## ARTICLE I: MISSION AND CORE VALUES

### Section 1. MISSION

The mission of The Internet Corporation for Assigned Names and Numbers ("ICANN") is to coordinate, at the overall level, the global Internet's systems of unique identifiers, and in particular to ensure the stable and secure operation of the Internet's unique identifier systems. In particular, ICANN:

1. Coordinates the allocation and assignment of the three sets of unique identifiers for the Internet, which are
  - a. Domain names (forming a system referred to as "DNS");
  - b. Internet protocol ("IP") addresses and autonomous system ("AS") numbers; and
  - c. Protocol port and parameter numbers.
2. Coordinates the operation and evolution of the DNS root name server system.
3. Coordinates policy development reasonably and appropriately related to these technical functions.

### Section 2. CORE VALUES

In performing its mission, the following core values should guide the decisions and actions of ICANN:

1. Preserving and enhancing the operational stability, reliability, security, and global interoperability of the Internet.
2. Respecting the creativity, innovation, and flow of information made possible by the Internet by limiting ICANN's activities to those matters within ICANN's mission requiring or significantly benefiting from global coordination.
3. To the extent feasible and appropriate, delegating coordination functions to or recognizing the policy role of other responsible entities that reflect the interests of affected parties.
4. Seeking and supporting broad, informed participation reflecting the functional, geographic, and cultural diversity of the Internet at all levels of policy development and decision-making.
5. Where feasible and appropriate, depending on market mechanisms to

promote and sustain a competitive environment.

6. Introducing and promoting competition in the registration of domain names where practicable and beneficial in the public interest.
7. Employing open and transparent policy development mechanisms that (i) promote well-informed decisions based on expert advice, and (ii) ensure that those entities most affected can assist in the policy development process.
8. Making decisions by applying documented policies neutrally and objectively, with integrity and fairness.
9. Acting with a speed that is responsive to the needs of the Internet while, as part of the decision-making process, obtaining informed input from those entities most affected.
10. Remaining accountable to the Internet community through mechanisms that enhance ICANN's effectiveness.
11. While remaining rooted in the private sector, recognizing that governments and public authorities are responsible for public policy and duly taking into account governments' or public authorities' recommendations.

These core values are deliberately expressed in very general terms, so that they may provide useful and relevant guidance in the broadest possible range of circumstances. Because they are not narrowly prescriptive, the specific way in which they apply, individually and collectively, to each new situation will necessarily depend on many factors that cannot be fully anticipated or enumerated; and because they are statements of principle rather than practice, situations will inevitably arise in which perfect fidelity to all eleven core values simultaneously is not possible. Any ICANN body making a recommendation or decision shall exercise its judgment to determine which core values are most relevant and how they apply to the specific circumstances of the case at hand, and to determine, if necessary, an appropriate and defensible balance among competing values.

## ARTICLE II: POWERS

### Section 1. GENERAL POWERS

Except as otherwise provided in the Articles of Incorporation or these Bylaws, the powers of ICANN shall be exercised by, and its property controlled and its business and affairs conducted by or under the direction of, the Board. With respect to any matters that would fall within the provisions of [Article III](#),

[Section 6](#), the Board may act only by a majority vote of all members of the Board. In all other matters, except as otherwise provided in these Bylaws or by law, the Board may act by majority vote of those present at any annual, regular, or special meeting of the Board. Any references in these Bylaws to a vote of the Board shall mean the vote of only those members present at the meeting where a quorum is present unless otherwise specifically provided in these Bylaws by reference to "all of the members of the Board."

## **Section 2. RESTRICTIONS**

[ICANN](#) shall not act as a [Domain Name System Registry](#) or Registrar or [Internet Protocol Address Registry](#) in competition with entities affected by the policies of [ICANN](#). Nothing in this Section is intended to prevent [ICANN](#) from taking whatever steps are necessary to protect the operational stability of the Internet in the event of financial failure of a Registry or Registrar or other emergency.

## **Section 3. NON-DISCRIMINATORY TREATMENT**

[ICANN](#) shall not apply its standards, policies, procedures, or practices inequitably or single out any particular party for disparate treatment unless justified by substantial and reasonable cause, such as the promotion of effective competition.

# ARTICLE III: TRANSPARENCY

## **Section 1. PURPOSE**

[ICANN](#) and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness.

## **Section 2. WEBSITE**

[ICANN](#) shall maintain a publicly-accessible Internet World Wide Web site (the "Website"), which may include, among other things, (i) a calendar of scheduled meetings of the Board, [Supporting Organizations](#), and [Advisory Committees](#); (ii) a docket of all pending policy development matters, including their schedule and current status; (iii) specific meeting notices and agendas as described below; (iv) information on [ICANN's](#) budget, annual audit, financial contributors and the amount of their contributions, and related matters; (v) information about the availability of accountability mechanisms, including reconsideration, independent review, and Ombudsman activities, as well as information about the outcome of specific requests and complaints invoking these mechanisms; (vi) announcements about [ICANN](#) activities of

interest to significant segments of the ICANN community; (vii) comments received from the community on policies being developed and other matters; (viii) information about ICANN's physical meetings and public forums; and (ix) other information of interest to the ICANN community.

### **Section 3. MANAGER OF PUBLIC PARTICIPATION**

There shall be a staff position designated as Manager of Public Participation, or such other title as shall be determined by the President, that shall be responsible, under the direction of the President, for coordinating the various aspects of public participation in ICANN, including the Website and various other means of communicating with and receiving input from the general community of Internet users.

### **Section 4. MEETING NOTICES AND AGENDAS**

At least seven days in advance of each Board meeting (or if not practicable, as far in advance as is practicable), a notice of such meeting and, to the extent known, an agenda for the meeting shall be posted.

### **Section 5. MINUTES AND PRELIMINARY REPORTS**

1. All minutes of meetings of the Board and Supporting Organizations (and any councils thereof) shall be approved promptly by the originating body and provided to the ICANN Secretary for posting on the Website.
2. No later than 11:59 p.m. on the second business days after the conclusion of each meeting (as calculated by local time at the location of ICANN's principal office), any resolutions passed by the Board of Directors at that meeting shall be made publicly available on the Website; provided, however, that any actions relating to personnel or employment matters, legal matters (to the extent the Board determines it is necessary or appropriate to protect the interests of ICANN), matters that ICANN is prohibited by law or contract from disclosing publicly, and other matters that the Board determines, by a three-quarters (3/4) vote of Directors present at the meeting and voting, are not appropriate for public distribution, shall not be included in the preliminary report made publicly available. The Secretary shall send notice to the Board of Directors and the Chairs of the Supporting Organizations (as set forth in Articles VIII - X of these Bylaws) and Advisory Committees (as set forth in Article XI of these Bylaws) informing them that the resolutions have been posted.
3. No later than 11:59 p.m. on the seventh business days after the

conclusion of each meeting (as calculated by local time at the location of ICANN's principal office), any actions taken by the Board shall be made publicly available in a preliminary report on the Website, subject to the limitations on disclosure set forth in Section 5.2 above. For any matters that the Board determines not to disclose, the Board shall describe in general terms in the relevant preliminary report the reason for such nondisclosure.

4. No later than the day after the date on which they are formally approved by the Board (or, if such day is not a business day, as calculated by local time at the location of ICANN's principal office, then the next immediately following business day), the minutes shall be made publicly available on the Website; provided, however, that any minutes relating to personnel or employment matters, legal matters (to the extent the Board determines it is necessary or appropriate to protect the interests of ICANN), matters that ICANN is prohibited by law or contract from disclosing publicly, and other matters that the Board determines, by a three-quarters (3/4) vote of Directors present at the meeting and voting, are not appropriate for public distribution, shall not be included in the minutes made publicly available. For any matters that the Board determines not to disclose, the Board shall describe in general terms in the relevant minutes the reason for such nondisclosure.

#### **Section 6. NOTICE AND COMMENT ON POLICY ACTIONS**

1. With respect to any policies that are being considered by the Board for adoption that substantially affect the operation of the Internet or third parties, including the imposition of any fees or charges, ICANN shall:
  - a. provide public notice on the Website explaining what policies are being considered for adoption and why, at least twenty-one days (and if practical, earlier) prior to any action by the Board;
  - b. provide a reasonable opportunity for parties to comment on the adoption of the proposed policies, to see the comments of others, and to reply to those comments, prior to any action by the Board; and
  - c. in those cases where the policy action affects public policy concerns, to request the opinion of the Governmental Advisory Committee and take duly into account any advice timely presented by the Governmental Advisory Committee on its own initiative or at the Board's request.
2. Where both practically feasible and consistent with the relevant policy

development process, an in-person public forum shall also be held for discussion of any proposed policies as described in [Section 6\(1\)\(b\) of this Article](#), prior to any final Board action.

3. After taking action on any policy subject to this Section, the Board shall publish in the meeting minutes the reasons for any action taken, the vote of each Director voting on the action, and the separate statement of any Director desiring publication of such a statement.

## **Section 7. TRANSLATION OF DOCUMENTS**

As appropriate and to the extent provided in the ICANN budget, ICANN shall facilitate the translation of final published documents into various appropriate languages.

## **ARTICLE IV: ACCOUNTABILITY AND REVIEW**

### **Section 1. PURPOSE**

In carrying out its mission as set out in these Bylaws, ICANN should be accountable to the community for operating in a manner that is consistent with these Bylaws, and with due regard for the core values set forth in [Article I of these Bylaws](#). The provisions of this Article, creating processes for reconsideration and independent review of ICANN actions and periodic review of ICANN's structure and procedures, are intended to reinforce the various accountability mechanisms otherwise set forth in these Bylaws, including the transparency provisions of [Article III](#) and the Board and other selection mechanisms set forth throughout these Bylaws.

### **Section 2. RECONSIDERATION**

1. ICANN shall have in place a process by which any person or entity materially affected by an action of ICANN may request review or reconsideration of that action by the Board.
2. Any person or entity may submit a request for reconsideration or review of an ICANN action or inaction ("Reconsideration Request") to the extent that he, she, or it have been adversely affected by:
  - a. one or more staff actions or inactions that contradict established ICANN policy(ies); or
  - b. one or more actions or inactions of the ICANN Board that have been taken or refused to be taken without consideration of material information, except where the party submitting the request could have submitted, but did not submit, the

- information for the Board's consideration at the time of action or refusal to act; or
- c. one or more actions or inactions of the ICANN Board that are taken as a result of the Board's reliance on false or inaccurate material information.
3. The Board has designated the Board Governance Committee to review and consider any such Reconsideration Requests. The Board Governance Committee shall have the authority to:
- a. evaluate requests for review or reconsideration;
  - b. summarily dismiss insufficient requests;
  - c. evaluate requests for urgent consideration;
  - d. conduct whatever factual investigation is deemed appropriate;
  - e. request additional written submissions from the affected party, or from other parties;
  - f. make a final determination on Reconsideration Requests regarding staff action or inaction, without reference to the Board of Directors; and
  - g. make a recommendation to the Board of Directors on the merits of the request, as necessary.
4. ICANN shall absorb the normal administrative costs of the reconsideration process. It reserves the right to recover from a party requesting review or reconsideration any costs that are deemed to be extraordinary in nature. When such extraordinary costs can be foreseen, that fact and the reasons why such costs are necessary and appropriate to evaluating the Reconsideration Request shall be communicated to the party seeking reconsideration, who shall then have the option of withdrawing the request or agreeing to bear such costs.
5. All Reconsideration Requests must be submitted to an e-mail address designated by the Board Governance Committee within fifteen days after:
- a. for requests challenging Board actions, the date on which information about the challenged Board action is first published in a resolution, unless the posting of the resolution is not accompanied by a rationale. In that instance, the request must be submitted within 15 days from the initial posting of the rationale; or

- b. for requests challenging staff actions, the date on which the party submitting the request became aware of, or reasonably should have become aware of, the challenged staff action; or
  - c. for requests challenging either Board or staff inaction, the date on which the affected person reasonably concluded, or reasonably should have concluded, that action would not be taken in a timely manner.
6. To properly initiate a Reconsideration process, all requestors must review and follow the Reconsideration Request form posted on the ICANN website. at <http://www.icann.org/en/groups/board/governance/reconsideration>. Requestors must also acknowledge and agree to the terms and conditions set forth in the form when filing.
  7. Requestors shall not provide more than 25 pages (double-spaced, 12-point font) of argument in support of a Reconsideration Request. Requestors may submit all documentary evidence necessary to demonstrate why the action or inaction should be reconsidered, without limitation.
  8. The Board Governance Committee shall have authority to consider Reconsideration Requests from different parties in the same proceeding so long as: (i) the requests involve the same general action or inaction; and (ii) the parties submitting Reconsideration Requests are similarly affected by such action or inaction. In addition, consolidated filings may be appropriate if the alleged causal connection and the resulting harm is the same for all of the requestors. Every requestor must be able to demonstrate that it has been materially harmed and adversely impacted by the action or inaction giving rise to the request.
  9. The Board Governance Committee shall review each Reconsideration Request upon its receipt to determine if it is sufficiently stated. The Board Governance Committee may summarily dismiss a Reconsideration Request if: (i) the requestor fails to meet the requirements for bringing a Reconsideration Request; (ii) it is frivolous, querulous or vexatious; or (iii) the requestor had notice and opportunity to, but did not, participate in the public comment period relating to the contested action, if applicable. The Board Governance Committee's summary dismissal of a Reconsideration Request shall be posted on the Website.
  10. For all Reconsideration Requests that are not summarily dismissed, the

Board Governance Committee shall promptly proceed to review and consideration.

11. The Board Governance Committee may ask the ICANN staff for its views on the matter, which comments shall be made publicly available on the Website.
12. The Board Governance Committee may request additional information or clarifications from the requestor, and may elect to conduct a meeting with the requestor by telephone, email or, if acceptable to the party requesting reconsideration, in person. A requestor may ask for an opportunity to be heard; the Board Governance Committee's decision on any such request is final. To the extent any information gathered in such a meeting is relevant to any recommendation by the Board Governance Committee, it shall so state in its recommendation.
13. The Board Governance Committee may also request information relevant to the request from third parties. To the extent any information gathered is relevant to any recommendation by the Board Governance Committee, it shall so state in its recommendation. Any information collected from third parties shall be provided to the requestor.
14. The Board Governance Committee shall act on a Reconsideration Request on the basis of the public written record, including information submitted by the party seeking reconsideration or review, by the ICANN staff, and by any third party.
15. For all Reconsideration Requests brought regarding staff action or inaction, the Board Governance Committee shall be delegated the authority by the Board of Directors to make a final determination and recommendation on the matter. Board consideration of the recommendation is not required. As the Board Governance Committee deems necessary, it may make recommendation to the Board for consideration and action. The Board Governance Committee's determination on staff action or inaction shall be posted on the Website. The Board Governance Committee's determination is final and establishes precedential value.
16. The Board Governance Committee shall make a final determination or a recommendation to the Board with respect to a Reconsideration Request within thirty days following its receipt of the request, unless impractical, in which case it shall report to the Board the circumstances that prevented it from making a final recommendation and its best estimate of the time required to produce such a final determination or recommendation. The final recommendation shall be posted on ICANN's website.

17. The Board shall not be bound to follow the recommendations of the Board Governance Committee. The final decision of the Board shall be made public as part of the preliminary report and minutes of the Board meeting at which action is taken. The Board shall issue its decision on the recommendation of the Board Governance Committee within 60 days of receipt of the Reconsideration Request or as soon thereafter as feasible. Any circumstances that delay the Board from acting within this timeframe must be identified and posted on ICANN's website. The Board's decision on the recommendation is final.
18. If the requestor believes that the Board action or inaction posed for Reconsideration is so urgent that the timing requirements of the Reconsideration process are too long, the requestor may apply to the Board Governance Committee for urgent consideration. Any request for urgent consideration must be made within two business days (calculated at ICANN's headquarters in Los Angeles, California) of the posting of the resolution at issue. A request for urgent consideration must include a discussion of why the matter is urgent for reconsideration and must demonstrate a likelihood of success with the Reconsideration Request.
19. The Board Governance Committee shall respond to the request for urgent consideration within two business days after receipt of such request. If the Board Governance Committee agrees to consider the matter with urgency, it will cause notice to be provided to the requestor, who will have two business days after notification to complete the Reconsideration Request. The Board Governance Committee shall issue a recommendation on the urgent Reconsideration Request within seven days of the completion of the filing of the Request, or as soon thereafter as feasible. If the Board Governance Committee does not agree to consider the matter with urgency, the requestor may still file a Reconsideration Request within the regular time frame set forth within these Bylaws.
20. The Board Governance Committee shall submit a report to the Board on an annual basis containing at least the following information for the preceding calendar year:
  - a. the number and general nature of Reconsideration Requests received, including an identification if the requests were acted upon, summarily dismissed, or remain pending;
  - b. for any Reconsideration Requests that remained pending at the end of the calendar year, the average length of time for which such Reconsideration Requests have been pending, and a description of the reasons for any request pending for more

- than ninety (90) days;
- c. an explanation of any other mechanisms available to ensure that ICANN is accountable to persons materially affected by its decisions; and
  - d. whether or not, in the Board Governance Committee's view, the criteria for which reconsideration may be requested should be revised, or another process should be adopted or modified, to ensure that all persons materially affected by ICANN decisions have meaningful access to a review process that ensures fairness while limiting frivolous claims.

### **Section 3. INDEPENDENT REVIEW OF BOARD ACTIONS**

1. In addition to the reconsideration process described in [Section 2 of this Article](#), ICANN shall have in place a separate process for independent third-party review of Board actions alleged by an affected party to be inconsistent with the Articles of Incorporation or Bylaws.
2. Any person materially affected by a decision or action by the Board that he or she asserts is inconsistent with the Articles of Incorporation or Bylaws may submit a request for independent review of that decision or action. In order to be materially affected, the person must suffer injury or harm that is directly and causally connected to the Board's alleged violation of the Bylaws or the Articles of Incorporation, and not as a result of third parties acting in line with the Board's action.
3. A request for independent review must be filed within thirty days of the posting of the minutes of the Board meeting (and the accompanying Board Briefing Materials, if available) that the requesting party contends demonstrates that ICANN violated its Bylaws or Articles of Incorporation. Consolidated requests may be appropriate when the causal connection between the circumstances of the requests and the harm is the same for each of the requesting parties.
4. Requests for such independent review shall be referred to an Independent Review Process Panel ("IRP Panel"), which shall be charged with comparing contested actions of the Board to the Articles of Incorporation and Bylaws, and with declaring whether the Board has acted consistently with the provisions of those Articles of Incorporation and Bylaws. The IRP Panel must apply a defined standard of review to the IRP request, focusing on:
  - a. did the Board act without conflict of interest in taking its decision?;

- b. did the Board exercise due diligence and care in having a reasonable amount of facts in front of them?; and
  - c. did the Board members exercise independent judgment in taking the decision, believed to be in the best interests of the company?
- 5. Requests for independent review shall not exceed 25 pages (double-spaced, 12-point font) of argument. ICANN's response shall not exceed that same length. Parties may submit documentary evidence supporting their positions without limitation. In the event that parties submit expert evidence, such evidence must be provided in writing and there will be a right of reply to the expert evidence.
- 6. There shall be an omnibus standing panel of between six and nine members with a variety of expertise, including jurisprudence, judicial experience, alternative dispute resolution and knowledge of ICANN's mission and work from which each specific IRP Panel shall be selected. The panelists shall serve for terms that are staggered to allow for continued review of the size of the panel and the range of expertise. A Chair of the standing panel shall be appointed for a term not to exceed three years. Individuals holding an official position or office within the ICANN structure are not eligible to serve on the standing panel. In the event that an omnibus standing panel: (i) is not in place when an IRP Panel must be convened for a given proceeding, the IRP proceeding will be considered by a one- or three-member panel comprised in accordance with the rules of the IRP Provider; or (ii) is in place but does not have the requisite diversity of skill and experience needed for a particular proceeding, the IRP Provider shall identify one or more panelists, as required, from outside the omnibus standing panel to augment the panel members for that proceeding.
- 7. All IRP proceedings shall be administered by an international dispute resolution provider appointed from time to time by ICANN ("the IRP Provider"). The membership of the standing panel shall be coordinated by the IRP Provider subject to approval by ICANN.
- 8. Subject to the approval of the Board, the IRP Provider shall establish operating rules and procedures, which shall implement and be consistent with this [Section 3](#).
- 9. Either party may request that the IRP be considered by a one- or three-member panel; the Chair of the standing panel shall make the final determination of the size of each IRP panel, taking into account the wishes of the parties and the complexity of the issues presented.

10. The IRP Provider shall determine a procedure for assigning members from the standing panel to individual IRP panels.
11. The IRP Panel shall have the authority to:
  - a. summarily dismiss requests brought without standing, lacking in substance, or that are frivolous or vexatious;
  - b. request additional written submissions from the party seeking review, the Board, the Supporting Organizations, or from other parties;
  - c. declare whether an action or inaction of the Board was inconsistent with the Articles of Incorporation or Bylaws; and
  - d. recommend that the Board stay any action or decision, or that the Board take any interim action, until such time as the Board reviews and acts upon the opinion of the IRP;
  - e. consolidate requests for independent review if the facts and circumstances are sufficiently similar; and
  - f. determine the timing for each proceeding.
12. In order to keep the costs and burdens of independent review as low as possible, the IRP Panel should conduct its proceedings by email and otherwise via the Internet to the maximum extent feasible. Where necessary, the IRP Panel may hold meetings by telephone. In the unlikely event that a telephonic or in-person hearing is convened, the hearing shall be limited to argument only; all evidence, including witness statements, must be submitted in writing in advance.
13. All panel members shall adhere to conflicts-of-interest policy stated in the IRP Provider's operating rules and procedures, as approved by the Board.
14. Prior to initiating a request for independent review, the complainant is urged to enter into a period of cooperative engagement with ICANN for the purpose of resolving or narrowing the issues that are contemplated to be brought to the IRP. The cooperative engagement process is published on ICANN.org and is incorporated into this Section 3 of the Bylaws.
15. Upon the filing of a request for an independent review, the parties are urged to participate in a conciliation period for the purpose of narrowing the issues that are stated within the request for independent review. A conciliator will be appointed from the members of the omnibus standing panel by the Chair of that panel. The conciliator shall

not be eligible to serve as one of the panelists presiding over that particular IRP. The Chair of the standing panel may deem conciliation unnecessary if cooperative engagement sufficiently narrowed the issues remaining in the independent review.

16. Cooperative engagement and conciliation are both voluntary. However, if the party requesting the independent review does not participate in good faith in the cooperative engagement and the conciliation processes, if applicable, and ICANN is the prevailing party in the request for independent review, the IRP Panel must award to ICANN all reasonable fees and costs incurred by ICANN in the proceeding, including legal fees.
17. All matters discussed during the cooperative engagement and conciliation phases are to remain confidential and not subject to discovery or as evidence for any purpose within the IRP, and are without prejudice to either party.
18. The IRP Panel should strive to issue its written declaration no later than six months after the filing of the request for independent review. The IRP Panel shall make its declaration based solely on the documentation, supporting materials, and arguments submitted by the parties, and in its declaration shall specifically designate the prevailing party. The party not prevailing shall ordinarily be responsible for bearing all costs of the IRP Provider, but in an extraordinary case the IRP Panel may in its declaration allocate up to half of the costs of the IRP Provider to the prevailing party based upon the circumstances, including a consideration of the reasonableness of the parties' positions and their contribution to the public interest. Each party to the IRP proceedings shall bear its own expenses.
19. The IRP operating procedures, and all petitions, claims, and declarations, shall be posted on ICANN's website when they become available.
20. The IRP Panel may, in its discretion, grant a party's request to keep certain information confidential, such as trade secrets.
21. Where feasible, the Board shall consider the IRP Panel declaration at the Board's next meeting. The declarations of the IRP Panel, and the Board's subsequent action on those declarations, are final and have precedential value.

