, a web interface, a standard provisioning protocol (i.e., Extensible Provisioning Protocol, EPP), and a transport protocol (i.e., Secure Sockets Layer, SSL).

The SRS components include:

- \* **Web Interface:** Allows customers to access the authoritative database for accounts, contacts, users, authorization groups, product catalog, product subscriptions, and customer notification messages.

- \* **EPP Interface:** Provides an interface to the SRS that enables registrars to use EPP to register and manage domains, hosts, and contacts.

- \* **Authentication Provider:** A Verisign-developed application, specific to the SRS, that authenticates a user based on a login name, password, and the SSL certificate common name and client IP address.

The SRS is designed to be scalable and fault tolerant by incorporating clustering in multiple tiers of the platform. New nodes can be added to a cluster within a single tier to scale a specific tier, and if one node fails within a single tier, the services will still be available. The SRS allows registrars to manage the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD domain names in a single architecture.

To flexibly accommodate the scale of our transaction volumes, as well as new technologies, we employ the following design practices:

- \* **Scale for Growth:** Scale to handle current volumes and projected growth.

- \* **Scale for Peaks:** Scale to twice base capacity to withstand "registration add attacks" from a compromised registrar system.

- \* **Limit Database CPU Utilization:** Limit utilization to no more than 50 percent during peak loads.

- \* **Limit Database Memory Utilization:** Each user's login process that connects to the database allocates a small segment of memory to perform connection overhead, sorting, and data caching. Our standards mandate that no more than 40 percent of the total available physical memory on the database server will be allocated for these functions.

Our SRS is built upon a three-tier architecture as illustrated in Figure 24-1 (see Attachment VRSN\_.comHebrew\_Q24 Figures for all figures in this response) and detailed here:

- \* **Gateway Layer:** The first tier, the gateway servers, uses EPP to communicate with registrars. These gateway servers then interact with application servers, which comprise the second tier.

- \* **Application Layer:** The application servers contain business logic for managing and maintaining the registry business. The business logic is particular to each TLD's business rules and requirements. The flexible internal design of the application servers allows Verisign to easily leverage existing business rules to apply to the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD. The application servers store Verisign's data in the registry database, which comprises the third and final tier. This simple, industry-standard design has been highly effective with other customers for whom we provide backend registry services.

- \* **Database Layer:** The database is the heart of this architecture. It stores all the essential

information provisioned from registrars through the gateway servers. Separate servers query the database, extract updated zone and Whois information, validate that information, and distribute it around the clock to our worldwide domain name resolution sites.

## Scalability and Performance

We implement our scalable SRS on a supportable infrastructure that achieves the availability requirements in Specification 10. We employ the design patterns of simplicity and parallelism in both our software and systems, based on our experience that these factors contribute most significantly to scalability and reliable performance. Going counter to feature-rich development patterns, we intentionally minimize the number of lines of code between the end user and the data delivered. The result is a network of restorable components that provide rapid, accurate updates. Figure 24-2 depicts EPP traffic flows and local redundancy in our SRS provisioning architecture. As detailed in the figure, local redundancy is maintained for each layer as well as each piece of equipment. This built-in redundancy enhances operational performance while enabling the future system scaling necessary to meet additional demand created by this or future registry applications.

Besides improving scalability and reliability, local SRS redundancy enables us to take down individual system components for maintenance and upgrades, with little to no performance impact. With our redundant design, we can perform routine maintenance while the remainder of the system remains online and unaffected. For the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD registry, this flexibility minimizes unplanned downtime and provides a more consistent end-user experience.

### 1.2 Representative Network Diagrams

Figure 24-3 provides a summary network diagram of Verisign's SRS. This configuration at both the primary and alternate-primary Verisign data centers provides a highly reliable backup capability. Data is continuously replicated between both sites to ensure failover to the alternate-primary site can be implemented expeditiously to support both planned and unplanned outages.

### 1.3 Number of Servers

We continually review our server deployments for all aspects of our registry service. We evaluate usage based on peak performance objectives as well as current transaction volumes, which drive the quantity of servers in our implementations. Our scaling is based on the following factors:

- \* Server configuration is based on CPU, memory, disk IO, total disk, and network throughput projections.

- \* Server quantity is determined through statistical modeling to fulfill overall performance objectives as defined by both the service availability and the server configuration.

- \* To ensure continuity of operations for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD, we use a minimum of 100 dedicated servers per SRS site. These servers are virtualized to meet demand.

### 1.4 Description of Interconnectivity with Other Registry Systems

Figure 24-4 provides a technical overview of Verisign's SRS, showing how the SRS component fits into this larger system and interconnects with other system components.

### 1.5 Frequency of Synchronization Between Servers

We use synchronous replication to keep our SRS continuously in sync between the two data centers. This synchronization is performed in near-real time, thereby supporting rapid failover should a failure occur or a planned maintenance outage be required.

## 1.6 Synchronization Scheme

Verisign uses synchronous replication to keep the SRS continuously in sync between the two data centers. Because the alternate-primary site is continuously up, and built using an identical design to the primary data center, it is classified as a “hot standby.”

## 2 SCALABILITY AND PERFORMANCE ARE CONSISTENT WITH THE OVERALL BUSINESS APPROACH AND PLANNED SIZE OF THE REGISTRY

As an experienced backend registry provider, we have developed and use proprietary system scaling models to guide the growth of our TLD supporting infrastructure. These models direct our infrastructure scaling to include, but not be limited to, server capacity, data storage volume, and network throughput that are aligned to projected demand and usage patterns. We periodically update these models to account for the adoption of more capable and cost-effective technologies.

Verisign’s scaling models are proven predictors of needed capacity and related cost. As such, they provide the means to link the projected infrastructure needs of the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD with necessary implementation and sustainment cost. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 – Financial Projections: Most Likely) as an input to our scaling models, we derived the necessary infrastructure required to implement and sustain this gTLD. Cost related to this infrastructure is provided as “Total Critical Registry Function Cash Outflows” (Template 1, Line IIb.G) within the Question 46 financial projections response.

## 3 TECHNICAL PLAN THAT IS ADEQUATELY RESOURCED IN THE PLANNED COSTS DETAILED IN THE FINANCIAL SECTION

As an experienced backend registry provider, we have developed a set of proprietary resourcing models to project the number and type of personnel resources necessary to operate a TLD. We routinely adjust these staffing models to account for new tools and process innovations. These models enable us to continually right-size our staff to accommodate projected demand and meet service level agreements as well as Internet security and stability requirements. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 – Financial Projections: Most Likely) as an input to our staffing models, we derived the necessary personnel levels required for this gTLD’s initial implementation and ongoing maintenance. This personnel-related cost is included in “Total Critical Registry Function Cash Outflows” (Template 1, Line IIb.G) within the Question 46 financial projections response.

Verisign employs more than 1,040 individuals of which more than 775 comprise our technical work force. (Current statistics are publicly available in our quarterly filings.) Drawing from this pool of on-hand and fully committed technical resources, we have maintained DNS operational accuracy and stability 100 percent of the time for more than 13 years for .com, proving our ability to align personnel resource growth to the scale increases of our TLD service offerings.

We project we will use the following personnel roles, which are described in Section 5 of the response to Question 31, Technical Overview of Proposed Registry, to support SRS performance:

- \* Application Engineers: 19
- \* Database Administrators: 8
- \* Database Engineers: 3
- \* Network Administrators: 11
- \* Network Architects: 4
- \* Project Managers: 25
- \* Quality Assurance Engineers: 11
- \* SRS System Administrators: 13

- \* Storage Administrators: 4
- \* Systems Architects: 9

To implement and manage the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD as described in this application, we scale, as needed, the size of each technical area now supporting our portfolio of TLDs. Consistent with our resource modeling, we periodically review the level of work to be performed and adjust staff levels for each technical area.

When usage projections indicate a need for additional staff, our internal staffing group uses an in-place staffing process to identify qualified candidates. These candidates are then interviewed by the lead of the relevant technical area. By scaling one common team across all our TLDs instead of creating a new entity to manage only this proposed gTLD, we realize significant economies of scale and ensure our TLD best practices are followed consistently. This consistent application of best practices helps ensure the security and stability of both the Internet and this proposed gTLD, as we hold all contributing staff members accountable to the same procedures that guide our execution of the Internet's largest TLDs (i.e., .com and .net). Moreover, by augmenting existing teams, we afford new employees the opportunity to be mentored by existing senior staff. This mentoring minimizes start-up learning curves and helps ensure that new staff members properly execute their duties.

#### 4 EVIDENCE OF COMPLIANCE WITH SPECIFICATION 6 AND 10 TO THE REGISTRY AGREEMENT

##### Section 1.2 (EPP) of Specification 6, Registry Interoperability and Continuity Specifications

Verisign provides these services using our SRS, which complies fully with Specification 6, Section 1.2 of the Registry Agreement. In using our SRS to provide backend registry services, we implement and comply with relevant existing RFCs (i.e., 5730, 5731, 5732, 5733, 5734, and 5910) and intend to comply with RFCs that may be published in the future by the Internet Engineering Task Force (IETF), including successor standards, modifications, or additions thereto relating to the provisioning and management of domain names that use EPP. In addition, our SRS includes a Registry Grace Period (RGP) and thus complies with RFC 3915 and its successors. Details of the Verisign SRS' compliance with RFC SRS/EPP are provided in the response to Question 25, Extensible Provisioning Protocol. We do not use functionality outside the base EPP RFCs, although proprietary EPP extensions are documented in Internet-Draft format following the guidelines described in RFC 3735 within the response to Question 25. Moreover, prior to deployment, Verisign will provide to ICANN updated documentation of all the EPP objects and extensions supported in accordance with Specification 6, Section 1.2.

##### Specification 10, EPP Registry Performance Specifications

Verisign's SRS meets all EPP Registry Performance Specifications detailed in Specification 10, Section 2. Evidence of this performance can be verified by a review of the .com and .net Registry Operator's Monthly Reports, which we file with ICANN. These reports detail our operational status of the .com and .net registries, which use an SRS design and approach comparable to the one proposed for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD. These reports provide evidence of our ability to meet registry operation service level agreements (SLAs) comparable to those detailed in Specification 10. The reports are accessible at the following URL: <http://www.icann.org/en/tlds/monthly-reports/>.

In accordance with EPP Registry Performance Specifications detailed in Specification 10, our SRS meets the following performance attributes:

- \* EPP service availability: Fewer than or equal to 864 minutes of downtime (approximately 98%)
- \* EPP session-command round trip time (RTT): Fewer than or equal to 4000 milliseconds (ms), for at least 90 percent of the commands
- \* EPP query-command RTT: Fewer than or equal to 2000 ms, for at least 90 percent of the

commands

\* EPP transform-command RTT: Fewer than or equal to 4000 ms, for at least 90 percent of the commands

## 25. Extensible Provisioning Protocol (EPP)

### 1 COMPLETE KNOWLEDGE AND UNDERSTANDING OF THIS ASPECT OF REGISTRY TECHNICAL REQUIREMENTS

We have used Extensible Provisioning Protocol (EPP) since our inception and possess complete knowledge and understanding of EPP registry systems. Our first EPP implementation—for a thick registry for the .name generic top-level domain (gTLD)—was in 2002. Since then we have continued our RFC-compliant use of EPP in multiple TLDs, as detailed in Figure 25-1 (see Attachment VRSN\_.comHebrew\_Q25 Figures for all figures in this response).

Our understanding of EPP and our ability to implement code that complies with the applicable RFCs is unparalleled. Mr. Scott Hollenbeck, Verisign’s director of software development, authored the Extensible Provisioning Protocol and continues to be fully engaged in its refinement and enhancement (U.S. Patent Number 7299299 – Shared registration system for registering domain names). We have also developed numerous new object mappings and object extensions following the guidelines in RFC 3735 (Guidelines for Extending the Extensible Provisioning Protocol). Mr. James Gould, a principal engineer at Verisign, led and co-authored the most recent EPP Domain Name System Security Extensions (DNSSEC) RFC effort (RFC 5910).

All Verisign registry systems use EPP. Upon approval of this application, we will use EPP to provide registry services for this gTLD. The .com, .net, and .name registries, for which we are the registry operator, use an SRS design and approach comparable to the one proposed for this gTLD. Approximately 915 registrars use our EPP service, and the registry system performs more than 140 million EPP transactions daily without performance issues or restrictive maintenance windows. The processing time service level agreement (SLA) requirements for the Verisign-operated .net gTLD are the strictest of the current Verisign-managed gTLDs. All processing times for Verisign-operated gTLDs can be found in ICANN’s Registry Operator’s Monthly Reports at <http://www.icann.org/en/tlds/monthly-reports/>.

We have also been active on the Internet Engineering Task Force (IETF) Provisioning Registry Protocol (provreg) working group and mailing list since work started on the EPP protocol in 2000. This working group provided a forum for members of the Internet community to comment on Mr. Scott Hollenbeck’s initial EPP drafts, which Mr. Hollenbeck refined based on input and discussions with representatives from registries, registrars, and other interested parties. The working group has since concluded, but the mailing list is still active to enable discussion of different aspects of EPP.

#### 1.1 EPP Interface with Registrars

Verisign fully supports the features defined in the EPP specifications and provides a set of software development kits (SDK) and tools to help registrars build secure and stable interfaces. Our SDKs give registrars the option of either fully writing their own EPP client software to integrate with the Shared Registration System (SRS), or using the Verisign-provided SDKs to aid them in the integration effort. Registrars can download the Verisign EPP SDKs and tools from the registrar website (<http://www.Verisign.com/domain-name-services/current-registrars/epp-sdk/index.html>).

The EPP SDKs provide a host of features including connection pooling, Secure Sockets Layer (SSL), and a test server (stub server) to run EPP tests against. One tool—the EPP tool—provides a web interface for creating EPP Extensible Markup Language (XML) commands and sending them to a configurable set of target servers. This helps registrars in creating the template XML and testing a variety of test cases against the EPP servers. An Operational Test and Evaluation (OT&E) environment, which runs the same software as the production system

so approved registrars can integrate and test their software before moving into a live production environment, is also available.

## 2 TECHNICAL PLAN SCOPE/SCALE CONSISTENT WITH THE OVERALL BUSINESS APPROACH AND PLANNED SIZE OF THE REGISTRY

As an experienced backend registry provider, we have developed and use proprietary system scaling models to guide the growth of our TLD supporting infrastructure. These models direct our infrastructure scaling to include, but not be limited to, server capacity, data storage volume, and network throughput that are aligned to projected demand and usage patterns. We periodically update these models to account for the adoption of more capable and cost-effective technologies.

Our scaling models are proven predictors of needed capacity and related cost. As such, they provide the means to link the projected infrastructure needs of the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD with necessary implementation and sustainment cost. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 – Financial Projections: Most Likely) as an input to our scaling models, we derived the necessary infrastructure required to implement and sustain this gTLD. Cost related to this infrastructure is provided as “Total Critical Registry Function Cash Outflows” (Template 1, Line IIB.G) within the Question 46 financial projections response.

## 3 TECHNICAL PLAN THAT IS ADEQUATELY RESOURCED IN THE PLANNED COSTS DETAILED IN THE FINANCIAL SECTION

As an experienced backend registry provider, we have developed a set of proprietary resourcing models to project the number and type of personnel resources necessary to operate a TLD. We routinely adjust these staffing models to account for new tools and process innovations. These models enable us to continually right-size our staff to accommodate projected demand and meet service level agreements as well as Internet security and stability requirements. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 – Financial Projections: Most Likely) as an input to our staffing models, we derived the necessary personnel levels required for this gTLD’s initial implementation and ongoing maintenance. Cost related to this infrastructure is provided as “Total Critical Registry Function Cash Outflows” (Template 1, Line IIB.G) within the Question 46 financial projections response.

We employ more than 1,040 individuals of which more than 775 comprise our technical work force. (Current statistics are publicly available in our quarterly filings.) Drawing from this pool of on-hand and fully committed technical resources, we have maintained DNS operational accuracy and stability 100 percent of the time for more than 13 years for .com, proving our ability to align personnel resource growth to the scale increases of our TLD service offerings.

We project we will use the following personnel roles, which are described in Section 5 of the response to Question 31, Technical Overview of Proposed Registry, to support the provisioning of EPP services:

- \* Application Engineers: 19
- \* Database Engineers: 3
- \* Quality Assurance Engineers: 11

To implement and manage the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD as described in this application, we scale, as needed, the size of each technical area now supporting our portfolio of TLDs. Consistent with our resource modeling, we periodically review the level of work to be performed and adjust staff levels for each technical area.

When usage projections indicate a need for additional staff, our internal staffing group uses an in-place staffing process to identify qualified candidates. These candidates are then interviewed

by the lead of the relevant technical area. By scaling one common team across all our TLDs instead of creating a new entity to manage only this proposed gTLD, we realize significant economies of scale and ensure our TLD best practices are followed consistently. This consistent application of best practices helps ensure the security and stability of both the Internet and this proposed TLD, as we hold all contributing staff members accountable to the same procedures that guide our execution of the Internet's largest TLDs (i.e., .com and .net). Moreover, by augmenting existing teams, we afford new employees the opportunity to be mentored by existing senior staff. This mentoring minimizes start-up learning curves and helps ensure that new staff members properly execute their duties.

#### 4 ABILITY TO COMPLY WITH RELEVANT RFCS

We incorporate design reviews, code reviews, and peer reviews into our software development lifecycle (SDLC) to ensure compliance with the relevant RFCs. Our dedicated QA team creates extensive test plans and issues internal certifications when it has confirmed the accuracy of the code in relation to the RFC requirements. Our QA organization is independent from the development team within engineering. This separation helps Verisign ensure adopted processes and procedures are followed, further ensuring that all software releases fully consider the security and stability of the TLD.

For the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD, the Shared Registration System (SRS) complies with the following IETF EPP specifications, where the XML templates and XML schemas are defined in the following specifications:

- \* EPP RGP 3915 (<http://www.apps.ietf.org/rfc/rfc3915.html>): EPP Redemption Grace Period (RGP) Mapping specification for support of RGP statuses and support of Restore Request and Restore Report (authored by Verisign's Scott Hollenbeck)
- \* EPP 5730 (<http://tools.ietf.org/html/rfc5730>): Base EPP specification (authored by Verisign's Scott Hollenbeck)
- \* EPP Domain 5731 (<http://tools.ietf.org/html/rfc5731>): EPP Domain Name Mapping specification (authored by Verisign's Scott Hollenbeck)
- \* EPP Host 5732 (<http://tools.ietf.org/html/rfc5732>): EPP Host Mapping specification (authored by Verisign's Scott Hollenbeck)
- \* EPP Contact 5733 (<http://tools.ietf.org/html/rfc5733>): EPP Contact Mapping specification (authored by Verisign's Scott Hollenbeck)
- \* EPP TCP 5734 (<http://tools.ietf.org/html/rfc5734>): EPP Transport over Transmission Control Protocol (TCP) specification (authored by Verisign's Scott Hollenbeck)
- \* EPP DNSSEC 5910 (<http://tools.ietf.org/html/rfc5910>): EPP Domain Name System Security Extensions (DNSSEC) Mapping specification (authored by Verisign's James Gould and Scott Hollenbeck)

#### 5 PROPRIETARY EPP EXTENSIONS

We use our SRS to provide registry services. The SRS supports the following EPP specifications, which we developed following the guidelines in RFC 3735, where the XML templates and XML schemas are defined in the specifications:

- \* IDN Language Tag (<http://www.verisigninc.com/assets/idn-language-tag.pdf>): EPP internationalized domain names (IDN) language tag extension used for IDN domain name registrations
- \* RGP Poll Mapping (<http://www.verisigninc.com/assets/whois-info-extension.pdf>): EPP mapping for an EPP poll message in support of Restore Request and Restore Report
- \* Whois Info Extension (<http://www.verisigninc.com/assets/whois-info-extension.pdf>): EPP

extension for returning additional information needed for transfers

\* EPP ConsoliDate Mapping (<http://www.verisigninc.com/assets/consolidate-mapping.txt>): EPP mapping to support a Domain Sync operation for synchronizing domain name expiration dates

\* NameStore Extension (<http://www.verisigninc.com/assets/namestore-extension.pdf>): EPP extension for routing with an EPP intelligent gateway to a pluggable set of backend products and services

\* Low Balance Mapping (<http://www.verisigninc.com/assets/low-balance-mapping.pdf>): EPP mapping to support low balance poll messages that proactively notify registrars of a low balance (available credit) condition

As part of the 2006 implementation report to bring the EPP RFC documents from Proposed Standard status to Draft Standard status, an implementation test matrix was completed. Two independently developed EPP client implementations based on the RFCs were tested against the Verisign EPP server for the domain, host, and contact transactions. No compliance-related issues were identified during this test, providing evidence that these extensions comply with RFC 3735 guidelines and further demonstrating Verisign's ability to design, test, and deploy an RFC-compliant EPP implementation. A copy of the implementation test matrix that was completed in 2006 to bring the EPP RFC documents from Proposed Standard status to Draft Standard Status can be found here: <http://www.ietf.org/iesg/implementation/report-rfc4930-4934.txt>

## 5.1 EPP Templates and Schemas

The EPP XML schemas are formal descriptions of the EPP XML templates. They are used to express the set of rules to which the EPP templates must conform in order to be considered valid by the schema. The EPP schemas define the building blocks of the EPP templates, describing the format of the data and the different EPP commands' request and response formats. The current EPP implementations managed by Verisign use these EPP templates and schemas, as will the proposed TLD. For each proprietary XML template/schema, we provide a reference to the applicable template and include the schema.

### XML templates/schema for idnLang-1.0 (IDN Language Tag)

\* Template: The templates for idnLang-1.0 can be found in Chapter 3, EPP Command Mapping of the relevant EPP documentation, <http://www.verisigninc.com/assets/idn-language-tag.pdf>.

\* Schema: This schema describes the extension mapping for the IDN language tag. The mapping extends the EPP domain name mapping to provide additional features required for the provisioning of IDN domain name registrations.

```
<?xml version="1.0" encoding="UTF-8"?>

<schema targetNamespace="http://www.Verisign.com/epp/idnLang-1.0"
  xmlns:idnLang="http://www.Verisign.com/epp/idnLang-1.0"
  xmlns="http://www.w3.org/2001/XMLSchema"
  elementFormDefault="qualified">

  <annotation>
    <documentation>
      Extensible Provisioning Protocol v1.0 domain name
      extension schema for IDN Lang Tag.
    </documentation>
  </annotation>
```

<!--  
Child elements found in EPP commands.

```
-->
  <element name="tag" type="language"/>

  <!--
  End of schema.
  -->
</schema>
```

-----

XML templates/schema for rgp-poll-1.0 (RGP Poll Mapping)

\* Template: The templates for rgp-poll-1.0 can be found in Chapter 3, EPP Command Mapping of the relevant EPP documentation, <http://www.verisigninc.com/assets/rgp-poll-mapping.pdf>.