#### **Section 4. PERIODIC REVIEW OF ICANN STRUCTURE AND OPERATIONS**

1. The Board shall cause a periodic review of the performance and operation of each Supporting Organization, each Supporting Organization Council, each Advisory Committee (other than the Governmental Advisory Committee), and the Nominating Committee by an entity or entities independent of the organization under review. The goal of the review, to be undertaken pursuant to such criteria and standards as the Board shall direct, shall be to determine (i) whether that organization has a continuing purpose in the ICANN structure, and (ii) if so, whether any change in structure or operations is desirable to improve its effectiveness.

These periodic reviews shall be conducted no less frequently than every five years, based on feasibility as determined by the Board. Each five-year cycle will be computed from the moment of the reception by the Board of the final report of the relevant review Working Group.

The results of such reviews shall be posted on the Website for public review and comment, and shall be considered by the Board no later than the second scheduled meeting of the Board after such results have been posted for 30 days. The consideration by the Board includes the ability to revise the structure or operation of the parts of ICANN being reviewed by a two-thirds vote of all members of the Board.

2. The Governmental Advisory Committee shall provide its own review mechanisms.

## ARTICLE V: OMBUDSMAN

### Section 1. OFFICE OF OMBUDSMAN

1. There shall be an Office of Ombudsman, to be managed by an Ombudsman and to include such staff support as the Board determines is appropriate and feasible. The Ombudsman shall be a full-time position, with salary and benefits appropriate to the function, as determined by the Board.
2. The Ombudsman shall be appointed by the Board for an initial term of two years, subject to renewal by the Board.
3. The Ombudsman shall be subject to dismissal by the Board only upon a three-fourths (3/4) vote of the entire Board.
4. The annual budget for the Office of Ombudsman shall be established by the Board as part of the annual ICANN budget process. The Ombudsman shall submit a proposed budget to the President, and the President shall include that budget submission in its entirety and

without change in the general ICANN budget recommended by the ICANN President to the Board. Nothing in this Article shall prevent the President from offering separate views on the substance, size, or other features of the Ombudsman's proposed budget to the Board.

## **Section 2. CHARTER**

The charter of the Ombudsman shall be to act as a neutral dispute resolution practitioner for those matters for which the provisions of the Reconsideration Policy set forth in [Section 2 of Article IV](#) or the Independent Review Policy set forth in [Section 3 of Article IV](#) have not been invoked. The principal function of the Ombudsman shall be to provide an independent internal evaluation of complaints by members of the ICANN community who believe that the ICANN staff, Board or an ICANN constituent body has treated them unfairly. The Ombudsman shall serve as an objective advocate for fairness, and shall seek to evaluate and where possible resolve complaints about unfair or inappropriate treatment by ICANN staff, the Board, or ICANN constituent bodies, clarifying the issues and using conflict resolution tools such as negotiation, facilitation, and "shuttle diplomacy" to achieve these results.

## **Section 3. OPERATIONS**

The Office of Ombudsman shall:

1. facilitate the fair, impartial, and timely resolution of problems and complaints that affected members of the ICANN community (excluding employees and vendors/suppliers of ICANN) may have with specific actions or failures to act by the Board or ICANN staff which have not otherwise become the subject of either the Reconsideration or Independent Review Policies;
2. exercise discretion to accept or decline to act on a complaint or question, including by the development of procedures to dispose of complaints that are insufficiently concrete, substantive, or related to ICANN's interactions with the community so as to be inappropriate subject matters for the Ombudsman to act on. In addition, and without limiting the foregoing, the Ombudsman shall have no authority to act in any way with respect to internal administrative matters, personnel matters, issues relating to membership on the Board, or issues related to vendor/supplier relations;
3. have the right to have access to (but not to publish if otherwise confidential) all necessary information and records from ICANN staff and constituent bodies to enable an informed evaluation of the complaint and to assist in dispute resolution where feasible (subject

only to such confidentiality obligations as are imposed by the complainant or any generally applicable confidentiality policies adopted by ICANN);

4. heighten awareness of the Ombudsman program and functions through routine interaction with the ICANN community and online availability;
5. maintain neutrality and independence, and have no bias or personal stake in an outcome; and
6. comply with all ICANN conflicts-of-interest and confidentiality policies.

#### **Section 4. INTERACTION WITH ICANN AND OUTSIDE ENTITIES**

1. No ICANN employee, Board member, or other participant in Supporting Organizations or Advisory Committees shall prevent or impede the Ombudsman's contact with the ICANN community (including employees of ICANN). ICANN employees and Board members shall direct members of the ICANN community who voice problems, concerns, or complaints about ICANN to the Ombudsman, who shall advise complainants about the various options available for review of such problems, concerns, or complaints.
2. ICANN staff and other ICANN participants shall observe and respect determinations made by the Office of Ombudsman concerning confidentiality of any complaints received by that Office.
3. Contact with the Ombudsman shall not constitute notice to ICANN of any particular action or cause of action.
4. The Ombudsman shall be specifically authorized to make such reports to the Board as he or she deems appropriate with respect to any particular matter and its resolution or the inability to resolve it. Absent a determination by the Ombudsman, in his or her sole discretion, that it would be inappropriate, such reports shall be posted on the Website.
5. The Ombudsman shall not take any actions not authorized in these Bylaws, and in particular shall not institute, join, or support in any way any legal actions challenging ICANN structure, procedures, processes, or any conduct by the ICANN Board, staff, or constituent bodies.

#### **Section 5. ANNUAL REPORT**

The Office of Ombudsman shall publish on an annual basis a consolidated analysis of the year's complaints and resolutions, appropriately dealing with confidentiality obligations and concerns. Such annual report should include a description of any trends or common elements of complaints received during

the period in question, as well as recommendations for steps that could be taken to minimize future complaints. The annual report shall be posted on the Website.

## ARTICLE VI: BOARD OF DIRECTORS

### Section 1. COMPOSITION OF THE BOARD

The ICANN Board of Directors ("Board") shall consist of sixteen voting members ("Directors"). In addition, four non-voting liaisons ("Liaisons") shall be designated for the purposes set forth in [Section 9 of this Article](#). Only Directors shall be included in determining the existence of quorums, and in establishing the validity of votes taken by the ICANN Board.

### Section 2. DIRECTORS AND THEIR SELECTION; ELECTION OF CHAIRMAN AND VICE-CHAIRMAN

1. The Directors shall consist of:
  - a. Eight voting members selected by the Nominating Committee established by [Article VII of these Bylaws](#). These seats on the Board of Directors are referred to in these Bylaws as Seats 1 through 8.
  - b. Two voting members selected by the [Address Supporting Organization](#) according to the provisions of [Article VIII of these Bylaws](#). These seats on the Board of Directors are referred to in these Bylaws as Seat 9 and Seat 10.
  - c. Two voting members selected by the [Country-Code Names Supporting Organization](#) according to the provisions of [Article IX of these Bylaws](#). These seats on the Board of Directors are referred to in these Bylaws as Seat 11 and Seat 12.
  - d. Two voting members selected by the [Generic Names Supporting Organization](#) according to the provisions of [Article X of these Bylaws](#). These seats on the Board of Directors are referred to in these Bylaws as Seat 13 and Seat 14.
  - e. One voting member selected by the At-Large Community according to the provisions of Article XI of these Bylaws. This seat on the Board of Directors is referred to in these Bylaws as Seat 15.
  - f. The President ex officio, who shall be a voting member.
2. In carrying out its responsibilities to fill Seats 1 through 8, the Nominating Committee shall seek to ensure that the ICANN Board is composed of

members who in the aggregate display diversity in geography, culture, skills, experience, and perspective, by applying the criteria set forth in [Section 3 of this Article](#). At no time when it makes its selection shall the Nominating Committee select a Director to fill any vacancy or expired term whose selection would cause the total number of Directors (not including the President) from countries in any one Geographic Region (as defined in [Section 5 of this Article](#)) to exceed five; and the Nominating Committee shall ensure when it makes its selections that the Board includes at least one Director who is from a country in each ICANN Geographic Region ("Diversity Calculation").

For purposes of this sub-section 2 of Article VI, Section 2 of the ICANN Bylaws, if any candidate for director maintains citizenship of more than one country, or has been domiciled for more than five years in a country of which the candidate does not maintain citizenship ("Domicile"), that candidate may be deemed to be from either country and must select in his/her Statement of Interest the country of citizenship or Domicile that he/she wants the Nominating Committee to use for Diversity Calculation purposes. For purposes of this sub-section 2 of Article VI, Section 2 of the ICANN Bylaws, a person can only have one "Domicile," which shall be determined by where the candidate has a permanent residence and place of habitation.

3. In carrying out their responsibilities to fill Seats 9 through 15, the Supporting Organizations and the At-Large Community shall seek to ensure that the ICANN Board is composed of members that in the aggregate display diversity in geography, culture, skills, experience, and perspective, by applying the criteria set forth in [Section 3 of this Article](#). At any given time, no two Directors selected by a Supporting Organization shall be citizens from the same country or of countries located in the same Geographic Region.

For purposes of this sub-section 3 of Article VI, Section 2 of the ICANN Bylaws, if any candidate for director maintains citizenship of more than one country, or has been domiciled for more than five years in a country of which the candidate does not maintain citizenship ("Domicile"), that candidate may be deemed to be from either country and must select in his/her Statement of Interest the country of citizenship or Domicile that he/she wants the Supporting Organization or the At-Large Community to use for selection purposes. For purposes of this sub-section 3 of Article VI, Section 2 of the ICANN Bylaws, a person can only have one "Domicile," which shall be determined by where the candidate has a permanent residence and place of habitation.

4. The Board shall annually elect a Chairman and a Vice-Chairman from among the Directors, not including the President.

### Section 3. CRITERIA FOR SELECTION OF DIRECTORS

ICANN Directors shall be:

1. Accomplished persons of integrity, objectivity, and intelligence, with reputations for sound judgment and open minds, and a demonstrated capacity for thoughtful group decision-making;
2. Persons with an understanding of ICANN's mission and the potential impact of ICANN decisions on the global Internet community, and committed to the success of ICANN;
3. Persons who will produce the broadest cultural and geographic diversity on the Board consistent with meeting the other criteria set forth in this Section;
4. Persons who, in the aggregate, have personal familiarity with the operation of gTLD registries and registrars; with ccTLD registries; with IP address registries; with Internet technical standards and protocols; with policy-development procedures, legal traditions, and the public interest; and with the broad range of business, individual, academic, and non-commercial users of the Internet; and
5. Persons who are able to work and communicate in written and spoken English.

### Section 4. ADDITIONAL QUALIFICATIONS

1. Notwithstanding anything herein to the contrary, no official of a national government or a multinational entity established by treaty or other agreement between national governments may serve as a Director. As used herein, the term "official" means a person (i) who holds an elective governmental office or (ii) who is employed by such government or multinational entity and whose primary function with such government or entity is to develop or influence governmental or public policies.
2. No person who serves in any capacity (including as a liaison) on any Supporting Organization Council shall simultaneously serve as a Director or liaison to the Board. If such a person accepts a nomination to be considered for selection by the Supporting Organization Council or the At-Large Community to be a Director, the person shall not, following such nomination, participate in any discussion of, or vote by, the Supporting Organization Council or the committee designated by the At-Large Community relating to the selection of Directors by the Council or Community, until the Council or committee(s) designated by

the At-Large Community has selected the full complement of Directors it is responsible for selecting. In the event that a person serving in any capacity on a Supporting Organization Council accepts a nomination to be considered for selection as a Director, the constituency group or other group or entity that selected the person may select a replacement for purposes of the Council's selection process. In the event that a person serving in any capacity on the At-Large Advisory Committee accepts a nomination to be considered for selection by the At-Large Community as a Director, the Regional At-Large Organization or other group or entity that selected the person may select a replacement for purposes of the Community's selection process.

3. Persons serving in any capacity on the Nominating Committee shall be ineligible for selection to positions on the Board as provided by [Article VII, Section 8](#).

### **Section 5. INTERNATIONAL REPRESENTATION**

In order to ensure broad international representation on the Board, the selection of Directors by the Nominating Committee, each Supporting Organization and the At-Large Community shall comply with all applicable diversity provisions of these Bylaws or of any Memorandum of Understanding referred to in these Bylaws concerning the Supporting Organization. One intent of these diversity provisions is to ensure that at all times each Geographic Region shall have at least one Director, and at all times no region shall have more than five Directors on the Board (not including the President). As used in these Bylaws, each of the following is considered to be a "Geographic Region": Europe; Asia/Australia/Pacific; Latin America/Caribbean islands; Africa; and North America. The specific countries included in each Geographic Region shall be determined by the Board, and this Section shall be reviewed by the Board from time to time (but at least every three years) to determine whether any change is appropriate, taking account of the evolution of the Internet.

### **Section 6. DIRECTORS' CONFLICTS OF INTEREST**

The Board, through the Board Governance Committee, shall require a statement from each Director not less frequently than once a year setting forth all business and other affiliations that relate in any way to the business and other affiliations of ICANN. Each Director shall be responsible for disclosing to ICANN any matter that could reasonably be considered to make such Director an "interested director" within the meaning of Section 5233 of the California Nonprofit Public Benefit Corporation Law ("CNPBCL"). In addition, each Director shall disclose to ICANN any relationship or other factor that could

reasonably be considered to cause the Director to be considered to be an "interested person" within the meaning of Section 5227 of the CNPBCL. The Board shall adopt policies specifically addressing Director, Officer, and Supporting Organization conflicts of interest. No Director shall vote on any matter in which he or she has a material and direct financial interest that would be affected by the outcome of the vote.

#### **Section 7. DUTIES OF DIRECTORS**

Directors shall serve as individuals who have the duty to act in what they reasonably believe are the best interests of ICANN and not as representatives of the entity that selected them, their employers, or any other organizations or constituencies.

#### **Section 8. TERMS OF DIRECTORS**

1. The regular term of office of Director Seats 1 through 15 shall begin as follows:
  - a. The regular terms of Seats 1 through 3 shall begin at the conclusion of ICANN's annual meeting in 2003 and each ICANN annual meeting every third year after 2003;
  - b. The regular terms of Seats 4 through 6 shall begin at the conclusion of ICANN's annual meeting in 2004 and each ICANN annual meeting every third year after 2004;
  - c. The regular terms of Seats 7 and 8 shall begin at the conclusion of ICANN's annual meeting in 2005 and each ICANN annual meeting every third year after 2005;
  - d. The terms of Seats 9 and 12 shall continue until the conclusion of ICANN's ICANN's annual meeting in 2015. The next terms of Seats 9 and 12 shall begin at the conclusion of ICANN's annual meeting in 2015 and each ICANN annual meeting every third year after 2015;
  - e. The terms of Seats 10 and 13 shall continue until the conclusion of ICANN's annual meeting in 2013. The next terms of Seats 10 and 13 shall begin at the conclusion of ICANN's annual meeting in 2013 and each ICANN annual meeting every third year after 2013; and
  - f. The terms of Seats 11, 14 and 15 shall continue until the conclusion of ICANN's annual meeting in 2014. The next terms of Seats 11, 14 and 15 shall begin at the conclusion of ICANN's annual meeting in 2014 and each ICANN annual meeting every

third year after 2014.

2. Each Director holding any of Seats 1 through 15, including a Director selected to fill a vacancy, shall hold office for a term that lasts until the next term for that Seat commences and until a successor has been selected and qualified or until that Director resigns or is removed in accordance with these Bylaws.
3. At least two months before the commencement of each annual meeting, the Nominating Committee shall give the Secretary of ICANN written notice of its selection of Directors for seats with terms beginning at the conclusion of the annual meeting.
4. At least six months before the date specified for the commencement of the term as specified in paragraphs 1.d-f above, any Supporting Organization or the At-Large community entitled to select a Director for a Seat with a term beginning that year shall give the Secretary of ICANN written notice of its selection.
5. Subject to the provisions of the Transition Article of these Bylaws, no Director may serve more than three consecutive terms. For these purposes, a person selected to fill a vacancy in a term shall not be deemed to have served that term. (Note: In the period prior to the beginning of the first regular term of Seat 15 in 2010, Seat 15 was deemed vacant for the purposes of calculation of terms of service.)
6. The term as Director of the person holding the office of President shall be for as long as, and only for as long as, such person holds the office of President.

#### **Section 9. NON-VOTING LIAISONS**

1. The non-voting liaisons shall include:
  - a. One appointed by the Governmental Advisory Committee;
  - b. One appointed by the Root Server System Advisory Committee established by Article XI of these Bylaws;
  - c. One appointed by the Security and Stability Advisory Committee established by Article XI of these Bylaws;
  - d. One appointed by the Internet Engineering Task Force.
2. The non-voting liaisons shall serve terms that begin at the conclusion of each annual meeting. At least one month before the commencement of each annual meeting, each body entitled to appoint a non-voting liaison shall give the Secretary of ICANN written notice of its

appointment.

3. Each non-voting liaison may be reappointed, and shall remain in that position until a successor has been appointed or until the liaison resigns or is removed in accordance with these Bylaws.
4. The non-voting liaisons shall be entitled to attend Board meetings, participate in Board discussions and deliberations, and have access (under conditions established by the Board) to materials provided to Directors for use in Board discussions, deliberations and meetings, but shall otherwise not have any of the rights and privileges of Directors. Non-voting liaisons shall be entitled (under conditions established by the Board) to use any materials provided to them pursuant to this Section for the purpose of consulting with their respective committee or organization.

#### **Section 10. RESIGNATION OF A DIRECTOR OR NON-VOTING LIAISON**

Subject to Section 5226 of the CNPBCL, any Director or non-voting liaison may resign at any time, either by oral tender of resignation at any meeting of the Board (followed by prompt written notice to the Secretary of ICANN) or by giving written notice thereof to the President or the Secretary of ICANN. Such resignation shall take effect at the time specified, and, unless otherwise specified, the acceptance of such resignation shall not be necessary to make it effective. The successor shall be selected pursuant to [Section 12 of this Article](#).

#### **Section 11. REMOVAL OF A DIRECTOR OR NON-VOTING LIAISON**

1. Any Director may be removed, following notice to that Director, by a three-fourths (3/4) majority vote of all Directors; provided, however, that the Director who is the subject of the removal action shall not be entitled to vote on such an action or be counted as a voting member of the Board when calculating the required three-fourths (3/4) vote; and provided further, that each vote to remove a Director shall be a separate vote on the sole question of the removal of that particular Director. If the Director was selected by a Supporting Organization, notice must be provided to that Supporting Organization at the same time notice is provided to the Director. If the Director was selected by the At-Large Community, notice must be provided to the At-Large Advisory Committee at the same time notice is provided to the Director.
2. With the exception of the non-voting liaison appointed by the Governmental Advisory Committee, any non-voting liaison may be

removed, following notice to that liaison and to the organization by which that liaison was selected, by a three-fourths (3/4) majority vote of all Directors if the selecting organization fails to promptly remove that liaison following such notice. The Board may request the Governmental Advisory Committee to consider the replacement of the non-voting liaison appointed by that Committee if the Board, by a three-fourths (3/4) majority vote of all Directors, determines that such an action is appropriate.

## **Section 12. VACANCIES**

1. A vacancy or vacancies in the Board of Directors shall be deemed to exist in the case of the death, resignation, or removal of any Director; if the authorized number of Directors is increased; or if a Director has been declared of unsound mind by a final order of court or convicted of a felony or incarcerated for more than 90 days as a result of a criminal conviction or has been found by final order or judgment of any court to have breached a duty under Sections 5230 et seq. of the CNPBCL. Any vacancy occurring on the Board of Directors shall be filled by the Nominating Committee, unless (a) that Director was selected by a Supporting Organization, in which case that vacancy shall be filled by that Supporting Organization, or (b) that Director was the President, in which case the vacancy shall be filled in accordance with the provisions of [Article XIII of these Bylaws](#). The selecting body shall give written notice to the Secretary of ICANN of their appointments to fill vacancies. A Director selected to fill a vacancy on the Board shall serve for the unexpired term of his or her predecessor in office and until a successor has been selected and qualified. No reduction of the authorized number of Directors shall have the effect of removing a Director prior to the expiration of the Director's term of office.
2. The organizations selecting the non-voting liaisons identified in [Section 9 of this Article](#) are responsible for determining the existence of, and filling, any vacancies in those positions. They shall give the Secretary of ICANN written notice of their appointments to fill vacancies.

## **Section 13. ANNUAL MEETINGS**

Annual meetings of ICANN shall be held for the purpose of electing Officers and for the transaction of such other business as may come before the meeting. Each annual meeting for ICANN shall be held at the principal office of ICANN, or any other appropriate place of the Board's time and choosing, provided such annual meeting is held within 14 months of the immediately preceding annual meeting. If the Board determines that it is practical, the annual meeting should be distributed in real-time and archived video and

audio formats on the Internet.

#### **Section 14. REGULAR MEETINGS**

Regular meetings of the Board shall be held on dates to be determined by the Board. In the absence of other designation, regular meetings shall be held at the principal office of ICANN.

#### **Section 15. SPECIAL MEETINGS**

Special meetings of the Board may be called by or at the request of one-quarter (1/4) of the members of the Board or by the Chairman of the Board or the President. A call for a special meeting shall be made by the Secretary of ICANN. In the absence of designation, special meetings shall be held at the principal office of ICANN.

#### **Section 16. NOTICE OF MEETINGS**

Notice of time and place of all meetings shall be delivered personally or by telephone or by electronic mail to each Director and non-voting liaison, or sent by first-class mail (air mail for addresses outside the United States) or facsimile, charges prepaid, addressed to each Director and non-voting liaison at the Director's or non-voting liaison's address as it is shown on the records of ICANN. In case the notice is mailed, it shall be deposited in the United States mail at least fourteen (14) days before the time of the holding of the meeting. In case the notice is delivered personally or by telephone or facsimile or electronic mail it shall be delivered personally or by telephone or facsimile or electronic mail at least forty-eight (48) hours before the time of the holding of the meeting. Notwithstanding anything in this Section to the contrary, notice of a meeting need not be given to any Director who signed a waiver of notice or a written consent to holding the meeting or an approval of the minutes thereof, whether before or after the meeting, or who attends the meeting without protesting, prior thereto or at its commencement, the lack of notice to such Director. All such waivers, consents and approvals shall be filed with the corporate records or made a part of the minutes of the meetings.

#### **Section 17. QUORUM**

At all annual, regular, and special meetings of the Board, a majority of the total number of Directors then in office shall constitute a quorum for the transaction of business, and the act of a majority of the Directors present at any meeting at which there is a quorum shall be the act of the Board, unless otherwise provided herein or by law. If a quorum shall not be present at any meeting of the Board, the Directors present thereat may adjourn the meeting from time to time to another place, time, or date. If the meeting is adjourned for more than

twenty-four (24) hours, notice shall be given to those Directors not at the meeting at the time of the adjournment.

**Section 18. ACTION BY TELEPHONE MEETING OR BY OTHER COMMUNICATIONS EQUIPMENT**

Members of the Board or any Committee of the Board may participate in a meeting of the Board or Committee of the Board through use of (i) conference telephone or similar communications equipment, provided that all Directors participating in such a meeting can speak to and hear one another or (ii) electronic video screen communication or other communication equipment; provided that (a) all Directors participating in such a meeting can speak to and hear one another, (b) all Directors are provided the means of fully participating in all matters before the Board or Committee of the Board, and (c) ICANN adopts and implements means of verifying that (x) a person participating in such a meeting is a Director or other person entitled to participate in the meeting and (y) all actions of, or votes by, the Board or Committee of the Board are taken or cast only by the members of the Board or Committee and not persons who are not members. Participation in a meeting pursuant to this Section constitutes presence in person at such meeting. ICANN shall make available at the place of any meeting of the Board the telecommunications equipment necessary to permit members of the Board to participate by telephone.

**Section 19. ACTION WITHOUT MEETING**

Any action required or permitted to be taken by the Board or a Committee of the Board may be taken without a meeting if all of the Directors entitled to vote thereat shall individually or collectively consent in writing to such action. Such written consent shall have the same force and effect as the unanimous vote of such Directors. Such written consent or consents shall be filed with the minutes of the proceedings of the Board.

**Section 20. ELECTRONIC MAIL**

If permitted under applicable law, communication by electronic mail shall be considered equivalent to any communication otherwise required to be in writing. ICANN shall take such steps as it deems appropriate under the circumstances to assure itself that communications by electronic mail are authentic.

**Section 21. RIGHTS OF INSPECTION**

Every Director shall have the right at any reasonable time to inspect and copy all books, records and documents of every kind, and to inspect the physical

properties of ICANN. ICANN shall establish reasonable procedures to protect against the inappropriate disclosure of confidential information.

## **Section 22. COMPENSATION**

1. Except for the President of ICANN, who serves ex officio as a voting member of the Board, each of the Directors shall be entitled to receive compensation for his/her services as a Director. The President shall receive only his/her compensation for service as President and shall not receive additional compensation for service as a Director.
2. If the Board determines to offer a compensation arrangement to one or more Directors other than the President of ICANN for services to ICANN as Directors, the Board shall follow a process that is calculated to pay an amount for service as a Director that is in its entirety Reasonable Compensation for such service under the standards set forth in §53.4958-4(b) of the Treasury Regulations.
3. As part of the process, the Board shall retain an Independent Valuation Expert to consult with and to advise the Board regarding Director compensation arrangements and to issue to the Board a Reasoned Written Opinion from such expert regarding the ranges of Reasonable Compensation for any such services by a Director. The expert's opinion shall address all relevant factors affecting the level of compensation to be paid a Director, including offices held on the Board, attendance at Board and Committee meetings, the nature of service on the Board and on Board Committees, and appropriate data as to comparability regarding director compensation arrangements for U.S.-based, nonprofit, tax-exempt organizations possessing a global employee base.
4. After having reviewed the expert's written opinion, the Board shall meet with the expert to discuss the expert's opinion and to ask questions of the expert regarding the expert's opinion, the comparability data obtained and relied upon, and the conclusions reached by the expert.
5. The Board shall adequately document the basis for any determination the Board makes regarding a Director compensation arrangement concurrently with making that determination.
6. In addition to authorizing payment of compensation for services as Directors as set forth in this Section 22, the Board may also authorize the reimbursement of actual and necessary reasonable expenses incurred by any Director and by non-voting liaisons performing their duties as Directors or non-voting liaisons.

7. As used in this Section 22, the following terms shall have the following meanings:
- a. An "Independent Valuation Expert" means a person retained by ICANN to value compensation arrangements that: (i) holds itself out to the public as a compensation consultant; (ii) performs valuations regarding compensation arrangements on a regular basis, with a majority of its compensation consulting services performed for persons other than ICANN; (iii) is qualified to make valuations of the type of services involved in any engagement by and for ICANN; (iv) issues to ICANN a Reasoned Written Opinion regarding a particular compensation arrangement; and (v) includes in its Reasoned Written Opinion a certification that it meets the requirements set forth in (i) through (iv) of this definition.
  - b. A "Reasoned Written Opinion" means a written opinion of a valuation expert who meets the requirements of subparagraph 7(a) (i) through (iv) of this Section. To be reasoned, the opinion must be based upon a full disclosure by ICANN to the valuation expert of the factual situation regarding the compensation arrangement that is the subject of the opinion, the opinion must articulate the applicable valuation standards relevant in valuing such compensation arrangement, and the opinion must apply those standards to such compensation arrangement, and the opinion must arrive at a conclusion regarding the whether the compensation arrangement is within the range of Reasonable Compensation for the services covered by the arrangement. A written opinion is reasoned even though it reaches a conclusion that is subsequently determined to be incorrect so long as the opinion addresses itself to the facts and the applicable standards. However, a written opinion is not reasoned if it does nothing more than recite the facts and express a conclusion.
  - c. "Reasonable Compensation" shall have the meaning set forth in §53.4958-4(b)(1)(ii) of the Regulations issued under §4958 of the Code.
8. Each of the non-voting liaisons to the Board, with the exception of the Governmental Advisory Committee liaison, shall be entitled to receive compensation for his/her services as a non-voting liaison. If the Board determines to offer a compensation arrangement to one or more non-voting liaisons, the Board shall approve that arrangement by a required three-fourths (3/4) vote.

**Section 23. PRESUMPTION OF ASSENT**

A Director present at a Board meeting at which action on any corporate matter is taken shall be presumed to have assented to the action taken unless his or her dissent or abstention is entered in the minutes of the meeting, or unless such Director files a written dissent or abstention to such action with the person acting as the secretary of the meeting before the adjournment thereof, or forwards such dissent or abstention by registered mail to the Secretary of ICANN immediately after the adjournment of the meeting. Such right to dissent or abstain shall not apply to a Director who voted in favor of such action.

## ARTICLE VII: NOMINATING COMMITTEE

### Section 1. DESCRIPTION

There shall be a Nominating Committee of ICANN, responsible for the selection of all ICANN Directors except the President and those Directors selected by ICANN's Supporting Organizations, and for such other selections as are set forth in these Bylaws.

### Section 2. COMPOSITION

The Nominating Committee shall be composed of the following persons:

1. A non-voting Chair, appointed by the ICANN Board;
2. A non-voting Chair-Elect, appointed by the ICANN Board as a non-voting advisor;
3. A non-voting liaison appointed by the ICANN Root Server System Advisory Committee established by [Article XI of these Bylaws](#);
4. A non-voting liaison appointed by the ICANN Security and Stability Advisory Committee established by [Article XI of these Bylaws](#);
5. A non-voting liaison appointed by the [Governmental Advisory Committee](#);
6. Subject to the provisions of the Transition Article of these Bylaws, five voting delegates selected by the At-Large Advisory Committee established by [Article XI of these Bylaws](#);
7. Voting delegates to the Nominating Committee shall be selected from the Generic Names Supporting Organization, established by [Article X of these Bylaws](#), as follows:
  - a. One delegate from the Registries Stakeholder Group;

- b. One delegate from the Registrars Stakeholder Group;
  - c. Two delegates from the Business Constituency, one representing small business users and one representing large business users;
  - d. One delegate from the Internet Service Providers Constituency;
  - e. One delegate from the Intellectual Property Constituency; and
  - f. One delegate from consumer and civil society groups, selected by the Non-Commercial Users Constituency.
8. One voting delegate each selected by the following entities:
- a. The Council of the Country Code Names Supporting Organization established by [Article IX of these Bylaws](#);
  - b. The Council of the Address Supporting Organization established by [Article VIII of these Bylaws](#); and
  - c. The Internet Engineering Task Force.
9. A non-voting Associate Chair, who may be appointed by the Chair, at his or her sole discretion, to serve during all or part of the term of the Chair. The Associate Chair may not be a person who is otherwise a member of the same Nominating Committee. The Associate Chair shall assist the Chair in carrying out the duties of the Chair, but shall not serve, temporarily or otherwise, in the place of the Chair.

### Section 3. TERMS

Subject to the provisions of the [Transition Article of these Bylaws](#):

- 1. Each voting delegate shall serve a one-year term. A delegate may serve at most two successive one-year terms, after which at least two years must elapse before the individual is eligible to serve another term.
- 2. The regular term of each voting delegate shall begin at the conclusion of an [ICANN](#) annual meeting and shall end at the conclusion of the immediately following [ICANN](#) annual meeting.
- 3. Non-voting liaisons shall serve during the term designated by the entity that appoints them. The Chair, the Chair-Elect, and any Associate Chair shall serve as such until the conclusion of the next [ICANN](#) annual meeting.

4. It is anticipated that upon the conclusion of the term of the Chair-Elect, the Chair-Elect will be appointed by the Board to the position of Chair. However, the Board retains the discretion to appoint any other person to the position of Chair. At the time of appointing a Chair-Elect, if the Board determines that the person identified to serve as Chair shall be appointed as Chair for a successive term, the Chair-Elect position shall remain vacant for the term designated by the Board.
5. Vacancies in the positions of delegate, non-voting liaison, Chair or Chair-Elect shall be filled by the entity entitled to select the delegate, non-voting liaison, Chair or Chair-Elect involved. For any term that the Chair-Elect position is vacant pursuant to paragraph 4 of this Article, or until any other vacancy in the position of Chair-Elect can be filled, a non-voting advisor to the Chair may be appointed by the Board from among persons with prior service on the Board or a Nominating Committee, including the immediately previous Chair of the Nominating Committee. A vacancy in the position of Associate Chair may be filled by the Chair in accordance with the criteria established by Section 2(9) of this Article.
6. The existence of any vacancies shall not affect the obligation of the Nominating Committee to carry out the responsibilities assigned to it in these Bylaws.

**Section 4. CRITERIA FOR SELECTION OF NOMINATING COMMITTEE DELEGATES**

Delegates to the ICANN Nominating Committee shall be:

1. Accomplished persons of integrity, objectivity, and intelligence, with reputations for sound judgment and open minds, and with experience and competence with collegial large group decision-making;
2. Persons with wide contacts, broad experience in the Internet community, and a commitment to the success of ICANN;
3. Persons whom the selecting body is confident will consult widely and accept input in carrying out their responsibilities;
4. Persons who are neutral and objective, without any fixed personal commitments to particular individuals, organizations, or commercial objectives in carrying out their Nominating Committee responsibilities;
5. Persons with an understanding of ICANN's mission and the potential impact of ICANN's activities on the broader Internet community who are willing to serve as volunteers, without compensation other than the

reimbursement of certain expenses; and

6. Persons who are able to work and communicate in written and spoken English.

#### **Section 5. DIVERSITY**

In carrying out its responsibilities to select members of the ICANN Board (and selections to any other ICANN bodies as the Nominating Committee is responsible for under these Bylaws), the Nominating Committee shall take into account the continuing membership of the ICANN Board (and such other bodies), and seek to ensure that the persons selected to fill vacancies on the ICANN Board (and each such other body) shall, to the extent feasible and consistent with the other criteria required to be applied by [Section 4 of this Article](#), make selections guided by Core Value 4 in [Article I, Section 2](#) .

#### **Section 6. ADMINISTRATIVE AND OPERATIONAL SUPPORT**

ICANN shall provide administrative and operational support necessary for the Nominating Committee to carry out its responsibilities.

#### **Section 7. PROCEDURES**

The Nominating Committee shall adopt such operating procedures as it deems necessary, which shall be published on the Website.

#### **Section 8. INELIGIBILITY FOR SELECTION BY NOMINATING COMMITTEE**

No person who serves on the Nominating Committee in any capacity shall be eligible for selection by any means to any position on the Board or any other ICANN body having one or more membership positions that the Nominating Committee is responsible for filling, until the conclusion of an ICANN annual meeting that coincides with, or is after, the conclusion of that person's service on the Nominating Committee.

#### **Section 9. INELIGIBILITY FOR SERVICE ON NOMINATING COMMITTEE**

No person who is an employee of or paid consultant to ICANN (including the Ombudsman) shall simultaneously serve in any of the Nominating Committee positions described in [Section 2 of this Article](#).

### **ARTICLE VIII: ADDRESS SUPPORTING ORGANIZATION**

#### **Section 1. DESCRIPTION**

1. The Address Supporting Organization (ASO) shall advise the Board with respect to policy issues relating to the operation, assignment, and management of Internet addresses.
2. The ASO shall be the entity established by the Memorandum of Understanding entered on 21 October 2004 between ICANN and the Number Resource Organization (NRO), an organization of the existing regional Internet registries (RIRs).

## **Section 2. ADDRESS COUNCIL**

1. The ASO shall have an Address Council, consisting of the members of the NRO Number Council.
2. The Address Council shall select Directors to those seats on the Board designated to be filled by the ASO.

## **ARTICLE IX: COUNTRY-CODE NAMES SUPPORTING ORGANIZATION**

### **Section 1. DESCRIPTION**

There shall be a policy-development body known as the Country-Code Names Supporting Organization (ccNSO), which shall be responsible for:

1. developing and recommending to the Board global policies relating to country-code top-level domains;
2. Nurturing consensus across the ccNSO's community, including the name-related activities of ccTLDs; and
3. Coordinating with other ICANN Supporting Organizations, committees, and constituencies under ICANN.

Policies that apply to ccNSO members by virtue of their membership are only those policies developed according to section 4.10 and 4.11 of this Article. However, the ccNSO may also engage in other activities authorized by its members. Adherence to the results of these activities will be voluntary and such activities may include: seeking to develop voluntary best practices for ccTLD managers, assisting in skills building within the global community of ccTLD managers, and enhancing operational and technical cooperation among ccTLD managers.

### **Section 2. ORGANIZATION**

The ccNSO shall consist of (i) ccTLD managers that have agreed in writing to be members of the ccNSO (see [Section 4\(2\) of this Article](#)) and (ii) a ccNSO Council responsible for managing the policy-development process of the ccNSO.

### **Section 3. ccNSO COUNCIL**

1. The ccNSO Council shall consist of (a) three ccNSO Council members selected by the ccNSO members within each of [ICANN's Geographic Regions](#) in the manner described in [Section 4\(7\) through \(9\) of this Article](#); (b) three ccNSO Council members selected by the ICANN Nominating Committee; (c) liaisons as described in [paragraph 2 of this Section](#); and (iv) observers as described in [paragraph 3 of this Section](#).
2. There shall also be one liaison to the ccNSO Council from each of the following organizations, to the extent they choose to appoint such a liaison: (a) the Governmental Advisory Committee; (b) the At-Large Advisory Committee; and (c) each of the Regional Organizations described in [Section 5 of this Article](#). These liaisons shall not be members of or entitled to vote on the ccNSO Council, but otherwise shall be entitled to participate on equal footing with members of the ccNSO Council. Appointments of liaisons shall be made by providing written notice to the ICANN Secretary, with a notification copy to the ccNSO Council Chair, and shall be for the term designated by the appointing organization as stated in the written notice. The appointing organization may recall from office or replace its liaison at any time by providing written notice of the recall or replacement to the ICANN Secretary, with a notification copy to the ccNSO Council Chair.
3. The ccNSO Council may agree with the Council of any other ICANN Supporting Organization to exchange observers. Such observers shall not be members of or entitled to vote on the ccNSO Council, but otherwise shall be entitled to participate on equal footing with members of the ccNSO Council. The appointing Council may designate its observer (or revoke or change the designation of its observer) on the ccNSO Council at any time by providing written notice to the ICANN Secretary, with a notification copy to the ccNSO Council Chair.
4. Subject to the provisions of the [Transition Article of these Bylaws](#): (a) the regular term of each ccNSO Council member shall begin at the conclusion of an ICANN annual meeting and shall end at the conclusion of the third ICANN annual meeting thereafter; (b) the regular terms of the three ccNSO Council members selected by the ccNSO members within each ICANN Geographic Region shall be staggered so that one member's term begins in a year divisible by

three, a second member's term begins in the first year following a year divisible by three, and the third member's term begins in the second year following a year divisible by three; and (c) the regular terms of the three ccNSO Council members selected by the Nominating Committee shall be staggered in the same manner. Each ccNSO Council member shall hold office during his or her regular term and until a successor has been selected and qualified or until that member resigns or is removed in accordance with these Bylaws.

5. A ccNSO Council member may resign at any time by giving written notice to the ICANN Secretary, with a notification copy to the ccNSO Council Chair.
6. ccNSO Council members may be removed for not attending three consecutive meetings of the ccNSO Council without sufficient cause or for grossly inappropriate behavior, both as determined by at least a 66% vote of all of the members of the ccNSO Council.
7. A vacancy on the ccNSO Council shall be deemed to exist in the case of the death, resignation, or removal of any ccNSO Council member. Vacancies in the positions of the three members selected by the Nominating Committee shall be filled for the unexpired term involved by the Nominating Committee giving the ICANN Secretary written notice of its selection, with a notification copy to the ccNSO Council Chair. Vacancies in the positions of the ccNSO Council members selected by ccNSO members shall be filled for the unexpired term by the procedure described in [Section 4\(7\) through \(9\) of this Article](#).
8. The role of the ccNSO Council is to administer and coordinate the affairs of the ccNSO (including coordinating meetings, including an annual meeting, of ccNSO members as described in [Section 4\(6\) of this Article](#)) and to manage the development of policy recommendations in accordance with Section 6 of this Article. The ccNSO Council shall also undertake such other roles as the members of the ccNSO shall decide from time to time.
9. The ccNSO Council shall make selections to fill Seats 11 and 12 on the Board by written ballot or by action at a meeting; any such selection must have affirmative votes of a majority of all the members of the ccNSO Council then in office. Notification of the ccNSO Council's selections shall be given by the ccNSO Council Chair in writing to the ICANN Secretary, consistent with Article VI, [Sections 8\(4\) and 12\(1\)](#).
10. The ccNSO Council shall select from among its members the ccNSO Council Chair and such Vice Chair(s) as it deems appropriate. Selections of the ccNSO Council Chair and Vice Chair(s) shall be by

written ballot or by action at a meeting; any such selection must have affirmative votes of a majority of all the members of the ccNSO Council then in office. The term of office of the ccNSO Council Chair and any Vice Chair(s) shall be as specified by the ccNSO Council at or before the time the selection is made. The ccNSO Council Chair or any Vice Chair(s) may be recalled from office by the same procedure as used for selection.

11. The ccNSO Council, subject to direction by the ccNSO members, shall adopt such rules and procedures for the ccNSO as it deems necessary, provided they are consistent with these Bylaws. Rules for ccNSO membership and operating procedures adopted by the ccNSO Council shall be published on the Website.
12. Except as provided by [paragraphs 9 and 10 of this Section](#), the ccNSO Council shall act at meetings. The ccNSO Council shall meet regularly on a schedule it determines, but not fewer than four times each calendar year. At the discretion of the ccNSO Council, meetings may be held in person or by other means, provided that all ccNSO Council members are permitted to participate by at least one means described in [paragraph 14 of this Section](#). Except where determined by a majority vote of the members of the ccNSO Council present that a closed session is appropriate, physical meetings shall be open to attendance by all interested persons. To the extent practicable, ccNSO Council meetings should be held in conjunction with meetings of the Board, or of one or more of ICANN's other Supporting Organizations.
13. Notice of time and place (and information about means of participation other than personal attendance) of all meetings of the ccNSO Council shall be provided to each ccNSO Council member, liaison, and observer by e-mail, telephone, facsimile, or a paper notice delivered personally or by postal mail. In case the notice is sent by postal mail, it shall be sent at least 21 days before the day of the meeting. In case the notice is delivered personally or by telephone, facsimile, or e-mail it shall be provided at least seven days before the day of the meeting. At least seven days in advance of each ccNSO Council meeting (or if not practicable, as far in advance as is practicable), a notice of such meeting and, to the extent known, an agenda for the meeting shall be posted.
14. Members of the ccNSO Council may participate in a meeting of the ccNSO Council through personal attendance or use of electronic communication (such as telephone or video conference), provided that (a) all ccNSO Council members participating in the meeting can speak to and hear one another, (b) all ccNSO Council members participating

in the meeting are provided the means of fully participating in all matters before the ccNSO Council, and (c) there is a reasonable means of verifying the identity of ccNSO Council members participating in the meeting and their votes. A majority of the ccNSO Council members (i.e. those entitled to vote) then in office shall constitute a quorum for the transaction of business, and actions by a majority vote of the ccNSO Council members present at any meeting at which there is a quorum shall be actions of the ccNSO Council, unless otherwise provided in these Bylaws. The ccNSO Council shall transmit minutes of its meetings to the ICANN Secretary, who shall cause those minutes to be posted to the Website as soon as practicable following the meeting, and no later than 21 days following the meeting.

#### **Section 4. MEMBERSHIP**

1. The ccNSO shall have a membership consisting of ccTLD managers. Any ccTLD manager that meets the membership qualifications stated in [paragraph 2 of this Section](#) shall be entitled to be members of the ccNSO. For purposes of this Article, a ccTLD manager is the organization or entity responsible for managing an ISO 3166 country-code top-level domain and referred to in the IANA database under the current heading of "Sponsoring Organization", or under any later variant, for that country-code top-level domain.
2. Any ccTLD manager may become a ccNSO member by submitting an application to a person designated by the ccNSO Council to receive applications. Subject to the provisions of the Transition Article of these Bylaws, the application shall be in writing in a form designated by the ccNSO Council. The application shall include the ccTLD manager's recognition of the role of the ccNSO within the ICANN structure as well as the ccTLD manager's agreement, for the duration of its membership in the ccNSO, (a) to adhere to rules of the ccNSO, including membership rules, (b) to abide by policies developed and recommended by the ccNSO and adopted by the Board in the manner described by paragraphs 10 and 11 of this Section, and (c) to pay ccNSO membership fees established by the ccNSO Council under [Section 7\(3\) of this Article](#). A ccNSO member may resign from membership at any time by giving written notice to a person designated by the ccNSO Council to receive notices of resignation. Upon resignation the ccTLD manager ceases to agree to (a) adhere to rules of the ccNSO, including membership rules, (b) to abide by policies developed and recommended by the ccNSO and adopted by the Board in the manner described by paragraphs 10 and 11 of this

Section, and (c) to pay ccNSO membership fees established by the ccNSO Council under [Section 7\(3\) of this Article](#). In the absence of designation by the ccNSO Council of a person to receive applications and notices of resignation, they shall be sent to the ICANN Secretary, who shall notify the ccNSO Council of receipt of any such applications and notices.

3. Neither membership in the ccNSO nor membership in any Regional Organization described in [Section 5 of this Article](#) shall be a condition for access to or registration in the IANA database. Any individual relationship a ccTLD manager has with ICANN or the ccTLD manager's receipt of IANA services is not in any way contingent upon membership in the ccNSO.
4. The Geographic Regions of ccTLDs shall be as described in [Article VI, Section 5 of these Bylaws](#). For purposes of this Article, managers of ccTLDs within a Geographic Region that are members of the ccNSO are referred to as ccNSO members "within" the Geographic Region, regardless of the physical location of the ccTLD manager. In cases where the Geographic Region of a ccNSO member is unclear, the ccTLD member should self-select according to procedures adopted by the ccNSO Council.
5. Each ccTLD manager may designate in writing a person, organization, or entity to represent the ccTLD manager. In the absence of such a designation, the ccTLD manager shall be represented by the person, organization, or entity listed as the administrative contact in the IANA database.
6. There shall be an annual meeting of ccNSO members, which shall be coordinated by the ccNSO Council. Annual meetings should be open for all to attend, and a reasonable opportunity shall be provided for ccTLD managers that are not members of the ccNSO as well as other non-members of the ccNSO to address the meeting. To the extent practicable, annual meetings of the ccNSO members shall be held in person and should be held in conjunction with meetings of the Board, or of one or more of ICANN's other Supporting Organizations.
7. The ccNSO Council members selected by the ccNSO members from each Geographic Region (see [Section 3\(1\)\(a\) of this Article](#)) shall be selected through nomination, and if necessary election, by the ccNSO members within that Geographic Region. At least 90 days before the end of the regular term of any ccNSO-member-selected member of the ccNSO Council, or upon the occurrence of a vacancy in the seat of such a ccNSO Council member, the ccNSO Council shall establish a nomination and election schedule, which shall be sent to all ccNSO

members within the Geographic Region and posted on the Website.