\* Schema: This schema describes the extension mapping for poll notifications. The mapping extends the EPP base mapping to provide additional features for registry grace period (RGP) poll notifications.

```
<?xml version="1.0" encoding="UTF-8"?>

<schema targetNamespace="http://www.Verisign.com/epp/rgp-poll-1.0"

## 6 PROPRIETARY EPP EXTENSION CONSISTENCY WITH REGISTRATION LIFECYCLE

Verisign's proprietary EPP extensions, defined in Section 5 above, are consistent with the registration lifecycle documented in the response to Question 27, Registration Lifecycle. Details of the registration lifecycle are presented in that response. As new registry features are required, we develop proprietary EPP extensions to address new operational requirements. Consistent with ICANN procedures we adhere to all applicable Registry Services Evaluation Process (RSEP) procedures.

## 26. Whois

### 1 COMPLETE KNOWLEDGE AND UNDERSTANDING OF THIS ASPECT OF REGISTRY TECHNICAL REQUIREMENTS

Verisign has operated the Whois lookup service for the gTLDs and ccTLDs we manage since 1991, and will provide these proven services for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD registry. In addition, we continue to work with the Internet community to improve the utility of Whois data, while thwarting its application for abusive uses.

#### 1.1 High-Level Whois System Description

Like all other components of our registry service, our Whois system is designed and built for both reliability and performance in full compliance with applicable RFCs. Our current Whois implementation has answered more than five billion Whois queries per month for the TLDs we manage, and has experienced more than 250,000 queries per minute in peak conditions. The proposed gTLD uses a Whois system design and approach that is comparable to the current implementation. Independent quality control testing ensures our Whois service is RFC-

compliant through all phases of its lifecycle.

Our redundant Whois databases further contribute to overall system availability and reliability. The hardware and software for our Whois service is architected to scale both horizontally (by adding more servers) and vertically (by adding more CPUs and memory to existing servers) to meet future need.

We can fine-tune access to our Whois database on an individual Internet Protocol (IP) address basis, and we work with registrars to help ensure their services are not limited by any restriction placed on Whois. We provide near real-time updates for Whois services for the TLDs under our management. As information is updated in the registration database, it is propagated to the Whois servers for quick publication. These updates align with the near real-time publication of Domain Name System (DNS) information as it is updated in the registration database. This capability is important for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD registry as it is Verisign's experience that when DNS data is updated in near real time, so should Whois data be updated to reflect the registration specifics of those domain names.

Verisign's Whois response time has been less than 500 milliseconds for 95 percent of all Whois queries in .com, .net, .tv, and .cc. The response time in these TLDs, combined with our capacity, enables the Whois system to respond to up to 30,000 searches (or queries) per second for a total capacity of 2.6 billion queries per day.

The Whois software written by Verisign complies with RFC 3912. We use an advanced in-memory database technology to provide exceptional overall system performance and security. In accordance with RFC 3912, we provide a website at whois.nic. <TLD> that provides free public query-based access to the registration data.

We currently operate both thin and thick Whois systems.

Verisign commits to implementing a RESTful Whois service upon finalization of the relevant standards and protocols by the IETF (Internet Engineering Task Force).

#### Provided Functionalities for User Interface

To use the Whois service via port 43, the user enters the applicable parameter on the command line as illustrated here:

- \* For domain name: whois EXAMPLE.TLD
- \* For registrar: whois "registrar Example Registrar, Inc."
- \* For name server: whois "NS1.EXAMPLE.TLD" or whois "name server (IP address)"

To use the Whois service via the web-based directory service search interface:

- \* Go to [http://whois.nic. <TLD>](http://whois.nic.<TLD>)
- \* Click on the appropriate button (Domain, Registrar, or Name Server)
- \* Enter the applicable parameter:
  - a. Domain name, including the TLD (e.g., EXAMPLE.TLD)
  - b. Full name of the registrar, including punctuation (e.g., Example Registrar, Inc.)
  - c. Full host name or the IP address (e.g., NS1.EXAMPLE.TLD or 198.41.3.39)
- \* Click on the Submit button.

Provisions to Ensure That Access Is Limited to Legitimate Authorized Users and Is in Compliance with Applicable Privacy Laws or Policies

To further promote reliable and secure Whois operations, Verisign has implemented rate-limiting characteristics within the Whois service software. For example, to prevent data mining or other

abusive behavior, the service can throttle a specific requestor if the query rate exceeds a configurable threshold. In addition, QoS technology enables rate limiting of queries before they reach the servers, which helps protect against denial of service (DoS) and distributed denial of service (DDoS) attacks.

Our software also permits restrictions on search capabilities. For example, wild card searches can be disabled. If needed, it is possible to temporarily restrict and/or block requests coming from specific IP addresses for a configurable amount of time. Additional features that are configurable in the Whois software include help files, headers and footers for Whois query responses, statistics, and methods to memory map the database. Furthermore, we are European Union (EU) Safe Harbor certified and have worked with European data protection authorities to address applicable privacy laws by developing a tiered Whois access structure that requires users who require access to more extensive data to (i) identify themselves, (ii) confirm that their use is for a specified purpose and (iii) enter into an agreement governing their use of the more extensive Whois data.

## 1.2 Relevant Network Diagrams

Figure 26-1 (see Attachment VRSN\_.comHebrew\_Q26 Figures for all figures in this response) provides a summary network diagram of the Whois service provided by Verisign. The figure details the configuration with one resolution/Whois site. For the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD, we provide Whois service from six of our 17 primary sites based on the proposed gTLD's traffic volume and patterns. A functionally equivalent resolution architecture configuration exists at each Whois site.

## 1.3 IT and Infrastructure Resources

Figure 26-2 summarizes the IT and infrastructure resources that Verisign uses to provision Whois services from Verisign primary resolution sites. As needed, virtual machines are created based on actual and projected demand.

## 1.4 Description of Interconnectivity with Other Registry Systems

Figure 26-3 provides a technical overview of Verisign's registry system, and shows how the Whois service component fits into this larger system and interconnects with other system components.

## 1.5 Frequency of Synchronization Between Servers

Synchronization between the SRS and the geographically distributed Whois resolution sites occurs approximately every three minutes. We use a two-part Whois update process to ensure Whois data is accurate and available. Every 12 hours an initial file is distributed to each resolution site. This file is a complete copy of all Whois data fields associated with each domain name under management. As interactions with the SRS cause the Whois data to be changed, these incremental changes are distributed to the resolution sites as an incremental file update. This incremental update occurs approximately every three minutes. When the new 12-hour full update is distributed, this file includes all past incremental updates. Our approach to frequency of synchronization between servers meets the Performance Specifications defined in Specification 10 of the Registry Agreement for new gTLDs.

## 2 TECHNICAL PLAN SCOPE/SCALE CONSISTENT WITH THE OVERALL BUSINESS APPROACH AND PLANNED SIZE OF THE REGISTRY

As an experienced backend registry provider, we have developed and use proprietary system scaling models to guide the growth of our TLD supporting infrastructure. These models direct our infrastructure scaling to include, but not be limited to, server capacity, data storage volume, and network throughput that are aligned to projected demand and usage patterns. We periodically update these models to account for the adoption of more capable and cost-effective

technologies.

Our scaling models are proven predictors of needed capacity and related cost. As such, they provide the means to link the projected infrastructure needs of the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD with necessary implementation and sustainment cost. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 – Financial Projections: Most Likely) as an input to our scaling models, we derived the necessary infrastructure required to implement and sustain this gTLD. Cost related to this infrastructure is provided as “Total Critical Registry Function Cash Outflows” (Template 1, Line IIB.G) within the Question 46 financial projections response.

### 3 TECHNICAL PLAN THAT IS ADEQUATELY RESOURCED IN THE PLANNED COSTS DETAILED IN THE FINANCIAL SECTION

As an experienced backend registry provider, we have developed a set of proprietary resourcing models to project the number and type of personnel resources necessary to operate a TLD. We routinely adjust these staffing models to account for new tools and process innovations. These models enable us to continually right-size our staff to accommodate projected demand and meet service level agreements as well as Internet security and stability requirements. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 – Financial Projections: Most Likely) as an input to our staffing models, we derived the necessary personnel levels required for this gTLD’s initial implementation and ongoing maintenance. Cost related to this infrastructure is provided as “Total Critical Registry Function Cash Outflows” (Template 1, Line IIB.G) within the Question 46 financial projections response.

We employ more than 1,040 individuals of which more than 775 comprise our technical work force. (Current statistics are publicly available in our quarterly filings.) Drawing from this pool of on-hand and fully committed technical resources, we have maintained DNS operational accuracy and stability 100 percent of the time for more than 13 years for .com, proving our ability to align personnel resource growth to the scale increases of our TLD service offerings.

We project we will use the following personnel roles, which are described in Section 5 of the response to Question 31, Technical Overview of Proposed Registry, to support Whois services:

- \* Application Engineers: 19
- \* Database Engineers: 3
- \* Quality Assurance Engineers: 11

To implement and manage the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD as described in this application, we scale, as needed, the size of each technical area now supporting our portfolio of TLDs. Consistent with our resource modeling, we periodically review the level of work to be performed and adjust staff levels for each technical area.

When usage projections indicate a need for additional staff, our internal staffing group uses an in-place staffing process to identify qualified candidates. These candidates are then interviewed by the lead of the relevant technical area. By scaling one common team across all our TLDs instead of creating a new entity to manage only this proposed gTLD, we realize significant economies of scale and ensure our TLD best practices are followed consistently. This consistent application of best practices helps ensure the security and stability of both the Internet and this proposed gTLD, as we hold all contributing staff members accountable to the same procedures that guide our execution of the Internet’s largest TLDs (i.e., .com and .net). Moreover, by augmenting existing teams, we afford new employees the opportunity to be mentored by existing senior staff. This mentoring minimizes start-up learning curves and helps ensure that new staff members properly execute their duties.

### 4 COMPLIANCE WITH RELEVANT RFC

Verisign’s Whois service complies with the data formats defined in Specification 4 of the

Registry Agreement. We will provision Whois services for registered domain names and associated data in the top-level domain (TLD). Our Whois services are accessible over Internet Protocol version 4 (IPv4) and Internet Protocol version 6 (IPv6), via both Transmission Control Protocol (TCP) port 43 and a web-based directory service at whois.nic. (TLD) , which in accordance with RFC 3912, provides free public query-based access to domain name, registrar, and name server lookups. Our proposed Whois system meets all requirements as defined by ICANN for each registry under our management. Evidence of this successful implementation, and thus compliance with the applicable RFCs, can be verified by a review of the .com and .net Registry Operator's Monthly Reports that we file with ICANN. These reports provide evidence of our ability to meet registry operation service level agreements (SLAs) comparable to those detailed in Specification 10. The reports are accessible at the following URL:  
<http://www.icann.org/en/tlds/monthly-reports/>.

## 5 COMPLIANCE WITH SPECIFICATIONS 4 AND 10 OF REGISTRY AGREEMENT

In accordance with Specification 4, Verisign provides a Whois service that is available via both port 43 in accordance with RFC 3912, and a web-based directory service at whois.nic. (TLD) also in accordance with RFC 3912, thereby providing free public query-based access. We acknowledge that ICANN reserves the right to specify alternative formats and protocols, and upon such specification, we will implement such alternative specification as soon as reasonably practicable.

The format of the following data fields conforms to the mappings specified in Extensible Provisioning Protocol (EPP) RFCs 5730 - 5734 so the display of this information (or values returned in Whois responses) can be uniformly processed and understood: domain name status, individual and organizational names, address, street, city, state/province, postal code, country, telephone and fax numbers, email addresses, date, and times.

Specifications for data objects, bulk access, and lookups comply with Specification 4 and are detailed in the following subsections, provided in both bulk access and lookup modes.

### Bulk Access Mode

This data is provided on a daily schedule to a party designated from time to time in writing by ICANN. The specification of the content and format of this data, and the procedures for providing access, shall be as stated below, until revised in the ICANN Registry Agreement.

The data is provided in three files:

- \* Domain Name File: For each domain name, the file provides the domain name, server name for each name server, registrar ID, and updated date.
- \* Name Server File: For each registered name server, the file provides the server name, each IP address, registrar ID, and updated date.
- \* Registrar File: For each registrar, the following data elements are provided: registrar ID, registrar address, registrar telephone number, registrar email address, Whois server, referral URL, updated date, and the name, telephone number, and email address of all the registrar's administrative, billing, and technical contacts.

### Lookup Mode

Figures 26-4 through Figure 26-6 provide the query and response format for domain name, registrar, and name server data objects

#### 5.1 Specification 10, RDDS Registry Performance Specifications

Verisign's Whois service meets all registration data directory services (RDDS) registry performance specifications detailed in Specification 10, Section 2. Evidence of this performance can be verified by a review of the .com and .net Registry Operator's Monthly Reports that we file

monthly with ICANN. These reports are accessible from the ICANN website at the following URL: <http://www.icann.org/en/tlds/monthly-reports/>.

In accordance with RDDS registry performance specifications detailed in Specification 10, our Whois service meets the following proven performance attributes:

- \* RDDS availability: Fewer than or equal to 864 min of downtime (approximately 98%)
- \* RDDS query RTT: Fewer than or equal to 2000 ms, for at least 95% of the queries
- \* RDDS update time: Fewer than or equal to 60 min, for at least 95% of the probes

## 6 SEARCHABLE WHOIS

Verisign provides a searchable Whois service for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD. We have experience in providing tiered access to Whois for the .name registry, and we use these methods and control structures to help reduce potential malicious use of the function. The searchable Whois system currently uses Apache's Lucene full text search engine to index relevant Whois content with near-real time incremental updates from the provisioning system.

Features of our searchable Whois function include:

- \* Provision of a web-based searchable directory service
- \* Ability to perform partial match, at least, for the following data fields: domain name, contacts and registrant's name, and contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state, or province)
- \* Ability to perform exact match, at least, on the following fields: registrar ID, name server name, and name server's IP address (only applies to IP addresses stored by the registry, i.e., glue records)
- \* Ability to perform Boolean search supporting, at least, the following logical operators to join a set of search criteria: AND, OR, NOT
- \* Search results that include domain names that match the selected search criteria

Our implementation of searchable Whois is EU Safe Harbor certified and includes appropriate access control measures that help ensure that only legitimate authorized users can use the service. Furthermore, our compliance office monitors current ICANN policy and applicable privacy laws or policies to help ensure the solution is maintained within compliance of applicable regulations. Features of these access control measures include:

- \* All unauthenticated searches are returned as thin results.
- \* Registry system authentication is used to grant access to appropriate users for thick Whois data search results.
- \* Account access is granted by our defined HEBREW\_TRANSLITERATION\_OF\_.COM gTLD admin user.

## Potential Forms of Abuse and Related Risk Mitigation

Leveraging our experience providing tiered access to Whois for the .name registry and interacting with ICANN, data protection authorities, and applicable industry groups, we are knowledgeable of the likely data mining forms of abuse associated with a searchable Whois service. Figure 26-7 summarizes these potential forms of abuse and our approach to mitigate the identified risk.

## 27. Registration Life Cycle

### 1 COMPLETE KNOWLEDGE AND UNDERSTANDING OF REGISTRATION LIFECYCLES AND STATES

Verisign's registry implements the full registration lifecycle for domain names supporting the operations in the Extensible Provisioning Protocol (EPP) specification. The registration lifecycle of the domain name starts with registration and traverses various states as specified in the following sections. The registry system provides options to update domain names with different server and client status codes that block operations based on the EPP specification. The system also provides different grace periods for different billable operations, where the price of the billable operation is credited back to the registrar if the billable operation is removed within the grace period. Together Figure 27-1 and Figure 27-2 (see Attachment VRSN\_.comHebrew\_Q27 Figures for all figures in this response) define the registration states comprising the registration lifecycle and explain the trigger points that cause state-to-state transitions. States are represented as green rectangles within Figure 27-1.

#### 1.1 Registration Lifecycle of Create/Update/Delete

The following section details the create/update/delete processes and the related renewal process that we follow. For each process, this response defines the process function and its characterization, and as appropriate provides a process flow chart.

##### Create Process

The domain name lifecycle begins with a registration or what is referred to as a Domain Name Create operation in EPP. The system fully supports the EPP Domain Name Mapping as defined by RFC 5731, where the associated objects (e.g., hosts and contacts) are created independent of the domain name.

##### Process Characterization

The Domain Name Create command is received, validated, run through a set of business rules, persisted to the database, and committed in the database if all business rules pass. The domain name is included with the data flow to the DNS and Whois resolution services. If no name servers are supplied, the domain name is not included with the data flow to the DNS. A successfully created domain name has the created date and expiration date set in the database. Creates are subject to grace periods as described in Section 1.3 of this response.

The Domain Name Create operation (Figure 27-3) requires the following attributes:

- \* Domain name meets the string restrictions.
- \* Domain name does not already exist.
- \* Registrar is authorized to create a domain name in HEBREW\_TRANSLITERATION\_OF\_.COM.
- \* Registrar has available credit.
- \* Authorization Information (Auth-Info) value is valid.
- \* Required contacts (e.g., registrant, administrative contact, technical contact, and billing contact) are specified and exist.
- \* Specified name servers (hosts) exist, and there is a maximum of 13 name servers.
- \* Period in units of years with a maximum value of 10 (default period is one year).

##### Renewal Process

The domain name can be renewed unless it has any form of Pending Delete, Pending Transfer, or Renew Prohibited.

A request for renewal that sets the expiry date to more than ten years in the future is denied. The registrar must pass the current expiration date (without the timestamp) to support the idempotent features of EPP, where sending the same command a second time does not cause unexpected side effects.

Automatic renewal occurs when a domain name expires. On the expiration date, the registry extends the registration period one year and debits the registrar account balance. In the case of an auto-renewal of the domain name, a separate Auto-Renew grace period applies. Renewals are subject to grace periods as described in Section 1.3 of this response.

##### Process Characterization

The Domain Name Renew command is received, validated, authorized, and run through a set of business rules. The data is updated and committed in the database if it passes all business rules. The updated domain name's expiration date is included in the flow to the Whois resolution service.

The Domain Name Renew operation (Figure 27-4) requires the following attributes:

- \* Domain name exists and is sponsored by the requesting registrar.
- \* Registrar is authorized to renew a domain name in HEBREW\_TRANSLITERATION\_OF\_.COM.
- \* Registrar has available credit.
- \* Passed current expiration date matches the domain name's expiration date.
- \* Period in units of years with a maximum value of 10 (default period is one year). A domain name expiry past ten years is not allowed.

#### Registrar Transfer Procedures

A registrant may transfer the domain name from the current registrar to another registrar. The database system allows a transfer as long as the transfer is not within the initial 60 days, per industry standard, of the original registration date.

The registrar transfer process goes through many process states, which are described in detail below, unless it has any form of Pending Delete, Pending Transfer, or Transfer Prohibited.

A transfer can only be initiated when the appropriate Auth-Info is supplied. The Auth-Info for transfer is only available to the current registrar. Any other registrar requesting to initiate a transfer on behalf of a registrant must obtain the Auth-Info from the registrant.

The Auth-Info is available to the registrant upon request. The registrant is the only party other than the current registrar that has access to the Auth-Info. Registrar transfer entails a specified extension of the expiry date for the object. The registrar transfer is a billable operation and is charged identically to a renewal for the same extension of the period. This period can be from one to ten years, in one-year increments.

Because registrar transfer involves an extension of the registration period, the rules and policies applying to how the resulting expiry date is set after transfer are based on the renewal policies on extension.

Per industry standard, a domain name cannot be transferred to another registrar within the first 60 days after registration. This restriction continues to apply if the domain name is renewed during the first 60 days. Transfer of the domain name changes the sponsoring registrar of the domain name, and also changes the child hosts (ns1.sample.xyz) of the domain name (sample.xyz).

The domain name transfer consists of five separate operations:

- \* Transfer Request (Figure 27-5): Executed by a non-sponsoring registrar with the valid Auth-Info provided by the registrant. The Transfer Request holds funds of the requesting registrar but does not bill the registrar until the transfer is completed. The sponsoring registrar receives a Transfer Request poll message.
- \* Transfer Cancel (Figure 27-6): Executed by the requesting registrar to cancel the pending transfer. The held funds of the requesting registrar are reversed. The sponsoring registrar receives a Transfer Cancel poll message.
- \* Transfer Approve (Figure 27-7): Executed by the sponsoring registrar to approve the Transfer Request. The requesting registrar is billed for the Transfer Request and the sponsoring registrar is credited for an applicable Auto-Renew grace period. The requesting registrar receives a Transfer Approve poll message.
- \* Transfer Reject (Figure 27-8): Executed by the sponsoring registrar to reject the pending transfer. The held funds of the requesting registrar are reversed. The requesting registrar receives a Transfer Reject poll message.
- \* Transfer Query (Figure 27-9): Executed by either the requesting registrar or the sponsoring registrar of the last transfer.

The registry auto-approves a transfer if the sponsoring registrar takes no action. The requesting registrar is billed for the Transfer Request and the sponsoring registrar is credited for an applicable Auto-Renew grace period. The requesting registrar and the sponsoring registrar

receive a Transfer Auto-Approve poll message.

#### Delete Process

A registrar may choose to delete the domain name at any time.

#### Process Characterization

The domain name can be deleted, unless it has any form of Pending Delete, Pending Transfer, or Delete Prohibited.

A domain name is also prohibited from deletion if it has any in-zone child hosts that are name servers for domain names. For example, the domain name "sample.xyz" cannot be deleted if an in-zone host "ns.sample.xyz" exists and is a name server for "sample2.xyz."

If the Domain Name Delete occurs within the Add grace period, the domain name is immediately deleted and the sponsoring registrar is credited for the Domain Name Create. If the Domain Name Delete occurs outside the Add grace period, it follows the Redemption grace period (RGP) lifecycle.

#### Update Process

The sponsoring registrar can update the following attributes of a domain name:

- \* Auth-Info
- \* Name servers
- \* Contacts
- \* Statuses (e.g., Client Delete Prohibited, Client Hold, Client Renew Prohibited, Client Transfer Prohibited, Client Update Prohibited)

#### Process Characterization

Updates are allowed provided that the update includes the removal of any Update Prohibited status. The Domain Name Update operation is detailed in Figure 27-10.

A domain name can be updated unless it has any form of Pending Delete, Pending Transfer, or Update Prohibited.

### 1.2 Pending, Locked, Expired, and Transferred

Verisign handles pending, locked, expired, and transferred domain names as described here. When the domain name is deleted after the five-day Add grace period, it enters into the Pending Delete state. The registrant can return its domain name to active any time within the five-day Pending Delete grace period. After the five-day Pending Delete grace period expires, the domain name enters the Redemption Pending state and then is deleted by the system. The registrant can restore the domain name at any time during the Redemption Pending state.

When a non-sponsoring registrar initiates the domain name transfer request, the domain name enters Pending Transfer state and a notification is mailed to the sponsoring registrar for approvals. If the sponsoring registrar doesn't respond within five days, the Pending Transfer expires and the transfer request is automatically approved.

EPP specifies both client (registrar) and server (registry) status codes that can be used to prevent registry changes that are not intended by the registrant. Currently, many registrars use the client status codes to protect against inadvertent modifications that would affect their customers' high-profile or valuable domain names.

Verisign's registry service supports the following client (registrar) and server (registry) status codes:

- \* clientHold
- \* clientRenewProhibited
- \* clientTransferProhibited
- \* clientUpdateProhibited
- \* clientDeleteProhibited
- \* serverHold
- \* serverRenewProhibited

- \* serverTransferProhibited
- \* serverUpdateProhibited
- \* serverDeleteProhibited

### 1.3 Add Grace Period, Redemption Grace Period, and Notice Periods for Renewals or Transfers

\* Add Grace Period: The Add grace period is a specified number of days following the initial registration of the domain name. The current value of the Add grace period for all registrars is five days.

\* Redemption Grace Period: If the domain name is deleted after the five-day grace period expires, it enters the Redemption grace period and then is deleted by the system. The registrant has an option to use the Restore Request command to restore the domain name within the Redemption grace period. In this scenario, the domain name goes to Pending Restore state if there is a Restore Request command within 30 days of the Redemption grace period. From the Pending Restore state, it goes either to the OK state, if there is a Restore Report Submission command within seven days of the Restore Request grace period, or a Redemption Period state if there is no Restore Report Submission command within seven days of the Restore Request grace period.

\* Renew Grace Period: The Renew/Extend grace period is a specified number of days following the renewal/extension of the domain name's registration period. The current value of the Renew/Extend grace period is five days.

\* Auto-Renew Grace Period: All auto-renewed domain names have a grace period of 45 days.

\* Transfer Grace Period: Domain names have a five-day Transfer grace period.

### 1.4 Aspects of the Registration Lifecycle Not Covered by Standard EPP RFCs

Our registration lifecycle processes and code implementations adhere to the standard EPP RFCs related to the registration lifecycle. By adhering to the RFCs, our registration lifecycle is complete and addresses each registration-related task comprising the lifecycle. No aspect of our registration lifecycle is not covered by one of the standard EPP RFCs and thus no additional definitions are provided in this response.

## 2 CONSISTENCY WITH ANY SPECIFIC COMMITMENTS MADE TO REGISTRANTS AS ADAPTED TO THE OVERALL BUSINESS APPROACH FOR THE PROPOSED gTLD

The registration lifecycle described above applies to the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD as well as other TLDs managed by Verisign; thus we remain consistent with commitments made to our registrants. No unique or specific registration lifecycle modifications or adaptations are required to support the overall business approach for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD.

## 3 COMPLIANCE WITH RELEVANT RFCs

Our registration lifecycle complies with RFCs 5730 – 5734 and 3915. The system fully supports the EPP Domain Name Mapping (RFC 5731), where the associated objects (e.g., hosts and contacts) are created independent of the domain name.

In addition, in accordance with RFCs 5732 and 5733, the registration system enforces the following registration constraints:

\* Uniqueness/Multiplicity: A second-level domain name is unique in the HEBREW\_TRANSLITERATION\_OF\_.COM database. Two identical second-level domain names cannot simultaneously exist in HEBREW\_TRANSLITERATION\_OF\_.COM. Further, a second-level domain name cannot be created if it conflicts with a reserved domain name.

\* Point of Contact Associations: The domain name is associated with the following points of

contact. Contacts are created and managed independently according to RFC 5733.

- a. Registrant
- b. Administrative contact
- c. Technical contact
- d. Billing contact

\* Domain Name Associations: Each domain name is associated with:

- a. A maximum of 13 hosts, which are created and managed independently according to RFC 5732
- b. An Auth-Info, which is used to authorize certain operations on the object
- c. Status(es), which are used to describe the domain name's status in the registry
- d. A created date, updated date, and expiry date

#### 4 DEMONSTRATES THAT TECHNICAL RESOURCES REQUIRED TO CARRY THROUGH THE PLANS FOR THIS ELEMENT ARE ALREADY ON HAND OR READILY AVAILABLE

Verisign has developed a set of proprietary resourcing models to project the number and type of personnel resources necessary to operate a TLD. These routinely adjusted models enable us to continually right-size staff to meet projected demand, service level agreements, and requirements for Internet security and stability. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 - Financial Projections: Most Likely) as an input to our staffing models, we derived the personnel levels required for this gTLD's initial implementation and ongoing maintenance. Cost related to this infrastructure is provided as "Total Critical Registry Function Cash Outflows" (Template 1, Line Iib.G) within the Question 46 response.

We employ more than 1,040 individuals; more than 775 comprise our technical work force, enabling us to draw from this pool and align personnel resource growth to the scale increases of our TLD service offerings.

We expect to use the following personnel roles, which are described in Section 5 of the response to Question 31, to support the registration lifecycle:

- \* Application Engineers: 19
- \* Customer Support Personnel: 36
- \* Database Administrators: 8
- \* Database Engineers: 3
- \* Quality Assurance Engineers: 11
- \* SRS System Administrators: 13

To implement and manage the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD as described in this application, we scale, as needed, the size of each technical area now supporting our portfolio of TLDs. Consistent with our resource modeling, we periodically review the level of work to be performed and adjust staff levels for each technical area.

When usage projections indicate a need for additional staff, our internal staffing group uses an in-place staffing process to identify qualified candidates. These candidates are then interviewed by the lead of the relevant technical area. By scaling one common team across all our TLDs instead of creating a new entity to manage only this proposed gTLD, we realize significant economies of scale and ensure our TLD best practices are followed consistently. This consistent application of best practices helps ensure the security and stability of both the Internet and this proposed gTLD, as we hold all contributing staff members accountable to the same procedures that guide our execution of the Internet's largest TLDs (i.e., .com and .net). Moreover, by augmenting existing teams, we afford new employees the opportunity to be mentored by existing senior staff. This mentoring minimizes start-up learning curves and helps ensure that new staff members properly execute their duties.

## 28. Abuse Prevention and Mitigation

1. COMPREHENSIVE ABUSE POLICIES, WHICH INCLUDE CLEAR DEFINITIONS OF WHAT CONSTITUTES ABUSE IN THE TLD, AND PROCEDURES THAT WILL EFFECTIVELY MINIMIZE POTENTIAL FOR ABUSE IN THE TLD

Verisign has more than 16 years' experience in protecting our domains and Domain Name System (DNS) from malicious abuse, and we offer multiple services, products, and policies to combat abuse of the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD.

## Definitions

Malicious abuse of the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD, where software is disseminated to infiltrate or damage a computer system without the owner's informed consent, can include the following types of abuse:

- \* Trojan / Malware Executable(s): A malicious executable is hosted on a server.
- \* Trojan / Malware Drive-By: A website is crafted such that it attempts to exploit a vulnerability in a browser or browser plugin (e.g., Flash, PDF, Java) for the purpose of automatically downloading and installing a malicious executable on a client machine.
- \* Phishing: A link in an email (often sent as spam) points to fraudulent web pages/ website (primarily Trojan / Malware Drive-By). These fraudulent web pages are designed to trick recipients into divulging sensitive data such as user names or passwords.
- \* Command-and-Control (CnC): A server is used to send and receive commands from infected machines (bots).
- \* Mass Registrations: Many different domain names are used as part of a CnC infrastructure. The domain names are linked to a specific malware family and are registered in close proximity to each other (time-wise) or by a common entity (malicious actor).

We offer a number of security services to protect registrants and minimize the potential for abuse. These products include:

- \* Verisign MalDetector: This new commercial service enables registrars to offer malware scanning to their customers. MalDetector analyzes a website's content by scanning the site's web pages (text, video, images, ads, web code) for malware and obfuscations (hidden malware code). If MalDetector detects malware code in the website content, it provides remediation instructions for removing the malicious code.
- \* Verisign Domain Name System Security Extensions (DNSSEC) Signing Service: This services helps registrars build the infrastructure capability to protect users from redirection to unintended sites while reducing the cost, complexity, and administrative burden associated with implementing DNSSEC.
- \* Verisign Registry Lock Service: This service enables registrars to offer server-level protection for registrants' HEBREW\_TRANSLITERATION\_OF\_.COM domain name records, thereby guarding against unintended changes, deletions, or transfers. These modification may result in malicious use of the domain name.
- \* Verisign Registry-Registrar Two-Factor Authentication: Helps registrars better manage and control communications with the Verisign registry by providing a mechanism to validate that requested changes come from authorized personnel and update authorized contacts as personnel changes occur.

In the case of other forms of illegal activity, we work with law enforcement personnel, as needed, to mitigate abuse through the judicial system.

### 1.1 Abuse Prevention and Mitigation Implementation Plan

The security services described in the preceding section are currently implemented in the other TLDs that Verisign operates. These services are available immediately to the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD, without the need for additional implementation.

The HEBREW\_TRANSLITERATION\_OF\_.COM gTLD is added to the root zone, and second-level domain names are provisioned through Verisign's Shared Registration System

(SRS). Registrars have the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD and the products and services described in this application added to their account in the SRS. Registrars are required to complete a ramp-up period during which they test their Extensible Provisioning Protocol (EPP) client applications and services through our Operational Test Environment (OTE). The OTE is a functional equivalent to the production environment that allows registrars to determine whether their client applications are production ready. Once the registrar has completed the testing and certification of its client applications and services, it is granted access to the production environment and may begin processing domain names registrations to be published in the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD zone.

## 1.2 Policies for Handling Complaints Regarding Abuse

Verisign handles complaints regarding abuse as detailed in this section.

Abuse complaints are initially addressed to the Registrar of Record (ROR). If registrars or registrants need to escalate an abuse complaint, our Customer Service Center (CSC) is the initial point of contact. Our Customer Support includes the 24/7 onsite CSC staff and on-call support from Tier 3 teams (e.g., registry operations staff, engineers, and developers) during non-business hours. Our primary concern is to resolve issues quickly. As such, we maintain a formal escalation process to ensure that all issues are addressed promptly by the appropriate person/teams.

Abuse complaints are first directed to the Verisign CSC, which manages the complaint through the processes outlined in Section 3.2.2. Our CSC provides world-class support to our customers with key performance metrics that support a timely response to customer issues, including complaints of abuse. Team leads actively manage all access channels to ensure appropriate responsiveness via each access channel.

## 1.3 Proposed Measures for Removal of Orphan Glue Records

Although orphan glue records may support correct and ordinary operation of the Domain Name System (DNS), registry operators are required to remove orphan glue records (as defined at <http://www.icann.org/en/committees/security/sac048.pdf>) when provided with evidence in written form that such records are present in connection with malicious conduct. Verisign's registration system is specifically designed to not allow orphan glue records. Registrars are required to delete/move all dependent DNS records before deleting the parent domain name.

To prevent orphan glue records, we perform the following checks before removing a domain or name server:

Checks during domain delete:

\* A parent domain name deletion transaction is not allowed if any other domain name in the zone refers to the child name server.

\* If the parent domain name is the only domain name using the child name server, then both the domain name and the glue record are removed from the zone.

Check during explicit name server delete:

\* We confirm that the current name server is not referenced by any in-zone domain name before deleting the name server.

Zone-file impact:

\* If the parent domain name references the child name server AND if other domain names in the zone also reference it AND if the parent domain name is assigned a serverHold status, then the parent domain name is removed from the zone file, but the name server glue record is not.

\* If no domain names reference a name server, then the zone file removes the glue record.

## 1.4 Resourcing Plans

Details related to resourcing plans for the initial implementation and ongoing maintenance of our abuse plan are provided in Section 2 of this response.

## 1.5 Measures to Promote Whois Accuracy

Verisign performs periodic Whois reviews to verify accuracy and completeness of data for which the registry is authoritative. For data maintained in the registry database for which the registry is not authoritative and is therefore unable to verify registrant contact data, the registry validates the syntax and completeness of all required contact fields during registration and modification transactions. In addition, we coordinate with the respective registrars to promote accuracy of these data, including periodic notifications of ICANN's Whois Data Reminder Policy.

### 1.5.1 Authentication of Registrant Information

Authentication of registrant information is performed by the registrant's registrar, since the registry has no direct relationship with the registrant. The registration rules for HEBREW\_TRANSLITERATION\_OF\_.COM require creation of an AuthInfo code for each domain name. This AuthInfo code is required to initiate a request to transfer the domain name between registrars. Use of this authorization by the gaining registrar is intended to prevent unauthorized transfers of domain names.

### 1.5.2 Regular Monitoring of Registration Data for Accuracy and Completeness

Verisign has established policies and procedures to encourage registrar compliance with ICANN's Whois accuracy requirements. We incorporate the following services into our full-service registry operations.

#### Registrar Self Certification

Our self-certification program consists, in part, of evaluations applied equally to all operational ICANN accredited registrars and conducted from time to time throughout the year. Process steps are as follows:

- \* Verisign sends an email notification to the ICANN primary registrar contact, requesting that the contact go to a designated URL, log in with his/her Web ID and password, and complete and submit the online form. The contact must submit the form within 15 business days of receipt of the notification.

- \* When the form is submitted, we send the registrar an automated email confirming that the form was successfully submitted.

- \* We review the submitted form to ensure the certifications are compliant.

- \* We send the registrar an email notification if the registrar is found to be compliant in all areas.

- \* If a review of the response indicates that the registrar is out of compliance or if we have follow-up questions, the registrar has 10 days to respond to the inquiry.

- \* If the registrar does not respond within 15 business days of receiving the original notification, or if it does not respond to the request for additional information, we send the registrar a Breach Notice and give the registrar 30 days to cure the breach.

- \* If the registrar does not cure the breach, we terminate the Registry-Registrar Agreement (RRA).

#### Whois Data Reminder Process

Verisign regularly reminds registrars of their obligation to comply with ICANN's Whois Data Reminder

Policy, which was adopted by ICANN as a consensus policy on 27 March 2003 (<http://www.icann.org/en/registrars/wdrp.htm>). We send a notice to all registrars once a year reminding them of their obligation to be diligent in validating the Whois information provided during the registration process, to investigate claims of fraudulent Whois information, and to cancel domain name registrations for which Whois information is determined to be invalid.

#### 1.6 Malicious or Abusive Behavior Definitions, Metrics, and Service Level Requirements for Resolution

Please see Section 1.0 for the definition of potential forms of abuse specific to the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD. See Section 3.2.2 for a definition of Verisign's response procedures.

The initial response from Customer Service is within 20 seconds or less for 90% of phone calls. Verification of malicious activity and removal of confirmed malicious infections is completed within 24 hours.

#### 1.7 Controls to Ensure Proper Access to Domain Functions

The following sections describe various controls that Verisign employs to ensure appropriate access to domain functions.

##### 1.7.1 Multi-Factor Authentication

To ensure proper access to domain functions, we incorporate our Registry-Registrar Two-Factor Authentication Service into our full-service registry operations. The service is designed to improve domain name security and assist registrars in protecting the accounts they manage by providing another level of assurance that only authorized personnel can communicate with the registry. As part of the service, dynamic one-time passwords (OTPs) augment the user names and passwords currently used to process update, transfer, and/or deletion requests. These OTPs enable transaction processing to be based on requests that are validated both by "what users know" (i.e., their user name and password) and "what users have" (i.e., a two-factor authentication credential with a one-time-password).

Registrars can use the OTP when communicating directly with our Customer Service department as well as when using the registrar portal to make manual updates, transfers, and/or deletion transactions. The Two-Factor Authentication Service is an optional service offered to registrars that execute the Registry-Registrar Two-Factor Authentication Service Agreement. As shown in Figure 28-1 (see Attachment VRSN\_.comHebrew\_Q28 Figures for all figures in this response), the registrars' authorized contacts use the OTP to enable strong authentication when they contact the registry. There is no charge for the Registry-Registrar Two-Factor Authentication Service. It is enabled only for registrars that wish to take advantage of the added security provided by the service.

##### 1.7.2 Requiring Multiple, Unique Points of Contact

Each user of the system is required to have an account established with a responsibility role assigned to him/her. The authoritative contact for the account is the ICANN Primary Contact. In addition to the Administrative Contact, the following roles are available: Billing, Technical, Legal, Marketing, Administrative, CEO, and Technical <sup>24/7</sup>. Only one user is designated as the ICANN Primary and, as such, is the authoritative contact on the account should any conflict arise.

## 2. TECHNICAL PLAN THAT IS ADEQUATELY RESOURCED IN THE PLANNED COSTS DETAILED IN THE FINANCIAL SECTION

As an experienced backend registry provider, we have developed a set of proprietary resourcing models to project the number and type of personnel resources necessary to operate a TLD. We routinely adjust these staffing models to account for new tools and process innovations. These models enable us to continually right-size our staff to accommodate projected demand and meet service level agreements as well as Internet security and stability requirements. Using the

projected usage volume for the most likely scenario (defined in Question 46, Template 1 – Financial Projections: Most Likely) as an input to our staffing models, we derived the necessary personnel levels required for this gTLD’s initial implementation and ongoing maintenance. Cost related to this infrastructure is provided as “Total Critical Registry Function Cash Outflows” (Template 1, Line IIb.G) within the Question 46 financial projections response.

We employ more than 1,040 individuals of which more than 775 comprise our technical work force. (Current statistics are publicly available in our quarterly filings.)

We project we will use the following personnel roles, which are described in Section 5 of the response to Question 31, Technical Overview of Proposed Registry, to support abuse prevention and mitigation:

- \* Application Engineers: 19
- \* Business Continuity Personnel: 3
- \* Customer Affairs Organization: 9
- \* Customer Support Personnel: 36
- \* Information Security Engineers: 11
- \* Network Administrators: 11
- \* Network Architects: 4
- \* Network Operations Center (NOC) Engineers: 33
- \* Project Managers: 25
- \* Quality Assurance Engineers: 11
- \* Systems Architects: 9

To implement and manage the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD as described in this application, we scale, as needed, the size of each technical area now supporting our portfolio of TLDs. Consistent with our resource modeling, we periodically review the level of work to be performed and adjust staff levels for each technical area.

When usage projections indicate a need for additional staff, our internal staffing group uses an in-place staffing process to identify qualified candidates. These candidates are then interviewed by the lead of the relevant technical area. By scaling one common team across all our TLDs instead of creating a new entity to manage only this proposed gTLD, we realize significant economies of scale and ensure our TLD best practices are followed consistently. This consistent application of best practices helps ensure the security and stability of both the Internet and this proposed gTLD. Moreover, by augmenting existing teams, we afford new employees the opportunity to be mentored by existing senior staff. This mentoring minimizes start-up learning curves and helps ensure that new staff members properly execute their duties.

### 3. POLICIES AND PROCEDURES IDENTIFY AND ADDRESS THE ABUSIVE USE OF REGISTERED NAMES AT STARTUP AND ON AN ONGOING BASIS

#### 3.1 Start-Up Anti-Abuse Policies and Procedures

We incorporate the following domain name abuse prevention service into our full-service registry operations. This service is available at the time of domain name registration.

##### Registry Lock

The Registry Lock Service allows registrars to offer server-level protection for their registrants’ domain names. A registry lock can be applied during the initial standup of the domain name or at any time that the registry is operational.

Specific EPP status codes are set on the domain name to prevent malicious or inadvertent modifications, deletions, and transfers. Typically, these ‘server’ level status codes can only be updated by the registry. The registrar only has ‘client’ level codes and cannot alter ‘server’ level status codes. The registrant must provide a pass phrase to the registry before any updates are made to the domain name. However, with Registry Lock, registrars can also take advantage of server status codes.

The following EPP server status codes are applicable for domain names: (i) serverUpdateProhibited, (ii) serverDeleteProhibited, and (iii) serverTransferProhibited. These statuses may be applied individually or in combination.

The EPP also enables setting host (i.e., name server) status codes to prevent deleting or renaming a host or modifying its IP addresses. Setting host status codes at the registry reduces the risk of inadvertent disruption of DNS resolution for domain names.

The Registry Lock Service is used in conjunction with a registrar's proprietary security measures to bring a greater level of security to registrants' domain names and help mitigate potential for unintended deletions, transfers, and/or updates.

Two components comprise the Registry Lock Service:

\* Registrars provide Verisign with a list of the domain names to be placed on the server status codes. During the term of the service agreement, the registrar can add domain names to be placed on the server status codes and/or remove domain names currently placed on the server status codes. We then manually authenticate that the registrar submitting the list of domain names is the registrar of record for such domain names.

\* If registrars require changes (including updates, deletes, and transfers) to a domain name placed on a server status code, we follow a secure, authenticated process to perform the change. This process includes a request from a registrar-authorized representative for Verisign to remove the specific registry status code, validation of the authorized individual by Verisign, removal of the specified server status code, registrar completion of the desired change, and a request from the registrar-authorized individual to reinstate the server status code on the domain name. This process is designed to complement automated transaction processing through the Shared Registration System (SRS) by using independent authentication by trusted registry experts.

## 3.2 Ongoing Anti-Abuse Policies and Procedures

### 3.2.1 Policies and Procedures That Identify Malicious or Abusive Behavior

We incorporate the following service into our full-service registry operations.

#### Malware Scanning Service

Registrants are often unknowing victims of malware exploits. We have developed proprietary code to help identify malware in the zones we manage, which in turn helps us to identify malicious code hidden in HEBREW\_TRANSLITERATION\_OF\_.COM domain names.

MalDetector, our malware scanning service, helps prevent HEBREW\_TRANSLITERATION\_OF\_.COM websites from infecting other websites by scanning web pages for embedded malicious content that will infect visitors' websites. Our malware scanning technology uses a combination of in-depth malware behavioral analysis, anti-virus results, detailed malware patterns, and network analysis to discover known exploits for the particular scanned zone. If malware is detected, the service sends the registrant a report that contains the number of malicious domain names found and details about malicious content within its TLD zones. Reports with remediation instructions are provided to help the response team quickly and effectively remove the malicious code.

### 3.2.2 Policies and Procedures That Address the Abusive Use of Registered Names

#### Suspension Processes

In the case of domain name abuse, Verisign verifies the nature of the abuse and remediates the abuse using the procedures detailed in this section and in Figure 28-2.

Step 1.1: Verisign Notification. External party escalates the abuse notification to Verisign for processing, documented by:

\* Threat domain name

\* Registrar of record (ROR) Incident narrative, threat analytics, screen shots to depict abuse,

and/or other evidence

- \* Threat classification
- \* Recommended timeframe for action
- \* Technical details (e.g., Whois records, IP addresses, hash values, anti-virus detection results/nomenclature, name servers, domain name statuses that are relevant to the suspension)
- \* Contact details (e.g. name, phone, email address)
- \* Escalation history (initial timeframe of report to ROR, response from ROR, and so on)

Step 1.2: Registry Notification Verification. When we receive a request for escalation from an external party, we perform the following verification procedures:

- \* Validate that all the required data appears in the notification.
- \* Validate that the request for escalation is for a registered domain name.
- \* Return a case number for tracking purposes.

Step 1.3: Escalation Rejection. If required data is missing from the request for escalation, or the domain name is not registered, the request will be rejected and returned to the external party with the following information:

- \* Threat domain name
- \* Verisign case number
- \* Error reason

Step 1.4: Registrar Notification. Once we have performed the verification, we notify the registrar of the issue. Registrar notification includes the following information:

- \* Threat domain name
- \* Verisign case number
- \* Classification of type of domain name abuse
- \* Evidence of abuse
- \* Verisign anti-abuse contact name and number

Step 1.5: Registrant Notification. Once the registrar receives the notification from Verisign, it may, at its discretion, notify the registrant and/or take any appropriate action.

Step 1.6: Website/Domain Cleanup. We may work with the registrar to complete the following steps:

- \* Remediation steps: The registrar performs the remediation, and can elect to have us deploy MalDetector, our malware scanning service, to determine the remediation needed to remove the malware.
- \* Additional action needed: We provide additional comments to the registrar or information to contact the Internet service provider (ISP) or hosting company for additional action.

Step 1.7: Cleanup Acknowledgement. We notify the external party that the abuse cleanup has been completed. Acknowledgement of the cleanup includes the following information:

- \* Threat domain name
- \* Verisign case number
- \* Domain name
- \* Verisign abuse contact name and number
- \* Cleanup status

#### 4. WHEN EXECUTED IN ACCORDANCE WITH THE REGISTRY AGREEMENT, PLANS WILL RESULT IN COMPLIANCE WITH CONTRACTUAL REQUIREMENTS

All Verisign abuse mitigation policies are based on the corresponding terms in the Registry Agreement and the Registry-Registrar Agreement as applicable. Whenever we develop a policy, we look first at the language of our agreements to determine what we can and cannot do. We then structure policies that are based on these determinations and appropriate stakeholders, such as registrars, to develop policies with processes to monitor compliance with the policies.

In addition, ICANN recently asked us to participate (along with some other registries) in its 2011 Pilot Registry Self-Assessment. We are willingly cooperating with this pilot, for which we provide ICANN with our certification that we comply with specific terms of our Registry Agreements (as identified by ICANN).

#### 5. TECHNICAL PLAN SCOPE/SCALE THAT IS CONSISTENT WITH THE OVERALL BUSINESS APPROACH AND PLANNED SIZE OF THE REGISTRY

We have developed and use proprietary system scaling models to guide the growth of our TLD supporting infrastructure. These models direct our infrastructure scaling to include, but not be limited to, server capacity, data storage volume, and network throughput that are aligned to projected demand and usage patterns. We periodically update these models to account for the adoption of more capable and cost-effective technologies.

Our scaling models are proven predictors of needed capacity and related cost. As such, they provide the means to link the projected infrastructure needs of the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD with necessary implementation and sustainment cost. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 - Financial Projections: Most Likely) as an input to our scaling models, we derived the necessary infrastructure required to implement and sustain this gTLD. Cost related to this infrastructure is provided as "Other Operating Cost" (Template 1, Line I.L) within the Question 46 financial projections response.

## 29. Rights Protection Mechanisms

### 1 MECHANISMS DESIGNED TO PREVENT ABUSIVE REGISTRATIONS

Rights protection is a core objective of Verisign. We will implement and adhere to any rights protection mechanisms (RPMs) that may be mandated from time to time by ICANN, including each mandatory RPM set forth in the Trademark Clearinghouse model contained in the Registry Agreement, specifically Specification 7. We acknowledge that, at a minimum, ICANN requires a Sunrise period, a Trademark Claims period, and interaction with the Trademark Clearinghouse with respect to the registration of domain names for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD. It should be noted that because ICANN, as of the time of this application submission, has not issued final guidance with respect to the Trademark Clearinghouse, we cannot fully detail the specific implementation of the Trademark Clearinghouse within this application. We will adhere to all processes and procedures to comply with ICANN guidance once this guidance is finalized.

As described in this response, we implement a Sunrise period and Trademark Claims service with respect to the registration of domain names within the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD. Certain aspects of the Sunrise period and/or Trademark Claims service may be administered on behalf of Verisign by Verisign-approved registrars depending on final implementation specification detail related to the Trademark Clearinghouse.

#### Sunrise Service

We implement a Sunrise service procedure for at least 30 days prior to launch of the general registration of domain names in the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD as

provided by the Trademark Clearinghouse model set forth in the ICANN Applicant Guidebook. The HEBREW\_TRANSLITERATION\_OF\_.COM Sunrise service will comply with the requirements outlined in the current Applicant Guidebook as well as any final guidance to be issued pertaining to the operation of the Trademark Clearinghouse.

#### Trademark Claims Service

We also implement a Trademark Claims service for at least 60 days after the launch of the general registration of domain names in the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD. The HEBREW\_TRANSLITERATION\_OF\_.COM Trademark Claims service will comply with the requirements outlined in the current Applicant Guidebook as well as any final guidance to be issued pertaining to the operation of the Trademark Clearinghouse.

#### 2 MECHANISMS DESIGNED TO IDENTIFY AND ADDRESS THE ABUSIVE USE OF REGISTERED NAMES ON AN ONGOING BASIS

In addition to the Sunrise and Trademark Claims services described in Section 1 of this response, we implement and adhere to RPMs post-launch as mandated by ICANN, and we confirm that registrars accredited for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD are in compliance with these mechanisms. Certain aspects of these post-launch RPMs may be administered on behalf of Verisign by Verisign-approved registrars.

These post-launch RPMs include the established Uniform Domain-Name Dispute-Resolution Policy (UDRP), as well as the newer Uniform Rapid Suspension System (URS) and Trademark Post-Delegation Dispute Resolution Procedure (PDDRP). Where applicable, Verisign implements all determinations and decisions issued under the corresponding RPM.

After a domain name is registered, trademark holders can object to the registration through the UDRP or URS. Objections to the operation of the gTLD can be made through the PDDRP.

The following descriptions provide implementation details of each post-launch RPM for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD:

\* UDRP: The UDRP provides a mechanism for complainants to object to domain name registrations. The complainant files its objection with a UDRP provider and the domain name registrant has an opportunity to respond. The UDRP provider makes a decision based on the papers filed. If the complainant is successful, ownership of the domain name registration is transferred to the complainant. If the complainant is not successful, ownership of the domain name remains with the domain name registrant. Verisign and entities operating on our behalf adhere to all decisions rendered by UDRP providers.

\* URS: We also provide for a Uniform Rapid Suspension (URS) system as specified in the Applicant Guidebook. Similar to the UDRP, a complainant files its complaint with a URS provider. The URS provider conducts an administrative review for compliance with applicable filing requirements. If the complaint passes administrative review, the URS provider sends Verisign, the registry operator for HEBREW\_TRANSLITERATION\_OF\_.COM, a Notice of Complaint. Within 24 hours of receipt of the Notice of Complaint, we place the subject domain name on "lock," (serverUpdateProhibited, serverTransferProhibited, and serverDeleteProhibited) which restricts all changes to the registration data but allows the name to continue to resolve. After the domain name is placed on lock, the URS provider notifies the registrant of the complaint. The registrant is then given an opportunity to respond. The URS provider must then conduct a review of the complaint and response based on the rules outlined in the Uniform Rapid Suspension System Draft Procedures set forth in the Applicant Guidebook. If the complainant is successful, the registry operator is informed and the domain name is suspended for the balance of the registration period; the domain name will not resolve to the original website, but to an informational web page provided by the URS provider. If the complainant is not successful, the lock is removed and full control of the domain name registration is returned to the domain name registrant. Similar to the existing UDRP, Verisign and entities operating on our behalf adhere to the decisions rendered by the URS providers.

\* PDDRP: As provided in the Applicant Guidebook, all registries are required to implement the PDDRP. The PDDRP provides a mechanism for a complainant to object to the registry operator's manner of operation or use of the gTLD. The complainant files its objection with a

PDDRP provider, who performs a threshold review. The registry operator has the opportunity to respond and the provider issues its determination based on the papers filed, although there may be opportunity for further discovery and a hearing. Verisign participates in the PDDRP process for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD as specified in the Applicant Guidebook.

#### Additional Measures Specific to Rights Protection

We provide additional measures against potentially abusive registrations. These measures help mitigate phishing, pharming, and other Internet security threats. The measures exceed the minimum requirements for RPMs defined by Specification 7 of the Registry Agreement and are available at the time of registration. These measures include:

\* **Rapid Takedown or Suspension Based on Court Orders:** We comply promptly with any order from a court of competent jurisdiction that directs us to take any action on a domain name that is within our technical capabilities as a TLD registry. These orders may be issued when abusive content, such as child pornography, counterfeit goods, or illegal pharmaceuticals, is associated with the domain name.

\* **Anti-Abuse Process:** We implement an anti-abuse process that is executed based on the type of domain name action requested. These actions are coordinated with the domain name's registrar of record. The anti-abuse process is for malicious exploitation of the DNS infrastructure, such as phishing, botnets, and malware.

\* **Authentication Procedures:** We use two-factor authentication to augment security protocols for telephone, email, and chat communications.

\* **Registry Lock:** This Verisign service allows registrants to lock a domain name at the registry level to protect against both unintended and malicious changes, deletions, and transfers. Only Verisign, as the registry operator, can release the lock; thus all other entities that normally are permitted to update Shared Registration System (SRS) records are prevented from doing so. This lock is released only after the registrar request to unlock is validated.

\* **Malware Code Identification:** This safeguard reduces opportunities for abusive behaviors that use registered domain names in the gTLD. Registrants are often unknowing victims of malware exploits. As a backend registry services provider, we have developed proprietary code to help identify malware in the zones we manage, which in turn helps registrars by identifying malicious code hidden in their domain names.

\* **DNSSEC Signing Service:** Domain Name System Security Extensions (DNSSEC) helps mitigate pharming attacks that use cache poisoning to redirect unsuspecting users to fraudulent websites or addresses. It uses public key cryptography to digitally sign DNS data when it comes into the system and then validate it at its destination. The HEBREW\_TRANSLITERATION\_OF\_.COM gTLD is DNSSEC-enabled as part of our core backend registry services.

\* **Commingling Restriction:** If the Language Tag specified in the IDN registration is not from an approved language authorities table, and so does not have a List of Included Characters, then Verisign applies a restriction to prevent commingling of different scripts in a single domain. That is, if an IDN contains code points from two or more Unicode scripts, then that IDN registration is rejected. For example, a character from the Latin script cannot be used in the same IDN with any HEBREW character. All code points within an IDN must come from the same Unicode script. This is done to prevent confusable code points from appearing in the same IDN.

### 3. RESOURCING PLANS

As an experienced registry operator, we have developed a set of proprietary resourcing models to project the number and type of personnel resources necessary to operate a TLD. We routinely adjust these staffing models to account for new tools and process innovations. These models enable us to continually right-size our staff to accommodate projected demand and

meet service level agreements as well as Internet security and stability requirements. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 – Financial Projections: Most Likely) as an input to our staffing models, we derived the necessary personnel levels required for this gTLD’s initial implementation and ongoing maintenance.

We employ more than 1,040 individuals of which more than 775 comprise our technical work force. (Current statistics are publicly available in our quarterly filings.) Drawing from this pool of on-hand and fully committed technical resources, we have maintained DNS operational accuracy and stability 100 percent of the time for more than 13 years for .com, proving our ability to align personnel resource growth to the scale increases of our TLD service offerings.

We project we will use the following personnel roles, which are described in Section 5 of the response to Question 31, Technical Overview of Proposed Registry, to support the implementation of RPMS:

- \* Customer Affairs Organization: 9
- \* Customer Support Personnel: 36
- \* Information Security Engineers: 11

To implement and manage the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD as described in this application, we scale, as needed, the size of each technical area now supporting our portfolio of TLDs. Consistent with our resource modeling, we periodically review the level of work to be performed and adjust staff levels for each technical area.

When usage projections indicate a need for additional staff, our internal staffing group uses an in-place staffing process to identify qualified candidates. These candidates are then interviewed by the lead of the relevant technical area. By scaling one common team across all our TLDs instead of creating a new entity to manage only this proposed gTLD, we realize significant economies of scale and ensure our TLD best practices are followed consistently. This consistent application of best practices helps ensure the security and stability of both the Internet and this proposed gTLD, as we hold all contributing staff members accountable to the same procedures that guide our execution of the Internet’s largest TLDs (i.e., .com and .net). Moreover, by augmenting existing teams, we afford new employees the opportunity to be mentored by existing senior staff. This mentoring minimizes start-up learning curves and helps ensure that new staff members properly execute their duties.

### **30(a). Security Policy: Summary of the security policy for the proposed registry**

#### **1 DETAILED DESCRIPTION OF PROCESSES AND SOLUTIONS DEPLOYED TO MANAGE LOGICAL SECURITY ACROSS INFRASTRUCTURE AND SYSTEMS, MONITORING AND DETECTING THREATS AND SECURITY VULNERABILITIES AND TAKING APPROPRIATE STEPS TO RESOLVE THEM**

Verisign’s comprehensive security policy has evolved over the years as part of managing some of the world’s most critical TLDs. Our Information Security Policy is the primary guideline that sets the baseline for all other policies, procedures, and standards that we follow. This security policy addresses all of the critical components for the management of backend registry services, including architecture, engineering, and operations.

Our general security policies and standards with respect to these areas are provided as follows:

#### **Architecture**

\* Information Security Architecture Standard: This standard establishes the Verisign standard for application and network architecture. The document explains the methods for segmenting application tiers, using authentication mechanisms, and implementing application functions.

\* Information Security Secure Linux Standard: This standard establishes the information security requirements for all systems that run Linux throughout the Verisign organization.

\* Information Security Secure Oracle Standard: This standard establishes the information security requirements for all systems that run Oracle throughout the Verisign organization.

\* Information Security Remote Access Standard: This standard establishes the information security requirements for remote access to terminal services throughout the Verisign organization.

\* Information Security SSH Standard: This standard establishes the information security requirements for the application of Secure Shell (SSH) on all systems throughout the Verisign organization.

## Engineering

\* Secure SSL/TLS Configuration Standard: This standard establishes the information security requirements for the configuration of Secure Sockets Layer/Transport Layer Security (SSL/TLS) for all systems throughout the Verisign organization.

\* Information Security C++ Standards: These standards explain how to use and implement the functions and application programming interfaces (APIs) within C++. The document also describes how to perform logging, authentication, and database connectivity.

\* Information Security Java Standards: These standards explain how to use and implement the functions and APIs within Java. The document also describes how to perform logging, authentication, and database connectivity.

## Operations

\* Information Security DNS Standard: This standard establishes the information security requirements for all systems that run DNS systems throughout the Verisign organization.

\* Information Security Cryptographic Key Management Standard: This standard provides detailed information on both technology and processes for the use of encryption on Verisign information security systems.

\* Secure Apache Standard: We have a multitude of Apache web servers, which are used in both production and development environments on the Verisign intranet and on the Internet. They provide a centralized, dynamic, and extensible interface to various other systems that deliver information to the end user. Because of their exposure and the confidential nature of the data that these systems host, adequate security measures must be in place. The Secure Apache Standard establishes the information security requirements for all systems that run Apache web servers throughout the Verisign organization.

\* Secure Sendmail Standard: We use sendmail servers in both the production and development environments on the Verisign intranet and on the Internet. Sendmail allows users to communicate with one another via email. The Secure Sendmail Standard establishes the information security requirements for all systems that run sendmail servers throughout the Verisign organization.

\* Secure Logging Standard: This standard establishes the information security logging requirements for all systems and applications throughout the Verisign organization. Where specific standards documents have been created for operating systems or applications, the logging standards have been detailed. This document covers all technologies.

\* Patch Management Standard: This standard establishes the information security patch and upgrade management requirements for all systems and applications throughout Verisign.

## General

\* Secure Password Standard: Because passwords are the most popular and, in many cases, the sole mechanism for authenticating a user to a system, great care must be taken to help ensure that passwords are “strong” and secure. The Secure Password Standard details requirements for the use and implementation of passwords.

\* Secure Anti-Virus Standard: Verisign must be protected continuously from computer viruses and other forms of malicious code. These threats can cause significant damage to the overall operation and security of the Verisign network. The Secure Anti-Virus Standard describes the requirements for minimizing the occurrence and impact of these incidents.

Security processes and solutions for the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD are based on the standards defined above, each of which is derived from our experience and industry best practice. These standards comprise the framework for the overall security solution and applicable processes implemented across all products under our management. The security solution and applicable processes include, but are not limited to:

- \* System and network access control (e.g., monitoring, logging, and backup)
- \* Independent assessment and periodic independent assessment reports
- \* Denial of service (DoS) and distributed denial of service (DDoS) attack mitigation
- \* Computer and network incident response policies, plans, and processes
- \* Minimization of risk of unauthorized access to systems or tampering with registry data
- \* Intrusion detection mechanisms, threat analysis, defenses, and updates
- \* Auditing of network access
- \* Physical security

Further details of these processes and solutions are provided in Part B of this response.

### 1.1 Security Policy and Procedures for the Proposed Registry

Specific security policy related details, requested as the bulleted items of Question 30 – Part A, are provided here.

#### Independent Assessment and Periodic Independent Assessment Reports

To help ensure effective security controls are in place, we conduct a yearly American Institute of Certified Public Accountants (AICPA) and Canadian Institute of Chartered Accountants (CICA) SAS 70 audit on all of our data centers, hosted systems, and applications. During these SAS 70 audits, security controls at the operational, technical, and human level are rigorously tested. These audits are conducted by a certified and accredited third party and help ensure that Verisign in-place environments meet the security criteria specified in our customer contractual agreements and are in accordance with commercially accepted security controls and practices. We also perform numerous audits throughout the year to verify our security processes and activities. These audits cover many different environments and technologies and validate our capability to protect our registry and DNS resolution environments. Figure 30A-1 (see Attachment VRSN\_.comHebrew\_Q30A\_Figures for all figures in this response) lists a subset of the audits that Verisign conducts. For each audit program or certification listed in Figure 30A-1, we have included, as attachments to the Part B component of this response, copies of the assessment reports conducted by the listed third-party auditor. (See VRSN\_.comHebrew\_Q30B-1\_Attachment\_SAS70; VRSN\_.comHebrew\_Q30B-2\_Attachment\_KPMGSysTrust; VRSN\_.comHebrew\_Q30B-3\_Attachment\_KPMG 10K; and VRSN\_.comHebrew\_Q30B-4\_Attachment\_InfoSecPolicy.)

From our experience operating registries, we have determined that together these audit programs and certifications provide a reliable means to ensure effective security controls are in place and that these controls are sufficient to meet ICANN security requirements and therefore are commensurate with the guidelines defined by ISO 27001.

#### Augmented Security Levels or Capabilities

See Section 5 of this response.

#### Commitments Made to Registrants Concerning Security Levels

See Section 4 of this response.

### 2 SECURITY CAPABILITIES ARE CONSISTENT WITH THE OVERALL BUSINESS APPROACH AND PLANNED SIZE OF THE REGISTRY

As an experienced backend registry provider, we have developed and use proprietary system scaling models to guide the growth of our TLD supporting infrastructure. These models direct our infrastructure scaling to include, but not be limited to, server capacity, data storage volume, and network throughput that are aligned to projected demand and usage patterns. We periodically update these models to account for the adoption of more capable and cost-effective technologies.

Our scaling models are proven predictors of needed capacity and related cost. As such, they provide the means to link the projected infrastructure needs of the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD with necessary implementation and sustainment cost. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 – Financial Projections: Most Likely) as an input to our scaling models, we derived the necessary infrastructure required to implement and sustain this gTLD. Cost related to this infrastructure is provided as “Total Critical Registry Function Cash Outflows” (Template 1, Line IIb.G) within the Question 46 financial projections response.

### 3 TECHNICAL PLAN ADEQUATELY RESOURCED IN THE PLANNED COSTS DETAILED IN THE FINANCIAL SECTION

As an experienced backend registry provider, we have developed and use a set of proprietary resourcing models to project the number and type of personnel resources necessary to operate a TLD. We routinely adjust these staffing models to account for new tools and process innovations. These models enable us to continually right-size our staff to accommodate projected demand and meet service level agreements as well as Internet security and stability requirements. Using the projected usage volume for the most likely scenario (defined in Question 46, Template 1 – Financial Projections: Most Likely) as an input to our staffing models, we derived the necessary personnel levels required for this gTLD’s initial implementation and ongoing maintenance. Cost related to this infrastructure is provided as “Total Critical Registry Function Cash Outflows” (Template 1, Line IIb.G) within the Question 46 financial projections response.

We employ more than 1,040 individuals of which more than 775 comprise our technical work force. (Current statistics are publicly available in our quarterly filings.) Drawing from this pool of on-hand and fully committed technical resources, we have maintained DNS operational accuracy and stability 100 percent of the time for more than 13 years for .com, proving our ability to align personnel resource growth to the scale increases of our TLD service offerings.

We project we will use the following personnel role, which is described in Section 5 of the response to Question 31, Technical Overview of Proposed Registry, to support our security policy:

\* Information Security Engineers: 11

To implement and manage the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD as described in this application, we

scale, as needed, the size of each technical area now supporting our portfolio of TLDs. Consistent with our resource modeling, we periodically review the level of work to be performed and adjust staff levels for each technical area.

When usage projections indicate a need for additional staff, our internal staffing group uses an in-place staffing process to identify qualified candidates. These candidates are then interviewed by the lead of the relevant technical area. By scaling one common team across all our TLDs instead of creating a new entity to manage only this proposed gTLD, we realize significant economies of scale and ensure our TLD best practices are followed consistently. This consistent application of best practices helps ensure the security and stability of both the Internet and this proposed gTLD, as we hold all contributing staff members accountable to the same procedures that guide our execution of the Internet's largest TLDs (i.e., .com and .net). Moreover, by augmenting existing teams, we afford new employees the opportunity to be mentored by existing senior staff. This mentoring minimizes start-up learning curves and helps ensure that new staff members properly execute their duties.

#### 4 SECURITY MEASURES ARE CONSISTENT WITH ANY COMMITMENTS MADE TO REGISTRANTS REGARDING SECURITY LEVELS

For the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD, no unique security measures or commitments must be made by Verisign to any registrant.

#### 5 SECURITY MEASURES ARE APPROPRIATE FOR THE APPLIED-FOR gTLD STRING (FOR EXAMPLE, APPLICATIONS FOR STRINGS WITH UNIQUE TRUST IMPLICATIONS, SUCH AS FINANCIAL SERVICES-ORIENTED STRINGS, WOULD BE EXPECTED TO PROVIDE A COMMENSURATE LEVEL OF SECURITY)

No unique security measures are necessary to implement the HEBREW\_TRANSLITERATION\_OF\_.COM gTLD. As defined in Section 1 of this response, we commit to providing backend registry services in accordance with the following international and relevant security standards:

\* American Institute of Certified Public Accountants (AICPA) and Canadian Institute of Chartered Accountants (CICA) SAS 70

\* WebTrust/SysTrust for Certification Authorities (CA)

© *Internet Corporation For Assigned Names and Numbers.*

**EXHIBIT JJN-63**

# Program Implementation Review

---

29 January 2016

---

This report is intended to provide a high-level overview of the experiences of ICANN staff charged with implementing the New gTLD Program. The report does not represent a full and complete recitation of all facts and events associated with the New gTLD Program, nor is it dispositive of any matters highlighted in it. The report has not been approved by the ICANN Board or the ICANN community, and is not intended to serve as a policy document. Instead, the information presented is an attempt to capture in general terms the experiences of staff with the operational implementation of the New gTLD Program. This collection of staff experiences is anticipated to serve as input into the ongoing community reviews of the New gTLD Program, which may feed into further policy and implementation work that will require further vetting by the ICANN community.

# Foreword

The New gTLD Program has its origins in carefully deliberated policy development work performed by the ICANN community. During the policy development process, topics such as the demand, benefits, and risks of new gTLDs; the selection criteria that should be applied; how gTLDs should be allocated; and the contractual conditions that should be required for new gTLD registries going forward were discussed. In October 2007, the Generic Names Supporting Organization (GNSO) formally completed its policy development work on new gTLDs and approved a set of seven principles, 19 policy recommendations, and 18 implementation guidelines on the introduction of new gTLDs.<sup>1</sup> After these recommendations were adopted by the GNSO, ICANN engaged international technical, operational, and legal expertise to provide guidance on details to support the implementation of the policy recommendations. The ICANN Board of Directors considered the recommendations and the implementation plan and adopted the community-developed policy in June 2008.<sup>2</sup>

In its June 2008 resolution, the ICANN Board directed staff to work with the community to further develop and complete the implementation plan. The draft versions of the Applicant Guidebook were released for public comment, and meaningful community input led to multiple revisions of the draft Applicant Guidebook. These draft versions of the Applicant Guidebook reflect ICANN and the community's implementation work.<sup>3</sup>

In parallel, ICANN worked to establish the tools, processes, and resources needed to successfully launch and operate the program. On 20 June 2011, the ICANN Board of Directors adopted a resolution to launch the New gTLD Program, including the approval of the Applicant Guidebook, a communications plan, and the New gTLD Program Budget.<sup>4</sup>

On 11 January 2012, the application period opened. A total of 1,930 applications were submitted. Applications proceeded through the New gTLD Program as defined in the Applicant Guidebook — participating in evaluation, objection and dispute resolution, contention resolution, and contracting processes as applicable. On 23 October 2013, the first new gTLD was delegated. As of 31 July 2015, over 700 gTLDs have been delegated as a result of the New gTLD Program.

## *Purpose of the Review*

The New gTLD Program was the first effort to enable expansion of the DNS on such a large scale. The implementation guidance provided in the community-developed Applicant Guidebook described many complex and previously untested concepts and processes.

---

The Affirmation of Commitments, signed in 2009 by the U.S. Department of Commerce and ICANN, provides for ongoing commitment reviews.<sup>5</sup> Section 9.3 describes a review of the New gTLD Program in terms of promoting competition, consumer trust, and consumer choice to be performed by volunteer community members (“Review Team”):

*If and when new gTLDs (whether in ASCII or other language character sets) have been in operation for one year, ICANN will organize a review that will examine the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion.*

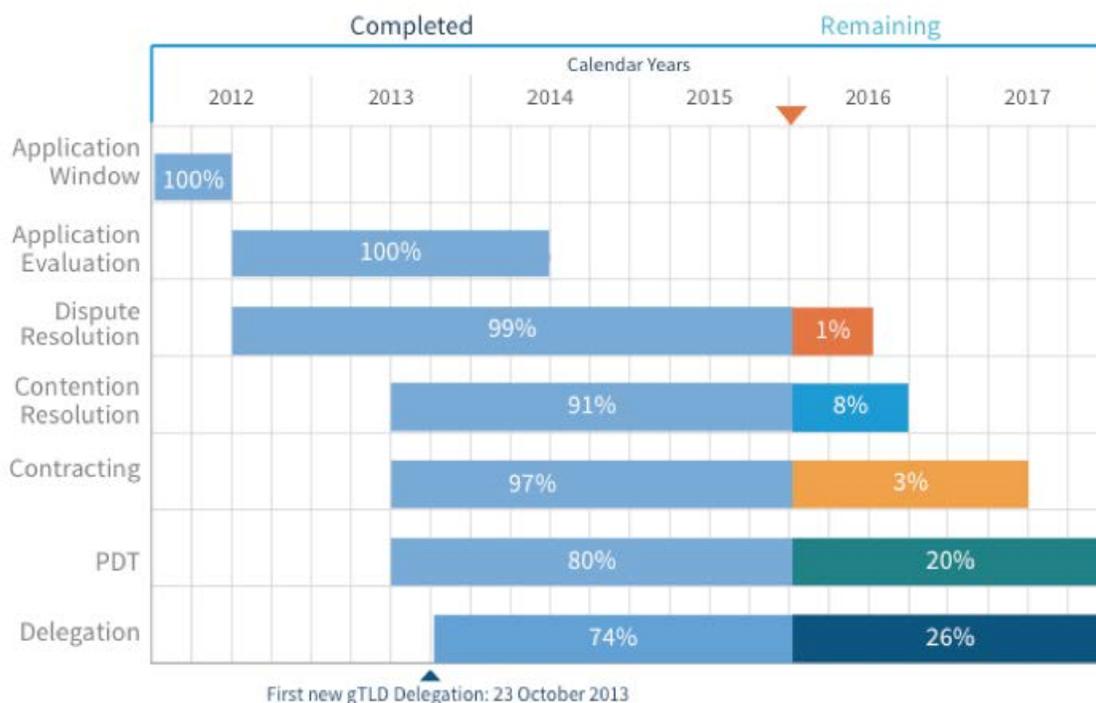

The Program implementation Review is ICANN’s assessment of the execution of New gTLD Program processes, and it is intended to help inform the Review Team’s assessment of the effectiveness of the application and evaluation process. The report documents the experiences of the ICANN staff members charged with executing the New gTLD Program as of the publication of the report (referred to throughout this report as “ICANN”). Other reviews are also being undertaken by ICANN to help inform the Review Team’s work on the competition, consumer trust and choice, and safeguards aspects of the Program. ICANN also recognizes that there are ongoing efforts by the community to review various aspects of the New gTLD Program (e.g., GAC sub-working group for protections of geographic names in next rounds of new gTLDs, SSAC work party on new gTLDs, GNSO new gTLD subsequent procedures discussion group). The Review Team may also wish to consider inclusion of the work of these community groups in its review.

Although some applications received as part of the New gTLD Program are still undergoing processing as of the publication date of this report, many of the processes described in the Applicant Guidebook are completed or nearing completion. Figure i provides an overview of the current New gTLD Program Timeline.

Figure i: Overview of Current New gTLD Program Timeline

As of 31 December 2015, two of the seven major processes defined in the Applicant Guidebook are complete, and three are over 90% complete.

As the focus of this report is the effectiveness of the implementation of the Applicant Guidebook and New gTLD Program processes, it is not intended as a review of the community-developed Applicant Guidebook nor of the GNSO policies on the introduction of new gTLDs. There was a separate effort led by the New gTLD Subsequent Procedures Discussion Group (a community-led group tasked with calling on the community’s collective experiences from the 2012 New gTLD Program round) to determine what, if any, changes may need to be made to the existing Introduction of New Generic Top-Level Domains GNSO policy recommendations from 8 August 2007. This group’s work can be viewed on the ICANN Community Wiki.<sup>6</sup> ICANN prepared a Final Issue report, and the GNSO has initiated a formal Policy Development Process.<sup>7, 8</sup>

The Program Implementation Review report documents the experiences gained during implementation for consideration in future rounds. To support this intention and to capture the lessons learned first-hand, the report is a self-assessment performed by a staff review team at ICANN. However, many stakeholders have played a major role in the Program. Accordingly, input received

<sup>6</sup> ICANN. Discussion Group (DG) – New gTLD Subsequent Procedures Home. Retrieved from <https://community.icann.org/display/DGNGSR/Discussion+Group+%28DG%29+-+New+gTLD+Subsequent+Procedures+Home>

<sup>8</sup> Generic Names Supporting Organization. (17 December 2015) Minutes of the GNSO Council Meeting 17 December 2015. Retrieved from <http://gns0.icann.org/en/meetings/minutes-council-17dec15-en.htm>

---

from applicants, service providers, and other members of the community on various elements of the Program has been incorporated into this report. ICANN sought and encouraged additional input from stakeholders. The draft version of this report was published for public comment, and stakeholder input has been considered and taken into account in updating the report. While ICANN believes it will be beneficial to document and publish its analysis of the experience gained in implementing the Program, it also values the experience and insight from others who participated in the process. It is recognized that other stakeholders are performing their own reviews, and this review is not intended to replace those reviews nor to represent the experience of all stakeholders.

### *Structure of the Review*

This report has been organized into eight chapters. Each chapter includes various sections pertaining to those broader topics. The chapters and sections mimic the structure of the Applicant Guidebook. Additional chapters for key topics that are not specific to sections of the Applicant Guidebook have been included as well.

The chapters are as follows:

1. Application Processing
2. Application Evaluation
3. Objection and Dispute Resolution
4. Contention Resolution
5. Transition to Delegation
6. Applicant Support Program
7. Continued Operations Instrument
8. Program Management

To guide the review, each topic has been assessed with consideration of the following dimensions:

- Alignment to policy and implementation guidance: to what extent the program criteria, requirements, and execution adhered to GNSO policy recommendations and the Applicant Guidebook
- Security and stability: to what extent the process/procedure/framework supported security and stability of the DNS
- Fairness: to what extent decision-making was consistent, objective, and adhered to documented policies and procedures
- Predictability: to what extent the Program process/procedures/timelines provided predictability
- Effectiveness: to what degree the process was successful in producing desired results/achieving objectives
- Efficiency: to what extent resources (time, effort, cost) were well used for the intended purpose

Each of the chapters includes lessons learned from the implementation of this round as well as considerations for future application rounds. In implementing the New gTLD Program and reflecting upon the challenges of execution, ICANN has identified areas that were particularly challenging and

---

which may require additional work and/or discussion. ICANN requests the community's input on these areas in order to enable improvement in future application rounds. The lessons learned and considerations in this report are based on the assumption that the policy recommendations for the introduction of new gTLDs will remain the same for future rounds. Should new consensus policy be developed, ICANN recognizes that some of the considerations may no longer be relevant to the application and evaluation processes.

### *Next Steps*

The final version of this report will be provided to the Review Team, along with the public comments received and ICANN's summary and analysis of the comments. As some Program processes are ongoing as of the writing of this report, the suggestions for future rounds have taken this into consideration and may be updated as necessary to reflect future events.

---

# Executive Summary

The Program Implementation Review documents the experiences of the ICANN staff members charged with executing the New gTLD Program as of the publication of this report. In this report, a staff review team at ICANN has assessed the implementation of the Program, considering each phase of implementation.

A recurring topic of consideration throughout this assessment was the Program timeline. The Applicant Guidebook (AGB) contemplated that a simple application's lifecycle might be nine months, while a complex application's lifecycle might be up to twenty months. The application window opened on 11 January 2012, and as of 31 December 2015, there are still applications pending the contention resolution, contracting, and pre-delegation phases of the Program. ICANN anticipates that all applications will have completed their lifecycle by the end of 2017.<sup>9</sup>

While there were several factors that impacted Program timelines, the extended timeline can be contributed to two high-level factors. First, the application volume was much higher than the assumption used during the AGB-development process. Second, implementation required some processes that were not defined in detail by the AGB. Development of these processes and procedures required additional time.

Ultimately, ICANN developed a method for establishing prioritization to process the high volume of applications, and developed procedures, systems, criteria, and rules for all of the processes in this application round. Accordingly, to the extent that future rounds are similar to the 2012 round, ICANN could implement future rounds with less time required for development and with increased effectiveness and efficiency. To this end, this report assesses ICANN's implementation of each major Program process, and highlights areas where review or improvement is encouraged.

## *Chapter 1: Application Processing*

The AGB defined a process for application submission, which included the application window, an administrative completeness check, and the publication of the applied-for strings. Section 1.1: Application Submission assesses these aspects of application submission and the application form.

Key lessons learned on the topic of application submission are:

- Explore a more structured way of capturing application responses
- Implement a system that would allow applicants the flexibility to associate as many applications as desired to a single user account

---

<sup>9</sup> ICANN. (25 June 2015) ICANN FY16 Operating Plan & Budget. Retrieved from <https://www.icann.org/en/system/files/files/adopted-opplan-budget-fy16-25jun15-en.pdf>

---

Due to the high volume of applications, ICANN established a process to prioritize applications. Section 1.2: Prioritization of this report assesses the implementation of this process, particularly prioritization's effect on the efficiency and effectiveness of the Initial Evaluation, Contracting, Pre-Delegation Testing, and Auction processes.

Key lessons learned on the topic of prioritization are:

- Assign priority numbers to applications prior to commencement of application processing
- Consider grouping applications by common characteristics while establishing priority numbers, in order to increase processing efficiency

The AGB called for ICANN to provide a mechanism for members of the community to submit comments on an application, and for these comments to be reviewed at certain points in the process (e.g., during Community Priority Evaluation). Section 1.3: Application Comments assesses the process and tool developed by ICANN to support the submission and consideration of application comments.

Key lessons learned on the topic of application comments are:

- Explore implementing additional functionality that will improve the usability of the Application Comment Forum
- Provide additional clarity around the intended use of the Application Comment Forum, including timelines and ways to indicate the type of comment being submitted

The AGB called for applicants to notify ICANN if portions of their application became untrue or inaccurate. Section 1.4: Application Change Requests assesses the process that ICANN defined for applicants to make changes to their applications, including the criteria against which the change requests were evaluated and the change requests' impact on Program processes.

Key lessons learned on the topic of application change requests are:

- Design the application change request processes and criteria prior to the start of application processing
- Consider whether all types of application changes should be processed the same way

The AGB defined a way for applicants to withdraw applications that they no longer wished to proceed in the Program. Withdrawn applications were eligible for a refund if the applicant had not yet executed a Registry Agreement with ICANN. Section 1.5: Application Withdrawals assesses the withdrawal and refund processes.

Key lessons learned on the topic of application withdrawals are:

- Consider defining a process to move applications that may not proceed in the Program to a final status and provide a refund if they are not withdrawn
- Review Program financials at the conclusion of this application round to determine whether the refund schedule accurately mapped to the costs incurred at the specified Program phases

---

## Chapter 2: Application Evaluation

The AGB defined 50 evaluation questions, intended to collect information on the applicant, to assess the applied-for string, to evaluate the proposed registry services, and to assess the applicant's capability to be a registry operator. The AGB defined Initial and Extended Evaluation as the periods during which applications would be reviewed against the AGB criteria. Section 2.1: Initial and Extended Evaluation assesses the evaluation process, evaluation timeline, and the quality control process.

Key lessons learned on the topic of Initial and Extended Evaluation are:

- Work with evaluation panels to perform pre-evaluation training and develop detailed procedures to ensure consistent and quality evaluations are achieved
- Consider whether Program processes that allow for additional communication between the applicant and ICANN, such as the Applicant Outreach process used in evaluation, may be beneficial

Sections 2.2 through 2.8 of this report assess the seven individual evaluations: Background Screening, String Similarity, DNS Stability, Geographic Names, Technical and Operational Capability, Financial Capability, and Registry Services. Observations from the execution of each of the evaluations are discussed, including areas of suggested review.

Key lessons learned on the topic of the individual evaluations are:

- Consider whether background screening should be performed during Initial Evaluation or at the time of contract execution
- Consider whether the procedures and criteria could be adjusted to account for a meaningful background screen in a variety of cases
- Review the relative timing of the String Similarity evaluation and the objections process
- Consider any ongoing work by various members of the community regarding string similarity, name collision, and geographic names
- Consider the purpose and the implications of the Geographic Names evaluation, particularly in terms of whether its purpose is limited to evaluation or if there are other implications to the geographic names designation
- For future rounds, leverage the IDN tools currently under development
- Consider whether alternate approaches to the Technical and Operational Capability and Financial Capability evaluations would be worthwhile
- Review Technical and Operational Capability and Financial Capability Clarifying Questions and responses to determine whether improvements to the application questions can be made
- Update the process for collection of registry services information to better support both evaluation and contracting activities

- 
- If an alternative approaches to the Technical and Operational Capability evaluation are explored, consider how the evaluation of Registry Services could be incorporated into the approach

### *Chapter 3: Objection Procedures*

The AGB provided for a process for ICANN's Governmental Advisory Committee (GAC) to issue advice on new gTLDs concerning specific applications. Section 3.1: GAC Advice assesses the GAC Early Warning and GAC Advice processes and ICANN's implementation of the advice issued.

Key lessons learned on the topic of GAC Advice are:

- Continue engagement with the GAC during the review process and the development of future procedures to ensure that its input is incorporated into relevant processes as early as possible

The AGB defined the Objections and Dispute Resolution process for parties with standing to file formal objections on four defined grounds, and to have their objections considered by experts. If an objection was successful, the applications would be placed into contention (in the case of String Confusion Objections filed by a new gTLD applicant), or the unsuccessful application would not proceed in the New gTLD Program (for all other objection types). Section 3.2: Objections and Dispute Resolution assesses the implementation of the objection grounds and standards, management of the dispute resolution service providers, the objections process, and the processes involving the Independent Objector. Additionally, while the AGB did not include an appeal mechanism, the ICANN Board New gTLD Program Committee approved a review mechanism for two objections. The concept of a review mechanism is discussed in this section.

Key lessons learned on the topic of objections and dispute resolution are:

- Explore a potential review mechanism for the next round
- Consider opportunities for improvement in administering the Independent Objector processes

### *Chapter 4: String Contention Procedures*

Contention sets were groups of two or more applications that were deemed confusingly similar to one-another by the String Similarity panel or by through a String Confusion Objection. Applicants were encouraged to self-resolve these contention sets; however, in the absence of self-resolution, the AGB provided for two mechanisms to resolve contention.

The first mechanism for resolution of string contention was Community Priority Evaluation (CPE), through which self-designated community applicants could gain priority by meeting CPE criteria. Section 4.1: Community Priority Evaluation assesses the implementation of the CPE criteria, process, and evaluation results.

Key lessons learned on the topic of CPE are:

- 
- Consider all dimensions of the feedback received to revisit the CPE scoring and framework before the next application round

The second mechanism for resolution of string contention was an ICANN-facilitated auction. Section 4.2: Auction: Mechanism of Last Resort assesses the implementation of the auction rules and auction process. In this round, auctions were implemented in a manner that supported fairness, predictability, effectiveness, and efficiency. Should auctions be included in the next application round, ICANN could replicate this process with minimal preparation.

### *Chapter 5: Transition to Delegation*

Once an application had successfully completed all required steps of the New gTLD Program (i.e., evaluation, objections and dispute resolution, contention resolution), the application could move forward to enter into a Registry Agreement (RA) with ICANN. The AGB included information about the contracting process, including timelines and a draft version of the Base RA, which are assessed in Section 5.1: Contracting.

Key lessons learned on the topic of contracting are:

- Explore the feasibility of finalizing the base RA before applications are submitted or establishing a process for updating the RA
- Explore whether different applicant types could be defined in a fair and objective manner, and if there are to be different applicant types, consider whether there should be different versions of the RA

The AGB called for the applicant to complete a technical test [Pre-Delegation Testing (PDT)] to demonstrate that they could operate their TLD in a secure and stable manner before delegation. Once the RA was executed and PDT was complete, ICANN recommended the TLD to IANA for delegation into the root zone. Section 5.2: Pre-Delegation Testing and Transition to IANA assesses the development of PDT requirements and service delivery and the Transition to IANA process.

Key lessons learned on the topics of PDT and Transition to IANA are:

- Consider which tests should be performed once per technical infrastructure implementation and which should be performed for each TLD
- Consider which, if any, tests can be converted from self-certifying tests to operational tests
- In considering an alternate approach to the Technical and Operational Capability evaluation, if an RSP accreditation program is considered, explore how PDT would be impacted
- In the development of evaluation criteria and procedures for IDNs, consider how the review of IDN tables during PDT would be affected

### *Chapter 6: Applicant Support*

The Applicant Support Program was a community-developed program designed to provide financial and non-financial support to applicants from underrepresented regions. The New gTLD Financial

---

Assistance Handbook defined the criteria and process for financial assistance. Section 6.1: Applicant Support assesses ICANN's implementation of the financial assistance component of the program, as well as the pro bono services and the establishment of a funding mechanism for the program.

Key lessons learned on the topic of the Applicant Support Program are:

- Consider leveraging the same procedural practices used for other panels, including the publication of process documents and documentation of rationale
- Consider researching globally recognized procedures that could be adapted for the implementation of the Applicant Support Program

### *Chapter 7: Continued Operations Instrument*

The Continued Operations Instrument (COI) was a financial instrument intended to temporarily fund the continued operations of the five critical registry functions of a new gTLD by an emergency back-end registry operator (EBERO) in the event of a TLD's failure. The AGB defined the requirements of the COI in Question 50 of the application, and applicants were required to submit a compliant instrument before RA execution. Section 7.1: Continued Operations Instrument assesses the implementation of the COI requirements defined in the AGB.

Key lessons learned on the topic of the COI are:

- Explore whether there other more effective and efficient ways to fund an EBERO in the event of a TLD failure

### *Chapter 8: Program Management*

In order to implement the New gTLD Program, there was a significant effort required from the community, ICANN, and service providers. ICANN defined operational procedures to implement the processes defined in the AGB, developed systems and tools to support the implementation, secured human resources to support the Program, and selected and managed service providers to execute the Program. Further, ICANN managed the Program's financials, executed communications activities, and developed a Customer Service Center to support applicants and registry operators.

Section 8.1: Program Processes, Systems, Resources assesses ICANN's execution of Program processes and procedures, applicant-facing systems, and internal human resources.

Key lessons learned on the topic of Program processes, systems, and resources are:

- In developing timelines for future application rounds, provide an appropriate amount of time to allow for the use of best practices in system development
- Explore beta testing programs for systems to allow for lessons learned, to increase effectiveness of such systems, and to provide further transparency, clarity, and opportunity for preparation to applicants

---

Section 8.2: Service Provider Coordination assesses the process used to select vendors, conflict of interest guidelines, and the coordination of the service providers' work.

Key lessons learned on the topic of service provider coordination are:

- Provide transparency and predictability to the procurement process following ICANN's procurement guidelines. Publish selection criteria, providers' process documents, and other relevant and non-confidential material in a timely manner.