8. Any ccNSO member may nominate an individual to serve as a ccNSO Council member representing the ccNSO member's Geographic Region. Nominations must be seconded by another ccNSO member from the same Geographic Region. By accepting their nomination, individuals nominated to the ccNSO Council agree to support the policies committed to by ccNSO members.
9. If at the close of nominations there are no more candidates nominated (with seconds and acceptances) in a particular Geographic Region than there are seats on the ccNSO Council available for that Geographic Region, then the nominated candidates shall be selected to serve on the ccNSO Council. Otherwise, an election by written ballot (which may be by e-mail) shall be held to select the ccNSO Council members from among those nominated (with seconds and acceptances), with ccNSO members from the Geographic Region being entitled to vote in the election through their designated representatives. In such an election, a majority of all ccNSO members in the Geographic Region entitled to vote shall constitute a quorum, and the selected candidate must receive the votes of a majority of those cast by ccNSO members within the Geographic Region. The ccNSO Council Chair shall provide the ICANN Secretary prompt written notice of the selection of ccNSO Council members under this paragraph.
10. Subject to clause 4(11), ICANN policies shall apply to ccNSO members by virtue of their membership to the extent, and only to the extent, that the policies (a) only address issues that are within scope of the ccNSO according to Article IX, Section 6 and Annex C; (b) have been developed through the ccPDP as described in [Section 6 of this Article](#), and (c) have been recommended as such by the ccNSO to the Board, and (d) are adopted by the Board as policies, provided that such policies do not conflict with the law applicable to the ccTLD manager which shall, at all times, remain paramount. In addition, such policies shall apply to ICANN in its activities concerning ccTLDs.
11. A ccNSO member shall not be bound if it provides a declaration to the ccNSO Council stating that (a) implementation of the policy would require the member to breach custom, religion, or public policy (not embodied in the applicable law described in [paragraph 10 of this Section](#)), and (b) failure to implement the policy would not impair DNS operations or interoperability, giving detailed reasons supporting its statements. After investigation, the ccNSO Council will provide a response to the ccNSO member's declaration. If there is a ccNSO

Council consensus disagreeing with the declaration, which may be demonstrated by a vote of 14 or more members of the ccNSO Council, the response shall state the ccNSO Council's disagreement with the declaration and the reasons for disagreement. Otherwise, the response shall state the ccNSO Council's agreement with the declaration. If the ccNSO Council disagrees, the ccNSO Council shall review the situation after a six-month period. At the end of that period, the ccNSO Council shall make findings as to (a) whether the ccNSO members' implementation of the policy would require the member to breach custom, religion, or public policy (not embodied in the applicable law described in [paragraph 10 of this Section](#)) and (b) whether failure to implement the policy would impair DNS operations or interoperability. In making any findings disagreeing with the declaration, the ccNSO Council shall proceed by consensus, which may be demonstrated by a vote of 14 or more members of the ccNSO Council.

## **Section 5. REGIONAL ORGANIZATIONS**

The ccNSO Council may designate a Regional Organization for each ICANN Geographic Region, provided that the Regional Organization is open to full membership by all ccNSO members within the Geographic Region. Decisions to designate or de-designate a Regional Organization shall require a 66% vote of all of the members of the ccNSO Council and shall be subject to review according to procedures established by the Board.

## **Section 6. ccNSO POLICY-DEVELOPMENT PROCESS AND SCOPE**

1. The scope of the ccNSO's policy-development role shall be as stated in [Annex C to these Bylaws](#); any modifications to the scope shall be recommended to the Board by the ccNSO by use of the procedures of the ccPDP, and shall be subject to approval by the Board.
2. In developing global policies within the scope of the ccNSO and recommending them to the Board, the ccNSO shall follow the ccNSO Policy-Development Process (ccPDP). The ccPDP shall be as stated in [Annex B to these Bylaws](#); modifications shall be recommended to the Board by the ccNSO by use of the procedures of the ccPDP, and shall be subject to approval by the Board.

## **Section 7. STAFF SUPPORT AND FUNDING**

1. Upon request of the ccNSO Council, a member of the ICANN staff may be assigned to support the ccNSO and shall be designated as the ccNSO Staff Manager. Alternatively, the ccNSO Council may

designate, at ccNSO expense, another person to serve as ccNSO Staff Manager. The work of the ccNSO Staff Manager on substantive matters shall be assigned by the Chair of the ccNSO Council, and may include the duties of ccPDP Issue Manager.

2. Upon request of the ccNSO Council, ICANN shall provide administrative and operational support necessary for the ccNSO to carry out its responsibilities. Such support shall not include an obligation for ICANN to fund travel expenses incurred by ccNSO participants for travel to any meeting of the ccNSO or for any other purpose. The ccNSO Council may make provision, at ccNSO expense, for administrative and operational support in addition or as an alternative to support provided by ICANN.
3. The ccNSO Council shall establish fees to be paid by ccNSO members to defray ccNSO expenses as described in [paragraphs 1 and 2 of this Section](#), as approved by the ccNSO members.
4. Written notices given to the ICANN Secretary under this Article shall be permanently retained, and shall be made available for review by the ccNSO Council on request. The ICANN Secretary shall also maintain the roll of members of the ccNSO, which shall include the name of each ccTLD manager's designated representative, and which shall be posted on the Website.

## ARTICLE X: GENERIC NAMES SUPPORTING ORGANIZATION

### Section 1. DESCRIPTION

There shall be a policy-development body known as the Generic Names Supporting Organization (GNSO), which shall be responsible for developing and recommending to the ICANN Board substantive policies relating to generic top-level domains.

### Section 2. ORGANIZATION

The GNSO shall consist of:

- i. A number of Constituencies, where applicable, organized within the Stakeholder Groups as described in [Section 5 of this Article](#);
- ii. Four Stakeholder Groups organized within Houses as described in [Section 5 of this Article](#);
- iii. Two Houses within the GNSO Council as described in [Section 3\(8\) of](#)

[this Article](#); and

- iv. a [GNSO Council](#) responsible for managing the policy development process of the [GNSO](#), as described in [Section 3 of this Article](#).

Except as otherwise defined in these Bylaws, the four Stakeholder Groups and the Constituencies will be responsible for defining their own charters with the approval of their members and of the [ICANN Board of Directors](#).

### **Section 3. [GNSO COUNCIL](#)**

1. Subject to the provisions of [Transition Article XX, Section 5 of these Bylaws](#) and as described in [Section 5 of Article X](#), the [GNSO Council](#) shall consist of:

- a. three representatives selected from the Registries Stakeholder Group;
- b. three representatives selected from the Registrars Stakeholder Group;
- c. six representatives selected from the Commercial Stakeholder Group;
- d. six representatives selected from the Non-Commercial Stakeholder Group; and
- e. three representatives selected by the [ICANN Nominating Committee](#), one of which shall be non-voting, but otherwise entitled to participate on equal footing with other members of the [GNSO Council](#) including, e.g. the making and seconding of motions and of serving as Chair if elected. One Nominating Committee Appointee voting representative shall be assigned to each House (as described in [Section 3\(8\) of this Article](#)) by the Nominating Committee.

No individual representative may hold more than one seat on the [GNSO Council](#) at the same time.

Stakeholder Groups should, in their charters, ensure their representation on the [GNSO Council](#) is as diverse as possible and practicable, including considerations of geography, [GNSO Constituency](#), sector, ability and gender.

There may also be liaisons to the [GNSO Council](#) from other [ICANN Supporting Organizations](#) and/or [Advisory Committees](#), from time to time. The appointing organization shall designate, revoke, or change its liaison on the [GNSO Council](#) by providing written notice to the Chair of the [GNSO Council](#) and to the [ICANN Secretary](#). Liaisons shall not be members of or entitled to vote, to make or second motions, or to serve as an officer on the [GNSO Council](#), but otherwise liaisons shall be entitled to participate on equal footing with members of the [GNSO Council](#).

2. Subject to the provisions of the [Transition Article XX, and Section 5 of these Bylaws](#), the regular term of each GNSO Council member shall begin at the conclusion of an ICANN annual meeting and shall end at the conclusion of the second ICANN annual meeting thereafter. The regular term of two representatives selected from Stakeholder Groups with three Council seats shall begin in even-numbered years and the regular term of the other representative selected from that Stakeholder Group shall begin in odd-numbered years. The regular term of three representatives selected from Stakeholder Groups with six Council seats shall begin in even-numbered years and the regular term of the other three representatives selected from that Stakeholder Group shall begin in odd-numbered years. The regular term of one of the three members selected by the Nominating Committee shall begin in even-numbered years and the regular term of the other two of the three members selected by the Nominating Committee shall begin in odd-numbered years. Each GNSO Council member shall hold office during his or her regular term and until a successor has been selected and qualified or until that member resigns or is removed in accordance with these Bylaws.

Except in a "special circumstance," such as, but not limited to, meeting geographic or other diversity requirements defined in the Stakeholder Group charters, where no alternative representative is available to serve, no Council member may be selected to serve more than two consecutive terms, in such a special circumstance a Council member may serve one additional term. For these purposes, a person selected to fill a vacancy in a term shall not be deemed to have served that term. A former Council member who has served two consecutive terms must remain out of office for one full term prior to serving any subsequent term as Council member. A "special circumstance" is defined in the GNSO Operating Procedures.

3. A vacancy on the GNSO Council shall be deemed to exist in the case of the death, resignation, or removal of any member. Vacancies shall be filled for the unexpired term by the appropriate Nominating Committee or Stakeholder Group that selected the member holding the position before the vacancy occurred by giving the GNSO Secretariat written notice of its selection. Procedures for handling Stakeholder Group-appointed GNSO Council member vacancies, resignations, and removals are prescribed in the applicable Stakeholder Group Charter.

A GNSO Council member selected by the Nominating Committee may be removed for cause: i) stated by a three-fourths (3/4) vote of all members of the applicable House to which the Nominating Committee appointee is assigned; or ii) stated by a three-fourths (3/4) vote of all members of each House in the case of the non-voting Nominating Committee appointee (see [Section 3\(8\) of this Article](#)). Such removal shall be subject to reversal by the ICANN Board on appeal by the affected GNSO Council member.

4. The GNSO Council is responsible for managing the policy development process of the GNSO. It shall adopt such procedures (the "GNSO Operating Procedures") as it sees fit to carry out that responsibility, provided that such procedures are approved by a majority vote of each House. The GNSO Operating Procedures shall be effective upon the expiration of a twenty-one (21) day public comment period, and shall be subject to Board oversight and review. Until any modifications are recommended by the GNSO Council, the applicable procedures shall be as set forth in [Section 6 of this Article](#).
5. No more than one officer, director or employee of any particular corporation or other organization (including its subsidiaries and affiliates) shall serve on the GNSO Council at any given time.
6. The GNSO shall make selections to fill Seats 13 and 14 on the ICANN Board by written ballot or by action at a meeting. Each of the two voting Houses of the GNSO, as described in [Section 3\(8\) of this Article](#), shall make a selection to fill one of two ICANN Board seats, as outlined below; any such selection must have affirmative votes comprising sixty percent (60%) of all the respective voting House members:
  - a. the Contracted Party House shall select a representative to fill Seat 13; and
  - b. the Non-Contracted Party House shall select a representative to fill Seat 14

Election procedures are defined in the GNSO Operating Procedures.

Notification of the Board seat selections shall be given by the GNSO Chair in writing to the ICANN Secretary, consistent with Article VI, Sections [8\(4\)](#) and [12\(1\)](#).

7. The GNSO Council shall select the GNSO Chair for a term the GNSO Council specifies, but not longer than one year. Each House (as described in [Section 3.8 of this Article](#)) shall select a Vice-Chair, who will be a Vice-Chair of the whole of the GNSO Council, for a term the GNSO Council specifies, but not longer than one year. The procedures for selecting the Chair and any other officers are contained in the GNSO Operating Procedures. In the event that the GNSO Council has not elected a GNSO Chair by the end of the previous Chair's term, the Vice-Chairs will serve as Interim GNSO Co-Chairs until a successful election can be held.
8. Except as otherwise required in these Bylaws, for voting purposes, the GNSO Council (see [Section 3\(1\) of this Article](#)) shall be organized into a bicameral House structure as described below:

- a. the Contracted Parties House includes the Registries Stakeholder Group (three members), the Registrars Stakeholder Group (three members), and one voting member appointed by the ICANN Nominating Committee for a total of seven voting members; and
- b. the Non Contracted Parties House includes the Commercial Stakeholder Group (six members), the Non-Commercial Stakeholder Group (six members), and one voting member appointed by the ICANN Nominating Committee to that House for a total of thirteen voting members.

Except as otherwise specified in these Bylaws, each member of a voting House is entitled to cast one vote in each separate matter before the GNSO Council.

9. Except as otherwise specified in these Bylaws, [Annex A](#), [Annex A-1](#) and [Annex A-2](#) hereto, or the GNSO Operating Procedures, the default threshold to pass a GNSO Council motion or other voting action requires a simple majority vote of each House. The voting thresholds described below shall apply to the following GNSO actions:

- a. Create an Issues Report: requires an affirmative vote of more than one-fourth (1/4) vote of each House or majority of one House.
- b. Initiate a Policy Development Process ("PDP") Within Scope (as described in [Annex A](#)): requires an affirmative vote of more than one-third (1/3) of each House or more than two-thirds (2/3) of one House.
- c. Initiate a PDP Not Within Scope: requires an affirmative vote of GNSO Supermajority.
- d. Approve a PDP Team Charter for a PDP Within Scope: requires an affirmative vote of more than one-third (1/3) of each House or more than two-thirds (2/3) of one House.
- e. Approve a PDP Team Charter for a PDP Not Within Scope: requires an affirmative vote of a GNSO Supermajority.
- f. Changes to an Approved PDP Team Charter: For any PDP Team Charter approved under d. or e. above, the GNSO Council may approve an amendment to the Charter through a simple majority vote of each House.
- g. Terminate a PDP: Once initiated, and prior to the publication of a Final Report, the GNSO Council may terminate a PDP only for significant cause, upon a motion that passes with a GNSO Supermajority Vote in

favor of termination.

- h. Approve a PDP Recommendation Without a GNSO Supermajority: requires an affirmative vote of a majority of each House and further requires that one GNSO Council member representative of at least 3 of the 4 Stakeholder Groups supports the Recommendation.
- i. Approve a PDP Recommendation With a GNSO Supermajority: requires an affirmative vote of a GNSO Supermajority,
- j. Approve a PDP Recommendation Imposing New Obligations on Certain Contracting Parties: where an ICANN contract provision specifies that "a two-thirds vote of the council" demonstrates the presence of a consensus, the GNSO Supermajority vote threshold will have to be met or exceeded.
- k. Modification of Approved PDP Recommendation: Prior to Final Approval by the ICANN Board, an Approved PDP Recommendation may be modified or amended by the GNSO Council with a GNSO Supermajority vote.
- l. Initiation of an Expedited Policy Development Process (EPDP): requires an affirmative vote of a GNSO Supermajority.
- m. Approve an EPDP Team Charter: requires an affirmative vote of a GNSO Supermajority.
- n. Approval of EPDP recommendations: requires an affirmative vote of a GNSO Supermajority.
- o. Approve an EPDP Recommendation Imposing New Obligations on Certain Contracting Parties: where an ICANN contract provision specifies that "a two-thirds vote of the council" demonstrates the presence of a consensus, the GNSO Supermajority vote threshold will have to be met or exceeded.
- p. Initiation of a GNSO Guidance Process (GGP): requires an affirmative vote of more than one-third (1/3) of each House or more than two-thirds (2/3) of one House.
- q. Rejection of initiation of a GGP requested by the ICANN Board: requires an affirmative vote of a GNSO Supermajority.
- r. Approval of GGP recommendations: requires an affirmative vote of a GNSO Supermajority.
- s. A "GNSO Supermajority" shall mean: (a) two-thirds (2/3) of the Council members of each House, or (b) three-fourths (3/4) of one House and a

majority of the other House."

#### Section 4. STAFF SUPPORT AND FUNDING

1. A member of the ICANN staff shall be assigned to support the GNSO, whose work on substantive matters shall be assigned by the Chair of the GNSO Council, and shall be designated as the GNSO Staff Manager (Staff Manager).
2. ICANN shall provide administrative and operational support necessary for the GNSO to carry out its responsibilities. Such support shall not include an obligation for ICANN to fund travel expenses incurred by GNSO participants for travel to any meeting of the GNSO or for any other purpose. ICANN may, at its discretion, fund travel expenses for GNSO participants under any travel support procedures or guidelines that it may adopt from time to time.

#### Section 5. STAKEHOLDER GROUPS

1. The following Stakeholder Groups are hereby recognized as representative of a specific group of one or more Constituencies or interest groups and subject to the provisions of the [Transition Article XX, Section 5 of these Bylaws](#):
  - a. Registries Stakeholder Group representing all gTLD registries under contract to ICANN;
  - b. Registrars Stakeholder Group representing all registrars accredited by and under contract to ICANN;
  - c. Commercial Stakeholder Group representing the full range of large and small commercial entities of the Internet; and
  - d. Non-Commercial Stakeholder Group representing the full range of non-commercial entities of the Internet.
2. Each Stakeholder Group is assigned a specific number of Council seats in accordance with [Section 3\(1\) of this Article](#).
3. Each Stakeholder Group identified in [paragraph 1 of this Section](#) and each of its associated Constituencies, where applicable, shall maintain recognition with the ICANN Board. Recognition is granted by the Board based upon the extent to which, in fact, the entity represents the global interests of the stakeholder communities it purports to represent and operates to the maximum extent feasible in an open and transparent manner consistent with procedures designed to ensure fairness. Stakeholder Group and Constituency

Charters may be reviewed periodically as prescribed by the Board.

4. Any group of individuals or entities may petition the Board for recognition as a new or separate Constituency in the Non-Contracted Parties House. Any such petition shall contain:
  - a. A detailed explanation of why the addition of such a Constituency will improve the ability of the GNSO to carry out its policy-development responsibilities;
  - b. A detailed explanation of why the proposed new Constituency adequately represents, on a global basis, the stakeholders it seeks to represent;
  - c. A recommendation for organizational placement within a particular Stakeholder Group; and
  - d. A proposed charter that adheres to the principles and procedures contained in these Bylaws.

Any petition for the recognition of a new Constituency and the associated charter shall be posted for public comment.

5. The Board may create new Constituencies as described in [Section 5\(3\)](#) in response to such a petition, or on its own motion, if the Board determines that such action would serve the purposes of ICANN. In the event the Board is considering acting on its own motion it shall post a detailed explanation of why such action is necessary or desirable, set a reasonable time for public comment, and not make a final decision on whether to create such new Constituency until after reviewing all comments received. Whenever the Board posts a petition or recommendation for a new Constituency for public comment, the Board shall notify the GNSO Council and the appropriate Stakeholder Group affected and shall consider any response to that notification prior to taking action.

## **Section 6. POLICY DEVELOPMENT PROCESS**

The policy-development procedures to be followed by the GNSO shall be as stated in [Annex A](#) to these Bylaws. These procedures may be supplemented or revised in the manner stated in [Section 3\(4\) of this Article](#).

## **ARTICLE XI: ADVISORY COMMITTEES**

### **Section 1. GENERAL**

The Board may create one or more Advisory Committees in addition to those

set forth in this Article. Advisory Committee membership may consist of Directors only, Directors and non-directors, or non-directors only, and may also include non-voting or alternate members. Advisory Committees shall have no legal authority to act for ICANN, but shall report their findings and recommendations to the Board.

## **Section 2. SPECIFIC ADVISORY COMMITTEES**

There shall be at least the following Advisory Committees:

### **1. Governmental Advisory Committee**

- a. The Governmental Advisory Committee should consider and provide advice on the activities of ICANN as they relate to concerns of governments, particularly matters where there may be an interaction between ICANN's policies and various laws and international agreements or where they may affect public policy issues.
- b. Membership in the Governmental Advisory Committee shall be open to all national governments. Membership shall also be open to Distinct Economies as recognized in international fora, and multinational governmental organizations and treaty organizations, on the invitation of the Governmental Advisory Committee through its Chair.
- c. The Governmental Advisory Committee may adopt its own charter and internal operating principles or procedures to guide its operations, to be published on the Website.
- d. The chair of the Governmental Advisory Committee shall be elected by the members of the Governmental Advisory Committee pursuant to procedures adopted by such members.
- e. Each member of the Governmental Advisory Committee shall appoint one accredited representative to the Committee. The accredited representative of a member must hold a formal official position with the member's public administration. The term "official" includes a holder of an elected governmental office, or a person who is employed by such government, public authority, or multinational governmental or treaty organization and whose primary function with such government, public authority, or organization is to develop or influence governmental or public policies.
- f. The Governmental Advisory Committee shall annually appoint one non-voting liaison to the ICANN Board of Directors, without limitation on reappointment, and shall annually appoint one non-voting liaison to the ICANN Nominating Committee.

- g. The Governmental Advisory Committee may designate a non-voting liaison to each of the Supporting Organization Councils and Advisory Committees, to the extent the Governmental Advisory Committee deems it appropriate and useful to do so.
- h. The Board shall notify the Chair of the Governmental Advisory Committee in a timely manner of any proposal raising public policy issues on which it or any of ICANN's supporting organizations or advisory committees seeks public comment, and shall take duly into account any timely response to that notification prior to taking action.
- i. The Governmental Advisory Committee may put issues to the Board directly, either by way of comment or prior advice, or by way of specifically recommending action or new policy development or revision to existing policies.
- j. The advice of the Governmental Advisory Committee on public policy matters shall be duly taken into account, both in the formulation and adoption of policies. In the event that the ICANN Board determines to take an action that is not consistent with the Governmental Advisory Committee advice, it shall so inform the Committee and state the reasons why it decided not to follow that advice. The Governmental Advisory Committee and the ICANN Board will then try, in good faith and in a timely and efficient manner, to find a mutually acceptable solution.
- k. If no such solution can be found, the ICANN Board will state in its final decision the reasons why the Governmental Advisory Committee advice was not followed, and such statement will be without prejudice to the rights or obligations of Governmental Advisory Committee members with regard to public policy issues falling within their responsibilities.

## 2. Security and Stability Advisory Committee

- a. The role of the Security and Stability Advisory Committee ("SSAC") is to advise the ICANN community and Board on matters relating to the security and integrity of the Internet's naming and address allocation systems. It shall have the following responsibilities:
  - 1. To communicate on security matters with the Internet technical community and the operators and managers of critical DNS infrastructure services, to include the root name server operator community, the top-level domain registries and registrars, the operators of the reverse delegation trees such as in-addr.arpa and ip6.arpa, and others as events and developments dictate.

- The Committee shall gather and articulate requirements to offer to those engaged in technical revision of the protocols related to DNS and address allocation and those engaged in operations planning.
2. To engage in ongoing threat assessment and risk analysis of the Internet naming and address allocation services to assess where the principal threats to stability and security lie, and to advise the ICANN community accordingly. The Committee shall recommend any necessary audit activity to assess the current status of DNS and address allocation security in relation to identified risks and threats.
  3. To communicate with those who have direct responsibility for Internet naming and address allocation security matters (IETF, RSSAC, RIRs, name registries, etc.), to ensure that its advice on security risks, issues, and priorities is properly synchronized with existing standardization, deployment, operational, and coordination activities. The Committee shall monitor these activities and inform the ICANN community and Board on their progress, as appropriate.
  4. To report periodically to the Board on its activities.
  5. To make policy recommendations to the ICANN community and Board.
- b. The SSAC's chair and members shall be appointed by the Board. SSAC membership appointment shall be for a three-year term, commencing on 1 January and ending the second year thereafter on 31 December. The chair and members may be re-appointed, and there are no limits to the number of terms the chair or members may serve. The SSAC chair may provide recommendations to the Board regarding appointments to the SSAC. The SSAC chair shall stagger appointment recommendations so that approximately one-third (1/3) of the membership of the SSAC is considered for appointment or re-appointment each year. The Board shall also have to power to remove SSAC appointees as recommended by or in consultation with the SSAC. (Note: The first full term under this paragraph shall commence on 1 January 2011 and end on 31 December 2013. Prior to 1 January 2011, the SSAC shall be comprised as stated in the Bylaws as amended 25 June 2010, and the SSAC chair shall recommend the re-appointment of all current SSAC members to full or partial terms as appropriate to implement the provisions of this paragraph.)
- c. The SSAC shall annually appoint a non-voting liaison to the ICANN

Board according to [Section 9 of Article VI](#).

### 3. Root Server System Advisory Committee

- a. The role of the Root Server System Advisory Committee ("RSSAC") is to advise the ICANN community and Board on matters relating to the operation, administration, security, and integrity of the Internet's Root Server System. It shall have the following responsibilities:
  1. Communicate on matters relating to the operation of the Root Servers and their multiple instances with the Internet technical community and the ICANN community. The Committee shall gather and articulate requirements to offer to those engaged in technical revision of the protocols and best common practices related to the operation of DNS servers.
  2. Communicate on matters relating to the administration of the Root Zone with those who have direct responsibility for that administration. These matters include the processes and procedures for the production of the Root Zone File.
  3. Engage in ongoing threat assessment and risk analysis of the Root Server System and recommend any necessary audit activity to assess the current status of root servers and the root zone.
  4. Respond to requests for information or opinions from the ICANN Board of Directors.
  5. Report periodically to the Board on its activities.
  6. Make policy recommendations to the ICANN community and Board.
- b. The RSSAC shall be led by two co-chairs. The RSSAC's chairs and members shall be appointed by the Board.
  1. RSSAC membership appointment shall be for a three-year term, commencing on 1 January and ending the second year thereafter on 31 December. Members may be re-appointed, and there are no limits to the number of terms the members may serve. The RSSAC chairs shall provide recommendations to the Board regarding appointments to the RSSAC. If the board declines to appoint a person nominated by the RSSAC then it will provide the rationale for its decision. The RSSAC chairs shall stagger appointment recommendations so that approximately one-third (1/3) of the membership of the RSSAC is considered for appointment or re-appointment each year. The

Board shall also have to power to remove RSSAC appointees as recommended by or in consultation with the RSSAC. (Note: The first term under this paragraph shall commence on 1 July 2013 and end on 31 December 2015, and shall be considered a full term for all purposes. All other full terms under this paragraph shall begin on 1 January of the corresponding year. Prior to 1 July 2013, the RSSAC shall be comprised as stated in the Bylaws as amended 16 March 2012, and the RSSAC chairs shall recommend the re-appointment of all current RSSAC members to full or partial terms as appropriate to implement the provisions of this paragraph.)

2. The RSSAC shall recommend the appointment of the chairs to the board following a nomination process that it devises and documents.

c. The RSSAC shall annually appoint a non-voting liaison to the ICANN Board according to Section 9 of Article VI.

#### 4. At-Large Advisory Committee

a. The At-Large Advisory Committee (ALAC) is the primary organizational home within ICANN for individual Internet users. The role of the ALAC shall be to consider and provide advice on the activities of ICANN, insofar as they relate to the interests of individual Internet users. This includes policies created through ICANN's Supporting Organizations, as well as the many other issues for which community input and advice is appropriate. The ALAC, which plays an important role in ICANN's accountability mechanisms, also coordinates some of ICANN's outreach to individual Internet users.

b. The ALAC shall consist of (i) two members selected by each of the Regional At-Large Organizations ("RALOs") established according to paragraph 4(g) of this Section, and (ii) five members selected by the Nominating Committee. The five members selected by the Nominating Committee shall include one citizen of a country within each of the five Geographic Regions established according to [Section 5 of Article VI](#).

c. Subject to the provisions of the [Transition Article of these Bylaws](#), the regular terms of members of the ALAC shall be as follows:

1. The term of one member selected by each RALO shall begin at the conclusion of an ICANN annual meeting in an even-numbered year.

2. The term of the other member selected by each RALO shall begin at the conclusion of an ICANN annual meeting in an odd-

numbered year.

3. The terms of three of the members selected by the Nominating Committee shall begin at the conclusion of an annual meeting in an odd-numbered year and the terms of the other two members selected by the Nominating Committee shall begin at the conclusion of an annual meeting in an even-numbered year.
  4. The regular term of each member shall end at the conclusion of the second ICANN annual meeting after the term began.
- d. The Chair of the ALAC shall be elected by the members of the ALAC pursuant to procedures adopted by the Committee.
  - e. The ALAC shall, after consultation with each RALO, annually appoint five voting delegates (no two of whom shall be citizens of countries in the same Geographic Region, as defined according to [Section 5 of Article VI](#)) to the Nominating Committee.
  - f. Subject to the provisions of the [Transition Article of these Bylaws](#), the At-Large Advisory Committee may designate non-voting liaisons to each of the ccNSO Council and the GNSO Council.
  - g. There shall be one RALO for each Geographic Region established according to [Section 5 of Article VI](#). Each RALO shall serve as the main forum and coordination point for public input to ICANN in its Geographic Region and shall be a non-profit organization certified by ICANN according to criteria and standards established by the Board based on recommendations of the At-Large Advisory Committee. An organization shall become the recognized RALO for its Geographic Region upon entering a Memorandum of Understanding with ICANN addressing the respective roles and responsibilities of ICANN and the RALO regarding the process for selecting ALAC members and requirements of openness, participatory opportunities, transparency, accountability, and diversity in the RALO's structure and procedures, as well as criteria and standards for the RALO's constituent At-Large Structures.
  - h. Each RALO shall be comprised of self-supporting At-Large Structures within its Geographic Region that have been certified to meet the requirements of the RALO's Memorandum of Understanding with ICANN according to [paragraph 4\(i\) of this Section](#). If so provided by its Memorandum of Understanding with ICANN, a RALO may also include individual Internet users who are citizens or residents of countries within the RALO's Geographic Region.

## i. Membership in the At-Large Community

1. The criteria and standards for the certification of At-Large Structures within each Geographic Region shall be established by the Board based on recommendations from the ALAC and shall be stated in the Memorandum of Understanding between ICANN and the RALO for each Geographic Region.
2. The criteria and standards for the certification of At-Large Structures shall be established in such a way that participation by individual Internet users who are citizens or residents of countries within the Geographic Region (as defined in [Section 5 of Article VI](#)) of the RALO will predominate in the operation of each At-Large Structure within the RALO, while not necessarily excluding additional participation, compatible with the interests of the individual Internet users within the region, by others.
3. Each RALO's Memorandum of Understanding shall also include provisions designed to allow, to the greatest extent possible, every individual Internet user who is a citizen of a country within the RALO's Geographic Region to participate in at least one of the RALO's At-Large Structures.
4. To the extent compatible with these objectives, the criteria and standards should also afford to each RALO the type of structure that best fits the customs and character of its Geographic Region.
5. Once the criteria and standards have been established as provided in this Clause i, the ALAC, with the advice and participation of the RALO where the applicant is based, shall be responsible for certifying organizations as meeting the criteria and standards for At-Large Structure accreditation.
6. Decisions to certify or decertify an At-Large Structure shall be made as decided by the ALAC in its Rules of Procedure, save always that any changes made to the Rules of Procedure in respect of ALS applications shall be subject to review by the RALOs and by the ICANN Board.
7. Decisions as to whether to accredit, not to accredit, or disaccredit an At-Large Structure shall be subject to review according to procedures established by the Board.
8. On an ongoing basis, the ALAC may also give advice as to whether a prospective At-Large Structure meets the applicable criteria and standards.

- j. The ALAC is also responsible, working in conjunction with the RALOs, for coordinating the following activities:
1. Making a selection by the At-Large Community to fill Seat 15 on the Board. Notification of the At-Large Community's selection shall be given by the ALAC Chair in writing to the ICANN Secretary, consistent with Article VI, Sections 8(4) and 12(1).
  2. Keeping the community of individual Internet users informed about the significant news from ICANN;
  3. Distributing (through posting or otherwise) an updated agenda, news about ICANN, and information about items in the ICANN policy-development process;
  4. Promoting outreach activities in the community of individual Internet users;
  5. Developing and maintaining on-going information and education programs, regarding ICANN and its work;
  6. Establishing an outreach strategy about ICANN issues in each RALO's Region;
  7. Participating in the ICANN policy development processes and providing input and advice that accurately reflects the views of individual Internet users;
  8. Making public, and analyzing, ICANN's proposed policies and its decisions and their (potential) regional impact and (potential) effect on individuals in the region;
  9. Offering Internet-based mechanisms that enable discussions among members of At-Large structures; and
  10. Establishing mechanisms and processes that enable two-way communication between members of At-Large Structures and those involved in ICANN decision-making, so interested individuals can share their views on pending ICANN issues.

### **Section 3. PROCEDURES**

Each Advisory Committee shall determine its own rules of procedure and quorum requirements.

### **Section 4. TERM OF OFFICE**

The chair and each member of a committee shall serve until his or her

successor is appointed, or until such committee is sooner terminated, or until he or she is removed, resigns, or otherwise ceases to qualify as a member of the committee.

#### **Section 5. VACANCIES**

Vacancies on any committee shall be filled in the same manner as provided in the case of original appointments.

#### **Section 6. COMPENSATION**

Committee members shall receive no compensation for their services as a member of a committee. The Board may, however, authorize the reimbursement of actual and necessary expenses incurred by committee members, including Directors, performing their duties as committee members.

### **ARTICLE XI-A: OTHER ADVISORY MECHANISMS**

#### **Section 1. EXTERNAL EXPERT ADVICE**

1. Purpose. The purpose of seeking external expert advice is to allow the policy-development process within ICANN to take advantage of existing expertise that resides in the public or private sector but outside of ICANN. In those cases where there are relevant public bodies with expertise, or where access to private expertise could be helpful, the Board and constituent bodies should be encouraged to seek advice from such expert bodies or individuals.
2. Types of Expert Advisory Panels.
  - a. On its own initiative or at the suggestion of any ICANN body, the Board may appoint, or authorize the President to appoint, Expert Advisory Panels consisting of public or private sector individuals or entities. If the advice sought from such Panels concerns issues of public policy, the provisions of [Section 1\(3\)\(b\) of this Article](#) shall apply.
  - b. In addition, in accordance with [Section 1\(3\) of this Article](#), the Board may refer issues of public policy pertinent to matters within ICANN's mission to a multinational governmental or treaty organization.
3. Process for Seeking Advice-Public Policy Matters.
  - a. The Governmental Advisory Committee may at any time recommend that the Board seek advice concerning one or more issues of public policy from an external source, as set out

above.

- b. In the event that the Board determines, upon such a recommendation or otherwise, that external advice should be sought concerning one or more issues of public policy, the Board shall, as appropriate, consult with the Governmental Advisory Committee regarding the appropriate source from which to seek the advice and the arrangements, including definition of scope and process, for requesting and obtaining that advice.
  - c. The Board shall, as appropriate, transmit any request for advice from a multinational governmental or treaty organization, including specific terms of reference, to the Governmental Advisory Committee, with the suggestion that the request be transmitted by the Governmental Advisory Committee to the multinational governmental or treaty organization.
4. Process for Seeking and Advice-Other Matters. Any reference of issues not concerning public policy to an Expert Advisory Panel by the Board or President in accordance with [Section 1\(2\)\(a\) of this Article](#) shall be made pursuant to terms of reference describing the issues on which input and advice is sought and the procedures and schedule to be followed.
  5. Receipt of Expert Advice and its Effect. External advice pursuant to this Section shall be provided in written form. Such advice is advisory and not binding, and is intended to augment the information available to the Board or other ICANN body in carrying out its responsibilities.
  6. Opportunity to Comment. The Governmental Advisory Committee, in addition to the Supporting Organizations and other Advisory Committees, shall have an opportunity to comment upon any external advice received prior to any decision by the Board.

## **Section 2. TECHNICAL LIAISON GROUP**

1. Purpose. The quality of ICANN's work depends on access to complete and authoritative information concerning the technical standards that underlie ICANN's activities. ICANN's relationship to the organizations that produce these standards is therefore particularly important. The Technical Liaison Group (TLG) shall connect the Board with appropriate sources of technical advice on specific matters pertinent to ICANN's activities.
2. TLG Organizations. The TLG shall consist of four organizations: the

European Telecommunications Standards Institute (ETSI), the International Telecommunications Union's Telecommunication Standardization Sector (ITU-T), the World Wide Web Consortium (W3C), and the Internet Architecture Board (IAB).

3. Role. The role of the TLG organizations shall be to channel technical information and guidance to the Board and to other ICANN entities. This role has both a responsive component and an active "watchdog" component, which involve the following responsibilities:
  - a. In response to a request for information, to connect the Board or other ICANN body with appropriate sources of technical expertise. This component of the TLG role covers circumstances in which ICANN seeks an authoritative answer to a specific technical question. Where information is requested regarding a particular technical standard for which a TLG organization is responsible, that request shall be directed to that TLG organization.
  - b. As an ongoing "watchdog" activity, to advise the Board of the relevance and progress of technical developments in the areas covered by each organization's scope that could affect Board decisions or other ICANN actions, and to draw attention to global technical standards issues that affect policy development within the scope of ICANN's mission. This component of the TLG role covers circumstances in which ICANN is unaware of a new development, and would therefore otherwise not realize that a question should be asked.
4. TLG Procedures. The TLG shall not have officers or hold meetings, nor shall it provide policy advice to the Board as a committee (although TLG organizations may individually be asked by the Board to do so as the need arises in areas relevant to their individual charters). Neither shall the TLG debate or otherwise coordinate technical issues across the TLG organizations; establish or attempt to establish unified positions; or create or attempt to create additional layers or structures within the TLG for the development of technical standards or for any other purpose.
5. Technical Work with the IETF. The TLG shall have no involvement with the ICANN's work for the Internet Engineering Task Force (IETF), Internet Research Task Force, or the Internet Architecture Board (IAB), as described in the IETF-ICANN Memorandum of Understanding Concerning the Technical Work of the Internet Assigned Numbers Authority ratified by the Board on 10 March 2000.

6. Individual Technical Experts. Each TLG organization shall designate two individual technical experts who are familiar with the technical standards issues that are relevant to ICANN's activities. These 8 experts shall be available as necessary to determine, through an exchange of e-mail messages, where to direct a technical question from ICANN when ICANN does not ask a specific TLG organization directly.

## ARTICLE XII: BOARD AND TEMPORARY COMMITTEES

### Section 1. BOARD COMMITTEES

The Board may establish one or more committees of the Board, which shall continue to exist until otherwise determined by the Board. Only Directors may be appointed to a Committee of the Board. If a person appointed to a Committee of the Board ceases to be a Director, such person shall also cease to be a member of any Committee of the Board. Each Committee of the Board shall consist of two or more Directors. The Board may designate one or more Directors as alternate members of any such committee, who may replace any absent member at any meeting of the committee. Committee members may be removed from a committee at any time by a two-thirds (2/3) majority vote of all members of the Board; provided, however, that any Director or Directors which are the subject of the removal action shall not be entitled to vote on such an action or be counted as a member of the Board when calculating the required two-thirds (2/3) vote; and, provided further, however, that in no event shall a Director be removed from a committee unless such removal is approved by not less than a majority of all members of the Board.

### Section 2. POWERS OF BOARD COMMITTEES

1. The Board may delegate to Committees of the Board all legal authority of the Board except with respect to:
  - a. The filling of vacancies on the Board or on any committee;
  - b. The amendment or repeal of Bylaws or the Articles of Incorporation or the adoption of new Bylaws or Articles of Incorporation;
  - c. The amendment or repeal of any resolution of the Board which by its express terms is not so amendable or repealable;
  - d. The appointment of committees of the Board or the members thereof;
  - e. The approval of any self-dealing transaction, as such transactions are defined in Section 5233(a) of the CNPBCL;

- f. The approval of the annual budget required by [Article XVI](#); or
- g. The compensation of any officer described in [Article XIII](#).

2. The Board shall have the power to prescribe the manner in which proceedings of any Committee of the Board shall be conducted. In the absence of any such prescription, such committee shall have the power to prescribe the manner in which its proceedings shall be conducted. Unless these Bylaws, the Board or such committee shall otherwise provide, the regular and special meetings shall be governed by the provisions of [Article VI](#) applicable to meetings and actions of the Board. Each committee shall keep regular minutes of its proceedings and shall report the same to the Board from time to time, as the Board may require.

### **Section 3. TEMPORARY COMMITTEES**

The Board may establish such temporary committees as it sees fit, with membership, duties, and responsibilities as set forth in the resolutions or charters adopted by the Board in establishing such committees.

## **ARTICLE XIII: OFFICERS**

### **Section 1. OFFICERS**

The officers of ICANN shall be a President (who shall serve as Chief Executive Officer), a Secretary, and a Chief Financial Officer. ICANN may also have, at the discretion of the Board, any additional officers that it deems appropriate. Any person, other than the President, may hold more than one office, except that no member of the Board (other than the President) shall simultaneously serve as an officer of ICANN.

### **Section 2. ELECTION OF OFFICERS**

The officers of ICANN shall be elected annually by the Board, pursuant to the recommendation of the President or, in the case of the President, of the Chairman of the ICANN Board. Each such officer shall hold his or her office until he or she resigns, is removed, is otherwise disqualified to serve, or his or her successor is elected.

### **Section 3. REMOVAL OF OFFICERS**

Any Officer may be removed, either with or without cause, by a two-thirds (2/3) majority vote of all the members of the Board. Should any vacancy occur in

any office as a result of death, resignation, removal, disqualification, or any other cause, the Board may delegate the powers and duties of such office to any Officer or to any Director until such time as a successor for the office has been elected.

#### **Section 4. PRESIDENT**

The President shall be the Chief Executive Officer (CEO) of ICANN in charge of all of its activities and business. All other officers and staff shall report to the President or his or her delegate, unless stated otherwise in these Bylaws. The President shall serve as an ex officio member of the Board, and shall have all the same rights and privileges of any Board member. The President shall be empowered to call special meetings of the Board as set forth herein, and shall discharge all other duties as may be required by these Bylaws and from time to time may be assigned by the Board.

#### **Section 5. SECRETARY**

The Secretary shall keep or cause to be kept the minutes of the Board in one or more books provided for that purpose, shall see that all notices are duly given in accordance with the provisions of these Bylaws or as required by law, and in general shall perform all duties as from time to time may be prescribed by the President or the Board.

#### **Section 6. CHIEF FINANCIAL OFFICER**

The Chief Financial Officer ("CFO") shall be the chief financial officer of ICANN. If required by the Board, the CFO shall give a bond for the faithful discharge of his or her duties in such form and with such surety or sureties as the Board shall determine. The CFO shall have charge and custody of all the funds of ICANN and shall keep or cause to be kept, in books belonging to ICANN, full and accurate amounts of all receipts and disbursements, and shall deposit all money and other valuable effects in the name of ICANN in such depositories as may be designated for that purpose by the Board. The CFO shall disburse the funds of ICANN as may be ordered by the Board or the President and, whenever requested by them, shall deliver to the Board and the President an account of all his or her transactions as CFO and of the financial condition of ICANN. The CFO shall be responsible for ICANN's financial planning and forecasting and shall assist the President in the preparation of ICANN's annual budget. The CFO shall coordinate and oversee ICANN's funding, including any audits or other reviews of ICANN or its Supporting Organizations. The CFO shall be responsible for all other matters relating to the financial operation of ICANN.

#### **Section 7. ADDITIONAL OFFICERS**

In addition to the officers described above, any additional or assistant officers who are elected or appointed by the Board shall perform such duties as may be assigned to them by the President or the Board.

#### **Section 8. COMPENSATION AND EXPENSES**

The compensation of any Officer of ICANN shall be approved by the Board. Expenses incurred in connection with performance of their officer duties may be reimbursed to Officers upon approval of the President (in the case of Officers other than the President), by another Officer designated by the Board (in the case of the President), or the Board.

#### **Section 9. CONFLICTS OF INTEREST**

The Board, through the Board Governance Committee, shall establish a policy requiring a statement from each Officer not less frequently than once a year setting forth all business and other affiliations that relate in any way to the business and other affiliations of ICANN.

### **ARTICLE XIV: INDEMNIFICATION OF DIRECTORS, OFFICERS, EMPLOYEES, AND OTHER AGENTS**

ICANN shall, to maximum extent permitted by the CNPBCL, indemnify each of its agents against expenses, judgments, fines, settlements, and other amounts actually and reasonably incurred in connection with any proceeding arising by reason of the fact that any such person is or was an agent of ICANN, provided that the indemnified person's acts were done in good faith and in a manner that the indemnified person reasonably believed to be in ICANN's best interests and not criminal. For purposes of this Article, an "agent" of ICANN includes any person who is or was a Director, Officer, employee, or any other agent of ICANN (including a member of any Supporting Organization, any Advisory Committee, the Nominating Committee, any other ICANN committee, or the Technical Liaison Group) acting within the scope of his or her responsibility; or is or was serving at the request of ICANN as a Director, Officer, employee, or agent of another corporation, partnership, joint venture, trust, or other enterprise. The Board may adopt a resolution authorizing the purchase and maintenance of insurance on behalf of any agent of ICANN against any liability asserted against or incurred by the agent in such capacity or arising out of the agent's status as such, whether or not ICANN would have the power to indemnify the agent against that liability under the provisions of this Article.

### **ARTICLE XV: GENERAL PROVISIONS**

### **Section 1. CONTRACTS**

The Board may authorize any Officer or Officers, agent or agents, to enter into any contract or execute or deliver any instrument in the name of and on behalf of ICANN, and such authority may be general or confined to specific instances. In the absence of a contrary Board authorization, contracts and instruments may only be executed by the following Officers: President, any Vice President, or the CFO. Unless authorized or ratified by the Board, no other Officer, agent, or employee shall have any power or authority to bind ICANN or to render it liable for any debts or obligations.

### **Section 2. DEPOSITS**

All funds of ICANN not otherwise employed shall be deposited from time to time to the credit of ICANN in such banks, trust companies, or other depositories as the Board, or the President under its delegation, may select.

### **Section 3. CHECKS**

All checks, drafts, or other orders for the payment of money, notes, or other evidences of indebtedness issued in the name of ICANN shall be signed by such Officer or Officers, agent or agents, of ICANN and in such a manner as shall from time to time be determined by resolution of the Board.

### **Section 4. LOANS**

No loans shall be made by or to ICANN and no evidences of indebtedness shall be issued in its name unless authorized by a resolution of the Board. Such authority may be general or confined to specific instances; provided, however, that no loans shall be made by ICANN to its Directors or Officers.