Section 8.3: Financial Management assesses ICANN's management of the USD 357 million collected from the 1,930 applications submitted. ICANN's execution of budgeting and reporting, fund segregation, and fees are assessed. The Program's budget is published with ICANN's annual fiscal year Operating Plan and Budget and follows ICANN's annual budgeting process, which includes a public comment period and approval of the final budget by the ICANN Board. Program-related fees were collected in accordance with the AGB and in-line with the principle of cost recovery.

Key lessons learned on the topic of financial management are:

- Perform full review of Program financials and application fee before fees are defined for the next application round

Section 8.4: Communications assesses the communications activities executed prior to and throughout the New gTLD Program in support of the New gTLD Communications Plan.

Key lessons learned on the topic of communications are:

- Consolidate all next round program information into a single site and make information as accessible as possible
- Leverage ICANN's Global Stakeholder Engagement team to promote awareness of the New gTLD Program within their regions/constituencies

Section 8.5: Customer Service assesses ICANN's implementation of a Customer Service Center to support potential applicants and applicants of the New gTLD Program. Assessed in this section are the Program's impact on customer service and ongoing improvements made to the Customer Service Center, which has evolved over time to support a much wider audience.

Key lessons learned on the topic of customer service are:

- Consider customer service to be a critical function of the organization, and ensure that the Customer Service Center has the appropriate resources to support the ongoing and future activities of the New gTLD Program

---

# Chapter 1: Application Processing

After several years of collaborative work by stakeholders from various sectors (e.g., governments, business and intellectual property constituencies, the technology community), the Applicant Guidebook (AGB)<sup>10</sup> – a roadmap for the implementation of the new gTLD Program – was approved by the ICANN Board on 20 June 2011.<sup>11</sup> Module 1 of the AGB “gives applicants an overview of the process for applying for a new generic top-level domain, and includes instructions on how to complete and submit an application, the supporting documentation an applicant must submit with an application, the fees required, and when and how to submit them.” At the close of the application window, which spanned 12 January through 30 May of 2012, 1,930 applications for new gTLDs were submitted.

The processing of these 1,930 applications included providing the tools (system and guidance) for applicants to submit applications, a fair and effective mechanism to order applications for processing, a mechanism for applicants to update application materials, a mechanism for applicants to withdraw applications, and a mechanism for interested parties to submit comments on application materials.

## 1.1 Application Submission

### 1.1.1 Introduction

Three main activities occurred during the period of time between the opening of the application window on 12 January 2012 and the publication of the applications on 13 June 2012:

- Applications submitted
- Administrative completeness check performed
- Applied-for TLDs published on Reveal Day

Collectively, these activities are referred to as application submission in this report. This section of the Program Implementation Review report discusses these activities.

### 1.1.2 Relevant Guidance

The following guidance is relevant to the topic of Contracting and will be discussed in further detail in Sections 1.1.3 and 1.1.4 of this report:

- GNSO Principle A: “New generic top-level domains (gTLDs) must be introduced in an orderly, timely and predictable way.”<sup>12</sup>
- GNSO Recommendation 1:

*ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination.*

*All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.*

- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”
- GNSO Recommendation 13: “Applications must initially be assessed in rounds until the scale of demand is clear.”
- GNSO Implementation Guideline A: “The application process will provide a pre-defined roadmap for applicants that encourages the submission of applications for new top-level domains.”

---

<sup>12</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gns0.icann.org/en/issues/new-gtlds/pdp-dec05-fr-part-a-08aug07.htm>

- GNSO Implementation Guideline E: “The application submission date will be at least four months after the issue of the Request for Proposal and ICANN will promote the opening of the application round.”
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>13</sup>

### 1.1.3 Background

GNSO Implementation Guideline E specified that “the application submission date [would] be at least four months after the issue of the Request for Proposal.” The “Request for Proposal” referenced in this Implementation Guideline is the Applicant Guidebook (AGB). In accordance with this Implementation Guideline, on 19 September 2011, version 8 of the Applicant Guidebook was published, which set the dates for the application submission period as 12 January 2012 through 29 March 2012. The submission closing date was later pushed to 30 May 2012.

During the application window, interested parties were able to submit gTLD applications via the TLD Application System (TAS). See Section 8.1: Program Processes, Systems, Resources of this report for more discussion on TAS. The required steps to submit applications in TAS are illustrated in Figure 1.1.i below.

*Figure 1.1.i: Required Steps to Submit Applications in TAS*

To create a user account and profile, applicants answered Questions 1 through 12 of the questionnaire in Module 2 of the AGB. Once the user account and profile were created, applicants paid the USD 5,000 registration fee via wire transfer. Upon confirming receipt of the USD 5,000 registration fee, ICANN provided applicants with access to the application form in TAS. With access to the application form, applicants could then answer Questions 13 through 50 of the questionnaire in Module 2 of the AGB. Concurrently, applicants had to pay the remaining USD 180,000 evaluation fee. Both the completed application form and the remaining USD 180,000 evaluation fee must have been submitted by the scheduled close of the application window on 30 May 2012. To ensure applicants had sufficient time to pay the USD 5,000 registration fee, complete the application form, and pay the USD 180,000 remaining evaluation fee, ICANN set a deadline date of 29 March 2012 to create user accounts and profiles.

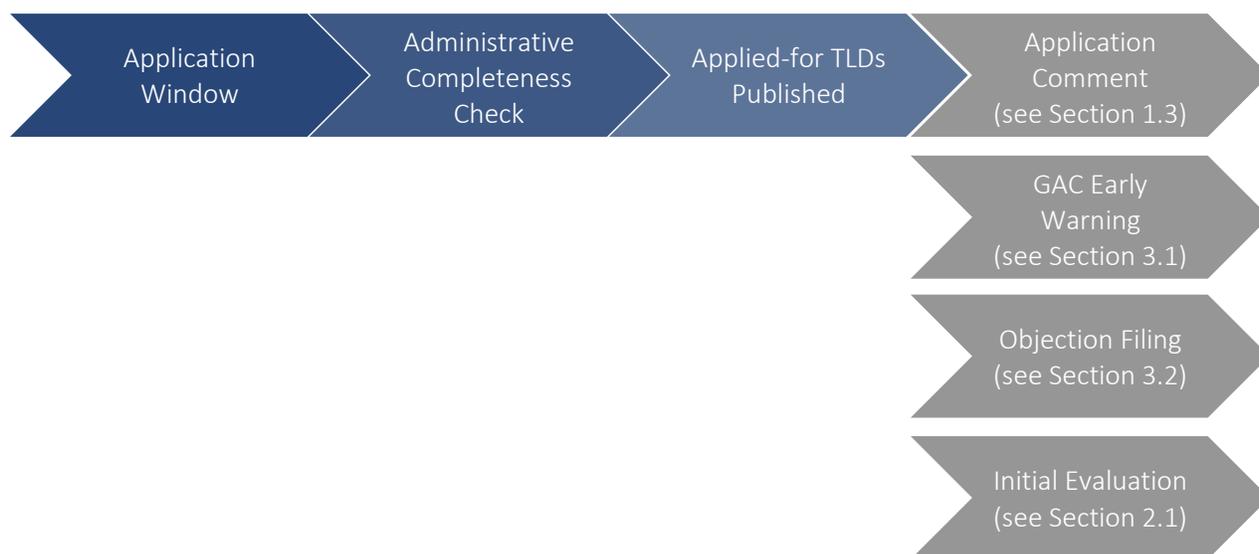

<sup>13</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

At the close of the application window, there were 1,268 user profiles created to submit 1,930 applications. Once the application window closed, ICANN performed an administrative completeness check on all applications in preparation for publication of the applied-for TLDs.

The final list of 1,930 applied-for TLDs and corresponding applications was published to the New gTLD microsite on 13 June 2012, also referred to as “Reveal Day.”<sup>14</sup>

The publication of the applied-for TLDs on Reveal Day triggered several Program processes. Figure 1.1.ii provides a summary of Program processes triggered by the publication of the applied-for TLDs.

*Figure 1.1.ii: Summary of Program Processes Triggered by the Publication of the Applied-for TLDs*

## 1.1.4 Assessment

### 1.1.4.1 APPLICATION WINDOW

#### *Timeline*

As per the AGB, the application window opened on 12 January 2012, six months after the ICANN Board approved the New gTLD Program.<sup>15</sup> During this six-month period, ICANN performed operational readiness activities as described in the AGB, such as engaging a third-party provider to perform background screening<sup>16</sup> and launching the New gTLD microsite.<sup>17</sup>

<sup>14</sup> ICANN. (13 June 2012) Announcement: New gTLD Reveal Day – Applied-for Strings. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/announcement-13jun12-en>

<sup>15</sup> ICANN. (20 June 2011) Approved Board Resolutions. Retrieved from <https://www.icann.org/resources/board-material/resolutions-2011-06-20-en>

<sup>16</sup> ICANN. (30 August 2011) Announcement: Safe Stable, and Secure TLDs, ICANN Seeks Global Background Screening Provider. Retrieved from <https://www.icann.org/news/announcement-2011-08-30-en>

---

The close of the application window was set as 12 April 2012 by the AGB. While ICANN intended to close the window on the date specified in the AGB, the window was extended to 30 May 2012 due to the unanticipated unavailability of TAS for an amount of time during the application period (for more information, see Section 8.1: Processes, Systems, and Resources of this report). When TAS was taken offline on 12 April 2012, hours before the scheduled close of the application window, there were 1,268 registered user accounts and profiles and 2,091 application forms submitted or in progress. At the final close of the application window on 30 May 2012, there were 1,930 applications submitted.

### *Application Submission*

In alignment with Section 1.1.2.1 of the AGB, applicants could submit as many applications as desired. However, TAS placed a limit of 50 applications per user account. To submit more than 50 applications, applicants had to create multiple user accounts. Although there was no limit to the number of user accounts that could be created and thus the number of applications, a limit of 50 applications per user account required some applicants to create and manage multiple user accounts. Some applicants reported that this created some inefficiency for them, as they had to maintain multiple system credentials for the various user accounts and keep track of which applications were associated with which user account.

### *Application Form*

A standard online application form was used for all applications to support fairness and consistency in the application submission experience.

The application form itself was modeled after the questionnaire in Module 2 of the AGB. The form restated the questions as they appeared in the AGB and provided a space for open text responses to the questions. For those questions where the AGB specified a page limit for the response, the application form applied a conversion of 4,000 characters per page. For those questions where the AGB did not specify a page limit, the application form set a reasonable character limit. The character limit for all 50 application questions was communicated to applicants prior to the opening of the application window in the Customer Service Center's knowledge base.<sup>17</sup> For questions that allowed attachments, the application form provided the capability to attach files. Acceptable file formats were also communicated to applicants prior to the opening of the application window in the Customer Service Center's knowledge base.

The application form provided fields for open text responses to questions in the AGB. Feedback from the Financial and Technical/Operational Capability Evaluation Panels was that a structured way to capture data might have helped applicants provide more complete answers and have eliminated some Clarifying Questions. For example, several of the Technical/Operational Capability questions asked for compliance to several RFCs. Instead of an open text field where the applicant might miss

---

<sup>17</sup> ICANN. (19 September 2011) Announcement: ICANN Launches New Online Information Center for New Generic Top-Level Domains. Retrieved from <https://www.icann.org/news/announcement-2-2011-09-19-en>

<sup>18</sup> ICANN. (16 December 2011) New gTLD Knowledge Articles. Retrieved from <http://newgtlds.icann.org/en/applicants/tas/character-limits-11jan12-en.pdf>

---

providing a response to one or more of the required RFCs, a structured question form specifying each RFC that the applicant must provide a response to would have avoided an incomplete response.

#### **1.1.4.2 ADMINISTRATIVE COMPLETENESS CHECK**

After the close of the application window, the AGB called for ICANN to complete an administrative completeness check in preparation for the public posting of application materials.<sup>19</sup> The intent of the administrative completeness check was to ensure that mandatory questions were answered, supporting documents were provided in the correct format, and evaluation fees were received.

The AGB allowed eight weeks for ICANN to complete the check. ICANN completed the check in two weeks, in time for the posting of applied-for strings on 13 June 2012 (Reveal Day).

ICANN was able to complete the check in less time than provided for in the AGB because some of the activities called for during the administrative check period were performed during the application window. The reconciliation of evaluation fees was performed during the application window due to the requirement in Section 1.5.1 of the AGB that the full USD 185,000 evaluation fee must be received by the end of the application window. Checking of the applications to ensure that all mandatory questions were answered was also not necessary as the application form had built-in validations to ensure that all required questions were answered prior to the form being submitted. The application form also had built-in validations to ensure that only attachments with acceptable file formats were accepted. The main checks that ICANN performed during the two weeks prior to the publication of the applied-for strings were:

- Validation of addresses provided to ensure that PO Box addresses had not been submitted.
- Validation of the script and code points of applied-for IDN TLDs to ensure they were accurate.

ICANN performed follow-up with the applicants during the two-week administrative check period to address any identified issues to ensure the publication of accurate information on Reveal Day.

#### **1.1.4.3. REVEAL DAY**

“Reveal Day,” 13 June 2012, referred to the day that ICANN published the applied-for strings and the public portions of the 1,930 applications. The questionnaire in Module 2 of the AGB specified which questions were public and which questions were confidential and therefore would not be posted publically.

On 14 June 2012, ICANN published an announcement that the postal addresses of some primary and secondary contacts for new generic top-level domain applications were published and that this information was not intended for publication.<sup>20</sup> The addresses appeared as responses to portions of questions 6 and 7 on the application. As a result, ICANN temporarily disabled viewing of the

---

<sup>19</sup> AGB Section 1.1.2.2: Administrative Completeness Check

<sup>20</sup> ICANN. (14 June 2012) Announcement: New gTLD Application Details Temporarily Offline – Update. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/announcement-2-14jun12-en>

---

application details. ICANN removed the unintended information and the viewing of application details was restored on the same day. This did not impact any of the processes that Reveal Day triggered, as additional time was provided for all of those processes due to the volume of applications received.

## 1.1.5 Conclusion

Even though some issues and delays (discussed in Section 1.1.4: Assessment above) arose, the application submission phase achieved its intended purpose of allowing applicants to submit applications for TLDs, for ICANN to perform a completeness check of the submitted applications, and for ICANN to post the application information. Overall, while these issues and delays had some impact to the timeline of the Program, the volume of applications received had a more significant impact on the Program timeline. Please see Section 1.2: Prioritization and Section 2.1: Initial and Extended Evaluation of this report for additional discussion on how the volume of applications impacted Program timelines.

There are some valuable lessons learned from the implementation of the application submission phase that could help to inform development of procedures for future rounds. One of the lessons learned is that capturing responses to application questions in open text fields led to incomplete answers that did not fully address the questions and reduced the efficiency of evaluators. A more structured way to capture responses to application questions should be explored to reduce or eliminate incomplete answers from seemingly qualified applicants. Structured data also could have efficiency benefits in the evaluations or other downstream uses of the application answers. The other lesson learned is that placing a restriction on the number of applications that can be submitted under each user account and profile created inefficiency for applicants. Implementing a system that would allow applicants the flexibility to associate as many applications as desired with a single user account should be considered.

In summary:

**1.1.a** Explore a more structured way of capturing application responses

**1.1.b** Implement a system that would allow applicants the flexibility to associate as many applications as desired to a single user account

---

## 1.2 Prioritization

### 1.2.1 Introduction

Prioritization refers to the assignment of priority numbers to applications for purposes of processing. This section of the Program Implementation Review report discusses the impact of prioritization on the following Program processes:

- Initial Evaluation
- Execution of Registry Agreements
- Pre-Delegation Testing
- Auction

### 1.2.2 Relevant Guidance

The following guidance is relevant to the topic of Contracting and will be discussed in further detail in Sections 1.2.3 and 1.2.4 of this report:

- GNSO Principle A: “New generic top-level domains (gTLDs) must be introduced in an orderly, timely and predictable way.”<sup>21</sup>
- GNSO Implementation Guideline D: “A first come first served processing schedule within the application round will be implemented and will continue for an ongoing process, if necessary. Applications will be time and date stamped on receipt.”
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>22</sup>
- ICANN Board Resolution 2012.03.28.01 (28 March 2012): Batching of New gTLD Applications: Secondary Timestamp<sup>23</sup>

### 1.2.3 Background

Section 1.1.2.5 of the AGB anticipated that Initial Evaluation (IE) would take approximately five months to complete and that results for all applications would be published at the end of IE. In the event of the number of applications exceeding 500, the AGB called for a secondary time stamp mechanism to establish batches for evaluation purposes. “Secondary time stamp” refers to a separate mechanism that would be used after the application window (see Section 1.1: Application Submission of this report) to assign time stamps to applications. At the end of the application

<sup>22</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>23</sup> ICANN. (28 March 2012) Approved Board Resolutions | Special Meeting of the ICAN Board. Retrieved from <https://www.icann.org/resources/board-material/resolutions-2012-03-28-en>

---

window, 1,930 applications were submitted for new gTLDs. As this number exceeded the anticipated 500 in the AGB, a secondary time stamp mechanism in the form of digital archery was launched on 8 June 2012 to allow applicants to register a time stamp for their applications.<sup>24</sup> On 23 June 2012, ICANN announced that digital archery was suspended due to applicants' reports that the timestamp system returned unexpected results depending on circumstances.<sup>25</sup> Digital archery was scheduled to close on 28 June 2012. At the time of suspension, approximately 20% of applications had registered a time stamp.

The suspension of digital archery did not impact the start of application evaluation. All evaluation panels—String Similarity, Financial Capability, Technical/Operational Capability, DNS Stability, Registry Services, Geographic Names, and Background Screening—started processing applications in June 2012. Absent guidance regarding how to order applications for evaluation purposes, the evaluation panels processed applications in random order at this time. Some of the evaluation panels organized applications in groups that would enable the most efficient evaluation. For example, the Technical and Operational Capability and Registry Services evaluation panels grouped applications by back-end Registry Service providers. The Financial evaluation grouped applications by applying entity.

On 10 October 2012, ICANN published for comment a “Use of a Drawing for Prioritizing New gTLD Applications” plan for prioritizing applications through the use of a drawing.<sup>26</sup> The Plan was the culmination of four months of discussions with the community.

On 20 November 2012, ICANN announced that a prioritization draw would take place on 17 December 2012.<sup>27</sup> The draw would assign a priority number to each application for the purposes of application processing. To participate in the drawing, applicants were required to purchase a ticket for each application. The funds collected from ticket sales were donated to charitable organizations pursuant to California laws.

On 17 December 2012, ICANN held four drawings. The first drawing prioritized IDN applications with a purchased ticket. The second drawing prioritized non-IDN applications with a purchased ticket. The third drawing prioritized IDN applications without a purchased ticket. The fourth drawing prioritized non-IDN applications without a purchased ticket. In total, 1,917 applications were assigned a priority number. Thirteen applications withdrew before the Prioritization Draw took place.

<sup>27</sup> ICANN. New gTLD Prioritization Draw. Retrieved from <http://newgtlds.icann.org/en/applicants/prioritization-draw>

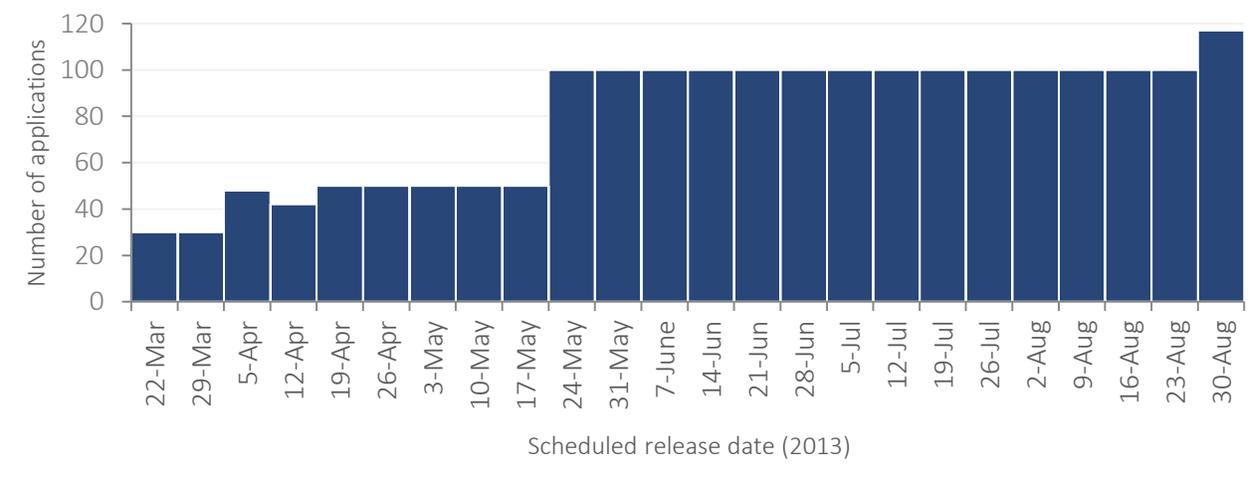

# 1.2.4 Assessment

According to the “Use of a Drawing for Prioritizing New gTLD Applications” plan,<sup>28</sup> priority numbers would be used to order the release of evaluation results (see Section 2.1: Initial and Extended Evaluation of this report), to execute Registry Agreements (see Section 5.1: Contracting of this report) and to schedule PDT appointments (see Section 5.2: Pre-Delegation Testing and Transition to IANA of this report). The Plan also stressed the importance of metering the execution of Registry Agreements and PDT processes to ensure that no more than 1,000 TLDs were delegated per year in accordance with root zone scaling requirements.<sup>29</sup>

## 1.2.4.1 INITIAL EVALUATION

For Initial Evaluation (IE), the Plan called for IE results to be released by priority numbers beginning in March 2013 and ending in June of 2013. ICANN met the March 2013 date and began releasing IE results on 22 March 2013. Results were released in batches by priority number. ICANN began by releasing results for priorities 1-30 the first week, ramping up to weekly batches of 100 priority numbers. This was lower than the 150 applications per week called for in the Plan. However, discussions with the evaluation panels after the publication of the Plan concluded that their maximum capacity was 100 applications per week. This resulted in the extended IE completion date of August 2013 instead of the June 2013 timeframe anticipated in the Plan.<sup>30</sup> Figure 1.2.i shows the IE results release schedule that ICANN followed during IE.

Figure 1.2.i: IE results release schedule

<sup>28</sup> ICANN. (10 October 2012) Use of a Drawing for Prioritizing New gTLD Applications. Retrieved from <http://newgtlds.icann.org/en/applicants/batching/drawing-prioritization-10oct12-en.pdf>

<sup>29</sup> ICANN. (October 2010) Summary of the Impact of Root Zone Scaling. Retrieved from <https://archive.icann.org/en/topics/new-gtlds/summary-of-impact-root-zone-scaling-06oct10-en.pdf>

<sup>30</sup> ICANN. (22 March 2013) Announcement: Initial Evaluation Results Released for First Set of Applications. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/announcement-22mar13-en>

---

There were instances where the IE results release for some applications could not occur in the scheduled week. Possible reasons IE results were not available in the scheduled week included pending change requests, clarifying questions or follow-up with applicants regarding missing information.

Although prioritization allowed for predictable release of IE results, it brought some inefficiency to the evaluation process. As mentioned in Section 1.2.3 of this report, evaluation panels began review of applications in June of 2012. When the Prioritization Draw took place on 17 December 2012, some applications with smaller prioritization numbers had not been evaluated while some of the applications with larger prioritization numbers had partially been reviewed. As such, significant reshuffling occurred and a considerable number of evaluations had to be completed in the three months leading up to the publication of the first set of IE results on 22 March 2013. The requirement to process applications by priority number also resulted in the inability to group applications by back-end registry service providers or by applicants throughout IE, which would have supported processing efficiency. This is further discussed in Sections 2.6: Technical and Operational Capability Evaluation and Section 2.7: Financial Capability Evaluation of this report.

#### **1.2.4.2 EXECUTION OF REGISTRY AGREEMENTS**

After IE, applications followed various possible paths as anticipated and illustrated in Section 1.1.5 of the AGB. For Contracting (see Section 5.1: Contracting of this report), priority numbers were used to invite applicants as they completed the required Program steps and became ready to enter the Contracting process. Similarly, priority numbers were used to order execution of the Registry Agreement as applicants completed all of the required Contracting process steps.

The AGB and Plan anticipated that applicants would sign the Registry Agreement quickly upon eligibility and that Registry Agreement execution would occur at a steady rate of 20 per week. In actuality, the majority of applicants did not sign the Registry Agreement quickly. The number of Registry Agreement executions varied and remained fewer than 20 for most weeks after the commencement of the Contracting process. See Section 5.1: Contracting of this report for further discussion on the process.

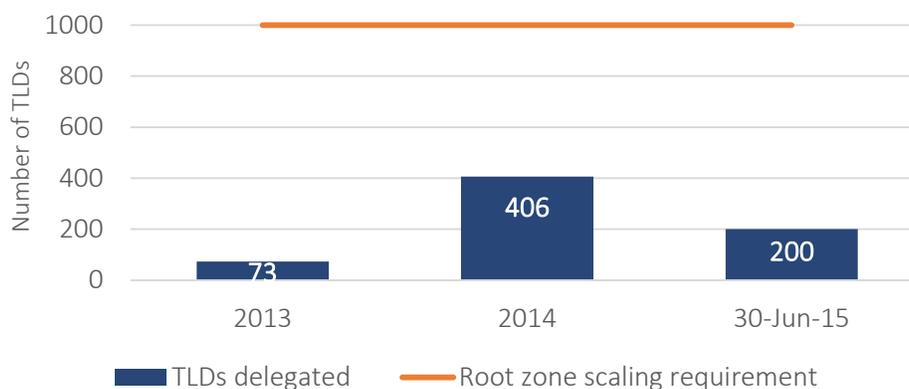

#### **1.2.4.3 PRE-DELEGATION TESTING (PDT)**

As applicants executed Registry Agreements and were ready to begin PDT, priority numbers were used to invite applicants to schedule PDT appointments. As the applicants were free to pick a PDT appointment date that worked for them, the actual PDT date did not always correspond to the order that applicants were invited to schedule PDT. Should there be several applicants wishing to schedule their appointments on the same date, applicants with the smallest priority numbers would be scheduled first, ahead of those with larger priority numbers.

As applicants did not quickly sign Registry Agreements, the volume and rate of PDT did not reach the 20 per week rate anticipated in the Plan. As such, the rate of delegation of TLDs stayed below the

root zone scaling requirement of 1,000 per year to-date. Figure 1.2.ii shows the number of delegations per calendar year.

Figure 1.2.ii: Delegations per calendar year

#### 1.2.4.4 AUCTION

Although not specifically called for in the Plan, priority numbers were also used to schedule auctions. Within a contention set, the application with the smallest priority number determined the order in which sets were scheduled for auction. Lacking any other direction to order contention sets, the use of priority number was the most fair and predictable method to schedule auctions.

### 1.2.5 Conclusion

Prioritization was a fair and effective method of ordering applications for release of IE results and for execution of other Program processes such as Contracting, PDT, and auction. It provided applicants with predictability of application processing order and timelines of IE results release. For staff, it provided an effective mechanism to prioritize service providers' and its own work. However, prioritization also caused some process inefficiency. The Prioritization Draw did not take place until six months after evaluation had already begun. As such, the evaluation panels were not able to fully leverage the work of the six months between the beginning of evaluation and the Prioritization Draw. Some applications that had been evaluated ended up with high priority numbers, and some applications where evaluations had not begun evaluation had low priority numbers. Prioritization also did not allow grouping of applications by back-end registry service providers, or applicants, which would have provided process efficiency in the evaluation of applications. Although these inefficiencies did not cause any delays to application processing, the lesson learned is that assignment of priority numbers to applications should be established prior to commencement of the processing of application. Considerations should also be given to how efficiency of grouping evaluations by common characteristics could be achieved while allowing for a fair and predictable way of ordering application processing.

---

In summary:

**1.2.a** Assign priority numbers to applications prior to commencement of application processing

**1.2.b** Consider grouping applications by common characteristics while establishing priority numbers, in order to increase processing efficiency

---

## 1.3 Application Comments

### 1.3.1 Introduction

The Application Comments Forum was provided as a mechanism for interested parties to comment on any applications and to bring relevant information to the attention of parties charged with handling specific aspects of application processing (e.g., evaluation panels, the Independent Objector, ICANN). This section of the Program Implementation Review discusses the following aspects of the application comments process:

- Application Comments Window
- Application Comments Forum
- Application Comment Submission and Review

### 1.3.2 Relevant Guidance

The following guidance is relevant to the topic of application comments and will be discussed in further detail in Sections 1.3.3 and 1.3.4 of this report:

- GNSO Implementation Guideline C: “ICANN will provide frequent communications with applicants and the public including comment forums.”<sup>31</sup>
- GNSO Implementation Guideline Q: “ICANN staff will provide an automatic reply to all those who submit public comments that will explain the objection procedure.”
- Applicant Guidebook, Section 1.1.2.3: Comment Period<sup>32</sup>
- Applicant Guidebook, Section 1.2.2: Required Documents
- Applicant Guidebook, Section 2.4.3.2: Code of Conduct Violations
- Applicant Guidebook, Section 3.2.5: Independent Objector
- Applicant Guidebook, Section 4.2.3: Community Priority Evaluation Criteria

### 1.3.3 Background

Section 1.1.2.3 of the AGB stated that “ICANN will open a comment period (the Application Comment period) at the time applications are publicly posted on ICANN’s website [ . . . ] This period will allow time for the community to review and submit comments on posted application materials.”

Consistent with the AGB, ICANN opened the Application Comment Forum on 13 June 2012 when the applied-for strings were published.

---

<sup>31</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gnso.icann.org/en/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>

<sup>32</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

The forum provided interested parties with the opportunity to submit a comment on any application in any language. Comments had to be associated with a specific application and directed to one of the evaluation panels or objection grounds. Comments not relevant to an evaluation panel or objection ground could be submitted under the “Other” category. As of 31 July 2015, 12,691 comments have been submitted. The Registry Services and String Similarity evaluation panels received the highest number of comments (23% and 17% of all comments submitted, respectively). In contrast, the String Confusion Objection Ground and DNS Stability evaluation panel each received only 1% of the total number of comments submitted. Table 1.3.i shows a breakdown of application comments submitted by category.

*Table 1.3.i: Breakdown of Application Comments Submitted by Category*

Evaluation Panel/Objection Ground	# Comments Submitted	% of Total Comments
Background Screening	1,492	12%
String Similarity	2,099	17%
DNS Stability	127	1%
Geographic Names	495	4%
Technical & Operational Capability	402	3%
Financial Capability	403	3%
Registry Services	2,967	23%
Community Priority Evaluation	1,556	12%
String Confusion Objection Ground	186	1%
Legal Rights Objection Ground	327	3%
Limited Public Interest Objection Ground	1,050	8%
Community Objection Ground	976	8%
Other	611	5%
<b>Total</b>	<b>12,691</b>	<b>100%</b>

## 1.3.4 Assessment

### 1.3.4.1 APPLICATION COMMENT WINDOW

Section 1.1.2.3 of the AGB stated: “Application comments received within a 60-day period from the posting of the application materials will be available to the evaluation panels performing the Initial Evaluation reviews.” This section of the AGB further said that “This period is subject to extension, should the volume of applications or other circumstances require.” Due to the higher than expected number of applications received (1,930 instead of the 500 estimated in the AGB), and in response to requests from the community for additional time to analyze and provide thoughtful comments on the high volume of applications, ICANN extended the comment period by 45 days.<sup>33</sup> The Application

<sup>33</sup> ICANN. (10 August 2012) Announcement: New gTLD Application Comment Period Extended. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/announcement-10aug12-en>

---

Comment Forum opened on 13 June 2012 when ICANN published application materials (see Section 1.1: Application Submission of this report) and the deadline for submission of comments to be considered by evaluators was extended from 12 August 2012 to 26 September 2012. A total of 11,716 comments were submitted for evaluators' consideration by 26 September 2012. Between 27 September 2012 and 31 July 2015, 975 additional comments were submitted on applications for various reasons--for example, as comments on application changes that ICANN approved, support or objection to an application on any of the objection grounds, support or objection to an application in CPE, and comments on voluntary Public Interest Commitments submitted by applicants. The total number of comments submitted as of 31 July 2015 was 12,691.

#### **1.3.4.2 APPLICATION COMMENTS FORUM**

The design of the Application Comment Forum built in some limitations; for example, a limit of 3,500 characters for each comment was put in place, and no attachments were allowed. These limitations were put in place to control processing time and costs based on concerns raised by evaluators that an unknown volume of additional materials would require an unknown number of additional resources to perform the review in order to enable them to meet the evaluation timeline set by ICANN, and that the applicants would use the Application Comments Forum as a mechanism to submit additional application materials to circumvent the character limit that the application system imposed on application responses (see Section 1.1: Application Submission of this report).

ICANN observed that commenters circumvented these limitations in several ways. Some submitted comments that exceeded the character limit by dividing them into multiple parts and submitting each part as a separate comment. Others submitted comments via correspondence to ICANN, particularly comments relating to applications in Community Priority Evaluation (CPE). Comments received via correspondence were published to the Correspondence page of the microsite. Although submission of comments in multiple parts resulted in a higher count of comments that the evaluators had to review, these alternate methods of comment submission did not create additional cost to the Program or cause delays to Program timelines.

Although these limitations achieved the intended efficiency for ICANN and evaluation panels, they may not have provided commenters with a good user experience of the tool. In addition, they might have unintentionally directed commenters away from using the forum for its intended purpose, which was to bring forward any relevant information or issues regarding an application.

GNSO Implementation Guideline Q stated that ICANN would provide an automatic reply to all those who submitted public comments that would explain the objection procedure (which was separate from the application comments procedure). This implementation guideline assumed that comments would be provided via email and thus, an automatic reply would be possible. Since the Application Comments Forum implemented as a web-based tool, in lieu of an automatic reply, information about the objection process was provided on the home page of the Application Comment Forum and the login page for submitting a comment.

---

### 1.3.4.3 APPLICATION COMMENTS SUBMISSION AND REVIEW

Section 1.1.2.3 of the AGB stated: “In cases where consideration of the comments has impacted the scoring of the application, the evaluators will seek clarification from the applicant.” The evaluators followed this guidance and provided applicants with an opportunity to address any comments that would cause them to change the score of an application by issuing a Clarifying Question (see Section 2.1: Initial and Extended Evaluation of this report). Less than 1% of application comments submitted resulted in the evaluation panel issuing a Clarifying Question. Although the volume of comments resulting in Clarifying Questions was low, public comment mechanisms are a core part of ICANN’s policy development, implementation, and operational processes. Providing a public comment mechanism allows for issues and concerns relating to applications to be considered.

Also consistent with the AGB, comments directed to the Limited Public Interest and Community objection grounds were considered by the Independent Objector if they were submitted prior to the close of the formal objection window. See Section 3.1: GAC Advice of this report for more information regarding the role of the Independent Objector and the formal objection process. The Independent Objector filed 24 objections, 18 of which were filed on applications that received comment(s) directed to the Community or Limited Public Interest objection ground.

For comments directed to the CPE panel (see Section 4.1: Application Processing of this report), the AGB did not specify a specific timeline for the comment window. ICANN set the comment window as 13 June 2012 (Reveal Day) through 14 days after the CPE invitation date, which was posted on the New gTLD microsite. All comments submitted within this window were considered by the CPE panel. This comment window was communicated to applicants and the community in webinars and in FAQs that were posted on the microsite prior to the start of CPE. The CPE panel had the fourth highest number of comments out of the 13 possible categories for which comments could be submitted. Also, as mentioned in Section 1.1.4.2 above, the limitation of the Application Comment Forum of not allowing attachments resulted in commenters submitting comments for the CPE panel via correspondence. This correspondence included submission of additional letters of support and mock evaluations performed by applicants and competitors of the applicant undergoing CPE.

Outside of IE, Objections, and CPE, the Application Comment Forum was also used to solicit comments on approved application change requests (see Section 1.4: Application Change Requests of this report), on Public Interest Commitment (PIC) statements submitted by applicants, and on complaints of code of conduct violations of an evaluation panelist (as specified in Section 2.4.3.2 of the AGB). However, there were no application change request, PIC, or code of conduct violation options to choose from when submitting or viewing a comment, which did not provide clarity for viewing comments and might also have created confusion for commenters.

The AGB describes the use of comment windows for comments to be considered by the evaluation panels and Independent Objector. However, ongoing review of the comments, and whether and how comments should be responded to was not specified by the AGB. As such, ICANN reviewed comments during certain windows of time such as when approved change requests or PICs were posted for 30-day comment periods. ICANN did not perform ongoing review of comments submitted in the forum.

---

In cases where the comments submitted required follow-up with applicants, ICANN performed the follow-up directly with the applicant to address any concerns or issues brought up in the comments. ICANN provided responses to commenters only in cases where the commenter also submitted a Customer Service inquiry or correspondence related to the same issue brought up in the Application Comment Forum.

## 1.3.5 Conclusion

The goal of creating the Application Comment Forum for the New gTLD Program was to provide a publicly accessible input mechanism that would be manageable given the unknown volume of applications and application comments. The Application Comment Forum was implemented in alignment with the AGB, and in some respects, it satisfied its intended purpose of providing a means for interested parties to bring forward any relevant information or issues regarding an application for consideration by those charged with handling applications.

There are some important lessons learned from the implementation of the Application Comment Forum that would be useful input to the development of procedures for future rounds.

ICANN put in place a character limit for comments and did not allow attachments to be submitted in the Application Comment Forum in order to control application processing time and costs, to prevent applicants from using the forum to supplement application materials and circumvent the character limit that TAS put in place for application responses, and to provide evaluation panels with some predictability regarding volume of comments. In spite of this, ICANN observed that applicants bypassed these limitations by breaking comments into multiple parts and submitting each part as a separate comment or by submitting comments via correspondence to ICANN. As such, the initial intention of the limitations was not met, and instead, the limitations might have diverted commenters away from using the forum to submit comments. ICANN should explore implementing additional functionalities that will improve the usability of the forum.

Outside of the AGB-prescribed uses of the Application Comment Forum, the forum was also used in this application round to obtain comment on approved application change requests and Public Interest Commitment statements submitted by applicants. However, the Application Comment Forum did not provide these as categories for commenters to select when submitting comments. This created confusion for the commenters and inefficiencies for ICANN as it was not always clear which comments were submitted for what purpose. If the Application Comment Forum is to be used for additional purposes, those purposes should be taken into consideration during the design phase of the tool.

In summary:

**1.3.a** Explore implementing additional functionality that will improve the usability of the Application Comment Forum

**1.3.b** Provide additional clarity around the intended use of the Application Comment Forum, including timelines and ways to indicate the type of comment being submitted

---

## 1.4 Application Change Requests

### 1.4.1 Introduction

The application change request (ACR) process allowed applicants to notify ICANN of changes to application materials prior to the execution of the Registry Agreement. This section of the Program Implementation Review report discusses the following aspects of the application change request process:

- ACR Evaluation Criteria
- ACR Process
- Re-evaluation

### 1.4.2 Relevant Guidance

The following guidance is relevant to the topic of Contracting and will be discussed in further detail in Sections 1.4.3 and 1.4.4 of this report:

- GNSO Recommendation 1:

*ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination.*

*All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.<sup>34</sup>*

- Applicant Guidebook, Section 1.2.7: Notice of Changes to Information<sup>35</sup>

### 1.4.3 Background

Section 1.2.7 of the AGB required applicants to promptly notify ICANN if application information became untrue or inaccurate. The requirement was intended to maintain the integrity of application materials.

---

<sup>34</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gnso.icann.org/en/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>

<sup>35</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

---

As early as during the application window, ICANN processed change requests to application materials. Although applicants could make changes to the application anytime up to submission, the TLD Application System (see Section 1.1: Application Submission and Section 8.1: Processes, Systems, and Resources of this report) did not allow applicants to modify application information once the complete application had been submitted. The majority of the changes that ICANN processed during the application window were changes to Questions 1-11 of the questionnaire in Module 2 of the AGB, and all ACRs were accepted as applicants were allowed to make any changes to their applications prior to the close of the application window.

After the application window closed, ICANN received a large number of requests to change application materials. Thirty-three requests were submitted between the close of the application window and Reveal Day. An additional 69 requests were submitted between Reveal Day and 4 September 2012. ICANN approved 89 of these 102 requests during the period between the close of the application window and 4 September 2012.

For transparency purposes and to standardize processes, on 5 September 2012, ICANN published a process for requesting changes to application materials, as well as the criteria used to evaluate the requests.<sup>36</sup> The process consisted of four steps:

1. Verify and validate the request to ensure that only those authorized to make changes to the application were able to do so (i.e., the application's primary contact).
2. Review the change request against the seven criteria.
3. Notify the applicant of the determination.
4. If the request was approved, make the changes and post them for a 30-day comment period.

The Application Comment Forum (see Section 1.3: Application Comments of this report) was used as the mechanism to gather comments on approved change requests. Between the close of the application window and the publication of the ACR process, there were 102 change requests submitted to the Customer Service Center.

ICANN continued to process application change requests throughout application processing.

On 30 September 2014, ICANN published updates to the change request process.<sup>37</sup> One of the main updates to the process was no longer requiring a 30-day comment period for certain types of changes, such as changes to confidential portions of the application and updates to the application as a normal course of business (e.g., changes to the applicant's contact information, stock symbol, or business/ tax ID). The removal of the 30-day comment period for certain change requests was intended to allow applicants to move expeditiously forward in the Program and because less than 1% of approved change requests received comments during the 30-day comment window.

<sup>37</sup> ICANN. (30 September 2014) Announcement: ICANN Updates Change Request Process. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/announcement-30sep14-en>

---

As of 31 July 2015, ICANN had processed 2,587 change requests. Change request statistics were available on the Change Request page of the New gTLD microsite and were updated monthly.<sup>38</sup>

## 1.4.4 Assessment

### 1.4.4.1 APPLICATION CHANGE REQUEST EVALUATION CRITERIA

To provide predictability and to allow for objective and consistent review of ACRs, ICANN published the seven criteria used to evaluate change requests.<sup>39</sup> These criteria were carefully developed to balance applicants' needs to update application information as a normal course of business and to provide fairness to all other applicants and third parties. The seven criteria were:

1. Explanation: Is a reasonable explanation provided?
2. Evidence that original submission was in error: Are there indicia to support an assertion that the change merely corrects an error?
3. Other third parties affected: Does the change affect other third parties materially?
4. Precedents: Is the change similar to others that have already been approved? Could the change lead others to request similar changes that could affect third parties or result in undesirable effects on the program?
5. Fairness to applicants: Would allowing the change be construed as fair to the general community? Would disallowing the change be construed as unfair?
6. Materiality: Would the change affect the evaluation score or require re-evaluation of some or all of the application? Would the change affect string contention or community priority consideration?
7. Timing: Does the timing interfere with the evaluation process in some way?

These criteria were consistently applied to evaluate each change request.

### 1.4.4.2 APPLICATION CHANGE MANAGEMENT

The questionnaire in Module 2 of the AGB specified the 50 questions that made up the application for a new gTLD. Some of the 50 questions gathered information regarding the applying entity, points of contact for communications regarding the application, and the applicant's intended operation of the TLD.

As all questions were considered part of the application, changes to any information in any of the application question had to go through the defined ACR process. For example, a change to the technical portion of the application as a result of the applicant's decision to outsource its back-end registry services to a different service provider would have required the applicant to submit a change

---

<sup>38</sup> ICANN. New gTLD Application Change Request Process and Criteria: Statistics. Retrieved from <http://newgtlds.icann.org/en/applicants/customer-service/change-requests#statistics>

---

request form to ICANN, provide the required information for ICANN to verify and validate the request, and for ICANN to review the request against the seven criteria and provide the applicant with a determination. The application would then be subject to a 30-day comment period and a re-evaluation of the application if the change took place after IE results for the application had been released. A change to the applicant's business phone number, which happened as a normal course of business, would have required the applicant to go through the same process, with the exception that re-evaluation would not have been required.

#### **1.4.4.3 IMPACT OF APPLICATION CHANGE REQUEST ON PROGRAM PROCESSES**

The ACR process was an effective mechanism for applicants in some Program processes, but it also created inefficiency in other Program processes.

For applications that went through Extended Evaluation (see Section 2.1: Initial and Extended Evaluation of this report), the ACR process provided applicants with an opportunity to address the deficiencies preventing them from successfully passing IE.

The ACR process was also used as a mechanism for applicants to address GAC Early Warning and GAC Advice (see Section 3.1: GAC Advice of this report). Applicants that entered into dialogue with the government(s) that issued GAC Early Warning on their applications and arrived at a mutual understanding after such dialogue, could submit an ACR to update their applications to reflect the mutual understanding reached with the government(s). Applicants that were subject to GAC Category 2 Advice (see Section 3.1: GAC Advice of this report) could move forward to Contracting (see Section 5.1: Contracting of this report) by updating their applications so that they would be in compliance with Section 3.d of Specification 11 of the base Registry Agreement.<sup>40</sup>

However, the ACR process presented operational challenges for IE, contention resolution, and contracting.

During IE (see Section 2.1: Initial and Extended Evaluation of this report), ICANN received a number of change requests prior to the publication of the IE results. Aside from changes that arose as a normal course of business, reasons that applicants submitted changes to applications prior to the publication of IE results included:

- To address deficiencies in the application materials prior to receiving Clarifying Questions because they received Clarifying Questions on similar application materials that had gone through evaluation.
- To submit Continuing Operations Instruments (see Section 7.1: Continuing Operations Instrument of this report) because they could not meet the deadline to submit them during the window provided to respond to Clarifying Questions.
- Because they engaged a different vendor to perform the back-end registry services, resulting in changes to the technical plans for the TLD.

---

<sup>40</sup> ICANN. Registry Agreement. Retrieved from <http://newgtlds.icann.org/sites/default/files/agreements/agreement-approved-09jan14-en.pdf>

- Because the intended operations of the TLD changed.

Although the ACR process allowed applicants to update application information and improve their chances of successfully passing IE, ACRs during IE in most cases delayed the release of IE results for the application because of processing and review time. Changes to application materials prior to IE results release also required the evaluation panel to re-perform evaluation of the application, creating inefficiency in the evaluation process.

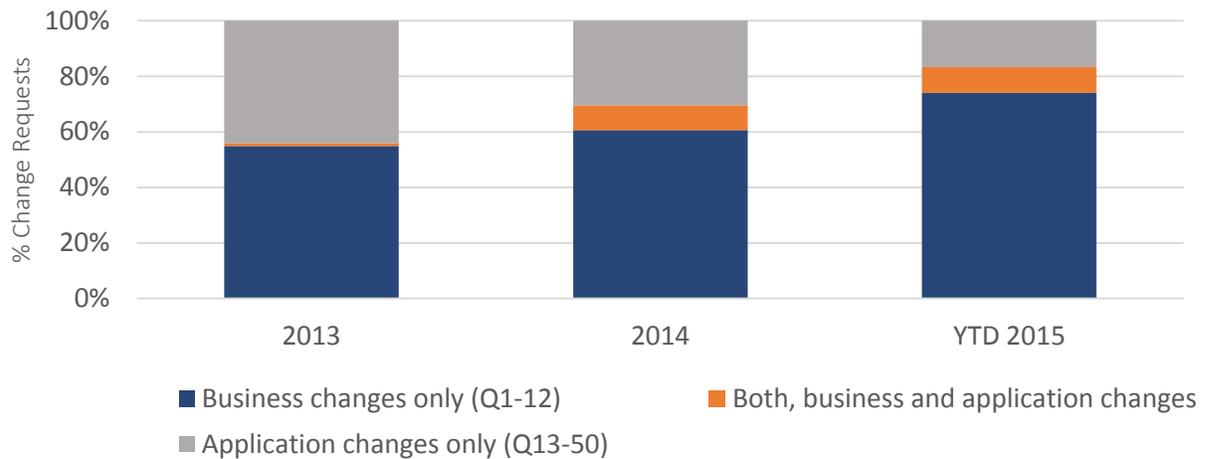

During the contention resolution process, some applicants submitted ACRs for applications that were self-designated as community applications and were qualified for CPE (see Section 4.1: Community Priority Evaluation of this report) to modify the community definition or registration policies. For these cases, ICANN deferred or denied the requests because such changes could impact the outcome of CPE. Approval of a change request to update a community definition and registration policies would have allowed a CPE applicant to update its application based on information learned from previously posted CPE results. This could have caused issues of unfairness to the first applicants who went through CPE that did not have the benefit of learning from others. Allowing such a change request would also improve the CPE applicant's chances to prevail in CPE, negatively impacting the other applicants in the same contention set. Therefore, although viewed as necessary from the CPE applicant's perspective to maximize its ability to pass CPE, approval of a change request to update a community's definition and registration policies prior to the completion of CPE would cause issues of unfairness to other applicants in the same contention set.

During the Contracting process (see Section 5.1: Contracting of this report), a number of ACRs were submitted. The majority of the changes were due to changes as a normal course of business (e.g., officer/director changes). However, it was possible that some applicants delayed the process by not providing ICANN with the necessary information to process the change request. Other changes were material changes, including changes to the entire technical portion of the application. These change requests caused delays to the applications and in some cases caused the applicants to miss the RA signing deadline date.<sup>41</sup> Table 1.4.i provides a break-down of the various types of change requests submitted.

---

<sup>41</sup> On 15 September 2014, ICANN implemented a Contracting extension process to allow applicants to request additional time to complete required activities such as change request in order to sign the Registry Agreement.

Table 1.4.i: Breakdown of Change Request Types

Another operational challenge that the ACR process presented was the significant amount of time and resources required to process the high volume of change requests for both ICANN and service providers. A total of 2,587 change requests were submitted as of 31 July 2015. Each change request required administrative processing, follow-up with applicants to obtain required information, significant time and breadth of resources to review the requests, and coordination with service providers to perform any additional application evaluations required.

## 1.4.5 Conclusion

The application change request process provided applicants with a standardized way to notify ICANN of changes to application materials. The criteria used to evaluate change requests allowed for consistent review of change requests and predictability into what factors were taken into consideration when reviewing change requests.

Because the overall timeline of the New gTLD Program spanned at least 15 months, the number of application change requests submitted was larger than anticipated. The lesson learned is that ICANN should take into account application change management and, therefore, design ACR processes and criteria prior to the start of application processing.

ICANN should also consider whether certain changes could be processed differently. For example, should primary contacts be able to update certain information, such as the applicant's phone number, without having to go through the ACR process?

In summary:

- 1.4.a** Design application change request processes and criteria prior to the start of application processing

---

**1.4.b** Consider whether all types of application changes should be processed the same way

---

## 1.5 Application Withdrawals and Refunds

### 1.5.1 Introduction

“Application withdrawal” refers to the applicant-initiated process to withdraw an application from the Program. Depending on when an application is withdrawn, applicants may be eligible for a partial refund of the evaluation fee. This section of the Program Implementation Review report discusses the withdrawal and refund processes.

### 1.5.2 Relevant Guidance

The following guidance is relevant to the topic of Contracting and will be discussed in further detail in Sections 1.5.3 and 1.5.4 of this report:

- GNSO Implementation Guideline B:

*Application fees will be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process.  
Application fees may differ for applicants.<sup>42</sup>*

- Applicant Guidebook, Section 1.5.1: gTLD Evaluation Fee<sup>43</sup>

- ICANN Board Resolution 2012.05.06.NG01 (6 May 2012): New gTLD Program Application Fee Refund<sup>44</sup>

### 1.5.3 Background

The AGB anticipated that applicants might choose to withdraw applications at various points during the Program. Section 1.5.1 of the AGB provided a schedule of refunds for withdrawal of applications at these various points. The refund amount is estimated to be commensurate with the Program work associated with processing of the application up to the point of the withdrawal.

Based on available Program information such as the number of contention sets (see Chapter 4: Contention Resolution of this report) and the refund schedule in Section 1.5.1 of the AGB, the annual New gTLD Program budgets (see Section 8.3: Financial Management of this report) forecast the number of withdrawals and total refund amounts.

<sup>43</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>44</sup> ICANN. (6 May 2012) Approved New gTLD Program Committee Resolution | Meeting of the New gTLD Program Committee. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2012-05-06-en>

As of 31 July 2015, 542 applications have been withdrawn from the Program. Figure 1.5.i provides a summary of the number of withdrawals as of 31 July 2015 and the refund amount they were eligible to receive.

*Figure 1.5.i: Summary of Number of Withdrawals and Refund Amount*

Program Phase	# of Applications Withdrawn	Refund Amount (USD)	% of Total Withdrawal
Prior to Reveal Day (see section 1.1 of this report)	1	185,000	<1
Within 21 days of receipt of GAC Early Warning (see Section 3.1 of this report)	2	148,000	<1
Before IE results released (see Section 2.1 of this report)	101	130,000	19
Before RA signed – no EE, objection, or contention resolution (see Sections 5.1, 2.1, 3.1, and 4 of this report)	340	65,000	63
Before RA signed – EE, objection, or contention resolution required	97	37,000	16
After Application Support evaluation	1	47,000	<1
After RA signed	0	0	0

## 1.5.4 Assessment

### 1.5.4.1 WITHDRAWAL PROCESS

Section 1.5.1 of the AGB stated that withdrawal of applications must be initiated in the TLD Application System (TAS) (see Section 1.1: Application Submission and Section 8.1: Processes, Systems, and Resources of this report). Consistent with the AGB, ICANN implemented a withdrawal process in TAS that allowed applicants to withdraw applications and request refunds. Withdrawals performed in TAS allowed the applicant to instantaneously withdraw an application, which was important as the date of withdrawal could impact the refund amount that the applicant was eligible to receive.

At the close of the application window (see Section 1.1: Application Submission of this report), 30 May 2012, access to TAS was closed. Applicants that wished to withdraw applications while TAS was closed could submit withdrawal requests to the Customer Service Center. Withdrawal requests were processed manually by the Customer Service Center during this time. The manual process required ICANN to first confirm and validate the request, then to generate a withdrawal form that was sent to the applicant. The applicant must then complete and send the form back to ICANN. Once ICANN completed review of the form and verified the information provided, the applicant was then notified that the application had been withdrawn. Because the process was not instantaneous during this

---

period, ICANN used the date of the withdrawal request submission to determine the refund amount. The manual process was not efficient for the applicant or ICANN.

On 26 November 2012, ICANN announced the reopening of TAS to release Clarifying Questions (see Section 2.1: Initial and Extended Evaluation of this report).<sup>45</sup> The reopening of TAS allowed applicants to again withdraw applications via the system.

At the end of Initial Evaluation (see Section 2.1: Initial and Extended Evaluation of this report), ICANN migrated application materials from TAS to the Customer Service Portal (see Section 8.5: Customer Service of this report) to provide a centralized location for applicants to access information, and TAS was once again closed. To retain efficiency in the withdrawal process, ICANN built application withdrawal functionality into the Customer Service Portal (see Section 8.5: Customer Service of this report) that allowed applicants to instantaneously withdraw applications.

Consistent with the AGB, when withdrawing applications, applicants had to confirm that they understood that withdrawal of the application was final and irrevocable. This step was required whether the application was withdrawn in TAS, in the Customer Service Portal, or by submitting a request to the Customer Service Center.

Once the application was withdrawn, ICANN updated the status of the application on the application status page of the microsite, which showed descriptive and administrative information (e.g., applicant name, evaluation results, string contention information) about all applications to provide transparency about where particular applications were in the process.<sup>46</sup> The update was typically reflected within 24 hours of the withdrawal, which provided visibility of application statuses to the community and other applicants as quickly as possible. If the withdrawn application belonged to a contention set (see Section 4: Contention Resolution of this report), updates to contention set information were then made.<sup>47</sup>

While the AGB anticipated withdrawal of applications initiated by applicants, it did not account for cases where the application could not proceed in the Program (e.g., did not prevail in the objection process, did not prevail contention resolution), but where the applicant did not withdraw the application. These applications were assigned an application status of “Will Not Proceed.” Applicants of some of the applications with the “Will Not Proceed” status did not agree with the outcome of their objections or contention resolution processes and filed an ICANN Accountability Mechanism in the hopes of being able to continue in the Program. This is one potential reason that applications in a “Will Not Proceed” status have not been withdrawn as of 31 July 2015.

---

#### 1.5.4.2 REFUND PROCESS

The refund process occurred after the completion of the withdrawal of the application. Refunds were based on the fee schedule in Section 1.5.1 of the AGB.

The refund schedule presumed that Program processes were completed successively. While most Program processes were indeed completed in a linear fashion, in some cases, processes took longer than expected and overlapped with succeeding ones. For example, an application might have completed Extended Evaluation (EE), but the objection process was still ongoing. (In this round, ICANN implemented a refund amount of USD 37,000 if the application was withdrawn under the example scenario.)

Additionally, the AGB and the defined refund schedule could not account for all unique situations regarding each application. For example, if two applications that were in a contention set self-resolved (see Chapter 4: Contention Resolution of this report), and one of the applications was withdrawn, the refund amount would be USD 65,000 if the application was not subject to EE or objections. The lower amount of refund, USD 37,000, was only applicable to contention resolution via an ICANN mechanism such as CPE or auction. In those cases, the application that did not prevail in CPE or auction received a USD 37,000 refund when the application was withdrawn.

In processing refunds, ICANN observed that some applicants requested the refund to be sent to a party other than the party that paid the USD 185,000 evaluation fee. Although Section 1.5.1 of the AGB stated that “Refunds will only be issued to the organization that submitted the original payment”, out of practicality, ICANN allowed some refunds to parties and bank accounts other than those that submitted the original payment. Scenarios under which this was allowed included cases where the original bank account had been closed as of the time of withdrawal and if the party that made the original payment provided written authorization for ICANN to direct the refund amount to another party affiliated with the application.

### 1.5.5 Conclusion

The AGB anticipated that applicants would withdraw applications at various stages after application submission and stipulated an evaluation fee refund schedule that corresponded to the stage at which an application was withdrawn. ICANN implemented the withdrawal and refund processes in accordance with the AGB. Based on the implementation of the withdrawal and refund process this first round, there are valuable lessons learned that would be useful input to the development of procedures for future rounds.

While the AGB anticipated withdrawal of applications initiated by applicants, it did not account for cases where the application could not proceed in the Program (e.g., did not prevail objections, did not prevail contention resolution), but the applicant did not withdraw the application. These applications were assigned an application status of “Will Not Proceed.” As of 31 July 2015, there were 45 applications with a “Will Not Proceed” status that had not been withdrawn, so considerations

---

should be given to defining a process to move these applications to a final state if the applicant does not initiate an application withdrawal.

Regarding refunds, there were various application scenarios that were not contemplated by the AGB's refund schedule (e.g., EE complete but objections were still ongoing). These various scenarios should be reviewed and the refund schedule should be updated to reflect these scenarios. A final financial review of the Program should also be undertaken and should include analysis of the refund schedule (see Section 8.3: Financial Management of this report).

In summary:

**1.5.a** Consider defining a process to move applications that may not proceed in the Program to a final status and provide a refund if they are not withdrawn

**1.5.b** Review Program financials at the conclusion of this application round to determine whether the refund schedule accurately mapped to the costs incurred at the specified Program phases

---

## Chapter 2: Application Evaluation

Module 2 of the Applicant Guidebook (AGB) defined an evaluation process to determine whether an applied-for gTLD would be approved for delegation. Several types of evaluation were required, and were intended to assess both the applied-for string and the applying entity's capabilities.

ICANN engaged third-party firms as evaluation panels to review applications using the processes and criteria defined in the AGB. The evaluation panels also defined their own procedures to supplement the AGB processes and to support consistent and high-quality evaluations across all applications. A rigorous quality control program was put in place to ensure that the AGB and the panel firms' procedures were followed.

As discussed in Chapter 1: Application Processing, 1,930 applications for new gTLDs were submitted. Of these, 1,782 passed Initial Evaluation, 38 were eligible for further review during Extended Evaluation, and 110 withdrew. Ultimately, all applications that completed evaluation passed either Initial or Extended Evaluation.

Evaluations were performed in a manner consistent with the AGB. However, observations from the implementation of the evaluation process and criteria suggest that some modifications to the process could be made to increase the efficacy of evaluation. Specific lessons learned are discussed within this Sections 2.1 through 2.8 of this report.

---

## 2.1 Initial and Extended Evaluation

### 2.1.1 Introduction

Initial and Extended Evaluation (IE and EE, respectively) were New gTLD Program phases during which applications were evaluated against the defined criteria in the Applicant Guidebook (AGB). This section of the Program Implementation Review report discusses the following aspects of Initial and Extended Evaluation:

- Evaluation Process
- Evaluation Timeline
- Quality Control

### 2.1.2 Relevant Guidance

The following guidance is relevant to the topic of Initial and Extended Evaluation and will be discussed in further detail in Sections 2.1.3 and 2.1.4 of this report:

- GNSO Principle D: “A set of technical criteria must be used for assessing a new gTLD registry applicant to minimise the risk of harming the operational stability, security and global interoperability of the Internet.”<sup>48</sup>
- GNSO Principle E: “A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meet its obligations under the terms of ICANN's registry agreement.”
- GNSO Principle F: “A set of operational criteria must be set out in contractual conditions in the registry agreement to ensure compliance with ICANN policies.”
- GNSO Recommendation 1:

*ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.*

- GNSO Recommendation 2: “Strings must not be confusingly similar to an existing top-level domain or a Reserved Name.”
- GNSO Recommendation 4: “Strings must not cause any technical instability.”
- GNSO Recommendation 5: “Strings must not be a Reserved Word.”

---

<sup>48</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gns0.icann.org/en/issues/new-gtlds/pdp-dec05-fr-part-a-08aug07.htm>

- GNSO Recommendation 7: “Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.”
- GNSO Recommendation 8: “Applicants must be able to demonstrate their financial and organisational operational capability.”
- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”
- GNSO Recommendation 18: “If an applicant offers an IDN service, then ICANN's IDN guidelines must be followed.”
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>49</sup>
- Applicant Guidebook, Section 2.2: Initial Evaluation
- Applicant Guidebook, Section 2.3: Extended Evaluation
- Applicant Guidebook, Attachment to Module 2: Evaluation Questions and Criteria

## 2.1.3 Background

The AGB anticipated that Initial Evaluation (IE) (see Section 2.1: Initial and Extended Evaluation of this report) would take five months to complete, all IE results would be published at the conclusion of IE, and the Contracting process would commence at the end of IE. This would allow applicants that passed IE to move expeditiously toward signing an RA if there were no other issues that the application must resolve (i.e., contention resolution, dispute resolution).

Module 2 of the AGB defined IE as the period “during which ICANN assess[ed] an applied-for gTLD string, an applicant’s qualifications, and its proposed registry services.” Assessment of the applied-for string was performed during the String Similarity, DNS Stability, and Geographic Names evaluations. Assessment of the applicant’s qualifications was performed during the Technical and Operational Capability and Financial Capability evaluations. In addition, the proposed registry services were assessed during the Registry Services evaluation, and the applicant’s eligibility was assessed during the Background Screening process. All evaluations were performed by qualified third-party experts. See Section 8.2: Service Provider Coordination of this report for more information on the service provider selection process and their qualifications.

IE began after the applied-for strings were published on 13 June 2012 (see Section 1.1: Application Submission of this report). During IE, evaluation panels evaluated the applications against the relevant criteria in the AGB and in accordance with their published process documentation.<sup>50,51,52,53,54</sup>

<sup>49</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>50</sup> Insterisle Consulting Group. (7 June 2013) ICANN New gTLD Program: DNS Stability Evaluation Process. Retrieved from <http://newgtlds.icann.org/en/program-status/evaluation-panels/dns-stability-process-07jun13-en.pdf>

<sup>51</sup> ICANN. (17 May 2013) Financial and Technical/Operational Panel: Application Evaluation Process. Retrieved from <http://newgtlds.icann.org/en/program-status/evaluation-panels/fin-tech-op-process-07jun13-en.pdf>

<sup>52</sup> InterConnect Communications (7 June 2013). New gTLD Program Evaluation Panels: Geographic Names - Decision Tree/Process Flow for Geographic Names Evaluation. Retrieved from <http://newgtlds.icann.org/en/program-status/evaluation-panels/geo-names-process-07jun13-en.pdf>

---

In cases where the evaluation panels did not have sufficient information to award a passing score, a Clarifying Question (CQ) was issued to the applicant. Responses to the CQs became part of the applications and were considered by the evaluation panels. Once the evaluation panels completed review of the applications, including responses to any CQs, they presented preliminary results to ICANN. ICANN then performed a quality check on the preliminary results to ensure consistency and alignment to AGB criteria. If during the quality check ICANN found that there were administrative oversights that prevented the evaluation panel from passing the application, ICANN performed outreach to the applicant to provide the applicant with an opportunity to address the administrative oversights within IE. Examples of administrative oversights included applicants providing links to acceptable documents instead of providing the documents as attachments, applicants referencing attachments in their CQ responses but not attaching them, and applicants addressing some of the questions asked but not addressing others. Responses to outreach became part of the applications and were provided to the evaluation panels for their consideration. Final results were then delivered by the evaluation panels to ICANN. ICANN aggregated results from each of the evaluation panels into IE reports that were published by priority number (see Section 1.2: Prioritization of this report).

There were three possible IE outcomes for applications:

- **Pass:** The evaluation panels determined that the application was consistent with the requirements in the Applicant Guidebook and could advance to the next phase of the Program.
- **Eligible for Extended Evaluation:** The Financial, Technical/Operational, Registry Services, or Geographic Names evaluation panels determined that the application did not have sufficient information to award a passing score. The application was eligible for EE.
- **Ineligible for Further Review:** The DNS Stability, String Similarity, Background Screening, and/or Geographic Names evaluation panels determined that the application did not meet the relevant criteria in the Applicant Guidebook, and the application was ineligible for further review.

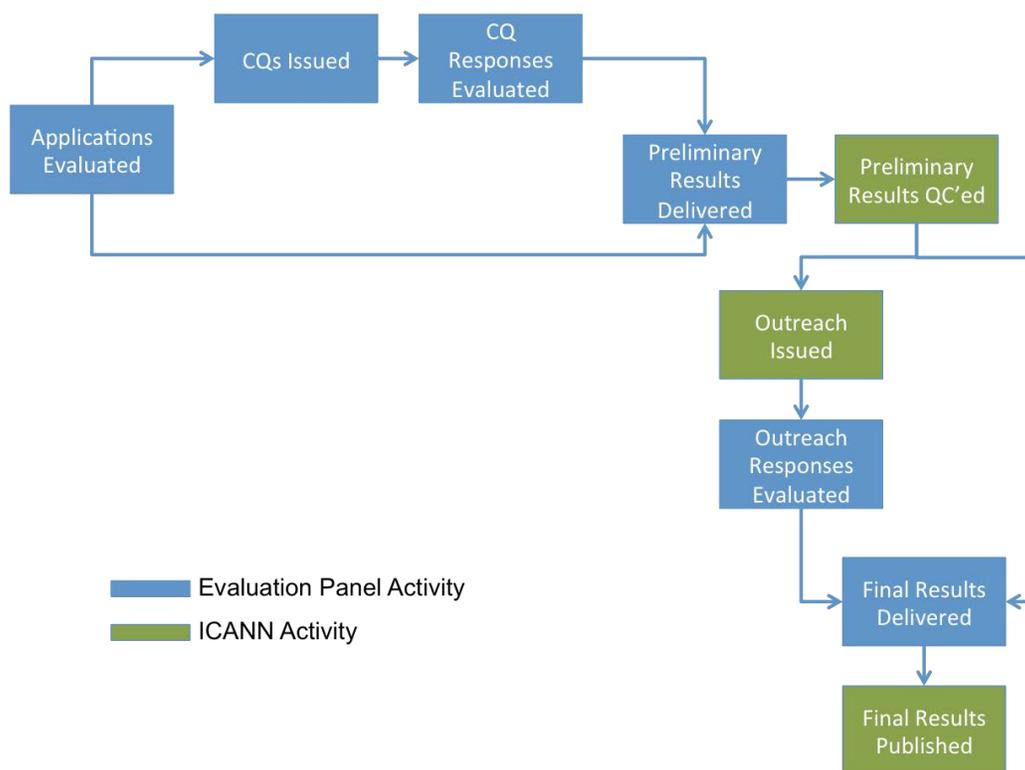

Of the 1,930 applications submitted, 1,782 applications passed IE, 38 applications were eligible for EE, and 110 withdrew prior to receiving their IE reports. An overview of the steps of Initial Evaluation is provided in Figure 2.1.i.

---

<sup>54</sup> InterConnect Communications (7 June 2013). New gTLD Program Evaluation Panels: Geographic Names - Process Flow for String Similarity Evaluation. Retrieved from <http://newgtlds.icann.org/en/program-status/evaluation-panels/geo-names-similarity-process-07jun13-en.pdf>

Figure 2.1.i: Overview of Initial Evaluation Steps

The EE period allowed for an additional exchange of information between applicants and evaluators to address any deficiencies preventing them from receiving a passing score. All 38 applications that were eligible for EE elected to participate in EE. However, three withdrew prior to receiving their Extended Evaluation results. The remaining 35 completed EE successfully with passing scores. The EE process was modeled after the IE process.<sup>55</sup> One addition to the EE process was that ICANN provided the opportunity for applicants to participate in a phone call with ICANN before electing to participate in EE, in order to better understand the remaining application deficiencies so that they could make an informed decision regarding EE election.

## 2.1.4 Assessment

### 2.1.4.1 EVALUATION PROCESS

#### *Clarifying Questions*

Section 2.2.2.3 of the AGB defines the CQ process, "The evaluators may request clarification or additional information during the Initial Evaluation period [ . . . ]. The applicant will thus have an opportunity to clarify or supplement the application in those areas where a request is made by the

<sup>55</sup> ICANN. (5 August 2013) Extended Evaluation Process Overview. Retrieved from <http://newgtlds.icann.org/en/program-status/application-results/ee-process-05aug13-en.pdf>

evaluators.” Consistent with the AGB, a CQ process was implemented in IE for all seven evaluation areas.

Prior to the issuance of CQs, ICANN worked with the evaluation panels on a standard CQ template to ensure that CQs were written in a consistent format. The CQ template defined how to structure the CQ. In the CQ template, the CQ started with a statement of the AGB criteria, then the information contained in the application, then the deficiency and the specific items required. To ensure that the CQ template was designed to elicit the required clarifying information, ICANN launched a CQ Pilot in August of 2012. A random sample of applications was selected to participate in the CQ Pilot. For those applications that were randomly selected, participation was voluntary. Participants were sent pilot CQs based on evaluation of their applications. However, these were not necessarily the final CQs that the applicants would receive once CQ process commenced for all applicants. In addition, participants also received a survey that contained questions such as whether the word limit for CQs was sufficient, whether the two-week timeframe provided in the AGB was sufficient, and whether the CQs were easy to understand.

Based on responses to pilot CQs and survey questions, the CQ template was modified slightly to make the questions more clear and succinct, with each CQ containing only one “ask.” Additionally, based on the survey responses, the window to respond to CQs was extended from two weeks to four weeks. Table 2.1.i below provides a summary of when CQs were issued per evaluation panel.

*Table 2.1.i: CQs Issued Per Evaluation Panel*

Evaluation Panel	Number of CQs Issued	Percent of Applications that Received CQs	Date CQs Issued
DNS Stability	None	0%	Not Applicable
String Similarity	None	0%	Not Applicable
Geographic Names	18	1%	November 2012 – February 2013
Background Screening	58	5% <sup>56</sup>	January 2013
Registry Services	975	52%	January 2013 – May 2013
Technical & Operational	1,690	90%	January 2013 – May 2013
Financial	1,677	90%	January 2013 – May 2013

CQs for the Technical and Operational Capability evaluation, Financial Capability evaluation, and Registry Services evaluation were issued to applicants in weekly batches of 100 applications. Almost all applications received CQs. Particularly due to the high volume of CQs, the use of prioritization numbers in this process provided predictability for applicants and helped ICANN, the evaluation panels, and applicants to manage their work.

<sup>56</sup> Background screening is performed once per applicant, not per application. This percentage is based on the total number of applicants.

---

## Outreach

Outreach was not a process provided for by the AGB, but it was implemented by ICANN based on the observation that many applicants had administrative oversights that prevented them from passing IE (e.g., missing attachments). Rather than failing these applicants in IE for these administrative oversights and thus requiring them to go through EE, which could have extended the timeline for the application and incurred more cost for the Program, ICANN implemented the Outreach process to allow applicants the opportunity to address the administrative oversights within IE. Although the Outreach process typically added an additional four weeks to the application's IE timeline, that four weeks was insignificant compared to the four or more months that EE would have required. Overall, the Outreach process allowed 243 of 281 applications to successfully pass IE.

## Evaluation Results

The structure of the final results provided by the evaluation panels to ICANN was designed and defined by the respective evaluation panels and varied by evaluation panel in terms of the level of detail provided within the report. ICANN consolidated the final results into one Initial Evaluation report per application. Because ICANN's consolidated evaluation report was based on the data provided to ICANN by the individual evaluation panels, different sections of the report included different levels of detail. For example, the Registry Services, Technical and Operational Capability, and Financial Capability evaluation panels provided detailed rationale for the results, but the other evaluation panels only provided their final determinations.

Because the Financial Capability and Technical and Operational Capability evaluation panels provided detailed rationale for the determinations and the rationale contained information about confidential parts of the applications, two versions of the IE reports were necessary. One version was for the applicant and contained all rationale and determinations from all evaluation panels. The second was a public-facing version that excluded confidential information, which was published on the New gTLD microsite.<sup>57</sup>

### 2.1.4.2 EVALUATION TIMELINE

AGB Sections 1.1.2.5 and 1.1.2.8 described the anticipated timelines for IE and EE, respectively. Each of these processes was expected to take approximately five months to complete if the volume of applications received was less than 500. The AGB contemplated that if the volume significantly exceeded 500, a process for "batching" applications would be used. The first batch would include 500 applications, and the subsequent batches would include 400 applications. Using the batching method contemplated by the AGB, Initial Evaluation would have taken an estimated 25 months to complete for 1,930 applications—an initial batch of 500 applications, and four subsequent batches, each taking five months to complete.

After consultation with the community, ICANN implemented a process for prioritizing applications and processing them in smaller batches based on priority number (see Section 1.2: Prioritization of

---

<sup>57</sup> ICANN. New gTLD Current Application Status. Retrieved from <https://gtldresult.icann.org/application-result/applicationstatus>

---

this report).<sup>58</sup> ICANN used priority numbers to provide predictability within the evaluation process for applicants. For example, ICANN published a schedule of CQs and issued them for approximately 100 applications at a time.<sup>59</sup>

Using prioritization, the first set of IE results was published on 22 March 2013, 10 months after the application window closed on 30 May 2012.<sup>60,61</sup> Results for 98% of applications were published by 30 August 2013, and the last IE results were published in November 2013, 18 months after the application window closed.

#### **2.1.4.4 QUALITY CONTROL**

The quality and consistency of the evaluation process was a very important consideration for ICANN. Quality Assurance was a line item in the first New gTLD Program budget draft.<sup>62</sup>

The primary objectives of the Quality Program were to measure and support consistency and quality in evaluation processes and outcomes. The Quality Program was administered by JAS Global Advisors, which delivered its final report on 26 August 2014, including a detailed description of the quality control processes used and the findings of the Quality Program.<sup>63</sup>

The Quality Control procedure had two main components: the blind content inspection and the blind procedural inspection.

The blind content inspection was performed for the Financial and Technical & Operational evaluation panels in parallel with the evaluation processes. It consisted of a secondary review performed by the Quality Control panel for a randomly selected 15% of applications. For these applications, the application materials were reviewed in their entirety by both the primary firm and the Quality Control firm. Based on the review, both firms independently wrote CQs (if applicable) for the applications. The primary firm sent all CQs to ICANN for review prior to issuance. ICANN and the Quality Control firm then reviewed the primary firm's CQs. If the Quality Control firm informed ICANN that there were CQ discrepancies, or if ICANN identified any issues with the primary firm's CQs, the primary firm was asked to review their CQs and resubmit them if necessary. The applicants' CQ responses were reviewed by the primary and Quality Control firms independently. Preliminary final results were submitted to ICANN, which were made available to the Quality Control firm for comparison against its own evaluation. Of the 274 applications sampled, there were five discrepancies in terms of the outcome (pass/fail) at the panel level. However, Applicant Outreach

---

<sup>62</sup> ICANN. (1 June 2010). New gTLD Program Explanatory Memorandum: New gTLD Budget. Retrieved from <https://archive.icann.org/en/topics/new-gtlds/new-gtld-budget-28may10-en.pdf>

<sup>63</sup> JAS Global Advisors. (26 August 2014) gTLD Application Processing: Initial Evaluation Quality Program Report. Retrieved from <http://newgtlds.icann.org/en/program-status/application-results/ie-quality-program-26aug14-en.pdf>

---

was performed for these applications, and there were no discrepancies in outcomes after the Outreach process was completed.

The blind procedural inspection was performed for the String Similarity, DNS Stability, Geographic Names, Registry Services, Technical and Operational Capability, and Financial Capability evaluations. ICANN and the panel firms developed procedural checklists based on the Program's requirements and the Panels' defined processes. Thirty-five percent of applications were randomly selected to be inspected against the checklist. The sampling was based on the number of applications receiving a priority number for the DNS Stability, Geographic Names, Registry Services, Technical and Operational Capability, and Financial Capability evaluations. Because the String Similarity panel operated on unique strings, the sampling was 35% of 1,388, the number of unique strings at the start of Initial Evaluation. The overall procedural compliance rate was 100% for the String Similarity panel and 99.84% for all other panels.

The existence of the Quality Program supported consistency in the evaluation process because it required all evaluation panels to define their processes and to be accountable for following them. Further, the Quality Program supported high-quality evaluations by requiring advanced preparation, calibration, and discussion of the evaluation among panel firms. The consistency and quality achieved within the evaluation process were validated by the Quality Report.

## 2.1.5 Conclusion

Although the 1,930 applications submitted for new gTLDs was a much higher volume than anticipated, ICANN completed IE in less time than the AGB provided for this volume of applications. However, the application volume still extended the Program timeline significantly, as IE was not complete until 18 months after the application window closed. During evaluation, ICANN worked with the evaluation panels to develop processes and procedures that would support a consistent and high-quality evaluation for all applications.

During Initial Evaluation, there were approximately 285 applications that did not meet the AGB criteria after CQs had been issued and reviewed. Two-hundred and eighty-one of these applications had administrative issues that prevented them from successfully passing IE. ICANN implemented an Outreach process to allow these applicants to address administrative issues within the IE timeline. Although this Outreach process was not provided for in the AGB, it allowed 243 applications to correct the administrative issues and pass IE instead of going to EE. There was a significant amount of time saved for the applicants, and a cost savings achieved for the Program by allowing these applicants to address the administrative issues within IE. Consideration should be given as to whether to include such a process in future application rounds, and to account for it in evaluation timelines.

The Initial Evaluation Quality Program demonstrated that a high level of consistency and quality in evaluations was achieved. Critical to this achievement was appropriate preparation for the evaluation panels, including pilots, training, and the development of detailed procedures. When developing the timeline for evaluation in future application rounds, consideration should be given to

---

the amount of time that these pre-evaluation phases require, so that the panels have reasonable amounts of time to prepare for a high-quality evaluation.

In summary:

**2.1.a** Work with evaluation panels to perform pre-evaluation training and develop detailed procedures to ensure consistent and quality evaluations are achieved

**2.1.b** Program processes that allow for additional communication between the applicant and ICANN, such as the Applicant Outreach process used in evaluation, may be beneficial

---

## 2.2 Background Screening

### 2.2.1 Introduction

Background screening was a review performed on all applying entities, and all individuals and organizations disclosed in Questions 9-11 of the application, which included officers and directors of the applying entities, in addition to shareholders owning a significant stake in the entity.

### 2.2.2 Relevant Guidance

The following guidance is relevant to the topic of Background Screening and will be discussed in further detail in Sections 2.2.3 and 2.2.4 of this report:

- GNSO Recommendation 1:

*ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination.*

*All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.<sup>64</sup>*

- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”
- GNSO Implementation Guideline L: “The use of personal data must be limited to the purpose for which it is collected.”
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>65</sup>
- Applicant Guidebook, Section 2.1: Background Screening
- Applicant Guidebook, Attachment to Module 2: Evaluation Questions and Criteria

### 2.2.3 Background

Background screening was a review put in place to help protect the public interest during the allocation of critical Internet resources. It was performed on all applying entities and all individuals and organizations disclosed in Questions 9-11 of the application, which included officers and directors of the applying entities, in addition to shareholders owning a significant stake in the entity.

<sup>64</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gnso.icann.org/en/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>

<sup>65</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

---

In support of GNSO Implementation Guideline L, and in recognition of the sensitive nature of the information, ICANN treated this information with care and only used it for the purpose of background screening and when required for application processing.

ICANN engaged an independent third-party service provider, PricewaterhouseCoopers (PwC), to perform background screening against criteria in Section 2.1.1 of the Applicant Guidebook in the following two areas:

1. General business diligence and criminal history
2. History of cybersquatting behavior

Background screening was performed as part of Initial Evaluation (IE). IE processes are described in detail in Section 2.1: Initial and Extended Evaluation of this report. Authorization for ICANN to perform background screening was provided by the applicant when it signed and agreed to the terms and conditions for participating in the New gTLD Program.<sup>66,67,68</sup> In order to perform background screening, ICANN collected information on the legal establishment of the applying entity, as well as the identification of directors, officers, partners, and major shareholders. The names and positions of individuals included in the application were published as part of the application, but other information collected about the individuals was not published.

Results of background screening were included in the IE reports. Where there were issues identified during background screening, applicants were given the opportunity to address them during IE. The AGB described the background screening process as one required to determine eligibility in the New gTLD Program. As such, background screening was not an evaluation eligible for EE. The AGB anticipated that Initial Evaluation (IE) (see Section 2.1: Initial and Extended Evaluation of this report) would take five months to complete, all IE results would be published at the conclusion of IE, and the Contracting process would commence at the end of IE. This would allow applicants that passed IE to move expeditiously toward signing an RA if there were no other issues that the application had to resolve (e.g., contention resolution, dispute resolution).

## 2.2.4 Assessment

Background screening was a mitigation measure intended to ensure that individuals and entities with criminal backgrounds, history of cybersquatting behavior, or other similar serious issues were not entrusted with TLDs.

Section 2.1.1 of the AGB defined specific criteria for background screening. The areas of background screening that were performed were general business diligence, criminal history, and history of

---

<sup>66</sup> ICANN. New gTLD Program Personal Data Privacy Statement. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/program-privacy>

<sup>67</sup> ICANN. Top-Level Domain Application Terms and Conditions. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/terms>

<sup>68</sup> ICANN. TLD Application System: Terms of Use – Applicants. Retrieved from <http://newgtlds.icann.org/en/applicants/tas/terms>

---

cybersquatting behavior. ICANN worked with the background screening provider to develop a robust background screening process that would support the criteria in the AGB, including background screens of the applying entity, officers, directors, and major shareholders for general business diligence, criminal history, and history of cybersquatting behavior.

To address cybersquatting, the AGB required applicants to disclose whether the applying entity or any individuals named in the application were engaged in cybersquatting or reverse domain name hijacking as defined in the Uniform Domain-Name Dispute-Resolution Policy (UDRP), Anti-cybersquatting Consumer Protection Act (ACPA), or other equivalent legislation. The background screening provider reviewed public records of UDRP proceedings.

If an initial background screen result did not clearly satisfy the AGB criteria for an application, ICANN and the background screening provider performed additional due diligence to ensure a more comprehensive review of the entity or individual. For some applications, ICANN staff performed several rounds of outreach to the applicant in order to acquire additional information that would better inform the background screening process and to ensure that the appropriate parties were being evaluated.

The same criteria were used to evaluate all applicants. However, the Section 2.4.4 of the AGB stated, “Applying entities that [were] publicly traded corporations listed and in good standing on any of the world’s largest 25 stock exchanges [ . . . ] [would] be deemed to have passed the general business diligence and criminal history screening.” This distinction was based on the idea that publicly listed corporations were regulated by their exchanges and subject to ongoing scrutiny, which met or exceeded ICANN’s criteria.

The AGB criteria relating to top-25 exchanges referred specifically to the applying entity, but the individuals (officers, directors) associated with these publicly traded entities were not considered as being exempt from the general business diligence and criminal history screening.

Within the application, ICANN collected specific information from applicants regarding individuals associated with the application. This was based on direct input from the background screening provider, regarding the minimum amount of information required to run a meaningful background screen. ICANN received feedback from applicants who did not want to provide personal information for officers and directors. In particular, some applicants indicated that performing a background screen on their officers and directors was not necessary, as they were required to meet a higher standard by the exchanges on which they were traded.

As background screening was performed at the entity level, although there were 1,930 applications, background screens were performed on approximately 1,150 entities.

In cases where additional information was required, the background screening panel issued Clarifying Questions (CQs) to the applicant. Once the panel had reviewed all application materials and CQ responses, the panel provided a report to ICANN. ICANN evaluated the report against the criteria in the AGB, and incorporated the results into the IE report. IE reports were released on a weekly basis, by application prioritization number (see Section 1.2: Prioritization of this report).

---

The AGB anticipated that IE would take five months. As the IE timeline was extended to 18 months due to the high volume of applications, the number of applications that required a rescreening was much higher than anticipated. Both during IE and beyond (during the Contracting process), many background screens had to be re-performed because of changes due to the normal course of business. Between August 2013 and July 2015, approximately 34 percent of over 1,200 change requests submitted resulted in background screening being re-performed. The high percentage could be attributed to the large gap in time between completion of IE and execution of the Registry Agreement (RA),<sup>69</sup> during which many changes occurred as part of the normal course of business. These changes created work for the applicant (to update the information in the application) and for ICANN (to re-perform the background screen). Additionally, the changes added to the cost of retaining the service provider, including the incremental cost of performing additional background screenings.

After IE results had been published, ICANN reserved the right to perform additional due diligence as required, such as before executing a Registry Agreement or after a change to certain application responses.

## 2.2.5 Conclusion

Background screening was performed in alignment with the AGB. While the process was successful in that it provided an opportunity for all applicants to be screened, observations from implementation suggest that there are opportunities for improvement to the background screening process to make it more effective.

Background screening was performed during IE. This timing was intended to prevent applicants that did not meet the eligibility criteria from progressing beyond IE and participating in downstream processes which could affect other applicants (e.g., objections, contention resolution). However, the time between the application submission deadline and the signing of Registry Agreements was longer than anticipated. This elongation of the time period required many applicants to submit application changes occurring during the normal course of business (e.g., officer and director changes) and thus require the background screening to be re-performed. Consideration should be given as to whether background screening should be performed as part of evaluation or at the time of Contracting in order to minimize the number of application updates and background screenings.

ICANN interpreted Section 2.1.1 of the AGB, which deemed that applicants that were traded on top-25 exchanges had passed the general business diligence and criminal history screening, to apply to the applying entity but not the individuals associated with the applying entity. Some applicants commented that they did not want to provide personal information on their officers and directors, and indicated that performing a background screen on their officers and directors was not necessary, as they were required to meet a higher standard by the exchanges on which they were traded. For future rounds, consideration should be given as to whether the procedures and criteria could be adjusted to account for a meaningful background screen in a variety of cases (e.g., newly formed

---

<sup>69</sup> As of 31 July 2015, 59% of applicants signed the Registry Agreement within the allotted 9-month window.

---

entities, publicly traded companies, companies in jurisdiction that do not provide readily available information).

In summary:

**2.2.a** Consider whether background screening should be performed during IE or at the time of contract execution

**2.2.b** Consider whether the background screening procedures and criteria could be adjusted to account for a meaningful review in a variety of cases (e.g., newly formed entities, publicly traded companies, companies in jurisdictions that do not provide readily available information)

---

## 2.3 String Similarity Evaluation

### 2.3.1 Introduction

The String Similarity evaluation was a review to determine whether applied-for strings were visually similar to existing TLDs, Reserved Names, or other applied-for strings.

### 2.3.2 Relevant Guidance

The following guidance is relevant to the topic of the String Similarity evaluation and will be discussed in further detail in Sections 2.3.3 and 2.3.4 of this report:

- GNSO Recommendation 1:

*ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.<sup>70</sup>*

- GNSO Recommendation 2: “Strings must not be confusingly similar to an existing top-level domain or a Reserved Name.”
- GNSO Recommendation 5: “Strings must not be a Reserved Word.”
- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>71</sup>
- Applicant Guidebook, Section 2.2.1.1: String Similarity Review
- Applicant Guidebook, Section 2.4: Parties Involved in Evaluation
- Applicant Guidebook, Attachment to Module 2: Evaluation Questions and Criteria
- ICANN Board New gTLD Program Committee Resolution 2013.06.25.NG07 (25 June 2013): Singular & Plural Versions of the Same String as a TLD<sup>72</sup>

---

<sup>72</sup> ICANN. (25 June 2013) Approved Resolutions | Meeting of the New gTLD Program Committee. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2013-06-25-en#2.d>

## 2.3.3 Background

The AGB anticipated that Initial Evaluation (IE) (see Section 2.1: Initial and Extended Evaluation of this report) would take five months to complete, all IE results would be published at the conclusion of IE, and the Contracting process would commence at the end of IE. This would allow applicants that passed IE to move expeditiously toward signing an RA if there were no other issues that the application must resolve (i.e., contention resolution, dispute resolution).

GNSO Recommendation 2 stated, “Strings must not be confusingly similar to an existing top-level domain or a Reserved Name.” The String Similarity evaluation was developed in support of this recommendation, which reviewed applied-for strings for visual similarity to existing, reserved, and other applied-for strings. As a result of the multistakeholder process, the criteria for the String Similarity evaluation were limited to review visual similarity, taking into account that the overall application process accounted for all forms of similarity. The String Similarity evaluation during IE was considered a preliminary review “to identify many instances of contention [multiple applications for one string] or user confusion as soon as possible in the process.”<sup>73</sup>

AGB Section 2.2.1.1.2 further explained user confusion:

*String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.*

Section 2.2.1.1.3 of the AGB defined the potential outcomes of the String Similarity evaluation as:

- An applicant would not be allowed to proceed if visual similarity to existing TLDs or Reserved Names is determined
- An applicant would be placed into a contention set with other applicants for strings that were determined to be exact matches or visually similar
- An applicant would not be placed into a “contention set” and would move on to the next stage of the Program if not determined to be an exact match or visually similar to any other strings (existing or applied-for)

ICANN engaged independent third-party providers, InterConnect Communications and the University College London, to act as the String Similarity evaluation panel. For more information, see Section 8.2: Service Provider Coordination of this report. To inform the panel’s review, ICANN also used the SWORD Algorithm, which was designed to be a “consistent and predictable tool [. . .] to inform the ‘string confusion’ element of the new gTLD project.”<sup>74</sup> The SWORD Algorithm also provided opportunities for the applicants to inform themselves, as it was available to applicants prior to

<sup>73</sup> ICANN. (18 February 2009). New gTLD Draft Applicant Guidebook: Analysis of Public Comment. Retrieved from <https://archive.icann.org/en/topics/new-gtlds/agv1-analysis-public-comments-18feb09-en.pdf>

<sup>74</sup> ICANN. (1 October 2008) Minutes of the Special Meeting of the ICANN Board of Directors. Retrieved from [https://www.icann.org/resources/board-material/minutes-2008-10-01-en?routing\\_type=path](https://www.icann.org/resources/board-material/minutes-2008-10-01-en?routing_type=path)

---

application submission and during the evaluation period. As described in Section 2.2.1.1.2 of the AGB, “it should be noted that the [SWORD] score [was] only indicative and that the final determination of similarity [was] entirely up to the Panel’s judgment.” Accordingly, the panel incorporated the SWORD Algorithm into its processes, but ultimately the expert evaluators made the determination.

While the String Similarity evaluation was limited to visual similarity, the String Confusion Objection process allowed parties to object to applications based on visual and other types of similarity. For more information, see Section 3.2: Objections and Dispute Resolution of this report.

String Similarity results were published on 26 February 2013.<sup>75</sup>

## 2.3.4 Assessment

String Similarity evaluation results were published later than originally scheduled by ICANN. At the ICANN 45 meeting in October 2012, ICANN had forecast the String Similarity evaluation to be completed in November of that year.<sup>76</sup> AGB Section 2.2.1.1.1 had contemplated that String Similarity evaluation results would be published prior to IE results. String Similarity evaluation results were published on 26 February 2013.<sup>77</sup> This delay was due to the volume of unique strings--there were 1,380 unique applied-for strings, resulting in over 1,000,000 combinations requiring review. In order to ensure the results were consistent, ICANN required additional time for administrative review to understand results before publicizing them.

The String Similarity evaluation results were consistent with the AGB-described outcomes. A string found to be confusingly similar to an existing TLD, a Reserved Name or a String on the “Ineligible for Delegation List” from Section 2.2.1.2.3 of the AGB did not pass the String Similarity evaluation. Applied-for strings found to be confusingly similar to other applied-for strings were placed in contention sets, along with strings that were determined to be IDN variants of one-another. Upon the completion of the review of all applications, results were released on 26 February 2013 in which the panel identified two non-exact match contentions sets (.HOTELS/.HOTEIS and .UNICORN/.UNICOM) and 230 exact match contention sets.<sup>78</sup> On 1 March 2013, an additional two non-exact match contention sets based on IDN variant relationships were published.<sup>79</sup> In total, the String Similarity evaluation identified 234 contention sets, composed of 754 applications.

<sup>77</sup> ICANN. (26 February 2013) Announcement: New gTLD Program: String Similarity Contention Sets. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/announcement-26feb13-en>

<sup>78</sup> ICANN. (26 February 2013) Announcement: New gTLD Program String Similarity Contention Sets. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/announcement-26feb13-en>

<sup>79</sup> ICANN. (1 March 2013) New gTLD String Similarity Contention Sets as of 1 March 2013. Retrieved from <http://newgtlds.icann.org/en/program-status/application-results/similarity-contention-01mar13-en.pdf>

---

There was one area in particular where several in the community indicated dissatisfaction with the results, which was in regard to singular and plural versions of strings (which were not found to be confusingly similar by the panel).<sup>80</sup> However, neither GNSO Policy nor the AGB defined a specific rule regarding singular and plural versions of a string. As the String Similarity evaluation panel did not find singular and plural versions of the strings to be visually confusingly similar, based on the standard specified in Module 2, ICANN accepted the expert recommendations of the panel.

Following the publication of the String Similarity results, the ICANN Board considered the issue based on community feedback through public comment at ICANN meetings and advice from the GAC.<sup>81</sup> After deliberating the issue, the ICANN Board New gTLD Program Committee determined “no changes to the AGB [were] needed to address potential consumer confusion specifically resulting from allowing singular and plural versions of the same string.”<sup>82</sup> However, the ICANN Board identified string similarity as a topic that may be appropriate for the GNSO’s discussion of evaluation in the current round and adjustments for future application procedures.<sup>83</sup>

As mentioned in Section 2.3.3. Background, applicants that were dissatisfied with the results of the panel’s review had the option to pursue a String Confusion Objection to create contention between two applications. Several applicants took advantage of this process, and some objections considered singular and plural versions of strings. For more information on String Confusion Objections, see Section 3.2: Objections and Dispute Resolution of this report.

## 2.3.5 Conclusion

The String Similarity evaluation was performed in alignment with the criteria and processes defined in the AGB. Dissatisfaction was expressed by the community in regards to the timing of the results and the results themselves.

The results were released two weeks before the deadline to file a String Confusion Objection, so parties who wished to file a String Confusion Objection based on the results of the String Similarity Review (i.e., create contention where the String Similarity evaluation did not) had a limited amount of time to prepare an objection. The delayed String Similarity results in this round were caused by the high volume of unique strings, but for future rounds, consideration should be given to how to best position the relative timing of these two processes, taking into consideration unknown factors such as the volume of unique strings.

Regarding the evaluation results, the GAC and the ALAC raised concerns regarding the similarity of certain cases of “singular and plural versions of the same string.” The ICANN Board passed a

---

<sup>82</sup> ICANN. (25 June 2013) Approved Resolutions | Meeting of the New gTLD Program Committee. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2013-06-25-en#2.d>

<sup>83</sup> ICANN. (17 November 2014). Annex A to Resolutions 1014.11.17.10 – 2014.11.17.12. Retrieved from <https://www.icann.org/en/system/files/files/resolutions-annex-a-17nov14-en.pdf>

---

resolution stating that “Due to perceived inconsistency in process results as well as questions about the means used for determining what is confusingly similar (e.g., assessing similarity between singular and plural strings), this is an area where further policy guidance could be provided.”<sup>84</sup>

In regard to IDN variants, the String Similarity evaluation panel found two sets of potential IDN variants. Once the Root Zone Label Generation Rules have been established, ICANN should leverage these rules to definitively determine IDN variants among the applied-for strings.

In summary:

**2.3.a** Review the relative timing of the String Similarity evaluation and the Objections process

**2.3.b** Consider any additional policy guidance provided to ICANN on the topic of String Similarity

**2.3.c** Leverage the Root Zone Label Generation Rules in the development of the String Similarity evaluation as it pertains to IDN variants

## 2.4 DNS Stability Evaluation

### 2.4.1 Introduction

The DNS Stability evaluation was designed to ensure that applied-for gTLD strings complied with technical, IDN, and policy requirements, and to ensure that a string did not cause significant security or stability issues.

### 2.4.2 Relevant Guidance

The following guidance is relevant to the topic of the DNS Stability evaluation and will be discussed in further detail in Sections 2.4.3 and 2.4.4 of this report:

- GNSO Principle B: “Some new generic top-level domains should be internationalised domain names (IDNs) subject to the approval of IDNs being available in the root.”<sup>85</sup>
- GNSO Recommendation 1:

*ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.*

- GNSO Recommendation 4: “Strings must not cause any technical instability.”
- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>86</sup>
- Applicant Guidebook, Section 2.2.1.3: DNS Stability Review
- Applicant Guidebook, Section 2.4: Parties Involved in Evaluation
- Applicant Guidebook, Attachment to Module 2: Evaluation Questions and Criteria
- ICANN Board New gTLD Program Committee Resolution 2014.07.30.NG01 - 2014.07.30.NG04 (30 July 2014): Name Collision Occurrence Management Framework<sup>87</sup>

<sup>86</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>87</sup> ICANN. (30 July 2014) Approved Resolutions | Meeting of the New gTLD Program Committee. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2014-07-30-en>

## 2.4.3 Background

The AGB anticipated that Initial Evaluation (IE) (see Section 2.1: Initial and Extended Evaluation of this report) would take five months to complete, all IE results would be published at the conclusion of IE, and the Contracting process would commence at the end of IE. This would allow applicants that passed IE to move expeditiously toward signing an RA if there were no other issues that the application must resolve (i.e., contention resolution, dispute resolution).

The DNS Stability evaluation criteria were designed to identify labels that did not meet minimum technical criteria for TLD labels and as a result, might cause technical instability in the DNS. The AGB criteria were developed in support of GNSO Principle D and GNSO Recommendation 4, and public comment was solicited for the DNS Stability paper published in February 2008 and updated in October 2008.<sup>88,89</sup> The SAC045 report, published in November 2010 for community and ICANN Board review, was also considered and incorporated into the development of the AGB and the DNS Stability Evaluation.<sup>90</sup> ICANN engaged an independent third-party service provider, Interisle Consulting Group, to act as the DNS Stability panel. For more information about the panel, see Section 8.2: Service Provider Coordination of this report.

The DNS Stability evaluation was performed as part of Initial Evaluation (IE). IE processes are described in detail in Section 2.1: Initial and Extended Evaluation of this report.

Section 2.2.1.3.1 of the AGB stated,

*During the Initial Evaluation Period, ICANN [would] conduct a preliminary review on the set of applied-for gTLD strings to:*

- *ensure that applied-for gTLD strings comply with the requirements provided in section 2.2.1.3.2, and*
- *determine whether any strings raise significant security or stability issues that may require further review.*

Section 2.2.1.3.2 of the AGB defined the syntactical requirements for strings.

- Part I, the Technical Requirements for all Strings, required that the ASCII label be valid (as specified in RFC 1035 and RFC 2181), and that the ASCII label be a valid host name (as specified in RFC 952, RFC 1123, RFC 3696, and RFCs 5890-5894). These requirements included the following syntactical rules: 63-character limit, identical treatment of upper- and lowercase letters, only alphabetic characters A-Z, and valid IDNA A-labels only.

<sup>89</sup> ICANN. (22 October 2008) New gTLD Program Explanatory Memorandum: Update to DNS Stability Paper. Retrieved from <http://archive.icann.org/en/topics/new-gtlds/update-dns-stability-22oct08-en.pdf>

<sup>90</sup> ICANN. (15 November 2010) ICANN Security and Stability Advisory Committee Report on Invalid Top Level Domain Queries at the Root Level of the Domain Name System. Retrieved from <https://www.icann.org/en/system/files/files/sac-045-en.pdf>.

- Part II, the Requirements for Internationalized Domain Names, required that for IDN labels, labels must be A-labels converted from a U-label consistent with the definition in IDNA and must meet the relevant criteria of the ICANN Guidelines for the Implementation of Internationalised Domain Names.<sup>91</sup>
- Part III, Policy Requirements for Generic Top-Level Domains, required that applied-for ASCII strings must be three or more characters, and that applied-for IDN strings must be two or more characters.

Should unanticipated issues have arisen beyond the defined requirements of AGB Section 2.2.1.3.2, the AGB provided for an extended review by the DNS Stability panel during IE. However, each string was reviewed against the AGB criteria in accordance with the panel’s procedures, and none of the applied-for strings required the extended review.

Results of the DNS Stability review were included in the IE reports. Applications that did not pass the DNS Stability Review were not eligible for Extended Evaluation (EE). However, all applications passed the DNS Stability Review in IE.

## 2.4.4 Assessment

The implementation of the DNS Stability review brought to light one issue with interpretation and scope of the review, referred to as “name collision.” The AGB contemplated the potential for collisions as discussed in the SAC045 report, which stated that “potential problems [...] may arise should a new TLD applicant use a string that has been seen with measurable (and meaningful) frequency in a query for resolution by the root system and the root system has previously generated a response.”<sup>92</sup> The report recommended that “ICANN promote a general awareness of the potential problems that may occur when a query for a TLD string that has historically resulted in a negative response begins to resolve to a new TLD.” These findings and recommendations were considered during the development of the AGB, which discussed the issue as a problem that a potential registry operator must prepare for from a query load perspective:

*Any new TLD registry operator may experience unanticipated queries, and some TLDs may experience a non-trivial load of unanticipated queries. [ . . ]*

*ICANN will take steps to alert applicants of the issues raised in SAC045, and encourage the applicant to prepare to minimize the possibility of operational difficulties that would pose a stability or availability problem for its registrants and users. However, this notice is merely an advisory to applicants and is not part of the evaluation, unless the string raises significant security or stability issues as described in the following section.<sup>93</sup>*

---

The DNS Stability evaluation panel completed its work in January 2013 and determined no strings should be ineligible for delegation based on its review.

In March 2013, ICANN’s Security and Stability Advisory Committee (SSAC) issued a report SAC 057: SSAC Advisory on Internal Name Certificates, wherein the SSAC referred to the issue of “name collision” and provided the ICANN Board with steps for mitigating the issue.<sup>94</sup> To formulate a plan to address the issue, ICANN enlisted broad community participation in the development of a solution, to further study the impact on applied-for strings (the SSAC’s list was not exhaustive).

Over the next year, ICANN worked with the community and the SSAC on a mitigation plan. The work included a study of the historical query traffic,<sup>95</sup> a mitigation development effort, and the development of educational materials for IT administrators. On 17 November 2013, ICANN began implementing an interim mitigation approach,<sup>96</sup> termed the “alternate path to delegation” as described in the New gTLD Name Collision Occurrence Management Plan,<sup>97</sup> which allowed most strings to move ahead to delegation with a set of restrictions for second-level names, while the final mitigation plan was further developed by ICANN and the community. On 30 July 2014, the ICANN Board New gTLD Program Committee (NGPC) adopted a resolution directing staff to defer delegation of the high-risk strings (i.e., HOME, CORP, MAIL) indefinitely, and outlined procedures for Controlled Interruption for new gTLDs.<sup>98</sup> On 30 July 2014, ICANN published the Name Collision Management Framework.<sup>99</sup> In the Framework, ICANN described its interest in “providing a good notification measure for those parties that may be leaking queries intended for private namespaces to the public DNS” and required that registry operators implement a period of 90 days of continuous controlled interruption to mitigate risk.

ICANN took numerous steps to minimize the potential impact of name collision. A mitigation plan was implemented for this round, and the NGPC has directed ICANN to “work with the GNSO to consider whether policy work on developing a long-term plan to manage gTLD name collision issues should be undertaken.”<sup>100</sup>

Much of the work performed during the DNS Stability evaluation related to IDNs. Since the DNS Stability evaluation during IE, considerable work has been conducted on establishing Root Zone Label Generation Rules, which are procedures for creating and maintaining the label generation

---

rules with respect to IDN labels for the root.<sup>101,102</sup> Any future instances of the DNS Stability review should incorporate or ensure compliance with such rules.

## 2.4.5 Conclusion

The DNS Stability evaluation was performed in alignment with the AGB. The review was able to assess many different potential issues, and narrower criteria could limit its ability to identify as many concerns that relate to a particular string.

In this application round, most of the processes in the DNS Stability evaluation related to IDNs. Once the Root Zone Label Generation Rules for IDNs are established, this will reduce the amount of review required for IDNs. Once the Root Zone Label Generation Rules for IDNs are adopted, the DNS Stability Review should leverage these rules and incorporate checks to ensure that the Root Label Generation Rules for IDNs are adhered to.

The Name Collision Occurrence Management Framework provided a plan for registry operators to mitigate the risk of name collision through the use of controlled interruption periods at the time of TLD introduction to the root zone. The NGPC has directed ICANN to “work with the GNSO to consider whether policy work on developing a long-term plan to manage gTLD name collision issues should be undertaken.”<sup>103</sup>

In summary:

**2.4.a** As directed in the NGPC’s 30 July 2014 resolution, “work with the GNSO to consider whether policy work on developing a long-term plan to manage gTLD name collision issues should be undertaken.”<sup>104</sup>

**2.4.b** Based on the outcome of the GNSO’s work, consider inclusion of the Name Collision Management Framework in the next application round prior to accepting applications<sup>105</sup>

**2.4.c** Leverage the Root Zone Label Generation Rules for IDNs in the DNS Stability evaluation

## 2.5 Geographic Names Evaluation

### 2.5.1 Introduction

The Geographic Names evaluation was an aspect of the New gTLD Program intended to ensure that appropriate consideration was given to the interests of governments and authorities in regards to strings representing geographic areas.

### 2.5.2 Relevant Guidance

The following guidance is relevant to the topic of the Geographic Names evaluation and will be discussed in further detail in Sections 2.5.3 and 2.5.4 of this report:

- GNSO Recommendation 1:

*ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.*

- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”
- Applicant Guidebook, Section 2.2.1.4: Geographic Names Review<sup>106</sup>
- Applicant Guidebook, Section 2.4: Parties Involved in Evaluation
- Applicant Guidebook, Attachment to Module 2: Evaluation Questions and Criteria

### 2.5.3 Background

The AGB anticipated that Initial Evaluation (IE) (see Section 2.1: Initial and Extended Evaluation of this report) would take five months to complete, all IE results would be published at the conclusion of IE, and the Contracting process would commence at the end of IE. This would allow applicants that passed IE to move expeditiously toward signing an RA if there were no other issues that the application must resolve (i.e., contention resolution, dispute resolution).

The Geographic Names criteria in the AGB criteria were developed based on advice from the GAC.<sup>107</sup> The GAC Principles Regarding New gTLDs stated, “ICANN should avoid country, territory or place

---

<sup>106</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

names, and country, territory or regional language or people descriptions, in agreement with the relevant governments or public authorities.”<sup>108</sup>

Question 21 of the application provided applicants with the opportunity to identify whether their application was intended to be for a geographic name. The Geographic Names evaluation was performed by InterConnect Communications (partnered with the University College London) and the Economist Intelligence Unit. For more information, see Section 3.2: Service Provider Coordination of this report.

The Geographic Names panel took note of the applicant’s self-designation. However, the panel evaluated all strings and applications and made its own determination based on the criteria in the AGB. Per Section 2.2.1.4 of the AGB:

- Applications for strings that were country or territory names were not approved.
- Strings representing geographic names required documentation of support or non-objection from the relevant governments or public authorities. Geographic names were:
  - Capital city names
  - City names, where the applicant intended to use the gTLD for purposes associated with the city
  - Strings that were exact matches of sub-national places (e.g., counties, provinces, states)
  - Strings for regions (as defined by internationally recognized lists)

In cases where the panel determined that an application met the criteria for a geographic name requiring government support, the Panel confirmed that the letters of support or non-objection met the defined criteria, and validated that they were sent by the appropriate authority. The Geographic Names evaluation was part of Initial Evaluation (IE) and eligible for Extended Evaluation (EE).

Of the 1,930 submitted applications:

- 66 applicants designated their applications as geographic names.
- The panel determined that six of the applications that had been self-designated geographic names did not meet the criteria for geographic names requiring government support, so no letters of support or non-objection were required.
- The panel determined that three applications that were not designated by the applicants as geographic names met the criteria of geographic name requiring government support.

The results for the Geographic Names evaluation were published on a weekly basis by priority number with IE and EE reports.

---

<sup>107</sup> ICANN. (22 October 2008) New gTLD Program Explanatory Memorandum: Proposed Process for Geographic Name Applications. Retrieved from <https://archive.icann.org/en/topics/new-gtlds/geographic-names-22oct08-en.pdf>

<sup>108</sup> ICANN Governmental Advisory Committee. (28 March 2007) GAC Principles regarding New gTLDs. Retrieved from <https://archive.icann.org/en/topics/new-gtlds/gac-principles-regarding-new-gtlds-28mar07-en.pdf>

---

The geographic names designation (whether designated by the applicant or the panel) did not have any contractual obligations associated with it.

## 2.5.4 Assessment

The Geographic Names panel performed its evaluation in accordance with the AGB and the processes defined by the panel.<sup>109</sup>

To support predictability and transparency, much of the Geographic Names criteria were based on established international classification lists (e.g., the ISO 3166-1 standard was used to identify names for countries and territories; the UNESCO region list<sup>110</sup> identified regions). The only exceptions to this were for applications for non-capital city names.

Applications for non-capital city names were required to provide documentation of government support in cases “where the applicant declare[d] that it intend[ed] to use the gTLD for purposes associated with the city name.”<sup>111</sup> Evaluation against this criterion required review of the proposed TLD’s intended purpose and a determination of whether this purpose related to the city.

The Geographic Names panel issued its Clarifying Questions in February 2013. Applicants were advised that the responses were due by the end of IE, which was projected to be 30 August 2013.

The AGB described the Geographic Names review as occurring within the timeframe of IE (five months, more if batching was required), plus an additional 90-day (or longer) period to obtain required documentation if necessary.<sup>112</sup> Of the 1,820 applications that completed IE, all but seven provided the required documentation to pass Geographic Names evaluation. The seven applications that did not provide the required documentation in IE were evaluated during EE.

The applicant’s designation of a string did not have an effect on the panel’s review of the application, as the panel reviewed all applications. Further, the geographic names designation did not have any contractual obligations associated with it. (However, it should be noted that a geographic names TLD might have had a contract in place with the relevant government, and that some geographic names applications were also community applications. Geographic names TLDs that were also community TLDs had contractual obligations included through Specification 12 to the Base Registry Agreement.)<sup>113</sup>

<sup>113</sup> ICANN. (9 January 2014) Registry Agreement. Retrieved from

<http://newgtlds.icann.org/en/applicants/agb/agreement-approved-09jan14-en.pdf>

---

## 2.5.5 Conclusion

The Geographic Names evaluation was performed in accordance with the AGB. The use of established international classification lists and clear criteria supported a fair evaluation and predictable process. However, there are some questions around the intended purpose of the geographic name designation that may benefit from further community discussion. The geographic names designation was a self-designation. This designation did not have an effect on the panel's review of the application, as the panel reviewed all applications. Further, the geographic name designation did not have any contractual obligations associated with it. Consideration should be given as to the purpose of the self-designation, and whether it should be limited to evaluation or if there should be other implications.

In summary:

**2.5.a** Consider the purpose and the implications of the Geographic Names evaluation, particularly in terms of whether its purpose is limited to evaluation or if there are other implications to the geographic names designation

**2.5.b** Consider ongoing work by various members of the community around geographic names in defining future procedures

---

## 2.6 Technical and Operational Capability Evaluation

### 2.6.1 Introduction

The Technical and Operational Capability evaluation was one of the seven evaluation streams defined in the Applicant Guidebook (AGB). The technical questions in the AGB gathered information from the applicant regarding its plans for operations so that the evaluation panel could assess whether the applicant demonstrated the technical and operational capability to run a TLD.

### 2.6.2 Relevant Guidance

The following guidance is relevant to the topic of the Technical and Operational Capability evaluation and will be discussed in further detail in Sections 2.6.3 and 2.6.4 of this report:

- GNSO Principle D: “A set of technical criteria must be used for assessing a new gTLD registry applicant to minimise the risk of harming the operational stability, security and global interoperability of the Internet.”<sup>114</sup>
- GNSO Principle E: “A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meet its obligations under the terms of ICANN's registry agreement.”
- GNSO Recommendation 1:  
*ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.*
- GNSO Recommendation 4: “Strings must not cause any technical instability.”
- GNSO Recommendation 7: “Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.”
- GNSO Recommendation 8: “Applicants must be able to demonstrate their financial and organisational operational capability.”
- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”
- GNSO Recommendation 18: “If an applicant offers an IDN service, then ICANN's IDN guidelines must be followed.”
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>115</sup>

---

<sup>114</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gns0.icann.org/en/issues/new-gtlds/pdp-dec05-fr-part-a-08aug07.htm>

- Applicant Guidebook, Section 2.2.2: Applicant Reviews
- Applicant Guidebook, Section 2.3.2: Technical/Operational or Financial Extended Evaluation
- Applicant Guidebook, Section 2.4: Parties Involved in Evaluation
- Applicant Guidebook, Attachment to Module 2: Evaluation Questions and Criteria

## 2.6.3 Background

The AGB anticipated that Initial Evaluation (IE) (see Section 2.1: Initial and Extended Evaluation of this report) would take five months to complete, all IE results would be published at the conclusion of IE, and the Contracting process would commence at the end of IE. This would allow applicants that passed IE to move expeditiously toward signing an RA if there were no other issues that the application must resolve (i.e., contention resolution, dispute resolution).

AGB Section 2.2.2.1 required that “the applicant [would] respond to a set of questions (see questions 22 – 44 in the Application Form) intended to gather information about the applicant’s technical capabilities and its plans for operation of the proposed gTLD.” There were 30 points available. Twenty-two points were required to pass, with no zero scores on any question (other than the optional Question 44).

The AGB, Attachment to Module 2, Section III stated, “Given the requirement that technical and financial planning be well integrated, the panels will work together and coordinate information transfer where necessary.” To support this, ICANN selected the same panel firms for the Technical and Operational Capability evaluation and the Financial Capability evaluation, and allocated both sections of an application to the same panel firm. The panel firms for the Technical and Operational Capability evaluation and Financial Capability evaluation were Ernst & Young, KPMG, and JAS Global Advisors. For more information, see Section 8.2: Service Provider Coordination of this report.

The overall evaluation process was described in Module 2 of the AGB. The implementation of the evaluation process was performed in alignment with the AGB-defined processes, and has been described in further detail in Section 2.1: Initial and Extended Evaluation of this report.

Once the evaluation panels’ evaluations were complete, they presented their results to ICANN. The results reports provided by the Technical and Operational Capability evaluation panel included detailed rationale for applications that did not meet the AGB criteria. ICANN reviewed the results for consistency and to confirm that the results appeared to be in alignment with the AGB. After review, ICANN consolidated the results received from the panels for publication and to share with the applicants.

1,795 applications passed the Technical and Operational Capability evaluation during IE and eight applications were eligible for EE. Ultimately, all applications that participated in the Technical and Operational Capability evaluation during EE passed.

---

<sup>115</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

---

Once an applicant executed a Registry Agreement (RA) with ICANN, it was required to demonstrate its Technical and Operational Capability during Pre-Delegation Testing (PDT). For more information, see Section 5.2: Pre-Delegation Testing and Transition to IANA of this report.

Additionally, all registry operators were obligated to comply with the technical specifications in the Registry Agreement (RA) upon signing of the agreement.<sup>116</sup>

## 2.6.4 Assessment

GNSO Recommendation 7 stated, “Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.” To support this, the AGB criteria in Questions 24 – 44 of the application were developed. The design of the application required applicants to consider the requirements for operating a TLD, as the responses to the Technical questions were theoretical in nature. Section 2.2.2.1 of the AGB stated, “Applicants [were] not required to have deployed an actual gTLD registry to pass the Technical/Operational review. It [would] be necessary, however, for an applicant to demonstrate a clear understanding and accomplishment of some groundwork toward the key technical and operational aspects of a gTLD registry operation.”

Although the Technical portion of the application was not designed to test actual registry operations, if the application was successful, the registry operator was ultimately required to pass PDT and demonstrate compliance with the technical specifications defined in the RA. Per the requirements of the AGB in this application round, the Technical section of the application was intended to “gather information about the applicant’s technical capabilities and its plans for operation of the proposed gTLD,” and the applicant was not required to have deployed an operational registry.

Although 1,930 applications were submitted, most shared one of a relatively small number of technical infrastructures (less than 50). In fact, 90% of applications shared one of 13 technical infrastructures (see Table 2.6.i).

---

<sup>116</sup> ICANN. Registry Agreement. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/agreement-approved-09jan14-en.pdf>

Table 2.6.i: Registry Service Providers (RSPs) Engaged

Registry Service Provider	% of Applications Using RSP
Neustar	18%
Demand Media	17%
Afilias	16%
Verisign	12%
ARI	8%
Google Registry	5%
Minds+Machines	5%
CentralNIC	3%
ISC	3%
CORE	2%
GMO	2%
Other	8%

The application process was designed so that even if an applicant chose to engage a provider to operate its back-end registry services, the applicant would be the party accountable for the application. In addition to promoting greater accountability for the applicant, the design of the application process was intended to level the playing field for new entrants to the market, whereas had the process encouraged engagement with an RSP, new entrants may have been discouraged.

Ninety percent of applications received one or more CQs from the Technical and Operational Capability panel. The table below shows the number of applications that received CQs for each question in the Technical section.

Table 2.6.ii Clarifying Questions Issued by Application Question

Technical Question	Question Description	# Applications with CQ Issued	% Applications with CQ Issued
Q24	Shared Registration System (SRS) Performance	54	3%
Q25	EPP	919	49%
Q26	Whois	142	8%
Q27	Registration Life Cycle	181	10%
Q28	Abuse Prevention & Mitigation	72	4%
Q29	Rights Protection Mechanisms	594	32%
Q30	Security	170	9%
Q31	Technical Overview of Proposed Registry	412	22%
Q32	Architecture	65	3%
Q33	Database Capabilities	18	1%
Q34	Geographic Diversity	24	1%
Q35	DNS Service Compliance	264	14%

Q36	IPV6 Reachability	41	2%
Q37	Data Backup Policies and Procedures	27	1%
Q38	Escrow	30	2%
Q39	Registry Continuity	57	3%
Q40	Registry Transition	121	6%
Q41	Failover Testing	42	2%
Q42	Monitoring and Fault Escalation Processes	13	1%
Q43	DNSSEC	334	18%
Q44	IDNs (Optional)	170	9%

ICANN observed during the implementation of the Technical and Operational Capability Evaluation that the responses to the Technical application questions were generally provided by the applicants' RSPs. As evidenced in Table 2.6.ii, five questions in particular generated a large proportion of CQs. The use of RSPs may have skewed these results (e.g., a particular RSP may have made a minor administrative error for a single question many times), but the high rate of CQs for certain questions may also indicate a systemic issue with particular questions. ICANN should review the CQs issued and responses received to determine if changes to application questions are required.

In addition to the responses being theoretical in nature, ICANN has observed that applicants did not necessarily follow through with implementing their technical infrastructure in the manner specified within the application. While to a certain extent, Pre-Delegation Testing (PDT) tested applicants' operational technical capabilities, PDT did not confirm whether registry operators were complying with their responses to application questions, only that they met the baseline requirements of the RA. (For more information on PDT, see Section 5.2: Pre-Delegation Testing and Transition to IANA of this report.)

The fact that applicants almost universally engaged an RSP also brought to light that the existing requirement of evaluating each application on a stand-alone basis did not enable evaluation of a particular RSP's ability to support multiple TLDs. Due to the application-by-application nature of evaluation, RSPs were not evaluated across the universe of applications and existing TLDs.

GNSO Recommendation 7 called for applicants to "demonstrate their technical capability." There were several different options that could have been used to implement this policy, including a question and answer approach, an approach involving the testing of infrastructure, and a more targeted evaluation specifically focused on technical back-end providers. In this application round, a question and answer approach was implemented to address this recommendation. In future rounds, different options, such as a program to accredit registry service providers, should be explored.

For example, a program to accredit registry service providers could prove to be more efficient for applicants and providers of technical back-end services in terms of application processing. An RSP accreditation program could allow for the thorough review of an RSP's full set of services provided (across TLDs). Such a program could also streamline processes for registry operators outside of the evaluation process, such as the process for adding new registry services (i.e., services could be pre-certified at the registry service provider level and thus require less testing, if any). This form of testing

---

could also fulfill some of the intent of PDT. Such an option should be carefully considered in terms of whether it supports the New gTLD Program’s objectives of competition, choice, and consumer trust.

## 2.6.5 Conclusion

The AGB criteria for Technical and Operational Capability evaluation required that applicants describe their plans for technical operations, but it did not require that actual registry operations be tested. In the execution of the Technical evaluation, ICANN observed that the majority of applicants used one of a relatively small population of back-end providers to operate their technical infrastructure. There were several possible approaches that could have been explored in order to achieve an effective evaluation of technical evaluation, and the operational experience brought to light certain inefficiencies in the evaluation approach that was taken.

To meet the objectives of GNSO Recommendation 7, consideration should be given as whether an alternate approach to the Technical and Operational Capability Evaluation would support the GNSO’s recommendation and the New gTLD Program objectives of competition, choice, and consumer trust, and whether the exploration of such an approach would be worthwhile.

In summary:

**2.6.a** Consider whether an alternate approach to the Technical and Operational Capability Evaluation would be worthwhile

**2.6.b** Review Technical and Operational Capability CQs and responses to determine whether improvements to the application questions can be made

---

## 2.7 Financial Capability Evaluation

### 2.7.1 Introduction

The Financial Capability evaluation was one of the seven evaluation streams defined in the AGB. The financial questions the Applicant Guidebook (AGB) gathered information from the applicant regarding its plans for operations and financial planning so that the evaluation panel could assess whether the applicant demonstrated the financial capability to run a TLD.

### 2.7.2 Relevant Guidance

The following guidance is relevant to the topic of the Financial Capability evaluation and will be discussed in further detail in Sections 2.7.3 and 2.7.4 of this report:

- GNSO Principle E: “A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meet its obligations under the terms of ICANN’s registry agreement.”<sup>117</sup>
- GNSO Recommendation 1:

*ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.*

- GNSO Recommendation 8: “Applicants must be able to demonstrate their financial and organisational operational capability.”
- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>118</sup>
- Applicant Guidebook, Section 2.2.2: Applicant Reviews
- Applicant Guidebook, Section 2.3.2: Technical/Operational or Financial Extended Evaluation
- Applicant Guidebook, Section 2.4: Parties Involved in Evaluation
- Applicant Guidebook, Attachment to Module 2: Evaluation Questions and Criteria

---

<sup>117</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gnso.icann.org/en/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>

<sup>118</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

## 2.7.3 Background

The AGB anticipated that Initial Evaluation (IE) (see Section 2.1: Initial and Extended Evaluation of this report) would take five months to complete, all IE results would be published at the conclusion of IE, and the Contracting process would commence at the end of IE. This would allow applicants that passed IE to move expeditiously toward signing an RA if there were no other issues that the application must resolve (i.e., contention resolution, dispute resolution).

The Financial Capability evaluation was “intended to gather information about the applicant’s financial capabilities for operation of a gTLD registry and its financial planning in preparation for long-term stability of the new gTLD.”<sup>119</sup> The Financial section of the application (Questions 45 through 50) had three main components:

1. The applicant’s financial statements (Question 45),
2. Information about the applicant’s intended business model (Question 46 – Question 49), and
3. A Continuing Operations Instrument (COI) to ensure that the registry could be guaranteed to fund registry operations for a minimum of three years following the termination of the RA, for the protection of registrants (Question 50).

There were 11 points available within the Financial section, and a total of eight points were required (with no zeros on an individual question) in order to pass.

The AGB, Attachment to Module 2, Section III stated, “Given the requirement that technical and financial planning be well integrated, the panels will work together and coordinate information transfer where necessary.” To support this, ICANN selected the same panel firms for the Technical and Operational Capability evaluation and the Financial Capability evaluation, and allocated both sections of an application to the same panel firm. The panel firms for the Technical and Operational Capability Evaluation and Financial Capability evaluation were Ernst & Young, KPMG, and JAS Global Advisors. For more information, see Section 8.2: Service Provider Coordination of this report.

The overall evaluation process was described in Module 2 of the AGB. The implementation of the evaluation process was performed in alignment with the AGB-defined processes, and has been described in further detail in Section 2.1: Initial and Extended Evaluation of this report.

Once the evaluation panel’s evaluation was complete, they presented their results to ICANN. The results reports provided by the Financial Capability evaluation panel included detailed rationale for applications that did not meet the AGB criteria. ICANN reviewed the results for consistency and to confirm that the results appeared to be in alignment with the AGB. After review, for each application, ICANN consolidated the results received from the panels for publication and to share with the applicant.

---

<sup>119</sup>ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04, Section 2.2.2.2: Financial Review. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

A total of 1,777 applications passed the Financial Capability evaluation during IE, and 26 applications were eligible for EE. Ultimately, all applications that participated in the Financial Capability evaluation during EE passed.

## 2.7.4 Assessment

GNSO Recommendation 8 stated, “Applicants must be able to demonstrate their financial and organisational operational capability.” In support of this recommendation, the AGB criteria in Questions 45 through 50 were developed. The AGB stated, “The process must provide for an objective evaluation framework, but allow for adaptation according to the differing models applicants will present.”<sup>120</sup> The financial criteria were not intended to be universal, rigid criteria, and were developed with the intention of being flexible enough to accommodate various business types. However, in order to ensure a consistent evaluation across all applications, the panel defined guidelines to interpret the application information as objectively and consistently as possible.

In order to provide additional clarity around the AGB criteria, before and during the application window, ICANN developed Supplemental Notes for each of the questions in the Financial section.<sup>121</sup> Table 2.7.i displays the number of Supplemental Notes (or updates) created for each of the Financial questions.

*Table 2.7.i: Supplemental Notes by Question*

Financial Question	# Supplemental Notes and Updates to Supplemental Notes
Q45	9
Q46	10
Q47	2
Q48	2
Q49	1
Q50	9

Once the panel had evaluated some applications and was developing its CQs, it was evident that a high volume of application would receive multiple CQs. To help applicants prepare for clarifying questions, ICANN issued five Applicant Advisories relating to questions in the Financial section (see table 2.7.ii).<sup>122</sup>

<sup>120</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04, Attachment to Module 2: Evaluation Questions and Criteria. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>121</sup> ICANN. Supplemental Notes. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/supplemental-notes>

<sup>122</sup> ICANN. Applicant Advisories. Retrieved from <http://newgtlds.icann.org/en/applicants/advisories>

Table 2.7.ii: Applicant Advisories by Question

Financial Question	Question Description	# Advisories and Updates to Advisories
Q45	Financial Statements	0
Q46	Projections Template: Costs and Funding	0
Q47	Costs: Setup and Operating	0
Q48	Funding and Revenue	1
Q49	Contingency Planning: Barriers, Funds, Volumes	0
Q50	Continuity: Continued Operations Instrument	4

Despite efforts to provide clarification, observations from the implementation of the Financial Capability evaluation suggest that there was a lack of clarity around the Financial criteria. The panel issued CQs on the Financial section for 90% of applications, which indicates that 90% of applications did not initially meet the AGB criteria based on the original application information submitted (see table 2.7.iii). A total of 4,378 CQs on the Financial Section were issued.

Table 2.7.iii: Clarifying Questions Issued by Question

Financial Questions	Question Description	# Applications	% Applications
Q45	Financial Statements	587	31%
Q46	Projections Template: Costs and Funding	126	7%
Q47	Costs: Setup and Operating	986	53%
Q48	Funding and Revenue	857	46%
Q49	Contingency Planning: Barriers, Funds, Volumes	292	16%
Q50	Continuity: Continued Operations Instrument	1,530	82%

Based on the number of Supplemental Notes, Applicant Advisories, and CQs issued, ICANN should examine the CQs issued and responses received. Consideration should be given to whether the financial criteria could be developed to better address a variety of business models and require less clarification and interaction among ICANN, applicants, and the panel.

Nine Supplemental Notes and four Advisories were issued for Question 50, which concerned the Continued Operations Instrument and required that the applicant describe the instrument that they planned to secure or provide an executed instrument. One of these updates to an Advisory, issued on 4 March 2013, was an explanation of the “unconditional withdrawal of funds” requirement within Question 50.<sup>123</sup> As evidenced by the 1,530 applications that received CQs on Question 50, the majority of applicants faced challenges in addressing Question 50, including many which received CQs

<sup>123</sup> ICANN. Continuing Operations Instrument: Unconditional Withdrawal of Funds. Retrieved from <http://newgtlds.icann.org/en/applicants/advisories/coi-withdrawal-05dec12-en>

---

regarding the “unconditional withdrawal of funds” requirement. On 5 June 2013, ICANN announced that as a result of some of the challenges faced by applicants, and inconsistent application and usage of the conditional language included in the letters of credit submitted in response to Question 50, the financial evaluation would focus on the financial aspects of the COI (most notably the amount) and address the legal language (such as conditions) during the Contracting process.<sup>124</sup> Continued Operations Instruments are discussed in greater detail in Section 7.1: Continued Operations Instruments of this report.

Another observation from implementation was that there were applicants that applied for many TLDs. As each was evaluated individually by priority number, the evaluation process as implemented in this round did not allow for evaluation of the applicant’s financial scalability in relation to its entire portfolio of applications.

While the criteria were developed to support the GNSO’s recommendation that applicants demonstrate financial capability, the number and nature of Supplemental Notes, Applicant Advisories, and CQs issued suggest that there was some level of administrative burden in the evaluation process for both applicants and the evaluation panels. Eighty-two percent of all applications received a CQ on Question 50, many of which were administrative corrections to the COI.

GNSO Recommendation 8 required that applicants be able to “demonstrate their financial and organisational operational capability.” There were several different options that could have been used to apply this policy, including a question and answer approach, a third-party certification of an applicant’s financial situation, or a mandatory insurance policy in lieu of a financial evaluation. In this application round, a question and answer approach was implemented to address this recommendation. For future rounds, consideration should be given to whether a third-party certification would allow applicants to demonstrate financial capability while providing the flexibility to evaluate various applications’ business models, including applicants that have applied for many TLDs.

## 2.7.5 Conclusion

The Financial Capability Evaluation criteria were developed in support of GNSO Recommendation 8, which stated, “Applicants must be able to demonstrate their financial and organisational operational capability.” The evaluation was performed in alignment with the AGB, and all applications met the AGB criteria in either IE or EE.

However, observations from implementation suggest that there were inefficiencies in the process that should be reviewed. There were many instances where a group of related applications was almost identical, but due to the application-by-application design of the evaluation process, applications were considered individually based on priority number. This reduced efficiency for both the panel and the applicants, and did not allow for an applicant’s financial scalability to be

---

<sup>124</sup> ICANN. (Updated 10 June 2013) Continuing Operations Instrument: Unconditional Withdrawal of Funds. Retrieved from <http://newgtlds.icann.org/en/applicants/advisories/coi-withdrawal-05dec12-en>

---

considered within evaluation. Additionally, the vast majority of applications received CQs, and for Question 50 (Continued Operations Instrument) in particular, 82% of applications received a CQ.

For future rounds, alternative approaches to the Financial Capability evaluation should be explored. For example, consideration should be given to whether a third-party certification (comparable to an audit performed by a certified auditor) would satisfy the intent of GNSO Recommendation 8 and provide for the flexibility to evaluate various applications' business models. ICANN should also review the CQs issued and consider whether criteria could be developed that would require less clarification among the evaluation panel, ICANN, and applicants.

In summary:

**2.7.a** Consider whether an alternative approach to the Financial Capability evaluation would be worthwhile

**2.7.b** Review Financial Capability CQs and responses to determine whether improvements to the application questions can be made

---

## 2.8 Registry Services Evaluation

### 2.8.1 Introduction

The Registry Services evaluation was one of the seven evaluation streams defined in the Applicant Guidebook (AGB). It served to evaluate each application’s proposed registry services for any possible adverse impact to the security and stability of the DNS.

### 2.8.2 Relevant Guidance

The following guidance is relevant to the topic of Registry Services evaluation and will be discussed in further detail in Sections 2.8.3 and 2.8.4 of this report:

- GNSO Principle D: “A set of technical criteria must be used for assessing a new gTLD registry applicant to minimise<sup>88</sup> the risk of harming the operational stability, security and global interoperability of the Internet.”<sup>125</sup>
- GNSO Principle E: “A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meet its obligations under the terms of ICANN’s registry agreement.”
- GNSO Recommendation 1:  
*ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.*
- GNSO Recommendation 7: “Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.”
- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”
- GNSO Recommendation 18: “If an applicant offers an IDN service, then ICANN’s IDN guidelines must be followed.”
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>126</sup>
- Applicant Guidebook, Section 2.2.3: Registry Services Review
- Applicant Guidebook, Section 2.3.3: Registry Services Extended Evaluation
- Applicant Guidebook, Section 2.4: Parties Involved in Evaluation

---

- ICANN Board New gTLD Program Committee Resolution 2013.08.13.NG02 (13 August 2013): : Dotless Domains<sup>127</sup>

## 2.8.3 Background

The AGB anticipated that Initial Evaluation (IE) (see Section 2.1: Initial and Extended Evaluation of this report) would take five months to complete, all IE results would be published at the conclusion of IE, and the Contracting process would commence at the end of IE. This would allow applicants that passed IE to move expeditiously toward signing an RA if there were no other issues that the application must resolve (i.e., contention resolution, dispute resolution).

The Registry Services evaluation was one of seven evaluation streams defined in the AGB. Its purpose was to evaluate each application’s proposed registry services “for any possible adverse impact on security or stability.”<sup>128</sup> The Registry Services evaluation was part of Initial Evaluation (IE) and eligible for Extended Evaluation (EE). The overall evaluation process was described in Module 2 of the AGB. The implementation of the evaluation process was performed in alignment with the AGB-defined processes, and has been described in further detail in Section 2.1: Initial and Extended Evaluation of this report.

As with all of the evaluation streams, independent third-party providers performed the review and evaluated each application against the criteria defined in the AGB. ICANN engaged Interisle Consulting Group as the Registry Services evaluation panel. (For more information, see Section 8.2: Service Provider Coordination of this report.) The Registry Services evaluation panel reviewed the five critical registry functions<sup>129</sup> and any services relating to these for each TLD for potential concerns to security or stability of the DNS.

The implementation of the evaluation process was performed in alignment with the processes defined in Module 2 of the AGB and the panel’s published process documentation.<sup>130</sup> In cases where the panel required additional clarification from the applicant, clarifying questions (CQs) were issued. Nine-hundred-seventy-five of 1,930 (51%) of applications received a CQ from the Registry Services Evaluation Panel during IE.

After the responses to CQs had been reviewed, in cases where the response was incomplete, ICANN performed Applicant Outreach to ensure that applicants had the opportunity to provide complete responses for the panel’s consideration. The panel presented its results to ICANN, and ICANN

---

<sup>127</sup> ICANN. (13 August 2013) Approved Resolutions | Meeting of the New gTLD Program Committee. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2013-08-13-en#1.a>

<sup>128</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04, Section 2.2.3: Registry Services Review. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>129</sup> The five critical registry functions are 1) DNS resolution for registered domain names, 2) Operation of Shared Registration System, 3) Operation of Registration Data Directory Services (Whois), 4) Registry data escrow deposits, and 5) Maintenance of a properly signed zone in accordance with DNSSEC requirements.

<sup>130</sup> Interisle Consulting Group. (7 June 2013). ICANN New gTLD Program Registry Services Initial Evaluation Process. Retrieved from <http://newgtlds.icann.org/en/program-status/evaluation-panels/registry-services-initial-process-07jun13-en.pdf>

---

reviewed the results to ensure consistency and alignment with the AGB before sharing results with the applicant and publishing them.

Ultimately, 1,802 of 1,930 applications passed the Registry Services evaluation during IE. Some applications were withdrawn before IE results were published, but all but two applications with published IE results passed IE. Of the two applications that were eligible for EE, both applications passed.

In addition to its primary purpose as an evaluation, the Registry Services evaluation also served as a means to collect a list of the applicant's proposed registry services for inclusion in the Registry Agreement.

## 2.8.4 Assessment

Section 2.2.3 of the AGB stated, "ICANN will review the applicant's proposed registry services for any possible adverse impact on security or stability." In Question 23 of the application, applicants were required to identify and describe their proposed implementation of the five critical registry functions and any services relating to these in their response to Question 23 of the application.

In addition to its primary purpose as an evaluation, the Registry Services portion of the application acted as a mechanism to collect the list of proposed registry services for insertion into Exhibit A of the RA.<sup>131</sup> The unstructured design of the application did not efficiently collect data for this purpose. As discussed in Section 1.1: Application Submission of this report, the application form was modeled after the AGB, and many of the questions did not have restrictions in the format beyond character limits and attachment size and file types. Question 23 solicited a textual description of the proposed TLD's registry services. In order to incorporate the response into Exhibit A of the RA, the language had to be converted into contractual language, which required a significant effort from ICANN. Further, applications often included descriptions of registry services in places other than the response to Question 23. The lack of consolidation within the application caused further inefficiencies in the evaluation of the proposed registry services, as well as in the process of incorporating them into Exhibit A of the RA. All applications were evaluated on an individual basis by priority number. While this design supported fairness, consistency, and predictability in process for applicants, it presented operational challenges.

The panel was required to accommodate prioritization numbers in the CQ process and IE results process, which created inefficiencies in defining the order to evaluate applications, redundancies for the panel when issuing CQs, redundancies for the applicants when responding to CQs, and limitations in the panel's ability to normalize results across an applicant's portfolio of applications before completing its evaluation. This is discussed in further detail in Section 1.2: Prioritization of this report.

---

<sup>131</sup> ICANN. Registry Agreement. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/agreement-approved-09jan14-en.pdf>

---

Ninety percent of applications shared one of 13 technical infrastructures. The application process was designed for the panel to communicate with the applicant, not with the RSP. This observation brought to light that the existing evaluation process did not consider a provider's scalability across the group of applications with which it had engaged. Due to the application-by-application nature of evaluation, the RSP's services for a particular TLD were evaluated, but the RSP was not evaluated across the universe of applications. For future rounds, the community may wish to consider evaluation of the RSP. This has been discussed further in Section 2.6: Technical and Operational Capability Evaluation of this report.

For those applications that proposed to provide IDN services, there were some challenges that affected the panel's evaluation of the IDN tables. The TLD application system (TAS) did not format the IDN tables submitted by the applicants in a machine-readable format, which was required for the panel to automate the validation of the tables. While the panel reviewed the applicant's proposed IDN policies, the panel did not validate the IDN tables provided by the applicants, and the review of IDN tables was performed during Pre-Delegation Testing (PDT) (see Section 5.2: Pre-Delegation Testing and Transition to IANA of this report). In the next round, it is probable that there will be additional tools available for the evaluation of IDNs. These tools should be leveraged in the evaluation and validation of IDN tables.

## 2.8.5 Conclusion

The Registry Services Evaluation was performed in line with the AGB. However, inefficiencies were observed in terms of how the data was captured in the application form. A more standardized format would better support efficiency in the process of incorporating registry services into the Registry Agreement. Additionally, observations from the implementation experience suggest that greater efficiency and effectiveness may be achievable through the implementation of a program to accredit registry service providers. This topic is discussed further in Section 2.6: Technical and Operational Capability Evaluation of this report.

In summary:

- 2.8.a** Update the process for collection of registry services information to better support both evaluation and contracting activities
- 2.8.b** Consider whether an alternate approach to Technical and Operational Capability evaluation would be worthwhile, and if so, how the evaluation of Registry Services could be incorporated into the approach
- 2.8.c** For future rounds, leverage the IDN tools currently under development

---

## Chapter 3: Objections Procedures

In its Final Report on the Introduction of New Generic Top-Level Domains, the GNSO recommended that standards be developed to protect certain rights and interests within the New gTLD Program (see Recommendations 2, 3, 6, and 20).<sup>132</sup> The GNSO also recommended that, “Dispute resolution and challenge processes must be established prior to the start of the process” (see Recommendation 12). In the GAC Principles regarding New gTLDs, Principle 3.3 stated, “If individual GAC members or other governments express formal concerns about any issues related to new gTLDs, the ICANN Board should fully consider those concerns and clearly explain how it will address them.”<sup>133</sup>

In support of the guidance from the GNSO and the GAC, Module 3 of the Applicant Guidebook defined two processes: the GAC Advice process and the Objections and Dispute Resolution process. Through the GAC Advice process, the GAC could provide advice on new gTLDs to the ICANN Board concerning specific applications. Through the Objections process, parties with standing had the opportunity to file formal objections with designated third-party dispute resolution providers on specific applications based on the following grounds: (i) String Confusion; (ii) Legal Rights; (iii) Limited Public Interest; and (iv) Community.

The GAC issued advice to the ICANN Board through multiple GAC Communiqués beginning with the 11 April 2013 Beijing Communiqué.<sup>134</sup> The advice that the GAC issued included advice on specific applications, for broad categories of (applied-for) strings, and for all applications. Section 3.1: GAC Advice of this report discusses the various GAC Advice and how the ICANN Board addressed the advice.

There were 263 formal objections filed across the four objection grounds on 205 new gTLD applications. Objections were considered by experts in a dispute resolution proceeding defined in the AGB and supplemented by the dispute resolution service providers’ own procedures. There were challenges in implementing some of the dispute resolution standards because the objection standards were new and untested concepts in this round of new gTLD applications. Section 3.2: Objections and Dispute Resolution of this report discusses the various objection grounds and standards as well as the dispute resolution process.

## 3.1 GAC Advice

### 3.1.1 Introduction

The GAC Advice process detailed in the Applicant Guidebook described how ICANN’s Governmental Advisory Committee (GAC) could provide the ICANN Board with Advice regarding new gTLDs that the GAC thought might be problematic. In advance of the issuance of GAC Advice, the GAC Early Warning process enabled members of the GAC to notify an applicant that its application was seen as potentially sensitive or problematic by one or more governments. This section of the Program Implementation Review report discusses the following aspects of GAC Advice:

- GAC Early Warning
- GAC Advice

### 3.1.2 Relevant Guidance

The following guidance is relevant to the topic of GAC Advice and will be discussed in further detail in Sections 3.1.3 and 3.1.4 of this report:

- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>135</sup>
- Applicant Guidebook, Section 3.1: GAC Advice on New gTLDs

### 3.1.3 Background

The ICANN Bylaws define several Advisory Committees that provide advice to the ICANN Board. The GAC is one of these committees.

The ICANN Bylaws, Article XI, state:<sup>145</sup>

*The Governmental Advisory Committee should consider and provide advice on the activities of ICANN as they relate to concerns of governments, particularly matters where there may be an interaction between ICANN’s policies and various laws and international agreements or where they may affect public policy issues.*

As an Advisory Committee, the GAC has a set of Operating Principles, which define GAC Advice as follows:<sup>146</sup>

#### *Principle 47*

*The GAC works on the basis of seeking consensus among its membership. Consistent with United Nations practice, consensus is understood to mean the practice of adopting decisions by general agreement in the absence of any formal objection. Where consensus is not possible, the Chair shall convey the full range of views expressed by members to the ICANN Board.*

<sup>141</sup> ICANN. (14 May 2014) Approved Resolution | Meeting of the New gTLD Program Committee. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2014-05-14-en#2.a>

<sup>142</sup> ICANN. (14 May 2014) Approved Resolution | Meeting of the New gTLD Program Committee. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2014-05-14-en#2.b>

<sup>143</sup> ICANN. (8 September 2014) Approved Resolution | Meeting of the New gTLD Program Committee. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2014-09-08-en#1.b>

<sup>144</sup> ICANN. (21 June 2015) Approved Resolution | Meeting of the New gTLD Program Committee. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2015-06-21-en#2.a>

<sup>145</sup> ICANN. (Amended 30 July 2014) Bylaws for Internet Corporation for Assigned Names and Numbers, Article XI: Advisory Committees. Retrieved from <https://www.icann.org/resources/pages/governance/bylaws-en#XI>

<sup>146</sup> ICANN Governmental Advisory Committee. (October 2011) Governmental Advisory Committee (GAC) - Operating Principles: Article XII – Provision of Advice to the ICANN Board. Retrieved from <https://gacweb.icann.org/display/gacweb/GAC+Operating+Principles#GACOperatingPrinciples-XII>

## Principle 48

*The GAC may deliver advice on any other matter within the functions and responsibilities of ICANN, at the request of the ICANN Board or on its own initiative. The ICANN Board shall consider any advice from the GAC prior to taking action.*

Within the context of the New gTLD Program, the AGB described the role of the GAC in issuing GAC Early Warning and GAC Advice.

The GAC Early Warning process enabled individual governments within the GAC to notify an applicant that its application was seen as potentially sensitive or problematic by one or more governments.<sup>147</sup> If an applicant received an Early Warning, the applicant could use this information to work with the concerned government(s) or could withdraw the application within 21 days of the issuance of the Early Warning for an 80% refund of the application fee.<sup>148</sup>

GAC Early Warnings were issued for 187 applications on 20 November 2012.<sup>149</sup> Two of the 187 applications that received GAC Early Warning withdrew their applications within 21 days of receiving GAC Early Warning and received the 80% refund.

The GAC Advice process was “intended to address applications that [were] identified by governments to be problematic, e.g., that potentially violate[d] national law or raise[d] sensitivities.”<sup>150</sup> The design of GAC Advice within the New gTLD Program supported the concept of GAC Advice, as defined in the ICANN Bylaws,<sup>151</sup> and the GAC Operating Principles by providing an opportunity for the GAC to issue advice on ICANN’s activities as they related to the concerns of governments.<sup>152</sup>

The GAC issued its first advice on new gTLD applications in its 11 April 2013 Beijing Communiqué to the ICANN Board. In addition to advice on specific applications affecting 23 applications, the Beijing Communiqué contained advice on broad categories of strings affecting 491 applications, as well as Advice on topics affecting all applications.<sup>153</sup> As of the publication date of this report, six additional communiqués have included further Advice on the new gTLDs.

## 3.1.4 Assessment

### 3.1.4.1 GAC EARLY WARNING

#### *Early Warning and Advice Correlation*

Section 1.1.2.4 of the AGB described the GAC Early Warning process as a potential indicator that an “application could be the subject of GAC Advice on New gTLDs.” Indeed, there was some correlation between Early Warnings and Advice, but not all applications that received Advice had received an Early Warning. While only 187 applications received Early Warnings, 517 applications were subject to GAC Advice. Over 300 applications that were subject to GAC Advice did not receive any Early Warning. Based on this data, if the intent of the Early Warning process was to provide applicants with predictability, that intent was achieved in only 38% of cases. Figure 3.1.i provides a summary of applications that received GAC Early Warning and GAC Advice.

*Figure 3.1.i: Applications with GAC Early Warning and GAC Advice*

#### *Standard Form*

Early Warnings were issued using a standard form, which included rationale and possible remediation steps from the government that issued the Early Warning. ICANN assisted the GAC in its development of the form. Each government provided rationale in the Early Warning, and sometimes included possible remediation steps to help applicants to act on the Early Warnings. Some applicants cited conversations with governments as a reason for requesting changes to their applications.<sup>154</sup>

GAC Advice was communicated to the ICANN Board through communiqués.

---

### 3.1.4.2 GAC ADVICE

#### *GAC Advice Issued*

Section 3.1 of the AGB described three possible forms of GAC Advice:

- I. The GAC advises ICANN that it is the consensus of the GAC that a particular application should not proceed. This will create a strong presumption for the ICANN Board that the application should not be approved.*
- II. The GAC advises ICANN that there are concerns about a particular application “dot-example.” The ICANN Board is expected to enter into a dialogue with the GAC to understand the scope of concerns. The ICANN Board is also expected to provide a rationale for its decision.*
- III. The GAC advises ICANN that an application should not proceed unless remediated. This will raise a strong presumption for the Board that the application should not proceed unless there is a remediation method available in the Guidebook (such as securing the approval of one or more governments), that is implemented by the applicant.*

All three possible forms of GAC Advice described in Section 3.1 of the AGB refer to GAC Advice issued on applications. The GAC Communiqués also included advice on categories of strings impacting several applications and on topics that impacted all applications (e.g., protection of IGO acronyms, protection of Red Cross/Red Crescent names).

Outside of the GAC Advice that impacted all applications, GAC Advice issued to-date has affected a total of 517 applications. Of this total, 26 applications received application-specific GAC Advice, and 491 were subjected to GAC Advice on broad categories of strings.

Of the 26 applications that received application-specific GAC Advice, the GAC issued advice according to Section 3.1.i of the AGB on six applications. The NGPC considered the advice in accordance with the AGB, which stated that such advice would “create a strong presumption for the ICANN Board that the application[s] should not be approved.” Two applications received GAC Advice according to Section 3.1.ii of the AGB. The ICANN Board also acted in accordance with the AGB regarding these two applications and entered into dialogue with the GAC to better understand the nature of the concerns. For the remaining 18 applications, the GAC requested additional time for further consideration or noted the concerns of specific governments. After the advice was issued, ICANN provided applicants with the opportunity to submit a response to the ICANN Board (in this case, the NGPC). The NGPC considered the advice and applicant responses, and then the NGPC addressed the advice on an application-by-application basis.

Table 3.1.i provides a summary of the 26 applications that received application-specific GAC Advice.

*Table 3.1.i: Summary of the 26 Applications that Received Application-Specific GAC Advice*

Type of Applications	Number of Applications
AGB Section 3.1 part I (consensus)	6
AGB Section 3.1 part II (expressed concerns)	2
AGB Section 3.1 part III (remediation suggested)	0
Other application-specific advice <sup>155</sup>	18
<b>Total</b>	<b>26</b>

In addition to the application-specific GAC Advice described in the AGB, the GAC’s Beijing Communiqué included safeguard advice applicable to broad categories of strings. Annex 1 of the Beijing Communiqué stated, “strings that are linked to regulated or professional sectors should operate in a way that is consistent with applicable laws.”<sup>156</sup> The GAC proposed specific safeguards that would apply to a broad category of strings related to “consumer protection, sensitive strings, and regulated markets.” The Annex listed specific strings, referred to as “Category 1” strings.

The GAC also provided advice relating to restricted registration policies referred to as “Category 2” advice in Annex 1 of the Beijing Communiqué. Part 1 of Category 2 advice stated that for strings mentioned under Category 1, “the registration restrictions should be appropriate for the types of risks associated with the TLD” and that “[t]he registry operator should administer access in these kinds of registries in a transparent way that does not give undue preference to any registrars or registrants, including itself, and shall not subject registrars or registrants to an undue disadvantage.”

Part 2 of Category 2 advice stated that, “For strings representing generic terms, exclusive registry access should serve a public interest goal.”<sup>157</sup> The Annex also included a list of strings that the GAC considered to be generic, where the applicant was proposing to provide exclusive registry access. These strings are referred to as “Category 2” strings.

There were a total of 491 applications and 212 strings specified in the GAC Category 1 and 2 lists. Figures 3.1.ii and 3.2.iii show the distribution of the applications and strings affected by GAC Category 1 and 2 Advice.

<sup>155</sup> In some instances, the GAC advised ICANN that it required additional time to finalize any potential GAC Advice.

<sup>156</sup> Governmental Advisory Committee. (11 April 2013) GAC Communiqué – Beijing, People’s Republic of China. Retrieved from <https://www.icann.org/en/system/files/correspondence/gac-to-board-11apr13-en.pdf>

<sup>157</sup> Governmental Advisory Committee. (11 April 2013) GAC Communiqué – Beijing, People’s Republic of China. Retrieved from <https://www.icann.org/en/system/files/correspondence/gac-to-board-18apr13-en.pdf>

Figure 3.1.ii: Distribution of the 491 Applications Affected By GAC Category 1 and 2 Advice

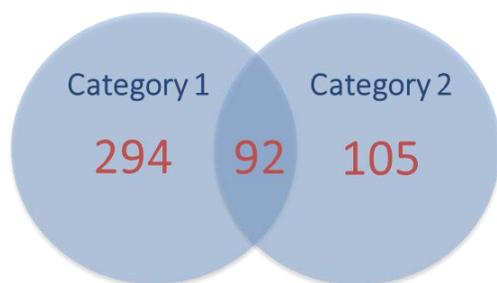

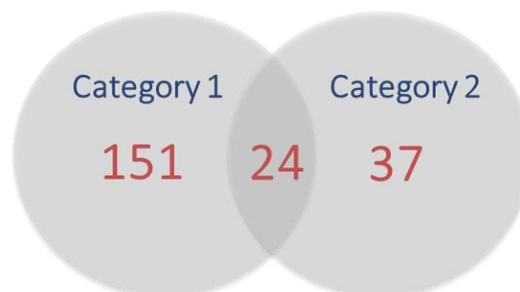

Figure 3.1.iii: Distribution of the 212 Strings Affected By GAC Category 1 and 2 Advice

### Impact on Applications

AGB Section 3.1 stated, “The receipt of GAC Advice [would] not toll the processing of any application (i.e., an application [would] not be suspended but [would] continue through the states of the application process).” However, GAC Operating Principle 48 stated: “The ICANN Board shall consider any advice from the GAC prior to taking action.”<sup>158</sup> In implementation, applications affected by application-specific and Category 1 and 2 GAC Advice were not allowed to proceed to the next step in the Program until the GAC Advice was addressed. This allowed the ICANN Board time to solicit public comment,<sup>159</sup> solicit applicant responses to GAC Advice,<sup>160</sup> and consider the comments and responses received. Further, it required time for the ICANN Board to discuss the advice with the GAC and consult with the community as appropriate on implementation plans to address the advice. Finally, it prevented ICANN and the applicants from making commitments such as resolving contention or executing a Registry Agreement (RA) based on unknown circumstances.

### Addressing GAC Advice

The way ICANN addressed application-specific GAC Advice was discussed above. With regards to GAC Category 1 Advice, ICANN implemented the advice through the use of public interest commitments (PICs). The PICs concept was originally developed to address GAC Advice in the Toronto Communiqué,<sup>161</sup> as a mechanism for applicants to elect to transform application statements into binding contractual commitments. The implementation of GAC Category 1 Advice leveraged the PICs concept by requiring the incorporation of specific safeguards into the PIC Specification of the RAs of applications subject to GAC Category 1 Advice.<sup>162</sup> The ICANN Board consulted with the community on

---

the Safeguard Advice via a public comment period,<sup>163</sup> shared the proposed implementation framework with the GAC,<sup>164</sup> and ultimately, the implementation framework<sup>165</sup> was adopted by the NGPC on 5 February 2014.<sup>166</sup> The implementation framework classified each Category 1 string as requiring one of three levels of safeguards:

- Regulated sectors/open entry requirements in multiple jurisdictions (273 applications)
- Highly regulated sectors/closed entry requirements in multiple jurisdictions (101 applications)
- Special safeguards required (12 applications)

The adoption of the GAC Category 1 implementation framework provided predictability and consistency in terms of how Category 1 applications were processed and allowed ICANN to invite applications that previously were not allowed to move forward to the next step of the Program because of the pending GAC Advice to begin the contracting process (see Section 5.1: Contracting of this report).

To address Part 1 of GAC Category 2 Advice, on 25 June 2013, the NGPC directed staff to update the RA to include Specification 11, Section 3(d), which stated, “Registry Operator will operate the TLD in a transparent manner consistent with general principles of openness and non-discrimination by establishing, publishing, and adhering to clear registration policies.”<sup>167</sup>

With regard to Part 2 GAC Category 2 Advice, the NGPC passed a resolution directing staff how to process applications for proposed exclusive generic TLDs on 21 June 2015.<sup>168</sup> However, in the interest of allowing affected applications to move forward in the application process towards contention resolution and contracting before the NGPC had determined how to process applications for proposed exclusive generic TLDs, on 28 September 2013, the NGPC passed a resolution directing staff “to move forward with the contracting process for applicants for strings identified in the Category 2 Safeguard Advice that are prepared to enter into the Registry Agreement as approved.”<sup>169</sup> Section 3.d of Specification 11 of the approved Registry Agreement stated that “Registry Operator of a ‘Generic String’ TLD may not impose eligibility criteria for registering names in the TLD that limit registrations exclusively to a single person or entity and/or that person’s or entity’s ‘Affiliates’ (as defined in Section 2.9(c) of the Registry Agreement).”<sup>170</sup> The adoption of this resolution by the NGPC allowed the

---

majority of the applications subject to GAC Category 2 Advice to move forward in the application process towards contention resolution or contracting.

On 21 June 2015, the NGPC passed a resolution requesting that the “GNSO include the issue of exclusive registry access for generic strings serving a public interest goal as part of the policy work it is planning to initiate on subsequent rounds of the New gTLD Program.”<sup>171</sup> Further, the resolution directed staff to “proceed with initiating other New gTLD Program processes” for the remaining applications that proposed to provide exclusive registry access for a generic string. Exclusive generic applicants for non-contended strings or prevailing in contention resolution were given the option to submit a change request to no longer be exclusive generic TLDs, to defer their applications to the next application round of the New gTLD Program, or to withdraw their applications.

Advice on categories of strings was not contemplated by the AGB, and it presented challenges in implementation. The unanticipated form of GAC Advice and the issues that were raised were the subject of multiple conversations between the ICANN Board and the community. Ultimately, changes were made to the New gTLD Program and to the Registry Agreement (see Section 5.1: Contracting of this report), reducing the level of predictability available to applicants. It should be noted that the subject of public interest guidance was identified by the ICANN Board as a topic that may be appropriate for discussion by the GNSO.<sup>172</sup>

### 3.1.5 Conclusion

Module 3 of the AGB described three forms that GAC Advice on new gTLD applications might take. For the advice that came in a form contemplated by the AGB, ICANN implemented the advice in a manner consistent with the AGB. However, the advice that impacted the vast majority of applications subject to GAC Advice did not take one of these forms. As a result, ICANN required a significant amount of time to implement the advice, as implementation involved public comment and community discussion, applicant responses to GAC Advice, and NGPC consideration of the advice. Whenever possible, ICANN developed a framework to move applications forward before the GAC Advice had been resolved (e.g., in the case of GAC Category 2 Advice), but as over 500 applications were subject to GAC Advice (excluding GAC Advice applicable to all applications) many applications were still delayed. For future rounds, engagement with the GAC should be continued in order to ensure that its input is incorporated into relevant processes as early as possible.

In summary:

**3.1.a** Continue engagement with the GAC during the review process and the development of future procedures to ensure that its input is incorporated into relevant processes as early as possible

## 3.2 Objections and Dispute Resolution

### 3.2.1 Introduction

The Objections and Dispute Resolution process provided an opportunity for parties with standing to have their concerns considered by an expert or panel of experts. Objections could be filed on four defined grounds (Legal Rights, String Confusion, Community, and Limited Public Interest), each subject to their own standards. This section of the Program Implementation Review report discusses the following aspects of the Objection and Dispute Resolution process:

- Objections Grounds and Standards
- Management of Dispute Resolution Service Providers
- Objections Process
- Review Mechanism
- Independent Objector

### 3.2.2 Relevant Guidance

The following guidance is relevant to the topic of Objections and Dispute Resolution and will be discussed in further detail in Sections 3.2.3 and 3.2.4 of this report:

- GNSO Principle G: “The string evaluation process must not infringe the applicant's freedom of expression rights that are protected under internationally recognized principles of law.”<sup>173</sup>
- GNSO Recommendation 2: “Strings must not be confusingly similar to an existing top-level domain or a Reserved Name.”
- GNSO Recommendation 3: “Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law.”
- GNSO Recommendation 6: “Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law.”
- GNSO Recommendation 12: “Dispute resolution and challenge processes must be established prior to the start of the process.”
- GNSO Recommendation 20: “An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.”

- GNSO Implementation Guideline H\*:

*Where an applicant lays any claim that the TLD is intended to support a particular community such as a sponsored TLD, or any other TLD intended for a specified community, that claim will be taken on trust with the following exceptions:*

- (i) the claim relates to a string that is also subject to another application and the claim to support a community is being used to gain priority for the application; and*
- (ii) a formal objection process is initiated.*

*Under these exceptions, Staff Evaluators will devise criteria and procedures to investigate the claim.*

*Under exception (ii), an expert panel will apply the process, guidelines, and definitions set forth in IG P.*

- GNSO Implementation Guideline H: “External dispute providers will give decisions on objections.”
- GNSO Implementation Guideline P: This Implementation Guideline provided additional information on the process, definitions, and guidelines relating to GNSO Recommendation 20 on Community Objections.
- GNSO Implementation Guideline R: “Once formal objections or disputes are accepted for review there will be a cooling off period to allow parties to resolve the dispute or objection before review by the panel is initiated.”

---

New Generic Top-Level Domains provided policy guidance which led to the development of the four objection grounds defined in the AGB:

- The Legal Rights Objection ground was developed in support of GNSO Recommendation 3: “Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law.”
- The String Confusion Objection ground was developed in support of GNSO Recommendation 2: “Strings must not be confusingly similar to an existing top-level domain or a reserved name.”
- The Community Objection ground was developed in support of GNSO Recommendation 20: “An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.”
- The Limited Public Interest Objection ground was developed in support of GNSO Recommendation 6: “Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law.”

These objection grounds provided safeguards for parties with standing to have their concerns considered by an expert or a panel of experts. The objection grounds were each subject to their own standing requirements and standards, which were developed and finalized as part of the AGB development process.

The dispute resolution proceedings were administered by three dispute resolution service providers (DRSPs), which were selected through a public call for expressions of interest:<sup>178</sup>

- The International Centre for Dispute Resolution (ICDR) administered String Confusion Objections
- The Arbitration and Mediation Center of the World Intellectual Property Organization (WIPO) administered Legal Rights Objections
- The International Centre for Expertise of the International Chamber of Commerce (ICC) administered Community Objections and Limited Public Interest Objections

For Legal Rights Objections, Community Objections, and Limited Public Interest Objections, the loss of a dispute resolution proceeding resulted in an application no longer proceeding in the Program. The loss of a dispute resolution proceeding for a String Confusion Objection filed by the registry operator of an existing TLD also resulted in an application no longer proceeding in the Program. For String Confusion Objections filed by another new gTLD applicant, the loss of a dispute resolution proceeding resulted in placement into string contention with another application.

The AGB provided for an Independent Objector, who would file objections and “[act] solely in the best interests of the public who use the global internet.” The Independent Objector “[could] file objections against ‘highly objectionable’ gTLD applications to which no objection [had] been

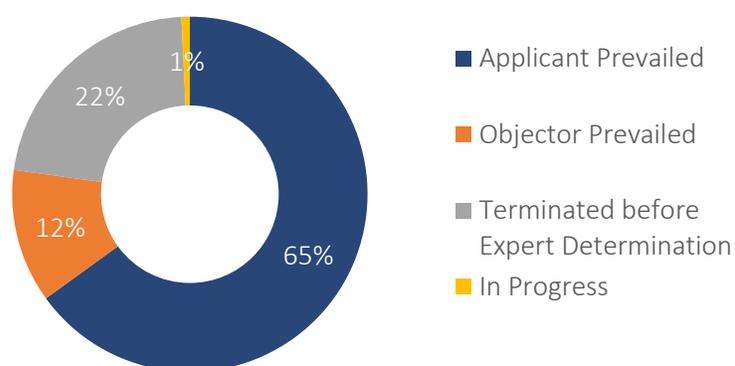

---

<sup>178</sup> ICANN (2007 December 21). Announcement: ICANN Calls for Expressions of Interest from Potential Dispute Resolution Service Providers for the New gTLD Program. Retrieved from: <https://www.icann.org/news/announcement-2007-12-21-en>.

filed.”<sup>179</sup> Per Section 3.2.5 of the AGB, in order for the Independent Objector to file an objection, there had to be at least one comment in opposition to the application made in the public sphere.” The concept of the Independent Objector was introduced in draft version 2 of the AGB,<sup>180</sup> and served to prevent “obviously objectionable” applications from proceeding through the Program without objection.<sup>181</sup> The Independent Objector was selected through a public RFI process.<sup>182</sup> Alain Pellet, a professor and practitioner of law, was announced as the Independent Objector on 14 May 2012.<sup>183</sup>

The Objection filing window opened on 13 June 2012 and closed on 13 March 2013. A total of 263 objections were filed. As of 31 July 2015, 261 objections have been completed, and two are in progress. Figure 3.2.i provides a summary of objection outcome.

Figure 3.2.i: Overall Objection Outcome

## 3.2.4 Assessment

### 3.2.4.1 OBJECTIONS GROUNDS AND STANDARDS

The AGB defined four objection grounds (Legal Rights, String Confusion, Community, and Limited Public Interest), each with their own standing requirements and principles. The DRSPs administered the dispute resolution proceedings using the principles defined in the AGB.

<sup>179</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04, Section 3.2.5: Independent Objector. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>182</sup> ICANN. (21 November 2011) Announcement: New gTLD Program: ICANN Seeks Independent Objector. Retrieved from: <https://www.icann.org/news/announcement-3-2011-11-21-en>

<sup>183</sup> ICANN. (14 May 2012) Announcement: Independent Objector for New gTLD Program Selected. Retrieved from <https://www.icann.org/news/announcement-2012-05-14-en>

### Legal Rights Objections

AGB Section 3.2.1 defined the standard for Legal Rights Objections as, “The applied-for gTLD string infringe[d] the existing legal rights of the objector.” The standards for Legal Rights Objections were drawn from real-world disputes and were based on existing trademark and intellectual property laws. Figure 3.2.ii provides a summary of Legal Rights Objections outcome.

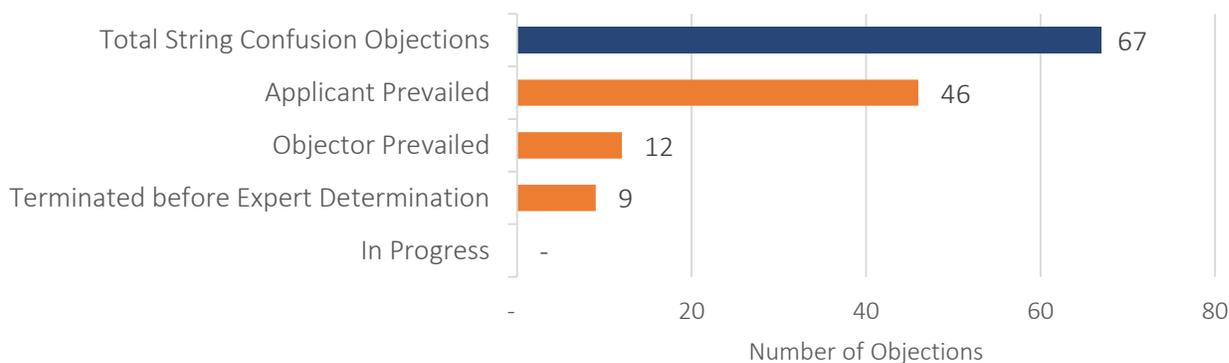

Figure 3.2.ii: Legal Rights Objections Outcomes

### String Confusion Objections

AGB Section 3.2.1 defined the standard for String Confusion Objections as, “The applied-for gTLD string [was] confusingly similar to an existing TLD or to another applied-for gTLD string in the same round of applications.” This standard was developed to capture the intention of avoiding user confusion caused by delegation of similar TLD strings. Figure 3.2.iii provides a summary of String Confusion objection outcome.

Figure 3.2.iii: String Confusion Objection Outcomes

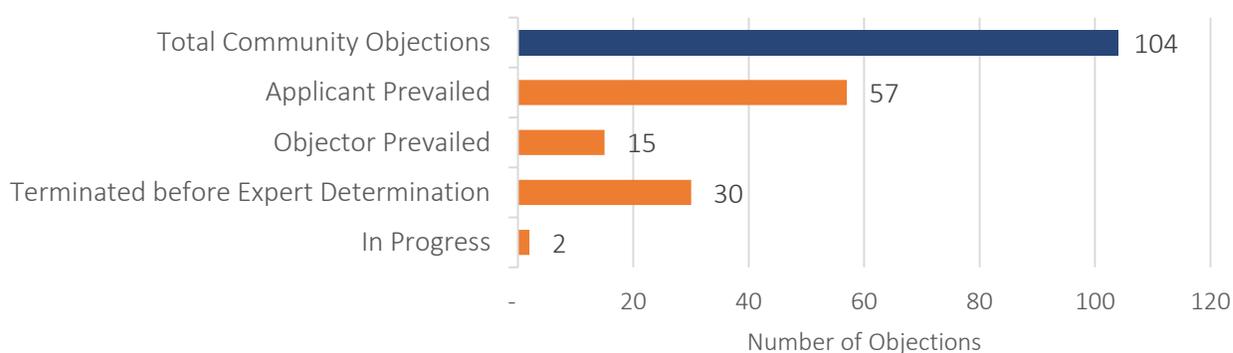

The String Confusion Objections process in this application round provided real-world examples of String Confusion Objections and outcomes. These examples could be used to aid the development of additional standards for String Confusion Objections and the String Similarity review as applicable in future rounds. (It should be noted that during this application round, the standards for String

Confusion Objections and the String Similarity review were different. Whereas the String Similarity review only assessed visual similarity, String Confusion Objections could be filed based on any type of similarity, including visual, aural, or similarity of meaning. For more information on the String Similarity review, see Section 2.3: String Similarity Evaluation of this report.)

### Community Objections

AGB Section 3.2.1 defined the standard for Community Objections as “substantial opposition to the gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.” Figure 3.2.iv provides a summary of Community Objection outcomes.

Figure 3.2.iv: Community Objections Outcomes

The AGB provided for two distinct processes that related to the concept of communities: Community Objections and Community Priority Evaluation (CPE) (see Section 4.1: Community Priority Evaluation of this report). While both processes related to communities, the processes served different purposes (a community application that prevailed in CPE eliminated all directly contending standard applications, while a Community Objection could eliminate a single application). Accordingly, the standards used for consideration of applications in Community Objections and CPE were different. The subject of community considerations has been identified by the ICANN Board as a topic that may be appropriate for discussion by the GNSO.<sup>184</sup>

### Limited Public Interest Objections

AGB Section 3.2.1 defined the standard for Limited Public Interest Objections as, “[. . .] the applied-for gTLD string [was] contrary to generally accepted legal norms of morality and public order that [were] recognized under principles of international law.”

In relation to the standing requirements for the other grounds, the standing requirements for Limited Public Interest Objections were very inclusive. Anyone could file a Limited Public Interest Objection.

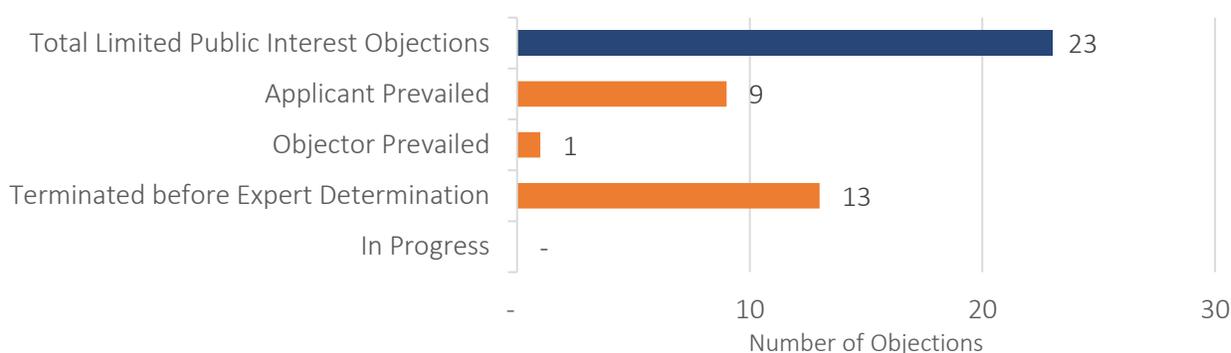

<sup>184</sup> ICANN. (17 November 2015) Annex A to Resolutions 1014.11.17.10 – 2014.11.17.12. Retrieved from <https://www.icann.org/en/system/files/files/resolutions-annex-a-17nov14-en.pdf>

To avoid abuse of this objection grounds due to its inclusive nature, Limited Public Interest Objections were subject to a “quick look” procedure. AGB Section 3.2.2.3 stated,

*Anyone may file a Limited Public Interest Objection. Due to the inclusive standing base, however, objectors are subject to a “quick look” procedure designed to identify and eliminate frivolous and/or abusive objections. An objection found to be manifestly unfounded and/or an abuse of the right to object may be dismissed at any time.*

Despite the inclusive standing base, of the four objection grounds, the fewest Limited Public Interest Objections were filed. Figure 3.2.v provides a summary of Limited Public Interest Objection outcomes.

Figure 3.2.v: Limited Public Interest Objections Outcomes

The objection and dispute resolution processes were complex and previously untested. This round provided real-world examples of objections and determinations, so there is a stronger basis on which to develop the standards and procedures for future rounds. Additionally, concerns from both objectors and objected-to applicants that were raised through ICANN’s Accountability Mechanisms<sup>185</sup> should also be reviewed to inform any development work for the next round. Accountability Mechanisms were filed relating to objections under all of the objection grounds. Table 3.2.i provides a summary of ICANN Accountability Mechanisms filed by objection ground as of 31 July 2015.

Table 3.2.i ICANN Accountability Mechanisms Filed by Objection Ground

Ground	Approximate # of Related Accountability Mechanisms Filed
Legal Rights	8
String Confusion	10
Community	47
Limited Public Interest	3

<sup>185</sup> ICANN. (Amended 30 July 2014) Bylaws for Internet Corporation for Assigned Names and, Article IV: Accountability and Review. Retrieved from <https://www.icann.org/resources/pages/governance/bylaws-en/#IV>

### 3.2.4.2 MANAGEMENT OF DISPUTE RESOLUTION SERVICE PROVIDERS (DRSPS)

The dispute resolution process as included in the AGB is an independent process administered by dispute resolution service providers. These DRSPs were selected through a public call for expressions of interest<sup>186</sup> before the AGB was finalized, so that ICANN and the DRSPs could work together to finalize the guidelines and processes. Each of the DRSPs selected by ICANN was a globally recognized firm with experience in dispute resolution. See Section 8.2: Service Provider Coordination of this report for more information on these DRSPs.

Recognizing that all of the selected DRSPs are world-renowned experts in the field of dispute resolution, and to support the intent to maintain independence in the dispute resolution process, ICANN did not attempt to direct or provide the DRSPs with interpretive guidance that might unduly influence the outcomes. However, ICANN received comments from the community regarding the areas of expertise of the panelists and suggestions that the panelists lacked training on the objection standards.<sup>187</sup> Given the untested nature of the standards of the objection grounds, ICANN may wish to provide training for the DRSPs in the next round to ensure that all expert panelists have a consistent baseline understanding of the relevant objection grounds.

As provided for by the AGB,<sup>188</sup> each Dispute Resolution Service Provider (DRSP) supplemented the AGB with its own respective procedures, which were published on the various DRSPs' websites.<sup>189,190,191</sup> ICANN received many questions from applicants regarding procedures that are published on the DRSPs' websites, potentially due to difficulties in finding this information on each of the DRSPs' websites or of being unsure of the relevant source for particular information. Examples of the types of questions received included fees and refunds, expert panelist selection criteria and process, and filing deadlines.

Although the DRSPs and ICANN published fee information in advance of the objection filing window,<sup>192</sup> during the window, ICANN received questions about fees and refund amounts, feedback that fee information was not easily accessible, and in some cases, feedback that the fees charged by the DRSPs were high. To address these areas of interest, ICANN hosted a webinar<sup>193</sup> to provide clarification on the DRSPs' processes, procedures, and fees. However, some of these questions might

---

have been avoided or addressed earlier in the process if ICANN had provided centralized information from all of the DRSPs about the procedures that each would follow with respect to refunds and in calculating estimated fees for those objection proceedings based on hourly rates, rather than fixed fees. Additionally, in regards to the feedback received about high fees, it should be noted that quality and expertise of the expert panelists were major factors in the selection of the DRSPs, which correlated to the amount of fees charged by the DRSPs.

For each objection filed, the expert selection process was managed by the DRSP administering the case, which used its established procedures and criteria to do so. For each case, the DRSPs selected experts in the field of dispute resolution who understood the applicable laws and how to apply them in dispute cases. These experts selected were also experienced in considering arguments presented by two sides and in making determinations based on the applicable laws and the arguments presented. Regarding expert panelist selection criteria and process, ICANN received community comments citing lack of transparency in the expert panelist selection process and in the experts' qualifications as they related to the dispute resolution proceedings.<sup>194</sup> To provide greater transparency in the process in future rounds, ICANN could ask the DRSPs to provide more information on their selection processes before Objections are filed.

Regarding filing deadlines, there were at least six instances where the outcome of an objection was impacted by the objector or applicant missing the filing deadline by several minutes.<sup>195</sup> The AGB defined precise deadlines for filing and responding to objections. Soon after the close of the objections filing window, the DRSPs agreed to provide a five-minute grace period for objection submissions. Even with this grace period, applicants/objectors were in some cases dissatisfied with the decisions made by the DRSPs in strictly adhering to the AGB-defined deadlines. Some applicants/objectors filed complaints with the ICANN Ombudsman, who reviewed the complaints and made a formal recommendation to the NGPC. The NGPC provided guidance to the DRSPs and encouraged them to use their discretion on whether to grant extensions.<sup>196</sup>

*Resolved (2013.07.13.NG04), in the interests of fairness and reasonableness, notwithstanding the deadlines set out in the Applicant Guidebook, in the future, the DRSPs are permitted and encouraged to use their discretion, in light of the facts and circumstances of each matter, and in cases where it is shown that the affected party is making a good faith effort to comply with the deadlines, as to whether to grant extensions, or deviate from the deadlines set forth in the Applicant Guidebook.*

In light of the observations made during implementation and the NGPC's 13 July 2013 resolution, the community may wish to consider whether such discretion should be accounted for in the standard process. If discretion were permitted, it would be beneficial for the DRSPs to notify ICANN of deviations from the standard process, and for ICANN to discuss such cases with all of the DRSPs to ensure that all parties are treated consistently across providers.

### 3.2.4.3 OBJECTIONS PROCESS

ICANN's implementation of the Objection and Dispute Resolution processes largely aligned to the processes defined in the AGB.

#### *Timeline*

One area where implementation was not in alignment with the AGB was in terms of the timeline. The AGB anticipated that the objection filing window would last for approximately seven months, and that “The objection filing period will close following the end of the Initial Evaluation period [ . . . ], with a two-week window of time between the posting of the Initial Evaluation results and the close of the objection filing period.”<sup>197</sup>

In implementation, the objection-filing window opened on 13 June 2012 and closed on 13 March 2013. This objection window of nine months exceeded the seven-month window called for in the AGB. Further, it did not provide for the two-week window of time between the posting of the IE results (which occurred on 22 March 2013) and the close of the objection filing period. While this did not align with the AGB, the AGB did not account for prioritization (see Section 1.2: Prioritization of this report) and the impact of a longer IE period on objection filing. Extending the objection filing timeframe by six additional months to beyond the completion of IE would not have supported certainty and predictability for applicants. While the first IE results were not published until 22 March 2013, the results of the String Similarity review and the publication of contention sets occurred on 26 February 2013. Ultimately, the objection filing window was extended to 13 March 2015, which allowed for a two-week period after string contention sets were published prior to the close of the objection window for concerned parties to decide whether to file String Confusion Objections.

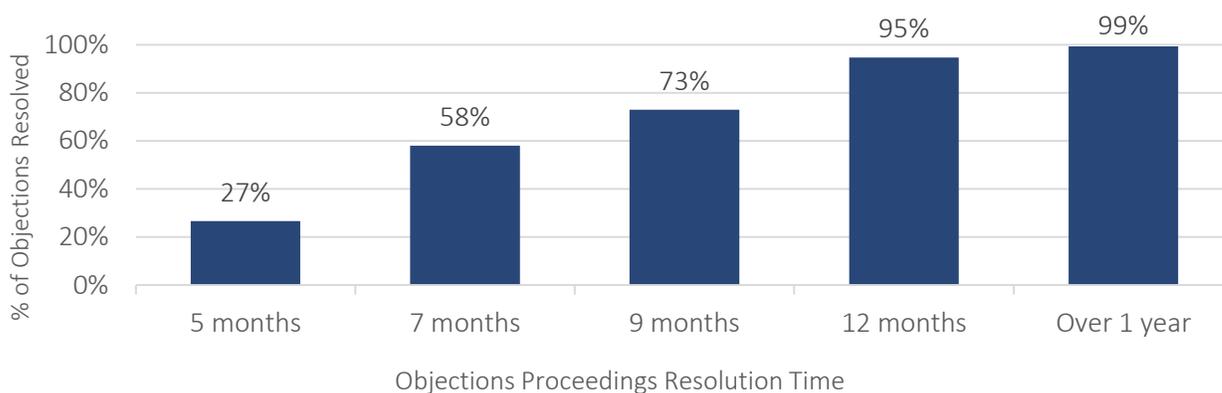

The timeline for objections to be considered and processed was also longer than contemplated by the AGB. The AGB estimated that “[d]ispute resolution proceedings, where applicable [were] expected to be completed for all applications within approximately a 5-month time frame.”<sup>198</sup> As of 31 July 2015, 28 months after the close of the objections filing window, two objections are still pending. Over a quarter of the objections completed within five months (AGB timeline). After 12 months, 95% were complete (See Figure 3.2.vi).

---

<sup>197</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04, Section 1.1.2.6: Objection Filing. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>198</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04, Section 1.1.2.9: Dispute Resolution. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

Figure 3.2.vi: Objection Proceedings Completed (Cumulative)

The delays to the dispute resolution proceedings have had both operational causes (e.g., volume of objections filed and the DRSPs' processes) and causes due to the parties (e.g., negotiation and requesting stays).

### Consolidation

The AGB provided that consolidation of dispute resolution cases could occur, that is, individual objections could be considered by the same expert and processed at the same time. After the DRSPs had received all objections, they could elect to consolidate certain objections (e.g., multiple objections filed against the same application on the same grounds). Section 3.4.2 of the AGB stated, "ICANN [. . .] strongly encourage[s] all of the DRSPs to consolidate matters whenever practicable," but it did not require consolidation. In this application round, the DRSP, the Panel, or the parties could suggest consolidation, but per the DRSPs' procedures, the parties had to agree in order for the cases to be consolidated. In some cases, a party may not have wished to consolidate objections, due to reasons of confidentiality or due to the specific arguments presented in their case.

In at least one instance, the parties decided to not consolidate, and the outcomes to the objections were different. ICANN received comments from the community on consolidation,<sup>199,200</sup> and questioned whether consolidation could have prevented perceived conflicting determinations.<sup>201</sup> Mandatory consolidation of cases might increase efficiency by reducing the amount of administrative work for the DRSPs, costs for the parties, and the overall objections timeline. However, if consolidation were required, criteria would have to be defined for which cases are/are not consolidated, and consolidation might not be appropriate in all cases.

<sup>201</sup> ICANN. (28 September 2013). ICANN New gTLD Program Committee Paper No. 2013.09.28.2c. Retrieved from <https://www.icann.org/en/system/files/bm/briefing-materials-1-2-28sep13-en.pdf>

## Conditions

Once the Expert Panel had reached its determination, the DRSPs issued the determination directly to the parties (i.e., applicant and objector). The DRSPs also shared the determination with ICANN. ICANN accepted the determinations in that ICANN published them to the New gTLD microsite,<sup>202</sup> and processed the applications accordingly by permitting them to move forward in the application process, updating the contention set if appropriate, or updating the application status. ICANN observed that there were instances where panelists included conditions or proposed remedies in their expert determinations.<sup>203,204</sup> The AGB did not contemplate such conditions and did not provide for these conditions or remedies to be considered before ICANN accepted the determinations. The community may wish to consider whether an additional opportunity for discussion of these conditions would be beneficial to the parties.

### 3.2.4.4 REVIEW MECHANISM

After the expert panel reached a determination, this determination was shared with the parties and then with ICANN. ICANN accepted the determination and acted on the determination as appropriate (i.e., allowed the application to proceed, updated the application status, or updated the contention set). The AGB did not provide for a process by which ICANN or any other body could conduct a substantive review of an expert panelist's determination. ICANN received comments from the community about the lack of an appeal mechanism in the Objections process.<sup>205</sup> Some parties chose to invoke ICANN Accountability Mechanisms<sup>206</sup> to have their cases considered by the ICANN Board or ICANN Ombudsman. While the ICANN Accountability Mechanisms provided parties with an opportunity to challenge staff or board action or inaction in terms of procedure, these are procedures broadly applicable to ICANN's accountability in its work, and were not designed to provide an opportunity for the merits of an objections case to be reviewed. However, two of the Accountability Mechanisms invoked<sup>207,208</sup> led to the NGPC's adoption of a Final Review Mechanism for a few limited objections.<sup>209</sup>

<sup>209</sup> ICANN. (12 October 2014) ICANN Board New gTLD Program Committee Resolution 2014.10.12.NG02 – 2014.10.12.NG03: Perceived Inconsistent String Confusion Objection Expert Determinations. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2014-10-12-en#2.b>

For these particular String Confusion Objections, the NGPC approved a review mechanism for two specific “perceived inconsistent” expert determinations, and suggested that the community consider whether a review process should be included in the next round. “[. . .] it is recommended that the development of rules and processes for future rounds of the New gTLD Program (to be developed through the multi-stakeholder process) should explore whether there is a need for a formal review process with respect to Expert Determinations.”<sup>210</sup>

### 3.2.4.5 INDEPENDENT OBJECTOR (IO)

The AGB called for an Independent Objector (IO), who would “not act on behalf of any particular persons or entities, but [would act] solely in the best interests of the public who use the global Internet.” The IO had standing to file on the grounds of Limited Public Interest and Community. Additionally, “Absent extraordinary circumstances, the IO [was] not permitted to file an objection to an application where an objection [had] already been filed on the same ground.”<sup>211</sup> Table 3.2.ii provides a summary of objections filed by the IO.

*Table 3.2.ii: Independent Objector’s Objections*

Total Objections Filed by IO and Admitted	23 <sup>212</sup>
Applications objected to by IO	19
Community Objections Filed by IO and Admitted	12
Limited Public Interest Objections Filed by IO and Admitted	11
Objections where IO Prevailed	5

The implementation of the IO’s processes did not align with the AGB in all cases, as the IO did not withdraw his objections in all cases when another objection to the same application on the same grounds was filed. In the context of the Objections and Dispute Resolution process, “grounds” refer to the four defined objection types (i.e., Limited Public Interest, Community, Legal Rights, and String Confusion), not to the arguments made within a specific objection.

The IO was subject to the same timeline as all objectors. The community may wish to consider providing the IO with an extended timeline, to allow him/her time to review the landscape of the objections submitted before making final decisions regarding filing of his/her objections.

Public comments were a consideration for the IO in filing objections. AGB Section 3.2.5 stated, “[. . .] the IO shall not object to an application unless at least one comment in opposition to the application is made in the public sphere.” However, in some instances it was unclear whether a comment made in the Application Comment Forum (see Section 1.5: Application Comments of this report) was

<sup>210</sup>ICANN. (12 October 2014) ICANN Board New gTLD Program Committee Resolution 2014.10.12.NG02 – 2014.10.12.NG03: Rationale for Resolutions 2014.10.12.NG02 – 2014.10.12.NG03. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2014-10-12-en#2.b.rationale>

<sup>211</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04, Section 3.2.4: Independent Objector. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>212</sup> The IO filed 24 objections, but one of the objected-to applications withdrew before ICANN published the Dispute Announcement, so the Objection was not admitted as an Objection.

intended to object to the string/application or to be informational in nature.<sup>213</sup> The community may wish to provide additional clarification on what should be considered as a “comment in opposition.” Consideration should be taken to determine whether the IO should be required to cite the comments on which the objection is based, and whether verification of these comments should be included in the process.

## 3.2.5 Conclusion

The objection and dispute resolution processes served their intended purpose, “External dispute providers will give decisions on objections.”<sup>214</sup> ICANN received comments from the community about the lack of an appeal mechanism in the Objections process.<sup>215</sup> In the absence of an appeal mechanism in the Objections process, some parties chose to invoke ICANN Accountability Mechanisms<sup>216</sup> to have their cases considered by the ICANN Board or ICANN Ombudsman. Two of the Accountability Mechanisms invoked<sup>217,218</sup> led to the NGPC’s adoption of a Final Review Mechanism for a few limited objections.<sup>219</sup> Consideration should be given to whether the Final Review Mechanism procedures utilized in this round or other review mechanisms should be made available in future rounds.

The intended role of the IO was to file Limited Public Interest and Community Objections in the interests of the public who use the global Internet. While the IO did act in this capacity, there are opportunities for improvement in administering the IO processes (e.g., withdrawal of the IO’s objection if another objection to the same application on the same ground was filed and how comments made in the public sphere were considered prior to the filing of an objection).

In summary:

**3.2.a** Explore a potential review mechanism for the next round

**3.2.b** Consider opportunities for improvement in administering the IO processes (e.g., withdrawal of IO objection if another objection to the same application on the same ground was filed, how comments made in the public sphere were considered prior to the filing of an objection)

## Chapter 4: Contention Resolution

Contention sets were groups of two or more applications that have been deemed confusingly similar to one another. The Applicant Guidebook (AGB) specified two methods for placing applications into contention sets. The first was based on the review conducted by the String Similarity panel during Initial Evaluation. The String Similarity panel created contention sets of applications that had applied for the same string, had applied for a potential IDN variant of another applied-for string, or had identified two or more strings as confusingly similar to one another. The panel identified two non-exact match contentions sets, two IDN Variant Sets, and 230 exact match contention sets—for a total of 234 contention sets composed of 754 applications. The second way an application could be placed into contention with another application was through the String Confusion Objection process, whereby an applicant could object to another application on the grounds that the two strings were confusingly similar to one another. After the String Confusion Objection process, there were 233 contention sets composed of 771 applications (some contention sets were combined).

In cases where an application had been placed into a contention set, the AGB encouraged applicants to resolve contention among themselves.<sup>220</sup> In the absence of resolution by the contending applicants, string contention cases were resolved either through Community Priority Evaluation (CPE) (if a self-designated community applicant had elected it<sup>221</sup>) or through an auction.

Table 4.i provides a breakdown of total contention sets as well as a breakdown of how sets were resolved (i.e., CPE, Auction, or Self-Resolution) as of 31 July 2015. The first column (“Contention Sets Identified by the String Similarity Panel”) refers to the entire population of contention sets resulting from the String Similarity review. As mentioned, each applicant was eligible to file a String Confusion Objection to contest an absence of contention where expected. The second column refers to the new population of contention sets after the conclusion of String Confusion Objections (i.e., two sets were combined to reduce the number of contention sets from 234 to 233). Of the 19 sets that used CPE as a contention resolution mechanism, five applications prevailed.<sup>222</sup>

---

<sup>220</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04, Section 1.1.2.10: String Contention. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>221</sup> An application could only be considered for Community Priority Evaluation (CPE) if the applicant designated the application as a community application at the time of application submission. Upon becoming eligible for CPE, discussed in the paper below, a self-designated community was also given the choice to elect to proceed through CPE.

<sup>222</sup> As of 31 July 2015, because of ICANN Accountability Mechanisms, explained later in this paper, only one set has been resolved via CPE (.OSAKA). Other applications have prevailed in CPE, but the sets are not yet resolved.

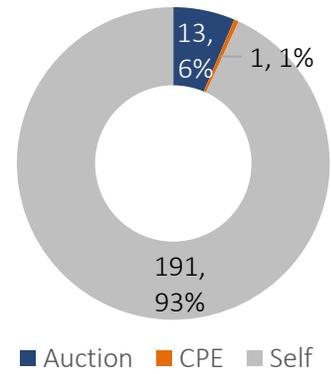

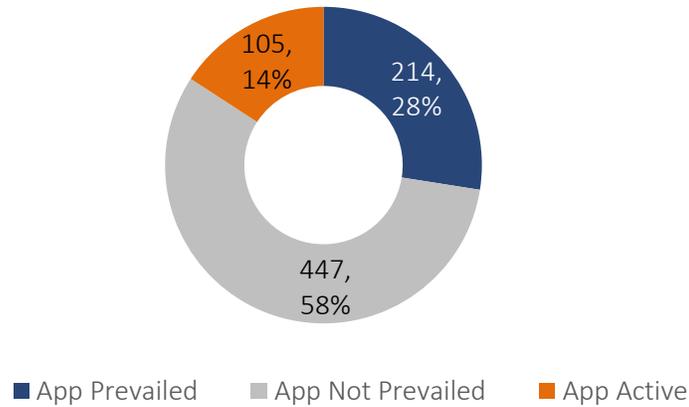

Figure 4.iii: Applications in Contention

Total Applications in Contention = 766

The string contention resolution mechanisms CPE and Auction are discussed in further detail in Section 4.1: Community Priority Evaluation and Section 4.2: Auction of this report.

## 4.1 Community Priority Evaluation

### 4.1.1 Introduction

Community Priority Evaluation (CPE) is a contention resolution mechanism available to applicants that self-designated their applications as community applications. Prevailing in CPE would allow the community applicant to gain priority within a contention set. This section of the Program Implementation Review report discusses the following aspects of CPE:

- CPE Criteria
- CPE Process Implementation
- CPE Results

### 4.1.2 Relevant Guidance

The following guidance is relevant to the topic of Community Priority Evaluation and will be discussed in further detail in Sections 4.1.3 and 4.1.4 of this report:

- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”<sup>223</sup>
- GNSO Implementation Guideline F:

*If there is contention for strings, applicants may:*

- i. resolve contention between them within a pre-established timeframe*
- ii. if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and;*
- iii. the ICANN Board may be used to make a final decision, using advice from staff and expert panels.*

- GNSO Implementation Guideline H\*:

*Where an applicant lays any claim that the TLD is intended to support a particular community such as a sponsored TLD, or any other TLD intended for a specified community, that claim will be taken on trust with the following exceptions:*

- i. the claim relates to a string that is also subject to another application and the claim to support a community is being used to gain priority for the application; and*
- ii. a formal objection process is initiated.*

*Under these exceptions, Staff Evaluators will devise criteria and procedures to investigate the claim.*

*Under exception (ii), an expert panel will apply the process, guidelines, and definitions set forth in [Implementation Guideline] P.GNSO Recommendation 10: “There must be a base contract provided to applicants at the beginning of the application process.”*

- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>224</sup>
- Applicant Guidebook, Section 4.2: Community Priority Evaluation

### 4.1.3 Background

GNSO Implementation Guideline H acknowledged cases where an applicant may “lay claim that [a] TLD is intended to support a particular community.”<sup>225</sup> If only one applicant has made such a claim, then this claim can be “taken on trust;” if there are multiple applications for this particular TLD, then it becomes necessary to determine whether an applicant making such a claim should receive “priority” over the other applicants for that string. As part of the multi-year AGB development process, supported by consultation and input from the community,<sup>226</sup> the contention resolution mechanism CPE was developed in accordance with this GNSO Implementation Guideline.

As per the AGB and consistent with GNSO Implementation Guidelines F and H, if a community application prevailed in CPE, it was eligible to proceed to the next step in the Program, and the other applications in the contention set were eliminated.

To perform CPE evaluations, ICANN issued a call for expressions of interest in 2009 and selected two firms, Economist Intelligence Unit (EIU) and InterConnect Communications.<sup>227</sup> ICANN made the announcement of EIU and InterConnect Communications as the CPE evaluation panels at the ICANN42 Public Meeting.<sup>228</sup>