## **ARTICLE XVI: FISCAL MATTERS**

### **Section 1. ACCOUNTING**

The fiscal year end of ICANN shall be determined by the Board.

### **Section 2. AUDIT**

At the end of the fiscal year, the books of ICANN shall be closed and audited by certified public accountants. The appointment of the fiscal auditors shall be the responsibility of the Board.

### **Section 3. ANNUAL REPORT AND ANNUAL STATEMENT**

The Board shall publish, at least annually, a report describing its activities, including an audited financial statement and a description of any payments made by ICANN to Directors (including reimbursements of expenses). ICANN shall cause the annual report and the annual statement of certain transactions as required by the CNPBCL to be prepared and sent to each member of the Board and to such other persons as the Board may designate, no later than one hundred twenty (120) days after the close of ICANN's fiscal year.

#### **Section 4. ANNUAL BUDGET**

At least forty-five (45) days prior to the commencement of each fiscal year, the President shall prepare and submit to the Board, a proposed annual budget of ICANN for the next fiscal year, which shall be posted on the Website. The proposed budget shall identify anticipated revenue sources and levels and shall, to the extent practical, identify anticipated material expense items by line item. The Board shall adopt an annual budget and shall publish the adopted Budget on the Website.

#### **Section 5. FEES AND CHARGES**

The Board may set fees and charges for the services and benefits provided by ICANN, with the goal of fully recovering the reasonable costs of the operation of ICANN and establishing reasonable reserves for future expenses and contingencies reasonably related to the legitimate activities of ICANN. Such fees and charges shall be fair and equitable, shall be published for public comment prior to adoption, and once adopted shall be published on the Website in a sufficiently detailed manner so as to be readily accessible.

### **ARTICLE XVII: MEMBERS**

ICANN shall not have members, as defined in the California Nonprofit Public Benefit Corporation Law ("CNPBCL"), notwithstanding the use of the term "Member" in these Bylaws, in any ICANN document, or in any action of the ICANN Board or staff.

### **ARTICLE XVIII: OFFICES AND SEAL**

#### **Section 1. OFFICES**

The principal office for the transaction of the business of ICANN shall be in the County of Los Angeles, State of California, United States of America. ICANN may also have an additional office or offices within or outside the United States of America as it may from time to time establish.

## Section 2. SEAL

The Board may adopt a corporate seal and use the same by causing it or a facsimile thereof to be impressed or affixed or reproduced or otherwise.

## ARTICLE XIX: AMENDMENTS

Except as otherwise provided in the Articles of Incorporation or these Bylaws, the Articles of Incorporation or Bylaws of ICANN may be altered, amended, or repealed and new Articles of Incorporation or Bylaws adopted only upon action by a two-thirds (2/3) vote of all members of the Board.

## ARTICLE XX: TRANSITION ARTICLE

### Section 1. PURPOSE

This Transition Article sets forth the provisions for the transition from the processes and structures defined by the ICANN Bylaws, as amended and restated on 29 October 1999 and amended through 12 February 2002 (the "Old Bylaws"), to the processes and structures defined by the Bylaws of which this Article is a part (the "New Bylaws"). [Explanatory Note (dated 10 December 2009): For Section 5(3) of this Article, reference to the Old Bylaws refers to the Bylaws as amended and restated through to 20 March 2009.]

### Section 2. BOARD OF DIRECTORS

1. For the period beginning on the adoption of this Transition Article and ending on the Effective Date and Time of the New Board, as defined in [paragraph 5 of this Section 2](#), the Board of Directors of the Corporation ("Transition Board") shall consist of the members of the Board who would have been Directors under the Old Bylaws immediately after the conclusion of the annual meeting in 2002, except that those At-Large members of the Board under the Old Bylaws who elect to do so by notifying the Secretary of the Board on 15 December 2002 or in writing or by e-mail no later than 23 December 2002 shall also serve as members of the Transition Board. Notwithstanding the provisions of [Article VI, Section 12 of the New Bylaws](#), vacancies on the Transition Board shall not be filled. The Transition Board shall not have liaisons as provided by [Article VI, Section 9 of the New Bylaws](#). The Board Committees existing on the date of adoption of this Transition Article shall continue in existence, subject to any change in Board Committees or their membership that the Transition Board may adopt by resolution.
2. The Transition Board shall elect a Chair and Vice-Chair to serve until

the Effective Date and Time of the New Board.

3. The "New Board" is that Board described in [Article VI, Section 2\(1\) of the New Bylaws](#).
4. Promptly after the adoption of this Transition Article, a Nominating Committee shall be formed including, to the extent feasible, the delegates and liaisons described in [Article VII, Section 2 of the New Bylaws](#), with terms to end at the conclusion of the ICANN annual meeting in 2003. The Nominating Committee shall proceed without delay to select Directors to fill Seats 1 through 8 on the New Board, with terms to conclude upon the commencement of the first regular terms specified for those Seats in [Article VI, Section 8\(1\)\(a\)-\(c\) of the New Bylaws](#), and shall give the ICANN Secretary written notice of that selection.
5. The Effective Date and Time of the New Board shall be a time, as designated by the Transition Board, during the first regular meeting of ICANN in 2003 that begins not less than seven calendar days after the ICANN Secretary has received written notice of the selection of Directors to fill at least ten of Seats 1 through 14 on the New Board. As of the Effective Date and Time of the New Board, it shall assume from the Transition Board all the rights, duties, and obligations of the ICANN Board of Directors. Subject to Section 4 of this Article, the Directors ([Article VI, Section 2\(1\)\(a\)-\(d\)](#)) and non-voting liaisons ([Article VI, Section 9](#)) as to which the ICANN Secretary has received notice of selection shall, along with the President ([Article VI, Section 2\(1\)\(e\)](#)), be seated upon the Effective Date and Time of the New Board, and thereafter any additional Directors and non-voting liaisons shall be seated upon the ICANN Secretary's receipt of notice of their selection.
6. The New Board shall elect a Chairman and Vice-Chairman as its first order of business. The terms of those Board offices shall expire at the end of the annual meeting in 2003.
7. Committees of the Board in existence as of the Effective Date and Time of the New Board shall continue in existence according to their existing charters, but the terms of all members of those committees shall conclude at the Effective Date and Time of the New Board. Temporary committees in existence as of the Effective Date and Time of the New Board shall continue in existence with their existing charters and membership, subject to any change the New Board may adopt by resolution.
8. In applying the term-limitation provision of [Section 8\(5\) of Article VI](#), a Director's service on the Board before the Effective Date and Time of

the New Board shall count as one term.

### **Section 3. ADDRESS SUPPORTING ORGANIZATION**

The Address Supporting Organization shall continue in operation according to the provisions of the [Memorandum of Understanding originally entered on 18 October 1999](#) between ICANN and a group of regional Internet registries (RIRs), and [amended in October 2000](#), until a replacement Memorandum of Understanding becomes effective. Promptly after the adoption of this Transition Article, the Address Supporting Organization shall make selections, and give the ICANN Secretary written notice of those selections, of:

1. Directors to fill Seats 9 and 10 on the New Board, with terms to conclude upon the commencement of the first regular terms specified for each of those Seats in [Article VI, Section 8\(1\)\(d\) and \(e\) of the New Bylaws](#); and
2. the delegate to the Nominating Committee selected by the Council of the Address Supporting Organization, as called for in [Article VII, Section 2\(8\)\(f\) of the New Bylaws](#).

With respect to the ICANN Directors that it is entitled to select, and taking into account the need for rapid selection to ensure that the New Board becomes effective as soon as possible, the Address Supporting Organization may select those Directors from among the persons it previously selected as ICANN Directors pursuant to the Old Bylaws. To the extent the Address Supporting Organization does not provide the ICANN Secretary written notice, on or before 31 March 2003, of its selections for Seat 9 and Seat 10, the Address Supporting Organization shall be deemed to have selected for Seat 9 the person it selected as an ICANN Director pursuant to the Old Bylaws for a term beginning in 2001 and for Seat 10 the person it selected as an ICANN Director pursuant to the Old Bylaws for a term beginning in 2002.

### **Section 4. COUNTRY-CODE NAMES SUPPORTING ORGANIZATION**

1. Upon the enrollment of thirty ccTLD managers (with at least four within each Geographic Region) as members of the ccNSO, written notice shall be posted on the Website. As soon as feasible after that notice, the members of the initial ccNSO Council to be selected by the ccNSO members shall be selected according to the procedures stated in [Article IX, Section 4\(8\) and \(9\)](#). Upon the completion of that selection process, a written notice that the ccNSO Council has been constituted shall be posted on the Website. Three ccNSO Council members shall be selected by the ccNSO members within each Geographic Region, with one member to serve a term that ends upon the conclusion of the

first ICANN annual meeting after the ccNSO Council is constituted, a second member to serve a term that ends upon the conclusion of the second ICANN annual meeting after the ccNSO Council is constituted, and the third member to serve a term that ends upon the conclusion of the third ICANN annual meeting after the ccNSO Council is constituted. (The definition of "ccTLD manager" stated in [Article IX, Section 4\(1\)](#) and the definitions stated in [Article IX, Section 4\(4\)](#) shall apply within this Section 4 of Article XX.)

2. After the adoption of [Article IX of these Bylaws](#), the Nominating Committee shall select the three members of the ccNSO Council described in [Article IX, Section 3\(1\)\(b\)](#). In selecting three individuals to serve on the ccNSO Council, the Nominating Committee shall designate one to serve a term that ends upon the conclusion of the first ICANN annual meeting after the ccNSO Council is constituted, a second member to serve a term that ends upon the conclusion of the second ICANN annual meeting after the ccNSO Council is constituted, and the third member to serve a term that ends upon the conclusion of the third ICANN annual meeting after the ccNSO Council is constituted. The three members of the ccNSO Council selected by the Nominating Committee shall not take their seats before the ccNSO Council is constituted.
3. Upon the ccNSO Council being constituted, the At-Large Advisory Committee and the Governmental Advisory Committee may designate one liaison each to the ccNSO Council, as provided by [Article IX, Section 3\(2\)\(a\) and \(b\)](#).
4. Upon the ccNSO Council being constituted, the Council may designate Regional Organizations as provided in [Article IX, Section 5](#). Upon its designation, a Regional Organization may appoint a liaison to the ccNSO Council.
5. Until the ccNSO Council is constituted, Seats 11 and 12 on the New Board shall remain vacant. Promptly after the ccNSO Council is constituted, the ccNSO shall, through the ccNSO Council, make selections of Directors to fill Seats 11 and 12 on the New Board, with terms to conclude upon the commencement of the next regular term specified for each of those Seats in [Article VI, Section 8\(1\)\(d\) and \(f\) of the New Bylaws](#), and shall give the ICANN Secretary written notice of its selections.
6. Until the ccNSO Council is constituted, the delegate to the Nominating Committee established by the New Bylaws designated to be selected by the ccNSO shall be appointed by the Transition Board or New Board, depending on which is in existence at the time any particular

appointment is required, after due consultation with members of the ccTLD community. Upon the ccNSO Council being constituted, the delegate to the Nominating Committee appointed by the Transition Board or New Board according to this Section 4(9) then serving shall remain in office, except that the ccNSO Council may replace that delegate with one of its choosing within three months after the conclusion of ICANN's annual meeting, or in the event of a vacancy. Subsequent appointments of the Nominating Committee delegate described in [Article VII, Section 2\(8\)\(c\)](#) shall be made by the ccNSO Council.

## **Section 5. GENERIC NAMES SUPPORTING ORGANIZATION**

1. The Generic Names Supporting Organization ("GNSO"), upon the adoption of this Transition Article, shall continue its operations; however, it shall be restructured into four new Stakeholder Groups which shall represent, organizationally, the former Constituencies of the GNSO, subject to ICANN Board approval of each individual Stakeholder Group Charter:
  - a. The gTLD Registries Constituency shall be assigned to the Registries Stakeholder Group;
  - b. The Registrars Constituency shall be assigned to the Registrars Stakeholder Group;
  - c. The Business Constituency shall be assigned to the Commercial Stakeholder Group;
  - d. The Intellectual Property Constituency shall be assigned to the Commercial Stakeholder Group;
  - e. The Internet Services Providers Constituency shall be assigned to the Commercial Stakeholder Group; and
  - f. The Non-Commercial Users Constituency shall be assigned to the Non-Commercial Stakeholder Group.
  
2. Each GNSO Constituency described in paragraph 1 of this subsection shall continue operating substantially as before and no Constituency official, working group, or other activity shall be changed until further action of the Constituency, provided that each GNSO Constituency described in paragraph 1 (c-f) shall submit to the ICANN Secretary a new or revised Charter inclusive of its operating procedures, adopted according to the Constituency's processes and consistent with these Bylaws Amendments, no later than the ICANN meeting in October 2009, or another date as the Board may designate by resolution.

3. Prior to the commencement of the ICANN meeting in October 2009, or another date the Board may designate by resolution, the GNSO Council shall consist of its current Constituency structure and officers as described in [Article X, Section 3\(1\) of the Bylaws](#) (as amended and restated on 29 October 1999 and amended through 20 March 2009 (the "Old Bylaws")). Thereafter, the composition of the GNSO Council shall be as provided in these Bylaws, as they may be amended from time to time. All committees, task forces, working groups, drafting committees, and similar groups established by the GNSO Council and in existence immediately before the adoption of this Transition Article shall continue in existence with the same charters, membership, and activities, subject to any change by action of the GNSO Council or ICANN Board.
4. Beginning with the commencement of the ICANN Meeting in October 2009, or another date the Board may designate by resolution (the "Effective Date of the Transition"), the GNSO Council seats shall be assigned as follows:
  - a. The three seats currently assigned to the Registry Constituency shall be reassigned as three seats of the Registries Stakeholder Group;
  - b. The three seats currently assigned to the Registrar Constituency shall be reassigned as three seats of the Registrars Stakeholder Group;
  - c. The three seats currently assigned to each of the Business Constituency, the Intellectual Property Constituency, and the Internet Services Provider Constituency (nine total) shall be decreased to be six seats of the Commercial Stakeholder Group;
  - d. The three seats currently assigned to the Non-Commercial Users Constituency shall be increased to be six seats of the Non-Commercial Stakeholder Group;
  - e. The three seats currently selected by the Nominating Committee shall be assigned by the Nominating Committee as follows: one voting member to the Contracted Party House, one voting member to the Non-Contracted Party House, and one non-voting member assigned to the GNSO Council at large.

Representatives on the GNSO Council shall be appointed or elected consistent with the provisions in each applicable Stakeholder Group Charter, approved by the Board, and sufficiently in advance of the

October 2009 ICANN Meeting that will permit those representatives to act in their official capacities at the start of said meeting.

5. The GNSO Council, as part of its Restructure Implementation Plan, will document: (a) how vacancies, if any, will be handled during the transition period; (b) for each Stakeholder Group, how each assigned Council seat to take effect at the 2009 ICANN annual meeting will be filled, whether through a continuation of an existing term or a new election or appointment; (c) how it plans to address staggered terms such that the new GNSO Council preserves as much continuity as reasonably possible; and (d) the effect of Bylaws term limits on each Council member.
6. As soon as practical after the commencement of the ICANN meeting in October 2009, or another date the Board may designate by resolution, the GNSO Council shall, in accordance with Article X, Section 3(7) and its GNSO Operating Procedures, elect officers and give the ICANN Secretary written notice of its selections.

## **Section 6. PROTOCOL SUPPORTING ORGANIZATION**

The Protocol Supporting Organization referred to in the Old Bylaws is discontinued.

## **Section 7. ADVISORY COMMITTEES AND TECHNICAL LIAISON GROUP**

1. Upon the adoption of the New Bylaws, the Governmental Advisory Committee shall continue in operation according to its existing operating principles and practices, until further action of the committee. The Governmental Advisory Committee may designate liaisons to serve with other ICANN bodies as contemplated by the New Bylaws by providing written notice to the ICANN Secretary. Promptly upon the adoption of this Transition Article, the Governmental Advisory Committee shall notify the ICANN Secretary of the person selected as its delegate to the Nominating Committee, as set forth in Article VII, Section 2 of the New Bylaws.
2. The organizations designated as members of the Technical Liaison Group under Article XI-A, Section 2(2) of the New Bylaws shall each designate the two individual technical experts described in Article XI-A, Section 2(6) of the New Bylaws, by providing written notice to the ICANN Secretary. As soon as feasible, the delegate from the Technical Liaison Group to the Nominating Committee shall be selected according to Article XI-A, Section 2(7) of the New Bylaws.

3. Upon the adoption of the New Bylaws, the [Security and Stability Advisory Committee](#) shall continue in operation according to its existing operating principles and practices, until further action of the committee. Promptly upon the adoption of this Transition Article, the [Security and Stability Advisory Committee](#) shall notify the [ICANN Secretary](#) of the person selected as its delegate to the Nominating Committee, as set forth in [Article VII, Section 2\(4\) of the New Bylaws](#).
4. Upon the adoption of the New Bylaws, the [Root Server System Advisory Committee](#) shall continue in operation according to its existing operating principles and practices, until further action of the committee. Promptly upon the adoption of this Transition Article, the [Root Server Advisory Committee](#) shall notify the [ICANN Secretary](#) of the person selected as its delegate to the Nominating Committee, as set forth in [Article VII, Section 2\(3\) of the New Bylaws](#).
5. [At-Large Advisory Committee](#)
  - a. There shall exist an [Interim At-Large Advisory Committee](#) until such time as [ICANN](#) recognizes, through the entry of a Memorandum of Understanding, all of the Regional At-Large Organizations (RALOs) identified in [Article XI, Section 2\(4\) of the New Bylaws](#). The [Interim At-Large Advisory Committee](#) shall be composed of (i) ten individuals (two from each [ICANN](#) region) selected by the [ICANN](#) Board following nominations by the At-Large Organizing Committee and (ii) five additional individuals (one from each [ICANN](#) region) selected by the initial Nominating Committee as soon as feasible in accordance with the principles established in [Article VII, Section 5 of the New Bylaws](#). The initial Nominating Committee shall designate two of these individuals to serve terms until the conclusion of the [ICANN](#) annual meeting in 2004 and three of these individuals to serve terms until the conclusion of the [ICANN](#) annual meeting in 2005.
  - b. Upon the entry of each RALO into such a Memorandum of Understanding, that entity shall be entitled to select two persons who are citizens and residents of that Region to be members of the [At-Large Advisory Committee](#) established by [Article XI, Section 2\(4\) of the New Bylaws](#). Upon the entity's written notification to the [ICANN](#) Secretary of such selections, those persons shall immediately assume the seats held until that notification by the [Interim At-Large Advisory Committee](#) members previously selected by the Board from the RALO's region.

- c. Upon the seating of persons selected by all five RALOs, the Interim At-Large Advisory Committee shall become the At-Large Advisory Committee, as established by [Article XI, Section 2\(4\) of the New Bylaws](#). The five individuals selected to the Interim At-Large Advisory Committee by the Nominating Committee shall become members of the At-Large Advisory Committee for the remainder of the terms for which they were selected.
- d. Promptly upon its creation, the Interim At-Large Advisory Committee shall notify the ICANN Secretary of the persons selected as its delegates to the Nominating Committee, as set forth in [Article VII, Section 2\(6\) of the New Bylaws](#).

### **Section 8. OFFICERS**

ICANN officers (as defined in [Article XIII of the New Bylaws](#)) shall be elected by the then-existing Board of ICANN at the annual meeting in 2002 to serve until the annual meeting in 2003.

### **Section 9. GROUPS APPOINTED BY THE PRESIDENT**

Notwithstanding the adoption or effectiveness of the New Bylaws, task forces and other groups appointed by the ICANN President shall continue unchanged in membership, scope, and operation until changes are made by the President.

### **Section 10. CONTRACTS WITH ICANN**

Notwithstanding the adoption or effectiveness of the New Bylaws, all agreements, including employment and consulting agreements, entered by ICANN shall continue in effect according to their terms.

---

## **Annex A: GNSO Policy Development Process**

The following process shall govern the GNSO policy development process ("PDP") until such time as modifications are recommended to and approved by the ICANN Board of Directors ("Board"). The role of the GNSO is outlined in Article X of these Bylaws. If the GNSO is conducting activities that are not intended to result in a Consensus Policy, the Council may act through other processes.

### **Section 1. Required Elements of a Policy Development Process**

The following elements are required at a minimum to form Consensus Policies as defined within ICANN contracts, and any other policies for which the GNSO Council requests application of this Annex A:

- a. Final Issue Report requested by the Board, the GNSO Council ("Council") or Advisory Committee, which should include at a minimum a) the proposed issue raised for consideration, b) the identity of the party submitting the issue, and c) how that party is affected by the issue;
- b. Formal initiation of the Policy Development Process by the Council;
- c. Formation of a Working Group or other designated work method;
- d. Initial Report produced by a Working Group or other designated work method;
- e. Final Report produced by a Working Group, or other designated work method, and forwarded to the Council for deliberation;
- f. Council approval of PDP Recommendations contained in the Final Report, by the required thresholds;
- g. PDP Recommendations and Final Report shall be forwarded to the Board through a Recommendations Report approved by the Council]; and
- h. Board approval of PDP Recommendations.

## Section 2. **Policy Development Process Manual**

The GNSO shall maintain a Policy Development Process Manual (PDP Manual) within the operating procedures of the GNSO maintained by the GNSO Council. The PDP Manual shall contain specific additional guidance on completion of all elements of a PDP, including those elements that are not otherwise defined in these Bylaws. The PDP Manual and any amendments thereto are subject to a twenty-one (21) day public comment period at minimum, as well as Board oversight and review, as specified at Article X, Section 3.6.

## Section 3. **Requesting an Issue Report**

*Board Request.* The Board may request an Issue Report by instructing the GNSO Council ("Council") to begin the process outlined the PDP Manual. In the event the Board makes a request for an Issue Report, the Board should provide a mechanism by which the GNSO Council can consult with the Board to provide information on the scope, timing, and priority of the request for an

Issue Report.

*Council Request.* The GNSO Council may request an Issue Report by a vote of at least one-fourth (1/4) of the members of the Council of each House or a majority of one House.

*Advisory Committee Request.* An Advisory Committee may raise an issue for policy development by action of such committee to request an Issue Report, and transmission of that request to the Staff Manager and GNSO Council.

#### Section 4. **Creation of an Issue Report**

Within forty-five (45) calendar days after receipt of either (i) an instruction from the Board; (ii) a properly supported motion from the GNSO Council; or (iii) a properly supported motion from an Advisory Committee, the Staff Manager will create a report (a "Preliminary Issue Report"). In the event the Staff Manager determines that more time is necessary to create the Preliminary Issue Report, the Staff Manager may request an extension of time for completion of the Preliminary Issue Report.

The following elements should be considered in the Issue Report:

- a. The proposed issue raised for consideration;
- b. The identity of the party submitting the request for the Issue Report;
- c. How that party is affected by the issue, if known;
- d. Support for the issue to initiate the PDP, if known;
- e. The opinion of the ICANN General Counsel regarding whether the issue proposed for consideration within the Policy Development Process is properly within the scope of the ICANN's mission, policy process and more specifically the role of the GNSO as set forth in the Bylaws.
- f. The opinion of ICANN Staff as to whether the Council should initiate the PDP on the issue

Upon completion of the Preliminary Issue Report, the Preliminary Issue Report shall be posted on the ICANN website for a public comment period that complies with the designated practice for public comment periods within ICANN.

The Staff Manager is responsible for drafting a summary and analysis of the public comments received on the Preliminary Issue Report and producing a

Final Issue Report based upon the comments received. The Staff Manager should forward the Final Issue Report, along with any summary and analysis of the public comments received, to the Chair of the GNSO Council for consideration for initiation of a PDP.