In early 2012, as publication of Initial Evaluation (IE) results (see Section 2.1: Initial and Extended Evaluation of this report) neared, ICANN began preparations for the contention resolution phase of the Program. As part of these preparations, ICANN determined that there were fewer than 40 community applications in contention (and therefore qualified for CPE). Based on the experience gained from IE, ICANN anticipated that significant training and preparation efforts would be required for the evaluation panels to achieve the desired consistency across evaluations. Given the relatively small number of potential evaluations, ICANN identified the reduction in training and preparation efforts as a potential benefit of using a single firm to act as the CPE Panel rather than dual-sourcing

---

<sup>227</sup> ICANN. (25 February 2009) ICANN Call for Expressions of Interest for a New gTLD Comparative Evaluation Panel. Retrieved from <https://www.icann.org/en/topics/new-gtlds/eoi-comparative-evaluation-25feb09-en.pdf>

<sup>228</sup> ICANN. (26 October 2011) New gTLD Program Update PowerPoint Presentation, slide 19. Retrieved from <http://dakar42.icann.org/meetings/dakar2011/presentation-new-gtld-program-update-26oct11-en.pdf>

the work. With this insight, ICANN verified that a single firm could handle the workload and that the firm was able to certify that it did not have a conflict of interest with any of the potential CPE applicants, as defined by Section 2.4.3.1 of the AGB and the firm’s contracts with ICANN. The EIU was then selected as the single firm to act as the CPE Panel. The EIU was selected for this role because it offers premier business intelligence services—providing political, economic, and public policy analysis to businesses, governments, and organizations across the globe. Additionally, the EIU had the ability to meet Program capacity and timeline constraints, and could perform its role without conflict of interests with applicants.<sup>229</sup>

To maintain transparency, fairness, and predictability in the CPE process, the CPE panel drafted a set of guidelines (CPE Guidelines) that its team would use to perform evaluations. These guidelines “provide[d] additional clarity around the process and scoring principles outlined in the AGB.”<sup>230</sup> The draft of the guidelines was published on 16 August 2013 for input from the ICANN community.<sup>231</sup> Comments and input were reviewed by the CPE Panel and incorporated if they aligned with the AGB. The final version of the guidelines was published on 27 September 2013, prior to the commencement of CPE.

### *Overview of the CPE Process*

When a community applicant became eligible for CPE,<sup>232</sup> ICANN sent an invitation to the applicant and provided 21 days for the applicant to elect participation (i.e., opt in) and submit the CPE fee of USD 22,000, which was refundable if the applicant prevailed in CPE. In parallel with notifying the applicant and in an effort to ensure awareness and transparency, ICANN would notify all other members of the contention set (including applicants for standard applications as well as other community-based applications) and note the invitation on the CPE page of the New gTLD microsite.<sup>233</sup> Included in the 21-day period was a final 14-day window for any new application comments or related correspondence to be submitted for the CPE panel’s consideration.<sup>234</sup>

ICANN would provide authorization to begin an evaluation to the CPE panel after both the applicant’s CPE fee had been collected and at least 14 days had elapsed after the CPE invitation. This ensured that the CPE evaluation did not start prior to the completion of the final 14 days of public comment. Applications were evaluated against the criteria in the AGB in accordance with the CPE

<sup>233</sup> ICANN. Community Priority Evaluation. Retrieved from <http://newgtlds.icann.org/en/applicants/cpe#status>

<sup>234</sup> As noted, this window marked the *final* 14 days an applicant had to gather support for its application. ICANN guaranteed the Panel would consider all letters and comments submitted up to the end of that 14-day window. After the close of the period, applicants were able to submit further letters and comments, but ICANN could not guarantee they would be reviewed by the Panel. Please see the CPE FAQs for more information on this matter: <http://newgtlds.icann.org/en/applicants/cpe/faqs-10sep14-en.pdf>

---

panel's defined process.<sup>235</sup> As per the AGB, the CPE panel could use any available public information to inform its determination and could conduct independent research regarding the proposed TLD community and application. At its discretion, the CPE panel could issue Clarifying Questions (CQs) request clarification of any information required to make a determination.

The entire CPE evaluation from invitation to publication of results ranged in processing time from three to six months. The actual amount of time required depended on whether there were CQs, the number of support or opposition letters that required review and verification, and the amount of additional research performed by the CPE panel. The quantity and length of letters of support or opposition varied from less than 10 pages of additional materials to hundreds of pages of text for the panel to review.

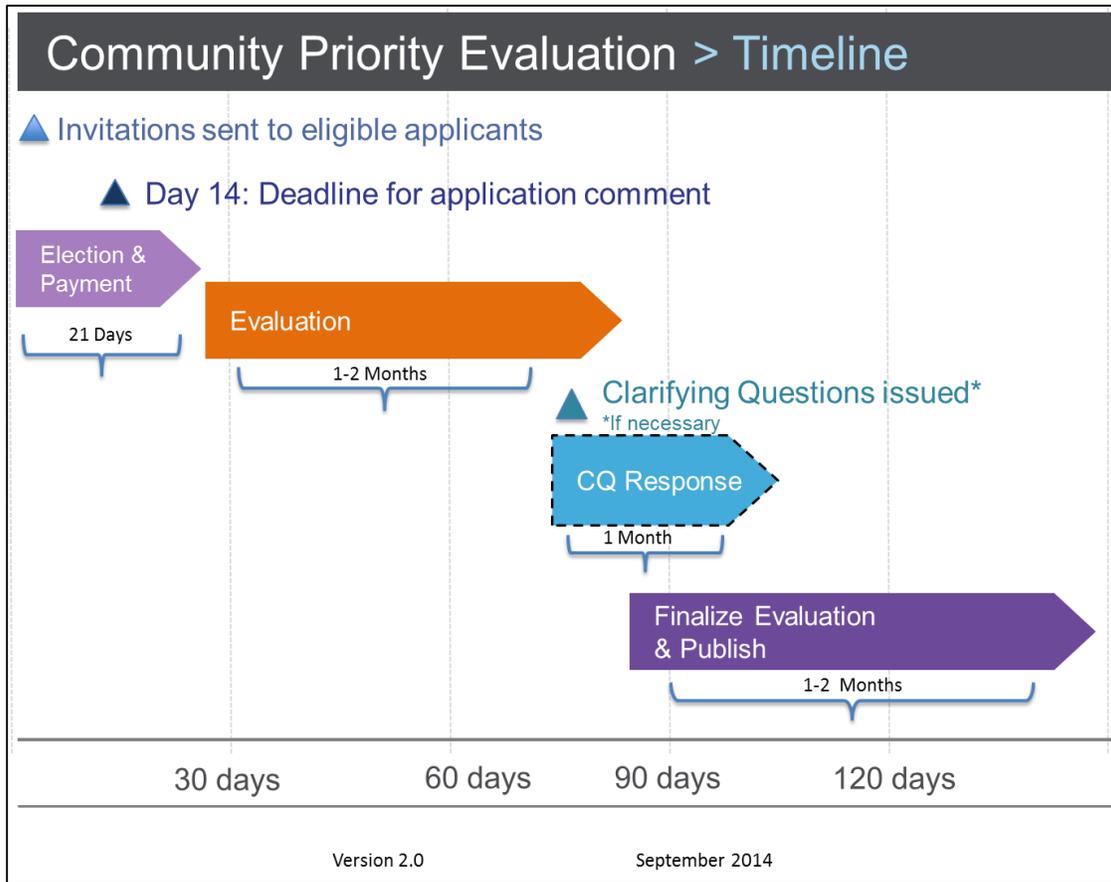

At the completion of evaluation, the CPE panel delivered a report to ICANN, which included the rationale for its determination. ICANN performed quality control on the report to ensure consistency and alignment with the AGB and CPE Guidelines as well as to ensure that adequate rationale was provided for scoring decisions. The CPE report was then published on the New gTLD microsite.<sup>236</sup> Figure 4.1.i depicts a typical CPE process timeline:

---

<sup>235</sup>ICANN. Community Priority Evaluation. Retrieved from <http://newgtlds.icann.org/en/applicants/cpe/panel-process-07aug14-en.pdf>

<sup>236</sup> ICANN. Community Priority Evaluation. Retrieved from <http://newgtlds.icann.org/en/applicants/cpe#invitations>

Figure 4.1.i: CPE Process Timeline

As of 31 July 2015, 19 applications have completed CPE. Table 4.1.i below provides a break-down of community applications.

Table 4.1.i: Break-down of Community Applications

Number of new gTLD applications	1,930
Number of applications self-designated as community	84
Number of applications self-designated as community that were in contention	34
Number of contention sets that included self-designated community application(s)	28
Number of self-designated community applications that participated in CPE as of 31 July 2015	19
Number of self-designated applications that prevailed CPE as of 31 July 2015	5

## 4.1.4 Assessment

### 4.1.4.1 COMMUNITY PRIORITY EVALUATION CRITERIA

Awarding priority to a particular applicant type was described by the GNSO in its Final Report for the “Introduction of New Generic Top-Level Domains.” The development of a process based on GNSO Implementation Guidelines F and H required significant discussion, and establishing the CPE criteria to determine whether priority should be awarded to a community application were the results of over three years of work by the ICANN community during the development of the AGB.

Section 4.2.3 of the AGB states the goal of the CPE process was to “identify qualified community-based applications, while preventing both ‘false positives’ (awarding undue priority to an application that refers to a ‘community’ construed merely to get a sought-after generic word as a gTLD string) and ‘false negatives’ (not awarding priority to a qualified community application).” Recognizing that the outcome of CPE has significant impact on not only the community applicant but all other applicants in the contention set, the AGB states the following regarding the CPE criteria: “It should be noted that a qualified community application eliminates all directly contending standard applications, regardless of how well qualified the latter may be. This is a fundamental reason for very stringent requirements for qualification of a community-based application.”<sup>237</sup> This kind of evaluation required a “holistic approach” that helped to counter the difficulty of interpreting and balancing aspects of communities. Thus, four primary criteria were established to assess an application’s qualifications for earning priority on the basis of community. In summary, they were:

1. Community Establishment – This criterion relates to the community as explicitly identified and defined according to statements in the application.
2. Nexus between Proposed String and Community – This criterion evaluates the relevance of the string to the specific community that the application claims to represent.

<sup>237</sup> AGB, Section 4.2.3: Community Priority Criteria

3. Registration Policies – This criterion evaluates the applicant’s registration policies as indicated in the application. Registration policies are the conditions that the future registry will set for prospective registrants.
4. Community Endorsement – This criterion evaluates community support and/or opposition to the application.

To maintain transparency, fairness, and predictability in the CPE process, the CPE panel drafted a set of guidelines (CPE Guidelines) that its team would use to perform evaluations. The Guidelines “provide[d] additional clarity around the process and scoring principles outlined in the AGB.”<sup>238</sup> The draft of the Guidelines was published on 16 August 2013 for input from the ICANN community.<sup>239</sup> Comments and input which aligned with the AGB were incorporated into the final version of the Guidelines, which was published on 27 September 2013, prior to the commencement of CPE.<sup>240</sup>

Given that awarding priority to community-based applications is a fairly new concept, the GNSO may wish to review whether the implementation of CPE meets the GNSO’s intended goal. The ICANN Board also identified community considerations as a topic that may be appropriate for the GNSO’s discussion of evaluation in the current round and adjustments for future application procedures.<sup>241</sup>

#### 4.1.4.2 CPE PROCESS IMPLEMENTATION

In implementing CPE, ICANN focused on ensuring that all aspects of the process, from eligibility determination to result publication, were applied consistently and in accordance with the AGB.

To support process transparency, ICANN published CPE criteria prior to the opening of the application window as part of the AGB and published CPE Guidelines prior to the commencement of CPE. In addition, ICANN created a dedicated CPE page on the New gTLD microsite<sup>242</sup> to share relevant information regarding CPE with applicants and the community.

To support consistency, the CPE panel developed a process that could be applied to the evaluation of all applications and published the process on the CPE page of the New gTLD microsite.<sup>243</sup> ICANN also followed the defined and published eligibility criteria to invite applicants to CPE.<sup>244</sup> Deadlines for CPE election, payment, and final comments were also consistently applied. Finally, prior to the publication of the CPE reports, ICANN reviewed the reports for consistent application of the AGB criteria.

### *Letter of Support/Opposition Verification Process*

To support an accurate evaluation, a letter verification process was instituted within CPE, similar to the process used in the context of Geographic Names evaluation. The verification process required that the authenticity of relevant letters that could impact a scoring decision be confirmed by the panel.<sup>245</sup> This process step addressed concerns expressed by both community- and non-community-based applicants prior to the beginning of CPE.

The letter verification process posed several challenges for applicants, commenting organizations, and the CPE panel. There were three avenues through which the community could provide input to a CPE evaluation: the Application Comments Forum,<sup>246</sup> by submitting a letter of support to the applicant for inclusion in their application [Question 20(f)], and by submitting correspondence to ICANN which would be posted publicly<sup>247</sup> for review and consideration by the Panel. Most applications included community input from all three avenues, and ICANN often received a fairly high volume of correspondence during the 14-day CPE invitation period or shortly after the period ended. The letters submitted via the correspondence page were challenging to review, as the letters were submitted over a long period of time (beginning “Reveal Day” in June 2012 through the CPE) and were up to several hundred pages in length. Due to the increased workload for the panel, this part of the process often extended the evaluation period for the application. Verifying the letters was sometimes complicated by a lack of contact information provided to the panel by the author of the letter or the applicant or contact information that was obsolete by the time the evaluation occurred.

To counter this challenge, ICANN encouraged applicants to provide a current list of supporters with contact information for those that authored letters by the start of the evaluation. Additionally, if the CPE panel was unable to receive the desired verification from the author and the impact of not having the verification would impact the scoring of the evaluation, the panel would issue a CQ to the applicant requesting their assistance in soliciting a response to the verification attempt and requesting that they provide current contact information for the author. Secondly, applicants or their supporters often submitted information to ICANN via correspondence after the deadline. Although the panel was not required to take these submissions into account, the panel did attempt to do so,<sup>248</sup> which extended the timeline of some evaluations.

### *Application Changes and Clarifying Questions*

The approach to CQs in CPE was intended to support the idea that applicants could not make substantive changes to their applications after the close of the objections window, as members of the community would not have the ability to file objections based on the updated application.

<sup>248</sup> ICANN. (10 September 2014) Community Priority Evaluation (CPE) Frequently Asked Questions version 1.3. Retrieved from <http://newgtlds.icann.org/en/applicants/cpe/faqs-10sep14-en.pdf>.

---

To support this idea, ICANN ensured that application materials for CPE applicants were not modified prior to CPE taking place. Change requests relating to the parts of the application that would be reviewed by the CPE panel were deferred until after CPE.<sup>249</sup> This was to prevent applicants from amending their applications in order to improve their chances of prevailing in CPE based on previously posted CPE results from other applications.

Secondly, the CQ process in CPE differed from IE. According to the CPE Panel Process Document,<sup>250</sup> “[i]f the core team so decides, the EIU may provide a clarifying question (CQ) to be issued via ICANN to the applicant to clarify statements in the application materials and/or to inform the applicant that letter(s) of support could not be verified.” With respect to CPE, CQs may have been issued in instances where the panel required the applicant to:

- Address any application comments that may impact the scoring of their application
- Address any letters of opposition
- Contact supporting organizations and ask them to respond to the EIU’s request for validation of letters of support
- Address any objection determinations where the applicants were the objectors and the experts did not rule in their favor
- Clarify application materials

Using a different approach to CQs in CPE than IE caused some challenges in implementation. Despite ICANN’s best efforts, it was challenging for ICANN to communicate the rationale for why applicants did not receive CQs prior to receiving their results.

The implementation of CPE strove to balance the CPE panel’s ability to request clarification without providing the applicant with the opportunity to provide new information not already in the application. Prospective community-based applicants were required to have addressed the criteria in the originally submitted application.

### *Community Priority Evaluation Results*

As of 31 July 2015, 19 applications representing 17 strings had participated in CPE and, of those, four applications had prevailed (i.e., achieved at least 14 of the 16 available points).

ICANN received complaints from applicants (both community and standard applicants) regarding the outcomes of CPE, through formal correspondence and ICANN Accountability Mechanisms. Such complaints included feedback that there was a lack of transparency, that the panel misinterpreted the applications or the communities they claimed to represent, and that the panel improperly applied the CPE criteria in reaching its determinations. ICANN observed that in any Program process where an application was eliminated or an applicant was dissatisfied with a Program outcome, it

---

<sup>249</sup> ICANN. (5 September 2014) New gTLD Advisory. Retrieved from

---

was likely that negative feedback would be submitted and Accountability Mechanisms would be invoked. Much of the feedback received about the CPE outcomes was in line with this observation.

The GAC issued advice to ICANN in multiple Communiqués regarding CPE and the various outcomes. In its Communiqués from Beijing, Durban, and Singapore, the GAC referred to “preferential treatment” that should be given applications with “demonstrable community support” or a “collective and clear opinion.”<sup>251,252,253</sup>

In the 14 May 2014 scorecard, the NGPC responded to the GAC that it “[would] continue to protect the public interest and improve outcomes for communities, and to work with the applicants in an open and transparent manner in an effort to assist those communities within the existing framework.”<sup>254</sup> By adhering to the AGB and ensuring each CPE is consistent with the AGB criteria, ICANN has sought to meet the GAC’s advice. Additionally, the subject of community considerations has been identified by the ICANN Board as a topic that may be appropriate for discussion by the GNSO.<sup>255</sup>

## 4.1.5 Conclusion

ICANN and the CPE panel implemented processes and procedures to assure the fair, consistent, and predictable administration of the CPE process. The CPE panel consistently applied the CPE criteria from the AGB to each application it evaluated and provided its rationale for each of its scoring decisions.

The concept of awarding priority to applications based on a set of criteria was new to this round of gTLD applications. Before a next round, the following should be considered:

- Whether to continue the practice of evaluating and awarding priority to community based applications
- Whether the criteria for granting priority should be revised

Staff recommends considering all dimensions of the feedback received to revisit the CPE scoring and framework before the next application round.

## 4.2 Auction: Mechanism of Last Resort

### 4.2.1 Introduction

Auction was the mechanism of last resort to resolve contention if applicants could not resolve contention amongst themselves or through CPE. This section of the Program Implementation Review report discusses the following aspects of ICANN-facilitated auctions:

- Auction Rules
- Auction Process and Administration

### 4.2.2 Relevant Guidance

The following guidance is relevant to the topic of Auction and will be discussed in further detail in Sections 4.2.3 and 4.2.4 of this report:

- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”<sup>256</sup>
- GNSO Implementation Guideline F:  
*If there is contention for strings, applicants may:*
  - iv. *resolve contention between them within a pre-established timeframe*
  - v. *if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and;*
  - vi. *the ICANN Board may be used to make a final decision, using advice from staff and expert panels.*
- GNSO Implementation Guideline I: “An applicant granted a TLD string must use it within a fixed timeframe which will be specified in the application process.”
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>257</sup>
- Applicant Guidebook, Section 4.3: Auction: Mechanism of Last Resort

### 4.2.3 Background

The AGB anticipated that most contention sets would either self-resolve or be resolved through CPE (see Section 4.1: Community Priority Evaluation of this report): “It is expected that most cases of

---

<sup>256</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gnso.icann.org/en/issues/new-gtlds/pdp-dec05-fr-part-a-08aug07.htm>

<sup>257</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

---

contention will be resolved by the community priority evaluation or through voluntary agreement among the involved applicants.”<sup>258</sup> That is, ICANN intended auctions to be the resolution “mechanism of last resort.”

After conducting an open procurement process, ICANN selected the auction firm, Power Auctions, LLC, to facilitate the auctions.<sup>259</sup> Power Auctions was a leader on auction thought and design, helping ICANN to adhere to GNSO Implementation Guideline F, wherein an “efficient resolution of contention” was called for should there be no mutual agreement or resolution via community claim. Power Auctions also supported the development and design of both the direct and indirect auction processes as well as the implementation rules governing the auctions.

If a contention set had not been resolved after each application had completed the previous phases of the Program, essentially AGB Modules 2, 3, and Section 4.2, the contention set was scheduled for an auction to resolve the contention set. The auction process started with ICANN assessing a contention set’s eligibility for an auction and then scheduling the eligible contention set for an auction date. For a contention set to be eligible for an auction, each application in the contention set had to have completed evaluation, resolved any objections and applicable GAC Advice, and completed CPE if any community-based applicants were members of the set. An Intent to Auction notification was sent to each member of the contention set, alerting them that an auction to resolve their string contention set had been scheduled and providing a set of forms to be completed within a stated time period to be eligible to participate in the auction. The Intent to Auction notifications were sent at least two months prior to the scheduled auction date to allow for 1) a contention set to self-resolve before an auction takes place, and 2) the required forms to be completed. To participate in the auction, applicants were required to agree to abide by the Auction Rules and Bidder Agreement with the auction provider. Additionally, they were required to submit a bidding deposit by a specified time period in advance of the auction. The auction then took place according to the Auction Rules. Once the winner(s) was/were determined, they were required to pay their winning fee and move onto the next phase of the Program, Contracting (see Section 5.1: Contracting of this report). The applicants that did not prevail did not proceed further in the Program and were able to withdraw their applications, receiving a partial refund of their application fee.

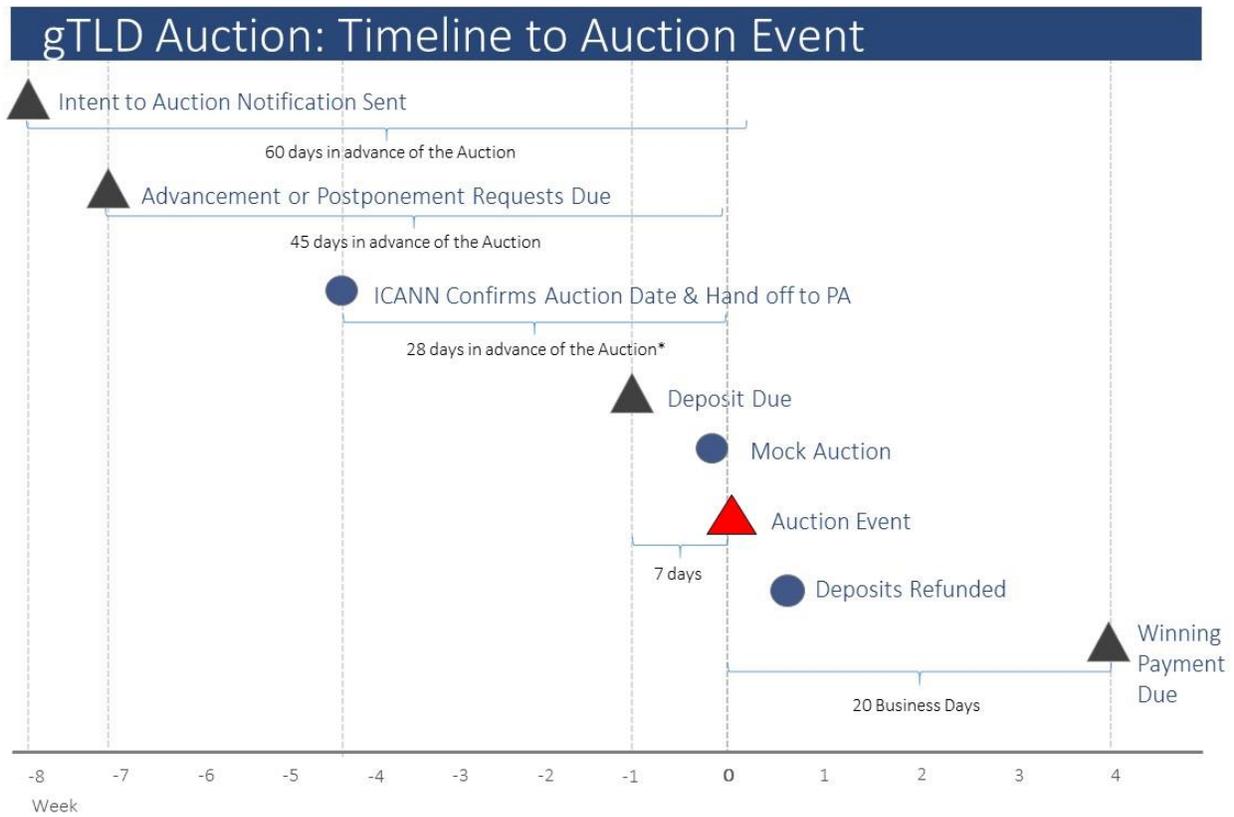

---

<sup>258</sup> ICANN. gTLD Applicant Guidebook Version 2012-06-04, Section 4.3: Auction: Mechanism of Last Resort. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>259</sup> For information on the vendor selection process as well as the agreement between ICANN and Power Auctions, LLC, please see: <http://newgtlds.icann.org/en/applicants/auctions/summary-vendor-selection-10mar14-en.pdf>

Figure 4.2.i illustrates the Auctions process and timelines:

Figure 4.2.i: New gTLD Auction Timeline

\* ICANN has committed to provide confirmation of the Auction Date at least 21 days prior to the Auction; however, ICANN attempts to provide confirmation of the Auction Date at least 28 days in advance of such Auction (as illustrated).

ICANN will notify applicants of intent to Auction at least 9 weeks prior to the Auction Date. The completed intent to Auction forms are due 28 days after distribution of the intent to Auction notification.

Applicants in contention were encouraged to resolve the contention amongst themselves and were able to do so up to seven days prior to the date of the auction. Being sent to auction did not prohibit self-resolution or require the set to utilize the auction to resolve the contention; rather, it created a deadline for self-resolution which facilitated many sets to resolve. As pointed out in the introduction to Chapter 4: Contention Resolution of this report, as of 31 July 2015, only 13 sets (out of 206 resolved) have resolved by way of an ICANN auction.

## 4.2.4 Assessment

### 4.2.4.1 AUCTION RULES

The AGB defined auction procedures for those contention sets that did not come to mutual agreement or resolve through CPE. These procedures called for an ascending-clock auction which utilized a second price method and defined where the auction should take place (online), how the auction rounds should be structured, the various terms associated with the auction (e.g., proxy and exit bids), and provided various auction outcome scenarios to help illustrate the process. In general, the AGB focused on facilitating auctions for direct contention, though it did define and discuss indirect contention in Section 4.1.1 “Identification of Contention Sets.”<sup>260</sup> These procedures provided the basis for operationalizing the auction process.

From these procedures, the auction service provider developed the New gTLD Auction Rules, with versions for both direct contention sets<sup>261</sup> and sets containing indirect contention.<sup>262</sup> These rules acted as a detailed guide for applicants to facilitate auctions and included insight into eligibility, scheduling considerations, preparation procedures, deposits, bidding limits, bidding procedures, the conclusion of auctions, and payments and refunds.

The direct contention Auction Rules were posted for public comment in late 2013<sup>263</sup> with the final version published in March 2014.<sup>264,265</sup> Because of the very small number of indirect contention sets (five of the total 233) and the anticipated complexity involved in developing the rules, ICANN and the auction service provider deferred developing the rules for indirect contention until after the direct contention Auction Rules had been established. The indirect contention Auction Rules were posted for public comment in December 2014,<sup>266</sup> and the final version was published in February 2015.<sup>267</sup> The complexity associated with auction design for indirect contention sets as well as less definition in the AGB required both additional time and cost on the part of ICANN, the auction service provider, and the community for drafting and finalization.

---

<sup>260</sup> An example of indirect contention would be: Application A is in direct contention with Application B. Application B is in direct contention with Application C. Applications A and C are only in indirect contention with each other. See AGB Section 4.1.1 for more information and examples of indirect contention.

<sup>261</sup> ICANN. (14 May 2014) Annex 1 to Resolution 2014.05.14.NG02. Retrieved from <http://newgtlds.icann.org/en/applicants/auctions/rules-03nov14-en.pdf>

---

For both sets of rules, comments were considered and incorporated if they were in line with the AGB. By engaging in public consultation for the development of the Auction Rules, ICANN was able to ensure transparency in the development process and achieved predictability in process execution.

The rules ensured that bidder information, including bidding limits, remained confidential and that all participants adhered to anti-collusion restrictions.

The auction service provider facilitated the auctions in accordance with these rules, and ICANN has not received comments or complaints stating otherwise.

#### **4.2.4.2 AUCTION PROCESS AND ADMINISTRATION**

One of the advantages of ascending clock auctions was that multiple contention sets could be resolved simultaneously in a single auction event. ICANN published the first auction schedule on 19 March 2014.<sup>268</sup> There were 10 auction events scheduled over a 10-month period beginning in June 2014, with the last auction event initially scheduled for March 2015. ICANN updated the schedule on a monthly basis to reflect any changes since the previous publication of the schedule.

When ICANN published the initial auction schedule in March 2014, it simultaneously sent intent to auction notifications to all 106 contention sets which had been scheduled for one of the 10 auctions between June 2014 and March 2015. These 106 contention sets accounted for 306 applications in contention. All applicants who received the intent to auction notification were required to submit the required forms within 28 days of receipt of the notification. For several multi-application applicants, this meant completing a significant amount of paperwork within a 28-day period. There may have been some inefficiencies incurred by applicants as a result of having to complete the auction paper work well in advance of the actual auction. However, early scheduling of all contention sets for auction allowed applicants to start working toward self-resolution and ensured that applicants would be ready for auction if the need arose. The process also allowed applicants to request a postponement of the auction date. Postponements were designed to facilitate self-resolution. Thus, ICANN required that all members of the contention set agree to the postponement, and ICANN specified a deadline for when postponement requests must have been received.

As of 31 July 2015, of the 151 contention sets scheduled for auction, 58 requested postponement based on mutual consensus amongst all members of the contention set. This high number of postponement requests created additional need for ICANN to manage requests and to update auction schedules; it also extended the timeline of the contention resolution phase of the Program. However, the granting of postponements facilitated the self-resolution of contention sets. As of 31 July 2015, 93% of contention sets that elected to postpone their auction date self-resolved prior to the new auction date.

The process also helped to ensure that financial information was secure. ICANN had, for example, no knowledge of bidding deposit amounts either before or after the auction took place. Deposits were

---

<sup>268</sup> ICANN. (20 July 2015) New gTLD Program Auctions: News & Views. Retrieved from <http://newgtlds.icann.org/en/applicants/auctions>

---

submitted directly to an escrow account established for the bidder, and the auction service provider coordinated with the escrow provider to ensure the funds were received and the applicant was eligible to participate in the auction.

Both ICANN and the auction service provider worked to provide an easy-to-use and clear auction system that ensured that applicants were prepared to participate in an auction. Various training materials including a manual and videos were provided to applicants, and for those who were slated for an upcoming auction, the auction service provider facilitated practice auctions (referred to as “mock auctions”) in advance of each official auction.

Per Section 4.3 of the AGB, the auction process should be self-funded. Additionally, “[a]ny proceeds from auctions will be reserved and earmarked until the uses of funds are determined. Funds must be used in a manner that supports directly ICANN’s Mission and Core Values and also allows ICANN to maintain its not for profit status.”

The contract with the auction service provider stipulated fees for auctions which were confirmed then canceled, as well as a 4% commission fee for auctions conducted.<sup>269</sup> ICANN took care to minimize costs associated with the operation of auctions by balancing the time that applicants would have to self-resolve with the time required by the auction provider to prepare for the Auction of Last Resort. The cancellation fee covered the work and time required by the auction service provider in preparing the auction. ICANN minimized these fees by confirming each auction with the auction service provider as close as possible to the time when the auction service provider needed to begin its preparation work (at least 21 days prior to the auction). However, because ICANN was not aware of when or if contention sets would self-resolve, it was sometimes necessary to proceed with the process and confirm the auction. ICANN considered whether it should begin the “quiet period” (the period which prevented applications from continuing to work towards self-resolution of the contention set) at the same time that it committed the minimum fees to the auction provider. However, it was ultimately decided that incurring some cancellation fees would be reasonable if it maximized the amount of time available for applicants to resolve contention without an ICANN-facilitated auction.

To further support cost minimization, when auction cancellation fees began to accumulate, ICANN initiated dialogue with the New gTLD Applicant Group (NTAG) to better educate them on the structure of ICANN’s agreement with the auction service provider and how best to avoid cancellation fees by resolving contention sets in advance of the formal auction date confirmation from ICANN. This dialogue with the community contributed to significant cost avoidance, on the order of several hundred thousand dollars. As of 31 July 2015, 5% of the total auction proceeds have been allocated towards payment of fees.

As 31 July 2015, 13 contention sets have completed an auction.<sup>270</sup> A total of USD 61.8 million has been collected from these auctions, resulting in net proceeds of USD 58.7 million.<sup>271</sup> These auction

---

proceeds are segregated in a bank account separate from other ICANN and Program funds and are reserved and earmarked until the ICANN Board determines a plan for the appropriate use of the funds through consultation with the community.

## 4.2.5 Conclusion

The AGB defined auction as a mechanism of last resort and defined the basic auction process. To ensure that applicants had a clear understanding for how auctions would occur, more detailed procedures and rules for both direct contention sets and indirect contention sets were developed by the auction provider and subject to public comment. Additionally, applicants were provided with the opportunity to participate in mock auctions prior to their auction events, supporting their full understanding of the process and rules.

In support of encouraging auction only as a “mechanism of last resort,” the auction process encouraged self-resolution among applicants. Auctions were scheduled once contention sets became eligible for auction, which defined a timeline for applicants to decide whether to self-resolve. Auction postponements were also permitted and frequently requested, in support of providing applicants with sufficient time to self-resolve if desired.

In this round, auctions were implemented in a manner that supported fairness, predictability, effectiveness, and efficiency. Should auctions be included in the next application round, ICANN could replicate this process with minimal preparation.

---

## Chapter 5: Transition to Delegation

“Transition to Delegation” refers to the phase of the New gTLD Program that applicants entered after successfully completing all required steps of the Program. During the Transition to Delegation phase, applicants went through the Contracting process to enter into a Registry Agreement (RA) with ICANN to operate the applied-for TLD. Also during this phase, applicants were required to complete a technical test, referred to as “Pre-Delegation Testing” (PDT), after signing an RA to demonstrate that they could operate their TLDs in a secure and stable manner. In the last step of the Transition to Delegation phase, ICANN confirmed that applicants successfully completed all required Program steps and recommended the TLDs to IANA for delegation into the root zone.

Contracting, PDT, and the IANA hand-off processes are discussed in further detail in this section of this report.

---

## 5.1 Contracting

### 5.1.1 Introduction

Contracting is a process by which applicants who have successfully completed all required Program steps entered into a Registry Agreement (RA) with ICANN to operate the applied-for TLD. This section of the Program Implementation Review report discusses the following aspects of the Contracting process:

- Base Registry Agreement
- Contracting Timelines and Extensions

### 5.1.2 Relevant Guidance

The following guidance is relevant to the topic of Contracting and will be discussed in further detail in Sections 5.1.3 and 5.1.4 of this report:

- GNSO Recommendation 10: “There must be a base contract provided to applicants at the beginning of the application process.”<sup>272</sup>
- GNSO Recommendation 14: “The initial registry agreement term must be of a commercially reasonable length.”
- GNSO Recommendation 15: “There must be renewal expectancy.”
- GNSO Recommendation 16: “Registries must apply existing Consensus Policies and adopt new Consensus Policies as they are approved.”
- GNSO Recommendation 17: “A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.”
- GNSO Recommendation 18: “If an applicant offers an IDN service, then ICANN's IDN guidelines must be followed.”
- GNSO Recommendation 19: “Registries must use only ICANN accredited registrars in registering domain names and may not discriminate among such accredited registrars.”
- GNSO Implementation Guideline I: “An applicant granted a TLD string must use it within a fixed timeframe which will be specified in the application process.”
- GNSO Implementation Guideline J: “The base contract should balance market certainty and flexibility for ICANN to accommodate a rapidly changing market place.”
- GNSO Implementation Guideline K: “ICANN should take a consistent approach to the establishment of registry fees.”
- Applicant Guidebook, Section 5.1: Registry Agreement<sup>273</sup>

- NGPC Resolution 2013.07.02.NG09 (02 July 2013): Registry Agreement (approval of the 02 July 2013 version)<sup>275</sup>
- ICANN Board New gTLD Program Committee Resolution 2014.07.30.NG01 - 2014.07.30.NG04 (30 July 2014): Name Collision Occurrence Management Framework<sup>276</sup>
- NGPC Resolution 2014.03.26.NG01 (26 March 2014): Approval of Registry Agreement Specification 13 for Brand Category of Applicants<sup>277</sup>

### 5.1.3 Background

The AGB anticipated that Initial Evaluation (IE) (see Section 2.1: Initial and Extended Evaluation of this report) would take five months to complete, all IE results would be published at the conclusion of IE, and the Contracting process would commence at the end of IE. This would allow applicants that passed IE to move expeditiously toward signing an RA if there were no other issues that the application must resolve (e.g., contention resolution, dispute resolution).

On 22 March 2013, ICANN began publishing IE results on a weekly basis by priority number (see Section 2.1: Initial and Extended Evaluation of this report).<sup>278</sup> Although Section 5.1 of the AGB stated that the Contracting process would commence after IE, the final RA was not approved when the first IE results were published. Once the RA was approved by the ICANN Board New gTLD Program Committee (NGPC) on 02 July 2013, ICANN confirmed that applications were eligible to begin the Contracting process and began inviting applicants to Contracting on 05 July 2013. The same month that ICANN commenced the Contracting process, the first four RAs for four IDN new gTLDs were executed. RA execution continued with 218 RAs executed between August and December of 2013. As of 31 July 2015, 1,214 TLDs have been invited to Contracting and 1,147 have signed an RA.

#### *Overview of the Contracting Process*

In order to be eligible to be invited to Contracting, applicants were required to pass evaluation, resolve contention, clear objections, clear GAC Advice, and complete any outstanding change requests. Once eligible, applicants were invited to Contracting by priority number (see Section 1.2: Prioritization of this report), and invitations were sent in the form of a Contracting Information

---

Request (CIR).<sup>279</sup> In October 2013, three months after ICANN began inviting applicants to Contracting, ICANN moved to a weekly Contracting operation cycle to increase efficiency and to provide applicants with a more complete understanding of Contracting process timelines.<sup>280</sup>

## 5.1.4 Assessment

### 5.1.4.1 BASE REGISTRY AGREEMENT

In accordance with GNSO Recommendation 10, a Base RA was drafted as part of the AGB development process with the community. When the ICANN Board approved the launch of the New gTLD Program on 20 June 2011, it also approved the 30 May 2011 version of the AGB<sup>281</sup> including the Base RA. This was the first version of the New gTLD Base RA approved by the ICANN Board. On 11 January 2012, ICANN published a revised AGB that included minor revisions to clarify some existing provisions of the Base RA.<sup>282</sup> This 11 January 2012 version of the RA became the Base RA available to applicants prior to “the beginning of the application process” as referenced in GNSO Recommendation 10.

Although intended to be the final form of the Base RA that successful applicants would enter into with ICANN, the RA was revised multiple times due to pending items provided for under the Program that required incorporation into the RA upon their completion, and new items that arose (e.g., GAC Advice, Name Collision).

The subject of Registry Agreement terms was identified by the ICANN Board as a topic that may be appropriate for discussion by the GNSO.<sup>283</sup>

#### *4 June 2012 Version of the Base RA*

On 4 June 2012, ICANN published a revised AGB that included a minor update to correct a reference in Specification 3 of the Base RA.<sup>284</sup>

## 2 July 2013 Version of the Base RA

In its Toronto Communiqué of 17 October 2012, the GAC stated, "it is necessary or all of these statements of commitments and objectives [detailed in individual gTLD applications] to be transformed into binding contractual commitments, subject to compliance oversight by ICANN."<sup>285</sup> In response to the GAC's Advice, ICANN asked applicants to submit Public Interest Commitments to turn public interest commitments made in the applications into binding contractual provisions.<sup>286</sup> It was proposed that these commitments be included in Specification 11 to the Base RA.<sup>287</sup>

Also during this time period, ICANN and the Registrar Stakeholder Group were in the final stages of negotiating amendments to the 2009 Registrar Accreditation Agreement (RAA). The negotiations began in 2011, and the proposed new RAA was posted for public comment on 7 March 2013, with an updated version posted for public comment on 22 April 2013.<sup>288</sup> In anticipation of the finalization of the 2013 RAA, the proposed Specification 11 to the Base RA included a provision requiring operators of new gTLDs to use registrars that were party to the 2013 RAA. The ICANN Board approved the 2013 RAA on 27 June 2013.<sup>289</sup>

On 5 February 2013, ICANN published an updated Base RA for public comment.<sup>290</sup> A further updated version that incorporated community feedback was posted on 2 May 2013.<sup>291</sup> On 2 July 2013, the NGPC approved the updated version of the RA that incorporated, among other things, Specification 11 to the Base RA.<sup>292</sup>

## 16 October 2013 Version of the Base RA

On 7 October 2013, the NGPC approved<sup>293</sup> the "New gTLD Collision Occurrence Management Plan"<sup>294</sup> to mitigate the risks of potential name collisions caused by the introduction of new gTLDs. As the implementation of this plan required modifications to the Base RA, on 16 October 2013, ICANN

---

published an updated version of the Base RA, which incorporated a “Name Collision Occurrence Management” section within Specification 6.<sup>295,296</sup> This update to the Base RA was automatically incorporated into the 56 RAs that had already been executed at that time. All RAs sent for signature beginning 16 October 2013 contained the updated Specification 6.

### *9 January 2014 Version of the Base RA*

The 9 January 2014 version of the Base RA<sup>297,298</sup> is the current form of the Base RA and inserted URLs in the following sections of the RA (where placeholders had existed previously):

- Section 2.19 (RRDRP)
- Section 1 of Specification 7 (Trademark Clearinghouse Requirements)
- Section 2(a) of Specification 7 (PPDRP and RRDRP)
- Section 2(b) of Specification 7 (URS)
- Section 2 of Specification 11 (PICDRP)

### *5 February 2014 – Adoption of GAC Category 1 Safeguards*

On 5 February 2014, the NGPC adopted an implementation framework to address GAC Category 1 Safeguard Advice for a broad category of strings related to “consumer protection, sensitive strings, and regulated markets.”<sup>299</sup> The implementation framework required standardized safeguards to be added to Specification 11 of the Registry Agreement as public interest commitments. For TLDs that were specified in Category 1 Advice, the safeguards were mandatory requirements. This implementation framework allowed applicants who previously could not begin Contracting because they were subject to GAC Category 1 Advice to proceed to Contracting. On 31 July 2015, 151 applicants that were subject to GAC Category 1 Safeguards were invited to Contracting. For more information about the implementation of GAC Category 1 Safeguard Advice, see Section 3.1: GAC Advice of this report.

### *9 May 2014 – Adoption of Specification 13*

On 26 March 2014, the NGPC passed a resolution approving Specification 13 to the Base RA for applicants of .Brand TLDs.<sup>300</sup> This approval followed discussions with members of the ICANN community (including the Brand Registry Group) who stated that brand owners required unique RA provisions in order to protect their brands, promote and maintain trust in their registries, and foster

---

<sup>300</sup> ICANN. (26 March 2014) Approved Resolutions | Meeting of the New gTLD Program Committee. Retrieved from <https://www.icann.org/resources/board-material/resolutions-new-gtld-2014-03-26-en#1.a>

---

innovation. In addition to these discussions, ICANN also sought community-wide input through a public comment period in December 2013.<sup>301</sup>

When the NGPC approved Specification 13 on 26 March 2014, implementation of a particular provision within Specification 13, which allowed .Brand registry operators to designate a limited number of preferred registrars for the TLD, was delayed for 45 days to provide the GNSO an opportunity to comment on this provision, in light of GNSO policy Recommendation 19 on the Introduction of New generic Top-Level Domains.<sup>302</sup> After considering the matter, the GNSO Council informed the ICANN Board in correspondence dated 9 May 2014<sup>303</sup> that the provision in the Specification 13 allowing Registry Operators of .Brand TLDs “the right to only use up to three exclusive registrars [...] is inconsistent with Recommendation 19.” However, the GNSO Council stated it “does not object to the implementation of Specification 13 as a whole, including an additional clause which will allow a Registry Operator to designate up to three exclusive Registrars, given the specific circumstances and the fact that a public comment period on Specification 13 was conducted in 2013 without objections from the GNSO.” In the same letter, the GNSO stated it “reserves the right to initiate a policy development process, potentially resulting in Consensus Policy affecting both existing and future TLDs, if and when the right granted to .BRAND TLDs is at risk of, or bears the risk of, being used for augmenting and / or circumventing the conditions of Specification 13 or any subsequent provisions.”

### *Initiating Contracting*

Although the Base RA went through multiple revisions and its final form was not known until 9 January 2014 for non-.Brand TLDs and 9 May 2014 for .Brand TLDs, in an effort to allow applicants to move expeditiously toward signing an RA, ICANN began inviting applicants to Contracting on 5 July 2013. Because the final form of the Base RA was not known when Contracting commenced, ICANN developed a Supplement to the RA in order to allow applicants to sign an RA while certain provisions were still under consideration.<sup>304</sup> The Supplement to the RA stated that the following provisions of the Base RA could be modified by ICANN without consent from the Registry Operator:

- Specification 6 – Registry Interoperability and Continuity
- Section 1 of Specification 7 – TMCH Requirements
- Section 2.a of Specification 7 – PDDRP and RRDRP
- Section 2.b of Specification 7 – URS
- Specification 11 – Public Interest Commitments
- Any provision or term of the RA that is the subject of advice or comment from the GAC

<sup>304</sup> ICANN. Supplement to Registry Agreement. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/agreement-supplement-14jul13-en.pdf>

---

The implementation of this Supplement, which had an expiration date of 15 January 2014, allowed applicants to move forward in the process prior to resolution of the above items. ICANN signed the first four RAs for four IDN gTLDs, along with the Supplement, on 13 July 2013. By the time the Supplement expired on 15 January 2014, ICANN had signed 241 RAs with the Supplement. This represented 26% of all TLDs invited to Contracting by 15 January 2014.

### *Negotiation Process*

As detailed in Section 5.1.2 of this report, there were several GNSO Policy Recommendations related to the contract. Additionally, AGB Section 5.1 states,

*All successful registry operators are expected to enter into the agreement substantially as written. Applicants may request and negotiate terms by exception; however, this extends the time involved in executing the agreement. In the event that material changes to the agreement are requested, these must first be approved by the ICANN Board of Directors before execution of the agreement.*

Section 7.7 of the Registry Agreement defines the annual negotiation process for revising the terms of the base RA between ICANN and the gTLD registries as a group.<sup>305</sup> The process includes a public comment period and requires approval of the new base RA from the ICANN Board.

With respect to individual RAs, when responding to a CIR, applicants had the option to request negotiation. ICANN considered each request within the framework of existing Policy, the Registry Agreement, and the AGB. In order to be fair to all applicants and to ensure that the community interests represented in the RA were preserved, ICANN did not make significant changes to the RA without a justification which matched the rationale for including the updated language. Absent a showing of extraordinary circumstances unique to any particular applicant justifying some change, ICANN took the view that the terms of the RA should remain consistent among all new gTLD registry operators.

#### **5.1.4.2 CONTRACTING TIMELINES AND EXTENSIONS**

When the 9 January 2014 version of the Base RA was published, it served as the final form of the Base RA. With the final form of the Base RA available and the Supplement to the RA expiring on 15 January 2014, ICANN announced the start of the nine-month deadline for applicants to sign the RA, as per Section 5.1 of the AGB. The announcement that 29 January 2014 served as the start of the nine-month period was made during the 22 January 2014 Applicant Update Webinar.<sup>306</sup> For the 957 applications whose nine-month period began on 29 January 2014, the RA signing deadline was 29 October 2014. Of these applicants, 440 (46%) signed the RA by the 29 October 2014 deadline.

Although ICANN envisioned that applicants would want to sign the RA quickly when the Contracting process was initiated, 517 applications did not sign by the 29 October 2014 deadline and required

---

<sup>305</sup> ICANN. (9 January 2014) Registry Agreement. Retrieved from <https://newgtlds.icann.org/sites/default/files/agreements/agreement-approved-09jan14-en.pdf>

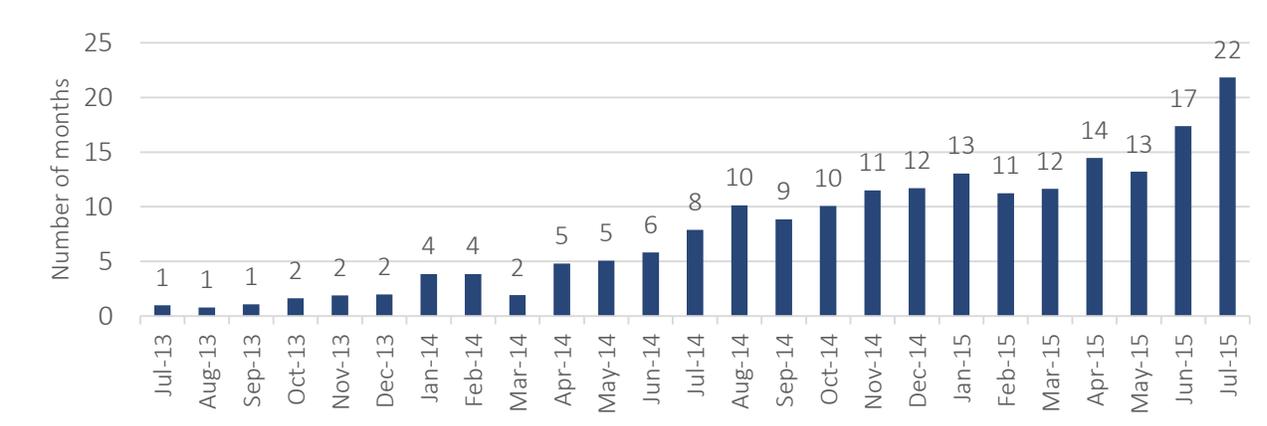

<sup>306</sup> <https://icann.adobeconnect.com/p1dbhnyzmr/>

additional time. Due to the need for additional time to sign the RA, ICANN implemented an extension request process that was available to both applicants of .Brand TLDs and applicants of non-brand TLDs.<sup>307, 308</sup>

For applicants of .Brand TLDs who had a 29 October 2014 deadline to sign the RA, the extension request process allowed them to receive an extension to 29 July 2015 if they satisfied certain criteria.<sup>309</sup> Essentially, this gave these applicants a total of 18 months from the effective date they were invited to Contracting, 29 January 2014, to sign the RA. Three-hundred-fifty applications met the criteria and received the 29 July 2015 RA signing extension. For all other applications, ICANN considered extension requests on a case-by-case basis and granted extensions of up to nine months if the applicant could demonstrate that it was working in good faith toward signing the RA.

In granting extensions, ICANN imposed upon applicants interim deadlines for activities they must have completed in order to sign the RA. The implementation of the interim deadlines allowed applicants to demonstrate progress toward signing the RA. As of 31 July 2015, ICANN had granted 517 TLDs extensions, and 97% of applicants that were granted extensions met interim deadlines. On average, applicants that were provided extensions signed the RA in 16 months. Figure 5.1.i shows the average number of months for RA execution over time.

Figure 5.1.i: Average Number of Months for RA Execution

As of 31 July 2015, a small number (13 applications) had not met their deadlines and had their application statuses changed to “Will Not Proceed” which meant loss of eligibility to sign a Registry Agreement with ICANN. On 30 June 2015, ICANN released a process for applicants with applications in a “Will Not Proceed” status due to missing a contracting-related deadline to request reinstatement of the application’s eligibility status within a defined period of time. In order to qualify for

<sup>307</sup> ICANN. (3 September 2014) Announcement: Requests for Extension to Execute New gTLD Registry Agreements. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/announcement-03sep14-en>

<sup>309</sup> ICANN. Contracting and the Registry Agreement. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/base-agreement-contracting#deadlines-extensions>

---

reinstatement, applicants had to provide all pending information required for RA execution and post-contracting activities along with the reinstatement request.

## 5.1.5 Conclusion

The intent of GNSO Recommendation 10 to provide applicants with a base RA at the beginning of the application process was satisfied with the inclusion of the Base RA in Module 5 of version 9 of the AGB, which was published prior to the opening of the application window. The base RA went through several modifications during the Program, but these modifications were necessary to address topics such as GAC Advice, Name Collision, approval of the 2013 Registrar Accreditation Agreement, and community request for another form of the RA for .Brand TLDs. As these changes occurred after the base RA was published, the intent of GNSO Recommendation 10 was not fully achieved.

Consideration should be given to either not allowing changes to the base RA once the application window opens so as to provide applicants with predictability of the final form and substance of the RA, or to establishing a process for modifying the RA. Additionally, the classification of .Brand TLDs was new in this round. Consideration should be given to whether there should be different versions of the RA for different types of applications.

In summary:

**5.1.a** Explore the feasibility of finalizing the base Registry Agreement before applications are submitted or establishing a process for updating the Registry Agreement

**5.1.b** Explore whether different applicant types could be defined in a fair and objective manner, and if there are to be different applicant types, consider whether there should be different versions of the Registry Agreement

---

## 5.2 Pre-Delegation Testing and Transition to IANA

### 5.2.1 Introduction

Pre-Delegation Testing (PDT) was a technical test required of applicants who had executed an RA with ICANN before delegation of the TLD into the root zone. PDT allowed the applicant to demonstrate that they could operate the TLD in a stable and secure manner.

Transition to IANA referred to the process steps by which ICANN recommended to IANA the delegation of the applied-for TLD. This section of the Program Implementation Review report discusses the following aspects of the PDT and Transition to IANA processes:

- PDT Requirements Development and Service Delivery
- Transition to IANA Process

### 5.2.2 Relevant Guidance

The following guidance is relevant to the topic of Pre-Delegation Testing and Transition to IANA and will be discussed in further detail in Sections 5.2.3 and 5.2.4 of this report:

- GNSO Principle D: “A set of technical criteria must be used for assessing a new gTLD registry applicant to minimise the risk of harming the operational stability, security and global interoperability of the Internet.”<sup>310</sup>
- GNSO Principle E: “A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meet its obligations under the terms of ICANN's registry agreement.”
- GNSO Recommendation 4: “Strings must not cause any technical instability.”
- GNSO Recommendation 7: “Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.”
- GNSO Recommendation 9: “There must be a clear and pre-published application process using objective and measurable criteria.”
- GNSO Recommendation 18: “If an applicant offers an IDN service, then ICANN's IDN guidelines must be followed.”
- GNSO Implementation Guideline I: “An applicant granted a TLD string must use it within a fixed timeframe which will be specified in the application process.”
- Applicant Guidebook, Section 5.2: Pre-Delegation Testing<sup>311</sup>

<sup>311</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

- Applicant Guidebook, Sections 5.3: Delegation Process
- Registry Agreement Specifications 2, 4, 6, and 10; Exhibit A<sup>312</sup>

## 5.2.3 Background

Section 5.2 of the AGB stated that “the purpose of the pre-delegation technical test is to verify that the applicant has met its commitment to establish registry operations in accordance with the technical and operational criteria described in Module 2.” Further, that “the test [was] also intended to indicate that the applicant [could] operate the gTLD in a stable and secure manner.” To this end, the AGB provided high-level testing requirements for DNS Infrastructure (e.g., UDP, TCP Support) and Registry Systems (e.g., System Performance, Whois Support). In addition, the AGB specified some tests, such as load testing, be performed by the registry itself, rather than ICANN, and that the registry would submit self-certification documentation showing that the test was performed and how it was performed.

To administer the testing process, ICANN issued a Request for Proposal (RFP) and selected the vendor Stiftelsen för Internetinfrastruktur (IIS) in 2012.<sup>313</sup> IIS is the registry operator for the .SE ccTLD (Sweden) and was selected based on criteria in the RFP.<sup>314</sup>

On 28 February 2013, ICANN requested volunteers for a PDT Pilot project, which would serve as a learning period for both ICANN and the PDT Provider ahead of PDT production.<sup>315</sup> In implementing the Pilot Project, ICANN and the PDT provider sought to verify the operational process, systems, specifications and criteria of the test. Twelve applicants, each supported by a different technical back-end provider, participated in the Pilot Project. The findings from the pilot were shared with the community during the ICANN46 Meeting in Beijing, China. Following the pilot, a beta testing period was offered, geared toward helping applicants prepare for PDT. Specifically, beta testing sought to expose more participants to the full suite of tests that were to be conducted during the official PDT phase of the Program and to reveal any requirements that may have required adjustment in testing approach or criteria. Eligible applicants were not able to move forward with Contracting and subsequently PDT until the finalization of the Registry Agreement on 02 July 2013 (see Section 5.1: Contracting of this report). While anticipating the final RA, beta testing allowed applicants to prepare and learn about PDT before PDT production operations.

The timeline to PDT production operations is illustrated in Figure 5.2.i:

Figure 5.2.i: PDT Timeline

Throughout the process, ICANN and the PDT provider continued to make updates and improvements to PDT Testing Specifications, input requirements, and FAQs.<sup>316</sup>

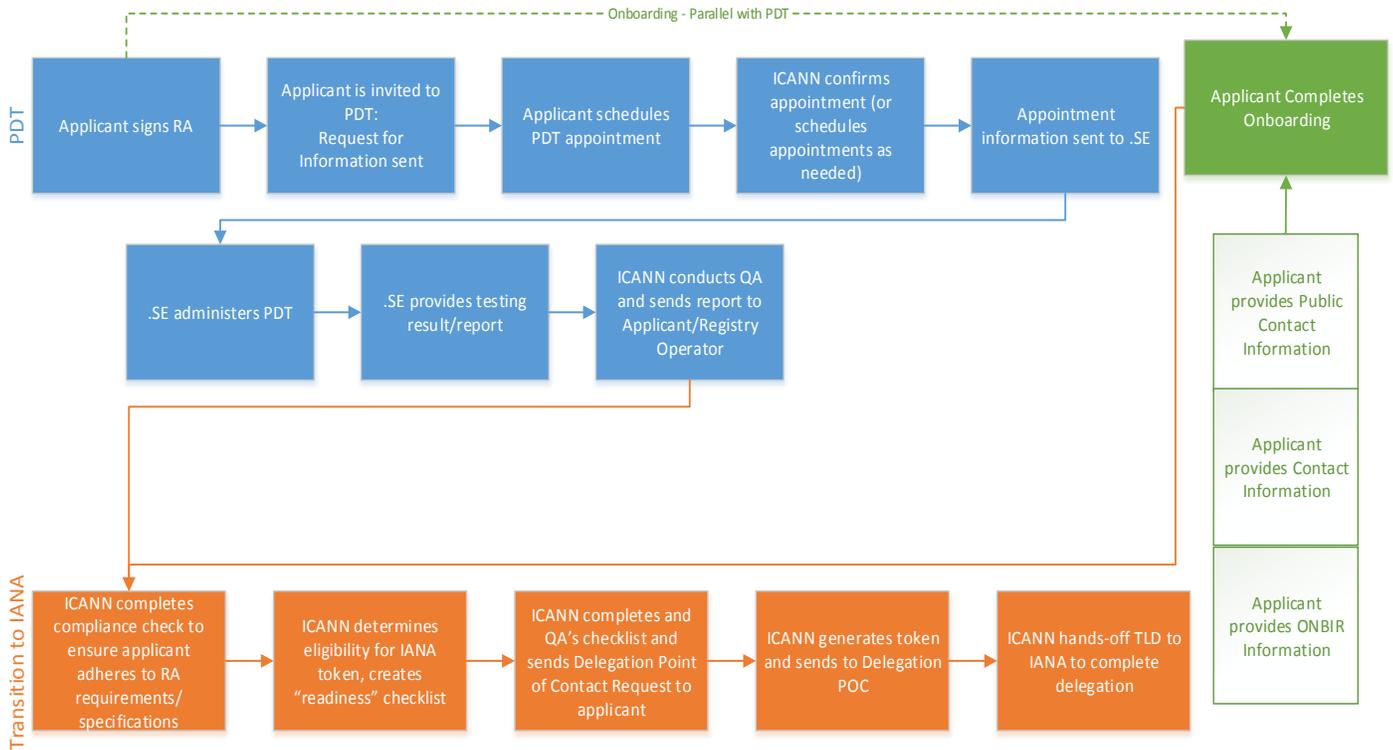

Following PDT, applicants moved to the “Transition to IANA” phase, which was a quality assurance and hand-off process that occurred before ICANN recommended the TLD to IANA for delegation into the root zone. The Transition to IANA process confirmed that the application had successfully completed all of the required Program steps and ensured that any exceptions were documented in a final report. Part of the Transition to IANA process included onboarding, where the applicant provided contact and technical information to establish an account as a registry operator with ICANN, as well as the issuing of a “token,” with which the applicant was able to access IANA’s Root Zone Management (RZM) system and initiate the delegation process.<sup>317</sup>

Figure 5.2.ii is a general overview of the process from Contracting to Delegation, including the PDT and Transition to IANA processes:

Figure 5.2.ii: Overview of Post-Contracting Processes

## 5.2.4 Assessment

### 5.2.4.1 PDT REQUIREMENTS DEVELOPMENT AND SERVICE DELIVERY

Section 5.2 of the AGB provided the high-level testing requirements for PDT, which “cover both the DNS server operational infrastructure and registry system operations. In many cases the applicant will perform the test elements as instructed and provide documentation of the results to ICANN to demonstrate satisfactory performance.”

For implementation, ICANN issued an RFP for a PDT service provider that could administer as well as design the testing of these requirements. Specifically, the RFP required the vendor to design and develop the testing specifications, the software to perform the testing, the processes to deliver the service and the system to manage the service delivery.<sup>318</sup> It was also important that a potential PDT provider could scale to meet the demands of the Program. Although the AGB did not specify an

<sup>318</sup> ICANN. Request for Proposal: Pre-Delegation Testing Provider for the new gTLD program, page 1. Retrieved from <https://www.icann.org/en/system/files/files/pre-delegation-testing-30oct12-en.pdf>

---

exact number of tests to be conducted on a weekly basis, ICANN established a baseline of 20 tests per week, which corresponded to the metering requirement of 1,000 delegations per year (i.e., 1,000 delegations/year divided by approximately 50 weeks/year = 20 tests/week).<sup>319,320</sup> The PDT provider also had to be able to ramp up to 100/week if needed, should some weeks see fewer than 20 tests and “catch-up” be desired.<sup>321</sup>

Following the RFP process in October-November 2012, IIS was selected as the PDT service provider in December 2012, as noted in the Background section of this report. By late February 2013, the Pilot Project had been announced and the PDT Documentation Instructions had been posted on the PDT microsite.<sup>322</sup> Together with IIS and technical consultants Kirei,<sup>323</sup> ICANN vetted the testing requirements and specifications before publishing in late March 2013. By posting the test requirements, ICANN helped ensure transparency and consistency. Further, ICANN implemented both a pilot and a beta testing period, which allowed ICANN and the PDT provider to help ensure that applicants were well-prepared for PDT.

The pilot and beta projects also contributed to an “evolution” of the PDT process to a more “interoperable” and service-oriented approach. Although the AGB provides for PDT to be structured in the format of asking questions and requesting clarification of any issues, it became apparent during the beta testing period that a more “interoperable” type of experience would be more beneficial. Rather than focus on the applicant providing responses to a test and the PDT provider “grading” the test as “Pass/Fail,” both the community and the PDT provider provided feedback that a more useful type of experience would be one where the applicant could work with the PDT provider regarding any issues encountered throughout the testing process.

To facilitate this change, the PDT provider made necessary enhancements to the PDT system (e.g., allowing for the threading of messages and communications between the PDT provider and the applicant) as well as allowed for extensions of tests. In the beginning of beta testing, many applicants needed longer than the two weeks prescribed by ICANN. By the time PDT was in the production phase, after these enhancements had been made and applicants were able to learn from their interactions with the PDT provider during beta testing, most applicants were able to meet the two-week timeframe to complete PDT. Finally, over the course of beta testing, and as a result of ongoing community feedback, the anycast instance testing approach was replaced by Distributed DNS Testing, which only assessed the prospective registries' public-facing DNS service.<sup>324</sup>

<sup>321</sup> Request for Proposal: Pre-Delegation Testing Provider for the new gTLD program, page 12. Retrieved from <https://www.icann.org/en/system/files/files/pre-delegation-testing-30oct12-en.pdf>

<sup>322</sup> ICANN. (19 March 2015) Pre-Delegation Testing News and Views. Retrieved from <http://newgtlds.icann.org/en/applicants/pdt#resources>

<sup>323</sup> Kirei. Retrieved from <https://www.kirei.se/en/webusaito/about/>

<sup>324</sup> For more information regarding this change, please see the announcement here: <http://newgtlds.icann.org/en/announcements-and-media/announcement-2-06jun13-en>

All of these changes together led to a PDT production service model that worked more smoothly for both applicants and ICANN/the PDT service provider than the model used during the beta period. Applicants were both well-prepared by the beta testing as well as able to contribute feedback, leading to a testing experience that allowed applicants to demonstrate their ability to meet the DNS Infrastructure and Registry Operations requirements in the AGB. Lastly, continuous improvement extended beyond beta testing, as test requirements and specifications were periodically updated to improve clarity and ensure secure and stable delegation of all TLDs.<sup>325</sup>

From the experience of developing the PDT requirements and service delivery, ICANN has identified several lessons learned:

- Review the requirements for self-certifying tests and the effectiveness of each. For example, is Service Level Agreement (SLA) monitoring/testing most effective as a self-certifying test, or should these be converted to operational type tests?
- Reviewing PDT as a whole to determine what optimizations can be made with regard to effectiveness of the tests. Many in the community have expressed that it is inefficient to test every TLD. Consideration should be given as to which tests could be performed once per technical infrastructure implementation, and which tests should be performed for each TLD.
- Building on lesson learned 2.8.c, in the development of evaluation criteria and procedures for IDNs, ICANN recommends that the review of IDN tables during PDT be limited to confirmation of compliance with the TLD's stated IDN policy.

#### 5.2.4.3 TRANSITION PROCESS

Following PDT, applicants entered the “Transition to IANA” process, which was the final “hand-off” of the TLD to the IANA department, wherein ICANN officially recommended delegation of a TLD. This transition process was defined in Section 5.3 of the AGB. “Upon notice of successful completion of the ICANN pre-delegation testing, applicants may initiate the process for delegation of the new gTLD into the root zone database. This will include provision of additional information and completion of additional technical steps required for delegation.”

ICANN's “hand-off” process before delegation into the root zone was to confirm that the applicant had successfully completed all required Program steps and PDT. In parallel with PDT, the applicant must also have completed Onboarding as indicated in the Graphic 5.2.2.b above. For Onboarding, an applicant was provided a Welcome Kit that explains in detail the requirements for its delegation into the root zone.<sup>326</sup>

In order to help facilitate the movement of applicants through the PDT and Onboarding processes and onto delegation, ICANN set up “post-contracting milestones,” which served as intermediary deadlines from the signing of the RA to delegation, as the RA provides 12 months to complete this process.

---

<sup>325</sup> The latest updates were made on 22 July 2015. For more information on these updates as well as others, please see the PDT microsite: <http://newgtlds.icann.org/en/applicants/pdt>

<sup>326</sup> ICANN. (12 June 2014) Webinar: Becoming a New gTLD Registry. Retrieved from <https://icann.adobeconnect.com/p2moysmxspv/>

---

Once both PDT and Onboarding were completed, ICANN completed final verification that all information had been received and was accurate, and then provided the applicant a “token” to access IANA’s Root Zone Management (RZM) system. From this point, IANA managed the applicant into delegation.

## 5.2.5 Conclusion

The PDT and Transition to IANA processes were implemented in alignment with the AGB, and in such a way as to support transparency, predictability, and consistency. To this end, the implementation of PDT included a pilot and beta testing intended to provide applicants with a predictable and well designed experience. Updates were made to the process and system based on feedback from the pilot and beta testing project, and continuous improvement occurred throughout this phase of the New gTLD Program to enhance the quality of PDT and the Transition to IANA processes.

There are some valuable lessons learned from the implementation the Transition to Delegation phase that would be useful input to the development of procedures for future rounds. One lesson learned questions the effectiveness and efficiency of testing each TLD, when many TLDs share the same back-end registry services provider. Consideration should be given to whether some tests could be performed once per technical infrastructure implementation, while others are performed for each individual TLD. Another lesson learned is that self-certifying tests may not provide optimal effectiveness, so the community may wish to convert certain tests, such as SLA testing, into operational tests. Finally, the review of IDN tables in this round was performed during PDT, but based on the experience during this round, ICANN recommends that the review parameters be updated to leverage the IDN tools currently under development. Consideration should be given to whether the review of IDN tables during PDT could be limited to confirmation of compliance with the TLD’s stated IDN policy.

In summary:

- 5.2.a** Consider which tests should be performed once per technical infrastructure implementation and which should be performed for each TLD
- 5.2.b** Consider which, if any, tests can be converted from self-certifying tests to operational tests
- 5.2.c** In considering an alternate approach to the Technical and Operational Capability evaluation, if an RSP accreditation program is considered, explore how Pre-Delegation Testing would be impacted
- 5.2.d** Building on lesson learned 2.8.c, in the development of evaluation criteria and procedures for IDNs, consider whether review of IDN tables during Pre-Delegation Testing could be limited to confirmation of compliance with the TLD’s stated IDN policy

---

# Chapter 6: Applicant Support

## 6.1 Applicant Support Program

### 6.1.1 Introduction

The Applicant Support Program was a community-driven initiative developed to promote access to the New gTLD Program. It assisted potential new gTLD applicants seeking both financial and non-financial support via the following mechanisms:

- Financial assistance in the form of new gTLD evaluation fee reduction
- Pro bono services
- Establishment of a funding mechanism for the program

This section of the Program Implementation Review report discusses these aspects of the Applicant Support Program.

### 6.1.2 Relevant Guidance

The following guidance is relevant to the topic of Applicant Support and will be discussed in further detail in Sections 6.1.3 and 6.1.4 of this report:

- GNSO Implementation Guideline N: “ICANN may put in place a fee reduction scheme for gTLD applicants from economies classified by the UN as least developed.”<sup>327</sup>
- Applicant Guidebook, Section 1.2.10: Resources for Applicant Assistance<sup>328</sup>
- New gTLD Financial Assistance Handbook<sup>329</sup>
- ICANN Board Resolution 2010.03.12.47 (12 March 2010): Support for Applicants Requesting New gTLD Applicants<sup>330</sup>
- ICANN Board Resolution 2011.06.20.01 (20 January 2011): Approval of New gTLD Program, including a program to ensure support for applicants from developing countries<sup>331</sup>
- ICANN Board Resolutions 2011.12.08-2011.12.08.03 (8 December 2011): Approval for ICANN staff to finalize the implementation plan for the Applicant Support Program and for the new

gTLD evaluation fee reduction to \$47,000 USD for candidates who meet the criteria under the Applicant Support Program<sup>332</sup>

### 6.1.3 Background

On 6 September 2007, the GNSO Council approved the “Final Report of the ICANN Generic Names Supporting Organization on the Introduction of New Generic Top-Level Domains,”<sup>333,334</sup> which included seven principles, 20 recommendations, and 18 implementation guidelines for the introduction of New gTLDs. Implementation Guideline N of the GNSO Report stated: “ICANN may put in place a fee reduction scheme for gTLD applicants from economies classified by the UN as least developed.”

As the early versions of the Applicant Guidebook (AGB) were being drafted in 2009 and 2010, there were community conversations regarding inclusion of applicants from developing countries and the application fee being prohibitive to applicants from developing countries. In particular, the Government Advisory Committee (GAC) submitted comments on versions 1, 2, and 3 of the draft AGB, concerning the proposed single fee structure. The comments suggested a variable cost structure that might allow for greater inclusion of stakeholders from developing regions.<sup>335,336,337</sup>

In line with the GNSO’s Implementation Guidance and with consideration to the comments submitted by ICANN stakeholders, on 12 March 2010, the ICANN Board resolved that: “[. . .] the Board recognize[d] the importance of an inclusive New gTLD Program” and “request[ed] stakeholders to work through their [Supporting Organizations (SOs)] and [Advisory Committees (ACs)], and form a Working Group to develop a sustainable approach to providing support to applicants requiring assistance in applying for and operating new gTLDs.”<sup>338</sup> In accordance with this resolution, in late April 2010, the GNSO and ALAC organized the Joint SO/AC New gTLD Applicant Support Working Group (JAS WG), which was made up of members from the GNSO and the ALAC.<sup>339</sup>

---

On 20 June 2011, the ICANN Board approved the launch of the New gTLD Program, which included a requirement for “a program to ensure support for applicants from developing countries.” The resolution further stated that this program’s

*[. . .] form, structure and processes [are] to be determined by the Board in consultation with stakeholders including: (a) consideration of the GAC recommendation for a fee waiver corresponding to 76 percent of the \$185,000 USD evaluation fee, (b) consideration of recommendations of the ALAC and GNSO as chartering organizations of the Joint Applicant Support (JAS) Working Group, (c) designation of a budget of up to \$2 million USD for seed funding, and creating opportunities for other parties to provide matching funds, and (d) the review of additional community feedback, advice from ALAC, and recommendations from the GNSO following their receipt of a Final Report from the JAS Working Group (requested in time to allow staff to develop an implementation plan for the Board’s consideration at its October 2011 meeting in Dakar, Senegal), with the goal of having a sustainable applicant support system in place before the opening of the application window.<sup>340</sup>*

On 13 September 2011, less than four months before the opening of the application window for New gTLDs, the JAS WG published its “Final Report of the Joint SO/AC New gTLD Applicant Support Working Group.”<sup>341</sup> This Final Report provided the JAS WG’s recommendations for the Applicant Support Program, including recommendations for financial assistance, access to pro bono services, and donations to the Applicant Support Fund. This Final Report drove the work that the community, the ICANN Board, and ICANN staff undertook to finalize the Applicant Support Program.

## 6.1.4 Assessment

### 6.1.4.1 FINANCIAL ASSISTANCE

As mentioned in Section 6.1.3 of this report, the JAS WG published its Final Report on 13 September 2011. The ICANN Board considered the JAS WG’s Final Report and formed a working group to develop an implementation model that took into account the JAS WG Final Report and the timely implementation of the program. On 8 December 2011, the ICANN Board directed staff to finalize the implementation plan in accordance with the proposed criteria and process, for the launch of the Applicant Support Program in January 2012. Additionally, the Board approved the fee reduction to USD 47,000 for Applicant Support candidates that qualified under the Applicant Support Program.<sup>342</sup>

---

As directed by the 8 December 2011 resolution, ICANN published the draft Financial Assistance Handbook for public comment on 20 December 2011,<sup>343</sup> which defined the criteria and process for financial assistance. Sixteen comments were submitted and updates were made to the Handbook, primarily to allow a refund of USD 42,000 of the USD 47,000 application fee if the applicant did not meet the criteria threshold, and to change the eligibility rules to allow communities and non-governmental organizations that are trademark holders to apply under the Applicant Support Program. The final Handbook was published on 11 January 2012, one day prior to the opening of the application window (see Section 1.1: Application Submission of this report).

The financial assistance component of the Applicant Support Program allowed applicants that can meet the established criteria threshold to pay a reduced evaluation fee of USD 47,000 instead of the full evaluation fee of USD 185,000. In order to qualify for the fee reduction, applicants were required to demonstrate financial need, provide a public interest benefit, and possess the necessary management and financial capabilities.

The JAS WG Final Report recommended that a “Support Application Review Panel (SARP) should be established to review applications.” It further recommended that the SARP “should be composed of volunteers (from the ICANN community and outside experts).” Consistent with this recommendation, on 3 February 2012, ICANN issued a request for expressions of interest to serve on the SARP.<sup>344</sup> Criteria for selecting SARP panelists included:

- Knowledge about the new gTLD process, potential gaming patterns and the general needs and capabilities of likely Support Program applicants
- Geographic diversity
- Expertise in:
  - Running a small business
  - Operating in developing economies
  - Serving in the public interest
  - Awarding grants
  - Financial experience or expertise in analyzing business plans, particularly those submitted from developing economies
  - Knowledge of domain names (or the domain name industry)
- Experience managing a domain name registry service

Eighty individuals from around the world encompassing a broad range of expertise submitted expressions of interest. Based on the volume of financial assistance applications submitted, ICANN selected five individuals to form the SARP. Collectively, the individuals selected for the SARP had experience in the domain name industry, managing small businesses, awarding grants, and assisting others on financial matters in developing countries.<sup>345</sup>

---

<sup>343</sup> ICANN. New gTLD Applicant Support Program: Financial Assistance. Retrieved from <https://www.icann.org/resources/pages/new-gtld-applicant-support-handbook-2011-12-20-en>.

<sup>344</sup> ICANN. (3 February 2012) Announcement: ICANN Seeks Evaluators for the Support Applicant Review Panel. Retrieved from <https://www.icann.org/news/announcement-3-2012-02-03-en>

<sup>345</sup> ICANN. Support Application Review Panel (SARP) Member Biographies. Retrieved from <http://newgtlds.icann.org/en/applicants/candidate-support/sarp-bios-28may13-en.pdf>

To assist the SARP, ICANN provided administrative support in the form of coordinating face-to-face meetings, arranging conference calls, and providing on-line workspaces for the SARP to do its work. As the SARP was an independent panel, it defined its own procedures, methodology, timelines, and final reports. On 12 March 2013, the SARP published its report for the three applications received under the Applicant Support Program.<sup>346</sup> The results of the SARP's evaluations were that one of the three applications met the criteria under the Applicant Support Program, and two did not.

The JAS WG recommended that “[w]hen the SARP rejects a Support Candidate, the SARP should explain its reasons.” The SARP's results reports reported its ultimate conclusion, but did not provide rationale for its determinations.<sup>347</sup> Feedback from applicants indicated that the amount of detail provided in the SARP's final report was insufficient and lacked rationale. ICANN provided the feedback to the SARP and on 20 March 2013, the SARP published an updated report that provided an additional level of detail, which was the determination for each criterion for each application.<sup>348</sup> ICANN also received feedback on the updated report, suggesting that further detail in the reports would support transparency in the process.<sup>349,350</sup>

The subject of Applicant Support was identified by the ICANN Board as a topic that may be appropriate for discussion by the GNSO.<sup>351</sup>

#### 6.1.4.2 PRO BONO SERVICES

In addition to financial assistance, the JAS WG's recommendations for the Applicant Support Program also called for the availability of non-financial support. Consistent with the recommendations of the JAS WG's Final Report, on 11 January 2012, ICANN launched a directory web page<sup>352</sup> on the New gTLD microsite to allow parties interested in providing pro bono assistance and parties interested in receiving pro bono services to have their names and contact information listed. As of 31 July 2015, 45 candidates sought support,<sup>353</sup> and 21 organization offered pro bono services.<sup>354</sup> ICANN would appreciate any feedback from those who offered or received pro bono

---

services as to the effectiveness of this resource. Feedback may be submitted to the Customer Service Center at [customerservice@icann.org](mailto:customerservice@icann.org).

#### 6.1.4.3 FUNDING FOR APPLICANT SUPPORT PROGRAM

In addition to the USD 2 million seed fund, the JAS WG Final Report recommended the “creation of a foundation to collect and distribute the financial support to Support Recipients.”<sup>355</sup> As the USD 2 million seed funding was not exhausted, additional donations to fund the program were not solicited.

### 6.1.5 Conclusion

The Applicant Support Program was a community-developed initiative intended to promote access to the New gTLD Program in developing regions, by providing new gTLD applicants with access to financial and non-financial support. Three applicants applied for financial support, and one met the criteria of the Applicant Support Program to receive a reduced application fee. The ICANN Board reserved USD 2 million to provide financial assistance to qualified applicants, but these funds were not exhausted. Given the low number of applications submitted, consideration should be given to exploring how the Program can be improved to serve its intended purpose.

To the extent that such a program exists in future application rounds, there are valuable lessons learned that should be considered in the development of a financial assistance program. In regards to the development of criteria and processes, the community may wish to research globally recognized procedures that could be adapted for the implementation of a financial assistance program (e.g., World Bank programs). Additional studies may also be undertaken to better understand the needs of the target market and their obstacles to becoming registry operators (e.g., infrastructure, training). This information would help to design a program to better meet the needs of the target market.

Regarding execution of the program, in this round, the SARP was an independent panel that defined its own processes, procedures, and final reports. The SARP’s work was performed earlier than the other New gTLD Program evaluation panels, and based on lessons learned from the implementation of other panels, ICANN should consider whether additional guidance should be provided to the SARP regarding publication of their processes, final report format, and documentation of rationale.

In summary:

**6.1.a** Consider leveraging the same procedural practices used for other panels, including the publication of process documents and documentation of rationale

# Chapter 7: Continued Operations Instrument

## 7.1 Continued Operations Instrument

### 7.1.1 Introduction

The Continued Operations Instrument (COI) is a financial instrument in the form of an irrevocable standby letter of credit (LOC) or deposit into an irrevocable cash escrow account. The purpose of the COI is to temporarily fund the continued operations of the five critical registry functions<sup>356</sup> of a new gTLD by an emergency back-end registry operator (EBERO) in the event of a TLD failure. This section of the Program Implementation Review report discusses the following aspects of the COI:

- COI Requirements
- COI Evaluation

### 7.1.2 Relevant Guidance

The following guidance is relevant to the topic of Continued Operations Instrument and will be discussed in further detail in Sections 7.1.3 and 7.1.4 of this report:

- GNSO Principle E: “A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meet its obligations under the terms of ICANN’s registry agreement.”<sup>357</sup>
- GNSO Recommendation 8: “Applicants must be able to demonstrate their financial and organizational operational capability.”
- Applicant Guidebook, Attachment to Module 2: Evaluation Questions and Criteria<sup>358</sup>
- Applicant Guidebook, Section 5.1: Registry Agreement
- Applicant Guidebook, Section 5.4: Ongoing Operations
- New gTLD Registry Agreement, Specification 8: Continued Operations Instrument<sup>359</sup>

---

<sup>356</sup> The five critical registry functions are 1) DNS resolution for registered domain names, 2) Operation of Shared Registration System, 3) Operation of Registration Data Directory Services (Whois), 4) Registry data escrow deposits, and 5) Maintenance of a properly signed zone in accordance with DNSSEC requirements.

<sup>357</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gns0.icann.org/en/issues/new-gtlds/pdp-dec05-fr-part-a-08aug07.htm>

<sup>359</sup> ICANN. Registry Agreement. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/agreement-approved-09jan14-en.pdf>

## 7.1.3 Background

Question 50 of the Applicant Guidebook (AGB) required that each applicant provide an estimate of the cost to fund the operations of the proposed registry’s five critical registry functions for at least three years. It further required that the applicant, “provide evidence as to how the funds required for performing these critical registry functions [would] be available and guaranteed,” in the form of an irrevocable standby LOC or a deposit into an irrevocable cash escrow account (these instruments are also collectively referred to as COIs”).

The requirements for the COI were specified in Question 50 of the AGB. However, because EBERO providers were not in place when the AGB was finalized, the EBERO’s cost to maintain operation of the five critical registry functions was not provided in the AGB. On 23 December 2011, prior to the opening of the application window (see Section 1.1: Application Submission of this report), ICANN published an announcement “Continued Operations Instrument Guidelines Available for New gTLD Applicants”<sup>360</sup> and provided guidance on the EBERO’s estimated cost by projected number of domains. The publication of this announcement provided applicants with the information they needed to finalize their COI.

Applicants who demonstrated an additional level of financial commitment by submitting a fully funded COI with the application were eligible to receive the maximum number of points (three) for Question 50 of the application. Of the 1,930 new gTLD applications submitted, 1,446 satisfied the AGB requirements to receive three points.

## 7.1.4 Assessment

The COIs submitted with the new gTLD applications were evaluated during Initial Evaluation (IE) (see Section 2.1: Initial and Extended Evaluation of this report) by the Financial Capability Evaluation Panel (See Section 2.7: Financial Capability Evaluation and Section 8.2: Service Provider Coordination of this report) against the requirements in Question 50 of the AGB:

- COI amount must be equal to or greater than the EBERO’s cost to fund the operations of the five critical registry functions for a period of three years
- COI must name “ICANN or its designee” as the beneficiary
- COI must have a term of at least five years from the delegation date of the TLD
- COI must be issued by a reputable financial institution insured at the highest level in its jurisdiction
- COI must provide that ICANN or its designee shall be unconditionally entitled to a release of funds
- COI must allow for partial drawing
- If an LOC, COI must be subject to ISP 98 or UCP
- If a cash escrow deposit:

---

<sup>360</sup> ICANN. 23 December 2011. Announcement: Continued Operations Instrument Guidelines Available for New gTLD Applicants. Retrieved from <https://www.icann.org/news/announcement-3-2011-12-23-en>

- ❑ Cash must not comingle with other funds
- ❑ Funds are not considered to be an asset of ICANN
- ❑ Interest earnings less bank fees are to accrue to the deposit and will be paid back to the applicant upon liquidation of the account

These requirements were in place to ensure that the COI was a viable financial instrument and could be drawn upon quickly by ICANN or the EBERO should a failure occur.

Based on the evaluation performed, the Financial Capability Evaluation Panel issued 1,531 Clarifying Questions (CQs) (see Section 2.7: Financial Capability Evaluation of this report) for Question 50. This number represents 35% of CQs issued during IE regarding the six questions in the Financial section of the AGB. This shows that a large number of COIs did not meet the criteria as described above and had issues that required correction (e.g., COIs with an insufficient COI amount, the COI being provided by a bank that did not meet the defined standard or errors in the address). Although the deficiencies spanned all of the requirements of Question 50, the requirements regarding two issues in particular resulted in the highest proportion of CQs.

1. COI must provide that ICANN or its designee shall be entitled unconditionally to a release of funds. In many cases, applicants specified “ICANN” as the beneficiary but not “ICANN or its designee” as required.
2. COI must provide that ICANN or its designee shall be entitled unconditionally to a release of funds. In many cases, the COI specified conditions for the release of funds.

Eighty-two percent of all applications received a CQ for Question 50. Within this population, 90% of the CQs included a question relating to the unconditional release of funds requirement, and 45% of the CQs included a question related to the beneficiary requirement.<sup>361</sup> To clarify the requirements of Question 50 and to assist applicants with responding to their CQs, ICANN published several advisories during IE:

#### *5 December 2012 Advisory*

On 5 December 2012, ICANN published the first of three Advisories on this topic. This Advisory was published to provide applicants with an explanation for the unconditional requirement (item 2 above):

*The purpose of the continuing operations instrument (COI) is to ensure availability of funds needed to provide continuity of service to the registrants should an issue with the registry arise. ICANN's ability to exercise its rights under the COI are set forth in the new gTLD registry agreement (see Section 2.13, Section 4.5, Specification 8 and, for intergovernmental organizations and governmental entities only, Section 7.14(f)). As ICANN cannot envision all*

---

<sup>361</sup> CQs were issued per question and each CQ may have contained multiple issues. For example, an applicant with issues relating to COI amount, unconditional requirement, and beneficiary requirement would receive one CQ for Q50 with all three issues specified. Percentage numbers provided are across all Question 50 CQs.

---

*possible scenarios that could result in the need to draw on the COI under these provisions, the "unconditional withdrawal of funds" requirement must be met.*<sup>362</sup>

The Advisory also provided examples of statements that were not considered to be conditions for withdrawal of funds so that applicants could work with their banks to arrive at language that would be suitable for them and meet the unconditional requirement.

#### *5 February 2013 Advisory*

On 5 February 2013, ICANN followed up with publication of a second Advisory regarding the beneficiary requirement (item #1 above). This publication addressed concerns expressed by applicants who informed ICANN that due to concerns about risks, their banks could not accommodate the requirements: “The LOC must name ICANN or its designee as the beneficiary.” and “Any funds paid out would be provided to the designee who is operating the required registry functions.”<sup>363</sup> To help these applicants overcome this hurdle with their banks, ICANN provided an alternative to naming “ICANN or its designee” the beneficiary. The applicant could name ICANN as the beneficiary of the letter of credit and make the letter of credit fully transferable or assignable by ICANN, in ICANN’s sole discretion. This guidance was communicated in the Advisory and provided an option available to all applicants.

#### *4 March 2013 Update to the 5 December 2012 Advisory*

Following the publication of the 5 December 2012 Advisory and despite having provided examples of statements not considered to be conditions, ICANN continued to receive questions from applicants regarding what specific language would satisfy the unconditional requirement of Question 50 (item #2 above). On 4 March 2013, ICANN published an update to the 5 December 2012 Advisory to provide an additional example of an acceptable statement that was not considered to be a condition.

Despite good efforts by applicants to utilize the unconditional language examples that were provided in the Advisories, there continued to be confusion and inconsistent application and usage of the conditional language throughout IE. Complicating this was the fact that there were some banks that would not issue unconditional irrevocable standby LOCs. This was made more challenging because IE was not designed to facilitate extended exchanges and dialogue about these issues between the Financial Capability evaluation panel, ICANN, the applicant, and the banks. Based on the inconsistency of unconditional language and in order to allow applicants to move through IE in a timely manner, on 5 June 2013, ICANN announced during an Applicant Update Webinar that the evaluation of Question 50 would be focused on the financial aspects of the COI.<sup>364</sup> The final evaluation of the COI against the requirements of Specification 8 of the Base RA, including the unconditional language, would be performed during Contracting (see Section 5.1 of this report).

---

At the time that this announcement was made, IE results for 600 applications had been published, and the change did not affect the result (passing IE vs. being eligible for EE) of any of these applications. The change did result in ICANN updating the IE score for Question 50 from 1 point to 3 points for 15% of the 600 applications.

In July 2013, when ICANN began inviting applicants to Contracting, ICANN began reviewing the COIs against the requirements of Specification 8 of the Base RA for Contracting purposes. One of the requirements of Question 50 and Specification 8 of the Base RA was that the COI be in place for a period of five years from the delegation date of the TLD, or six years from the effective date of the RA (as the RA provides for a period of 12 months from the effective date of the RA for the TLD to be delegated). Because Contracting commenced over two years after the close of the application window, many COIs needed to be amended to meet this requirement. In addition, many applicants needed to amend the unconditional language of the COI to meet the requirements of Specification 8 of the RA. These two issues affected approximately 85% of all non-compliant COIs at the time of Contracting.<sup>365</sup> The other COI issues that impacted applicants at Contracting included updating ICANN's office address, mailing to ICANN the physical original COI document, amending the COI to reflect appropriate choice of law, and amending the COI to ensure that the document could be transferred by ICANN.

When ICANN implemented the RA extension request process on 3 September 2014,<sup>366</sup> only 1,059 of 1,1718 active applications had compliant COIs. In order to ensure that applicants could complete the Contracting process, which required that a compliant COI be in place as per Section 5.4.1 of the AGB, an interim deadline (see Section 5.1: Contracting of this report) of 31 October 2014 was set for the submission of compliant COI for applications that were in Contracting. Two-hundred-thirty applications were received by the 31 October 2014 deadline. Of this number, 217 met the final deadline. A small number, 13 applicants, did not meet this deadline and had their application status changed to "Will Not Proceed" which meant loss of eligibility to sign a Registry Agreement with ICANN.<sup>367</sup> ICANN worked with these applicants on a one-on-one basis to address their outstanding issues.

As of 31 July 2015, 965 of the 1,390 non-withdrawn applications required at least one amendment to achieve a compliant COI, 607 required two amendments, and 316 required three or more amendments before reaching compliance.

## 7.1.5 Conclusion

COI was the financial instrument that applicants were required to submit with their applications to temporarily fund the continued operations of the five critical registry functions of a new gTLD by an emergency back-end registry operator (EBERO) in the event of a TLD failure. The majority of

---

<sup>365</sup> ICANN did not track this specific statistic. This number is ICANN's estimate.

<sup>366</sup> ICANN. 3 September 2014. Announcement: Requests for Extension to Execute New GTLD Registry Agreement. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/announcement-03sep14-en>

<sup>367</sup> ICANN. Contracting and the Registry Agreement. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/base-agreement-contracting#deadlines-extensions>

---

applicants had issues obtaining a COI that met the requirements of the AGB as evidenced by the fact that almost all applicants were required to make amendments to their COIs, and over 20% of applications had three or more amendments. As such, consideration should be given to whether there are other ways to fund an EBERO in the event of a TLD failure.

In summary:

**7.1.a** Explore whether there other more effective and efficient ways to fund emergency back-end registry operator in the event of a TLD failure

---

# Chapter 8: Program Management

Section 1.1 of the Applicant Guidebook estimated an application volume of 500 when estimating processing times for each phase.<sup>368</sup> The total estimated lifecycle was approximately nine months for straightforward applications and up to 20 months for complex applications. In fact, 1,930 applications for new gTLD were submitted and the New gTLD Program is currently estimated to conclude in 2017, representing a five-year lifespan during which ICANN processed gTLD applications. The implementation of such a large and complex program was not a small task, and required significant effort from the community, ICANN, and service providers over the three-and-a-half-year period between the opening of the application window on 12 January 2012 and the publication of this report. This section of the Program Implementation Review Report discusses how ICANN defined operational procedures to implement the processes defined in the AGB, the systems and tools that were developed and used in support of the operational implementation of the Program, the resources that supported the Program, how and which service providers were selected to support Program processes, how ICANN managed these service providers to ensure the quality and consistency of results delivered, how ICANN managed the Program's financials, how ICANN executed various communications activities in support of the Program, and how the Customer Service Center evolved over time to provide improved services to applicants and registry operators.

---

## 8.1 Program Processes, Systems, Resources

### 8.1.1 Introduction

Program processes, systems and resources are elements that supported the implementation of the New gTLD Program. Processes and procedures provided predictability to applicants, service providers, and ICANN. Systems supported communications with applicants. Resources performed the work. This section of the Program Implementation Review report discusses the following topics:

- Program processes and procedures
- Applicant-facing systems
- ICANN’s internal resources to support Program implementation

### 8.1.2 Relevant Guidance

The following guidance is relevant to the topic of Program Processes, Systems, Resources and will be discussed in further detail in Sections 8.1.3 and 8.1.4 of this report:

- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>369</sup>

### 8.1.3 Background

On 8 August 2007, the GNSO published its Final Report for the “Introduction of New Generic Top-Level Domains.” The community and ICANN subsequently undertook the effort to draft the AGB, which would serve as a roadmap for the implementation of the policies set forth in the GNSO’s Final Report. On 24 October 2008, ICANN published the first version of the AGB for comments and input from the community.<sup>370</sup> Over the next three years, the community and ICANN continued to work on the development of the AGB.<sup>371</sup> On 11 January 2012, the current and ninth version of the AGB was published. This version served as the final roadmap for the implementation of the first round of new gTLDs.

In accordance with GNSO Recommendation 1, the AGB was developed to provide criteria and requirements that applicants must meet in order to successfully complete the evaluation process. The AGB defined the overall process flow for applications, the criteria they would be considered against, and the rules for various processes each application may be subject to; however, the AGB

---

<sup>369</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>370</sup> ICANN. (24 October 2008) New gTLD Program: Draft Applicant Guidebook (Draft RFP). Retrieved from <http://newgtlds.icann.org/en/about/historical-documentation/matrix-agb-v1>

<sup>371</sup> ICANN. Historical Documents. Retrieved from <http://newgtlds.icann.org/en/about/historical-documentation>

---

typically (and intentionally) did not contain the detailed step-by-step process descriptions necessary for the operational implementation of the New gTLD Program. The task of defining the operational processes and procedures, systems and tools, and resources required for the implementation of the New gTLD Program was ICANN's responsibility.

Although GNSO Recommendation 1 stated, “no subsequent additional selection criteria should be used in the selection process,” new requirements did come up during the implementation of the New gTLD Program (e.g., GAC Category 1 and 2 Advice, name collision, designation of .Brand TLDs). These new requirements required additional work by the community and ICANN to develop a roadmap for the implementation of these new requirements. Once the roadmap for the implementation of these new requirements was developed, ICANN defined the operational processes and procedures to support the implementation.

## 8.1.4 Assessment

### 8.1.4.1 PROGRAM PROCESSES AND PROCEDURES

#### *Consistency and Quality*

The operational implementation of the New gTLD Program was guided by the principles of consistency and quality. To achieve consistency, standardized processes and procedures were defined for all areas of the Program. An example of a standardized process and procedure was the application change request process (see Section 1.3: Application Change Requests of this report). Section 1.2.7 of the AGB stated the following: “If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms.” However, the AGB did not define the forms that the applicant could use to notify ICANN of changes to the application or the criteria and process by which ICANN had to process the notification. In order to put in place a standardized and repeatable process that could be applied consistently for all applicants, ICANN:

- Defined seven criteria that were used to assess each application change request.
- Defined a form for applicants to notify ICANN of changes to application materials.
- Defined a process for applicants to submit application change requests.
- Defined a process to review application change requests.<sup>372</sup>

Generally, defining standardized processes and procedures allowed ICANN to provide predictability to applicants and to execute the process in a repeatable manner with consistent results. Each of the previous chapters of this report describes how ICANN defined operational implementation processes and procedures for each specific area.

---

<sup>372</sup> ICANN. New gTLD Application Change Request Process and Criteria. Retrieved from <http://newgtlds.icann.org/en/applicants/customer-service/change-requests>

---

Quality is the other principle that was crucial to ICANN in the implementation of the New gTLD Program. In addition to achieving quality through standardized processes that yielded consistent results, ICANN implemented quality control steps in all Program processes, including a formal Quality Control program<sup>373</sup> that was implemented in Initial Evaluation (see Section 2.1: Initial and Extended Evaluation of this report), and a quality control step that was inserted prior to the publication of any applicant report to ensure that the reports are consistent among themselves and with the AGB requirements.

Service providers, discussed in Section 8.2: Service Provider Coordination of this report, were partners to ICANN in the implementation of the New gTLD Program and shared the same principles of consistency and quality in their approach. Each documented their approach and process, which were posted on the New gTLD microsite for transparency.

### *Alignment to Relevant Guidance*

In defining operational processes and procedures, ICANN adhered to the requirements of the AGB. In cases where the AGB did not provide the level of detail required for operational implementation, ICANN relied on the expertise of the service providers engaged, as in the case of String Similarity evaluation (see Section 2.3: String Similarity Evaluation of this report), or consulted with service providers and the community, as in the case of auction rules (see Section 4.2: Auctions of this report).

### *Process Improvement*

As the Program progressed, some processes evolved to gain operational efficiency and to better meet the needs of applicants. Examples of processes that evolved included the application change request process, which was updated on 1 October 2014 to not require certain types of change requests to be subject to a 30-day window.<sup>374</sup> This update was made to improve the efficiency of the process, after the observation was made that only 25 comments were submitted on the 496 approved change requests from January 2014 through September 2014. This update allowed applicants to more expeditiously move forward in the Program (see Section 1.4: Application Change Requests of this report). Another example is the implementation of the weekly Contracting operational cycle, which was implemented in October 2013, three months after ICANN commenced the Contracting process.<sup>375</sup> The move to the weekly Contracting operational cycle allowed ICANN to gain efficiency and provide more predictability of the process to applicants (see Section 5.1: Contracting of this report).

---

#### 8.1.4.2 APPLICANT-FACING SYSTEMS

Applicant-facing systems refer to systems that facilitated communications between ICANN and the applicant. In this round, the TLD Application System (TAS) allowed applicants to submit applications for new gTLDs, and for ICANN to deliver Financial Capability, Technical/Operational Capability, and Registry Services CQs and IE results to applicants. The Customer Portal allowed applicants to submit questions and requests regarding Program requirements and their applications to ICANN, and it allowed ICANN to provide responses. This system was also used by ICANN to deliver Background Screening CQs, Geographic Names CQs, and EE results to applicants. The remaining applicant-facing system, the Application Comments Forum, is discussed in Section 1.3: Application Comments of this report.

##### *TLD Application System (TAS)*

There were challenges in the development of TAS. While ICANN began defining preliminary requirements for the application system in 2009, the AGB was not finalized until June 2011. ICANN had seven months between the finalization of the AGB and the opening of the application window to finalize the system requirements, complete system development, integrate the system, and perform testing. A longer period between the finalization of the requirements and the launch of the application window would have provided additional time for aspects of the development process such as system integration, user acceptance testing, security testing, and user beta testing. The limited development period may have contributed to some of the challenges identified by applicants.

In terms of usability, there were some areas that were challenging to users of the system. To access TAS, applicants had to first log into a virtual application that provided a browser-agnostic environment for applicants. Although the browser-agnostic environment might have eliminated some problems with user experience across various browsers, the virtual environment created issues for users as reported in the feedback and inquiries received by the Customer Service Center. Many applicants had issues with downloading and uploading files due to how files are handled within the virtual environment. The Customer Service Center received 108 inquiries during the application window regarding working with files within the virtual environment. To assist applicants, ICANN provided a user guide to educate applicants on how to work within the virtual environment.<sup>376,377</sup> Although the user guide was helpful, it did not solve the challenge of working with files within this environment.

The other issue that the virtual environment created was with regards to logins. Although the virtual environment provided an additional level of security by creating a second set of passwords, it also created complexity and difficulties for users. Applicants frequently forgot which password was for which system and had to reset passwords frequently. The ICANN Customer Service Center recorded 1,802 inquiries about TAS and the virtual environment passwords during the application window.

---

<sup>376</sup> ICANN. TAS: TLD Application System. Retrieved from <http://newgtlds.icann.org/en/applicants/tas>

<sup>377</sup> ICANN. Accessing TAS and the CSC Portal. Retrieved from <http://newgtlds.icann.org/en/applicants/tas/access-21nov12-en.pdf>

On 12 April 2012, hours before the scheduled close of the application window (see Section 1.1: Application Submission of this report), ICANN identified a technical issue with TAS software. ICANN took the most conservative approach possible to protect all applicants and allow time to resolve the issue by taking TAS offline. ICANN informed applicants that the application window would be extended to 20 April 2012 to allow applicants sufficient time to complete their applications in TAS.<sup>378</sup> The technical issue with the TAS software allowed a limited number of users to view some other users' filenames and usernames in certain scenarios. The issue was first reported by a system user on 19 March 2012, and although ICANN believed that the reported issue had been addressed, on 12 April 2012, ICANN confirmed that there was a continuing unresolved issue and took the system offline.<sup>379</sup> At the time the system was taken offline, there were 1,268 registered users and approximately 95,000 file attachments in the system.<sup>380</sup> ICANN's review showed that 105 users might have had filenames and usernames viewed by another user, and 50 users might have viewed filenames and usernames from one or more other users. On 7 May 2012, ICANN issued an announcement that in recognition of the inconvenience caused by the TAS system being temporarily taken offline, if applicants withdrew their applications before Reveal Day, ICANN would provide a full refund of the USD 185,000 evaluation fee.<sup>381</sup> Previously, the USD 5,000 registration fee was non-refundable to reduce risk of frivolous access to TAS. TAS was brought back online on 21 May 2012, after users were notified whether they were affected or not, and after the system had been fixed and the overall system performance had been improved.<sup>382</sup> During the period from 12 April 2012 through 21 May 2012, ICANN provided frequent updates to both the applicants and the community via announcements.<sup>383</sup>