#### Section 5. **Initiation of the PDP**

The Council may initiate the PDP as follows:

*Board Request*: If the Board requested an Issue Report, the Council, within the timeframe set forth in the PDP Manual, shall initiate a PDP. No vote is required for such action.

*GNSO Council or Advisory Committee Requests*: The Council may only initiate the PDP by a vote of the Council. Initiation of a PDP requires a vote as set forth in [Article X, Section 3, paragraph 9\(b\) and \(c\)](#) in favor of initiating the PDP.

#### Section 6. **Reports**

An Initial Report should be delivered to the GNSO Council and posted for a public comment period that complies with the designated practice for public comment periods within ICANN, which time may be extended in accordance with the PDP Manual. Following the review of the comments received and, if required, additional deliberations, a Final Report shall be produced for transmission to the Council.

#### Section 7. **Council Deliberation**

Upon receipt of a Final Report, whether as the result of a working group or otherwise, the Council chair will (i) distribute the Final Report to all Council members; and (ii) call for Council deliberation on the matter in accordance with the PDP Manual.

The Council approval process is set forth in [Article X, Section 3, paragraph 9\(d\) through \(g\)](#), as supplemented by the PDP Manual.

#### Section 8. **Preparation of the Board Report**

If the PDP recommendations contained in the Final Report are approved by the GNSO Council, a Recommendations Report shall be approved by the GNSO Council for delivery to the ICANN Board.

#### Section 9. **Board Approval Processes**

The Board will meet to discuss the GNSO Council recommendation as soon as feasible, but preferably not later than the second meeting after receipt of the Board Report from the Staff Manager. Board deliberation on the PDP Recommendations contained within the Recommendations Report shall proceed as follows:

- a. Any PDP Recommendations approved by a GNSO Supermajority Vote shall be adopted by the Board unless, by a vote of more than two-thirds (2/3) of the Board, the Board determines that such policy is not in the best interests of the ICANN community or ICANN. If the GNSO Council recommendation was approved by less than a GNSO Supermajority Vote, a majority vote of the Board will be sufficient to determine that such policy is not in the best interests of the ICANN community or ICANN.
- b. In the event that the Board determines, in accordance with paragraph a above, that the policy recommended by a GNSO Supermajority Vote or less than a GNSO Supermajority vote is not in the best interests of the ICANN community or ICANN (the Corporation), the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council.
- c. The Council shall review the Board Statement for discussion with the Board as soon as feasible after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement.
- d. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for the then-current recommendation. In the event that the Council is able to reach a GNSO Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than two-thirds (2/3) of the Board determines that such policy is not in the interests of the ICANN community or ICANN. For any Supplemental Recommendation approved by less than a GNSO Supermajority Vote, a majority vote of the Board shall be sufficient to determine that the policy in the Supplemental Recommendation is not in the best interest of the ICANN community or ICANN.

#### Section 10. Implementation of Approved Policies

Upon a final decision of the Board adopting the policy, the Board shall, as appropriate, give authorization or direction to ICANN staff to work with the GNSO Council to create an implementation plan based upon the implementation recommendations identified in the Final Report, and to implement the policy. The GNSO Council may, but is not required to, direct the creation of an implementation review team to assist in implementation of the policy.

#### Section 11. **Maintenance of Records**

Throughout the PDP, from policy suggestion to a final decision by the Board, ICANN will maintain on the Website, a status web page detailing the progress of each PDP issue. Such status page will outline the completed and upcoming steps in the PDP process, and contain links to key resources (e.g. Reports, Comments Fora, WG Discussions, etc.).

#### Section 12. **Additional Definitions**

"Comment Site", "Comment Forum", "Comments For a" and "Website" refer to one or more websites designated by ICANN on which notifications and comments regarding the PDP will be posted.

"Supermajority Vote" means a vote of more than sixty-six (66) percent of the members present at a meeting of the applicable body, with the exception of the GNSO Council.

"Staff Manager" means an ICANN staff person(s) who manages the PDP.

"GNSO Supermajority Vote" shall have the meaning set forth in the Bylaws.

#### Section 13. **Applicability**

The procedures of this Annex A shall be applicable to all requests for Issue Reports and PDPs initiated after 8 December 2011. For all ongoing PDPs initiated prior to 8 December 2011, the Council shall determine the feasibility of transitioning to the procedures set forth in this Annex A for all remaining steps within the PDP. If the Council determines that any ongoing PDP cannot be feasibly transitioned to these updated procedures, the PDP shall be concluded according to the procedures set forth in Annex A in force on 7 December 2011.

---

## **Annex A-1: GNSO Expedited Policy Development Process**

The following process shall govern the specific instances where the GNSO Council invokes the GNSO Expedited Policy Development Process ("EPDP"). The GNSO Council may invoke the EPDP in the following limited circumstances: (1) to address a narrowly defined policy issue that was identified and scoped after either the adoption of a GNSO policy recommendation by the ICANN Board or the implementation of such an adopted recommendation; or (2) to create new or additional recommendations for a specific policy issue that had been substantially scoped previously such that extensive, pertinent background information already exists, e.g. (a) in an Issue Report for a possible PDP that was not initiated; (b) as part of a previous PDP that was not completed; or (c) through other projects such as a GGP. The following process shall be in place until such time as modifications are recommended to and approved by the ICANN Board of Directors. Where a conflict arises in relation to an EPDP between the PDP Manual (see Annex 2 of the GNSO Operating Procedures) and the procedures described in this Annex A-1, the provisions of this Annex A-1 shall prevail.

The role of the GNSO is outlined in Article X of these Bylaws. Provided the Council believes and documents via Council vote that the above-listed criteria are met, an EPDP may be initiated to recommend an amendment to an existing Consensus Policy; however, in all cases where the GNSO is conducting policy-making activities that do not meet the above criteria as documented in a Council vote, the Council should act through a Policy Development Process (see Annex A).

#### **Section 1. Required Elements of a GNSO Expedited Policy Development Process**

The following elements are required at a minimum to develop expedited GNSO policy recommendations, including recommendations that could result in amendments to an existing Consensus Policy, as part of a GNSO Expedited Policy Development Process:

- a. Formal initiation of the GNSO Expedited Policy Development Process by the GNSO Council, including an EPDP scoping document;
- b. Formation of an EPDP Team or other designated work method;
- c. Initial Report produced by an EPDP Team or other designated work method;
- d. Final EPDP Policy Recommendation(s) Report produced by an EPDP Team, or other designated work method, and forwarded to the Council for deliberation;
- e. GNSO Council approval of EPDP Policy Recommendations contained

in the Final EPDP Policy Recommendation(s) Report, by the required thresholds;

- f. EPDP Recommendations and Final EPDP Recommendation(s) Report forwarded to the Board through a Recommendations Report approved by the Council; and
- g. Board approval of EPDP Recommendation(s).

## Section 2. Expedited Policy Development Process Manual

The GNSO shall include a specific section(s) on the EPDP process as part of its maintenance of the GNSO Policy Development Process Manual (PDP Manual), described in Annex 5 of the GNSO Operating Procedures. The EPDP Manual shall contain specific additional guidance on completion of all elements of an EPDP, including those elements that are not otherwise defined in these Bylaws. The EPDP Manual and any amendments thereto are subject to a twenty-one (21) day public comment period at minimum, as well as Board oversight and review, as specified at Article X, Section 3.4.

## Section 3. Initiation of the EPDP

The Council may initiate an EPDP as follows:

The Council may only initiate the EPDP by a vote of the Council. Initiation of an EPDP requires an affirmative Supermajority vote of the Council (as defined in these Bylaws) in favor of initiating the EPDP.

The request to initiate an EPDP must be accompanied by an EPDP scoping document, which is expected to include at a minimum the following information:

1. Name of Council Member / SG / C;
2. Origin of issue (e.g. previously completed PDP);
3. Scope of the effort (detailed description of the issue or question that the EPDP is expected to address);
4. Description of how this issue meets the criteria for an EPDP, i.e. how the EPDP will address either: (1) a narrowly defined policy issue that was identified and scoped after either the adoption of a GNSO policy recommendation by the ICANN Board or the implementation of such an adopted recommendation, or (2) new or additional policy recommendations on a specific GNSO policy issue that had been scoped previously as part of a PDP that was not completed or other

similar effort, including relevant supporting information in either case;

5. If not provided as part of item 4, the opinion of the ICANN General Counsel as to whether the issue proposed for consideration is properly within the scope of the ICANN's mission, policy process and more specifically the role of the GNSO;
6. Proposed EPDP mechanism (e.g. WG, DT, individual volunteers);
7. Method of operation, if different from GNSO Working Group Guidelines;
8. Decision-making methodology for EPDP mechanism, if different from GNSO Working Group Guidelines;
9. Target completion date.

#### Section 4. **Council Deliberation**

Upon receipt of an EPDP Final Recommendation(s) Report, whether as the result of an EPDP Team or otherwise, the Council chair will (i) distribute the Final EPDP Recommendation(s) Report to all Council members; and (ii) call for Council deliberation on the matter in accordance with the PDP Manual.

Approval of EPDP Recommendation(s) requires an affirmative vote of the Council meeting the thresholds set forth in in Article X, Section 3, paragraphs 9 n-o, as supplemented by the PDP Manual.

#### Section 5. **Preparation of the Board Report**

If the EPDP Recommendation(s) contained in the Final EPDP Recommendation(s) Report are approved by the GNSO Council, a Recommendation(s) Report shall be approved by the GNSO Council for delivery to the ICANN Board.

#### Section 6. **Board Approval Processes**

The Board will meet to discuss the EPDP recommendation(s) as soon as feasible, but preferably not later than the second meeting after receipt of the Recommendations Report from the Staff Manager. Board deliberation on the EPDP Recommendations contained within the Recommendations Report shall proceed as follows:

- a. Any EPDP Recommendations approved by a GNSO Supermajority Vote shall be adopted by the Board unless, by a vote of more than two-thirds (2/3) of the Board, the Board determines that such policy is not in the best interests of the ICANN community or ICANN. If the

GNSO Council recommendation was approved by less than a GNSO Supermajority Vote, a majority vote of the Board will be sufficient to determine that such policy is not in the best interests of the ICANN community or ICANN.

- b. In the event that the Board determines, in accordance with paragraph a above, that the proposed EPDP Recommendations are not in the best interests of the ICANN community or ICANN (the Corporation), the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council.
- c. The Council shall review the Board Statement for discussion with the Board as soon as feasible after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement.
- d. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for the then-current recommendation. In the event that the Council is able to reach a GNSO Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than two-thirds (2/3) of the Board determines that such guidance is not in the interests of the ICANN community or ICANN. For any Supplemental Recommendation approved by less than a GNSO Supermajority Vote, a majority vote of the Board shall be sufficient to determine that the guidance in the Supplemental Recommendation is not in the best interest of the ICANN community or ICANN.

#### **Section 7. Implementation of Approved Policies**

Upon a final decision of the Board adopting the EPDP recommendations, the Board shall, as appropriate, give authorization or direction to ICANN staff to implement the EPDP Recommendations. If deemed necessary, the Board shall direct ICANN staff to work with the GNSO Council to create a guidance implementation plan, based upon the guidance recommendations identified in the Final EPDP Recommendation(s) Report.

#### **Section 8. Maintenance of Records**

Throughout the EPDP, from initiation to a final decision by the Board, ICANN will maintain on the Website, a status web page detailing the progress of each

EPDP issue. Such status page will outline the completed and upcoming steps in the EPDP process, and contain links to key resources (e.g. Reports, Comments Fora, EPDP Discussions, etc.).

#### Section 9. **Applicability**

The procedures of this Annex A-1 shall be applicable from 28 September 2015 onwards.

---

### **Annex A-2: GNSO Guidance Process**

The following process shall govern the GNSO guidance process ("GGP") until such time as modifications are recommended to and approved by the ICANN Board of Directors ("Board"). The role of the GNSO is outlined in Article X of these Bylaws. If the GNSO is conducting activities that are intended to result in a Consensus Policy, the Council should act through a Policy Development Process (see Annex A).

#### Section 1. **Required Elements of a GNSO Guidance Process**

The following elements are required at a minimum to develop GNSO guidance:

1. Formal initiation of the GNSO Guidance Process by the Council, including a GGP scoping document;
2. Identification of the types of expertise needed on the GGP Team;
3. Recruiting and formation of a GGP Team or other designated work method;
4. Proposed GNSO Guidance Recommendation(s) Report produced by a GGP Team or other designated work method;
5. Final GNSO Guidance Recommendation(s) Report produced by a GGP Team, or other designated work method, and forwarded to the Council for deliberation;
6. Council approval of GGP Recommendations contained in the Final Recommendation(s) Report, by the required thresholds;
7. GGP Recommendations and Final Recommendation(s) Report shall be forwarded to the Board through a Recommendations Report approved by the Council; and
8. Board approval of GGP Recommendation(s).

## Section 2. GNSO Guidance Process Manual

The GNSO shall maintain a GNSO Guidance Process (GGP Manual) within the operating procedures of the GNSO maintained by the GNSO Council. The GGP Manual shall contain specific additional guidance on completion of all elements of a GGP, including those elements that are not otherwise defined in these Bylaws. The GGP Manual and any amendments thereto are subject to a twenty-one (21) day public comment period at minimum, as well as Board oversight and review, as specified at Article X, Section 3.4.

## Section 3. Initiation of the GGP

The Council may initiate a GGP as follows:

The Council may only initiate the GGP by a vote of the Council or at the formal request of the ICANN Board. Initiation of a GGP requires a vote as set forth in Article X, Section 3, paragraph 9.p in favor of initiating the GGP. In the case of a GGP requested by the ICANN Board, a GGP will automatically be initiated unless the GNSO Council votes against the initiation of a GGP as set forth in Article X, Section 3, paragraph 9 q<sup>1</sup>.

The request to initiate a GGP must be accompanied by a GGP scoping document, which is expected to include at a minimum the following information:

1. Name of Council Member / SG / C
2. Origin of issue (e.g., board request)
3. Scope of the effort (detailed description of the issue or question that the GGP is expected to address)
4. Proposed GGP mechanism (e.g. WG, DT, individual volunteers)
5. Method of operation, if different from GNSO Working Group Guidelines
6. Decision-making methodology for GGP mechanism, if different from GNSO Working Group Guidelines
7. Desired completion date and rationale

In the event the Board makes a request for a GGP, the Board should provide a mechanism by which the GNSO Council can consult with the Board to provide information on the scope, timing, and priority of the request for a GGP.

## Section 4. Council Deliberation

Upon receipt of a Final Recommendation(s) Report, whether as the result of a GGP Team or otherwise, the Council chair will (i) distribute the Final Recommendation(s) Report to all Council members; and (ii) call for Council deliberation on the matter in accordance with the GGP Manual.

The Council approval process is set forth in Article X, Section 3, paragraph 9. r<sup>2</sup> as supplemented by the GGP Manual.

#### Section 5. Preparation of the Board Report

If the GGP recommendations contained in the Final Recommendation(s) Report are approved by the GNSO Council, a Recommendations Report shall be approved by the GNSO Council for delivery to the ICANN Board.

#### Section 6. Board Approval Processes

The Board will meet to discuss the GNSO Guidance recommendation(s) as soon as feasible, but preferably not later than the second meeting after receipt of the Board Report from the Staff Manager. Board deliberation on the GGP Recommendations contained within the Recommendations Report shall proceed as follows:

- a. Any GGP Recommendations approved by a GNSO Supermajority Vote shall be adopted by the Board unless, by a vote of more than two-thirds (2/3) of the Board, the Board determines that such guidance is not in the best interests of the ICANN community or ICANN.
- b. In the event that the Board determines, in accordance with paragraph a above, that the proposed GNSO Guidance recommendation(s) adopted by a GNSO Supermajority Vote is not in the best interests of the ICANN community or ICANN (the Corporation), the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council.
- c. The Council shall review the Board Statement for discussion with the Board as soon as feasible after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement.
- d. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for the then-current recommendation. In the

event that the Council is able to reach a GNSO Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than two-thirds (2/3) of the Board determines that such guidance is not in the interests of the ICANN community or ICANN.

#### Section 7. **Implementation of Approved GNSO Guidance**

Upon a final decision of the Board adopting the guidance, the Board shall, as appropriate, give authorization or direction to ICANN staff to implement the GNSO Guidance. If deemed necessary, the Board may direct ICANN Staff to work with the GNSO Council to create a guidance implementation plan, if deemed necessary, based upon the guidance recommendations identified in the Final Recommendation(s) Report.

#### Section 8. **Maintenance of Records**

Throughout the GGP, from initiation to a final decision by the Board, ICANN will maintain on the Website, a status web page detailing the progress of each GGP issue. Such status page will outline the completed and upcoming steps in the GGP process, and contain links to key resources (e.g. Reports, Comments Fora, GGP Discussions, etc.).

#### Section 9. **Additional Definitions**

"Comment Site", "Comment Forum", "Comments Fora" and "Website" refer to one or more websites designated by ICANN on which notifications and comments regarding the GGP will be posted.

"GGP Staff Manager" means an ICANN staff person(s) who manages the GGP.

### Annex B: ccNSO Policy-Development Process (ccPDP)

The following process shall govern the ccNSO policy-development process ("PDP").

#### 1. **Request for an Issue Report**

An Issue Report may be requested by any of the following:

- a. *Council*. The ccNSO Council (in this Annex B, the "Council") may call for the creation of an Issue Report by an affirmative vote of at least seven of the members of the Council present at any meeting or voting

by e-mail.

- b. *Board*. The ICANN Board may call for the creation of an Issue Report by requesting the Council to begin the policy-development process.
- c. *Regional Organization*. One or more of the Regional Organizations representing ccTLDs in the ICANN recognized Regions may call for creation of an Issue Report by requesting the Council to begin the policy-development process.
- d. *ICANN Supporting Organization or Advisory Committee*. An ICANN Supporting Organization or an ICANN Advisory Committee may call for creation of an Issue Report by requesting the Council to begin the policy-development process.
- e. *Members of the ccNSO*. The members of the ccNSO may call for the creation of an Issue Report by an affirmative vote of at least ten members of the ccNSO present at any meeting or voting by e-mail.

Any request for an Issue Report must be in writing and must set out the issue upon which an Issue Report is requested in sufficient detail to enable the Issue Report to be prepared. It shall be open to the Council to request further information or undertake further research or investigation for the purpose of determining whether or not the requested Issue Report should be created.

## **2. Creation of the Issue Report and Initiation Threshold**

Within seven days after an affirmative vote as outlined in Item 1(a) above or the receipt of a request as outlined in Items 1 (b), (c), or (d) above the Council shall appoint an Issue Manager. The Issue Manager may be a staff member of ICANN (in which case the costs of the Issue Manager shall be borne by ICANN) or such other person or persons selected by the Council (in which case the ccNSO shall be responsible for the costs of the Issue Manager).

Within fifteen (15) calendar days after appointment (or such other time as the Council shall, in consultation with the Issue Manager, deem to be appropriate), the Issue Manager shall create an Issue Report. Each Issue Report shall contain at least the following:

- a. The proposed issue raised for consideration;
- b. The identity of the party submitting the issue;
- c. How that party is affected by the issue;
- d. Support for the issue to initiate the PDP;

- e. A recommendation from the Issue Manager as to whether the Council should move to initiate the PDP for this issue (the "Manager Recommendation"). Each Manager Recommendation shall include, and be supported by, an opinion of the ICANN General Counsel regarding whether the issue is properly within the scope of the ICANN policy process and within the scope of the ccNSO. In coming to his or her opinion, the General Counsel shall examine whether:
1. The issue is within the scope of ICANN's mission statement;
  2. Analysis of the relevant factors according to Article IX, Section 6(2) and Annex C affirmatively demonstrates that the issue is within the scope of the ccNSO;

In the event that the General Counsel reaches an opinion in the affirmative with respect to points 1 and 2 above then the General Counsel shall also consider whether the issue:

3. Implicates or affects an existing ICANN policy;
4. Is likely to have lasting value or applicability, albeit with the need for occasional updates, and to establish a guide or framework for future decision-making.

In all events, consideration of revisions to the ccPDP (this Annex B) or to the scope of the ccNSO (Annex C) shall be within the scope of ICANN and the ccNSO.

In the event that General Counsel is of the opinion the issue is not properly within the scope of the ccNSO Scope, the Issue Manager shall inform the Council of this opinion. If after an analysis of the relevant factors according to Article IX, Section 6 and Annex C a majority of 10 or more Council members is of the opinion the issue is within scope the Chair of the ccNSO shall inform the Issue Manager accordingly. General Counsel and the ccNSO Council shall engage in a dialogue according to agreed rules and procedures to resolve the matter. In the event no agreement is reached between General Counsel and the Council as to whether the issue is within or outside Scope of the ccNSO then by a vote of 15 or more members the Council may decide the issue is within scope. The Chair of the ccNSO shall inform General Counsel and the Issue Manager accordingly. The Issue Manager shall then proceed with a recommendation whether or not the Council should move to initiate the PDP including both the opinion and analysis of General Counsel and Council in the Issues Report.

- f. In the event that the Manager Recommendation is in favor of initiating

the PDP, a proposed time line for conducting each of the stages of PDP outlined herein (PDP Time Line).

- g. If possible, the issue report shall indicate whether the resulting output is likely to result in a policy to be approved by the ICANN Board. In some circumstances, it will not be possible to do this until substantive discussions on the issue have taken place. In these cases, the issue report should indicate this uncertainty. Upon completion of the Issue Report, the Issue Manager shall distribute it to the full Council for a vote on whether to initiate the PDP.

### **3. Initiation of PDP**

The Council shall decide whether to initiate the PDP as follows:

- a. Within 21 days after receipt of an Issue Report from the Issue Manager, the Council shall vote on whether to initiate the PDP. Such vote should be taken at a meeting held in any manner deemed appropriate by the Council, including in person or by conference call, but if a meeting is not feasible the vote may occur by e-mail.
- b. A vote of ten or more Council members in favor of initiating the PDP shall be required to initiate the PDP provided that the Issue Report states that the issue is properly within the scope of the ICANN mission statement and the ccNSO Scope.

### **4. Decision Whether to Appoint Task Force; Establishment of Time Line**

At the meeting of the Council where the PDP has been initiated (or, where the Council employs a vote by e-mail, in that vote) pursuant to Item 3 above, the Council shall decide, by a majority vote of members present at the meeting (or voting by e-mail), whether or not to appoint a task force to address the issue. If the Council votes:

- a. In favor of convening a task force, it shall do so in accordance with Item 7 below.
- b. Against convening a task force, then it shall collect information on the policy issue in accordance with Item 8 below.

The Council shall also, by a majority vote of members present at the meeting or voting by e-mail, approve or amend and approve the PDP Time Lineset out in the Issue Report.

### **5. Composition and Selection of Task Forces**

- a. Upon voting to appoint a task force, the Council shall invite each of the Regional Organizations (see [Article IX, Section 6](#)) to appoint two individuals to participate in the task force (the "Representatives"). Additionally, the Council may appoint up to three advisors (the "Advisors") from outside the [ccNSO](#) and, following formal request for [GAC](#) participation in the Task Force, accept up to two Representatives from the [Governmental Advisory Committee](#) to sit on the task force. The Council may increase the number of Representatives that may sit on a task force in its discretion in circumstances that it deems necessary or appropriate.
- b. Any Regional Organization wishing to appoint Representatives to the task force must provide the names of the Representatives to the Issue Manager within ten (10) calendar days after such request so that they are included on the task force. Such Representatives need not be members of the Council, but each must be an individual who has an interest, and ideally knowledge and expertise, in the subject matter, coupled with the ability to devote a substantial amount of time to the task force's activities.
- c. The Council may also pursue other actions that it deems appropriate to assist in the [PDP](#), including appointing a particular individual or organization to gather information on the issue or scheduling meetings for deliberation or briefing. All such information shall be submitted to the Issue Manager in accordance with the [PDP Time Line](#).