### *Customer Portal*

The Customer Portal served its intended purpose of allowing applicants to submit questions regarding the Program requirements and their applications to ICANN and for ICANN to provide responses, and to facilitate the Clarifying Question process during Initial Evaluation and Extended Evaluation (see Section 2.1: Initial and Extended Evaluation of this report). Improvements to the Customer Portal were made over time to enhance usability, such as the addition of sorting capability for the knowledge base and the migration of application data into the Customer Portal to provide applicants with a central location to manage their applications and engage with ICANN.

On 1 March 2015, ICANN announced that the Customer Portal and GDD Portal were taken offline on 27 February 2015 to investigate a reported security issue where under certain circumstances an

<sup>383</sup> ICANN. 2012 New gTLD Announcements. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/2012>

authenticated portal user could potentially view data of, or related to, other users.<sup>384</sup> The reported security issue was addressed and the Customer and GDD portals were brought back online on 2 March 2015.<sup>385</sup> On 30 April 2015, ICANN published an announcement regarding the results of the first phase of its investigation into the reported security issue.<sup>386</sup> The investigation involved two consulting firms reviewing and analyzing historical log data going back to the activation of the Customer Portal on 17 April 2013 and of the GDD portal on 17 March 2014. The results of the investigation showed that the unauthorized access resulted from advanced searches conducted using the login credentials of 19 users, which exposed 330 advanced search result records, pertaining to 96 applicants and 21 registry operators. These records may have included attachment(s). These advanced searches occurred during 36 user sessions out of a total of nearly 595,000 user sessions since April 2013. On 27 May 2015, ICANN announced that it had notified users whose credentials were used to access information that did not appear to belong to them and requested that these users: (1) provide an explanation of their activity; (2) certify that they would delete or destroy all information obtained; (3) certify that they had not used and would not use the information or convey it to any third party. In addition, ICANN provided the affected parties with the name(s) of the user(s) whose credentials were used to view their information without their authorization, or of the individuals that were not officially designated by their organization to access certain data.<sup>387</sup> On 9 June 2015, ICANN's Chief Information and Innovation Officer posted a blog to share that ICANN had engaged the services of an expert-knowledge firm to review ICANN's implementation of Salesforce.com, the software platform for the Customer and GDD portals.<sup>388</sup> The review highlighted several areas where ICANN could harden its platform. As of 31 July 2015, ICANN has since released multiple software patches to address several potential vulnerabilities that were identified, and expects that all work will be completed by the end of calendar year 2015. Several other efforts to harden ICANN's IT and digital services are also underway.

#### **8.1.4.3 ICANN'S INTERNAL RESOURCES TO SUPPORT PROGRAM IMPLEMENTATION**

Program staff was a critical component of the effective and efficient implementation of the New gTLD Program. These resources had a wide span of expertise including vendor management, system requirements gathering, business process analysis and development, operations management, technical customer service support, financial management, and program management. In addition to these skills, Program staff was also required to have a broad understanding of ICANN, the AGB, and the diverse set of technical and policy issues that affected the Program.

---

As the Program progressed, Program staff was required to quickly learn new content (e.g., understanding the Registry Agreement (RA) and the contracting process while still executing Initial Evaluation) and to take on the additional tasks of defining new processes and procedures while continuing to operate the previous phases of the Program. The existence of defined processes and procedures allowed for cross-training of resources to meet varying level of Program demands. Over time, Program staff built expertise and gained operational efficiency.

## 8.1.5 Conclusion

Overall, Program processes, systems, and resources were critical components in supporting the execution of the Program. Program processes and procedures were designed to ensure alignment to GNSO policy and the AGB, and to honor the principles of consistency and quality. Applicant-facing systems served their intended purpose of facilitating communications between ICANN and applicants. ICANN resources flexed to accommodate the demand and evolving needs of the Program. That said, there are additional considerations from this round that can be used to inform the next round.

In particular, the system development process may have benefited from leveraging industry standard best practices for product development. In this round, there was a limited time available between the finalization of system requirements and the launch of the TLD Application System. In future application rounds, the Program timeline should provide additional time for system development, including the definition of robust system requirements and appropriate testing.

In summary:

**8.1.a** In developing timelines for future application rounds, provide an appropriate amount of time to allow for the use of best practices in system development

**8.1.b** Explore beta testing programs for systems to allow for lessons learned, to increase effectiveness of such systems, and to provide further transparency, clarity, and opportunity for preparation to applicants

---

## 8.2 Service Provider Coordination

### 8.2.1 Introduction

Service providers are strategic partners in the implementation of the New gTLD Program. This section of the Program Implementation Review Report discusses the following aspects of service provider coordination:

- Service Provider Selection Process
- Conflict of Interest Guidelines
- Service Provider Coordination Program

### 8.2.2 Relevant Guidance

The following guidance is relevant to the topic of Service Provider Coordination and will be discussed in further detail in Sections 8.2.3 and 8.2.4 of this report:

- GNSO Implementation Guideline H: “External dispute providers will give decisions on objections.”<sup>389</sup>
- Applicant Guidebook, Module 1: Introduction to the gTLD Application Process<sup>390</sup>
- Applicant Guidebook, Module 2: Evaluation Procedures
- Applicant Guidebook, Module 3: Objection Procedures
- Applicant Guidebook, Module 4: String Contention Procedures

### 8.1.3 Background

The AGB called for independent experts to perform certain Program activities such as evaluation, objection and dispute resolution proceeding, and auction management. In addition to the independent experts required by the AGB, ICANN engaged other service providers to execute other Program activities such as PDT and Quality Control.

ICANN selected all but two service providers for the Program through competitive, open processes, implemented the conflict of interest guidelines established in Section 2.4.3 of the AGB, and coordinated the service providers’ work to ensure timely and quality deliverables.

<sup>390</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agg/guidebook-full-04jun12-en.pdf>

## 8.2.4 Assessment

### 8.2.4.1 SERVICE PROVIDER SELECTION PROCESS

Section 2.4.2 of the AGB called for service providers that were global, diverse, and that had the ability to scale quickly in order to meet the unknown demands of the New gTLD Program. Call for Expression of Interest, Requests for Proposals, and Requests for Information were issued to solicit qualified service providers to perform background screening, Financial Capability evaluation, Technical/Operational Capability evaluation, Geographic Names evaluation, String Similarity evaluation, Community Priority Evaluation, Auction, PDT, and to administer the Community, Limited Public Interest, Legal Rights, and String Confusion Objections.<sup>391, 392, 393, 394, 395, 396, 397</sup> For DNS Stability and Registry Services, ICANN performed direct procurement, which is provided for under the ICANN Procurement Guidelines,<sup>398</sup> due to the specific technical skills required for these evaluations.

Service provider selection criteria were provided in the EOIs, RFPs, and RFIs, and mapped to the criteria provided in Section 2.4.2 of the AGB. In addition to the criteria provided in the AGB, ICANN also considered the candidates' capacity to develop tools for evaluation, proposed internal processes to ensure the consistency of evaluation results, approach, experience, technical competency, commitment, and proposed costing model. Over the course of the New gTLD Program, ICANN developed best practices for sharing information with the community regarding the procurement process. To support transparency, in future application rounds, ICANN should continue to provide procurement information to the community in the form of timely updates. Such updates should include selection criteria and service provider process documentation where applicable.

Where it made sense, ICANN selected more than one service provider to perform a particular evaluation. This approach allowed ICANN to address any conflict of interest issues, increase

capacity, and foster competition among service providers to increase quality and minimize cost. Table 8.2.i shows the selected service providers.

*Table 8.2.i: Selected Service Providers*

Evaluation Panel	Service Provider
Background Screening Panel	• PricewaterhouseCoopers (PwC)
String Similarity Panel	• Interconnect Communications (partnering with the University College London)
DNS Stability Panel	• Interisle Consulting Group
Registry Services	• Interisle Consulting Group
Geographic Names Panel	• The Economist Intelligence Unit (EIU) • Interconnect Communications (partnering with the University College London)
Financial and Technical Evaluation Panels	• Ernst & Young • KPMG • JAS Advisors
Community Priority Evaluation Panel	• The Economist Intelligence Unit (EIU) • Interconnect Communications
Dispute Resolution Service Providers	• The International Centre for Dispute Resolution (ICDR) • The Arbitration and Mediation Center of the World Intellectual Property Organization (WIPO) • The International Centre for Expertise of the International Chamber of Commerce (ICC)
Independent Objector	• Professor Alain Pellet
Auction Provider	• Power Auctions, LLC
Pre-Delegation Testing	• Stiftelsen för Internetinfrastruktur (IIS)

### *Background Screening Panel*

ICANN selected PricewaterhouseCoopers (PwC) to perform background screening for its independence, expertise, and capacity to gather, analyze, assess, scrutinize, and report information. With more than 195,000 people in 157 countries, PwC had the global network and reach necessary to perform complete background research of applicants for the New gTLD Program as well as the ability to quickly scale to meet the demands of the Program.<sup>399</sup>

### *String Similarity Panel*

ICANN selected one service provider to perform the String Similarity evaluation because all of the strings had to be evaluated against one another. InterConnect Communications, in partnership with the University College London (UCL), was selected as the String Similarity panel firm. InterConnect Communications had nearly 30 years of experience providing consulting services in

<sup>399</sup>ICANN. (25 February 2009) ICANN Call for Expression of Interest (EOIs) for a New gTLD Geographic Names Panel. Retrieved from <https://archive.icann.org/en/topics/new-gtlds/eoi-geonames-25feb09-en.pdf>

communications sector strategy, policy and associated regulatory frameworks.<sup>400</sup> UCL came with internationally renowned researchers with “breadth and depth of expertise across the entire range of academic disciplines.”<sup>401</sup> Together, InterConnect and UCL firms brought diverse linguistics resources offering and subject matter expertise.<sup>402</sup>

#### *DNS Stability Panel and Registry Services Panel*

ICANN selected Interisle Consulting Group to perform the DNS Stability and Registry Services evaluations for its specific subject matter expertise in the DNS. Interisle convened separate independent panels for each of these evaluations. In 2009, Interisle was selected by ICANN to perform technical string requirement evaluations for requested IDN ccTLDs under the IDN ccTLD Fast Track Process.<sup>403</sup> Within the Fast Track program, the Panel reviewed ccTLDs for confusability with two-letter codes, existing TLDs and other applied-for TLDs — this experience was valuable in determining, for instance, whether new gTLDs could cause instability based on non-compliance with ASCII/non-ASCII label requirements or ISO standards. Furthermore, Interisle had experience in ICANN’s Registry Services Evaluation Policy (RSEP) as part of the Registry Service Technical Evaluation Panel (RSTEP),<sup>404</sup> experience which was leveraged in the Registry Services evaluation.

#### *Financial Capability and Technical and Operational Capability Evaluation Panels*

The AGB, Attachment to Module 2, Section III stated, “Given the requirement that technical and financial planning be well integrated, the panels [would] work together and coordinate information transfer where necessary.” To support this, ICANN selected the same panel firms for the Technical and Operational Capability Evaluation and the Financial Capability Evaluation, and allocated both sections of an application to the same panel firm.

ICANN selected three service providers to conduct Financial Capability and Technical and Operational Capability evaluations: Ernst & Young, KPMG, and JAS Global Advisors. Ernst & Young and KPMG were selected for their expertise in technology and finance. Both firms had large and global practices that provided technology advisory and evaluate financial transactions, making them well suited to perform Technical/Operational and Financial evaluations for the Program. Their large global footprints could also effectively scale to ensure timely processing of applications. JAS Global Advisors had a decade of experience in due diligence, Internet security, and global IT operations as well as an in-depth knowledge of ICANN.<sup>405</sup>

---

## Geographic Names Panel

ICANN selected two service providers to conduct Geographic Names evaluations: the Economist Intelligence Unit (EIU) and Interconnect Communications. The EIU had more than six decades of experience and incorporated a solid understanding of global corporate and government processes. Additionally, the EIU had experience building evaluative frameworks and benchmarking models for its clients, including governments, corporations, academic institutions, and NGOs.<sup>406</sup> InterConnect Communications (partnered with the University College London) brought experience in working with governments in the telecommunications and wireless industry. InterConnect Communications had nearly 30 years of experience providing consulting services in communications sector strategy, policy and associated regulatory frameworks.<sup>407</sup> Both providers were able to convene globally diverse panels that could evaluate applications from all regions of the world. They were also able to quickly scale to meet the demands of the evaluation of an unknown application volume.

## Community Priority Evaluation Panel

ICANN initially selected two service providers to conduct CPE, the EIU and InterConnect Communications. The decision to have only one service provider performing CPE was primarily due to the low volume of community-based applications in contention (34 in total) where additional capacity was not required and in order to ensure consistency in evaluation over this low volume. Ultimately, ICANN selected EIU to perform CPE because of its experience, expertise, and global network.<sup>408</sup> Its network of more than 500 analysts and contributors in more than 200 countries helped executives, governments, and institutions by providing timely, reliable, and impartial analysis. Additionally, the EIU had more than six decades of experience building evaluative frameworks and benchmarking models for its clients, including governments, corporations, academic institutions, and NGOs. One of its core competencies was applying scoring systems to complex questions, which was a good fit for CPE due to the need to apply consistent analysis to a variety of applications during the CPE process.<sup>409</sup>

## Dispute Resolution Service Providers

Each of the DRSPs selected by ICANN was a globally recognized firm with notable experience in dispute resolution:

- The International Centre for Dispute Resolution (ICDR) for String Confusion Objections:

*Established in 1996 as the global component of the American Arbitration Association, the [ICDR] provide[d] conflict-management services in more than 80 countries with a staff fluent in 14 languages. Through a worldwide panel of hundreds of independent*

---

*arbitrators and mediators and global cooperative agreements for hearing-room access, the ICDR provide[d] a flexible, party-centered process over a broad range of industries and geopolitical issues.*<sup>410</sup>

- The Arbitration and Mediation Center of the World Intellectual Property Organization (WIPO) for Legal Rights Objections: “WIPO [was] the global forum for intellectual property services, policy, information and cooperation. [It was] a self-funding agency of the United Nations, with 188 member states.”<sup>411</sup> The WIPO Arbitration and Mediation Center provided time- and cost-efficient mechanisms to resolve internet domain name disputes, without the need for court litigation. This service included the WIPO-initiated Uniform Domain Name Dispute Resolution Policy (UDRP), under which the WIPO Center processed over 30,000 cases (as of 2015).<sup>412</sup> The WIPO Center described the Legal Rights Objection development, procedure, and substance in its End Report.<sup>413</sup>
- The International Centre for Expertise of the International Chamber of Commerce (ICC) for Limited Public Interest and Community Objections: “ICC [was] a leading provider of dispute resolution services for individuals, business, states, state entities, and international organizations seeking alternatives to court litigation.”<sup>414</sup>

### *Independent Objector*

On 14 May 2012, Professor Alain Pellet was announced as the Independent Objector.<sup>415</sup> Professor Pellet's credentials and experience were suitable for the role. He was a highly regarded professor and practitioner of law and has represented governments as Counsel and Advocate in the International Court of Justice in many significant and well-known cases. He was widely published and held several significant honors.<sup>416</sup> The Independent Objector's role and process were discussed in Section 3.2: Objections & Dispute Resolution of this report.

### *Auction Service Provider*

In June 2008 ICANN selected Power Auctions LLC to provide expertise as ICANN's auction design consultants as the ICANN community was considering if and how ICANN could use auctions to resolve contention sets.<sup>417</sup> This selection was based on an open Expression of Interest and

---

subsequent Request for Proposal process.<sup>418</sup> In support of this effort, Power Auctions LLC helped ICANN to define the Ascending Clock Auction process as the best choice for contention resolution auctions, and much of the text of Module 4.3.1 Auction Procedures is based on Power Auctions LLC’s work. Subsequently, in August 2009, Power Auctions LLC was selected to provide the implementation of auctions for the Program, based on an RFP issued earlier that year. In September 2013, ICANN updated the 2009 agreement with Power Auctions LLC to facilitate the auctions.<sup>419</sup> Power Auctions LLC was a leader on auction thought and design. It had an international team composed of noted experts in auction design and implementation with relevant experience in international high stakes auctions for public goods including telecommunications spectrum, natural resources, and public utility rights.<sup>420</sup> Power Auctions LLC was also pivotal in the development and design of both the direct and indirect auction processes, as well as the implementation rules governing both types of auction.

#### *Pre-Delegation Testing Service Provider*

ICANN selected Stiftelsen för Internetinfrastruktur (IIS) as the PDT service provider in December 2012.<sup>421</sup> This selection was based on an open request for proposals conducted earlier in 2012.<sup>422</sup> IIS was the registry operator for the .se ccTLD (Sweden) and was selected for its proven track record of technical capability, operations excellence, and significant experience in the industry.<sup>423</sup> IIS provided the expertise to help ICANN develop all PDT systems and requirements as well as perform testing. For example, IIS had demonstrated understanding of the critical registry functions (i.e., DNS, DNSSEC, EPP, Whois, Data Escrow), operational experience necessary to deliver the testing services, ability to scale up on request to meet the volume demand of the Program, and experience designing, building, and operating robust and secure systems. Furthermore, IIS’s pre-existing tools (e.g., DNS check) could be leveraged to meet the Program’s timelines. Over the course of the relationship, IIS provided invaluable assistance in continuous improvement of the PDT experience to the applicants.

#### **8.2.4.2 CONFLICT OF INTEREST GUIDELINES**

AGB Section 2.4.3.1 provided Conflict of Interest guidelines and procedures “to safeguard against the potential for inappropriate influence and ensure applications are evaluated in an objective and independent manner.” ICANN required the panels to contractually comply with these guidelines.

The Conflict of Interest guidelines defined the minimum standards with which panels and panelists --individuals associated with the review of an application--had to comply. Prior to allocating any

---

applications to the service providers, ICANN required that service providers perform conflict of interest checks for the panelists in accordance with the requirements of the AGB, and to provide ICANN with the results. ICANN allocated applications taking these results into account.

#### **8.2.4.3 SERVICE PROVIDER COORDINATION**

Program service providers provided recommendations to ICANN under their firms' names. ICANN worked in close coordination with them to ensure understanding of the AGB requirements, ICANN processes as well as timelines for delivery of deliverables. The service providers were responsible for defining their own processes and procedures and for training their staff.

DRSPs, on the other hand, assigned experts that administered the individual proceedings, and these experts provided their determinations directly to the parties of the objections under their own names. Attachment to Module 3, Article 10, of the AGB called for ICANN to monitor the progress of all objections and proceedings, as some applications might have been subject to objections filed with more than one DRSP. ICANN managed the DRSPs in a manner consistent with the AGB.

### 8.2.5 Conclusion

The AGB called for independent service providers to perform activities for many aspects of the New gTLD Program, including evaluation, dispute resolution, and auction. ICANN also engaged service providers as strategic partners to execute other Program activities such as PDT and quality control. In almost all cases, ICANN selected the providers through a public procurement process. ICANN worked with the providers to develop processes and procedures, and managed their work to ensure consistency and quality of results delivered.

Over the course of the New gTLD Program, ICANN developed best practices for sharing information with the community regarding the procurement process. To support transparency, in future application rounds, ICANN should continue to follow its procurement guidelines, and it should provide timely procurement information to the community.

In summary:

**8.2.a** Provide transparency and predictability to the procurement process following ICANN's procurement guidelines. Publish selection criteria, providers' process documents, and other relevant and non-confidential material in a timely manner.

---

## 8.3 Financial Management

### 8.3.1 Introduction

New gTLD Program financial management refers to the management of the USD 357 million Program fund. USD 357 million was the total amount collected from the 1,930 new gTLD applications submitted with an evaluation fee of USD 185,000 per application. This section of the Program Implementation Review Report discusses the following topics:

- Program budgeting and reporting
- Program fund segregation
- Program-related fees

### 8.3.2 Relevant Guidance

The following guidance is relevant to the topic of Financial Management and will be discussed in further detail in Sections 8.3.3 and 8.3.4 of this report:

- GNSO Implementation Guideline B: “Application fees will be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process. Application fees may differ for applicants.”<sup>424</sup>
- Applicant Guidebook, Section 1.5: Fees and Payments<sup>425</sup>
- Applicant Guidebook, Section 1.2.7: Notice of Changes to Information
- ICANN Board Resolution 2011.06.20 (20 June 2011): Approval of the New gTLD Program<sup>426</sup>

### 8.3.3 Background

Following guidance from the GNSO, the evaluation fee of USD 185,000 was first proposed in version 1 of the AGB, and was “set to recover costs associated with the new gTLD program. The fee [was] set to ensure that the program [was] fully funded, and [didn’t] take resources from other ICANN funding sources.”<sup>427</sup> On 31 May 2010, ICANN published a draft New gTLD Budget for public

---

<sup>424</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gnso.icann.org/en/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>

<sup>425</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

<sup>426</sup> ICANN. (20 June 2011) Approved Board Resolutions | Singapore. Retrieved from <https://www.icann.org/resources/board-material/resolutions-2011-06-20-en#1>

<sup>427</sup> ICANN. (24 October 2008) New gTLD Program: Draft Applicant Guidebook (Draft RFP), Section 1.5.1. Retrieved from <http://archive.icann.org/en/topics/new-gtlds/draft-rfp-24oct08-en.pdf>

---

comment.<sup>428</sup> The draft New gTLD Budget was an analysis of Program costs, including an assessment of the general risk and timing required to complete certain remaining activities necessary for operational readiness. The draft New gTLD Budget assumed 500 applications would be submitted for new gTLDs. To ensure costs are appropriately managed, tracked, and disclosed, the draft New gTLD Budget included categories of Program costs, which were defined based on information available at that time regarding the Program.

On 22 October 2010, an updated draft New gTLD Budget was published.<sup>429</sup> The update included an increase from USD 2.6 million to USD 4.0 million for the development phase, and an increase of USD 205,000 under the application processing phase for customer service and background screening. These updates were made based on updates to the procedures called for in public comments submitted on AGB version 4,<sup>430</sup> additional internal development work, and discussions with the ICANN Board.

On 17 May 2011, ICANN published for comment the draft FY12 Operating Plan and Budget, which included the New gTLD Program launch scenario.<sup>431</sup> The inclusion of the New gTLD Program budget into the FY12 Operating Plan and Budget represented the first time that the New gTLD Program budget formally became part of the ICANN budgeting process. The draft FY12 Operating Plan and Budget continued to assume a volume of 500 applications, and it included a forecast of the cost associated with activities that would be incurred in FY12 if the Program launched within FY12.

On 20 June 2011, the ICANN Board approved the New gTLD Program, and its related income and expenditures as detailed in the Draft FY12 Operating Plan and Budget.<sup>432</sup>

## 8.3.4 Assessment

### 8.3.4.1 PROGRAM BUDGETING AND REPORTING

The New gTLD Program launched when ICANN opened the application window on 12 January 2012 (see Section 1.1: Application Submission of this report). Application submission activities during the application window gave ICANN additional information that assisted with the development of the FY13 Operating Plan and Budget.

On 1 May 2012, a draft FY13 Operating Plan and Budget was published.<sup>433</sup> For the first time, the New gTLD Program budget forecasted revenues and costs based on three different scenarios of

application volume: 500 applications; 1,000 applications; and 2,000 applications. As more information about the Program was available by this time, ICANN was able to include a forecast of the life of the Program in the FY13 Operating Plan and Budget. The forecast anticipated that the Program would conclude in FY15 for the 2,000-application scenario, based on information available in the AGB version 9.<sup>434</sup>

On 24 June 2012, after the close of the application window, ICANN published the adopted FY13 Operating Plan and Budget, which included only the 2,000-application scenario.<sup>435</sup> Although there was a difference between the estimated number of applications in the budget and the actual number of applications received, the difference was small and caused no material impact to the budget; therefore no changes were made to the adopted budget.

As the Program progressed and more information about key factors became available (e.g., number of withdrawals, number of staff needed to support of the Program, allocation of indirect cost, and other projects not originally budgeted such as the TMCH and EBERO program), ICANN was able to report more information and make more accurate forecasts.

On 22 August 2013, the adopted FY14 Operating Plan and Budget was published with revised estimates reflecting actual costs incurred to date and updated forecast of Program costs for the entire life of the Program.<sup>436</sup> For the first time, the FY14 Operating Plan and Budget included a variance analysis of the actual cost incurred versus the budgeted amount, and it provided explanations for variances in the Program budget.

On 1 December 2014, ICANN published the adopted FY15 Operating Plan and Budget, which changed the anticipated completion date of the Program to FY17 based on information available at the time.<sup>437</sup>

Budgeting and reporting of the Program budget followed the standard ICANN budgeting and reporting process starting with the FY12 Operating Plan and Budget, and continued for all subsequent fiscal years. The ICANN budgeting and planning process included a formal ICANN public comment period of the draft FY Operating Plan and Budget and ICANN's Board Approval of the FY Operating Plan and Budget.<sup>438</sup> In addition, starting with the fiscal quarter ending 30 September 2013, ICANN published on its website quarterly financial statements in which the Program financial position was disclosed. Internally, ICANN revisited forecasts quarterly, reviewing actual spend versus the budgeted amount to identify any significant variances.

### 8.3.4.2 FINANCIAL SEGREGATION

The New gTLD application fee structure was based on the principles of cost recovery. In order to ensure that Program costs were appropriately tracked and disclosed, all Program-related financial matters were segregated from ICANN's operations:

- (i) Operating funds for the Program were segregated in a separate bank account created for the New gTLD Program.
- (ii) A specific and separate investment policy was approved by the Board in December 2012 for the New gTLD Program funds<sup>439</sup> and separate investment accounts were created at three different investment management firms<sup>440</sup> selected via an RFP process.
- (iii) Systems, processes, and policies were developed in order to reinforce the separation of funds. This included an accounting ledger distinct from other ICANN operations activities, a separate procurement process, separate segments in all financial reporting, dedicated resources, and transaction accounting processes specifically developed for the New gTLD Program.

Per Section 4.3 of the AGB, "Any proceeds from auctions [would] be reserved and earmarked until the uses of funds are determined." To comply with this section of the AGB, Auction proceeds (see Section 4.2: Auction of this report) were further segregated into a separate bank account under the Program's bank account until the ICANN Board, through consultation with the community, determined a plan for the appropriate use of the funds.<sup>441</sup>

The funds pertaining to the New gTLD program, not including the funds from Auction proceeds, were managed by three investment firms selected via an RFP process. Investments for Program funds follow the New gTLD Funds Investment Policy<sup>442</sup> adopted by the ICANN Board on December 2011.<sup>443</sup> The distinct investment policy was developed because of this specific usage of the Program funds, as well as the specific timeframe associated with such usage.

### 8.3.4.3 PROGRAM-RELATED FEES

Section 1.5 of the AGB defined various Program-related fees:

- Evaluation fee: USD 185,000 fee associated with the evaluation of each application that had to be paid with a submitted application. Applicants may have qualified for partial refund of the evaluation in accordance with the refund schedule in Section 1.5.1 of the AGB if the application was withdrawn. A non-refundable USD 5,000 registration fee was required to create a TAS user account in order to submit an application (see Section 1.1: Application

<sup>439</sup> ICANN. (20 December 2012) Approved Board Resolutions | Special Meeting of the ICANN Board. Retrieved from <https://www.icann.org/resources/board-material/resolutions-2012-12-20-en#2.e>

<sup>440</sup> Northern Trust Asset Management, U.S. Bank Asset Management, and Deutsche Bank Asset and Wealth Management

<sup>441</sup> ICANN. New gTLD Auction Proceeds. Retrieved from <http://newgtlds.icann.org/en/applicants/auctions/proceeds>

<sup>442</sup> ICANN. (20 December 2012) Investment Policy - New gTLD. Retrieved from <https://www.icann.org/resources/pages/investment-policy-new-gtld-2013-01-07-en>

<sup>443</sup> ICANN. (21 December 2012) Approved Board Resolutions | Special Meeting of the ICANN Board. Retrieved from <https://www.icann.org/resources/board-material/resolutions-2012-12-20-en#2.e>

Submission of this report). This registration fee was applied toward the USD 185,000 evaluation fee if an application was submitted.

- Registry Services Review fee: This fee became applicable if the application was referred to the Registry Services Technical Evaluation Panel by the Registry Services Panel (see Section 2.8: Registry Services Evaluation of this report).
- Dispute Resolution fees: Fees that must be paid in association with any formal objections (see section 3.2: Objections and Dispute Resolution of this report). Fee and refund schedules were set by the DRSPs.
- Community Priority Evaluation fee: The AGB estimated a cost of USD 10,000 for Community Priority Evaluation if a community applicant participated in CPE. This fee was refunded if the applicant prevailed in CPE.

Fees were collected as per the AGB with the exception of the CPE fee. Based on scope of work, the selected service provider for CPE informed ICANN that the evaluation cost for CPE would be USD 22,000 per application. Consistent with Program's principle of cost recovery, ICANN transferred the CPE panel's fee to the applicant even though it was higher than the amount estimated in the AGB.<sup>444</sup>

During the application window, ICANN had a strict requirement that the entire USD 185,000 evaluation fee be submitted with the application. A large number of applicants did not anticipate that their banks would charge a fee to process the wire transfer. The applicants therefore had to make multiple payments to ensure that the full USD 185,000 was received by ICANN. Due to the inefficiencies that this created, all other fees collected by ICANN after the application window allowed for a variance of USD 25 to accommodate potential bank transaction fees being applied during the banking process of the applicants payments.

Section 1.2.7 of the AGB anticipated that certain application change requests (see Section 1.3: Application Change Requests of this report) might require re-evaluation of the application. However, the AGB did not specify the cost for re-evaluation. Consistent with the Program's principle of cost recovery, ICANN passed on the evaluation panel's fee to the applicant.

## 8.3.5 Conclusion

ICANN's management of the Program funds aligned with GNSO's Implementation Guideline B and Module 1 of the AGB. All financial matters were segregated in a separate bank account so that Program financial information could be appropriately tracked and disclosed. As per the AGB, proceeds from ICANN auctions are further segregated in a separate bank and investment account until the ICANN Board, through consultation with the community, determines a plan for the appropriate use of the funds.

The Program's budget is published with ICANN's annual fiscal year Operating Plan and Budget and follows ICANN's annual budgeting process, which includes a public comment period and approval

---

<sup>444</sup> 10 September 2013 CPE Teleconference: <http://audio.icann.org/new-gtlds/cpe-10sep13-en.mp3>.

---

of the final budget by the ICANN Board. ICANN's financial information, including historical and current financial data for the Program, is available on the ICANN website.<sup>445</sup>

Program-related fees were collected in accordance with the AGB and in-line with the principle of cost recovery. Before fees are defined for the next application round, a review of Program financials should be undertaken.

ICANN implemented one change in this round to the collection of Program-related fees based on lessons from an earlier phase of the Program. During the application window, ICANN's strict requirement that the full USD 185,000 evaluation fee be submitted with the application caused some delays and inefficiencies for applicants as many did not anticipate that a wire transfer fee would be deducted from their USD 185,000 payment by their banks, and they therefore had to make multiple payments. Due to the inefficiencies that this created, all other fees collected by ICANN post application window allowed for a variance of USD 25.

In summary:

**8.3.a** Perform full review of Program financials and application fee before fees are defined for the next application round

## 8.4 Communications

### 8.4.1 Introduction

New gTLD Program Communications refers to various communications activities executed prior to and throughout the life of the Program in support of the New gTLD Program Communications Plan. This section of the Program Implementation Review report discusses the implementation of this Plan.

### 8.4.2 Relevant Guidance

The following guidance is relevant to the topic of Communications and will be discussed in further detail in Sections 8.4.3 and 8.4.4 of this report:

- GNSO Implementation Guideline C: ICANN will provide frequent communications with applicants and the public including comment forums<sup>446</sup>
- GNSO Implementation Guideline M: “ICANN may establish a capacity building and support mechanism aiming at facilitating effective communication on important and technical Internet governance functions in a way that no longer requires all participants in the conversation to be able to read and write English.”
- GNSO Implementation Guideline O: “ICANN may put in place systems that could provide information about the gTLD process in major languages other than English, for example, in the six working languages of the United Nations.”
- ICANN Board Resolution 2011.06.20: Approval of the New gTLD Program<sup>447</sup>
- ICANN Board Resolution 2011.10.28.23-24: Budget Request – New gTLD Communications Plan<sup>448</sup>

### 8.4.3 Background

On 20 June 2011, the ICANN Board approved the New gTLD Program, and along with it the Draft New gTLD Communications Plan.<sup>449,450</sup> The goal of the Plan was to “increase likelihood of success

---

<sup>446</sup> ICANN. (8 August 2007) ICANN Generic Names Supporting Organization Final Report Introduction of New Generic Top-Level Domains, Part A. Retrieved from <http://gns0.icann.org/en/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>

<sup>447</sup> ICANN. (20 June 2011) Approved Resolution | Meeting of the ICANN Board of Directors. Retrieved from <https://www.icann.org/resources/board-material/resolutions-2011-06-20-en>

<sup>448</sup> ICANN. (28 October 2011) Approved Resolution | Meeting of the ICANN Board of Directors. Retrieved from <https://www.icann.org/resources/board-material/resolutions-2011-10-28-en#3>

<sup>449</sup> ICANN. (20 June 2011) Approved Resolution | Meeting of the ICANN Board of Directors. Retrieved from <https://www.icann.org/resources/board-material/resolutions-2011-06-20-en>

<sup>450</sup> ICANN. (30 May 2011). New gTLD Communications Plan. Retrieved from <https://archive.icann.org/en/topics/new-gtlds/new-gtlds-communications-plan-30may11-en.pdf>

for the new gTLD program and to ensure that new gTLDs are communicated as clearly and comprehensively as possible – both the opportunities they present and the risks involved in applying for and operating one.” To achieve this goal, the Plan envisioned a global awareness campaign to raise awareness of the who, what, when, where and why of new gTLDs. The Plan laid out important aspects of the campaign, including key messages, tone and vision, and theme and audiences, which served as the basis for the development of all Program-related information. The Plan also outlined various communications channels and tools that could be used to disseminate information.

The core component of the Communications Plan entailed four key communications areas to be executed across four phases of the Plan. The four key communications areas were:

1. Coordinated campaign incorporating TV, radio, print and online advertising elements, customized by region.
2. Top-tier international press coverage.
3. Five major regional launches/road shows.
4. Social and other online media.

Table 8.4.i below provides a summary of the four phases of the Communications Plan.

*Table 8.4.i: Summary of the Four Phases of the Communications Plan*

Phase 1	<b>Pre-launch</b> – Defined as the four-month campaign period leading up to the official launch of the program signaled by the opening of the application period.
Phase 2	<b>Launch</b> – Defined as the 60-day period when applications were accepted.
Phase 3	<b>Post-launch</b> – Defined as the time period between the close of the application period and the open of the next round.
Phase 4	<b>TLDs go live/in the root.</b>

The New gTLD Communications Plan further provided evaluation metrics to be collected such as website statistics, countries reached during regional launches, attendees at outreach events, applications received and social media monitoring.

## 8.4.4 Assessment

Though it included evaluation metrics, the communications plan did not define “success,” which makes it difficult to assess success of the Plan. As such, sections 8.4.4.1, 8.4.4.2, and 8.4.4.3 below provide an overview of activities performed during each phase and metrics collected during the execution of the Plan.

#### 8.4.4.1 PHASE 1: PRE-LAUNCH

The New gTLD Program launched when ICANN opened the application window on 11 January 2012 (see Section 1.1: Application Submission of this report).

During Phase 1 of the Plan, all four key communications areas were utilized. Regional launches/road shows and press coverage were the key activities during this Phase. There was significant growth in some social media activities with 1,300+ Twitter followers in October 2011 compared to approximately 400 one year prior. Some online advertising was also done to drive traffic to the New gTLD microsite, an ICANN website dedicated to the New gTLD Program. Although the Plan called for TV, radio, and print advertising, in order to gain synergy, efforts were directed toward getting media coverage for the road shows.

##### *Identity*

As called for in the Communications Plan, a New gTLD Program logo and style guide were developed and used on all online and offline New gTLD-related materials. The logo allowed for an effective way to brand the New gTLD Program.

##### *Content Development and Dissemination*

Prior to the opening of the application window (see Section 1.1: Application Submission of this report), key Program-related documents such as the Applicant Guidebook, the May 2010 New gTLD Program Budget,<sup>451</sup> and some public comment summaries and analyses were translated from English into the five other UN languages, in order to allow and encourage broad input into the Program. Knowledge base articles that educated interested parties about the Program requirements were also translated from English into the five other UN languages to better promote the Program.<sup>452</sup>

During this time, the content created focused on providing information about the business potential and risks of participating in the Program, the application process, and how to apply.<sup>453,454</sup> Content was available in the form of web page content,<sup>455</sup> videos,<sup>456</sup> PowerPoint presentations, fact sheets and FAQs,<sup>457</sup> and included messages consistent with the nine messages defined in the Communications Plan.

---

<sup>451</sup> ICANN. (31 May 2010) New gTLD Program Explanatory Memorandum: New gTLD Budget. Retrieved from <https://archive.icann.org/en/topics/new-gtlds/new-gtld-budget-28may10-en.pdf>

<sup>452</sup> ICANN. New gTLD Knowledge Base. Retrieved from <https://crm-gtld.icann.org/portal-icann/index.php?action=index&module=Home>

<sup>453</sup> ICANN. Program Materials. Retrieved from <http://newgtlds.icann.org/en/about/program/materials>

<sup>454</sup> ICANN. Benefits and Risks of Operating a New gTLD. Retrieved from <http://newgtlds.icann.org/en/about/benefits-risks>

<sup>455</sup> ICANN. New Generic Top-Level Domains. Retrieved from <http://newgtlds.icann.org/>

<sup>456</sup> ICANN. Videos. Retrieved from <http://newgtlds.icann.org/en/about/historical-documentation/matrix-videos>

<sup>457</sup> ICANN. Program Materials. Retrieved from <http://newgtlds.icann.org/en/about/program/materials>

After the opening of the application window, the majority of new Program content, such as announcements,<sup>458</sup> website pages, videos, and public comment materials,<sup>459</sup> was in English, as focus shifted to assisting applicants through the Program, which required application materials to be submitted in English (per Section 1.4 of the AGB).

All New gTLD content was centralized and housed on the New gTLD microsite (newgtlds.icann.org), which was launched on 19 September 2011.<sup>460</sup> To drive traffic to the microsite, ICANN placed ads on Google’s ad network and launched a banner ad campaign targeted at senior-level marketing professionals between December 2011 and January 2012. The ad campaigns resulted in more than 5,500,000 impressions and drove more than 21,000 visitors from 136 countries in Africa, the Asia-Pacific region, Eastern Europe, the Middle East, and Latin America to the microsite. Ads in 10 of the 172 developing nations targeted with the Google online advertising campaign received click-through rates (rate of people who view the ad and click on it) above the industry average.

### Regional Events

Also in support of raising awareness of new gTLDs, ICANN did major launch events between August and December 2011 in each of the five ICANN regions as called for in the Communications Plan. The regional events allowed ICANN to connect with businesses, governments, and individuals in person in various countries to promote awareness of new gTLDs. Table 8.4.ii provides statistics of the regional events that occurred during this period.

Table 8.4.ii: Statistics of the Five Regional Events

ICANN Region	# Countries Visited	# Events per Region	Total Attendees per Region
<b>Africa</b>	3	4	725
<b>Asia/Australia/Pacific</b>	11	14	12,129
<b>Europe</b>	17	30	5,230
<b>Latin America/Caribbean</b>	3	3	5,700
<b>North America</b>	1	1	500
<b>Total</b>	35	52	24,284

The Communications Plan stated that “three countries [would] be visited per region, with major speeches, press conferences and outreach events held in each.” Except for the North America region, ICANN visited at least three countries in each region. During the regional events, the New gTLD Program received significant press coverage from major news outlets. For instance, the December 2011 Beijing Roadshow press conference attracted reporters from 46 media outlets over the Asia Pacific region. Another example was the January 2012 New York Roadshow when ICANN met with six United Nations correspondents of major wire services, followed by media interviews. Media outlets included Agence France Presse (AFP), Reuters, Associated Press (AP), The New York

<sup>458</sup> ICANN. Announcements. Retrieved from <http://newgtlds.icann.org/en/announcements-and-media/latest>

---

Times, Wired, AdWeek, The Huffington Post, and South-South News. In addition to these regional events, the ICANN CEO visited 16 countries, and other staff and ICANN Board members visited 38 countries.<sup>461</sup>

#### **8.4.4.2 PHASE 2: LAUNCH**

The Communications Plan defined Phase 2 as the period of 60 days when the New gTLD applications were being accepted. The AGB in fact defined the application window as a 90-day period. As discussed in Section 1.1: Application Submission of this report, the 90-day application window was extended by approximately 45 days.

Phase 2 heavily relied on social media and the microsite to promote the Program. During this phase of the Communications Plan, ICANN continued to add content to the microsite including videos, blogs, announcements regarding the New gTLD Program, and information about the TLD Application System (see Section 8.1: Program Processes, Systems, Resources of this report). The content continued to focus on the business potential and risks of participating in the Program, on how to apply, and on the Program's requirements, consistent with the defined messages in the Communications Plan.

As regional events concluded, ICANN shifted its focus to social media to drive traffic to the microsite and to raise awareness. Between 1 January and 30 July 2012, ICANN spent approximately USD 42,000 on Twitter Ads to promote its Twitter account, @ICANN. As a result, ICANN tweets had over 4,000 clicks, 2,000 re-tweets, and the number of ICANN's Twitter followers increased from approximately 8,000 to nearly 65,000. The countries with the highest number of @ICANN followers were Indonesia, Brazil, the United States, the Philippines and India. In January 2011, ICANN conducted two Twitter chat sessions. Combined, the chats resulted in more than 200 questions and comments regarding new gTLDs.

Other mechanisms utilized during this Phase to promote the Program included posting on ICANN's Facebook page and on LinkedIn. Postings on ICANN's Facebook page generated more than 28,000 views from December 2011 to January 2012. Postings on LinkedIn targeted Chief Marketing Officers (CMOs) and brand marketers' groups, who would be affected by the New gTLD Program. Postings encouraged and spurred discussions about the benefits and risks associated with new gTLDs. Collectively, these groups had more than 160,000 members.

#### **8.4.4.3 PHASE 3: POST-LAUNCH**

Communications activities during Phase 3 continued to rely heavily on social media and road shows to promote the Program. In addition, ICANN increased media engagement and began reaching out to financial and industry analysts to raise awareness and educate them about the impending expansion of the DNS as well as the choice, competition, and innovation that expansion

will bring. Webinars as a communication channel used to support applicants were also introduced during Phase 3.

*Reveal Day*

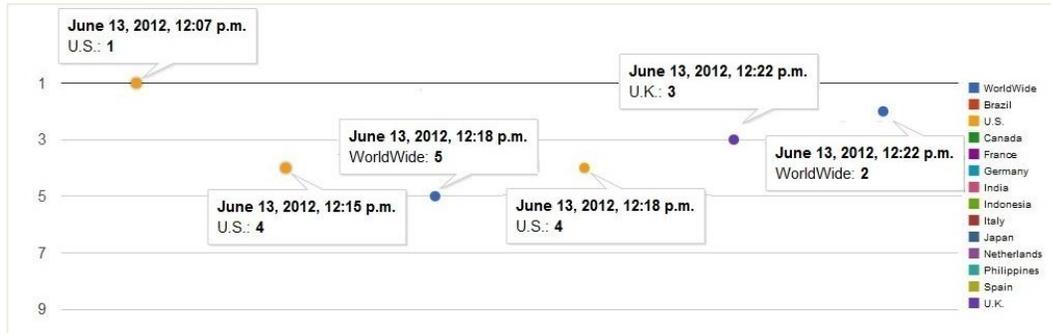

After the close of the application window on 30 May 2012, ICANN focused on promoting the next big milestone of the Program, Reveal Day.

To announce the applied-for new gTLDs, ICANN held a news conference in London on 13 June 2012, which had significant media coverage. There were over a dozen camera crews from major international broadcasts such as BBC, Al Jazeera, and CNN. The news conference was covered by worldwide news wires (e.g., Associated Press, AFP, Reuters), and was widely featured in the press, including in *The Economist*, *The New York Times*, *Washington Post*, and *Times of India*.

The event was live-streamed on the Internet and the live video webcast was accessible at [icann.org](http://icann.org). The recording of the news conference was made available after the event.<sup>462</sup> The live webcast was intended to provide global access to the event, however, its reach to certain countries where bandwidth was limited was unknown.

On social media, #RevealDay was included on Twitter’s list of top trending topics worldwide, in the United States, and in the United Kingdom (see Figure 8.4.i).

Figure 8.4.i: Twitter Trending Topics Database (#RevealDay)

\* - UTC Time

<sup>462</sup> ICANN. (13 June 2012) ICANN Reveal Day: New gTLDs and What's Next. Retrieved from [http://library.fora.tv/2012/06/13/ICANN\\_Reveal\\_Day\\_New\\_gTLDs\\_and\\_Whats\\_Next](http://library.fora.tv/2012/06/13/ICANN_Reveal_Day_New_gTLDs_and_Whats_Next)

Traffic on the microsite also peaked on Reveal Day at approximately 160,000 sessions and remained at that level for about 10 days. After this period, traffic returned to the average level of fewer than 3,000 sessions/day with occasional peaks not exceeding 15,000 sessions.

Early New gTLD Program budgets (see Section 8.3: Financial Management of this report) estimated 500 new gTLD applications.<sup>463</sup> In actuality, ICANN received 1,930 applications from 60 countries and territories, representing all of ICANN’s geographic regions. Table 8.4.iii shows a breakdown of applications received by ICANN region, based on the applicant’s country (i.e., answer to Question 2 of the application).

*Table 8.4.iii Applications by ICANN Region on Reveal Day*

ICANN Region	New gTLD Applications
Africa	17
Asia/Australia/Pacific	303
Europe	675
Latin America/Caribbean	24
North America	911
<b>Total</b>	<b>1,930</b>

Twelve percent of the total applications received (241) were applications for IDNs, community and/or geographic gTLDs. Table 8.4.iv provides a breakdown of application types. The breakdown shows unique count by application type. An application may be all three application types, which would be counted on each row of the table.

*Table 8.4.iv: Breakdown of Application Types*

Type of New gTLD Applications	New gTLD Applications	% of Total Applications
IDN	116	6.0%
Community	84	4.4%
Geographic	66	3.4%

### *Post Reveal Day*

After Reveal Day, communications became more targeted for the two audiences, applicants and the general public, including governments, trademark holders, communities, businesses, and Internet users. The general public needed to be kept informed of Program progress so that they could participate at relevant Program steps such as submitting a comment on a particular application for the evaluation panel’s consideration, filing a formal objection on an application, or participating in the GAC Advice process.

<sup>463</sup> ICANN. (1 May 2012) Draft FY13 Operating Plan and Budget. Retrieved from <https://www.icann.org/en/system/files/files/proposed-opplan-budget-v1-fy13-01may12-en.pdf>

---

Content that ICANN produced post-Reveal Day was more focused on the New gTLD Program's specific requirements and processes. Web pages on the microsite were created to provide detailed information regarding each Program process. Timelines, process documents, advisories, FAQs, and relevant forms were provided to applicants and those interested in the Program's transparency and predictability. ICANN also provided Program statistics such as application statuses, evaluation reports, and service metrics on the microsite. During this phase of the Program, all applicant-specific communications materials on the microsite were created in English, primarily to ensure timely dissemination of important Program information.

Beginning August 2012, ICANN began to hold applicant webinars to provide applicants with updates on various Program processes. By July 2015, ICANN had held 35 webinars on various topics. Webinars were recorded and posted to the New gTLD Program microsite.<sup>464</sup> Over the course of the 35 webinars, ICANN implemented some improvements based on applicants' feedback. For example, ICANN made an effort to accommodate different time zones by cycling webinar times to ensure no single region (APAC in particular) was excluded from live participation. Later, ICANN began holding two sessions for each webinar to accommodate multiple time zones. Additionally, ICANN provided 21-day advance notice on upcoming webinars, redesigned the webinars landing page, and used Twitter to provide updates to participants when technical issues arose during a webinar. Region-oriented webinars were also offered with information tailored to fit the needs of each region.

To continue raising awareness of New gTLDs with the general public, ICANN leveraged social media, engaged with the news media and analysts, and held road shows in all ICANN regions.

On social media, ICANN broadened its presence to include international platforms (e.g., Weibo) that allowed messages to be delivered in local languages. ICANN social media communications expanded to other languages, including Arabic, Chinese, Spanish, French, and Portuguese. Social media was an effective platform to raise awareness of new gTLDs. For example, many mainstream outlets (e.g., @TheNextWeb, @WSJ, @BBCWorld, @Mashable, @FayerWayer, and @ChannelNewsAsia) tweeted about the first new 'gTLD' delegations in October 2013. There were over 6,000 mentions of the first new gTLD delegations in October 2013 and nearly 30 million potential impressions.

While ICANN engaged with the news media throughout the Program, delegation of the first four new gTLDs on 25 October 2013 became one of the most widely covered ICANN news stories. There were over 400 news stories about the first delegations disseminated via online news outlets, print, radio, television and major blogs. A large number of mainstream news outlets from around the world covered the story, from the BBC, to The Moscow Times, to Japan Times, to The Times of India.<sup>465, 466, 467</sup> ICANN also conducted pre-briefings for international wire services Agence France

Presse (AFP) and Associated Press (AP) before the delegation. Their stories were posted very quickly after delegations were announced, which translated to broad global pickup.

In 2013 and 2014, ICANN conducted briefing events with technology and financial analysts and their clients. Firms including Gartner, IDC, Forrester, Altimeter Group Citigroup, JP Morgan, Baird and Cowen Group attended the briefings.

ICANN organized small-scale roadshows offering educational sessions about ICANN, including the New gTLD Program, to applicants, registrars, registries, businesses, and the media. In 2014, ICANN held roadshows in Latin America in Mexico, Brazil, and Bolivia, and in the Caribbean in Trinidad and Tobago. Each event had approximately 250 attendees and received press coverage from local media.<sup>468</sup>The event in Mexico was particularly successful; it garnered 87 pieces of coverage by national media. Following its success in 2014, ICANN held roadshows in 2015 in St. Lucia, Argentina, Kenya, the United Arab Emirates, and Thailand. For the remainder of 2015, ICANN is planning to hold similar events in Colombia and other nations and regions.

#### **8.4.4.4 PHASE 4: TLDS GO LIVE/IN THE ROOT**

The Communications Plan defined Phase 4 as separate and distinct from Phase 3. In reality, Phase 4 and Phase 3 are concurrent because applications are processed in batches (see Section 1.2: Prioritization of this report).

## 8.4.5 Conclusion

New gTLD Program communications were executed in accordance with the Communications Plan. ICANN performed outreach to global regions to provide information about the Program and increase awareness. ICANN also developed tools to share information with applicants and the community, most notably the New gTLD microsite.

Although the success of Program communications during this application round is difficult to assess because “success” was not defined within the Communications Plan, there are lessons learned that should be taken into consideration for future rounds. In the 2012 application round, the New gTLD microsite was developed to house all New gTLD Program information. To increase accessibility and usability for future rounds, Program information should be consolidated into a single site with other ICANN information. Another consideration for future rounds is that ICANN’s Global Stakeholder Engagement team is much larger than it was before the 2012 application round, and this team should be leveraged to help promote awareness of the New gTLD Program within their respective regions/constituencies.

---

In summary:

**8.4.a** Consolidate all next round program information into a single site and make information as accessible as possible

**8.4.b** Leverage ICANN's Global Stakeholder Engagement team to promote awareness of the New gTLD Program within their regions/constituencies

---

## 8.5 Customer Service

### 8.5.1 Introduction

The Customer Service Center (“CSC”) was initially launched to provide support to potential applicants and applicants of the New gTLD Program. Overtime, the CSC evolved into a Global Support function, providing customer support not only to applicants of the Program, but also to contracted parties resulting from the New gTLD Program, and other members of the ICANN community. This section of the Program Implementation Review report discusses the following aspects of Customer Service:

- New gTLD Program’s Impact on Customer Service
- Ongoing Improvements

### 8.5.2 Relevant Guidance

The following guidance is relevant to the topic of Customer Service and will be discussed in further detail in Sections 8.5.3 and 8.5.4 of this report:

- GNSO Implementation Guideline O: “ICANN may put in place systems that could provide information about the gTLD process in major languages other than English, for example, in the six working languages of the United Nations.”<sup>469</sup>
- Applicant Guidebook, Section 1.4.2: Customer Service during the Application Process<sup>470</sup>

### 8.5.3 Background

Per GNSO Implementation Guideline O, the AGB provided for a customer service function during the new gTLD application process. Prior to the ICANN Board’s approval of the New gTLD Program and along with it the AGB, ICANN made the email address [newgtld@icann.org](mailto:newgtld@icann.org) available to the general public for any inquiries relating to the New gTLD Program. This email box was monitored by ICANN staff and responses to inquiries were provided; however, as this was an email box, mechanisms for tracking and reporting of inquiries were lacking. Upon the ICANN’s Board approval of the New gTLD Program and the AGB on 20 June 2011, ICANN began work on launching an improved Customer Service Center (CSC) to provide additional support capabilities.

<sup>470</sup> ICANN. (4 June 2012) gTLD Applicant Guidebook Version 2012-06-04. Retrieved from <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>

---

On 21 November 2011, the CSC was launched with a new customer service platform that allowed for submission of inquiries in the six UN languages and a knowledge base with 250 articles in six UN languages. The customer service platform also allowed better tracking and reporting of statistics such as the number and type of inquiries submitted and response time.

As the Program launched and progressed, the CSC continued to expand and improve its services. During the application window between January and May 2012, the CSC processed application change requests and refund requests. After the application window closed, the CSC supported the administrative completeness check of applications in preparation for Reveal Day (see Section 1.1: Application Submission of this report). In 2013, ICANN launched a new and improved Customer Portal and began supporting Registry Operators as applicants completed the Program and signed Registry Agreements. In 2014, the CSC began standardizing a set of customer service metrics, which it published in 2015. In 2015, in an effort to better support ICANN's global customers, the CSC began offering 24/5 support by staff located in ICANN hub offices. Language support also expanded through third-party phone translations for languages beyond the six UN languages. A customer satisfaction survey was also implemented in July 2015 to gather feedback and improve services.

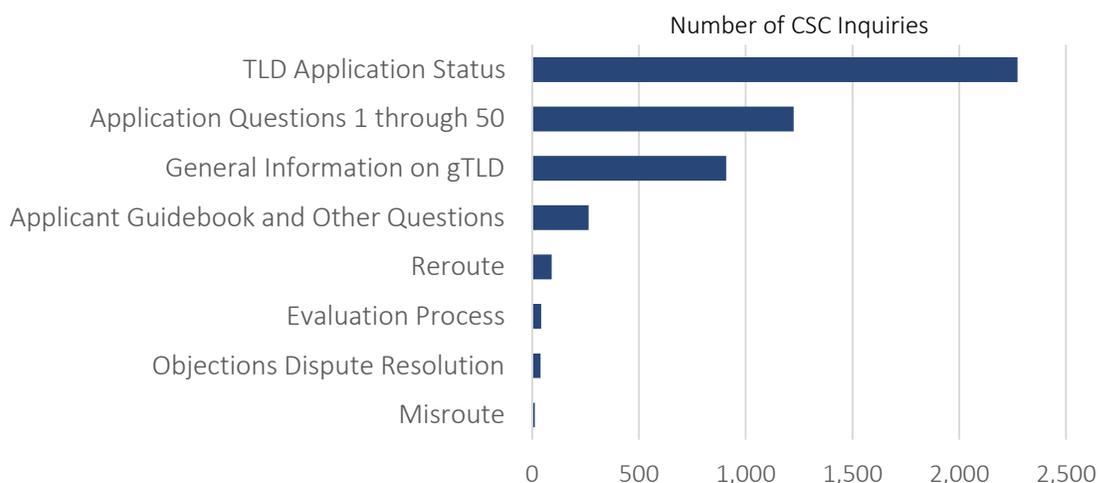

## 8.5.4 Assessment

### 8.5.4.1 EVOLUTION OF CUSTOMER SERVICE

The New gTLD Program has many phases, including the application window, the publication of applied-for strings, application evaluation, objections and GAC Advice, contention resolution, contracting, and delegation. Each phase of the Program has its own set of requirements that directly influenced applicants' customer support needs. To meet these needs, the CSC had to evolve throughout the life of the Program.

Leading up to and during the application window, the CSC received approximately 5,000 inquiries. Figure 8.5.i shows a breakdown of CSC inquiries during the application window by category.

Figure 8.5.i: Breakdown of CSC inquiries during the application window by category

Section 1.6 of the AGB stated: “To provide all applicants equitable access to information, ICANN [would] make all questions and answers publicly available.” The knowledge base that the CSC made available to applicants and potential applicants of the Program served the dual purpose of providing applicants and potential applicants with a self-service tool to get information regarding the Program and satisfying the criteria of Section 1.6 of the AGB.

To achieve the goal of equitable access to information, ICANN created knowledge base articles based on inquiries submitted. Responses to inquiries then pointed applicants and potential applicants to published knowledge base materials. Although this approach allowed for ICANN to publish the inquiries and the responses provided in a form that ensured confidentiality of the applicant and potential applicant, it created a longer response time because the knowledge base articles had to be created and translated before the responses could be provided.

Once the application window closed and applicants began moving into other phases of the Program, there were primarily two types of inquiries submitted, inquiries regarding status of specific applications and inquiries regarding upcoming Program processes. Because inquiries regarding application statuses were confidential and ICANN began to provide information regarding upcoming Program processes via webinars, FAQs, Advisories, and updates on the New gTLD microsite (see Section 8.4: Communications of this report), the knowledge base became less relevant after the close of the application window.

In August of 2013, as Initial Evaluation came to an end and Extended Evaluation began, ICANN began to offer applicants the ability to schedule phone calls with ICANN staff to discuss specific issues regarding their applications. Up until this time, all questions regarding specific applications and Program requirements and criteria were required to be submitted via the Customer Service Portal. This change allowed a more direct and effective channel for ICANN and applicants that had complex issues preventing them from moving forward in the Program to communicate. Phone communications were only used in cases where there were issues impacting a specific application. Information that would impact all applicants was disseminated via the New gTLD microsite or

webinars to continue to ensure equal access of information to all applicants. On 22 June 2015, ICANN began offering phone support to all applicants. To continue providing equal access of information to applicants, an internal knowledge base was created to support resolution of inquiries via phone. The internal knowledge base contained standardized answers to frequently asked questions, and all CSC resources had access to the knowledge base.

Not only did the nature of the inquiries change as the Program progressed, the volume of questions received by the CSC also increased over the life of the Program. Figure 8.5.ii shows the annual volume of cases received by the customer service team from the launch of the CSC in 2011 through the end of calendar year 2014.

*Figure 8.5.ii: Annual Volume of CSC Cases*

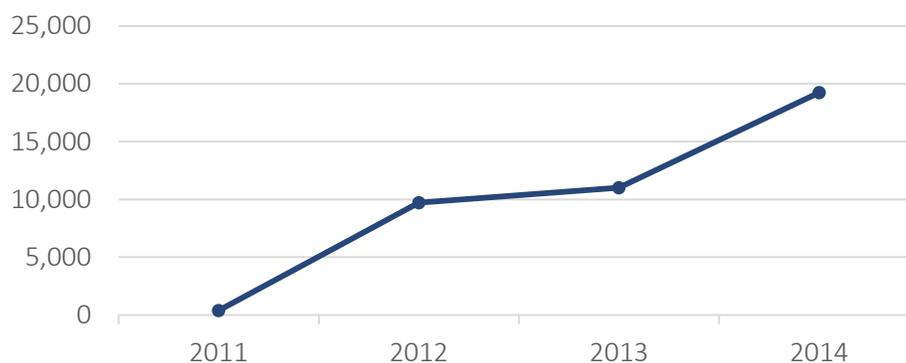

Figure 8.5.ii above shows a small increase in the number of CSC cases from 2012 to 2013. The majority of the CSC cases received in 2012 were during the application window. As evaluation began during the second half of 2012, the inquiries received were primarily regarding upcoming processes such as contention resolution and objections. In 2013, the volume of inquiries represented application change requests as applicants received CQs, and COIs as applicants started contracting.

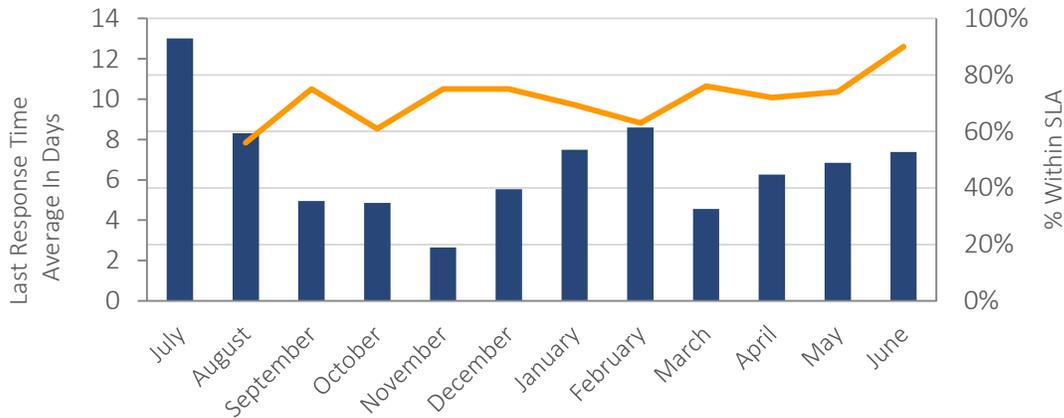

#### **8.5.4.2 ONGOING IMPROVEMENTS**

In the time after its launch in November 2011, the CSC implemented system upgrades and put in places new processes to increase its efficiency and effectiveness while improving the service that it delivered.

On 17 April 2013, ICANN launched a new and improved Customer Portal. The new Customer Portal continued to provide applicants with the ability to manage their customer service cases and provided the added benefit of allowing applicants to access their application information in the same Portal. Previously, applicants had to access their application information in a separate system, TAS (see Section 1.1: Application Submission of this report).

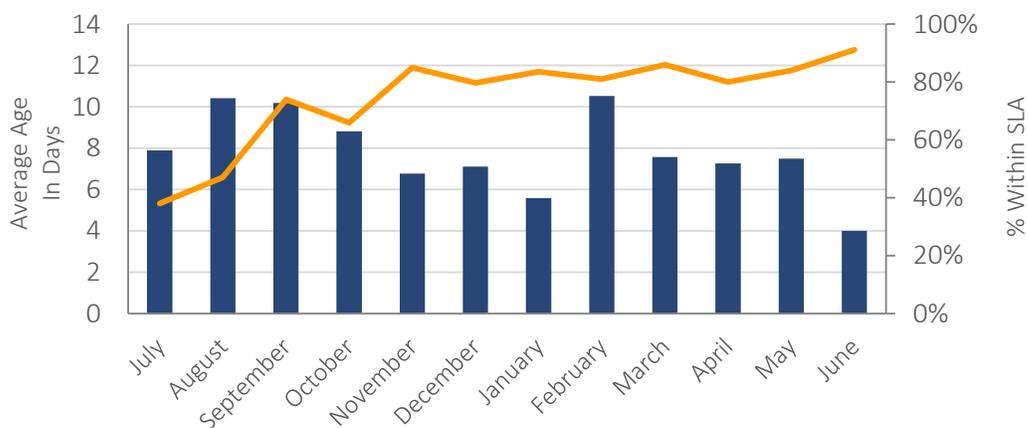

In mid-2014, ICANN began to work on standardizing metrics and service level targets for those metrics. To support transparency, in January 2015, ICANN began publishing the customer service metrics and service level targets. The metrics that ICANN reported on included number of days to last response, number of days to case closure, and percentage of cases resolved by Tier 1 customer service. Figures 8.5.iii, 8.5.iv, and 8.5.v show these metrics for the period between July 2014 and April 2015, respectively.

Figure 8.5.iii: Number of Days to Last Response

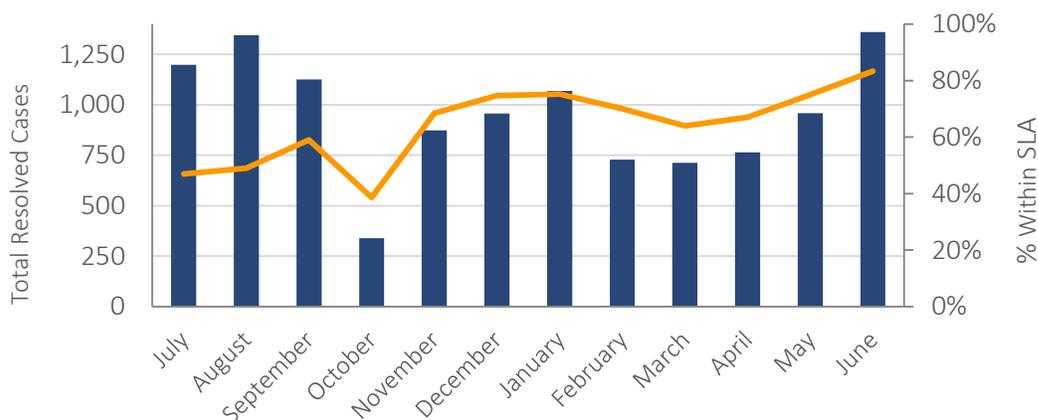

The Number of Days to Last Response metric measured the percentage of cases that received a communication from ICANN within the number of days specified by the service level target from the date of the last communication. The service level target for this metric was for Customer Service to provide a communication to applicants within seven days of the last communication. The team saw a positive trend in this area and regularly met or exceeded the service level target at least 70% of the time between November 2014 and July 2015.

Figure 8.5.iv: Number of Days to Case Closure

The Number of Days to Case Closure metric measured the percentage of cases resolved within the number of days specified by their service level targets. The service level target for this metric was for customer service to resolve cases within seven days of their submission. The team met this service level target at least 80 percent of time between November 2014 and July 2015.

Figure 8.5.v: Percentage of Cases Resolved by Tier 1 Customer Service

The Percentage of Cases Resolved by Tier 1 Customer Service metric measured the percentage of cases resolved without escalation outside of the customer service team. The service level target for this metric was for customer service to resolve 60% of the cases submitted. The team consistently met this service level target between November 2014 and July 2015.

In May 2015, the CSC began to offer voice support to incoming calls and expanded its support hours to 24/5. Additional staff was also added in 2015 in the ICANN Los Angeles and Singapore hub offices in order to provide adequate coverage for the expanded support provided. To support the growing global staff and to ensure consistent and quality of responses, an internal knowledge base was implemented in January 2015. This knowledge base is integrated into the Customer Portal’s case management functionality and provides the customer service team with trusted responses to ongoing customer inquiries as well as “how-to” documentation for case-related processes. It is anticipated that as new team members are added to ICANN hub offices, the knowledge base will expedite the onboarding process and provide them with clear, accurate, and consistent information to resolve cases.

Also implemented in 2015 was enhanced language support. Voice support for incoming calls included “real-time meaning-to-meaning” translation services for languages beyond the six UN languages. The addition of Customer Service staff in ICANN’s hub offices that can speak both English and the local language is also underway in 2015 to further enhance the breadth of languages supported.

Also launched in 2015 was the customer satisfaction survey to measure customer satisfaction with the resolution of their cases and to identify areas for improvement.

---

## 8.5.5 Conclusion

The AGB called for a Customer Service Center to support potential applicants and applicants during the application process. The Customer Service Center was launched prior to the applicant window to support this guidance. To support fairness and transparency, during the application window, ICANN published inquiries and standard responses in a publicly available knowledge base. As the Program progressed through evaluation and other phases, ICANN continued to share information via webinars, Applicant Advisories, and the New gTLD microsite.

Over time, the Customer Service Center has evolved to support not only applicants at all phases of the New gTLD Program, but also registry operators, other contracted parties, and the public. As of 2015, the Customer Service Center provides 24/5 support, phone support, and support in the six UN languages. To further support continuous improvement, the Customer Service Center has also implemented public service level targets, an enhanced customer portal, an internal knowledge base, and a customer satisfaction survey. Based on the demand for support before, during, and after the application window, ICANN recognizes that customer service is a critical function of the organization, and should be planned for accordingly for future operations. As the systems, processes, and resources have been established to support ICANN's contracted parties and the wider community, in advance of the next application round, these resources should be leveraged to ensure that an appropriate team is in place to support the activities of the New gTLD Program.

In summary:

**8.5.a** Consider customer service to be a critical function of the organization, and ensure that the Customer Service Center has the appropriate resources to support the ongoing and future activities of the New gTLD Program

# Annex 1. Summary of Lessons Learned

Reference	Lesson Learned
1.1.a	Explore a more structured way of capturing application responses
1.1.b	Implement a system that would allow applicants the flexibility to associate as many applications as desired to a single user account
1.2.a	Assign priority numbers to applications prior to commencement of application processing
1.2.b	Consider grouping applications by common characteristics while establishing priority numbers, in order to increase processing efficiency
1.3.a	Explore implementing additional functionality that will improve the usability of the Application Comment Forum
1.3.b	Provide additional clarity around the intended use of the Application Comment Forum, including timelines and ways to indicate the type of comment being submitted
1.4.a	Design application change request processes and criteria prior to the start of application processing
1.4.b	Consider whether all types of application changes should be processed the same way
1.5.a	Consider defining a process to move applications that may not proceed in the Program to a final status and provide a refund if they are not withdrawn
1.5.b	Review Program financials at the conclusion of this application round to determine whether the refund schedule accurately mapped to the costs incurred at the specified Program phases
2.1.a	Work with evaluation panels to perform pre-evaluation training and develop detailed procedures to ensure consistent and quality evaluations are achieved
2.1.b	Program processes that allow for additional communication between the applicant and ICANN, such as the Applicant Outreach process used in evaluation, may be beneficial
2.2.a	Consider whether background screening should be performed during Initial Evaluation or at the time of contract execution
2.2.b	Consider whether the background screening procedures and criteria could be adjusted to account for a meaningful review in a variety of cases (e.g., newly formed entities, publicly traded companies, companies in jurisdictions that do not provide readily available information)
2.3.a	Review the relative timing of the String Similarity evaluation and the Objections process
2.3.b	Consider any additional policy guidance provided to ICANN on the topic of String Similarity
2.3.c	Leverage the Root Zone Label Generation Rules in the development of the String Similarity evaluation as it pertains to IDN variants

Reference	Lesson Learned
2.4.a	As directed in the NGPC's 30 July 2014 resolution, "work with the GNSO to consider whether policy work on developing a long-term plan to manage gTLD name collision issues should be undertaken."
2.4.b	Based on the outcome of the GNSO's work, consider inclusion of the Name Collision Management Framework in the next application round prior to accepting applications
2.4.c	Leverage the Root Zone Label Generation Rules for IDNs in the DNS Stability evaluation
2.5.a	Consider the purpose and the implications of the Geographic Names evaluation, particularly in terms of whether its purpose is limited to evaluation or if there are other implications to the Geographic Names designation
2.5.b	Consider ongoing work by various members of the community around geographic names in defining future procedures
2.6.a	Consider whether an alternate approach to the Technical and Operational Capability evaluation would be worthwhile
2.6.b	Review Technical and Operational Capability Clarifying Questions and responses to determine whether improvements to the application questions can be made
2.7.a	Consider whether an alternative approach to the Financial Capability evaluation would be worthwhile
2.7.b	Review Financial Capability Clarifying Questions and responses to determine whether improvements to the application questions can be made
2.8.a	Update the process for collection of registry services information to better support both evaluation and contracting activities
2.8.b	Consider whether an alternate approach to Technical and Operational Capability Evaluation would be worthwhile, and if so, how the evaluation of Registry Services could be incorporated into the approach
2.8.c	For future rounds, leverage the IDN tools currently under development
3.1.a	Continue engagement with the GAC during the review process and the development of future procedures to ensure that its input is incorporated into relevant processes as early as possible
3.2.a	Explore a potential review mechanism for the next round
3.2.b	Consider opportunities for improvement in administering the Independent Objector processes (e.g., withdrawal of Independent Objector's objection if another objection to the same application on the same ground was filed, how comments made in the public sphere were considered prior to the filing of an objection)
4.1.a	Consider all dimensions of the feedback received to revisit the Community Priority Evaluation scoring and framework before the next application round
5.1.a	Explore the feasibility of finalizing the base Registry Agreement before applications are submitted or establishing a process for updating the Registry Agreement
5.1.b	Explore whether different applicant types could be defined in a fair and objective manner, and if there are to be different applicant types, consider whether there should be different versions of the Registry Agreement
5.2.a	Consider which tests should be performed once per technical infrastructure implementation and which should be performed for each TLD

Reference	Lesson Learned
5.2.b	Consider which, if any, tests can be converted from self-certifying tests to operational tests
5.2.c	In considering an alternate approach to the Technical and Operational Capability Evaluation, if an RSP accreditation program is considered, explore how Pre-Delegation Testing would be impacted
5.2.d	Building on lesson learned 2.8.c, in the development of evaluation criteria and procedures for IDNs, consider whether review of IDN tables during Pre-Delegation Testing could be limited to confirmation of compliance with the TLD's stated IDN policy
6.1.a	Consider leveraging the same procedural practices used for other panels, including the publication of process documents and documentation of rationale
6.1.b	Consider researching globally recognized procedures that could be adapted for the implementation of the Applicant Support Program
7.1.a	Explore whether there other more effective and efficient ways to fund an emergency back-end registry operator in the event of a TLD failure
8.1.a	In developing timelines for future application rounds, provide an appropriate amount of time to allow for the use of best practices in system development
8.1.b	Explore beta testing programs for systems to allow for lessons learned, to increase effectiveness of such systems, and to provide further transparency, clarity, and opportunity for preparation to applicants
8.2.a	Provide transparency and predictability to the procurement process following ICANN's procurement guidelines. Publish selection criteria, providers' process documents, and other relevant and non-confidential material in a timely manner.
8.3.a	Perform full review of Program financials and application fee before fees are defined for the next application round
8.4.a	Consolidate all next round program information into a single site and make information as accessible as possible
8.4.b	Leverage ICANN's Global Stakeholder Engagement team to promote awareness of the New gTLD Program within their regions/constituencies
8.5.a	Consider customer service to be a critical function of the organization, and ensure that the Customer Service Center has the appropriate resources to support the ongoing and future activities of the New gTLD Program

## Annex 2. Glossary of Acronyms

Acronym	Description
<b>AGB</b>	<b>The gTLD Applicant Guidebook</b> The AGB is a document describing the requirements of the new gTLD application and evaluation processes.
<b>ALAC</b>	<b>At-Large Advisory Committee</b> The ALAC is responsible for considering and providing advice on the activities of the ICANN, as they relate to the interests of individual Internet users (the "At-Large" community). ICANN, as a private sector, non-profit corporation with technical management responsibilities for the Internet's domain name and address system, will rely on the ALAC and its supporting infrastructure to involve and represent in ICANN a broad set of individual user interests.
<b>ASCII</b>	<b>American Standard Code for Information Interchange</b> A character encoding based on the English alphabet.
<b>ccTLD</b>	<b>Country-Code Top-Level Domain</b> A class of top-level domain only assignable to represent countries and territories listed in the ISO 3166-1 standard. See <a href="http://iana.org/domains/root/db/">http://iana.org/domains/root/db/</a> .
<b>CEO</b>	<b>Chief Executive Officer</b>
<b>COI</b>	<b>Continued Operations Instrument</b> COI is a financial instrument in the form of an irrevocable standby Letter of Credit, or deposit into an irrevocable cash escrow account. The purpose of the COI is to fund the continued operations of the five critical registry functions of a new gTLD by an EBERO in the event of a TLD failure.
<b>CPE</b>	<b>Community Priority Evaluation</b> CPE is a New gTLD Program process to resolve string contention, which may be elected by a community-based applicant.
<b>CQ</b>	<b>Clarifying Question</b> Evaluators could issue Clarifying Questions to applicants to request clarification or additional information during Initial or Extended Evaluation. Clarifying Questions served to clarify or supplement the application.
<b>CSC</b>	<b>ICANN Customer Service Center</b> The CSC provides support to New gTLD Program applicants as they move through the New gTLD Program.
<b>DNS</b>	<b>Domain Name System</b> The global hierarchical system of domain names.

Acronym	Description
<b>DRSP</b>	<b>Dispute Resolution Service Provider</b> DRSP is an entity engaged by ICANN to adjudicate dispute resolution proceedings in response to formally filed objections.
<b>EBERO</b>	<b>Emergency Back-End Registry Operator</b> EBERO providers have entered into contracts with ICANN to provide the five critical registry functions in the event of a TLD registry operator failure. EBERO providers must have demonstrated years of experience in operating domain name services, registration data directory services and extensible provisioning protocol services.
<b>EE</b>	<b>Extended Evaluation</b> EE is the second stage of evaluation applicable for new gTLD applications that do not pass Initial Evaluation, but are eligible for further review.
<b>EIU</b>	<b>The Economist Intelligence Unit</b>
<b>FAQ</b>	<b>Frequently Asked Questions</b>
<b>FY</b>	<b>Fiscal Year</b> ICANN's fiscal year is the 12-month period ending on 30 June of that year. For example, "FY14" began on 1 July 2013 and ended on 30 June 2014.
<b>GAC</b>	<b>Governmental Advisory Committee</b> The GAC is an advisory committee comprising appointed representatives of national governments, multi-national governmental organizations and treaty organizations, and distinct economies. Its function is to advise the ICANN Board on matters of concern to governments. The GAC operates as a forum for the discussion of government interests and concerns, including consumer interests. As an advisory committee, the GAC has no legal authority to act for ICANN, but will report its findings and recommendations to the ICANN Board.
<b>GNSO</b>	<b>Generic Names Supporting Organization</b> The GNSO is ICANN's policy-development body for generic TLDs and the lead in developing the policy recommendations for the introduction of new gTLDs. The GNSO is the body of six constituencies, as follows: the Commercial and Business constituency, the gTLD Registry constituency, the ISP constituency, the non-commercial constituency, the registrar's constituency, and the IP constituency.
<b>gTLD</b>	<b>Generic Top-Level Domain</b> gTLD is a TLD that does not correspond to any country code.

Acronym	Description
<b>IANA</b>	<b>Internet Assigned Numbers Authority</b> IANA is the authority originally responsible for overseeing Internet Protocol (IP) address allocation, coordinating the assignment of protocol parameters provided for in Internet technical standards, and managing the DNS, including delegating top-level domains, and overseeing the root name server system. Under ICANN, the IANA distributes addresses to the Regional Internet Registries, coordinates with the IETF and other technical bodies to assign protocol parameters, and oversees DNS operation.
<b>ICANN</b>	<b>Internet Corporation for Assigned Names and Numbers</b>
<b>ICC</b>	<b>The International Centre for Expertise of the International Chamber of Commerce</b>
<b>ICDR</b>	<b>The International Centre for Dispute Resolution</b>
<b>IDN</b>	<b>Internationalized Domain Name</b> IDN is a domain name including characters used in the local representation of languages not written with the basic Latin alphabet (a - z), European-Arabic digits (0 - 9), and the hyphen (-).
<b>IE</b>	<b>Initial Evaluation</b> IE is the first stage of evaluation applicable for new gTLD applications.
<b>IGO</b>	<b>Inter-governmental organization</b>
<b>IIS</b>	<b>Stiftelsen för Internetinfrastruktur</b>
<b>IO</b>	<b>Independent Objector</b> As part of the New gTLD Program, the IO could lodge Community and Limited Public Interest objections in the best interests of global Internet users if there were comments in opposition to an application made in the public sphere.
<b>ISP 98</b>	<b>International Standby Practices</b>
<b>JAS WG</b>	<b>Joint SO/AC New gTLD Applicant Support Working Group</b> The main objective of the JAS WG was to develop a sustainable approach to providing support to entities requiring assistance in applying for and operating new gTLD Registries.
<b>LGR</b>	<b>Label Generation Rules</b> The label generation rules govern the way a zone is operated.
<b>LOC</b>	<b>Letter of Credit</b>
<b>NGO</b>	<b>Non-Governmental Organization</b>
<b>NGPC</b>	<b>ICANN Board New gTLD Program Committee</b> The NGPC is a group set up by the ICANN Board to make decisions regarding the New gTLD Program. Formed on 10 April 2012, the NGPC is composed of all ICANN Board members who do not have a conflict of interest relating to the New gTLDs, in addition to two non-voting liaisons.

Acronym	Description
<b>NTAG</b>	<p><b>New TLD Applicant Group</b></p> <p>The NTAG is an interest group formed under Article III.D. of the Charter of the gTLD Registries Stakeholder Group (RySG). The primary role of the NTAG is to represent the interests of entities that applied for a new gTLD(s) in ICANN's 2012 gTLD round.</p>
<b>PDT</b>	<p><b>Pre-Delegation Testing</b></p> <p>PDT is a technical test required of applicants before delegation of the applied-for gTLD string into the root zone.</p>
<b>PIC</b>	<p><b>Public Interest Commitment</b></p> <p>PICs are safeguards in Specification 11 of the Registry Agreement in order to hold their registry operations to certain standards. PICs are also a mechanism to allow registry operators to commit certain statements into binding contractual obligations that may be enforced by ICANN compliance and via the Public Interest Commitments Dispute Resolution Procedure (PICDRP).</p>
<b>PICDRP</b>	<p><b>Public Interest Commitments Dispute Resolution Procedure</b></p> <p>The PICDRP addresses complaints that a Registry Operator may not be complying with the Public Interest Commitment(s) in Specification 11 of their Registry Agreement.</p>
<b>PwC</b>	<p><b>PricewaterhouseCoopers</b></p>
<b>RA</b>	<p><b>Registry Agreement</b></p> <p>The RA is the agreement executed between ICANN and successful gTLD applicants.</p>
<b>RFP</b>	<p><b>Request for Proposal</b></p>
<b>RSEP</b>	<p><b>Registry Services Evaluation Policy</b> (also referred to as Registry Services Evaluation Process)</p> <p>RSEP is ICANN's process for evaluating proposed gTLD registry services or contractual modifications for security, stability or competition issues.</p>
<b>RSP</b>	<p><b>Registry Services Provider</b></p> <p>RSP is a company that runs the operations of a TLD on behalf of the TLD owner or licensee. The RSP keeps the master database and generates zone files to allow computers to route Internet traffic using the DNS.</p>
<b>RSTEP</b>	<p><b>Registry Service Technical Evaluation Panel</b></p> <p>The RSTEP, created based on Section 1.4 of the RSEP, is a technical team under the GNSO. The RSTEP primary responsibility is to assist in the evaluation of requests for new registry services.</p>
<b>RZM</b>	<p><b>Root Zone Management System</b></p> <p>The DSN RZM is the automated system used to process change requests for TLDs and to delegate new gTLDs once they have passed PDT.</p>

Acronym	Description
<b>SARP</b>	<b>Support Application Review Panel</b> The SARP is a selected, volunteer panel responsible for the evaluation and scoring of applications for the Applicant Support Program.
<b>SLT</b>	<b>Service Level Target</b> SLT is a target agreed as a means of measuring the performance of a particular service.
<b>SSAC</b>	<b>Security and Stability Advisory Committee</b> The SSAC is an advisory committee to the ICANN Board comprised of technical experts from industry and academia as well as operators of Internet root servers, registrars and TLD registries.
<b>TAS</b>	<b>TLD Application System</b> TAS was the online interface for submission of gTLD applications to ICANN. This interface is no longer active.
<b>TCP</b>	<b>Transmission Control Protocol</b> TCP is one of the main transport layers of the Internet Protocol Suite. It is an effective transport service connection wherein data is transferred with an end-to-end reliability from the source host to the destination host. TCP verifies the correct delivery of data and provides a support to check for errors and missing data, and re-sends it to complete the data transfer.
<b>TLD</b>	<b>Top-Level Domain</b> A TLD is a name at the top of the DNS naming hierarchy. It appears in domain names as the string of letters following the last dot, such as “NET” in www.example.net. The TLD administrator controls what second-level names are recognized in that TLD. The administrators of the root domain or root zone control what TLDs are recognized by the DNS.
<b>TMCH</b>	<b>Trademark Clearinghouse</b> The TMCH is a repository for trademark data supporting rights protection services offered by new gTLD registries.
<b>UCL</b>	<b>University College London</b>
<b>UCP</b>	<b>Uniform Customs and Practice for Documentary Credits</b>
<b>UDRP</b>	<b>Uniform Domain Name Dispute Resolution Policy</b> All ICANN-accredited registrars follow a uniform dispute resolution policy. Under that policy, disputes over entitlement to a domain name registration are ordinarily resolved by court litigation between the parties claiming rights to the registration.
<b>UN</b>	<b>United Nations</b>

Acronym	Description
<b>URL</b>	<p><b>Uniform Resource Locator</b></p> <p>The URL is a string that describes the address of documents and other resources on the Internet. Defined by the IETF in RFC 2396, a URL is composed of two parts separated by a colon (":"). The first part of the address indicates what protocol to use, e.g., http, ftp, etc., and the second part specifies the IP address or the domain name where the resource is located.</p>
<b>URS</b>	<p><b>Uniform Rapid Suspension</b></p> <p>The URS provides trademark holders with a rapid and efficient mechanism to "take down" undeniably infringing domain names. A successful proceeding will result in suspension of the domain name. Compliance with results mandatory for all new gTLD operators.</p>
<b>WIPO</b>	<b>World Intellectual Property Organization</b>

#### News & Views

Announcement: 30 September 2014 – [ICANN Updates Application Change Request Process](#)

Announcement: 30 September 2014 – [Change Request Advisory](#)

---

#### Change Request Overview

Per section 1.2.7 of the Applicant Guidebook:

*If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.*

This section of the Applicant Guidebook further states:

*ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.*

*Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.*

The Application Change Request ("ACR") process was created during the application window in order to allow applicants to notify ICANN of changes to application materials.

## Change Request Determination Criteria

Determination of whether changes will be approved will balance the following factors:

1. **Explanation** – Is a reasonable explanation provided?
2. **Evidence that original submission was in error** – Are there indicia to support an assertion that the change merely corrects an error?
3. **Other third parties affected** – Does the change affect other third parties materially?
4. **Precedents** – Is the change similar to others that have already been approved? Could the change lead others to request similar changes that could affect third parties or result in undesirable effects on the program?
5. **Fairness to applicants** – Would allowing the change be construed as fair to the general community? Would disallowing the change be construed as unfair?
6. **Materiality** – Would the change affect the evaluation score or require re-evaluation of some or all of the application? Would the change affect string contention or community priority consideration?
7. **Timing** – Does the timing interfere with the evaluation process in some way? ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round. (AGB §1.2.7.)

These criteria were carefully developed to enable applicants to make necessary changes to their applications while ensuring a fair and equitable process for all applicants.

In evaluating each change request, all available information is considered against the seven criteria above. The weight of each criterion may vary on a case-by-case basis, depending on the facts and circumstances surrounding the change request, the application, and the string.

**Explanation** – This criterion requires that the applicant provide an explanation for the requested changes. If an explanation is not provided, the applicant is given an opportunity to remediate. As such, this criterion is always met and does not bear as much weight as the other criteria.

**Evidence that original submission was in error** – This criterion is applicable in cases where the applicant requests a change to correct an error. In this case, the criterion requires that the applicant provide adequate information to support the request. There are few cases of change requests to correct an error. However, when such a case is submitted, this criterion is heavily weighted.

**Other third parties affected** – This criterion evaluates whether the change request materially impacts other third parties, particularly other applicants. In cases where a change to application material has the potential to materially impact the status of another applicant's application, this criterion is heavily weighted.

**Precedents** – This criterion assesses whether approval of the change request would create a new precedent, or if it would be in-line with other similar requests that have been approved. At this stage of the New gTLD Program, it is unlikely that a change request that would create a new precedent would be approved.

**Fairness to applicants** – This criterion evaluates whether approving a change request would put the applicant in a position of advantage or disadvantage compared to other applicants. This criterion is related

to the "Other third parties affected" criterion, and if a change request is found to materially impact other third parties, it will likely be found to cause issues of unfairness.

**Materiality** – This criterion assesses how the change request will impact the status of the application and its competing applications, the string, the contention set, and any additional Program processes that it or its competing applications must complete such as Community Priority Evaluation ("CPE"). A change that is determined to be material in and of itself will not cause a change request to be rejected. However, it will cause other criteria to weigh more when considered in conjunction with each other.

**Timing** – This criterion determines whether the timing of the change request impacts the materiality, fairness to applicants, and other third parties affected criteria. In cases where timing of the change request is found to impact these criteria, it will be heavily weighted.

### How to Submit a Change Request

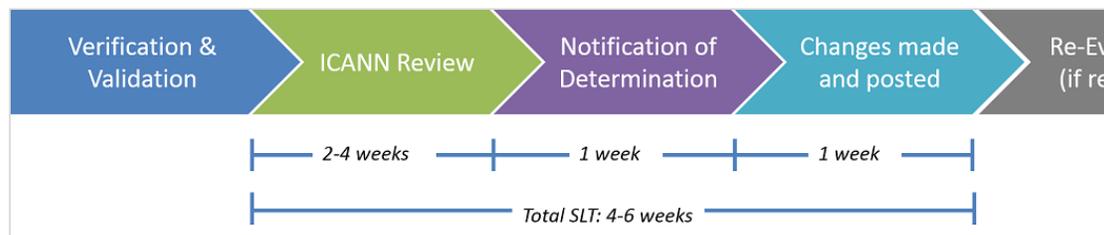

Requests for changes to application materials may be submitted to the [Naming Services Portal \(NSp\)](#) by following these 2 steps:

1. Download and complete a [gTLD Application Change Request Form](#) [DOCX, 564 KB].
2. Log into the NSp with the primary contact's credentials and submit the Form, along with redlines of the changes being requested. An example of a redline document can be viewed [here](#).

The standard change request process requires that any change to the application, including changes to the Primary Contact, be initiated by the Primary Contact and submitted via the appropriate login in the NSp. If the Primary Contact is no longer available to initiate the change, then the Secondary Contact may contact the GSC at [newgtld@icann.org](mailto:newgtld@icann.org) to submit the change request.

### Change Request Process

Below is a graphic depicting the change request process.

**Verification & Validation** – In this step, ICANN verifies the applicant's credentials in order to ensure that only those authorized to make changes to the application are able to do so. Additionally, ICANN reviews the change request materials submitted by the applicant to ensure that a completed Change Request Form, appropriate redline documents, as well as all relevant supporting documentations are provided. This step is not counted in the 4-6 week Service Level Target ("SLT") for change requests, because the amount of time to complete this step is highly dependent upon the applicant providing the required information. ICANN's work during this step is minimal. ICANN typically performs its work within 2 business days of receiving the requests or information from the applicant. Submission of incomplete information, and non-response to ICANN's request for required information are typical causes of delay in this step. ICANN will inform the applicant once this step is completed.

**ICANN Review** – Once verification and validation of the change request is completed, ICANN reviews the change request materials against the seven criteria above. In the event that additional information is required before a determination can be made, ICANN will reach out to the applicant to request the information. The SLT for this step of the process is 2-4 weeks, depending on the complexity of the change request and whether additional information is required.

**Notification of Determination** – Once ICANN completes its review of the change request, the applicant will be informed of the determination. Possible determinations include approval of the change request, denial of the change request, or deferral of the change request to a later time. The SLT for this step is one week to account for the drafting of denial or deferral letters if the change request is denied or deferred.

**Changes Made and Posted** – In this step, ICANN makes the requested and approved changes to the application. Changes that require a 30-day comment window will be posted on the [Application Status page](#) of the New gTLD Microsite. Changes that do not require a 30-day comment window will not be posted. Refer to the "Change Requests Requiring 30-day Comment Window" section below for information on which changes will be posted for comments and which ones will not. Applicants will be notified once the changes are made. The notification will also inform applicants whether the changes are posted for comments, and whether application re-evaluation will be required.

**Re-evaluation** – This step is applicable to those change requests that require re-evaluation of the application. Once ICANN notifies the applicant that the changes are made and that re-evaluation is required, the change request case will be closed and a new re-evaluation case will be opened to assist the applicant through the re-evaluation process. Under the re-evaluation step, the applicant will be sent an invoice for the re-evaluation fee. Once payment is made, ICANN will proceed with the re-evaluation of the application. The re-evaluation will follow the same process and timelines as Extended Evaluation:

- 3 weeks: evaluators review the updated application, and issue Clarifying Questions if required.
- 6 weeks: applicants respond to Clarifying Questions.
- 2 weeks: evaluators review response to Clarifying Questions and deliver results to ICANN.
- 1 week: ICANN reviews and processes the results for publication. Note that if the re-evaluation results in any scoring changes, ICANN will update either the Initial or Extended Evaluation report and post it on the [Application Status page](#) of the New gTLD Microsite. If the re-evaluation does not result in any scoring changes, no updates will be made.

## Change Requests That Do Not Require A 30-day Comment Window

In the interest of allowing applicants to expeditiously move forward in the New gTLD Program, effective 1 October 2014, the following types of change requests will generally not be posted for comments for 30 days:

- Changes to confidential portions of the application
- Changes to primary and secondary contacts of the application
- Changes to the applicant's contact information (address, phone, fax, web address)
- Changes to applicant's stock symbol
- Changes to applicant's business/tax ID
- Changes to applicant's officers/directors
- Changes to name of applying entity\*
- Changes to parent entity

Although these types of change requests generally will not be posted for comments, ICANN reserves the right to make exceptions in ICANN's discretion.

\* This item refers to a simple name change of the applying entity only. It does not apply to changes in the applying entity itself such as the case of the application being assigned from a parent entity to a wholly-owned subsidiary.

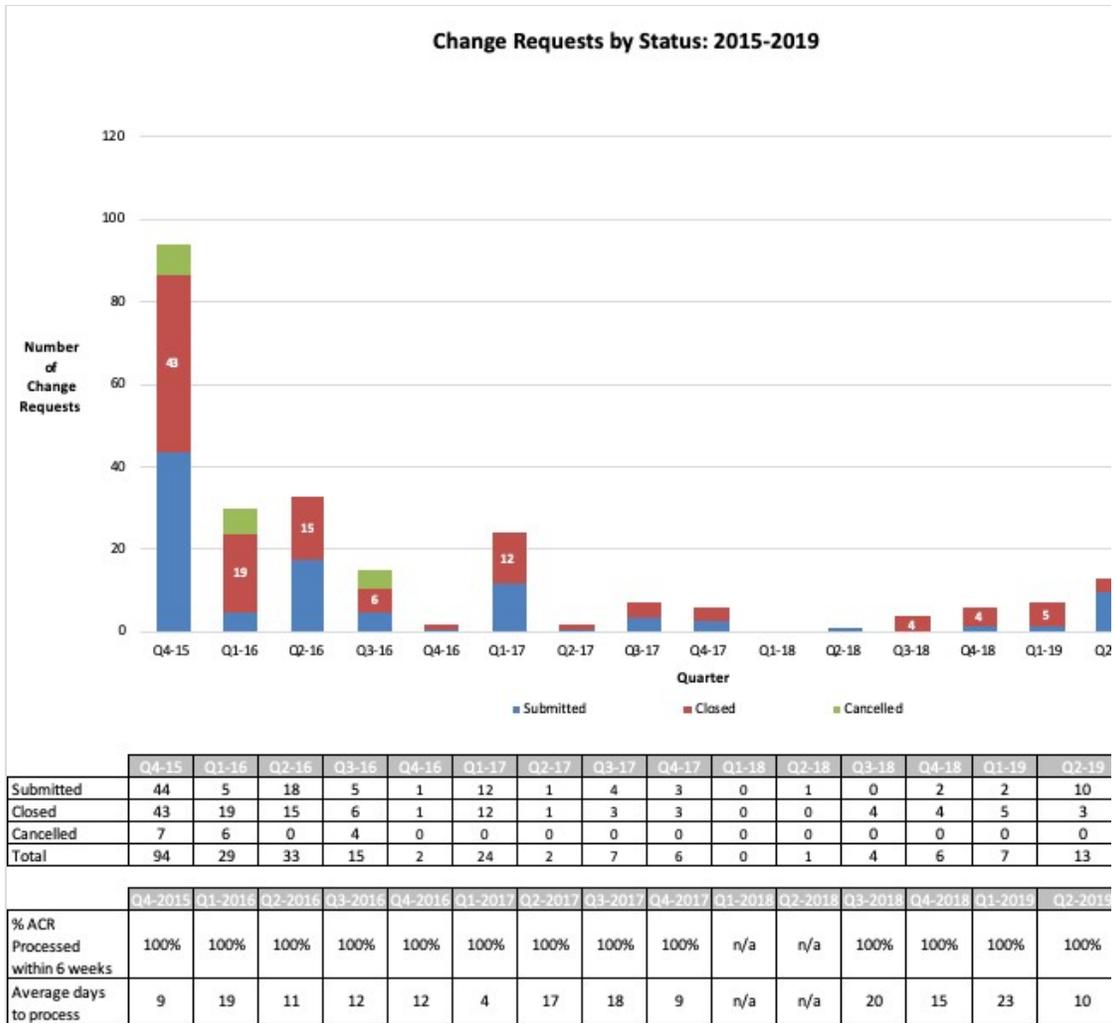

## How Change Requests Impact Other New gTLD Program Processes

**Contracting** – If an applicant is eligible to be invited to Contracting, but there is a pending change request on the application, the applicant will not be invited until the change request completes processing. If the applicant has been invited to contracting and is progressing through the contracting process, a pending change request will cause delays and may impact the applicant's ability to execute the Registry Agreement in a timely manner. If the applicant anticipates not being able to execute the Registry Agreement by the Registry Agreement execution deadline, ICANN recommends that the applicant [submit an extension request](#) [DOCX, 565 KB] in order to avoid missing the Registry Agreement execution deadline. Applicants will not receive a Registry Agreement until the change request completes processing, and the 30-comment window (if required) has concluded.

**Contention Resolution** – For Community Priority Evaluation, the applicant will only be invited once the change request completes processing and the 30-day comment window (if required) has concluded. For Auction, a pending change request will not prevent an Auction from being scheduled, but in some circumstances, the Auction may be delayed.

## Statistics

Below are quarterly change request statistics (as of December 2019).

Director, Strategic Initiatives

# Operational Design Phase (ODP) and Subsequent Procedures (SubPro)

Agenda Item 1

# Objective of the Operational Design Phase (ODP)

---

To perform an assessment of GNSO Council policy recommendations in order to **provide the Board with relevant information** to facilitate the Board's determination in accordance with the Bylaws and in consideration of the public interest, **on the operational impact of the implementation of the recommendations**, including whether the recommendations are in the best interests of the ICANN community or ICANN ([Annex A, Section 9 \(a\)](#)).

The ODP supports the **Board's ability to request a focused assessment** of the operational impact of GNSO Council-approved recommendations.

The ODP will also **support ICANN org's consultation with the community to solicit feedback on the assumptions, facts, and figures** that underpin ICANN org's ODP assessment.

# Subsequent Procedures Policy Development Process (PDP)

---

On 18 February 2021, the Generic Name Support Organization (GNSO) Council voted to approve the [New Generic Top-Level Domain \(gTLD\) Subsequent Procedures Policy Development Process Final Report](#) (the “Final Report”).

On 24 March 2021, the GNSO Council transmitted its [Recommendations Report](#) to the ICANN Board, following the GNSO Council’s approval of the Final Recommendations, and the Board is now considering the Outputs contained in the Final Report.

# ODP Board Resolution and Scoping

---

## Sub Pro ODP Board Resolutions:

- Resolved (2021.09.12.01) The Board directs the President and CEO, to take the steps needed to **organize the resources required to begin work on the ODP, and to advise the Board when the work of the ODP is initiated** within the organization. The Board requests **regular updates on the progress of the work and delivery of the Operational Design Assessment (ODA)**, the expected output of the ODP, **within ten months from the date of initiation.**
- Resolved (2021.09.12.02) The Board authorizes the President and CEO of **up to US\$9M to fund the internal project needed for initiation of the ODP, the execution of the ODP including community engagement, formation and delivery of an ODA to the Board, and any additional related work that may be required** to support the ICANN Board's consideration of the New Generic Top Level Domain (gTLD) Subsequent Procedures Policy Development Process Final Report.

## Sub Pro ODP Scoping Document:

- Board worked with the org to create a structure and outline of the Sub Pro ODP Scoping document

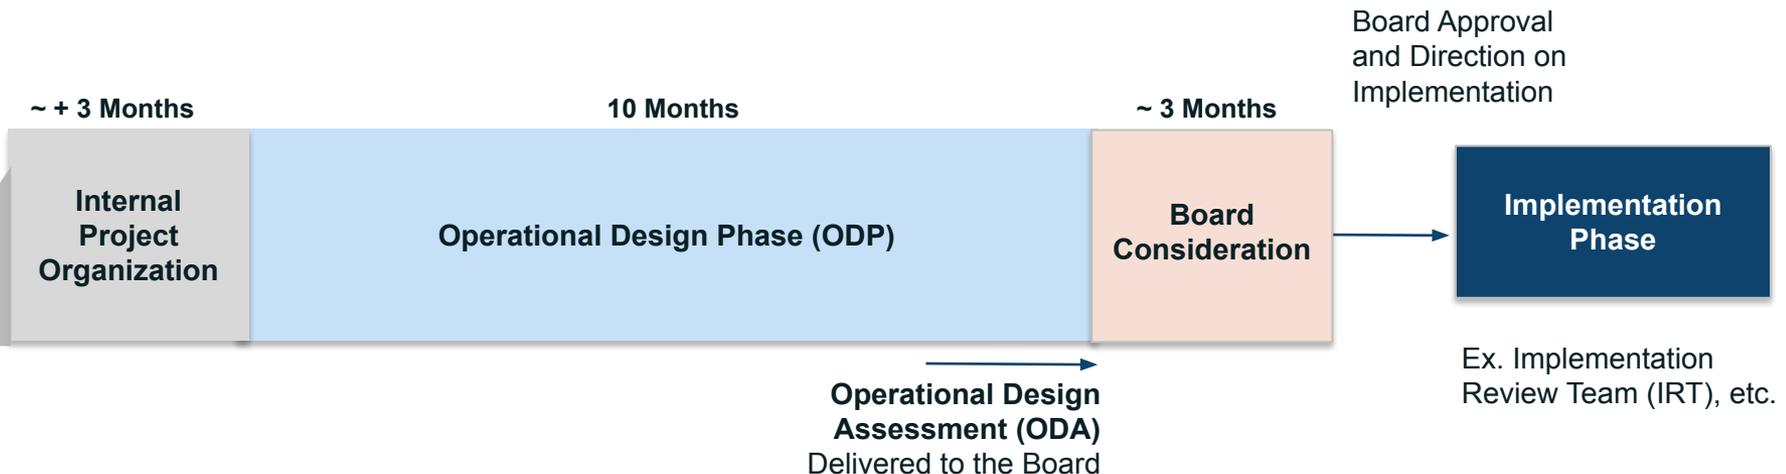

# ODP Overview of Work

The ODP is a significant undertaking for which the Board provided approval of up to US\$9 million outside of ICANN's operational budget.

**Internal Project Organization:** Org internal infrastructure ramp-up to support this effort

**Operational Design Phase (ODP):** ODP execution stage to deliver the *Operational Design Assessment (ODA)*, based on the Board-determined scope

**Board Consideration:** Board's determination on the Final Report Outputs

# What comes after ODP?

Once the Board considers the Operational Design Assessment (ODA), there are a number of things that need to occur before the launch of the next round application window.

# ODP Project Update

## Agenda Item 2

# SubPro ODP High-Level Timeline

## Subsequent Procedures ODP High-Level Timeline

Resolved (2021.09.12.01), ... The Board requests regular updates on the progress of the work and delivery of the Operational Design Assessment (ODA), the expected output of the ODP, within ten months from the date of initiation, provided that there are no unforeseen matters that could affect the timeline, of which any such matters are to be communicated to the Board immediately upon identification.

### Ongoing Activities:

Work Track + Project Team Analysis, Meeting with liaison, Monthly status report, Legal Review, Comms.

# SubPro ODP Activity Since ICANN73

---

- 23 March 2022: [Initial & Overarching Assumptions](#) posted
  - ICANN org posted a list of assumptions that the ICANN org SubPro ODP team developed. The list included overarching and topic-specific assumptions. Development of assumptions is ongoing and additional lists are posted as they become available.
- 28 March 2022: [Community Status Report](#) posted
  - This report is the first [Community Status Report](#) for the SubPro ODP.
- 11 April 2022: Published a [blog](#) introducing the Policy Development and Implementation Materials Work Track
- 19 April 2022: Supported Board's publication of [blog](#) on Supporting ICANN Community Progress: The Issue of Closed Generics
- 2 May 2022: Published [Assumptions Subsequent Procedures ODP v3](#)
- 16 May 2022: 2nd [Community Status Report](#) posted
- 26 May 2022: Published [Assumptions Subsequent Procedures ODP v4](#)

# SubPro ODP Stakeholder Activities

---

Since ICANN73 the org has provided ongoing support to project stakeholders.

- Board & Board Caucus
  - Supported SubPro ODP discussions during Board workshops and Board Caucus meetings
- GNSO Council Liaison
  - Met with GNSO Council Liaison and shared policy-related questions developed by the SubPro ODP team
- ICANN SubPro Project Steering Committee
  - Supported project steering committee discussions
- Work Track Leads
  - Held several half-day workshops with SubPro Work Track leads to discuss final report topics, outputs, and overall methodology

# Sub Pro ODP Finances: Jan-Apr 2022

## Resource and Costs Overview by Work Track (WT)

SubPro ODP Work Track (WT)	Project-to-Date (January to April 2022)		
	FTE (avg)	Total Hours	Total Expenses*
WT 1: Project Governance	2.4	1,410	\$183
WT 2: Policy Development and Implementation Materials	2.1	1,245	\$137
WT 3: Operational Readiness	0.6	368	\$40
WT 4: Systems and Tools	0.9	548	\$69

WT 6: Communications and Outreach	0.9	518	\$57
WT 7: Resources, Staffing, and Logistics	1.0	585	\$60
WT 8: Finance	0.5	315	\$35
WT 9: Overarching	0.7	443	\$49
Shared Services Support**	NA	NA	\$338
<b>Total</b>	<b>9.1</b>	<b>5,478</b>	<b>\$972</b>

*\*Expenses presented in \$US thousands*

*\*\*Shared Services Support is not a work track and represents allocated costs from ICANN org for general administrative costs. Any arithmetic inconsistencies are due to rounding.*

# Review Methodology and Sample Topic

## Agenda Item 3

# SubPro ODP Methodology

SubPro ODP Stages	Description
Policy Analysis	Review and analysis of the 300+ policy outputs in the Final Report. The assumptions and policy questions come out of this work.
Process Development	Development of a high-level business process design using the 2012 processes as a baseline for developing the application processes for the next round.
Operational Assessment	An assessment of the impact to ICANN to implement the proposed business process design. This includes timelines and costs for systems, staffing and outsourcing. It also includes an explanation of the risks associated with implementation.
ODA Drafting	The development, drafting, and submission of the ODA.

# Sample Topic: Application Change Request (ACR)

---

## Background

- After the 2012 New gTLD Program application window closed, the Application Change Request (ACR) process was developed to allow applicants to request changes to application materials in a standardized way.
- These changes included business/administrative changes (Application Questions 1-12) and application changes (Application Questions 13-50).
- Evaluation criteria were developed to provide predictability and allowed for objective and consistent review of change requests.
- To date, 2772 change requests have been processed for applications from the 2012 round.

# Final Report: Application Change Request (ACR)

---

## Topic 20 Output Summary

- Affirmation 20.1: The Working Group supports maintaining a high-level, criteria-based change request process, as was employed in the 2012 application round
- Implementation Guidance 20.2: Provide guidance on what changes would likely be approved or rejected
- Implementation Guidance 20.3: Identify which change requests will require a re-evaluation
- Recommendation 20.4: List the types of changes that will require an operational comment period
- Implementation Guidance 20.5: Provide ability for community members to be notified of an application change request requiring an operational comment period
- Recommendation 20.6: Allow joint venture change requests to resolve contention
- Implementation Guidance 20.7: Allow for 60-90 day delay for joint venture change request
- Recommendation 20.8: Allow .BRAND TLD to change their string to resolve contention within certain conditions

# ACR: ODP Considerations

---

- Application Change Request is a simple concept
- Final Report outputs introduce some new aspects but do not appear particularly difficult
- The change request process is inherently complex because:
  - Changes can occur at any time until contracting
  - Changes touch nearly every process
    - each change needs to be reviewed against where it is the overall process
    - criteria are viewed differently at different points in the process
  - Changes may impact other processes
    - require re-evaluation or re-initiating a process
  - Changes may impact other applicants or community
    - possible gaming (e.g. delay in contention resolution)
    - miss out on processes (e.g. objections)

# ACR: ODP Methodology

SubPro ODP Stages	Description
Policy Analysis	<ul style="list-style-type: none"><li>● Review and analyze the GNSO Final Report outputs</li><li>● Consider prior process &amp; ICANN org recommendations.</li><li>● Identify any issues or concerns that need to be addressed.</li></ul>
Process Development	<ul style="list-style-type: none"><li>● Identify processes and activities potentially impacted by the inclusion of an application change request. Adjust processes as needed.</li></ul>
Operational Assessment	<ul style="list-style-type: none"><li>● Assess the impact of application change requests across all program processes.</li></ul>
ODA Drafting	<ul style="list-style-type: none"><li>● Write analysis and assessment of the topic. Include:<ul style="list-style-type: none"><li>○ High level business process</li><li>○ Impact to org</li><li>○ Note issues, concerns, and associated risks.</li></ul></li></ul>

# Upcoming Items & Questions

Agenda Item 4

# Upcoming Items

---

- ICANN74 session: [New gTLD Subsequent Procedures - Working Together](#)
  - 13 June, 2022 (0700 UTC)
    - ICANN org's New gTLD Subsequent Procedures (SubPro) ODP team will facilitate a multistakeholder session to describe work in progress and gather feedback on one or more subject areas.
  
- Third 'Community Status Report' will be published Mid-August 2022

## ICANN New gTLD Auction Schedule dated 27 April 2016

This Auction schedule has been developed based on an anticipated volume of 20 contention sets per event. However, several factors, including self-resolution of contention sets, Auction eligibility, and postponement requests, will affect the actual number of contention sets participating in each Auction Event. Because of these and other factors, the Auction event for a contention set is subject to change, and the schedule will be updated periodically to reflect these changes. Auction Dates will be confirmed to the application primary contact via the customer portal at least 21 days prior to the Auction.

The latest contention set statuses, including Auction Dates for any contention set, are available on the contention set status page: <https://gtldresult.icann.org/application-result/applicationstatus/stringcontentionstatus>.

The table below contains Auction Dates and Times as well as Deposit Due Dates and Times. The subsequent pages show the list of the contention sets planned for each Auction, which, as mentioned above, is subject to change.

Planned Auction Dates				
Auction #	Auction Date*	Auction Time*	Deposit Due Date	Deposit Due Time
1	4-Jun-2014	13:00 UTC	28-May-2014	16:00 UTC
2	9-Jul-2014	16:00 UTC	2-Jul-2014	16:00 UTC
3	6-Aug-2014	20:00 UTC	30-Jul-2014	16:00 UTC
4	17-Sep-2014	13:00 UTC	10-Sep-2014	16:00 UTC
5	22-Oct-2014	16:00 U TC	15-Oct-2014	16:00 UTC
6	19-Nov-2014	20:00 UTC	12-Nov-2014	16:00 UTC
7	17-Dec-2014	13:00 UTC	10-Dec-2014	16:00 UTC
8	21-Jan-2015	16:00 UTC	14-Jan-2015	16:00 UTC
9	25-Feb-2015	20:00 UTC	18-Feb-2015	16:00 UTC
10	25-Mar-2015	13:00 UTC	18-Mar-2015	16:00 UTC
11	29-Apr-2015	16:00 UTC	22-Apr-2015	16:00 UTC
12	27-May-2015	20:00 UTC	20-May-2015	16:00 UTC
13	29-Jul-2015	13:00 UTC	22-Jul-2015	16:00 UTC
14	16-Sep-2015	16:00 UTC	9-Sep-2015	16:00 UTC
15	14-Oct-2015	20:00 UTC	7-Oct-2015	16:00 UTC
16	18-Nov-2015	13:00 UTC	11-Nov-2015	16:00 UTC
17	20-Jan-2016	16:00 UTC	13-Jan-2016	16:00 UTC
18	25-May-2016	20:00 UTC	18-May-2016	16:00 UTC
19	27-Jul-2016	13:00 UTC	20-Jul-2016	16:00 UTC
Planned Auction Dates: Indirect Contention				
A	20-May-2015	13:00 UTC	13-May-2015	16:00 UTC
B**	27-Jan-2016	16:00 UTC	20-Jan-2016	16:00 UTC
C	27-Jul-2016	13:00 UTC	20-Jul-2016	16:00 UTC

\*Auction Date and Time refer to the Auction Commencement Date and may not reflect Auction Manager's intention to provide Early Bidding-- a time period prior to the standard 30 minutes of bidding for Round 1.

\*\*This indirect set changed to a direct set due to resolution of one of the strings contained in the set. See [Announcement](#).

### Updates to the Auction Schedule as of 27 April 2016.

This version is updated to reflect eligible contention sets. Additional Auctions may be scheduled based on eligibility.

#### Recent Announcements

[ICANN Request for Proposal: Middle East Domain Name Industry Study 2023](#)

On 27 July 2016, [Power Auctions LLC](http://www.powerauctions.com/) (<http://www.powerauctions.com/>), ICANN's authorized auction service provider, conducted a New Generic Top-Level Domain (gTLD) Program auction to resolve contention for [.WEB](https://gtldresult.icann.org/application-result/applicationstatus/contentionsetdiagram/233) and [.WEBS](https://gtldresult.icann.org/application-result/applicationstatus/contentionsetdiagram/233) (<https://gtldresult.icann.org/application-result/applicationstatus/contentionsetdiagram/233>). Auction serves as the method of last resort for determining which applicant may operate a gTLD when several entities have applied for the same or confusingly similar gTLDs. This method was defined through ICANN's bottom-up, multistakeholder process.

Eight applicants completed the requirements for participating in the .WEB/.WEBS auction. NU DOT CO LLC prevailed in the auction for the price of \$135 million to operate the .WEB gTLD, and Vistaprint Ltd prevailed with a price of \$1 for the .WEBS gTLD.

### Auction Proceeds

The proceeds from New gTLD Program auctions, which will total more than \$230 million, are being reserved. The multistakeholder community will develop proposals for how these proceeds could be distributed. A community-based drafting team is currently working on a charter for a Cross-Community Working Group that will create recommendations for Board consideration. [Learn more](https://community.icann.org/display/NGAPDT/New+gTLD+Auction+Proceeds+Drafting+Team+Home) (<https://community.icann.org/display/NGAPDT/New+gTLD+Auction+Proceeds+Drafting+Team+Home>) about this work.

"New gTLD Program auctions are the community-established, last resort method to help determine which applicant will have the opportunity to operate a particular new generic top-level domain, when multiple entities vied for the same or confusingly similar domains." said Akram Atallah, president of ICANN's Global Domains Division. "We look forward to seeing the community's recommendations for the use of these proceeds."

### Auctions and the New gTLD Applicant Guidebook

The Internet community spent nearly three years developing a playbook for rolling out new gTLDs under the New gTLD Program, known as the New gTLD Applicant Guidebook. The guidebook outlines measures for addressing a variety of circumstances that could occur throughout the gTLD application and evaluation processes, including instances where multiple applicants applied for the same or confusingly similar new gTLDs. Only one entity can operate a given new gTLD, so contention must be resolved. Applicants can resolve contention among themselves, and ICANN encourages them to do so. However, this isn't always possible. The ICANN stakeholder community helped develop methods for resolving contention, and it decided that auction should serve as the method of last resort. ICANN is responsible for implementing auctions in accordance with the rules defined in the New gTLD Applicant Guidebook.

There are two different types of contention sets: direct and indirect. Direct contention occurs when multiple applicants are vying for the same or confusingly similar gTLDs. Indirect contention exists when two or more applications are in direct contention with a third application, but not with

## About ICANN

*ICANN's mission is to help ensure a stable, secure and unified global Internet. To reach another person on the Internet, you have to type an address into your computer - a name or a number. That address has to be unique so computers know where to find each other. ICANN helps coordinate and support these unique identifiers across the world. ICANN was formed in 1998 as a not-for-profit public-benefit corporation and a community with participants from all over the world. ICANN and its community help keep the Internet secure, stable and interoperable. It also promotes competition and develops policy for the top-level of the Internet's naming system and facilitates the use of other unique Internet identifiers. For more information please visit: [www.icann.org/\(\)](http://www.icann.org/).*

## REGISTRY AGREEMENT

### ARTICLE 1 - DELEGATION AND OPERATION OF TOP-LEVEL DOMAIN; REPRESENTATIONS AND WARRANTIES

- 1.1 DOMAIN AND DESIGNATION
- 1.2 TECHNICAL FEASIBILITY OF STRING
- 1.3 REPRESENTATIONS AND WARRANTIES.

### ARTICLE 2 - COVENANTS OF REGISTRY OPERATOR

- 2.1 APPROVED SERVICES; ADDITIONAL SERVICES.
- 2.2 COMPLIANCE WITH CONSENSUS POLICIES AND TEMPORARY POLICIES.
- 2.3 DATA ESCROW.
- 2.4 MONTHLY REPORTING.
- 2.5 PUBLICATION OF REGISTRATION DATA.
- 2.6 RESERVED NAMES
- 2.7 REGISTRY INTEROPERABILITY AND CONTINUITY.
- 2.8 PROTECTION OF LEGAL RIGHTS OF THIRD PARTIES
- 2.9 REGISTRARS.
- 2.10 PRICING FOR REGISTRY SERVICES.
- 2.11 CONTRACTUAL AND OPERATIONAL COMPLIANCE AUDITS.
- 2.12 CONTINUED OPERATIONS INSTRUMENT.
- 2.13 EMERGENCY TRANSITION
- 2.14 REGISTRY CODE OF CONDUCT.
- 2.15 COOPERATION WITH ECONOMIC STUDIES.
- 2.16 REGISTRY PERFORMANCE SPECIFICATIONS.
- 2.17 ADDITIONAL PUBLIC INTEREST COMMITMENTS.
- 2.18 PERSONAL DATA
- 2.19 [NOTE: FOR COMMUNITY-BASED TLDS ONLY] OBLIGATIONS OF REGISTRY OPERATOR TO TLD COMMUNITY.

### ARTICLE 3 - COVENANTS OF ICANN

- 3.1 OPEN AND TRANSPARENT.
- 3.2 EQUITABLE TREATMENT.
- 3.3 TLD NAMESERVERS.
- 3.4 ROOT-ZONE INFORMATION PUBLICATION.
- 3.5 AUTHORITATIVE ROOT DATABASE.

### ARTICLE 4 - TERM AND TERMINATION

- 4.1 TERM.
- 4.2 RENEWAL.
- 4.3 TERMINATION BY ICANN.
- 4.4 TERMINATION BY REGISTRY OPERATOR.
- 4.5 TRANSITION OF REGISTRY UPON TERMINATION OF AGREEMENT.
- 4.6 EFFECT OF TERMINATION.

### ARTICLE 5 - DISPUTE RESOLUTION

- 5.1 MEDIATION.
- 5.2 ARBITRATION.
- 5.3 LIMITATION OF LIABILITY.
- 5.4 SPECIFIC PERFORMANCE.

**ARTICLE 6 - FEES**

- 6.1 REGISTRY-LEVEL FEES.**
- 6.2 COST RECOVERY FOR RSTEP.**
- 6.3 VARIABLE REGISTRY-LEVEL FEE.**
- 6.4 PASS THROUGH FEES.**
- 6.5 ADJUSTMENTS TO FEES.**
- 6.6 ADDITIONAL FEE ON LATE PAYMENTS.**
- 6.7 FEE REDUCTION WAIVER.**

**ARTICLE 7 - MISCELLANEOUS**

- 7.1 INDEMNIFICATION OF ICANN.**
- 7.2 INDEMNIFICATION PROCEDURES.**
- 7.3 DEFINED TERMS.**
- 7.4 NO OFFSET.**

## REGISTRY AGREEMENT

This REGISTRY AGREEMENT (this “Agreement”) is entered into as of \_\_\_\_\_ (the “Effective Date”) between Internet Corporation for Assigned Names and Numbers, a California nonprofit public benefit corporation (“ICANN”), and \_\_\_\_\_, a \_\_\_\_\_ (“Registry Operator”).

### ARTICLE 1.

#### DELEGATION AND OPERATION OF TOP-LEVEL DOMAIN; REPRESENTATIONS AND WARRANTIES

**1.1 Domain and Designation.** The Top-Level Domain to which this Agreement applies is \_\_\_\_\_ (the “TLD”). Upon the Effective Date and until the earlier of the expiration of the Term (as defined in Section 4.1) or the termination of this Agreement pursuant to Article 4, ICANN designates Registry Operator as the registry operator for the TLD, subject to the requirements and necessary approvals for delegation of the TLD and entry into the root-zone.

**1.2 Technical Feasibility of String.** While ICANN has encouraged and will continue to encourage universal acceptance of all top-level domain strings across the Internet, certain top-level domain strings may encounter difficulty in acceptance by ISPs and webhosters and/or validation by web applications. Registry Operator shall be responsible for ensuring to its satisfaction the technical feasibility of the TLD string prior to entering into this Agreement.

#### **1.3 Representations and Warranties.**

(a) Registry Operator represents and warrants to ICANN as follows:

(i) all material information provided and statements made in the registry TLD application, and statements made in writing during the negotiation of this Agreement, were true and correct in all material respects at the time made, and such information or statements continue to be true and correct in all material respects as of the Effective Date except as otherwise previously disclosed in writing by Registry Operator to ICANN;

(ii) Registry Operator is duly organized, validly existing and in good standing under the laws of the jurisdiction set forth in the preamble hereto, and Registry Operator has all requisite power and authority and has obtained all necessary approvals to enter into and duly execute and deliver this Agreement; and

(iii) Registry Operator has delivered to ICANN a duly executed instrument that secures the funds required to perform registry functions for the TLD in the event of the termination or expiration of this Agreement (the “Continued Operations Instrument”), and such instrument is a binding obligation of the parties thereto, enforceable against the parties thereto in accordance with its terms.

(b) ICANN represents and warrants to Registry Operator that ICANN is a nonprofit public benefit corporation duly organized, validly existing and in good standing under the laws of the State of California, United States of America. ICANN has all requisite power and authority and has obtained all necessary corporate approvals to enter into and duly execute and deliver this Agreement.

### ARTICLE 2.

Registry Operator covenants and agrees with ICANN as follows:

**2.1 Approved Services; Additional Services.** Registry Operator shall be entitled to provide the Registry Services described in clauses (a) and (b) of the first paragraph of Section 2.1 in the Specification 6 attached hereto (“Specification 6”) and such other Registry Services set forth on Exhibit (collectively, the “Approved Services”). If Registry Operator desires to provide any Registry Service that is not an Approved Service or is a material modification to an Approved Service (each, an “Additional Service”), Registry Operator shall submit a request for approval of such Additional Service pursuant to the Registry Services Evaluation Policy at <http://www.icann.org/en/registries/rsep/rsep.html>, as such policy may be amended from time to time in accordance with the bylaws of ICANN (as amended from time to time, the “ICANN Bylaws”) applicable to Consensus Policies (the “RSEP”). Registry Operator may offer Additional Services only with the written approval of ICANN, and, upon any such approval, such Additional Services shall be deemed Registry Services under this Agreement. In its reasonable discretion, ICANN may require an amendment to this Agreement reflecting the provision of any Additional Service which is approved pursuant to the RSEP, which amendment shall be in a form reasonably acceptable to the parties.

**2.2 Compliance with Consensus Policies and Temporary Policies.** Registry Operator shall comply with and implement all Consensus Policies and Temporary Policies found at <http://www.icann.org/general/consensus-policies.htm>, as of the Effective Date and as may in the future be developed and adopted in accordance with the ICANN Bylaws, provided such future Consensus Policies and Temporary Policies are adopted in accordance with the procedure and relate to those topics and subject to those limitations set forth in Specification 1 attached hereto (“Specification 1”).

**2.3 Data Escrow.** Registry Operator shall comply with the registry data escrow procedures set forth in Specification 2 attached hereto (“Specification 2”) within fourteen (14) calendar days after delegation.

**2.4 Monthly Reporting.** Within twenty (20) calendar days following the end of each calendar month, commencing with the first calendar month in which the TLD is delegated in the root zone, Registry Operator shall deliver to ICANN reports in the format set forth in Specification 3 attached hereto (“Specification 3”); provided, however, that if the TLD is delegated in the root zone after the fifteenth (15<sup>th</sup>) calendar day of the calendar month, Registry Operator may defer the delivery of the reports for such first calendar month and instead deliver to ICANN such month’s reports no later than the time that Registry Operator is required to deliver the reports for the immediately following calendar month. Registry Operator must include in the Per-Registrar Transactions Report any domain name created during pre-delegation testing that has not been deleted as of the time of delegation (notably but not limited to domains registered by Registrar IDs 9995 and/or 9996).

**2.5 Publication of Registration Data.** Registry Operator shall provide public access to registration data in accordance with Specification 4 attached hereto (“Specification 4”).

**2.6 Reserved Names.** Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall comply with the requirements set forth in Specification 5 attached hereto (“Specification 5”). Registry Operator may at any time establish or modify policies concerning Registry Operator’s ability to reserve (i.e., withhold from registration or allocate to Registry Operator, but not register to third parties, delegate, use, activate in the DNS or otherwise make available) or block additional character strings within the TLD at its discretion. Except as specified in Specification 5, if Registry Operator is the registrant for any domain names in the registry TLD, such registrations must be through an ICANN accredited registrar and will be considered Transactions (as defined in Section 6.1) for purposes of calculating the Registry-level transaction fee to be paid to ICANN by Registry Operator

**2.7 Registry Interoperability and Continuity.** Registry Operator shall comply with the Registry Interoperability and Continuity Specifications as set forth in Specification 6 attached hereto (“Specification 6”).

**2.8 Protection of Legal Rights of Third Parties.** Registry Operator must specify, and comply with, the processes and procedures for launch of the TLD and initial registration-related and ongoing protection of the legal rights of third parties as set forth Specification 7 attached hereto (“Specification 7”). Registry Operator may, at its election, implement additional protections of the legal rights of third parties. Any changes or modifications to the process and procedures required by Specification 7 following the Effective Date must be approved in advance by ICANN in writing. Registry Operator must comply with all remedies imposed by ICANN pursuant to Section 2 of Specification 7, subject to Registry Operator’s right to challenge such remedies as set forth in the applicable procedure described therein. Registry Operator shall take reasonable steps to investigate and respond to any reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of the TLD. In responding to such reports, Registry Operator will not be required to take any action in contravention of applicable law.

## **2.9 Registrars.**

(a) All domain name registrations in the TLD must be registered through an ICANN accredited registrar; provided, that Registry Operator need not use a registrar if it registers names in its own name in order to withhold such names from delegation or use in accordance with Section 2.6. Subject to the requirements of Specification 11, Registry Operator must provide non-discriminatory access to Registry Services to all ICANN accredited registrars that enter into and are in compliance with the registry-registrar agreement for the TLD; provided that Registry Operator may establish non-discriminatory criteria for qualification to register names in the TLD that are reasonably related to the proper functioning of the TLD. Registry Operator must use a uniform non-discriminatory agreement with all registrars authorized to register names in the TLD (the “Registry-Registrar Agreement”). Registry Operator may amend the Registry-Registrar Agreement from time to time; provided, however, that any material revisions thereto must be approved by ICANN before any such revisions become effective and binding on any registrar. Registry Operator will provide ICANN and all registrars authorized to register names in the TLD at least fifteen (15) calendar days written notice of any revision to the Registry-Registrar Agreement before any such revisions become effective and binding on any registrar. During such period, ICANN will determine whether such proposed revisions are immaterial, potentially material or material in nature. If ICANN has not provided Registry Operator with notice of its determination within such fifteen (15) calendar-day period, ICANN shall be deemed to have determined that such proposed revisions are immaterial in nature. If ICANN determines, or is deemed to have determined under this Section 2.9(a), that such revisions are immaterial, then Registry Operator may adopt and implement such revisions. If ICANN determines such revisions are either material or potentially material, ICANN will thereafter follow its procedure regarding review and approval of changes to Registry-Registrar Agreements at <<http://www.icann.org/en/resources/registries/rra-amendment-procedure>>, and such revisions may not be adopted and implemented until approved by ICANN. Notwithstanding the foregoing provisions of this Section 2.9(a), any change to the Registry-Registrar Agreement that relates exclusively to the fee charged by Registry Operator to register domain names in the TLD will not be subject to the notice and approval process specified in this Section 2.9(a), but will be subject to the requirements in Section 2.10 below.

(b) If Registry Operator (i) becomes an Affiliate or reseller of an ICANN accredited registrar, or (ii) subcontracts the provision of any Registry Services to an ICANN accredited registrar, registrar reseller or any of their respective Affiliates, then, in either such case of (i) or (ii) above, Registry Operator will give ICANN prompt notice of the contract, transaction or other arrangement that resulted

copies of any contract relating thereto; provided, that ICANN will treat such contract or related documents that are appropriately marked as confidential (as required by Section 7.15) as Confidential Information of Registry Operator in accordance with Section 7.15 (except that ICANN may disclose such contract and related documents to relevant competition authorities). ICANN reserves the right, but not the obligation, to refer any such contract, related documents, transaction or other arrangement to relevant competition authorities in the event that ICANN determines that such contract, related documents, transaction or other arrangement might raise significant competition issues under applicable law. If feasible and appropriate under the circumstances, ICANN will give Registry Operator advance notice prior to making any such referral to a competition authority.

(c) For the purposes of this Agreement: (i) "Affiliate" means a person or entity that, directly or indirectly, through one or more intermediaries, or in combination with one or more other persons or entities, controls, is controlled by, or is under common control with, the person or entity specified, and (ii) "control" (including the terms "controlled by" and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as an employee or a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

## 2.10 Pricing for Registry Services.

(a) With respect to initial domain name registrations, Registry Operator shall provide each ICANN accredited registrar that has executed the Registry-Registrar Agreement for the TLD advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying or other programs which had the effect of reducing the price charged to registrars, unless such refunds, rebates, discounts, product tying or other programs are of a limited duration that is clearly and conspicuously disclosed to the registrar when offered) of no less than thirty (30) calendar days. Registry Operator shall offer registrars the option to obtain initial domain name registrations for periods of one (1) to ten (10) years at the discretion of the registrar, but no greater than ten (10) years.

(b) With respect to renewal of domain name registrations, Registry Operator shall provide each ICANN accredited registrar that has executed the Registry-Registrar Agreement for the TLD advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying, Qualified Marketing Programs or other programs which had the effect of reducing the price charged to registrars) of no less than one hundred eighty (180) calendar days. Notwithstanding the foregoing sentence, with respect to renewal of domain name registrations: (i) Registry Operator need only provide thirty (30) calendar days notice of any price increase if the resulting price is less than or equal to (A) for the period beginning on the Effective Date and ending twelve (12) months following the Effective Date, the initial price charged for registrations in the TLD, or (B) for subsequent periods, a price for which Registry Operator provided a notice pursuant to the first sentence of this Section 2.10(b) within the twelve (12) month period preceding the effective date of the proposed price increase; and (ii) Registry Operator need not provide notice of any price increase for the imposition of the Variable Registry-Level Fee set forth in Section 6.3. Registry Operator shall offer registrars the option to obtain domain name registration renewals at the current price (i.e., the price in place prior to any noticed increase) for periods of one (1) to ten (10) years at the discretion of the registrar, but no greater than ten (10) years.

(c) In addition, Registry Operator must have uniform pricing for renewals of domain name registrations ("Renewal Pricing"). For the purposes of determining Renewal Pricing, the price for each domain registration renewal must be identical to the price of all other domain name registration renewals for the same TLD and registration period.

application of any refunds, rebates, discounts, product tying or other programs in place at the time of renewal. The foregoing requirements of this Section 2.10(c) shall not apply for (i) purposes of determining Renewal Pricing if the registrar has provided Registry Operator with documentation that demonstrates that the applicable registrant expressly agreed in its registration agreement with registrar to higher Renewal Pricing at the time of the initial registration of the domain name following clear and conspicuous disclosure of such Renewal Pricing to such registrant, and (ii) discounted Renewal Pricing pursuant to a Qualified Marketing Program (as defined below). The parties acknowledge that the purpose of this Section 2.10(c) is to prohibit abusive and/or discriminatory Renewal Pricing practices imposed by Registry Operator without the written consent of the applicable registrant at the time of the initial registration of the domain and this Section 2.10(c) will be interpreted broadly to prohibit such practices. For purposes of this Section 2.10(c), a "Qualified Marketing Program" is a marketing program pursuant to which Registry Operator offers discounted Renewal Pricing, provided that each of the following criteria is satisfied: (i) the program and related discounts are offered for a period of time not to exceed one hundred eighty (180) calendar days (with consecutive substantially similar programs aggregated for purposes of determining the number of calendar days of the program), (ii) all ICANN accredited registrars are provided the same opportunity to qualify for such discounted Renewal Pricing and (iii) the intent or effect of the program is not to exclude any particular class(es) of registrations (e.g. registrations held by large corporations) or increase the renewal price of any particular class(es) of registrations. Nothing in this Section 2.10(c) shall limit Registry Operator's obligations pursuant to Section 2.10(b).

(d) Registry Operator shall provide public query-based DNS lookup service for the TLD (that is, operate the Registry TLD zone servers) at its sole expense.

## **2.11 Contractual and Operational Compliance Audits.**

(a) ICANN may from time to time (not to exceed twice per calendar year) conduct, or engage a third party to conduct, contractual compliance audits to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement. Such audits shall be tailored to achieve the purpose of assessing compliance, and ICANN will (a) give reasonable advance notice of any such audit, which notice shall specify in reasonable detail the categories of documents, data and other information requested by ICANN, and (b) use commercially reasonable efforts to conduct such audit during regular business hours and in such a manner as to not unreasonably disrupt the operations of Registry Operator. As part of such audit and upon request by ICANN, Registry Operator shall timely provide all responsive documents, data and any other information reasonably necessary to demonstrate Registry Operator's compliance with this Agreement. Upon no less than ten (10) calendar days notice (unless otherwise agreed to by Registry Operator), ICANN may, as part of any contractual compliance audit, conduct site visits during regular business hours to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement. ICANN will treat any information obtained in connection with such audits that is appropriately marked as confidential (as required by Section 7.15) as Confidential Information of Registry Operator in accordance with Section 7.15.

(b) Any audit conducted pursuant to Section 2.11(a) will be at ICANN's expense, unless (i) Registry Operator (A) controls, is controlled by, is under common control or is otherwise Affiliated with, any ICANN accredited registrar or registrar reseller or any of their respective Affiliates, or (B) has subcontracted the provision of Registry Services to an ICANN accredited registrar or registrar reseller or any of their respective Affiliates, and, in either case of (A) or (B) above, the audit relates to Registry Operator's compliance with Section 2.14, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the portion of the audit related to Registry Operator's

Operator hereunder in excess of 5% in a given quarter to ICANN's detriment, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the entirety of such audit. In either such case of (i) or (ii) above, such reimbursement will be paid together with the next Registry- Level Fee payment due following the date of transmittal of the cost statement for such audit.

(c) Notwithstanding Section 2.11(a), if Registry Operator is found not to be in compliance with its representations and warranties contained in Article 1 of this Agreement or its covenants contained in Article 2 of this Agreement in two consecutive audits conducted pursuant to this Section 2.11, ICANN may increase the number of such audits to one per calendar quarter.

(d) Registry Operator will give ICANN immediate notice of Registry Operator's knowledge of the commencement of any of the proceedings referenced in Section 4.3(d) or the occurrence of any of the matters specified in Section 4.3(f).

**2.12 Continued Operations Instrument.** Registry Operator shall comply with the terms and conditions relating to the Continued Operations Instrument set forth in Specification 8 attached hereto ("Specification 8").

**2.13 Emergency Transition.** Registry Operator agrees that, in the event that any of the emergency thresholds for registry functions set forth in Section 6 of Specification 10 is reached, ICANN may designate an emergency interim registry operator of the registry for the TLD (an "Emergency Operator") in accordance with ICANN's registry transition process (available at <http://www.icann.org/en/resources/registries/transition-processes>) (as the same may be amended from time to time, the "Registry Transition Process") until such time as Registry Operator has demonstrated to ICANN's reasonable satisfaction that it can resume operation of the registry for the TLD without the reoccurrence of such failure. Following such demonstration, Registry Operator may transition back into operation of the registry for the TLD pursuant to the procedures set out in the Registry Transition Process, provided that Registry Operator pays all reasonable costs incurred (i) by ICANN as a result of the designation of the Emergency Operator and (ii) by the Emergency Operator in connection with the operation of the registry for the TLD, which costs shall be documented in reasonable detail in records that shall be made available to Registry Operator. In the event ICANN designates an Emergency Operator pursuant to this Section 2.13 and the Registry Transition Process, Registry Operator shall provide ICANN or any such Emergency Operator with all data (including the data escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such Emergency Operator. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event that an Emergency Operator is designated pursuant to this Section 2.13. In addition, in the event of such failure, ICANN shall retain and may enforce its rights under the Continued Operations Instrument.

**2.14 Registry Code of Conduct.** In connection with the operation of the registry for the TLD, Registry Operator shall comply with the Registry Code of Conduct as set forth in Specification 9 attached hereto ("Specification 9").

**2.15 Cooperation with Economic Studies.** If ICANN initiates or commissions an economic study on the impact or functioning of new generic top-level domains on the Internet, the DNS or related matters, Registry Operator shall reasonably cooperate with such study, including by delivering to ICANN or its designee conducting such study all data related to the operation of the TLD reasonably necessary for the purposes of such study requested by ICANN or its designee, provided, that Registry Operator may withhold (a) any internal analyses or evaluations prepared by Registry Operator with respect to such data and (b) any data to the extent that the delivery of such data would be in violation of applicable

law. Any data delivered to ICANN or its designee pursuant to this Section 2.15 that is appropriately marked as confidential (as required by Section 7.15) shall be treated as Confidential Information of Registry Operator in accordance with Section 7.15, provided that, if ICANN aggregates and makes anonymous such data, ICANN or its designee may disclose such data to any third party. Following completion of an economic study for which Registry Operator has provided data, ICANN will destroy all data provided by Registry Operator that has not been aggregated and made anonymous.

**2.16 Registry Performance Specifications.** Registry Performance Specifications for operation of the TLD will be as set forth in Specification 10 attached hereto (“Specification 10”). Registry Operator shall comply with such Performance Specifications and, for a period of at least one (1) year, shall keep technical and operational records sufficient to evidence compliance with such specifications for each calendar year during the Term.

**2.17 Additional Public Interest Commitments.** Registry Operator shall comply with the public interest commitments set forth in Specification 11 attached hereto (“Specification 11”).

**2.18 Personal Data.** Registry Operator shall (i) notify each ICANN-accredited registrar that is a party to the Registry-Registrar Agreement for the TLD of the purposes for which data about any identified or identifiable natural person (“Personal Data”) submitted to Registry Operator by such registrar is collected and used under this Agreement or otherwise and the intended recipients (or categories of recipients) of such Personal Data, and (ii) require such registrar to obtain the consent of each registrant in the TLD for such collection and use of Personal Data. Registry Operator shall take reasonable steps to protect Personal Data collected from such registrar from loss, misuse, unauthorized disclosure, alteration or destruction. Registry Operator shall not use or authorize the use of Personal Data in a way that is incompatible with the notice provided to registrars.

**2.19 [Note: For Community-Based TLDs Only] Obligations of Registry Operator to TLD Community.** Registry Operator shall establish registration policies in conformity with the application submitted with respect to the TLD for: (i) naming conventions within the TLD, (ii) requirements for registration by members of the TLD community, and (iii) use of registered domain names in conformity with the stated purpose of the community-based TLD. Registry Operator shall operate the TLD in a manner that allows the TLD community to discuss and participate in the development and modification of policies and practices for the TLD. Registry Operator shall establish procedures for the enforcement of registration policies for the TLD, and resolution of disputes concerning compliance with TLD registration policies, and shall enforce such registration policies. Registry Operator agrees to implement and be bound by the Registry Restrictions Dispute Resolution Procedure as set forth at <http://www.icann.org/en/resources/registries/rrdrp> with respect to disputes arising pursuant to this Section 2.19. Registry Operator shall implement and comply with the community registration policies set forth on Specification 12 attached hereto.]

### ARTICLE 3.

#### COVENANTS OF ICANN

ICANN covenants and agrees with Registry Operator as follows:

**3.1 Open and Transparent.** Consistent with ICANN’s expressed mission and core values, ICANN shall operate in an open and transparent manner.

**3.2 Equitable Treatment.** ICANN shall not apply standards, policies, procedures or practices arbitrarily, unjustifiably, or inequitably and shall not single out Registry Operator for disparate treatment unless justified by substantial and reasonable cause.

**3.3 TLD Nameservers.** ICANN will use commercially reasonable efforts to ensure that any changes to the TLD nameserver designations submitted to ICANN by Registry Operator (in a format and with required technical elements specified by ICANN at <http://www.iana.org/domains/root/> will be implemented by ICANN within seven (7) calendar days or as promptly as feasible following technical verifications.

**3.4 Root-zone Information Publication.** ICANN's publication of root-zone contact information for the TLD will include Registry Operator and its administrative and technical contacts. Any request to modify the contact information for the Registry Operator must be made in the format specified from time to time by ICANN at <http://www.iana.org/domains/root/>.

**3.5 Authoritative Root Database.** To the extent that ICANN is authorized to set policy with regard to an authoritative root server system (the "Authoritative Root Server System"), ICANN shall use commercially reasonable efforts to (a) ensure that the authoritative root will point to the top-level domain nameservers designated by Registry Operator for the TLD, (b) maintain a stable, secure, and authoritative publicly available database of relevant information about the TLD, in accordance with ICANN publicly available policies and procedures, and (c) coordinate the Authoritative Root Server System so that it is operated and maintained in a stable and secure manner; provided, that ICANN shall not be in breach of this Agreement and ICANN shall have no liability in the event that any third party (including any governmental entity or internet service provider) blocks or restricts access to the TLD in any jurisdiction.

## ARTICLE 4.

### TERM AND TERMINATION

**4.1 Term.** The term of this Agreement will be ten (10) years from the Effective Date (as such term may be extended pursuant to Section 4.2, the "Term").

**4.2 Renewal.**

(a) This Agreement will be renewed for successive periods of ten (10) years upon the expiration of the initial Term set forth in Section 4.1 and each successive Term, unless:

(i) Following notice by ICANN to Registry Operator of a fundamental and material breach of Registry Operator's covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement, which notice shall include with specificity the details of the alleged breach, and such breach has not been cured within thirty (30) calendar days of such notice, (A) an arbitrator or court of competent jurisdiction has finally determined that Registry Operator has been in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (B) Registry Operator has failed to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court of competent jurisdiction; or

(ii) During the then current Term, Registry Operator shall have been found by an arbitrator (pursuant to Section 5.2 of this Agreement) or a court of competent jurisdiction on at least three (3) separate occasions to have been in (A) fundamental and material breach (whether or not cured) of Registry Operator's covenants set forth in Article 2 or (B) breach of its payment obligations under Article 6 of this Agreement.

(b) Upon the occurrence of the events set forth in Section 4.2(a) (i) or (ii), the

### 4.3 Termination by ICANN.

(a) ICANN may, upon notice to Registry Operator, terminate this Agreement if: (i) Registry Operator fails to cure (A) any fundamental and material breach of Registry Operator's representations and warranties set forth in Article 1 or covenants set forth in Article 2, or (B) any breach of Registry Operator's payment obligations set forth in Article 6 of this Agreement, each within thirty (30) calendar days after ICANN gives Registry Operator notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court of competent jurisdiction has finally determined that Registry Operator is in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (iii) Registry Operator fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court of competent jurisdiction.

(b) ICANN may, upon notice to Registry Operator, terminate this Agreement if Registry Operator fails to complete all testing and procedures (identified by ICANN in writing to Registry Operator prior to the date hereof) for delegation of the TLD into the root zone within twelve (12) months of the Effective Date. Registry Operator may request an extension for up to additional twelve (12) months for delegation if it can demonstrate, to ICANN's reasonable satisfaction, that Registry Operator is working diligently and in good faith toward successfully completing the steps necessary for delegation of the TLD. Any fees paid by Registry Operator to ICANN prior to such termination date shall be retained by ICANN in full.

(c) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator fails to cure a material breach of Registry Operator's obligations set forth in Section 2.12 of this Agreement within thirty (30) calendar days of delivery of notice of such breach by ICANN, or if the Continued Operations Instrument is not in effect for greater than sixty (60) consecutive calendar days at any time following the Effective Date, (ii) an arbitrator or court of competent jurisdiction has finally determined that Registry Operator is in material breach of such covenant, and (iii) Registry Operator fails to cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court of competent jurisdiction.

(d) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator makes an assignment for the benefit of creditors or similar act, (ii) attachment, garnishment or similar proceedings are commenced against Registry Operator, which proceedings are a material threat to Registry Operator's ability to operate the registry for the TLD, and are not dismissed within sixty (60) calendar days of their commencement, (iii) a trustee, receiver, liquidator or equivalent appointed in place of Registry Operator or maintains control over any of Registry Operator's property, (iv) execution is levied upon any material property of Registry Operator that, if levied, would reasonably be expected to materially and adversely affect Registry Operator's ability to operate the registry for the TLD, (v) proceedings are instituted by or against Registry Operator under any bankruptcy, insolvency, reorganization or other laws relating to the relief of debtors and such proceedings are not dismissed within sixty (60) calendar days of their commencement (if such proceedings are instituted by Registry Operator or its Affiliates) or one hundred and eighty (180) calendar days of their commencement (if such proceedings are instituted by a third party against Registry Operator), or (vi) Registry Operator files for protection under the United States Bankruptcy Code, 11 U.S.C. Section 101, et seq., or a foreign equivalent or liquidates, dissolves or otherwise discontinues its operations or the operation of the TLD.

(e) ICANN may, upon thirty (30) calendar days' notice to Registry Operator, terminate this Agreement pursuant to a determination by any PDDRP panel or RRDRP panel under Section 2 of Specification 7 or a determination by any PICDRP panel under Section 2, Section 3 or any other applicable Section of Specification 11, subject to Registry Operator's right to challenge such termination

(f) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator knowingly employs any officer who is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such officer is not terminated within thirty (30) calendar days of Registry Operator's knowledge of the foregoing, or (ii) any member of Registry Operator's board of directors or similar governing body is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such member is not removed from Registry Operator's board of directors or similar governing body within thirty (30) calendar days of Registry Operator's knowledge of the foregoing.

(g) ICANN may, upon thirty (30) calendar days' notice to Registry Operator, terminate this Agreement as specified in Section 7.5.

(h) *[Applicable to intergovernmental organizations or governmental entities only.]* ICANN may terminate this Agreement pursuant to Section 7.16.

#### **4.4 Termination by Registry Operator.**

(a) Registry Operator may terminate this Agreement upon notice to ICANN if (i) ICANN fails to cure any fundamental and material breach of ICANN's covenants set forth in Article 3, within thirty (30) calendar days after Registry Operator gives ICANN notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court of competent jurisdiction has finally determined that ICANN is in fundamental and material breach of such covenants, and (iii) ICANN fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court of competent jurisdiction.

(b) Registry Operator may terminate this Agreement for any reason upon one hundred eighty (180) calendar day advance notice to ICANN.

**4.5 Transition of Registry upon Termination of Agreement.** Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, Registry Operator shall provide ICANN or any successor registry operator that may be designated by ICANN for the TLD in accordance with this Section 4.5 with all data (including the data escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process; provided, however, that (i) ICANN will take into consideration any intellectual property rights of Registry Operator (as communicated to ICANN by Registry Operator) in determining whether to transition operation of the TLD to a successor registry operator and (ii) if Registry Operator demonstrates to ICANN's reasonable satisfaction that (A) all domain name registrations in the TLD are registered to, and maintained by, Registry Operator or its Affiliates for their exclusive use, (B) Registry Operator does not sell, distribute or transfer control or use of any registrations in the TLD to any third party that is not an Affiliate of Registry Operator, and (C) transitioning operation of the TLD is not necessary to protect the public interest, then ICANN may not transition operation of the TLD to a successor registry operator upon the expiration or termination of this Agreement without the consent of Registry Operator (which shall not be unreasonably withheld, conditioned or delayed). For the avoidance of doubt, the foregoing sentence shall not prohibit ICANN

from delegating the TLD pursuant to a future application process for the delegation of top-level domain subject to any processes and objection procedures instituted by ICANN in connection with such application process intended to protect the rights of third parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument for the maintenance and operation of the TLD, regardless of the reason for termination or expiration of this Agreement.

*[Alternative Section 4.5 Transition of Registry upon Termination of Agreement text for intergovernmental organizations or governmental entities or other special circumstances:*

**“Transition of Registry upon Termination of Agreement.** Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, in connection with ICANN’s designation of a successor registry operator for the TLD, Registry Operator and ICANN agree to consult each other and work cooperatively to facilitate and implement the transition of the TLD in accordance with this Section 4.5. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process. In the event ICANN determines to transition operation of the TLD to a successor registry operator, upon Registry Operator’s consent (which shall not be unreasonably withheld, conditioned or delayed), Registry Operator shall provide ICANN or such successor registry operator for the TLD with any data regarding operations of the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator in addition to data escrowed in accordance with Section 2.3 hereof. In the event that Registry Operator does not consent to provide such data, any registry data related to the TLD shall be returned to Registry Operator, unless otherwise agreed upon by the parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument, regardless of the reason for termination or expiration of this Agreement.”]

**4.6 Effect of Termination.** Upon any expiration of the Term or termination of this Agreement the obligations and rights of the parties hereto shall cease, provided that such expiration or termination of this Agreement shall not relieve the parties of any obligation or breach of this Agreement accruing prior to such expiration or termination, including, without limitation, all accrued payment obligations arising under Article 6. In addition, Article 5, Article 7, Section 2.12, Section 4.5, and this Section 4.6 shall survive the expiration or termination of this Agreement. For the avoidance of doubt, the rights of Registry Operator to operate the registry for the TLD shall immediately cease upon any expiration of the Term or termination of this Agreement.

## ARTICLE 5.

### DISPUTE RESOLUTION

**5.1 Mediation.** In the event of any dispute arising under or in connection with this Agreement before either party may initiate arbitration pursuant to Section 5.2 below, ICANN and Registry Operator must attempt to resolve the dispute through mediation in accordance with the following terms and conditions:

a mediator within fifteen (15) calendar days of delivery of written notice pursuant to this Section 5.1, the parties will promptly select a mutually acceptable mediation provider entity, which entity shall, as soon as practicable following such entity's selection, designate a mediator, who is a licensed attorney with general knowledge of contract law, has no ongoing business relationship with either party and, to the extent necessary to mediate the particular dispute, general knowledge of the domain name system. Any mediator must confirm in writing that he or she is not, and will not become during the term of the mediation, an employee, partner, executive officer, director, or security holder of ICANN or Registry Operator. If such confirmation is not provided by the appointed mediator, then a replacement mediator shall be appointed pursuant to this Section 5.1(a).

(b) The mediator shall conduct the mediation in accordance with the rules and procedures that he or she determines following consultation with the parties. The parties shall discuss the dispute in good faith and attempt, with the mediator's assistance, to reach an amicable resolution of the dispute. The mediation shall be treated as a settlement discussion and shall therefore be confidential and may not be used against either party in any later proceeding relating to the dispute, including any arbitration pursuant to Section 5.2. The mediator may not testify for either party in any later proceeding relating to the dispute.

(c) Each party shall bear its own costs in the mediation. The parties shall share equally the fees and expenses of the mediator. Each party shall treat information received from the other party pursuant to the mediation that is appropriately marked as confidential (as required by Section 7.15) as Confidential Information of such other party in accordance with Section 7.15.

(d) If the parties have engaged in good faith participation in the mediation but have not resolved the dispute for any reason, either party or the mediator may terminate the mediation at any time and the dispute can then proceed to arbitration pursuant to Section 5.2 below. If the parties have not resolved the dispute for any reason by the date that is ninety (90) calendar days following the date of the notice delivered pursuant to Section 5.1(a), the mediation shall automatically terminate (unless extended by agreement of the parties) and the dispute can then proceed to arbitration pursuant to Section 5.2 below.

**5.2 Arbitration.** Disputes arising under or in connection with this Agreement that are not resolved pursuant to Section 5.1, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce (the "ICC"). The arbitration will be conducted in the English language and will occur in Los Angeles County, California. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, (ii) the parties agree in writing to a greater number of arbitrators, or (iii) the dispute arises under Section 7.6 or 7.7. In the case of clauses (i), (ii) or (iii) in the preceding sentence, the arbitration will be in front of three arbitrators with each party nominating one arbitrator for confirmation by the ICC and the two selected arbitrators nominating the third arbitrator for confirmation by the ICC. For an arbitration in front of a sole arbitrator, Registry Operator and ICANN may, by mutual agreement, nominate the sole arbitrator for confirmation by the ICC. If the parties fail to nominate a sole arbitrator or, in the case of an arbitration in front of three arbitrators, either party fails to nominate an arbitrator, in each case within thirty (30) calendar days from the date when a party's request for arbitration has been received by the other party, or within such additional time as may be allowed by the Secretariat of the Court of the ICC, the arbitrator(s) shall be appointed by the ICC. If any nominated arbitrator is not confirmed by the ICC, the party or persons that appointed such arbitrator shall promptly nominate a replacement arbitrator for confirmation by the ICC. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1)

venue for such litigation will be in a court located in Geneva, Switzerland, unless another location is mutually agreed upon by Registry Operator and ICANN; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction.”]

**5.3 Limitation of Liability.** ICANN’s aggregate monetary liability for violations of this Agreement will not exceed an amount equal to the Registry-Level Fees paid by Registry Operator to ICANN within the preceding twelve-month period pursuant to this Agreement (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any). Registry Operator’s aggregate monetary liability to ICANN for breaches of this Agreement will be limited to an amount equal to the fees paid to ICANN during the preceding twelve-month period (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any), and punitive and exemplary damages, if any, awarded in accordance with Section 5.2, except with respect to Registry Operator’s indemnification obligations pursuant to Section 7.1 and Section 7.2. In no event shall either party be liable for special, punitive, exemplary or consequential damages arising out of or in connection with this Agreement or the performance or nonperformance of obligations undertaken in this Agreement, except as provided in Section 5.2. Except as otherwise provided in this Agreement, neither party makes any warranty, express or implied, with respect to the services rendered by itself, its servants or agents, or the results obtained from their work, including, without limitation, any implied warranty of merchantability, non-infringement or fitness for a particular purpose.

**5.4 Specific Performance.** Registry Operator and ICANN agree that irreparable damage could occur if any of the provisions of this Agreement was not performed in accordance with its specific terms. Accordingly, the parties agree that they each shall be entitled to seek from the arbitrator or court of competent jurisdiction specific performance of the terms of this Agreement (in addition to any other remedy to which each party is entitled).

## ARTICLE 6.

### FEES

#### 6.1 Registry-Level Fees.

(a) Registry Operator shall pay ICANN a registry-level fee equal to (i) the registry fixed fee of US\$6,250 per calendar quarter and (ii) the registry-level transaction fee (collectively, the “Registry Level Fees”). The registry-level transaction fee will be equal to the number of annual increments of an initial or renewal domain name registration (at one or more levels, and including renewals associated with transfers from one ICANN-accredited registrar to another, each a “Transaction”), during the applicable calendar quarter multiplied by US\$0.25; provided, however that the registry-level transaction fee shall not apply until and unless more than 50,000 Transactions have occurred in the TLD during any calendar quarter or any consecutive four calendar quarter period in the aggregate (the “Transaction Threshold”) and shall apply to each Transaction that occurred during each quarter in which the Transaction Threshold has been met, but shall not apply to each quarter in which the Transaction Threshold has not been met. Registry Operator’s obligation to pay the quarterly registry-level fixed fee will begin on the date on which the TLD is delegated in the DNS to Registry Operator. The first quarterly payment of the registry-level fixed fee will be prorated based on the number of calendar days between the delegation date and the end of the calendar quarter in which the delegation date falls.

(b) Subject to Section 6.1(a), Registry Operator shall pay the Registry-Level Fees on a quarterly basis to an account designated by ICANN within thirty (30) calendar days following the date of the invoice provided by ICANN.

Panel (“RSTEP”) pursuant to that process at <http://www.icann.org/en/registries/rsep/>. In the event that such requests are referred to RSTEP, Registry Operator shall remit to ICANN the invoiced cost of the RSTEP review within fourteen (14) calendar days of receipt of a copy of the RSTEP invoice from ICANN, unless ICANN determines, in its sole and absolute discretion, to pay all or any portion of the invoiced cost of such RSTEP review.

### 6.3 Variable Registry-Level Fee.

(a) If the ICANN accredited registrars (accounting, in the aggregate, for payment of two thirds of all registrar-level fees (or such portion of ICANN accredited registrars necessary to approve variable accreditation fees under the then-current registrar accreditation agreement), do not approve, pursuant to the terms of their registrar accreditation agreements with ICANN, the variable accreditation fees established by the ICANN Board of Directors for any ICANN fiscal year, upon delivery of notice from ICANN, Registry Operator shall pay to ICANN a variable registry-level fee, which shall be paid on a fiscal quarter basis, and shall accrue as of the beginning of the first fiscal quarter of such ICANN fiscal year (the “Variable Registry-Level Fee”). The fee will be calculated and invoiced by ICANN on a quarterly basis, and shall be paid by Registry Operator within sixty (60) calendar days with respect to the first quarter of such ICANN fiscal year and within twenty (20) calendar days with respect to each remaining quarter of such ICANN fiscal year, of receipt of the invoiced amount by ICANN. The Registry Operator may invoice and collect the Variable Registry-Level Fees from the registrars that are party to a Registry-Registrar Agreement with Registry Operator (which agreement may specifically provide for the reimbursement of Variable Registry-Level Fees paid by Registry Operator pursuant to this Section 6.3); provided, that the fees shall be invoiced to all ICANN accredited registrars if invoiced to any. The Variable Registry-Level Fee, if collectible by ICANN, shall be an obligation of Registry Operator and shall be due and payable as provided in this Section 6.3 irrespective of Registry Operator’s ability to seek and obtain reimbursement of such fee from registrars. In the event ICANN later collects variable accreditation fees for which Registry Operator has paid ICANN a Variable Registry-Level Fee, ICANN shall reimburse the Registry Operator an appropriate amount of the Variable Registry-Level Fee, as reasonably determined by ICANN. If the ICANN accredited registrars (as a group) do approve, pursuant to the terms of their registrar accreditation agreements with ICANN, the variable accreditation fees established by the ICANN Board of Directors for a fiscal year, ICANN shall not be entitled to a Variable-Level Fee hereunder for such fiscal year, irrespective of whether the ICANN accredited registrars comply with their payment obligations to ICANN during such fiscal year.

(b) The amount of the Variable Registry-Level Fee will be specified for each registrar, and may include both a per-registrar component and a transactional component. The per-registrar component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year. The transactional component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year but shall not exceed US\$0.25 per domain name registration (including renewals associated with transfers from one ICANN accredited registrar to another) per year.

**6.4 Pass Through Fees.** Registry Operator shall pay to ICANN (i) a one-time fee equal to US\$5,000 for access to and use of the Trademark Clearinghouse as described in Specification 7 (the “RPM Access Fee”) and (ii) US\$0.25 per Sunrise Registration and Claims Registration (as such terms are used in Trademark Clearinghouse RPMs incorporated herein pursuant to Specification 7) (the “RPM Registration Fee”). The RPM Access Fee will be invoiced as of the Effective Date of this Agreement, and Registry Operator shall pay such fee to an account specified by ICANN within thirty (30) calendar days following the date of the invoice. ICANN will invoice Registry Operator quarterly for the RPM Registration Fee, which shall be due in accordance with the invoicing and payment procedure specified

**6.5 Adjustments to Fees.** Notwithstanding any of the fee limitations set forth in this Article 6, commencing upon the expiration of the first year of this Agreement, and upon the expiration of each year thereafter during the Term, the then-current fees set forth in Section 6.1 and Section 6.3 may be adjusted, at ICANN's discretion, by a percentage equal to the percentage change, if any, in (i) the Consumer Price Index for All Urban Consumers, U.S. City Average (1982-1984 = 100) published by the United States Department of Labor, Bureau of Labor Statistics, or any successor index (the "CPI") for the month which is one (1) month prior to the commencement of the applicable year, over (ii) the CPI published for the month which is one (1) month prior to the commencement of the immediately prior year. In the event of any such increase, ICANN shall provide notice to Registry Operator specifying the amount of such adjustment. Any fee adjustment under this Section 6.5 shall be effective as of the first day of the first calendar quarter following at least thirty (30) days after ICANN's delivery to Registry Operator of such fee adjustment notice.

**6.6 Additional Fee on Late Payments.** For any payments thirty (30) calendar days or more overdue under this Agreement, Registry Operator shall pay an additional fee on late payments at the rate of 1.5% per month or, if less, the maximum rate permitted by applicable law.

**6.7 Fee Reduction Waiver.** In ICANN's sole discretion, ICANN may reduce the amount of registry fees payable hereunder by Registry Operator for any period of time ("Fee Reduction Waiver"). Any such Fee Reduction Waiver may, as determined by ICANN in its sole discretion, be (a) limited in duration and (b) conditioned upon Registry Operator's acceptance of the terms and conditions set forth in such waiver. A Fee Reduction Waiver shall not be effective unless executed in writing by ICANN as contemplated by Section 7.6(i). ICANN will provide notice of any Fee Reduction Waiver to Registry Operator in accordance with Section 7.9.

## ARTICLE 7.

### MISCELLANEOUS

#### 7.1 Indemnification of ICANN.

(a) Registry Operator shall indemnify and defend ICANN and its directors, officers, employees, and agents (collectively, "Indemnitees") from and against any and all third-party claims, damages, liabilities, costs, and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator's operation of the registry for the TLD or Registry Operator's provision of Registry Services, provided that Registry Operator shall not be obligated to indemnify or defend any Indemnitee to the extent the claim, damage, liability, cost or expense arose: (i) due to the actions or omissions of ICANN, its subcontractors, panelists or evaluators specifically related to and occurring during the registry TLD application process (other than actions or omissions requested by or for the benefit of Registry Operator), or (ii) due to a breach by ICANN of any obligation contained in this Agreement or any willful misconduct by ICANN. This Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties' respective obligations hereunder. Further, this Section shall not apply to any request for attorney's fees in connection with any litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court of competent jurisdiction or arbitrator.

[Alternative **Section 7.1(a)** text for intergovernmental organizations or governmental entities:

amended and restated in their entirety as set forth in such Consensus Policy, Security and Stability shall be defined as follows:

(a) For the purposes of this Agreement, an effect on “Security” shall mean (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

(b) For purposes of this Agreement, an effect on “Stability” shall refer to (1) lack of compliance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice Requests for Comments (“RFCs”) sponsored by the Internet Engineering Task Force; or (2) the creation of a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems operating in accordance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice RFCs, and relying on Registry Operator’s delegated information or provisioning of services.

**7.4 No Offset.** All payments due under this Agreement will be made in a timely manner throughout the Term and notwithstanding the pendency of any dispute (monetary or otherwise) between Registry Operator and ICANN.

**7.5 Change of Control; Assignment and Subcontracting.** Except as set forth in this Section 7.5, neither party may assign any of its rights and obligations under this Agreement without the prior written approval of the other party, which approval will not be unreasonably withheld. For purposes of this Section 7.5, a direct or indirect change of control of Registry Operator or any subcontracting arrangement that relates to any Critical Function (as identified in Section 6 of Specification 10) for the TLD (a “Material Subcontracting Arrangement”) shall be deemed an assignment.

(a) Registry Operator must provide no less than thirty (30) calendar days advance notice to ICANN of any assignment or Material Subcontracting Arrangement, and any agreement to assign or subcontract any portion of the operations of the TLD (whether or not a Material Subcontracting Arrangement) must mandate compliance with all covenants, obligations and agreements by Registry Operator hereunder, and Registry Operator shall continue to be bound by such covenants, obligations and agreements. Registry Operator must also provide no less than thirty (30) calendar days advance notice to ICANN prior to the consummation of any transaction anticipated to result in a direct or indirect change of control of Registry Operator.

(b) Within thirty (30) calendar days of either such notification pursuant to Section 7.5(a), ICANN may request additional information from Registry Operator establishing (i) compliance with this Agreement and (ii) that the party acquiring such control or entering into such assignment or Material Subcontracting Arrangement (in any case, the “Contracting Party”) and the ultimate parent entity of the Contracting Party meets the ICANN-adopted specification or policy on registry operator criteria then in effect (including with respect to financial resources and operational and technical capabilities), in which case Registry Operator must supply the requested information within fifteen (15) calendar days.

(c) Registry Operator agrees that ICANN’s consent to any assignment, change of control or Material Subcontracting Arrangement will also be subject to background checks on any proposed Contracting Party (and such Contracting Party’s Affiliates).

(d) If ICANN fails to expressly provide or withhold its consent to any assignment, direct or indirect change of control of Registry Operator or any Material Subcontracting Arrangement within thirty (30) calendar days of ICANN's receipt of notice of such transaction (or, if ICANN has requested additional information from Registry Operator as set forth above, thirty (30) calendar days of the receipt of all requested written information regarding such transaction) from Registry Operator, ICANN shall be deemed to have consented to such transaction.

(e) In connection with any such assignment, change of control or Material Subcontracting Arrangement, Registry Operator shall comply with the Registry Transition Process.

(f) Notwithstanding the foregoing, (i) any consummated change of control shall not be avoidable by ICANN; provided, however, that, if ICANN reasonably determines to withhold its consent to such transaction, ICANN may terminate this Agreement pursuant to Section 4.3(g), (ii) ICANN may assign this Agreement without the consent of Registry Operator upon approval of the ICANN Board of Directors in conjunction with a reorganization, reconstitution or re-incorporation of ICANN upon such assignee's express assumption of the terms and conditions of this Agreement, (iii) Registry Operator may assign this Agreement without the consent of ICANN directly to an Affiliated Assignee, as that term is defined herein below, upon such Affiliated Assignee's express written assumption of the terms and conditions of this Agreement, and (iv) ICANN shall be deemed to have consented to any assignment, Material Subcontracting Arrangement or change of control transaction in which the Contracting Party is an existing operator of a generic top-level domain pursuant to a registry agreement between such Contracting Party and ICANN (provided that such Contracting Party is then in compliance with the terms and conditions of such registry agreement in all material respects), unless ICANN provides to Registry Operator a written objection to such transaction within ten (10) calendar days of ICANN's receipt of notice of such transaction pursuant to this Section 7.5. Notwithstanding Section 7.5(a), in the event an assignment is made pursuant to clauses (ii) or (iii) of this Section 7.5(f), the assigning party will provide the other party with prompt notice following any such assignment. For the purposes of this Section 7.5(f), (A) "Affiliated Assignee" means a person or entity that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, the person or entity specified, and (B) "control" (including the terms "controlled by" and "under common control with") shall have the same meaning specified in Section 2.9(c) of this Agreement.

## **7.6 Amendments and Waivers.**

(a) If the ICANN Board of Directors determines that an amendment to this Agreement (including to the Specifications referred to herein) and all other registry agreements between ICANN and the Applicable Registry Operators (the "Applicable Registry Agreements") is desirable (each, a "Special Amendment"), ICANN may adopt a Special Amendment pursuant to the requirements of and process set forth in this Section 7.6; provided that a Special Amendment may not be a Restricted Amendment.

(b) Prior to submitting a Special Amendment for Registry Operator Approval, ICANN shall first consult in good faith with the Working Group regarding the form and substance of such Special Amendment. The duration of such consultation shall be reasonably determined by ICANN based on the substance of the Special Amendment. Following such consultation, ICANN may propose the adoption of a Special Amendment by publicly posting such amendment on its website for no less than thirty (30) calendar days (the "Posting Period") and providing notice of such proposed amendment to the Applicable Registry Operators in accordance with Section 7.9. ICANN will consider the public comments submitted on a Special Amendment during the Posting Period (including comments submitted by the Applicable Registry Operators).

(which may be in a form different than submitted for public comment, but must address the subject matter of the Special Amendment posted for public comment, as modified to reflect and/or address input from the Working Group and public comments), ICANN shall provide notice of, and submit, such Special Amendment for approval or disapproval by the Applicable Registry Operators. If, during the sixty (60) calendar day period following the date ICANN provides such notice to the Applicable Registry Operators, such Special Amendment receives Registry Operator Approval, such Special Amendment shall be deemed approved (an "Approved Amendment") by the Applicable Registry Operators, and shall be effective and deemed an amendment to this Agreement on the date that is sixty (60) calendar days following the date ICANN provided notice of the approval of such Approved Amendment to Registry Operator (the "Amendment Effective Date"). In the event that a Special Amendment does not receive Registry Operator Approval, the Special Amendment shall be deemed not approved by the Applicable Registry Operators (a "Rejected Amendment"). A Rejected Amendment will have no effect on the terms and conditions of this Agreement, except as set forth below.

(d) If the ICANN Board of Directors reasonably determines that a Rejected Amendment falls within the subject matter categories set forth in Section 1.2 of Specification 1, the ICANN Board of Directors may adopt a resolution (the date such resolution is adopted is referred to herein as the "Resolution Adoption Date") requesting an Issue Report (as such term is defined in ICANN's Bylaws) by the Generic Names Supporting Organization (the "GNSO") regarding the substance of such Rejected Amendment. The policy development process undertaken by the GNSO pursuant to such requested Issue Report is referred to herein as a "PDP." If such PDP results in a Final Report supported by a GNSO Supermajority (as defined in ICANN's Bylaws) that either (i) recommends adoption of the Rejected Amendment as Consensus Policy or (ii) recommends against adoption of the Rejected Amendment as Consensus Policy, and, in the case of (i) above, the Board adopts such Consensus Policy, Registry Operator shall comply with its obligations pursuant to Section 2.2 of this Agreement. In either case, ICANN will abandon the Rejected Amendment and it will have no effect on the terms and conditions of this Agreement. Notwithstanding the foregoing provisions of this Section 7.6(d), the ICANN Board of Directors shall not be required to initiate a PDP with respect to a Rejected Amendment if, at any time in the twelve (12) month period preceding the submission of such Rejected Amendment for Registry Operator Approval pursuant to Section 7.6(c), the subject matter of such Rejected Amendment was the subject of a concluded or otherwise abandoned or terminated PDP that did not result in a GNSO Supermajority recommendation.

(e) If (a) a Rejected Amendment does not fall within the subject matter categories set forth in Section 1.2 of Specification 1, (b) the subject matter of a Rejected Amendment was, at any time in the twelve (12) month period preceding the submission of such Rejected Amendment for Registry Operator Approval pursuant to Section 7.6(c), the subject of a concluded or otherwise abandoned or terminated PDP that did not result in a GNSO Supermajority recommendation, or (c) a PDP does not result in a Final Report supported by a GNSO Supermajority that either (A) recommends adoption of the Rejected Amendment as Consensus Policy or (B) recommends against adoption of the Rejected Amendment as Consensus Policy (or such PDP has otherwise been abandoned or terminated for any reason), then, in any such case, such Rejected Amendment may still be adopted and become effective in the manner described below. In order for the Rejected Amendment to be adopted, the following requirements must be satisfied:

(i) the subject matter of the Rejected Amendment must be within the scope of ICANN's mission and consistent with a balanced application of its core values (as described in ICANN's Bylaws);

(ii) the Rejected Amendment must be justified by a Substantial and Compelling Reason in the Public Interest, must be likely to promote such interest, taking into account

Amendment, and must be narrowly tailored and no broader than reasonably necessary to address such Substantial and Compelling Reason in the Public Interest;

(iii) to the extent the Rejected Amendment prohibits or requires conduct or activities, imposes material costs on the Applicable Registry Operators, and/or materially reduces public access to domain name services, the Rejected Amendment must be the least restrictive means reasonably available to address the Substantial and Compelling Reason in the Public Interest;

(iv) the ICANN Board of Directors must submit the Rejected Amendment, along with a written explanation of the reasoning related to its determination that the Rejected Amendment meets the requirements set out in subclauses (i) through (iii) above, for public comment for a period of no less than thirty (30) calendar days; and

(v) following such public comment period, the ICANN Board of Directors must (a) engage in consultation (or direct ICANN management to engage in consultation) with the Working Group, subject matter experts, members of the GNSO, relevant advisory committees and other interested stakeholders with respect to such Rejected Amendment for a period of no less than sixty (60) calendar days; and (b) following such consultation, reapprove the Rejected Amendment (which may be in a form different than submitted for Registry Operator Approval, but must address the subject matter of the Rejected Amendment, as modified to reflect and/or address input from the Working Group and public comments) by the affirmative vote of at least two-thirds of the members of the ICANN Board of Directors eligible to vote on such matter, taking into account any ICANN policy affecting such eligibility, including ICANN's Conflict of Interest Policy (a "Board Amendment").

Such Board Amendment shall, subject to Section 7.6(f), be deemed an Approved Amendment, and shall be effective and deemed an amendment to this Agreement on the date that is sixty (60) calendar days following the date ICANN provided notice of the approval of such Board Amendment to Registry Operator (which effective date shall be deemed the Amendment Effective Date hereunder). Notwithstanding the foregoing, a Board Amendment may not amend the registry fees charged by ICANN hereunder, or amend this Section 7.6.

(f) Notwithstanding the provisions of Section 7.6(e), a Board Amendment shall not be deemed an Approved Amendment if, during the thirty (30) calendar day period following the approval by the ICANN Board of Directors of the Board Amendment, the Working Group, on the behalf of the Applicable Registry Operators, submits to the ICANN Board of Directors an alternative to the Board Amendment (an "Alternative Amendment") that meets the following requirements:

(i) sets forth the precise text proposed by the Working Group to amend this Agreement in lieu of the Board Amendment;

(ii) addresses the Substantial and Compelling Reason in the Public Interest identified by the ICANN Board of Directors as the justification for the Board Amendment; and

(iii) compared to the Board Amendment is: (a) more narrowly tailored to address such Substantial and Compelling Reason in the Public Interest, and (b) to the extent the Alternative Amendment prohibits or requires conduct or activities, imposes material costs on Affected Registry Operators, or materially reduces access to domain

name services, is a less restrictive means to address the Substantial and Compelling Reason in the Public Interest.

Any proposed amendment that does not meet the requirements of subclauses (i) through (iii) in the immediately preceding sentence shall not be considered an Alternative Amendment hereunder and therefore shall not supersede or delay the effectiveness of the Board Amendment. If, following the submission of the Alternative Amendment to the ICANN Board of Directors, the Alternative Amendment receives Registry Operator Approval, the Alternative Amendment shall supersede the Board Amendment and shall be deemed an Approved Amendment hereunder (and shall be effective and deemed an amendment to this Agreement on the date that is sixty (60) calendar days following the date ICANN provided notice of the approval of such Alternative Amendment to Registry Operator, which effective date shall be deemed the Amendment Effective Date hereunder), unless, within a period of sixty (60) calendar days following the date that the Working Group notifies the ICANN Board of Directors of Registry Operator Approval of such Alternative Amendment (during which time ICANN shall engage with the Working Group with respect to the Alternative Amendment), the ICANN Board of Directors by the affirmative vote of at least two-thirds of the members of the ICANN Board of Directors eligible to vote on such matter, taking into account any ICANN policy affecting such eligibility, including ICANN's Conflict of Interest Policy, rejects the Alternative Amendment. If (A) the Alternative Amendment does not receive Registry Operator Approval within thirty (30) calendar days of submission of such Alternative Amendment to the Applicable Registry Operators (and the Working Group shall notify ICANN of the date of such submission), or (B) the ICANN Board of Directors rejects the Alternative Amendment by such two-thirds vote, the Board Amendment (and not the Alternative Amendment) shall be effective and deemed an amendment to this Agreement on the date that is sixty (60) calendar days following the date ICANN provided notice to Registry Operator (which effective date shall be deemed the Amendment Effective Date hereunder). If the ICANN Board of Directors rejects an Alternative Amendment, the board shall publish a written rationale setting forth its analysis of the criteria set forth in Sections 7.6(f)(i) through 7.6(f)(iii). The ability of the ICANN Board of Directors to reject an Alternative Amendment hereunder does not relieve the Board of the obligation to ensure that any Board Amendment meets the criteria set forth in Section 7.6(e)(i) through 7.6(e)(v).

(g) In the event that Registry Operator believes an Approved Amendment does not meet the substantive requirements set out in this Section 7.6 or has been adopted in contravention of any of the procedural provisions of this Section 7.6, Registry Operator may challenge the adoption of such Special Amendment pursuant to the dispute resolution provisions set forth in Article 5, except that such arbitration shall be conducted by a three-person arbitration panel. Any such challenge must be brought within sixty (60) calendar days following the date ICANN provided notice to Registry Operator of the Approved Amendment, and ICANN may consolidate all challenges brought by registry operators (including Registry Operator) into a single proceeding. The Approved Amendment will be deemed not to have amended this Agreement during the pendency of the dispute resolution process.

(h) Registry Operator may apply in writing to ICANN for an exemption from the Approved Amendment (each such request submitted by Registry Operator hereunder, an "Exemption Request") during the thirty (30) calendar day period following the date ICANN provided notice to Registry Operator of such Approved Amendment. Each Exemption Request will set forth the basis for such request and provide detailed support for an exemption from the Approved Amendment. An Exemption Request may also include a detailed description and support for any alternatives to, or a variation of, the Approved Amendment proposed by such Registry Operator. An Exemption Request may only be granted upon a clear and convincing showing by Registry Operator that compliance with the Approved Amendment conflicts with applicable laws or would have a material adverse effect on the long-term financial condition or results of operations of Registry Operator. No Exemption Request will be granted if ICANN determines, in its reasonable discretion, that granting such Exemption Request would

(90) calendar days of ICANN's receipt of an Exemption Request, ICANN shall either approve (which approval may be conditioned or consist of alternatives to or a variation of the Approved Amendment) or deny the Exemption Request in writing, during which time the Approved Amendment will not amend this Agreement. If the Exemption Request is approved by ICANN, the Approved Amendment will not amend this Agreement; provided, that any conditions, alternatives or variations of the Approved Amendment required by ICANN shall be effective and, to the extent applicable, will amend this Agreement as of the Amendment Effective Date. If such Exemption Request is denied by ICANN, the Approved Amendment will amend this Agreement as of the Amendment Effective Date (or, if such date has passed, such Approved Amendment shall be deemed effective immediately on the date of such denial), provided that Registry Operator may, within thirty (30) calendar days following receipt of ICANN's determination, appeal ICANN's decision to deny the Exemption Request pursuant to the dispute resolution procedures set forth in Article 5. The Approved Amendment will be deemed not to have amended this Agreement during the pendency of the dispute resolution process. For avoidance of doubt, only Exemption Requests submitted by Registry Operator that are approved by ICANN pursuant to this Section 7.6(j), agreed to by ICANN following mediation pursuant to Section 5.1 or through an arbitration decision pursuant to Section 5.2 shall exempt Registry Operator from any Approved Amendment, and no Exemption Request granted to any other Applicable Registry Operator (whether by ICANN or through arbitration) shall have any effect under this Agreement or exempt Registry Operator from any Approved Amendment.

(i) Except as set forth in this Section 7.6, Section 7.7 and as otherwise set forth in this Agreement and the Specifications hereto, no amendment, supplement or modification of this Agreement or any provision hereof shall be binding unless executed in writing by both parties, and nothing in this Section 7.6 or Section 7.7 shall restrict ICANN and Registry Operator from entering into bilateral amendments and modifications to this Agreement negotiated solely between the two parties. No waiver of any provision of this Agreement shall be binding unless evidenced by a writing signed by the party waiving compliance with such provision. No waiver of any of the provisions of this Agreement or failure to enforce any of the provisions hereof shall be deemed or shall constitute a waiver of any other provision hereof, nor shall any such waiver constitute a continuing waiver unless otherwise expressly provided. For the avoidance of doubt, nothing in this Sections 7.6 or 7.7 shall be deemed to limit Registry Operator's obligation to comply with Section 2.2.

(j) For purposes of this Section 7.6, the following terms shall have the following meanings:

(i) "Applicable Registry Operators" means, collectively, the registry operators of top-level domains party to a registry agreement that contains a provision similar to this Section 7.6, including Registry Operator.

(ii) "Registry Operator Approval" means the receipt of each of the following: (A) the affirmative approval of the Applicable Registry Operators whose payments to ICANN accounted for two-thirds of the total amount of fees (converted to U.S. dollars, if applicable at the prevailing exchange rate published the prior day in the U.S. Edition of the Wall Street Journal for the date such calculation is made by ICANN) paid to ICANN by all the Applicable Registry Operators during the immediately previous calendar year pursuant to the Applicable Registry Agreements, and (B) the affirmative approval of a majority of the Applicable Registry Operators at the time such approval is obtained. For the avoidance of doubt, with respect to clause (B), each Applicable Registry Operator shall have one vote for each top-level domain operated by such Registry Operator pursuant to an Applicable

Registry Agreement.

(iii) “Restricted Amendment” means the following: (A) an amendment of Specification 1, (B) except to the extent addressed in Section 2.10 hereof, an amendment that specifies the price charged by Registry Operator to registrars for domain name registrations, (C) an amendment to the definition of Registry Services as set forth in the first paragraph of Section 2.1 of Specification 6, or (D) an amendment to the length of the Term.

(iv) “Substantial and Compelling Reason in the Public Interest” means a reason that is justified by an important, specific, and articulated public interest goal that is within ICANN's mission and consistent with a balanced application of ICANN's core values as defined in ICANN's Bylaws.

(v) “Working Group” means representatives of the Applicable Registry Operator and other members of the community that the Registry Stakeholders Group appoints, from time to time, to serve as a working group to consult on amendments to the Applicable Registry Agreements (excluding bilateral amendments pursuant to Section 7.6(i)).

(k) Notwithstanding anything in this Section 7.6 to the contrary, (i) if Registry Operator provides evidence to ICANN's reasonable satisfaction that the Approved Amendment would materially increase the cost of providing Registry Services, then ICANN will allow up to one-hundred eighty (180) calendar days for Approved Amendment to become effective with respect to Registry Operator, and (ii) no Approved Amendment adopted pursuant to Section 7.6 shall become effective with respect to Registry Operator if Registry Operator provides ICANN with an irrevocable notice of termination pursuant to Section 4.4(b).

## 7.7 Negotiation Process.

(a) If either the Chief Executive Officer of ICANN (“CEO”) or the Chairperson of the Registry Stakeholder Group (“Chair”) desires to discuss any revision(s) to this Agreement, the CEO or Chair, as applicable, shall provide written notice to the other person, which shall set forth in reasonable detail the proposed revisions to this Agreement (a “Negotiation Notice”). Notwithstanding the foregoing, neither the CEO nor the Chair may (i) propose revisions to this Agreement that modify any Consensus Policy then existing, (ii) propose revisions to this Agreement pursuant to this Section 7.7 on or before June 30, 2014, or (iii) propose revisions or submit a Negotiation Notice more than once during any twelve (12) month period beginning on July 1, 2014.

(b) Following receipt of the Negotiation Notice by either the CEO or the Chair, ICANN and the Working Group (as defined in Section 7.6) shall consult in good faith negotiations regarding the form and substance of the proposed revisions to this Agreement, which shall be in the form of a proposed amendment to this Agreement (the “Proposed Revisions”), for a period of at least ninety (90) calendar days (unless a resolution is earlier reached) and attempt to reach a mutually acceptable agreement relating to the Proposed Revisions (the “Discussion Period”).

(c) If, following the conclusion of the Discussion Period, an agreement is reached on the Proposed Revisions, ICANN shall post the mutually agreed Proposed Revisions on its website for public comment for no less than thirty (30) calendar days (the “Posting Period”) and provide notice of such revisions to all Applicable Registry Operators in accordance with Section 7.9. ICANN and the Working Group will consider the public comments submitted on the Proposed Revisions during the Posting Period (including comments submitted by the Applicable Registry Operators). Following the conclusion of the Posting Period, the Proposed Revisions shall be submitted for Registry Operator Approval (as defined in Section 7.6) and approval by the ICANN Board of Directors. If such approvals are obtained, the Proposed Revisions shall be deemed an Approved Amendment (as defined in Section 7.6) by the

Applicable Registry Operators and ICANN, and shall be effective and deemed an amendment to this Agreement upon sixty (60) calendar days notice from ICANN to Registry Operator.

(d) If, following the conclusion of the Discussion Period, an agreement is not reached between ICANN and the Working Group on the Proposed Revisions, either the CEO or the Chair may provide the other person written notice (the “Mediation Notice”) requiring each party to attempt to resolve the disagreements related to the Proposed Revisions through impartial, facilitative (non-evaluative) mediation in accordance with the terms and conditions set forth below. In the event that a Mediation Notice is provided, ICANN and the Working Group shall, within fifteen (15) calendar days thereof, simultaneously post the text of their desired version of the Proposed Revisions and a position paper with respect thereto on ICANN’s website.

(i) The mediation shall be conducted by a single mediator selected by the parties. If the parties cannot agree on a mediator within fifteen (15) calendar days following receipt by the CEO or Chair, as applicable, of the Mediation Notice, the parties will promptly select a mutually acceptable mediation provider entity, which entity shall, as soon as practicable following such entity’s selection, designate a mediator, who is a licensed attorney with general knowledge of contract law, who has no ongoing business relationship with either party and, to the extent necessary to mediate the particular dispute, general knowledge of the domain name system. Any mediator must confirm in writing that he or she is not, and will not become during the term of the mediation, an employee, partner, executive officer, director, or security holder of ICANN or an Applicable Registry Operator. If such confirmation is not provided by the appointed mediator, then a replacement mediator shall be appointed pursuant to this Section 7.7(d)(i).

(ii) The mediator shall conduct the mediation in accordance with the rules and procedures for facilitative mediation that he or she determines following consultation with the parties. The parties shall discuss the dispute in good faith and attempt, with the mediator’s assistance, to reach an amicable resolution of the dispute.

(iii) Each party shall bear its own costs in the mediation. The parties shall share equally the fees and expenses of the mediator.

(iv) If an agreement is reached during the mediation, ICANN shall post the mutually agreed Proposed Revisions on its website for the Posting Period and provide notice to all Applicable Registry Operators in accordance with Section 7.9. ICANN and the Working Group will consider the public comments submitted on the agreed Proposed Revisions during the Posting Period (including comments submitted by the Applicable Registry Operators). Following the conclusion of the Posting Period, the Proposed Revisions shall be submitted for Registry Operator Approval and approval by the ICANN Board of Directors. If such approvals are obtained, the Proposed Revisions shall be deemed an Approved Amendment (as defined in Section 7.6) by the Applicable Registry Operators and ICANN, and shall be effective and deemed an amendment to this Agreement upon sixty (60) calendar days notice from ICANN to Registry Operator.

(v) If the parties have not resolved the dispute for any reason by the date that is ninety (90) calendar days following receipt by the CEO or Chair, as applicable, of the Mediation Notice, the mediation shall automatically terminate (unless extended by agreement of the parties). The mediator shall deliver to the parties a definition of the issues that could be considered in future arbitration, if invoked. Those issues are subject to the limitations set forth in Section 7.7(e)(ii) below.

(e) If, following mediation, ICANN and the Working Group have not reached an agreement on the Proposed Revisions, either the CEO or the Chair may provide the other person written notice (an "Arbitration Notice") requiring ICANN and the Applicable Registry Operators to resolve the dispute through binding arbitration in accordance with the arbitration provisions of Section 5.2, subject to the requirements and limitations of this Section 7.7(e).

(i) If an Arbitration Notice is sent, the mediator's definition of issues, along with the Proposed Revisions (be those from ICANN, the Working Group or both) shall be posted for public comment on ICANN's website for a period of no less than thirty (30) calendar days. ICANN and the Working Group will consider the public comments submitted on the Proposed Revisions during the Posting Period (including comments submitted by the Applicable Registry Operators), and information regarding such comments and consideration shall be provided to a three (3) person arbitrator panel. Each party may modify its Proposed Revisions before and after the Posting Period. The arbitration proceeding may not commence prior to the closing of such public comment period, and ICANN may consolidate all challenges brought by registry operators (including Registry Operator) into a single proceeding. Except as set forth in this Section 7.7, the arbitration shall be conducted pursuant to Section 5.2.

(ii) No dispute regarding the Proposed Revisions may be submitted for arbitration to the extent the subject matter of the Proposed Revisions (i) relates to Consensus Policy, (ii) falls within the subject matter categories set forth in Section 1.2 of Specification 1, or (iii) seeks to amend any of the following provisions or Specifications of this Agreement: Articles 1, 3 and 6; Sections 2.1, 2.2, 2.5, 2.7, 2.9, 2.10, 2.16, 2.17, 2.19, 4.1, 4.2, 7.3, 7.6, 7.7, 7.8, 7.10, 7.11, 7.12, 7.13, 7.14, 7.16; Section 2.8 and Specification 7 (but only to the extent such Proposed Revisions seek to implement an RPM not contemplated by Sections 2.8 and Specification 7); Exhibit A; and Specifications 1, 4, 6, 10 and 11.

(iii) The mediator will brief the arbitrator panel regarding ICANN and the Working Group's respective proposals relating to the Proposed Revisions.

(iv) No amendment to this Agreement relating to the Proposed Revisions may be submitted for arbitration by either the Working Group or ICANN, unless, in the case of the Working Group, the proposed amendment has received Registry Operator Approval and, in the case of ICANN, the proposed amendment has been approved by the ICANN Board of Directors.

(v) In order for the arbitrator panel to approve either ICANN or the Working Group's proposed amendment relating to the Proposed Revisions, the arbitrator panel must conclude that such proposed amendment is consistent with a balanced application of ICANN's core values (as described in ICANN's Bylaws) and reasonable in light of the balancing of the costs and benefits to the business interests of the Applicable Registry Operators and ICANN (as applicable), and the public benefit sought to be achieved by the Proposed Revisions as set forth in such amendment. If the arbitrator panel concludes that either ICANN or the Working Group's proposed amendment relating to the Proposed Revisions meets the foregoing standard, such amendment shall be effective and deemed an amendment to this Agreement upon sixty (60) calendar days notice from ICANN to Registry Operator and deemed an Approved Amendment hereunder.

(f) With respect to an Approved Amendment relating to an amendment proposed by ICANN, Registry may apply in writing to ICANN for an exemption from such amendment pursuant to the provisions of Section 7.6

(g) Notwithstanding anything in this Section 7.7 to the contrary, (a) if Registry Operator provides evidence to ICANN's reasonable satisfaction that the Approved Amendment would materially increase the cost of providing Registry Services, then ICANN will allow up to one-hundred eighty (180) calendar days for the Approved Amendment to become effective with respect to Registry Operator, and (b) no Approved Amendment adopted pursuant to Section 7.7 shall become effective with respect to Registry Operator if Registry Operator provides ICANN with an irrevocable notice of termination pursuant to Section 4.4(b).

**7.8 No Third-Party Beneficiaries.** This Agreement will not be construed to create any obligation by either ICANN or Registry Operator to any non-party to this Agreement, including any registrar or registered name holder.

**7.9 General Notices.** Except for notices pursuant to Sections 7.6 and 7.7, all notices to be given under or in relation to this Agreement will be given either (i) in writing at the address of the appropriate party as set forth below or (ii) via facsimile or electronic mail as provided below, unless that party has given a notice of change of postal or email address, or facsimile number, as provided in this Agreement. All notices under Sections 7.6 and 7.7 shall be given by both posting of the applicable information on ICANN's web site and transmission of such information to Registry Operator by electronic mail. Any change in the contact information for notice below will be given by the party within thirty (30) calendar days of such change. Other than notices under Sections 7.6 or 7.7, any notice required by this Agreement will be deemed to have been properly given (i) if in paper form, when delivered in person or via courier service with confirmation of receipt or (ii) if via facsimile or by electronic mail, upon confirmation of receipt by the recipient's facsimile machine or email server, provided that such notice via facsimile or electronic mail shall be followed by a copy sent by regular postal mail service within three (3) calendar days. Any notice required by Sections 7.6 or 7.7 will be deemed to have been given when electronically posted on ICANN's website and upon confirmation of receipt by the email server. In the event other means of notice become practically achievable, such as notice via a secure website, the parties will work together to implement such notice means under this Agreement.

[\_\_\_\_\_]

Telephone:  
With a Required Copy to:  
Email: (As specified from time to time.)

the parties hereto pertaining to the operation of the TLD and supersedes all prior agreements, understandings, negotiations and discussions, whether oral or written, between the parties on that subject.

**7.11 English Language Controls.** Notwithstanding any translated version of this Agreement and/or specifications that may be provided to Registry Operator, the English language version of this Agreement and all referenced specifications are the official versions that bind the parties hereto. In the event of any conflict or discrepancy between any translated version of this Agreement and the English language version, the English language version controls. Notices, designations, determinations, and specifications made under this Agreement shall be in the English language.

**7.12 Ownership Rights.** Nothing contained in this Agreement shall be construed as (a) establishing or granting to Registry Operator any property ownership rights or interests of Registry Operator in the TLD or the letters, words, symbols or other characters making up the TLD string, or (b) affecting any existing intellectual property or ownership rights of Registry Operator.

**7.13 Severability; Conflicts with Laws.** This Agreement shall be deemed severable; the invalidity or unenforceability of any term or provision of this Agreement shall not affect the validity or enforceability of the balance of this Agreement or of any other term hereof, which shall remain in full force and effect. If any of the provisions hereof are determined to be invalid or unenforceable, the parties shall negotiate in good faith to modify this Agreement so as to effect the original intent of the parties as closely as possible. ICANN and the Working Group will mutually cooperate to develop an ICANN procedure for ICANN's review and consideration of alleged conflicts between applicable laws and non-WHOIS related provisions of this Agreement. Until such procedure is developed and implemented by ICANN, ICANN will review and consider alleged conflicts between applicable laws and non-WHOIS related provisions of this Agreement in a manner similar to ICANN's Procedure For Handling WHOIS Conflicts with Privacy Law.

**7.14 Court Orders.** ICANN will respect any order from a court of competent jurisdiction, including any orders from any jurisdiction where the consent or non-objection of the government was a requirement for the delegation of the TLD. Notwithstanding any other provision of this Agreement, ICANN's implementation of any such order will not be a breach of this Agreement

### **7.15 Confidentiality**

(a) Subject to Section 7.15(c), during the Term and for a period of three (3) years thereafter, each party shall, and shall cause its and its Affiliates' officers, directors, employees and agents to, keep confidential and not publish or otherwise disclose to any third party, directly or indirectly, any information that is, and the disclosing party has marked as, or has otherwise designated in writing to the receiving party as, "confidential trade secret," "confidential commercial information" or "confidential financial information" (collectively, "Confidential Information"), except to the extent such disclosure is permitted by the terms of this Agreement.

(b) The confidentiality obligations under Section 7.15(a) shall not apply to any Confidential Information that (i) is or hereafter becomes part of the public domain by public use, publication, general knowledge or the like through no fault of the receiving party in breach of this Agreement, (ii) can be demonstrated by documentation or other competent proof to have been in the receiving party's possession prior to disclosure by the disclosing party without any obligation of confidentiality with respect to such information, (iii) is subsequently received by the receiving party from a third party who is not bound by any obligation of confidentiality with respect to such information, (iv) has been published by a third party or otherwise enters the public domain through no fault of the receiving party or (v) can be demonstrated by documentation or other competent evidence to have been

independently developed by or for the receiving party without reference to the disclosing party's Confidential Information.

(c) Each party shall have the right to disclose Confidential Information to the extent that such disclosure is (i) made in response to a valid order of a court of competent jurisdiction or, if in the reasonable opinion of the receiving party's legal counsel, such disclosure is otherwise required by applicable law; provided, however, that the receiving party shall first have given notice to the disclosing party and given the disclosing party a reasonable opportunity to quash such order or to obtain a protective order or confidential treatment order requiring that the Confidential Information that is the subject of such order or other applicable law be held in confidence by such court or other third party recipient, unless the receiving party is not permitted to provide such notice under such order or applicable law, or (ii) made by the receiving party or any of its Affiliates to its or their attorneys, auditor advisors, consultants, contractors or other third parties for use by such person or entity as may be necessary or useful in connection with the performance of the activities under this Agreement, provided that such third party is bound by confidentiality obligations at least as stringent as those set forth herein either by written agreement or through professional responsibility standards.

***[Note: The following section is applicable to intergovernmental organizations or governmental entities only.]***

#### **7.16 Special Provision Relating to Intergovernmental Organizations or Governmental Entities.**

(a) ICANN acknowledges that Registry Operator is an entity subject to public international law, including international treaties applicable to Registry Operator (such public international law and treaties, collectively hereinafter the "Applicable Laws"). Nothing in this Agreement and its related specifications shall be construed or interpreted to require Registry Operator to violate Applicable Laws or prevent compliance therewith. The Parties agree that Registry Operator's compliance with Applicable Laws shall not constitute a breach of this Agreement.

(b) In the event Registry Operator reasonably determines that any provision of this Agreement and its related specifications, or any decisions or policies of ICANN referred to in this Agreement, including but not limited to Temporary Policies and Consensus Policies (such provisions, specifications and policies, collectively hereinafter, "ICANN Requirements"), may conflict with or violate Applicable Law (hereinafter, a "Potential Conflict"), Registry Operator shall provide detailed notice (a "Notice") of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy. In the event Registry Operator determines that there is Potential Conflict between a proposed Applicable Law and any ICANN Requirement, Registry Operator shall provide detailed Notice of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy.

(c) As soon as practicable following such review, the parties shall attempt to resolve the Potential Conflict by mediation pursuant to the procedures set forth in Section 5.1. In addition, Registry Operator shall use its best efforts to eliminate or minimize any impact arising from such Potential Conflict between Applicable Laws and any ICANN Requirement. If, following such mediation, Registry Operator determines that the Potential Conflict constitutes an actual conflict between any ICANN Requirement, on the one hand, and Applicable Laws, on the other hand, then ICANN shall waive compliance with such ICANN Requirement (provided that the parties shall negotiate in good faith on a continuous basis thereafter to mitigate or eliminate the effects of such noncompliance on ICANN), unless ICANN reasonably and objectively determines that the failure of Registry Operator to comply with such

ICANN Requirement would constitute a threat to the Security and Stability of Registry Services, the Internet or the DNS (hereinafter, an "ICANN Determination"). Following receipt of notice by Registry Operator of such ICANN Determination, Registry Operator shall be afforded a period of ninety (90) calendar days to resolve such conflict with an Applicable Law. If the conflict with an Applicable Law is not resolved to ICANN's complete satisfaction during such period, Registry Operator shall have the option to submit, within ten (10) calendar days thereafter, the matter to binding arbitration as defined in subsection (d) below. If during such period, Registry Operator does not submit the matter to arbitration pursuant to subsection (d) below, ICANN may, upon notice to Registry Operator, terminate this Agreement with immediate effect.

(d) If Registry Operator disagrees with an ICANN Determination, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2, except that the sole issue presented to the arbitrator for determination will be whether or not ICANN reasonably and objectively reached the ICANN Determination. For the purposes of such arbitration, ICANN shall present evidence to the arbitrator supporting the ICANN Determination. If the arbitrator determines that ICANN did not reasonably and objectively reach the ICANN Determination, then ICANN shall waive Registry Operator's compliance with the subject ICANN Requirement. If the arbitrators or pre-arbitral referee, as applicable, determine that ICANN did reasonably and objectively reach the ICANN Determination, then, upon notice to Registry Operator, ICANN may terminate this Agreement with immediate effect.

(e) Registry Operator hereby represents and warrants that, to the best of its knowledge as of the date of execution of this Agreement, no existing ICANN Requirement conflicts with or violates any Applicable Law.

(f) Notwithstanding any other provision of this Section 7.16, following an ICANN Determination and prior to a finding by an arbitrator pursuant to Section 7.16(d) above, ICANN may, subject to prior consultations with Registry Operator, take such reasonable technical measures as it deems necessary to ensure the Security and Stability of Registry Services, the Internet and the DNS. These reasonable technical measures shall be taken by ICANN on an interim basis, until the earlier of the date of conclusion of the arbitration procedure referred to in Section 7.16(d) above or the date of complete resolution of the conflict with an Applicable Law. In case Registry Operator disagrees with such technical measures taken by ICANN, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2 above, during which process ICANN may continue to take such technical measures. In the event that ICANN takes such measures, Registry Operator shall pay all costs incurred by ICANN as a result of taking such measures. In addition, in the event that ICANN takes such measures, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

\* \* \* \* \*

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be executed by their duly authorized representatives.

## EXHIBIT A

### Approved Services

The ICANN gTLD Applicant Guidebook (located at <http://newgtlds.icann.org/en/applicants/agb>) and the RSEP specify processes for consideration of proposed registry services. Registry Operator may provide any service that is required by the terms of this Agreement. In addition, the following services (if any) are specifically identified as having been approved by ICANN prior to the effective date of the Agreement and Registry Operator may provide such services:

#### 1. DNS Service – TLD Zone Contents

Notwithstanding anything else in this Agreement, as indicated in section 2.2.3.3 of the gTLD Applicant Guidebook, permissible contents for the TLD's DNS service are:

##### 1.1. For the "Internet" (IN) Class:

1.1.1. Apex SOA record

1.1.2. Apex NS records and in-bailiwick glue for the TLD's DNS servers

1.1.3. NS records and in-bailiwick glue for DNS servers of registered names in the TLD

1.1.4. DS records for registered names in the TLD

1.1.5. Records associated with signing the TLD zone (e.g., RRSIG, DNSKEY, NSEC, NSEC3PARAM and NSEC3)

1.1.6. Apex TXT record for zone versioning purposes

1.1.7. Apex TYPE65534 record for automatic dnssec signing signaling

##### 1.2. For the "Chaos" (CH) Class:

1.2.1. TXT records for server version/identification (e.g., TXT records for "version.bind.", "id.server.", "authors.bind" and/or "hostname.bind.")

(Note: The above language effectively does not allow, among other things, the inclusion of DNS resource records that would enable a dotless domain name (e.g., apex A, AAAA, MX records) in the TLD zone.)

If Registry Operator wishes to place any DNS resource record type or class into its TLD DNS service (other than those listed in Sections 1.1 or 1.2 above), it must describe in detail its proposal and submit a Registry Services Evaluation Process (RSEP) request. This will be evaluated per RSEP to determine whether the service would create a risk of a meaningful adverse impact on security or stability of the DNS. Registry Operator recognizes and acknowledges that a service based on the use of less-common DNS resource records and/or classes in the TLD zone, even if approved, might not work as intended for all users due to lack of software support.

## SPECIFICATION 1

### CONSENSUS POLICIES AND TEMPORARY POLICIES SPECIFICATION

#### 1. Consensus Policies.

- 1.1. “**Consensus Policies**” are those policies established (1) pursuant to the procedure set forth in ICANN’s Bylaws and due process, and (2) covering those topics listed in Section 1.2 of this Specification. The Consensus Policy development process and procedure set forth in ICANN’s Bylaws may be revised from time to time in accordance with the process set forth therein.
- 1.2. Consensus Policies and the procedures by which they are developed shall be designed to produce, to the extent possible, a consensus of Internet stakeholders, including the operators of gTLDs. Consensus Policies shall relate to one or more of the following:
  - 1.2.1 issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, security and/or stability of the Internet or Domain Name System (“DNS”);
  - 1.2.2 functional and performance specifications for the provision of Registry Services;
  - 1.2.3 Security and Stability of the registry database for the TLD;
  - 1.2.4 registry policies reasonably necessary to implement Consensus Policies relating to registry operations or registrars;
  - 1.2.5 resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names); or
  - 1.2.6 restrictions on cross-ownership of registry operators and registrars or registrar resellers and regulations and restrictions with respect to registry operations and the use of registry and registrar data in the event that a registry operator and a registrar or registrar reseller are affiliated.
- 1.3. Such categories of issues referred to in Section 1.2 of this Specification shall include, without limitation:
  - 1.3.1 principles for allocation of registered names in the TLD (e.g., first-come/first-serve timely renewal, holding period after expiration);
  - 1.3.2 prohibitions on warehousing of or speculation in domain names by registries or registrars;
  - 1.3.3 reservation of registered names in the TLD that may not be registered initially or that may not be renewed due to reasons reasonably related to (i) avoidance of confusion among or misleading of users, (ii) intellectual property, or (iii) the technical management of the DNS or the Internet (e.g., establishment of reservations of names from registration); and
  - 1.3.4 maintenance of and access to accurate and up-to-date information concerning domain name registrations, and procedures to avoid disruptions of domain name registrations due to suspension or termination of operations by a registry operator

or a registrar, including procedures for allocation of responsibility for serving registered domain names in a TLD affected by such a suspension or termination.

- 1.4. In addition to the other limitations on Consensus Policies, they shall not:
  - 1.4.1 prescribe or limit the price of Registry Services;
  - 1.4.2 modify the terms or conditions for the renewal or termination of the Registry Agreement;
  - 1.4.3 modify the limitations on Temporary Policies (defined below) or Consensus Policies;
  - 1.4.4 modify the provisions in the registry agreement regarding fees paid by Registry Operator to ICANN; or
  - 1.4.5 modify ICANN's obligations to ensure equitable treatment of registry operators and act in an open and transparent manner.
  
2. **Temporary Policies.** Registry Operator shall comply with and implement all specifications or policies established by the Board on a temporary basis, if adopted by the Board by a vote of at least two-thirds of its members, so long as the Board reasonably determines that such modifications or amendments are justified and that immediate temporary establishment of a specification or policy on the subject is necessary to maintain the stability or security of Registry Services or the DNS ("**Temporary Policies**").
  - 2.1. Such proposed specification or policy shall be as narrowly tailored as feasible to achieve those objectives. In establishing any Temporary Policy, the Board shall state the period of time for which the Temporary Policy is adopted and shall immediately implement the Consensus Policy development process set forth in ICANN's Bylaws.
    - 2.1.1 ICANN shall also issue an advisory statement containing a detailed explanation of its reasons for adopting the Temporary Policy and why the Board believes such Temporary Policy should receive the consensus support of Internet stakeholders.
    - 2.1.2 If the period of time for which the Temporary Policy is adopted exceeds ninety (90) calendar days, the Board shall reaffirm its temporary adoption every ninety (90) calendar days for a total period not to exceed one (1) year, in order to maintain such Temporary Policy in effect until such time as it becomes a Consensus Policy. If the one (1) year period expires or, if during such one (1) year period, the Temporary Policy does not become a Consensus Policy and is not reaffirmed by the Board, Registry Operator shall no longer be required to comply with or implement such Temporary Policy.
  
3. **Notice and Conflicts.** Registry Operator shall be afforded a reasonable period of time following notice of the establishment of a Consensus Policy or Temporary Policy in which to comply with such policy or specification, taking into account any urgency involved. In the event of a conflict between Registry Services and Consensus Policies or any Temporary Policy, the Consensus Policy or Temporary Policy shall control, but only with respect to subject matter in conflict.

## SPECIFICATION 2

### DATA ESCROW REQUIREMENTS

Registry Operator will engage an independent entity to act as data escrow agent ("**Escrow Agent**") for the provision of data escrow services related to the Registry Agreement. The following Technical Specifications set forth in Part A, and Legal Requirements set forth in Part B, will be included in any data escrow agreement between Registry Operator and the Escrow Agent, under which ICANN must be named a third-party beneficiary. In addition to the following requirements, the data escrow agreement may contain other provisions that are not contradictory or intended to subvert the required terms provided below.

#### PART A – TECHNICAL SPECIFICATIONS

1. **Deposits.** There will be two types of Deposits: Full and Differential. For both types, the universe of Registry objects to be considered for data escrow are those objects necessary in order to offer all of the approved Registry Services.
  - 1.1. "**Full Deposit**" will consist of data that reflects the state of the registry as of 00:00:00 UTC (Coordinated Universal Time) on the day that such Full Deposit is submitted to Escrow Agent.
  - 1.2. "**Differential Deposit**" means data that reflects all transactions that were not reflected in the last previous Full or Differential Deposit, as the case may be. Each Differential Deposit will contain all database transactions since the previous Deposit was completed as of 00:00:00 UTC of each day, but Sunday. Differential Deposits must include complete Escrow Records as specified below that were not included or changed since the most recent full or Differential Deposit (i.e., all additions, modifications or removals of data).
2. **Schedule for Deposits.** Registry Operator will submit a set of escrow files on a daily basis as follows:
  - 2.1. Each Sunday, a Full Deposit must be submitted to the Escrow Agent by 23:59 UTC.
  - 2.2. The other six (6) days of the week, a Full Deposit or the corresponding Differential Deposit must be submitted to Escrow Agent by 23:59 UTC.
3. **Escrow Format Specification.**
  - 3.1. **Deposit's Format.** Registry objects, such as domains, contacts, name servers, registrars, etc. will be compiled into a file constructed as described in draft-arias-noguchi-registry-data-escrow, see Part A, Section 9, reference 1 of this Specification and draft-arias-noguchi-dnrd-objects-mapping, see Part A, Section 9, reference 2 of this Specification (collectively, the "DNDE Specification"). The DNDE Specification describes some elements as optional; Registry Operator will include those elements in the Deposits if they are available. If not already an RFC, Registry Operator will use the most recent draft version of the DNDE Specification available at the Effective Date. Registry Operator may at its election use newer versions of the DNDE Specification after the Effective Date. Once the DNDE Specification is published as an RFC, Registry Operator will implement that version of the DNDE Specification, no later than one hundred eighty (180) calendar days after. UTF-8 character encoding will be used.

- 5.1. {gTLD} is replaced with the gTLD name; in case of an IDN-TLD, the ASCII-compatible form (A-Label) must be used;
- 5.2. {YYYY-MM-DD} is replaced by the date corresponding to the time used as a timeline watermark for the transactions; i.e. for the Full Deposit corresponding to 2009-08-02T00:00Z, the string to be used would be “2009-08-02”;
- 5.3. {type} is replaced by:
- (1) “full”, if the data represents a Full Deposit;
  - (2) “diff”, if the data represents a Differential Deposit;
  - (3) “thin”, if the data represents a Bulk Registration Data Access file, as specified in Section 3 of Specification 4;
  - (4) “thick-{gurid}”, if the data represent Thick Registration Data from a specific registrar as defined in Section 3.2 of Specification 4. The {gurid} element must be replaced with the IANA Registrar ID associated with the data.
- 5.4. {#} is replaced by the position of the file in a series of files, beginning with “1”; in case of a lone file, this must be replaced by “1”.
- 5.5. {rev} is replaced by the number of revision (or resend) of the file beginning with “0”:
- 5.6. {ext} is replaced by “sig” if it is a digital signature file of the quasi-homonymous file. Otherwise it is replaced by “ryde”.
6. **Distribution of Public Keys.** Each of Registry Operator and Escrow Agent will distribute its public key to the other party (Registry Operator or Escrow Agent, as the case may be) via email to an email address to be specified. Each party will confirm receipt of the other party’s public key with a reply email, and the distributing party will subsequently reconfirm the authenticity of the key transmitted via offline methods, like in person meeting, telephone, etc. In this way, public key transmission is authenticated to a user able to send and receive mail via a mail server operated by the distributing party. Escrow Agent, Registry Operator and ICANN will exchange public keys by the same procedure.
7. **Notification of Deposits.** Along with the delivery of each Deposit, Registry Operator will deliver to Escrow Agent and to ICANN (using the API described in draft-lozano-icann-registry-interfaces, see Part A, Section 9, reference 5 of this Specification (the “Interface Specification”)) a written statement from Registry Operator (which may be by authenticated e-mail) that includes a copy of the report generated upon creation of the Deposit and states that the Deposit has been inspected by Registry Operator and is complete and accurate. The preparation and submission of this statement must be performed by the Registry Operator or its designee, provided that such designee may not be the Escrow Agent or any of Escrow Agent’s Affiliates. Registry Operator will include the Deposit’s “id” and “resend” attributes in its statement. The attributes are explained in Part A, Section 9, reference 1 of this Specification.

If not already an RFC, Registry Operator will use the most recent draft version of the Interface Specification at the Effective Date. Registry Operator may at its election use newer versions of the Interface Specification after the Effective Date. Once the Interface Specification is published as an RFC, Registry Operator will implement that version of the Interface Specification, no later than one hundred eighty (180) calendar days after such publishing.

## 8. **Verification Procedure.**

- (1) The signature file of each processed file is validated.
- (2) If processed files are pieces of a bigger file, the latter is put together.
- (3) Each file obtained in the previous step is then decrypted and uncompressed.
- (4) Each data file contained in the previous step is then validated against the format defined in Part A, Section 9, reference 1 of this Specification.
- (5) The data escrow agent extended verification process, as defined below in reference 2 of Part A of this Specification 2, as well as any other data escrow verification process contained in such reference.

If any discrepancy is found in any of the steps, the Deposit will be considered incomplete.

## PART B – LEGAL REQUIREMENTS

1. **Escrow Agent.** Prior to entering into an escrow agreement, the Registry Operator must provide notice to ICANN as to the identity of the Escrow Agent, and provide ICANN with contact information and a copy of the relevant escrow agreement, and all amendments thereto. In addition, prior to entering into an escrow agreement, Registry Operator must obtain the consent of ICANN to (a) use the specified Escrow Agent, and (b) enter into the form of escrow agreement provided. ICANN must be expressly designated as a third-party beneficiary of the escrow agreement. ICANN reserves the right to withhold its consent to any Escrow Agent, escrow agreement, or any amendment thereto, all in its sole discretion.
2. **Fees.** Registry Operator must pay, or have paid on its behalf, fees to the Escrow Agent directly. If Registry Operator fails to pay any fee by the due date(s), the Escrow Agent will give ICANN written notice of such non-payment and ICANN may pay the past-due fee(s) within fifteen (15) calendar days after receipt of the written notice from Escrow Agent. Upon payment of the past-due fees to ICANN, ICANN shall have a claim for such amount against Registry Operator, which Registry Operator shall be required to submit to ICANN together with the next fee payment due under the Registry Agreement.
3. **Ownership.** Ownership of the Deposits during the effective term of the Registry Agreement shall remain with Registry Operator at all times. Thereafter, Registry Operator shall assign any such ownership rights (including intellectual property rights, as the case may be) in such Deposits to ICANN. In the event that during the term of the Registry Agreement any Deposit is released from escrow to ICANN, any intellectual property rights held by Registry Operator in the Deposits will automatically be licensed to ICANN or to a party designated in writing by ICANN on a non-exclusive, perpetual, irrevocable, royalty-free, paid-up basis, for any use related to the operation, maintenance or transition of the TLD.
4. **Integrity and Confidentiality.** Escrow Agent will be required to (i) hold and maintain the Deposits in a secure, locked, and environmentally safe facility, which is accessible only to authorized representatives of Escrow Agent, (ii) protect the integrity and confidentiality of the Deposits using commercially reasonable measures and (iii) keep and safeguard each Deposit for one (1) year. ICANN and Registry Operator will be provided the right to inspect Escrow Agent's applicable records upon reasonable prior notice and during normal business hours. Registry Operator and ICANN will be provided with the right to designate a third-party auditor to audit Escrow Agent's compliance with the technical specifications and maintenance requirements of the Specification 2 from time to time.

If Escrow Agent receives a subpoena or any other order from a court or other judicial tribunal pertaining to the disclosure or release of the Deposits, Escrow Agent will promptly notify the Registry Operator and ICANN unless prohibited by law. After notifying the Registry Operator and ICANN, Escrow Agent shall allow sufficient time for Registry Operator or ICANN to challenge any such order, which shall be the responsibility of Registry Operator or ICANN; provided, however, that Escrow Agent does not waive its rights to present its position with respect to any such order. Escrow Agent will cooperate with the Registry Operator or ICANN to support efforts to quash or limit any subpoena, at such party's expense. Any party requesting additional assistance shall pay Escrow Agent's standard charges or as quoted upon submission of a detailed request.

5. **Copies.** Escrow Agent may be permitted to duplicate any Deposit, in order to comply with the terms and provisions of the escrow agreement.

6. **Release of Deposits.** Escrow Agent will make available for electronic download (unless otherwise requested) to ICANN or its designee, within twenty-four (24) hours, at the Registry Operator's expense, all Deposits in Escrow Agent's possession in the event that the Escrow Agent receives a request from Registry Operator to effect such delivery to ICANN, or receives one of the following written notices by ICANN stating that:
- 6.1. the Registry Agreement has expired without renewal, or been terminated; or
  - 6.2. ICANN has not received a notification as described in Part B, Sections 7.1 and 7.2 of this Specification from Escrow Agent within five (5) calendar days after the Deposit's scheduled delivery date; (a) ICANN gave notice to Escrow Agent and Registry Operator of that failure; and (b) ICANN has not, within seven (7) calendar days after such notice, received the notification from Escrow Agent; or
  - 6.3. ICANN has received notification as described in Part B, Sections 7.1 and 7.2 of this Specification from Escrow Agent of failed verification of the latest escrow deposit for a specific date or a notification of a missing deposit, and the notification is for a deposit that should have been made on Sunday (i.e., a Full Deposit); (a) ICANN gave notice to Registry Operator of that receipt; and (b) ICANN has not, within seven (7) calendar days after such notice, received notification as described in Part B, Sections 7.1 and 7.2 of this Specification from Escrow Agent of verification of a remediated version of such Full Deposit; or
  - 6.4. ICANN has received five notifications from Escrow Agent within the last thirty (30) calendar days notifying ICANN of either missing or failed escrow deposits that should have been made Monday through Saturday (i.e., a Differential Deposit), and (x) ICANN provided notice to Registry Operator of the receipt of such notifications; and (y) ICANN has not, within seven (7) calendar days after delivery of such notice to Registry Operator, received notification from Escrow Agent of verification of a remediated version of such Differential Deposit; or
  - 6.5. Registry Operator has: (i) ceased to conduct its business in the ordinary course; or (ii) filed for bankruptcy, become insolvent or anything analogous to any of the foregoing under the laws of any jurisdiction anywhere in the world; or
  - 6.6. Registry Operator has experienced a failure of critical registry functions and ICANN has asserted its rights pursuant to Section 2.13 of the Agreement; or
  - 6.7. a competent court, arbitral, legislative, or government agency mandates the release of the Deposits to ICANN; or
  - 6.8. pursuant to Contractual and Operational Compliance Audits as specified under Section 2.1 of the Agreement.

Unless Escrow Agent has previously released the Registry Operator's Deposits to ICANN or its designee, Escrow Agent will deliver all Deposits to ICANN upon expiration or termination of the Registry Agreement or the Escrow Agreement.

7. **Verification of Deposits.**

- 7.1. Within twenty-four (24) hours after receiving each Deposit or corrected Deposit, Escrow Agent must verify the format and completeness of each Deposit and deliver to ICANN a notification generated for each Deposit. Reports will be delivered electronically using the

API described in draft-lozano-icann-registry-interfaces, see Part A, Section 9, reference 5 of this Specification.

- 7.2. If Escrow Agent discovers that any Deposit fails the verification procedures or if Escrow Agent does not receive any scheduled Deposit, Escrow Agent must notify Registry Operator either by email, fax or phone and ICANN (using the API described in draft-lozano-icann-registry-interfaces, see Part A, Section 9, reference 5 of this Specification) of such nonconformity or non-receipt within twenty-four (24) hours after receiving the non-conformant Deposit or the deadline for such Deposit, as applicable. Upon notification of such verification or delivery failure, Registry Operator must begin developing modifications, updates, corrections, and other fixes of the Deposit necessary for the Deposit to be delivered and pass the verification procedures and deliver such fixes to Escrow Agent as promptly as possible.
8. **Amendments.** Escrow Agent and Registry Operator shall amend the terms of the Escrow Agreement to conform to this Specification 2 within ten (10) calendar days of any amendment or modification to this Specification 2. In the event of a conflict between this Specification 2 and the Escrow Agreement, this Specification 2 shall control.
9. **Indemnity.** Escrow Agent shall indemnify and hold harmless Registry Operator and ICANN, and each of their respective directors, officers, agents, employees, members, and stockholders (“Indemnitees”) absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys’ fees and costs, that may be asserted by a third party against any Indemnitee in connection with the misrepresentation, negligence or misconduct of Escrow Agent or its directors, officers, agents, employees and contractors.

## SPECIFICATION 3

### FORMAT AND CONTENT FOR REGISTRY OPERATOR MONTHLY REPORTING

Registry Operator shall provide one set of monthly reports per gTLD, using the API described in draft-lozano-icann-registry-interfaces, see Specification 2, Part A, Section 9, reference 5, with the following content.

ICANN may request in the future that the reports be delivered by other means and using other formats. ICANN will use reasonable commercial efforts to preserve the confidentiality of the information reported until three (3) months after the end of the month to which the reports relate. Unless set forth in this Specification 3, any reference to a specific time refers to Coordinated Universal Time (UTC). Monthly reports shall consist of data that reflects the state of the registry at the end of the month (UTC).

1. **Per-Registrar Transactions Report.** This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-transactions-yyyymm.csv” where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields per registrar:

Field #	Field name	Description
01	registrar-name	Registrar’s full corporate name as registered with IANA
02	iana-id	For cases where the registry operator acts as registrar (i.e., without the use of an ICANN accredited registrar) either 9998 or 9999 should be used depending on registration type (as described in Specification 5), otherwise the sponsoring Registrar IANA id should be used as specified in <a href="http://www.iana.org/assignments/registrar-ids">http://www.iana.org/assignments/registrar-ids</a>
03	total-domains	total domain names under sponsorship in any EPP status but pendingCreate that have not been purged
04	total-nameservers	total name servers (either host objects or name server hosts as domain name attributes) associated with domain names registered for the TLD in any EPP status but pendingCreate that have not been purged
05	net-adds-1-yr	number of domains successfully registered (i.e., not in EPP pendingCreate status) with an initial term of one (1) year (and not deleted within the add grace period). A transaction must be reported in the month the add grace period ends.
06	net-adds-2-yr	number of domains successfully registered (i.e., not in EPP pendingCreate status) with

		deleted within the add grace period). A transaction must be reported in the month the add grace period ends.
15	net-renews-1-yr	number of domains successfully renewed (i.e., not in EPP pendingRenew status) either automatically or by command with a new renewal period of one (1) year (and not deleted within the renew or auto-renew grace period). A transaction must be reported in the month the renew or auto-renew grace period ends.
16	net-renews-2-yr	number of domains successfully renewed (i.e., not in EPP pendingRenew status) either automatically or by command with a new renewal period of two (2) years (and not deleted within the renew or auto-renew grace period). A transaction must be reported in the month the renew or auto-renew grace period ends.
17	net-renews-3-yr	number of domains successfully renewed (i.e., not in EPP pendingRenew status) either automatically or by command with a new renewal period of three (3) years (and not deleted within the renew or auto-renew grace period). A transaction must be reported in the month the renew or auto-renew grace period ends.
18	net-renews-4-yr	number of domains successfully renewed (i.e., not in EPP pendingRenew status) either automatically or by command with a new renewal period of four (4) years (and not deleted within the renew or auto-renew grace period). A transaction must be reported in the month the renew or auto-renew grace period ends.
19	net-renews-5-yr	number of domains successfully renewed (i.e., not in EPP pendingRenew status) either automatically or by command with a new renewal period of five (5) years (and not deleted within the renew or auto-renew grace period). A transaction must be reported in the month the renew or auto-renew grace period ends.
20	net-renews-6-yr	number of domains successfully renewed (i.e., not in EPP pendingRenew status) either automatically or by command with a new renewal period of six (6) years (and not deleted within the renew or auto-renew grace period). A transaction must be

		reported in the month the renew or auto-renew grace period ends.
21	net-renews-7-yr	number of domains successfully renewed (i.e., not in EPP pendingRenew status) either automatically or by command with a new renewal period of seven (7) years (and not deleted within the renew or auto-renew grace period). A transaction must be reported in the month the renew or auto-renew grace period ends.
22	net-renews-8-yr	number of domains successfully renewed (i.e., not in EPP pendingRenew status) either automatically or by command with a new renewal period of eight (8) years (and not deleted within the renew or auto-renew grace period). A transaction must be reported in the month the renew or auto-renew grace period ends.
23	net-renews-9-yr	number of domains successfully renewed (i.e., not in EPP pendingRenew status) either automatically or by command with a new renewal period of nine (9) years (and not deleted within the renew or auto-renew grace period). A transaction must be reported in the month the renew or auto-renew grace period ends.
24	net-renews-10-yr	number of domains successfully renewed (i.e., not in EPP pendingRenew status) either automatically or by command with a new renewal period of ten (10) years (and not deleted within the renew or auto-renew grace period). A transaction must be reported in the month the renew or auto-renew grace period ends.
25	transfer-gaining-successful	number of domain transfers initiated by this registrar that were successfully completed (either explicitly or automatically approved) and not deleted within the transfer grace period. A transaction must be reported in the month the transfer grace period ends.
26	transfer-gaining-nacked	number of domain transfers initiated by this registrar that were rejected (e.g., EPP transfer op="reject") by the other registrar
27	transfer-losing-successful	number of domain transfers initiated by another registrar that were successfully completed (either explicitly or automatically approved)

28	transfer-losing-nacked	number of domain transfers initiated by another registrar that this registrar rejected (e.g., EPP transfer op="reject")
29	transfer-disputed-won	number of transfer disputes in which this registrar prevailed (reported in the month where the determination happened)
30	transfer-disputed-lost	number of transfer disputes this registrar lost (reported in the month where the determination happened)
31	transfer-disputed-nodecision	number of transfer disputes involving this registrar with a split or no decision (reported in the month where the determination happened)
32	deleted-domains-grace	domains deleted within the add grace period (does not include names deleted while in EPP pendingCreate status). A deletion must be reported in the month the name is purged.
33	deleted-domains-nograce	domains deleted outside the add grace period (does not include names deleted while in EPP pendingCreate status). A deletion must be reported in the month the name is purged.
34	restored-domains	domain names restored during reporting period
35	restored-noreport	total number of restored names for which a restore report is required by the registry, but the registrar failed to submit it
36	agp-exemption-requests	total number of AGP (add grace period) exemption requests
37	agp-exemptions-granted	total number of AGP (add grace period) exemption requests granted
38	agp-exempted-domains	total number of names affected by granted AGP (add grace period) exemption requests
39	attempted-adds	number of attempted (both successful and failed) domain name create commands

The first line shall include the field names exactly as described in the table above as a "header line" as described in section 2 of RFC 4180. The last line of each report shall include totals for each column across all registrars; the first field of this line shall read "Totals" while the second field shall be left empty in that line. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

2. **Registry Functions Activity Report.** This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-activity-yyyymm.csv”, where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields:

Field #	Field Name	Description
01	operational-registrars	number of operational registrars in the production system at the end of the reporting period
02	zfa-passwords	number of active zone file access passwords at the end of the reporting period; "CZDS" may be used instead of the number of active zone file access passwords, if the Centralized Zone Data Service (CZDS) is used to provide the zone file to the end user
03	whois-43-queries	number of WHOIS (port-43) queries responded during the reporting period
04	web-whois-queries	number of Web-based Whois queries responded during the reporting period, not including searchable Whois
05	searchable-whois-queries	number of searchable Whois queries responded during the reporting period, if offered
06	dns-udp-queries-received	number of DNS queries received over UDP transport during the reporting period
07	dns-udp-queries-responded	number of DNS queries received over UDP transport that were responded during the reporting period
08	dns-tcp-queries-received	number of DNS queries received over TCP transport during the reporting period
09	dns-tcp-queries-responded	number of DNS queries received over TCP transport that were responded during the reporting period
10	srs-dom-check	number of SRS (EPP and any other interface) domain name “check” requests responded during the reporting period
11	srs-dom-create	number of SRS (EPP and any other interface) domain name “create” requests responded during the reporting period
12	srs-dom-delete	number of SRS (EPP and any other interface) domain name “delete” requests responded during the reporting period
13	srs-dom-info	number of SRS (EPP and any other interface) domain name “info” requests responded during the reporting period
14	srs-dom-renew	number of SRS (EPP and any other interface) domain name “renew” requests responded

Field #	Field Name	Description
		during the reporting period
15	srs-dom-rgp-restore-report	number of SRS (EPP and any other interface) domain name RGP "restore" requests delivering a restore report responded during the reporting period
16	srs-dom-rgp-restore-request	number of SRS (EPP and any other interface) domain name RGP "restore" requests responded during the reporting period
17	srs-dom-transfer-approve	number of SRS (EPP and any other interface) domain name "transfer" requests to approve transfers responded during the reporting period
18	srs-dom-transfer-cancel	number of SRS (EPP and any other interface) domain name "transfer" requests to cancel transfers responded during the reporting period
19	srs-dom-transfer-query	number of SRS (EPP and any other interface) domain name "transfer" requests to query about a transfer responded during the reporting period
20	srs-dom-transfer-reject	number of SRS (EPP and any other interface) domain name "transfer" requests to reject transfers responded during the reporting period
21	srs-dom-transfer-request	number of SRS (EPP and any other interface) domain name "transfer" requests to request transfers responded during the reporting period
22	srs-dom-update	number of SRS (EPP and any other interface) domain name "update" requests (not including RGP restore requests) responded during the reporting period
23	srs-host-check	number of SRS (EPP and any other interface) host "check" requests responded during the reporting period
24	srs-host-create	number of SRS (EPP and any other interface) host "create" requests responded during the reporting period
25	srs-host-delete	number of SRS (EPP and any other interface) host "delete" requests responded during the reporting period
26	srs-host-info	number of SRS (EPP and any other interface) host "info" requests responded during the reporting period
27	srs-host-update	number of SRS (EPP and any other interface) host "update" requests responded during the reporting period
28	srs-cont-check	number of SRS (EPP and any other interface) contact "check" requests responded during the reporting period

Field #	Field Name	Description
29	srs-cont-create	number of SRS (EPP and any other interface) contact “create” requests responded during the reporting period
30	srs-cont-delete	number of SRS (EPP and any other interface) contact “delete” requests responded during the reporting period
31	srs-cont-info	number of SRS (EPP and any other interface) contact “info” requests responded during the reporting period
32	srs-cont-transfer-approve	number of SRS (EPP and any other interface) contact “transfer” requests to approve transfers responded during the reporting period
33	srs-cont-transfer-cancel	number of SRS (EPP and any other interface) contact “transfer” requests to cancel transfers responded during the reporting period
34	srs-cont-transfer-query	number of SRS (EPP and any other interface) contact “transfer” requests to query about a transfer responded during the reporting period
35	srs-cont-transfer-reject	number of SRS (EPP and any other interface) contact “transfer” requests to reject transfers responded during the reporting period
36	srs-cont-transfer-request	number of SRS (EPP and any other interface) contact “transfer” requests to request transfers responded during the reporting period
37	srs-cont-update	number of SRS (EPP and any other interface) contact “update” requests responded during the reporting period

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

For gTLDs that are part of a single-instance Shared Registry System, the Registry Functions Activity Report may include the total contact or host transactions for all the gTLDs in the system.

## SPECIFICATION 4

### REGISTRATION DATA PUBLICATION SERVICES

1. **Registration Data Directory Services.** Until ICANN requires a different protocol, Registry Operator will operate a WHOIS service available via port 43 in accordance with RFC 3912, and a web-based Directory Service at <whois.nic.TLD> providing free public query-based access to at least the following elements in the following format. ICANN reserves the right to specify alternative formats and protocols, and upon such specification, the Registry Operator will implement such alternative specification as soon as reasonably practicable.

Registry Operator shall implement a new standard supporting access to domain name registration data (SAC 051) no later than one hundred thirty-five (135) days after it is requested by ICANN if: 1) the IETF produces a standard (i.e., it is published, at least, as a Proposed Standard RFC as specified in RFC 2026); and 2) its implementation is commercially reasonable in the context of the overall operation of the registry.

- 1.1. The format of responses shall follow a semi-free text format outline below, followed by a blank line and a legal disclaimer specifying the rights of Registry Operator, and of the user querying the database.
- 1.2. Each data object shall be represented as a set of key/value pairs, with lines beginning with keys, followed by a colon and a space as delimiters, followed by the value.
- 1.3. For fields where more than one value exists, multiple key/value pairs with the same key shall be allowed (for example to list multiple name servers). The first key/value pair after a blank line should be considered the start of a new record, and should be considered as identifying that record, and is used to group data, such as hostnames and IP addresses, or a domain name and registrant information, together.
- 1.4. The fields specified below set forth the minimum output requirements. Registry Operator may output data fields in addition to those specified below, subject to approval by ICANN, which approval shall not be unreasonably withheld.

- 1.5. **Domain Name Data:**

- 1.5.1 **Query format:** whois EXAMPLE.TLD

- 1.5.2 **Response format:**

Domain Name: EXAMPLE.TLD  
 Domain ID: D1234567-TLD

## 1.7. Nameserver Data:

1.7.1 **Query format:** whois “nameserver (nameserver name)”, or whois “nameserver (IP Address).” For example: whois “nameserver NS1.EXAMPLE.TLD”.

### 1.7.2 Response format:

Server Name: NS1.EXAMPLE.TLD  
 IP Address: 192.0.2.123  
 IP Address: 2001:0DB8::1  
 Registrar: Example Registrar, Inc.  
 WHOIS Server: whois.example-registrar.tld  
 Referral URL: http://www.example-registrar.tld  
 >>> Last update of WHOIS database: 2009-05-29T20:15:00Z <<<

1.8. The format of the following data fields: domain status, individual and organizational names, address, street, city, state/province, postal code, country, telephone and fax numbers (the extension will be provided as a separate field as shown above), email addresses, date and times should conform to the mappings specified in EPP RFCs 5730-5734 so that the display of this information (or values return in WHOIS responses) can be uniformly processed and understood.

1.9. In order to be compatible with ICANN’s common interface for WHOIS (InterNIC), WHOIS output shall be in the format outline above.

section.

- 1.10.1 Registry Operator will offer searchability on the web-based Directory Service.
- 1.10.2 Registry Operator will offer partial match capabilities, at least, on the following fields: domain name, contacts and registrant's name, and contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.).
- 1.10.3 Registry Operator will offer exact-match capabilities, at least, on the following fields: Registrar ID, name server name, and name server's IP address (only applies to IP addresses stored by the registry, i.e., glue records).
- 1.10.4 Registry Operator will offer Boolean search capabilities supporting, at least, the following logical operators to join a set of search criteria: AND, OR, NOT.
- 1.10.5 Search results will include domain names matching the search criteria.
- 1.10.6 Registry Operator will: 1) implement appropriate measures to avoid abuse of this feature (e.g., permitting access only to legitimate authorized users); and 2) ensure the feature is in compliance with any applicable privacy laws or policies.
- 1.11. Registry Operator shall provide a link on the primary website for the TLD (i.e., the website provided to ICANN for publishing on the ICANN website) to a web page designated by ICANN containing WHOIS policy and educational materials.

## 2. Zone File Access

### 2.1. Third-Party Access

- 2.1.1 **Zone File Access Agreement.** Registry Operator will enter into an agreement with any Internet user, which will allow such user to access an Internet host server or servers designated by Registry Operator and download zone file data. The agreement will be standardized, facilitated and administered by a Centralized Zone Data Access Provider, which may be ICANN or an ICANN designee (the "CZDA Provider"). Registry Operator (optionally through the CZDA Provider) will provide access to zone file data per Section 2.1.3 of this Specification and do so using the format described in Section 2.1.4 of this Specification. Notwithstanding the foregoing, (a) the CZDA Provider may reject the request for access of any user that does not satisfy the credentialing requirements in Section 2.1.2 below; (b) Registry Operator may reject the request for access of any user that does not provide correct or legitimate credentials under Section 2.1.2 below or where Registry Operator reasonably believes will violate the terms of Section 2.1.5. below; and, (c) Registry Operator may revoke access of any user if Registry Operator has evidence to support that the user has violated the terms of Section 2.1.5 below.
- 2.1.2 **Credentialing Requirements.** Registry Operator, through the facilitation of the CZDA Provider, will request each user to provide it with information sufficient to correctly identify and locate the user. Such user information will include, without limitation, company name, contact name, address, telephone number, facsimile number, email address and IP address.

**2.1.3 Grant of Access.** Each Registry Operator (optionally through the CZDA Provider) will provide the Zone File SFTP (or other Registry supported) service for an ICANN specified and managed URL (specifically, <TLD>.zda.icann.org where <TLD> is the TLD for which the registry is responsible) for the user to access the Registry's zone data archives. Registry Operator will grant the user a non-exclusive, nontransferable, limited right to access Registry Operator's (optionally CZDA Provider's) Zone File hosting server, and to transfer a copy of the top-level domain zone files, and any associated cryptographic checksum files no more than once per 24 hour period using SFTP, or other data transport and access protocols that may be prescribed by ICANN. For every zone file access server, the zone files are in the top-level directory called <zone>.zone.gz, with <zone>.zone.gz.md5 and <zone>.zone.gz.sig to verify downloads. If the Registry Operator (or the CZDA Provider) also provides historical data, it will use the naming pattern <zone>-yyyymmdd.zone.gz, etc.

**2.1.4 File Format Standard.** Registry Operator (optionally through the CZDA Provider) will provide zone files using a subformat of the standard Master File format as originally defined in RFC 1035, Section 5, including all the records present in the actual zone used in the public DNS. Sub-format is as follows:

1. Each record must include all fields in one line as: <domain-name> <TTL> <class> <type> <RDATA>.
2. Class and Type must use the standard mnemonics and must be in lower case.
3. TTL must be present as a decimal integer.
4. Use of \X and \DDD inside domain names is allowed.
5. All domain names must be in lower case.
6. Must use exactly one tab as separator of fields inside a record.
7. All domain names must be fully qualified.
8. No \$ORIGIN directives.
9. No use of "@" to denote current origin.
10. No use of "blank domain names" at the beginning of a record to continue the use of the domain name in the previous record.
11. No \$INCLUDE directives.
12. No \$TTL directives.
13. No use of parentheses, e.g., to continue the list of fields in a record across a line boundary.
14. No use of comments.

15. No blank lines.

16. The SOA record should be present at the top and (duplicated at) the end of the zone file.
17. With the exception of the SOA record, all the records in a file must be in alphabetical order.
18. One zone per file. If a TLD divides its DNS data into multiple zones, each zone goes into a separate file named as above, with all the files combined using tar into a file called <tld>.zone.tar.

2.1.5 **Use of Data by User.** Registry Operator will permit user to use the zone file for lawful purposes; provided that (a) user takes all reasonable steps to protect against unauthorized access to, use of, and disclosure of the data, and (b) under no circumstances will Registry Operator be required or permitted to allow user to use the data to (i) allow, enable or otherwise support any marketing activities to entities other than the user's existing customers, regardless of the medium used (such media include but are not limited to transmission by e-mail, telephone, facsimile, postal mail, SMS, and wireless alerts of mass unsolicited, commercial advertising or solicitations to entities), (ii) enable high volume, automated, electronic processes that send queries or data to the systems of Registry Operator or any ICANN-accredited registrar, or (iii) interrupt, disrupt or interfere in the normal business operations of any registrant.

2.1.6 **Term of Use.** Registry Operator, through CZDA Provider, will provide each user with access to the zone file for a period of not less than three (3) months. Registry Operator will allow users to renew their Grant of Access.

2.1.7 **No Fee for Access.** Registry Operator will provide, and CZDA Provider will facilitate access to the zone file to user at no cost.

## 2.2. Co-operation

2.2.1 **Assistance.** Registry Operator will co-operate and provide reasonable assistance to ICANN and the CZDA Provider to facilitate and maintain the efficient access of zone file data by permitted users as contemplated under this Schedule.

2.3. **ICANN Access.** Registry Operator shall provide bulk access to the zone files for the TLD to ICANN or its designee on a continuous basis in the manner ICANN may reasonably specify from time to time. Access will be provided at least daily. Zone files will include SRS data committed as close as possible to 00:00:00 UTC.

2.4. **Emergency Operator Access.** Registry Operator shall provide bulk access to the zone files for the TLD to the Emergency Operators designated by ICANN on a continuous basis in the manner ICANN may reasonably specify from time to time.

## 3. Bulk Registration Data Access to ICANN

3.1. **Periodic Access to Thin Registration Data.** In order to verify and ensure the operational stability of Registry Services as well as to facilitate compliance checks on accredited registrars, Registry Operator will provide ICANN on a weekly basis (the day to be designated by ICANN) with up-to-date Registration Data as specified below. Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for

- 3.1.1 **Contents.** Registry Operator will provide, at least, the following data for all registered domain names: domain name, domain name repository object id (roid), Registrar ID (IANA ID), statuses, last updated date, creation date, expiration date, and name server names. For sponsoring registrars, at least, it will provide: registrar name, registrar id (IANA ID), hostname of registrar Whois server, and UR of registrar.
- 3.1.2 **Format.** The data will be provided in the format specified in Specification 2 for Data Escrow (including encryption, signing, etc.) but including only the fields mentioned in the previous section, i.e., the file will only contain Domain and Registrar objects with the fields mentioned above. Registry Operator has the option to provide a full deposit file instead as specified in Specification 2.
- 3.1.3 **Access.** Registry Operator will have the file(s) ready for download as of 00:00:00 UTC on the day designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, though ICANN may request other means in the future.
- 3.2. **Exceptional Access to Thick Registration Data.** In case of a registrar failure, deaccreditation, court order, etc. that prompts the temporary or definitive transfer of its domain names to another registrar, at the request of ICANN, Registry Operator will provide ICANN with up-to-date data for the domain names of the losing registrar. The data will be provided in the format specified in Specification 2 for Data Escrow. The file will only contain data related to the domain names of the losing registrar. Registry Operator will provide the data as soon as commercially practicable, but in no event later than five (5) calendar days following ICANN's request. Unless otherwise agreed by Registry Operator and ICANN, the file will be made available for download by ICANN in the same manner as the data specified in Section 3.1 of this Specification.

## SPECIFICATION 5

### SCHEDULE OF RESERVED NAMES

Except to the extent that ICANN otherwise expressly authorizes in writing, and subject to the terms and conditions of this Specification, Registry Operator shall reserve the following labels from initial (i.e., other than renewal) registration within the TLD. If using self-allocation, the Registry Operator must show the registration in the RDDS. In the case of IDN names (as indicated below), IDN variants will be identified according to the registry operator IDN registration policy, where applicable.

1. **Example.** The ASCII label “EXAMPLE” shall be withheld from registration or allocated to Registry Operator at the second level and at all other levels within the TLD at which Registry Operator offers registrations (such second level and all other levels are collectively referred to herein as, “All Levels”). Such label may not be activated in the DNS, and may not be released for registration to any person or entity other than Registry Operator. Upon conclusion of Registry Operator’s designation as operator of the registry for the TLD, such withheld or allocated label shall be transferred as specified by ICANN. Registry Operator may self-allocate and renew such name without use of an ICANN accredited registrar, which will not be considered Transactions for purposes of Section 6.1 of the Agreement.
2. **Two-character labels.** All two-character ASCII labels shall be withheld from registration or allocated to Registry Operator at the second level within the TLD. Such labels may not be activated in the DNS, and may not be released for registration to any person or entity other than Registry Operator, provided that such two-character label strings may be released to the extent that Registry Operator reaches agreement with the related government and country-code manager of the string as specified in the ISO 3166-1 alpha-2 standard. The Registry Operator may also propose the release of these reservations based on its implementation of measures to avoid confusion with the corresponding country codes, subject to approval by ICANN. Upon conclusion of Registry Operator’s designation as operator of the registry for the TLD, all such labels that remain withheld from registration or allocated to Registry Operator shall be transferred as specified by ICANN. Registry Operator may self-allocate and renew such names without use of an ICANN accredited registrar, which will not be considered Transactions for purposes of Section 6.1 of the Agreement.
3. **Reservations for Registry Operations.**
  - 3.1. The following ASCII labels must be withheld from registration or allocated to Registry Operator at All Levels for use in connection with the operation of the registry for the TLD: WWW, RDDS and WHOIS. The following ASCII label must be allocated to Registry Operator upon delegation into the root zone at All Levels for use in connection with the operation of the registry for the TLD: NIC. Registry Operator may activate WWW, RDDS and WHOIS in the DNS, but must activate NIC in the DNS, as necessary for the operation of the TLD (in accordance with the provisions of Exhibit A, the ASCII label NIC must be provisioned in the DNS as a zone cut using NS resource records). None of WWW, RDDS, WHOIS or NIC may be released or registered to any person (other than Registry Operator) or third party. Upon conclusion of Registry Operator’s designation as operator of the registry for the TLD, all such withheld or allocated names shall be transferred as specified by ICANN. Registry Operator may self-allocate and renew such names without use of an ICANN accredited registrar, which will not be considered Transactions for purposes of Section 6.1 of the Agreement. Such domains shall be identified by Registrar ID 9999.

4. **Country and Territory Names.** The country and territory names (including their IDN variants, where applicable) contained in the following internationally recognized lists shall be withheld from registration or allocated to Registry Operator at All Levels:
- 4.1. the short form (in English) of all country and territory names contained on the ISO 3166-1 list, as updated from time to time, including the European Union, which is exceptionally reserved on the ISO 3166-1 list, and its scope extended in August 1999 to any application needing to represent the name European Union  
<[http://www.iso.org/iso/support/country\\_codes/iso\\_3166\\_code\\_lists/iso-3166-1\\_decoding\\_table.htm](http://www.iso.org/iso/support/country_codes/iso_3166_code_lists/iso-3166-1_decoding_table.htm)>;
  - 4.2. the United Nations Group of Experts on Geographical Names, Technical Reference Manual for the Standardization of Geographical Names, Part III Names of Countries of the World; and
  - 4.3. the list of United Nations member states in 6 official United Nations languages prepared by the Working Group on Country Names of the United Nations Conference on the Standardization of Geographical Names;

provided, that the reservation of specific country and territory names (including their IDN variants according to the registry operator IDN registration policy, where applicable) may be released to the extent that Registry Operator reaches agreement with the applicable government(s). Registry Operator must not activate such names in the DNS; provided, that Registry Operator may propose the release of these reservations, subject to review by ICANN's Governmental Advisory Committee and approval by ICANN. Upon conclusion of Registry Operator's designation as operator of the registry for the TLD, all such names that remain withheld from registration or allocated to Registry Operator shall be transferred as specified by ICANN. Registry Operator may self-allocate and renew such names without use of an ICANN accredited registrar, which will not be considered Transactions for purposes of Section 6.1 of the Agreement.

5. **International Olympic Committee; International Red Cross and Red Crescent Movement.** As instructed from time to time by ICANN, the names (including their IDN variants, where applicable) relating to the International Olympic Committee, International Red Cross and Red Crescent Movement listed at <http://www.icann.org/en/resources/registries/reserved> shall be withheld from registration or allocated to Registry Operator at the second level within the TLD. Additional International Olympic Committee, International Red Cross and Red Crescent Movement names (including their IDN variants) may be added to the list upon ten (10) calendar days notice from ICANN to Registry Operator. Such names may not be activated in the DNS, and may not be released for registration to any person or entity other than Registry Operator. Upon conclusion of Registry Operator's designation as operator of the registry for the TLD, all such names withheld from registration or allocated to Registry Operator shall be transferred as specified by ICANN. Registry Operator may self-allocate and renew such names without use of an ICANN accredited registrar, which will not be considered Transactions for purposes of Section 6.1 of the Agreement.
6. **Intergovernmental Organizations.** As instructed from time to time by ICANN, Registry Operator will implement the protections mechanism determined by the ICANN Board of Directors relating to the protection of identifiers for Intergovernmental Organizations. A list of reserved names for this Section 6 is available at <http://www.icann.org/en/resources/registries/reserved>. Additional names (including their IDN variants) may be added to the list upon ten (10) calendar days notice from ICANN to Registry Operator. Any such protected identifiers for Intergovernmental

Organizations may not be activated in the DNS, and may not be released for registration to any person or entity other than Registry Operator. Upon conclusion of Registry Operator's designation as operator of the registry for the TLD, all such protected identifiers shall be transferred as specified by ICANN. Registry Operator may self-allocate and renew such names without use of an ICANN accredited registrar, which will not be considered Transactions for purposes of Section 6.1 of the Agreement.

## SPECIFICATION 6

### REGISTRY INTEROPERABILITY AND CONTINUITY SPECIFICATIONS

#### 1. Standards Compliance

- 1.1. **DNS.** Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF), including all successor standards, modifications or additions thereto relating to the DNS and name server operations including without limitation RFCs 1034, 1035, 1123, 1982, 2181, 2182, 3226, 3596, 3597, 4343, 5966 and 6891. DNS labels may only include hyphens in the third and fourth position if they represent valid IDNs (as specified above) in their ASCII encoding (e.g., “xn--ndk061n”).
- 1.2. **EPP.** Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to the provisioning and management of domain names using the Extensible Provisioning Protocol (EPP) in conformance with RFCs 5910, 5730, 5731, 5732 (if using host objects), 5733 and 5734. If Registry Operator implements Registry Grace Period (RGP), it will comply with RFC 3915 and its successors. If Registry Operator requires the use of functionality outside the base EPP RFCs, Registry Operator must document EPP extensions in Internet-Draft format following the guidelines described in RFC 3735. Registry Operator will provide and update the relevant documentation of all the EPP Objects and Extensions supported to ICANN prior to deployment.
- 1.3. **DNSSEC.** Registry Operator shall sign its TLD zone files implementing Domain Name System Security Extensions (“DNSSEC”). For the absence of doubt, Registry Operator shall sign the zone file of <TLD> and zone files used for in-bailiwick glue for the TLD’s DNS servers. During the Term, Registry Operator shall comply with RFCs 4033, 4034, 4035, 4509 and their successors, and follow the best practices described in RFC 6781 and its successors. If Registry Operator implements Hashed Authenticated Denial of Existence for DNS Security Extensions, it shall comply with RFC 5155 and its successors. Registry Operator shall accept public-key material from child domain names in a secure manner according to industry best practices. Registry shall also publish in its website the DNSSEC Practice Statements (DPS) describing critical security controls and procedures for key material storage, access and usage for its own keys and secure acceptance of registrants’ public-key material. Registry Operator shall publish its DPS following the format described in RFC 6841. DNSSEC validation must be active and use the IANA DNS Root Key Signing Key set (available at <https://www.iana.org/dnssec/files>) as a trust anchor for Registry Operator’s Registry Services making use of data obtained via DNS responses.
- 1.4. **IDN.** If the Registry Operator offers Internationalized Domain Names (“IDNs”), it shall comply with RFCs 5890, 5891, 5892, 5893 and their successors. Registry Operator shall comply with the ICANN IDN Guidelines at <http://www.icann.org/en/topics/idn/implementation-guidelines.htm>, as they may be amended, modified, or superseded from time to time. Registry Operator shall publish and keep updated its IDN Tables and IDN Registration Rules in the IANA Repository of IDN Practices.

corresponding IPv6 addresses registered with IANA. Registry Operator should follow “DNS IPv6 Transport Operational Guidelines” as described in BCP 91 and the recommendations and considerations described in RFC 4472. Registry Operator shall offer public IPv6 transport for its Registration Data Publication Services as defined in Specification 4 of this Agreement; e.g., Whois (RFC 3912), Web based Whois. Registry Operator shall offer public IPv6 transport for its Shared Registration System (SRS) to any Registrar, no later than six (6) months after receiving the first request in writing from a gTLD accredited Registrar willing to operate with the SRS over IPv6.

- 1.6. **IANA Rootzone Database.** In order to ensure that authoritative information about the TLD remains publicly available, Registry Operator shall submit a change request to the IANA functions operator updating any outdated or inaccurate DNS or WHOIS records of the TLD. Registry Operator shall use commercially reasonable efforts to submit any such change request no later than seven (7) calendar days after the date any such DNS or WHOIS records becomes outdated or inaccurate. Registry Operator must submit all change requests in accordance with the procedures set forth at <http://www.iana.org/domains/root>.
- 1.7. **Network Ingress Filtering.** Registry Operator shall implement network ingress filtering checks for its Registry Services as described in BCP 38 and BCP 84, which ICANN will also implement.

## 2. Registry Services

- 2.1. **Registry Services.** “Registry Services” are, for purposes of the Agreement, defined as the following: (a) those services that are operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry DNS servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by this Agreement; (b) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy as defined in Specification 1; (c) any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator; and (d) material changes to any Registry Service within the scope of (a), (b) or (c) above.
- 2.2. **Wildcard Prohibition.** For domain names which are either not registered, or the registrant has not supplied valid records such as NS records for listing in the DNS zone file or their status does not allow them to be published in the DNS, the use of DNS wildcard Resource Records as described in RFCs 1034 and 4592 or any other method or technology for synthesizing DNS Resources Records or using redirection within the DNS by the Registry is prohibited. When queried for such domain names the authoritative name servers must return a “Name Error” response (also known as NXDOMAIN), RCODE as described in RFC 1035 and related RFCs. This provision applies for all DNS zone files at all levels in the DNS tree for which the Registry Operator (or an affiliate engaged in providing Registration Services) maintains data, arranges for such maintenance, or derives revenue from such maintenance.

## 3. Registry Continuity

- 3.1. **High Availability.** Registry Operator will conduct its operations using network and geographically diverse, redundant servers (including network-level redundancy, end-nod

level redundancy and the implementation of a load balancing scheme where applicable) to ensure continued operation in the case of technical failure (widespread or local), or an extraordinary occurrence or circumstance beyond the control of the Registry Operator. Registry Operator's emergency operations department shall be available at all times to respond to extraordinary occurrences.

3.2. **Extraordinary Event.** Registry Operator will use commercially reasonable efforts to restore the critical functions of the registry within twenty-four (24) hours after the termination of an extraordinary event beyond the control of the Registry Operator and restore full system functionality within a maximum of forty-eight (48) hours following such event, depending on the type of critical function involved. Outages due to such an event will not be considered a lack of service availability.

3.3. **Business Continuity.** Registry Operator shall maintain a business continuity plan, which will provide for the maintenance of Registry Services in the event of an extraordinary event beyond the control of the Registry Operator or business failure of Registry Operator and may include the designation of a Registry Services continuity provider. If such plan includes the designation of a Registry Services continuity provider, Registry Operator shall provide the name and contact information for such Registry Services continuity provider to ICANN. In the case of an extraordinary event beyond the control of the Registry Operator where the Registry Operator cannot be contacted, Registry Operator consents that ICANN may contact the designated Registry Services continuity provider, if one exists. Registry Operator shall conduct Registry Services Continuity testing at least once per year.

#### 4. **Abuse Mitigation**

4.1. **Abuse Contact.** Registry Operator shall provide to ICANN and publish on its website its accurate contact details including a valid email and mailing address as well as a primary contact for handling inquiries related to malicious conduct in the TLD, and will provide ICANN with prompt notice of any changes to such contact details.

4.2. **Malicious Use of Orphan Glue Records.** Registry Operator shall take action to remove orphan glue records (as defined at <http://www.icann.org/en/committees/security/sac048.pdf>) when provided with evidence in written form that such records are present in connection with malicious conduct.

#### 5. **Supported Initial and Renewal Registration Periods**

5.1. **Initial Registration Periods.** Initial registrations of registered names may be made in the registry in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, initial registrations of registered names may not exceed ten (10) year

5.2. **Renewal Periods.** Renewal of registered names may be made in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, renewal of registered names may not extend their registration period beyond ten (10) years from the time of the renewal.

#### 6. **Name Collision Occurrence Management**

6.1. **No-Activation Period.** Registry Operator shall not activate any names in the DNS zone for the Registry TLD (except for "NIC") until at least 120 calendar days after the effective date of this agreement. Registry Operator may allocate names (subject to subsection 6.2 below

during this period only if Registry Operator causes registrants to be clearly informed of the inability to activate names until the No-Activation Period ends.

## 6.2. Name Collision Occurrence Assessment

- 6.2.1 Registry Operator shall not activate any names in the DNS zone for the Registry TLD except in compliance with a Name Collision Occurrence Assessment provided by ICANN regarding the Registry TLD. Registry Operator will either (A) implement the mitigation measures described in its Name Collision Occurrence Assessment before activating any second-level domain name, or (B) block those second-level domain names for which the mitigation measures as described in the Name Collision Occurrence Assessment have not been implemented and proceed with activating names that are not listed in the Assessment.
- 6.2.2 Notwithstanding subsection 6.2.1, Registry Operator may proceed with activation of names in the DNS zone without implementation of the measures set forth in Section 6.2.1 only if (A) ICANN determines that the Registry TLD is eligible for this alternative path to activation of names; and (B) Registry Operator blocks all second level domain names identified by ICANN and set forth at <http://newgtlds.icann.org/en/announcements-and-media/announcement-2-17nov13-en> as such list may be modified by ICANN from time to time. Registry Operator may activate names pursuant to this subsection and later activate names pursuant to subsection 6.2.1.
- 6.2.3 The sets of names subject to mitigation or blocking pursuant to Sections 6.2.1 and 6.2.2 will be based on ICANN analysis of DNS information including "Day in the Life of the Internet" data maintained by the DNS Operations, Analysis, and Research Center (DNS-OARC) <https://www.dns-oarc.net/oarc/data/ditl>.
- 6.2.4 Registry Operator may participate in the development by the ICANN community of process for determining whether and how these blocked names may be released.
- 6.2.5 If ICANN determines that the TLD is ineligible for the alternative path to activation of names, ICANN may elect not to delegate the TLD pending completion of the final Name Collision Occurrence Assessment for the TLD, and Registry Operator's completion of all required mitigation measures. Registry Operator understands that the mitigation measures required by ICANN as a condition to activation of names in the DNS zone for the TLD may include, without limitation, mitigation measures such as those described in Section 3.2 of the New gTLD Name Collision Occurrence Management Plan approved by the ICANN Board New gTLD Program Committee (NGPC) on 7 October 2013 as found at <http://www.icann.org/en/groups/board/documents/resolutions-new-gtld-annex-1-07oct13-en.pdf>.

## 6.3. Name Collision Report Handling

- 6.3.1 During the first two years after delegation of the TLD, Registry Operator's emergency operations department shall be available to receive reports, relayed by ICANN, alleging demonstrably severe harm from collisions with overlapping use of the names outside of the authoritative DNS.

- 6.3.2 Registry Operator shall develop an internal process for handling in an expedited

Operator may, to the extent necessary and appropriate, remove a recently activated name from the TLD zone for a period of up to two years in order to allow the affected party to make changes to its systems.

## SPECIFICATION 7

### MINIMUM REQUIREMENTS FOR RIGHTS PROTECTION MECHANISMS

1. **Rights Protection Mechanisms.** Registry Operator shall implement and adhere to the rights protection mechanisms (“RPMs”) specified in this Specification. In addition to such RPMs, Registry Operator may develop and implement additional RPMs that discourage or prevent registration of domain names that violate or abuse another party’s legal rights. Registry Operator will include all RPMs required by this Specification 7 and any additional RPMs developed and implemented by Registry Operator in the Registry-Registrar Agreement entered into by ICANN-accredited registrars authorized to register names in the TLD. Registry Operator shall implement in accordance with requirements set forth therein each of the mandatory RPMs set forth in the Trademark Clearinghouse as of the date hereof, as posted at <http://www.icann.org/en/resources/registries/tmch-requirements> (the “Trademark Clearinghouse Requirements”), which may be revised in immaterial respects by ICANN from time to time. Registry Operator shall not mandate that any owner of applicable intellectual property rights use any other trademark information aggregation, notification, or validation service in addition to or instead of the ICANN-designated Trademark Clearinghouse. If there is a conflict between the terms and conditions of this Agreement and the Trademark Clearinghouse Requirements, the terms and conditions of this Agreement shall control. Registry Operator must enter into a binding and enforceable Registry-Registrar Agreement with at least one ICANN accredited registrar authorizing such registrar(s) to register domain names in the TLD as follows:
  - a. if Registry Operator conducts a Qualified Launch Program or is authorized by ICANN to conduct an Approved Launch Program (as those terms are defined in the Trademark Clearinghouse Requirements), Registry Operator must enter into a binding and enforceable Registry-Registrar Agreement with at least one ICANN accredited registrar prior to allocating any domain names pursuant to such Qualified Launch Program or Approved Launch Program, as applicable;
  - b. if Registry Operator does not conduct a Qualified Launch Program or is not authorized by ICANN to conduct an Approved Launch Program, Registry Operator must enter into a binding and enforceable Registry-Registrar Agreement with at least one ICANN accredited registrar at least thirty (30) calendar days prior to the expiration date of the Sunrise Period (as defined in the Trademark Clearinghouse Requirements) for the TLD; or
  - c. if this Agreement contains a Specification 13, Registry Operator must enter into a binding and enforceable Registry-Registrar Agreement with at least one ICANN accredited registrar prior to the Claims Commencement Date (as defined in Specification 13).

Nothing in this Specification 7 shall limit or waive any other obligations or requirements of this Agreement applicable to Registry Operator, including Section 2.9(a) and Specification 9.

2. **Dispute Resolution Mechanisms.** Registry Operator will comply with the following dispute resolution mechanisms as they may be revised from time to time:
  - a. the Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) and the Registration Restriction Dispute Resolution Procedure (RRDRP) adopted by ICANN (posted at <http://www.icann.org/en/resources/registries/pddrp> and <http://www.icann.org/en/resources/registries/rrdrp>, respectively). Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy including for the avoidance of doubt the termination of the Registry

Agreement pursuant to Section 4.3(e) of the Agreement) following a determination by any PDDRP or RRDRP panel and to be bound by any such determination; and

- b. the Uniform Rapid Suspension system (“URS”) adopted by ICANN (posted at <http://www.icann.org/en/resources/registries/urs>), including the implementation of determinations issued by URS examiners.

## SPECIFICATION 8

### CONTINUED OPERATIONS INSTRUMENT

1. The Continued Operations Instrument shall (a) provide for sufficient financial resources to ensure the continued operation of the critical registry functions related to the TLD set forth in Section 6 of Specification 10 to this Agreement for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6<sup>th</sup>) anniversary of the Effective Date, and (b) be in the form of either (i) an irrevocable standby letter of credit, or (ii) an irrevocable cash escrow deposit, each meeting the requirements set forth in item 50(b) of Attachment to Module 2 – Evaluation Questions and Criteria – of the gTLD Applicant Guidebook, as published and supplemented by ICANN prior to the date hereof (which is hereby incorporated by reference into this Specification 8). Registry Operator shall use its best efforts to take all actions necessary or advisable to maintain in effect the Continued Operations Instrument for a period of six (6) years from the Effective Date, and to maintain ICANN as a third party beneficiary thereof. If Registry Operator elects to obtain an irrevocable standby letter of credit but the term required above is unobtainable, Registry Operator may obtain a letter of credit with a one-year term and an “evergreen provision,” providing for annual extensions, without amendment, for an indefinite number of additional periods until the issuing bank informs ICANN of its final expiration or until ICANN releases the letter of credit as evidenced in writing, if the letter of credit otherwise meets the requirements set forth in item 50(b) of Attachment to Module 2 – Evaluation Questions and Criteria – of the gTLD Applicant Guidebook, as published and supplemented by ICANN prior to the date hereof; provided, however, that if the issuing bank informs ICANN of the expiration of such letter of credit prior to the sixth (6th) anniversary of the Effective Date, such letter of credit must provide that ICANN is entitled to draw the funds secured by the letter of credit prior to such expiration. The letter of credit must require the issuing bank to give ICANN at least thirty (30) calendar days’ notice of any such expiration or non-renewal. If the letter of credit expires or is terminated at any time prior to the sixth (6th) anniversary of the Effective Date, Registry Operator will be required to obtain a replacement Continued Operations Instrument. ICANN may draw the funds under the original letter of credit, if the replacement Continued Operations Instrument is not in place prior to the expiration of the original letter of credit. Registry Operator shall provide to ICANN copies of all final documents relating to the Continued Operations Instrument and shall keep ICANN reasonably informed of material developments relating to the Continued Operations Instrument. Registry Operator shall not agree to, or permit, any amendment of, or waiver under, the Continued Operations Instrument or other documentation relating thereto without the prior written consent of ICANN (such consent not to be unreasonably withheld).
2. If, notwithstanding the use of best efforts by Registry Operator to satisfy its obligations under the preceding paragraph, the Continued Operations Instrument expires or is terminated by another party thereto, in whole or in part, for any reason, prior to the sixth anniversary of the Effective Date, Registry Operator shall promptly (i) notify ICANN of such expiration or termination and the reasons therefor and (ii) arrange for an alternative instrument that provides for sufficient financial resources to ensure the continued operation of the critical registry functions related to the TLD set forth in Section 6 of Specification 10 to this Agreement for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date (an Alternative Instrument). Any such Alternative Instrument shall be on terms no less

favorable to ICANN than the Continued Operations Instrument and shall otherwise be in form and substance reasonably acceptable to ICANN.

3. Notwithstanding anything to the contrary contained in this Specification 8, at any time, Registry Operator may replace the Continued Operations Instrument with an Alternative Instrument that (i) provides for sufficient financial resources to ensure the continued operation of the critical registry functions related to the TLD set forth in Section 6 of Specification 10 to this Agreement for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date, and (ii) contains terms no less favorable to ICANN than the Continued Operations Instrument and is otherwise in form and substance reasonably acceptable to ICANN. In the event Registry Operator replaces the Continued Operations Instrument either pursuant to paragraph 2 or this paragraph 3, the terms of this Specification 8 shall no longer apply with respect to the original Continuing Operations Instrument, but shall thereafter apply with respect to such Alternative Instrument(s), and such instrument shall thereafter be considered the Continued Operations Instrument for purposes of this Agreement.

## SPECIFICATION 9

### REGISTRY OPERATOR CODE OF CONDUCT

1. In connection with the operation of the registry for the TLD, Registry Operator will not, and will not allow any parent, subsidiary, Affiliate, subcontractor or other related entity, to the extent such party is engaged in the provision of Registry Services with respect to the TLD (each, a “Registry Related Party”), to:
  - a. directly or indirectly show any preference or provide any special consideration to any registrar with respect to operational access to registry systems and related registry services, unless comparable opportunities to qualify for such preferences or considerations are made available to all registrars on substantially similar terms and subject to substantially similar conditions;
  - b. register domain names in its own right, except for names registered through an ICANN accredited registrar; provided, however, that Registry Operator may (a) reserve names from registration pursuant to Section 2.6 of the Agreement and (b) may withhold from registration or allocate to Registry Operator up to one hundred (100) names pursuant to Section 3.2 of Specification 5;
  - c. register names in the TLD or sub-domains of the TLD based upon proprietary access to information about searches or resolution requests by consumers for domain names not yet registered (commonly known as, “front-running”); or
  - d. allow any Affiliated registrar to disclose Personal Data about registrants to Registry Operator or any Registry Related Party, except as reasonably necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such user data on substantially similar terms and subject to substantially similar conditions.
2. If Registry Operator or a Registry Related Party also operates as a provider of registrar or registrar-reseller services, Registry Operator will, or will cause such Registry Related Party to, ensure that such services are offered through a legal entity separate from Registry Operator, and maintain separate books of accounts with respect to its registrar or registrar-reseller operations
3. If Registry Operator or a Registry Related Party also operates as a provider of registrar or registrar-reseller services, Registry Operator will conduct internal reviews at least once per calendar year to ensure compliance with this Code of Conduct. Within twenty (20) calendar days following the end of each calendar year, Registry Operator will provide the results of the internal review, along with a certification executed by an executive officer of Registry Operator certifying as to Registry Operator’s compliance with this Code of Conduct, via email to an address to be provided by ICANN. (ICANN may specify in the future the form and contents of such reports or that the reports be delivered by other reasonable means.) Registry Operator agrees that ICANN may publicly post such results and certification; provided, however, ICANN shall not disclose Confidential Information contained in such results except in accordance with Section 7.15 of the Agreement.
4. Nothing set forth herein shall: (i) limit ICANN from conducting investigations of claims of Registry Operator’s non-compliance with this Code of Conduct; or (ii) provide grounds for Registry Operator to refuse to cooperate with ICANN in investigations of claims of Registry Operator’s non-compliance with this Code of Conduct.

5. Nothing set forth herein shall limit the ability of Registry Operator or any Registry Related Party, to enter into arms-length transactions in the ordinary course of business with a registrar or reseller with respect to products and services unrelated in all respects to the TLD.
6. Registry Operator may request an exemption to this Code of Conduct, and such exemption may be granted by ICANN in ICANN's reasonable discretion, if Registry Operator demonstrates to ICANN's reasonable satisfaction that (i) all domain name registrations in the TLD are registered to, and maintained by, Registry Operator for the exclusive use of Registry Operator or its Affiliate; (ii) Registry Operator does not sell, distribute or transfer control or use of any registrations in the TLD to any third party that is not an Affiliate of Registry Operator, and (iii) application of this Code of Conduct to the TLD is not necessary to protect the public interest.

## SPECIFICATION 10

### REGISTRY PERFORMANCE SPECIFICATIONS

#### 1. Definitions

- 1.1. **DNS.** Refers to the Domain Name System as specified in RFCs 1034, 1035, and related RFCs.
- 1.2. **DNSSEC proper resolution.** There is a valid DNSSEC chain of trust from the root trust anchor to a particular domain name, e.g., a TLD, a domain name registered under a TLD, etc.
- 1.3. **EPP.** Refers to the Extensible Provisioning Protocol as specified in RFC 5730 and related RFCs.
- 1.4. **IP address.** Refers to IPv4 or IPv6 addresses without making any distinction between the two. When there is need to make a distinction, IPv4 or IPv6 is used.
- 1.5. **Probes.** Network hosts used to perform (DNS, EPP, etc.) tests (see below) that are located at various global locations.
- 1.6. **RDDS.** Registration Data Directory Services refers to the collective of WHOIS and Web-based WHOIS services as defined in Specification 4 of this Agreement.
- 1.7. **RTT.** Round-Trip Time or RTT refers to the time measured from the sending of the first bit of the first packet of the sequence of packets needed to make a request until the reception of the last bit of the last packet of the sequence needed to receive the response. If the client does not receive the whole sequence of packets needed to consider the response as received, the request will be considered unanswered.
- 1.8. **SLR.** Service Level Requirement is the level of service expected for a certain parameter being measured in a Service Level Agreement (SLA).

#### 2. Service Level Agreement Matrix

	Parameter	SLR (monthly basis)
<b>DNS</b>	DNS service availability	0 min downtime = 100% availability
	DNS name server availability	≤ 432 min of downtime (≈ 99%)
	TCP DNS resolution RTT	≤ 1500 ms, for at least 95% of the queries
	UDP DNS resolution RTT	≤ 500 ms, for at least 95% of the queries
<b>RDDS</b>	DNS update time	≤ 60 min, for at least 95% of the probes
	RDDS availability	≤ 864 min of downtime (≈ 98%)
	RDDS query RTT	≤ 2000 ms, for at least 95% of the queries
<b>EPP</b>	RDDS update time	≤ 60 min, for at least 95% of the probes
	EPP service availability	≤ 864 min of downtime (≈ 98%)
	EPP session-command RTT	≤ 4000 ms, for at least 90% of the commands
	EPP query-command RTT	≤ 2000 ms, for at least 90% of the commands
	EPP transform-command RTT	≤ 4000 ms, for at least 90% of the commands

domain name being monitored. If a “**DNS test**” result is undefined/unanswered, the tested IP will be considered unavailable from that probe until it is time to make a new test.

- 3.9. **Collating the results from DNS probes.** The minimum number of active testing probes to consider a measurement valid is 20 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.
- 3.10. **Distribution of UDP and TCP queries.** DNS probes will send UDP or TCP “**DNS test**” approximating the distribution of these queries.
- 3.11. **Placement of DNS probes.** Probes for measuring DNS parameters shall be placed as near as possible to the DNS resolvers on the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

#### 4. **RDDS**

- 4.1. **RDDS availability.** Refers to the ability of all the RDDS services for the TLD, to respond to queries from an Internet user with appropriate data from the relevant Registry System. If 51% or more of the RDDS testing probes see any of the RDDS services as unavailable during a given time, the RDDS will be considered unavailable.
- 4.2. **WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the WHOIS response. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.
- 4.3. **Web-based-WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the HTTP response for only one HTTP request. If Registry Operator implements a multiple-step process to get to the information, only the last step shall be measured. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.
- 4.4. **RDDS query RTT.** Refers to the collective of “**WHOIS query RTT**” and “**Web-based-WHOIS query RTT**”.
- 4.5. **RDDS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, host or contact, up until the servers of the RDDS services reflect the changes made.
- 4.6. **RDDS test.** Means one query sent to a particular “**IP address**” of one of the servers of one of the RDDS services. Queries shall be about existing objects in the Registry System and the responses must contain the corresponding information otherwise the query will be considered unanswered. Queries with an **RTT** 5 times higher than the corresponding SLR will be considered as unanswered. The possible results to an RDDS test are: a number in milliseconds corresponding to the **RTT** or undefined/unanswered.
- 4.7. **Measuring RDDS parameters.** Every 5 minutes, RDDS probes will select one IP address from all the public-DNS registered “**IP addresses**” of the servers for each RDDS service of the TLD being monitored and make an “**RDDS test**” to each one. If an “**RDDS test**” result is undefined/unanswered, the corresponding RDDS service will be considered as unavailable from that probe until it is time to make a new test.

- 4.8. **Collating the results from RDDS probes.** The minimum number of active testing probes to consider a measurement valid is 10 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.
- 4.9. **Placement of RDDS probes.** Probes for measuring RDDS parameters shall be placed inside the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

## 5. EPP

- 5.1. **EPP service availability.** Refers to the ability of the TLD EPP servers as a group, to respond to commands from the Registry accredited Registrars, who already have credentials to the servers. The response shall include appropriate data from the Registry System. An EPP command with “**EPP command RTT**” 5 times higher than the corresponding SLR will be considered as unanswered. If 51% or more of the EPP testing probes see the EPP service as unavailable during a given time, the EPP service will be considered unavailable.
- 5.2. **EPP session-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a session command plus the reception of the EPP response for only one EPP session command. For the login command it will include packets needed for starting the TCP session. For the logout command it will include packets needed for closing the TCP session. EPP session commands are those described in section 2.9.1 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.
- 5.3. **EPP query-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a query command plus the reception of the EPP response for only one EPP query command. It does not include packets needed for the start or close of either the EPP or the TCP session. EPP query commands are those described in section 2.9.2 of EPP RFC 5730. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.
- 5.4. **EPP transform-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a transform command plus the reception of the EPP response for only one EPP transform command. It does not include packets needed for the start or close of either the EPP or the TCP session. EPP transform commands are those described in section 2.9.3 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.
- 5.5. **EPP command RTT.** Refers to “**EPP session-command RTT**”, “**EPP query-command RTT**” or “**EPP transform-command RTT**”.
- 5.6. **EPP test.** Means one EPP command sent to a particular “**IP address**” for one of the EPP servers. Query and transform commands, with the exception of “create”, shall be about existing objects in the Registry System. The response shall include appropriate data from the Registry System. The possible results to an EPP test are: a number in milliseconds corresponding to the “**EPP command RTT**” or undefined/unanswered.

- 5.7. **Measuring EPP parameters.** Every 5 minutes, EPP probes will select one “**IP address**” of

inside each category. If an “EPP test” result is undefined/unanswered, the EPP service will be considered as unavailable from that probe until it is time to make a new test.

- 5.8. **Collating the results from EPP probes.** The minimum number of active testing probes to consider a measurement valid is 5 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.
- 5.9. **Placement of EPP probes.** Probes for measuring EPP parameters shall be placed inside or close to Registrars points of access to the Internet across the different geographic regions and care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

## 6. Emergency Thresholds

The following matrix presents the emergency thresholds that, if reached by any of the services mentioned above for a TLD, would cause the emergency transition of the Registry for the TLD as specified in Section 2.13 of this Agreement.

Critical Function	Emergency Threshold
DNS Service	4-hour total downtime / week
DNSSEC proper resolution	4-hour total downtime / week
EPP	24-hour total downtime / week
RDDS	24-hour total downtime / week
Data Escrow	Reaching any of the criteria for the release of deposits described in Specification 2, Part B, Section 6.2 through Section 6.6.

## 7. Emergency Escalation

Escalation is strictly for purposes of notifying and investigating possible or potential issues in relation to monitored services. The initiation of any escalation and the subsequent cooperative investigations do not in themselves imply that a monitored service has failed its performance requirements.

Escalations shall be carried out between ICANN and Registry Operators, Registrars and Registry Operator, and Registrars and ICANN. Registry Operators and ICANN must provide said emergency operations departments. Current contacts must be maintained between ICANN and Registry Operators and published to Registrars, where relevant to their role in escalations, prior to any processing of an Emergency Escalation by all related parties, and kept current at all times.

### 7.1. **Emergency Escalation initiated by ICANN**

Upon reaching 10% of the Emergency thresholds as described in Section 6 of this Specification, ICANN’s emergency operations will initiate an Emergency Escalation with the relevant Registry Operator. An Emergency Escalation consists of the following minimum elements: electronic (i.e., email or SMS) and/or voice contact notification to the Registry Operator’s emergency operations department with detailed information concerning the issue being escalated, including evidence of monitoring failures, cooperative trouble-shooting of the monitoring failure between ICANN staff and the Registry Operator, and the commitment to begin the process of rectifying issues with either the monitoring service or the service being monitored.

## 7.2. Emergency Escalation initiated by Registrars

Registry Operator will maintain an emergency operations department prepared to handle emergency requests from registrars. In the event that a registrar is unable to conduct EPP transactions with the registry for the TLD because of a fault with the Registry Service and is unable to either contact (through ICANN mandated methods of communication) the Registry Operator, or the Registry Operator is unable or unwilling to address the fault, the registrar may initiate an emergency escalation to the emergency operations department of ICANN. ICANN then may initiate an emergency escalation with the Registry Operator as explained above.

## 7.3. Notifications of Outages and Maintenance

In the event that a Registry Operator plans maintenance, it will provide notice to the ICANN emergency operations department, at least, twenty-four (24) hours ahead of that maintenance. ICANN's emergency operations department will note planned maintenance times, and suspend Emergency Escalation services for the monitored services during the expected maintenance outage period.

If Registry Operator declares an outage, as per its contractual obligations with ICANN, on services under a service level agreement and performance requirements, it will notify the ICANN emergency operations department. During that declared outage, ICANN's emergency operations department will note and suspend emergency escalation services for the monitored services involved.

## 8. Covenants of Performance Measurement

- 8.1. **No interference.** Registry Operator shall not interfere with measurement **Probes**, including any form of preferential treatment of the requests for the monitored services. Registry Operator shall respond to the measurement tests described in this Specification as if it would to any other request from an Internet user (for DNS and RDDS) or registrar (for EPP).
- 8.2. **ICANN testing registrar.** Registry Operator agrees that ICANN will have a testing registrar used for purposes of measuring the **SLRs** described above. Registry Operator agrees to not provide any differentiated treatment for the testing registrar other than no billing of the transactions. ICANN shall not use the registrar for registering domain names (or other registry objects) for itself or others, except for the purposes of verifying contractual compliance with the conditions described in this Agreement. Registry Operator shall identify these transactions using Registrar ID 9997.

## SPECIFICATION 11

### PUBLIC INTEREST COMMITMENTS

1. Registry Operator will use only ICANN accredited registrars that are party to the Registrar Accreditation Agreement approved by the ICANN Board of Directors on 27 June 2013 in registering domain names. A list of such registrars shall be maintained by ICANN on ICANN's website.
2. Registry Operator will operate the registry for the TLD in compliance with all commitments, statements of intent and business plans stated in the following sections of Registry Operator's application to ICANN for the TLD, which commitments, statements of intent and business plans hereby incorporated by reference into this Agreement. Registry Operator's obligations pursuant to this paragraph shall be enforceable by ICANN and through the Public Interest Commitment Dispute Resolution Process established by ICANN (posted at <http://www.icann.org/en/resources/registries/picdrp>), which may be revised in immaterial respects by ICANN from time to time (the "PICDRP"). Registry Operator shall comply with the PICDRP. Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Agreement) following a determination by any PICDRP panel and to be bound by any such determination

[Registry Operator to insert specific application sections here, if applicable]

3. Registry Operator agrees to perform the following specific public interest commitments, which commitments shall be enforceable by ICANN and through the Public Interest Commitment Dispute Resolution Process established by ICANN (posted at <http://www.icann.org/en/resources/registries/picdrp>), which may be revised in immaterial respects by ICANN from time to time (the "PICDRP"). Registry Operator shall comply with the PICDRP. Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Agreement) following a determination by any PICDRP panel and to be bound by any such determination.
  - a. Registry Operator will include a provision in its Registry-Registrar Agreement that requires Registrars to include in their Registration Agreements a provision prohibiting Registered Name Holders from distributing malware, abusively operating botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law, and providing (consistent with applicable law and any related procedures) consequences for such activities including suspension of the domain name.
  - b. Registry Operator will periodically conduct a technical analysis to assess whether domains in the TLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. Registry Operator will maintain statistical reports on the number of security threats identified and the actions taken as a result of the periodic security checks. Registry Operator will maintain these reports for the term of the Agreement unless a shorter period is required by law or approved by ICANN, and will provide them to ICANN upon request.

- d. Registry Operator of a “Generic String” TLD may not impose eligibility criteria for registered names in the TLD that limit registrations exclusively to a single person or entity and/or to a person’s or entity’s “Affiliates” (as defined in Section 2.9(c) of the Registry Agreement). “Generic String” means a string consisting of a word or term that denominates or describes a general class of goods, services, groups, organizations or things, as opposed to distinguishing a specific brand of goods, services, groups, organizations or things from those of others.

–  
**SPECIFICATION 12**

**COMMUNITY REGISTRATION POLICIES**

Registry Operator shall implement and comply with all community registration policies described below and/or attached to this Specification 12.

### Relying on ICANN Community-Developed Processes for a Safe, Secure Internet

5 January 2022

By [John Jeffrey](#) and [Theresa Swinehart](#)

We have observed community discussions and received comments and questions about ICANN's top-level domain (TLD) Registry Agreement assignment approval process and a recent Urgent Reconsideration

**Recent Blogs**

[President and CEO Search Enters the Next Phase](#)  
[\(/en/blogs/details/president-](#)

Request considered by the ICANN Board Accountability Mechanisms Committee (BAMC). We believe it is important to provide context to some of these discussions.

### Proposed Assignments of TLD Registry Agreements

In May 2021, ICANN began receiving formal assignment notifications and requests for approval relating to the proposed assignments of top-level domain (TLD) Registry Agreements by UNR Corp. (UNR). With the exception of one TLD, the assignments are the result of private, non-ICANN affiliated auctions held by UNR for several of its TLDs in April 2021.

The UNR auctions offered these TLDs in an unconventional manner. The marketing materials and other communications associated with the UNR auctions indicated that the potential assignees would receive ownership rights, possibly denoting some form of property right or interest. The marketing materials also asserted that the potential assignees would have the power to control the entire name spaces of the TLDs in both the Domain Name System (DNS) and the Ethereum Name Service (ENS). This has led us to ask specific questions during our diligence to understand whether UNR was asserting authority in this regard. Additionally, the UNR offering included "newly minted NFTs" (non-fungible tokens) in the ENS for suffixes identical to the TLDs UNR operates under registry agreements with ICANN.

These assertions raised questions and concerns during our review, particularly with regard to ownership, as TLDs are not considered property. The statements also raise potential issues and consequences related to the Consensus Policies created by the ICANN community, name collisions, contractual compliance, predictability for users, consumer interests, and rights protection as it relates to receiving rights to a TLD in both the DNS and the ENS. Additionally, we are aware that some of the TLDs put out for auction by UNR are meant to support certain public interests, and therefore those Registry Agreements contain specific Public Interest Commitments or Community Registration Policies with unique and specific binding obligations on the registry operator.

Since May 2021, we have been conducting diligence of the proposed assignment requests to inform the decision of whether to approve the assignments. This diligence includes asking questions to ensure the proposed assignees meet the community-established criteria for a registry operator, as well as to ensure a clear understanding of the transactions and any impact such an approval could have on ICANN's remit and responsibilities. This is work ICANN does regularly, as we receive and process numerous transactions each year, some of which are simple and some more complex. This proposed assignment falls into the category of more complex and in this instance, it has been difficult to get clear answers to our questions resulting from the diligence process.

Since May, ICANN has repeatedly requested information and asked clarifying questions of UNR and the potential assignees. UNR and the potential assignees have provided, and continue to provide, additional

information throughout this process, including new answers as recently as 30 December 2021. ICANN is evaluating this new information.

Despite assertions made publicly, ICANN has not indicated that the issuance of NFTs was the primary concern relating to the transactions. ICANN questioned what purpose they serve. ICANN org has since been informed that the NFTs have been destroyed. This only serves to make the issue more confusing since the NFTs were marketed as enhancing the value of the offering, but now are set out as unimportant and of no value. There is no indication that the rights intended to be conferred did or did not exist, or where the authority to issue them or destroy them came from, or how that related to auctioning TLD's conferred via contracts with ICANN.

### **Urgent Reconsideration Request Submission**

On 14 December 2021, ICANN received an Urgent Reconsideration Request submitted by one of the potential assignees challenging alleged staff inaction on the requested assignment of one specific TLD, .HIPHOP. The BAMC concluded that the request did not meet the requirements for urgent reconsideration as mandated in ICANN's Bylaws.

While the BAMC considered the request for urgent treatment of the Reconsideration Request, it did not evaluate the merits of the request and determined that the Reconsideration Request will proceed under the regular time frame of the Reconsideration process set forth in the Bylaws. This process requires several steps, all of which are to be completed no later than 135 days from ICANN's receipt of the request, or 28 April 2022. More specifically, the BAMC must first decide if the request is sufficiently stated (see ICANN Bylaws, Article 4, section 4.2(k)). If so, then the ICANN Ombudsman must determine within 15 days of receipt (see Id., section 4.2(l)(ii)) if it is appropriate to evaluate the matter and make a recommendation to the BAMC, or to pass the matter directly to the BAMC. Following the Ombudsman step, the BAMC must then make a recommendation to the Board 30 days after receiving the Ombudsman's response, unless impractical (see Id., section 4.2 (q)). The Board must then make a final decision within 45 days of receipt of the BAMC recommendation, or as soon after as feasible, but in no event later than 135 days following ICANN org's receipt of the request (see Id., section 4.2(r)).

Representatives of .HIPHOP have made assertions that ICANN is retaliating against them by pausing the review of the request by UNR to assign that specific TLD while the matter is being considered under the Reconsideration Request process. Pausing review while an accountability mechanism is processed is a long-standing practice for ICANN, but we are considering the potential impact on the requestor as we have been requested to do. ICANN has often treated similarly situated requests evoking the ICANN Accountability Mechanisms by placing consideration by ICANN on hold, during the review phases, so that the information regarding the request can be reviewed without the information relating to such request shifting or changing during the review period, and to avoid Accountability Mechanisms from being used to pressure ICANN to make a

(<https://subscribe.icann.org>)

decision on any basis other than the public interest. We have received correspondence from UNR and are reviewing many pieces of correspondence, blogs, and community outreach from representatives of .HIPHOP since the original Reconsideration Request was filed and are concerned that the information and record is still evolving. That said, we are still seeking to continue to evaluate and review the totality of the UNR requests and thereby .HIPHOP, as the answers relate to them, as soon as possible.

## ICANN's Responsibility and Remit

ICANN enters into contractual agreements with registry operators by following Board-adopted, community-developed policies and processes, with the objective of establishing the rights, duties, and obligations required to operate TLDs. The intention of these agreements and the community-developed Consensus Policies are to protect domain name holders, rights holders, and end users by helping to maintain a stable, secure, and resilient DNS. Registry Operators adherence to these requirements are critical, and ICANN's means to enforce such obligations is through the Registry Agreements for TLDs in the DNS.

ICANN's responsibility is to consider and thoroughly evaluate all requests that impact the landscape of the Internet ecosystem or users' access to critical global resources. ICANN must conduct the necessary diligence to ensure that the potential gaining registry will abide by the commitments in the Registry Agreement. It would be irresponsible not to consider the implications before such a precedent is set.

We are providing this information to continue to enhance ICANN's performance of its responsibilities with accountability and transparency, following the processes decided by the global community and integrated into ICANN's Bylaws. As a nonprofit, public-benefit corporation with participants from all over the world, ICANN is conducting its work, within its mission, according to policies, processes, and accountability mechanisms as established by the community to ensure that the Internet continues to evolve in a safe, secure, and reliable manner.

Technology will always change and evolve, and the Internet will change and evolve, making way for new innovation, competition, and choice. The ICANN community is open to all participants, and open discussions about the Internet's unique identifiers. We all must consider how we together perform our areas of responsibility while also ensuring a stable, secure, predictable addressing system for users and economies globally.

Please note that the English language version of all translated content and documents are the official versions and that translations in other languages are for informational purposes only.

For registry operators subject to the base new gTLD (generic Top Level Domain) Registry Agreement ("Registry Agreement"), any proposed assignment of the Registry Agreement or direct or indirect change of control of the

registry operator must follow the process set forth in Section 7.5 of the Registry Agreement.

- **Assignment** (</resources/assignments>) - occurs when the registry operator transfers any of its rights and/or obligations under the Registry Agreement to another entity. Assignments can be classified as:
  - Assignment to Affiliated Assignee
  - Assignment to Existing Registry Operator
  - Assignment to New Registry Operator
- **Change of Control** (</resources/change-of-control>) - occurs when there is a change in the possession, directly or indirectly, of the power to direct or cause the direction of management or policies of the registry operator. Please refer to the definition of "control" in [Section 2.9](#) (<https://newgtlds.icann.org/sites/default/files/agreements/agreement-approved-31jul17-en.html#article2.9>)(c) of the Registry Agreement.

The review and approval processes for assignments or changes of control will follow related but distinct paths, which may vary depending on the specific set of circumstances surrounding the transaction. For further information and instructions on submitting a request, please visit the [Assignment](/resources/assignments) (</resources/assignments>) or [Change of Control](/resources/change-of-control) (</resources/change-of-control>) webpages.

If your request is related to a subcontracting arrangement of any Critical Function (as identified in Section 6 of [Specification 10](#) (<https://newgtlds.icann.org/sites/default/files/agreements/agreement-approved-31jul17-en.html#specification10>) of the Registry Agreement), please visit the [Material Subcontracting Arrangement \(MSA \(Material Subcontracting Agreement\)\)](#).

change webpage (/resources/material-subcontracting-arrangement) for further details. **When both an assignment of a Registry Agreement and MSA (Material Subcontracting Agreement) change are being contemplated simultaneously, please keep in mind the timing of submission because an MSA (Material Subcontracting Agreement) change request must be started and completed under the same registry operator.**

ICANN (Internet Corporation for Assigned Names and Numbers) organization encourages early engagement with your account manager when planning for these types of transactions to help you better understand the service request case(s) that may be applicable, including any timing considerations. To schedule a consultation call, registry operators may contact their account managers directly or open a General Inquiry case in the Naming Services portal (<https://portal.icann.org/>). Note that any such inquiries shall not be considered notice of an assignment or change of control as required by the Registry Agreement.

*Registry operators are not to construe any consultations with ICANN (Internet Corporation for Assigned Names and Numbers) organization as legal, business or tax advice. Each registry operator should consult its own attorney, accountant or other professional advisors concerning legal, business, tax, or other matters concerning the proposed assignment or change of control. No statement contained herein shall be deemed to modify or supplement in any way the provisions of the Registry Agreement. This webpage and the various linked webpages herein are resources and guides only and by no means limits ICANN (Internet Corporation for Assigned Names and Numbers)'s rights provided under the Registry Agreements or limits ICANN (Internet Corporation for Assigned Names and Numbers) in performing its diligence of the assignment requests.*

ICANN APPLICANT GUIDEBOOK NAMING SERVICES PORTAL GLOBAL SUPPORT

### OBJECTION DETERMINATIONS

In April 2013, ICANN published the [list of Objections](#) filed that passed the Dispute Resolution Service Providers' (DRSPs') administrative reviews. Determinations made by the expert panels are published in the Determination column of the table below. ICANN will update this table as new Determinations become available. The date listed in the Determination Date column represents the actual date of the Determination, which can be found in each PDF file. The Determination Publication Date column reflects the date that ICANN published the Determination.

More information on Objections and Determinations can be found on DRSP websites:

- [String Confusion Objections](#) (The International Center for Dispute Resolution)
- [Existing Legal Rights Objections](#) (WIPO Arbitration and Mediation Center)
- [Limited Public Interest Objections](#) (The International Center of Expertise of the International Chamber of Commerce)
- [Community Objections](#) (The International Center of Expertise of the International Chamber of Commerce)