## **6. Public Notification of Initiation of the [PDP](#) and Comment Period**

After initiation of the [PDP](#), [ICANN](#) shall post a notification of such action to the Website and to the other [ICANN Supporting Organizations](#) and [Advisory Committees](#). A comment period (in accordance with the [PDP Time Line](#), and ordinarily at least 21 days long) shall be commenced for the issue. Comments shall be accepted from [ccTLD](#) managers, other [Supporting Organizations](#), [Advisory Committees](#), and from the public. The Issue Manager, or some other designated Council representative shall review the comments and incorporate them into a report (the "Comment Report") to be included in either the Preliminary Task Force Report or the Initial Report, as applicable.

## **7. Task Forces**

- a. *Role of Task Force.* If a task force is created, its role shall be responsible for (i) gathering information documenting the positions of the [ccNSO](#) members within the Geographic Regions and other parties and groups; and (ii) otherwise obtaining relevant information that shall enable the Task Force Report to be as complete and informative as

possible to facilitate the Council's meaningful and informed deliberation.

The task force shall not have any formal decision-making authority. Rather, the role of the task force shall be to gather information that shall document the positions of various parties or groups as specifically and comprehensively as possible, thereby enabling the Council to have a meaningful and informed deliberation on the issue.

- b. *Task Force Charter or Terms of Reference.* The Council, with the assistance of the Issue Manager, shall develop a charter or terms of reference for the task force (the "Charter") within the time designated in the PDP Time Line. Such Charter shall include:
1. The issue to be addressed by the task force, as such issue was articulated for the vote before the Council that initiated the PDP;
  2. The specific time line that the task force must adhere to, as set forth below, unless the Council determines that there is a compelling reason to extend the timeline; and
  3. Any specific instructions from the Council for the task force, including whether or not the task force should solicit the advice of outside advisors on the issue.

The task force shall prepare its report and otherwise conduct its activities in accordance with the Charter. Any request to deviate from the Charter must be formally presented to the Council and may only be undertaken by the task force upon a vote of a majority of the Council members present at a meeting or voting by e-mail. The quorum requirements of [Article IX, Section 3\(14\)](#) shall apply to Council actions under this Item 7(b).

- c. *Appointment of Task Force Chair.* The Issue Manager shall convene the first meeting of the task force within the time designated in the PDP Time Line. At the initial meeting, the task force members shall, among other things, vote to appoint a task force chair. The chair shall be responsible for organizing the activities of the task force, including compiling the Task Force Report. The chair of a task force need not be a member of the Council.
- d. *Collection of Information.*
1. *Regional Organization Statements.* The Representatives shall each be responsible for soliciting the position of the Regional Organization for their Geographic Region, at a minimum, and may solicit other comments, as each Representative deems

appropriate, including the comments of the ccNSO members in that region that are not members of the Regional Organization, regarding the issue under consideration. The position of the Regional Organization and any other comments gathered by the Representatives should be submitted in a formal statement to the task force chair (each, a "Regional Statement") within the time designated in the PDP Time Line. Every Regional Statement shall include at least the following:

- i. If a Supermajority Vote (as defined by the Regional Organization) was reached, a clear statement of the Regional Organization's position on the issue;
- ii. If a Supermajority Vote was not reached, a clear statement of all positions espoused by the members of the Regional Organization;
- iii. A clear statement of how the Regional Organization arrived at its position(s). Specifically, the statement should detail specific meetings, teleconferences, or other means of deliberating an issue, and a list of all members who participated or otherwise submitted their views;
- iv. A statement of the position on the issue of any ccNSO members that are not members of the Regional Organization;
- v. An analysis of how the issue would affect the Region, including any financial impact on the Region; and
- vi. An analysis of the period of time that would likely be necessary to implement the policy.

2. *Outside Advisors.* The task force may, in its discretion, solicit the opinions of outside advisors, experts, or other members of the public. Such opinions should be set forth in a report prepared by such outside advisors, and (i) clearly labeled as coming from outside advisors; (ii) accompanied by a detailed statement of the advisors' (a) qualifications and relevant experience and (b) potential conflicts of interest. These reports should be submitted in a formal statement to the task force chair within the time designated in the PDP Time Line.

e. *Task Force Report.* The chair of the task force, working with the Issue Manager, shall compile the Regional Statements, the Comment Report, and other information or reports, as applicable, into a single

document ("Preliminary Task Force Report") and distribute the Preliminary Task Force Report to the full task force within the time designated in the PDP Time Line. The task force shall have a final task force meeting to consider the issues and try and reach a Supermajority Vote. After the final task force meeting, the chair of the task force and the Issue Manager shall create the final task force report (the "Task Force Report") and post it on the Website and to the other ICANN Supporting Organizations and Advisory Committees. Each Task Force Report must include:

1. A clear statement of any Supermajority Vote (being 66% of the task force) position of the task force on the issue;
2. If a Supermajority Vote was not reached, a clear statement of all positions espoused by task force members submitted within the time line for submission of constituency reports. Each statement should clearly indicate (i) the reasons underlying the position and (ii) the Regional Organizations that held the position;
3. An analysis of how the issue would affect each Region, including any financial impact on the Region;
4. An analysis of the period of time that would likely be necessary to implement the policy; and
5. The advice of any outside advisors appointed to the task force by the Council, accompanied by a detailed statement of the advisors' (i) qualifications and relevant experience and (ii) potential conflicts of interest.

**8. Procedure if No Task Force is Formed**

- a. If the Council decides not to convene a task force, each Regional Organization shall, within the time designated in the PDP Time Line, appoint a representative to solicit the Region's views on the issue. Each such representative shall be asked to submit a Regional Statement to the Issue Manager within the time designated in the PDP Time Line.
- b. The Council may, in its discretion, take other steps to assist in the PDP, including, for example, appointing a particular individual or organization, to gather information on the issue or scheduling meetings for deliberation or briefing. All such information shall be submitted to the Issue Manager within the time designated in the PDP Time Line.
- c. The Council shall formally request the Chair of the GAC to offer opinion or advice.

- d. The Issue Manager shall take all Regional Statements, the Comment Report, and other information and compile (and post on the Website) an Initial Report within the time designated in the PDP Time Line. Thereafter, the Issue Manager shall, in accordance with Item 9 below, create a Final Report.

#### **9. Comments to the Task Force Report or Initial Report**

- a. A comment period (in accordance with the PDP Time Line, and ordinarily at least 21 days long) shall be opened for comments on the Task Force Report or Initial Report. Comments shall be accepted from ccTLD managers, other Supporting Organizations, Advisory Committees, and from the public. All comments shall include the author's name, relevant experience, and interest in the issue.
- b. At the end of the comment period, the Issue Manager shall review the comments received and may, in the Issue Manager's reasonable discretion, add appropriate comments to the Task Force Report or Initial Report, to prepare the "Final Report". The Issue Manager shall not be obligated to include all comments made during the comment period, nor shall the Issue Manager be obligated to include all comments submitted by any one individual or organization.
- c. The Issue Manager shall prepare the Final Report and submit it to the Council chair within the time designated in the PDP Time Line.

#### **10. Council Deliberation**

- a. Upon receipt of a Final Report, whether as the result of a task force or otherwise, the Council chair shall (i) distribute the Final Report to all Council members; (ii) call for a Council meeting within the time designated in the PDP Time Line wherein the Council shall work towards achieving a recommendation to present to the Board; and (iii) formally send to the GAC Chair an invitation to the GAC to offer opinion or advice. Such meeting may be held in any manner deemed appropriate by the Council, including in person or by conference call. The Issue Manager shall be present at the meeting.
- b. The Council may commence its deliberation on the issue prior to the formal meeting, including via in-person meetings, conference calls, e-mail discussions, or any other means the Council may choose.
- c. The Council may, if it so chooses, solicit the opinions of outside advisors at its final meeting. The opinions of these advisors, if relied upon by the Council, shall be (i) embodied in the Council's report to the Board, (ii) specifically identified as coming from an outside advisor; and (iii) accompanied by a detailed statement of the advisor's (a)

qualifications and relevant experience and (b) potential conflicts of interest.

### **11. Recommendation of the Council**

In considering whether to make a recommendation on the issue (a "Council Recommendation"), the Council shall seek to act by consensus. If a minority opposes a consensus position, that minority shall prepare and circulate to the Council a statement explaining its reasons for opposition. If the Council's discussion of the statement does not result in consensus, then a recommendation supported by 14 or more of the Council members shall be deemed to reflect the view of the Council, and shall be conveyed to the Members as the Council's Recommendation. Notwithstanding the foregoing, as outlined below, all viewpoints expressed by Council members during the PDP must be included in the Members Report.

### **12. Council Report to the Members**

In the event that a Council Recommendation is adopted pursuant to Item 11 then the Issue Manager shall, within seven days after the Council meeting, incorporate the Council's Recommendation together with any other viewpoints of the Council members into a Members Report to be approved by the Council and then to be submitted to the Members (the "Members Report"). The Members Report must contain at least the following:

- a. A clear statement of the Council's recommendation;
- b. The Final Report submitted to the Council; and
- c. A copy of the minutes of the Council's deliberation on the policy issue (see Item 10), including all the opinions expressed during such deliberation, accompanied by a description of who expressed such opinions.

### **13. Members Vote**

Following the submission of the Members Report and within the time designated by the PDP Time Line, the ccNSO members shall be given an opportunity to vote on the Council Recommendation. The vote of members shall be electronic and members' votes shall be lodged over such a period of time as designated in the PDP Time Line (at least 21 days long).

In the event that at least 50% of the ccNSO members lodge votes within the voting period, the resulting vote will be employed without further process. In the event that fewer than 50% of the ccNSO members lodge votes in the

first round of voting, the first round will not be employed and the results of a final, second round of voting, conducted after at least thirty days notice to the ccNSO members, will be employed if at least 50% of the ccNSO members lodge votes. In the event that more than 66% of the votes received at the end of the voting period shall be in favor of the Council Recommendation, then the recommendation shall be conveyed to the Board in accordance with Item 14 below as the ccNSO Recommendation.

#### **14. Board Report**

The Issue Manager shall within seven days after a ccNSO Recommendation being made in accordance with Item 13 incorporate the ccNSO Recommendation into a report to be approved by the Council and then to be submitted to the Board (the "Board Report"). The Board Report must contain at least the following:

- a. A clear statement of the ccNSO recommendation;
- b. The Final Report submitted to the Council; and
- c. the Members' Report.

#### **15. Board Vote**

- a. The Board shall meet to discuss the ccNSO Recommendation as soon as feasible after receipt of the Board Report from the Issue Manager, taking into account procedures for Board consideration.
- b. The Board shall adopt the ccNSO Recommendation unless by a vote of more than 66% the Board determines that such policy is not in the best interest of the ICANN community or of ICANN.
  1. In the event that the Board determines not to act in accordance with the ccNSO Recommendation, the Board shall (i) state its reasons for its determination not to act in accordance with the ccNSO Recommendation in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council.
  2. The Council shall discuss the Board Statement with the Board within thirty days after the Board Statement is submitted to the Council. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board shall discuss the Board Statement. The discussions shall be held in good faith and in a timely and efficient manner, to find a mutually acceptable solution.
  3. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its Council

Recommendation. A recommendation supported by 14 or more of the Council members shall be deemed to reflect the view of the Council (the Council's "Supplemental Recommendation"). That Supplemental Recommendation shall be conveyed to the Members in a Supplemental Members Report, including an explanation for the Supplemental Recommendation. Members shall be given an opportunity to vote on the Supplemental Recommendation under the same conditions outlined in Item 13. In the event that more than 66% of the votes cast by ccNSO Members during the voting period are in favor of the Supplemental Recommendation then that recommendation shall be conveyed to Board as the ccNSO Supplemental Recommendation and the Board shall adopt the recommendation unless by a vote of more than 66% of the Board determines that acceptance of such policy would constitute a breach of the fiduciary duties of the Board to the Company.

4. In the event that the Board does not accept the ccNSO Supplemental Recommendation, it shall state its reasons for doing so in its final decision ("Supplemental Board Statement").
5. In the event the Board determines not to accept a ccNSO Supplemental Recommendation, then the Board shall not be entitled to set policy on the issue addressed by the recommendation and the status quo shall be preserved until such time as the ccNSO shall, under the ccPDP, make a recommendation on the issue that is deemed acceptable by the Board.

## **16. Implementation of the Policy**

Upon adoption by the Board of a ccNSO Recommendation or ccNSO Supplemental Recommendation, the Board shall, as appropriate, direct or authorize ICANN staff to implement the policy.

## **17. Maintenance of Records**

With respect to each ccPDP for which an Issue Report is requested (see Item 1), ICANN shall maintain on the Website a status web page detailing the progress of each ccPDP, which shall provide a list of relevant dates for the ccPDP and shall also link to the following documents, to the extent they have been prepared pursuant to the ccPDP:

- a. Issue Report;

- b. PDP Time Line;
- c. Comment Report;
- d. Regional Statement(s);
- e. Preliminary Task Force Report;
- f. Task Force Report;
- g. Initial Report;
- h. Final Report;
- i. Members' Report;
- j. Board Report;
- k. Board Statement;
- l. Supplemental Members' Report; and
- m. Supplemental Board Statement.

In addition, ICANN shall post on the Website comments received in electronic written form specifically suggesting that a ccPDP be initiated.

---

## Annex C: The Scope of the ccNSO

This annex describes the scope and the principles and method of analysis to be used in any further development of the scope of the ccNSO's policy-development role. As provided in [Article IX, Section 6\(2\)](#) of the Bylaws, that scope shall be defined according to the procedures of the ccPDP.

The scope of the ccNSO's authority and responsibilities must recognize the complex relation between ICANN and ccTLD managers/registries with regard to policy issues. This annex shall assist the ccNSO, the ccNSO Council, and the ICANN Board and staff in delineating relevant global policy issues.

### *Policy areas*

The ccNSO's policy role should be based on an analysis of the following functional model of the DNS:

1. Data is registered/maintained to generate a zone file,
2. A zone file is in turn used in TLD name servers.

Within a TLD two functions have to be performed (these are addressed in greater detail below):

1. Entering data into a database (Data Entry Function) and
2. Maintaining and ensuring upkeep of name-servers for the TLD (Name Server Function).

These two core functions must be performed at the ccTLD registry level as well as at a higher level (IANA function and root servers) and at lower levels of the DNS hierarchy. This mechanism, as RFC 1591 points out, is recursive:

There are no requirements on sub domains of top-level domains beyond the requirements on higher-level domains themselves. That is, the requirements in this memo are applied recursively. In particular, all sub domains shall be allowed to operate their own domain name servers, providing in them whatever information the sub domain manager sees fit (as long as it is true and correct).

#### *The Core Functions*

##### 1. Data Entry Function (DEF):

Looking at a more detailed level, the first function (entering and maintaining data in a database) should be fully defined by a naming policy. This naming policy must specify the rules and conditions:

- a. under which data will be collected and entered into a database or data changed (at the TLD level among others, data to reflect a transfer from registrant to registrant or changing registrar) in the database.
- b. for making certain data generally and publicly available (be it, for example, through Whois or nameservers).

##### 2. The Name-Server Function (NSF)

The name-server function involves essential interoperability and stability issues at the heart of the domain name system. The importance of this function extends to nameservers at the ccTLD level, but also to the root servers (and root-server system) and nameservers at lower levels.

On its own merit and because of interoperability and stability considerations, properly functioning nameservers are of utmost importance to the individual, as well as to the local and the global Internet communities.

With regard to the nameserver function, therefore, policies need to be defined

and established. Most parties involved, including the majority of ccTLD registries, have accepted the need for common policies in this area by adhering to the relevant RFCs, among others RFC 1591.

*Respective Roles with Regard to Policy, Responsibilities, and Accountabilities*

It is in the interest of ICANN and ccTLD managers to ensure the stable and proper functioning of the domain name system. ICANN and the ccTLD registries each have a distinctive role to play in this regard that can be defined by the relevant policies. The scope of the ccNSO cannot be established without reaching a common understanding of the allocation of authority between ICANN and ccTLD registries.

Three roles can be distinguished as to which responsibility must be assigned on any given issue:

- Policy role: i.e. the ability and power to define a policy;
- Executive role: i.e. the ability and power to act upon and implement the policy; and
- Accountability role: i.e. the ability and power to hold the responsible entity accountable for exercising its power.

Firstly, responsibility presupposes a policy and this delineates the policy role. Depending on the issue that needs to be addressed those who are involved in defining and setting the policy need to be determined and defined. Secondly, this presupposes an executive role defining the power to implement and act within the boundaries of a policy. Finally, as a counter-balance to the executive role, the accountability role needs to be defined and determined.

The information below offers an aid to:

1. delineate and identify specific policy areas;
2. define and determine roles with regard to these specific policy areas.

This annex defines the scope of the ccNSO with regard to developing policies. The scope is limited to the policy role of the ccNSO policy-development process for functions and levels explicitly stated below. It is anticipated that the accuracy of the assignments of policy, executive, and accountability roles shown below will be considered during a scope-definition ccPDP process.

*Name Server Function (as to ccTLDs)*

Level 1: Root Name Servers

Policy role: IETF, RSSAC (ICANN)  
Executive role: Root Server System Operators  
Accountability role: RSSAC (ICANN), (US DoC-ICANN MoU)

Level 2: ccTLD Registry Name Servers in respect to interoperability  
Policy role: ccNSO Policy Development Process (ICANN), for best practices a ccNSO process can be organized  
Executive role: ccTLD Manager  
Accountability role: part ICANN (IANA), part Local Internet Community, including local government

Level 3: User's Name Servers  
Policy role: ccTLD Manager, IETF (RFC)  
Executive role: Registrant  
Accountability role: ccTLD Manager

*Data Entry Function (as to ccTLDs)*

Level 1: Root Level Registry  
Policy role: ccNSO Policy Development Process (ICANN)  
Executive role: ICANN (IANA)  
Accountability role: ICANN community, ccTLD Managers, US DoC, (national authorities in some cases)

Level 2: ccTLD Registry  
Policy role: Local Internet Community, including local government, and/or ccTLD Manager according to local structure  
Executive role: ccTLD Manager  
Accountability role: Local Internet Community, including national authorities in some cases

Level 3: Second and Lower Levels  
Policy role: Registrant  
Executive role: Registrant  
Accountability role: Registrant, users of lower-level domain names

---

<sup>1</sup>A GNSO Supermajority Vote will be required to not initiate a GGP following a formal request from the ICANN Board.

<sup>2</sup>Approval of GGP recommendations requires a GNSO Supermajority Vote.

R-2

RESPONDENT'S EXHIBIT

*Dedicated to preserving the central co-ordinating functions of the global Internet for the public good.*

**INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS (ICANN)**

**GOVERNMENTAL ADVISORY COMMITTEE (GAC) - OPERATING PRINCIPLES**

*As amended, GAC Dakar meeting in October, 2011*

Whereas:

1. The functions and responsibilities of the Internet Assigned Numbers Authority (IANA) are being transferred to a new private not for profit corporation, the Internet Corporation for Assigned Names and Numbers (ICANN).
2. ICANN's functions and responsibilities will affect the functioning of the global Internet.
3. ICANN's Articles of Incorporation establish that the corporation shall operate for the benefit of the Internet community as a whole and shall pursue the charitable and public purposes of lessening the burdens of government and promoting the global public interest in the operational stability of the Internet by performing and co-ordinating functions associated with the technical management of Internet names and addresses.
4. a) The Articles of Incorporation and Bylaws establish that ICANN shall carry out its activities in conformity with relevant principles of international law and applicable international conventions and local law. b) ICANN is committed to carrying out its activities based on the principles of stability, competition, private bottom-up coordination, and representation.
5. ICANN's Bylaws, Article XI Advisory Committees, Section 2.1 provide for a Governmental Advisory Committee The Governmental Advisory Committee should consider and provide advice on the activities of ICANN as they relate to concerns of governments and where they may affect public policy issues. The Advice of the Governmental Advisory Committee on public policy matters shall be duly taken into account by ICANN, both in the formulation and adoption of policies.
6. The GAC commits itself to implement efficient procedures in support of ICANN and to provide thorough and timely advice and analysis on relevant matters of concern with regard to government and public interests

Considering that:

1. The Internet naming and addressing system is a public resource that must be managed in the interests of the global Internet community;
2. The management of Internet names and addresses must be facilitated by organisations that are global in character.
3. ICANN's decision making should take into account public policy objectives including, among other things:
  - secure, reliable and affordable functioning of the Internet, including uninterrupted service and universal connectivity;
  - the robust development of the Internet, in the interest of the public good, for government, private, educational, and commercial purposes, world wide;
  - transparency and non-discriminatory practices in ICANN's role in the allocation of Internet names and address;
  - effective competition at all appropriate levels of activity and conditions for fair competition, which will bring benefits to all categories of users including, greater choice, lower prices, and better services;
  - fair information practices, including respect for personal privacy and issues of consumer concern; and
  - freedom of expression.
4. Country code top level domains are operated in trust by the Registry for the public interest, including the interest of the Internet community, on behalf of the relevant public authorities including governments, who ultimately have public policy authority over their ccTLDs, consistent with universal connectivity of the Internet.

## **ARTICLE I – SCOPE OF THE GOVERNMENTAL ADVISORY COMMITTEE**

### **Principle 1**

The Governmental Advisory Committee (GAC) shall consider and provide advice on the activities of ICANN as they relate to concerns of governments, multinational governmental organisations and treaty organisations, and distinct economies as recognised in international fora, including matters where there may be an interaction between ICANN's policies and various laws and international agreements and public policy objectives.

### **Principle 2**

The GAC shall provide advice and communicate issues and views to the ICANN Board. The GAC is not a decision making body. Such advice given by the GAC shall be without prejudice to the responsibilities of any public authority with regard to the bodies and activities of ICANN, including the Supporting Organisations and Councils.

**Principle 3**

The GAC shall report its findings and recommendations in a timely manner to the ICANN Board through the Chair of the GAC.

**Principle 4**

The GAC shall operate as a forum for the discussion of government and other public policy interests and concerns.

**Principle 5**

The GAC shall have no legal authority to act for ICANN.

**ARTICLE II – MEETINGS**

**Principle 6**

The GAC shall meet at least once annually; notwithstanding this designated annual meeting, the GAC shall meet as appropriate.

**Principle 7**

A meeting may be convened on the initiative of the Chair, at the request of a Member or at the request of the ICANN Board, concurred in by one third (1/3) of the Current Membership.

**Principle 8**

Face-to-face meetings of the GAC shall be convened by the Chair, by a notice issued not less than twenty-eight (28) calendar days prior to the date set for the meeting. This notice may be issued electronically, via telefacsimile, or via airmail.

**Principle 9**

Online and electronic meetings of the GAC shall be convened by the Chair, by a notice issued not less than ten (10) calendar days prior to the date set for the meeting.

This notice may be issued electronically, via telefacsimile, or via airmail. GAC Documents  
Operating Principles

**Principle 10**

An emergency meeting of the GAC may be convened by the Chair, by a notice issued not less than ten (10) calendar days prior to the date set for the meeting. This notice may be issued electronically, via telefacsimile, or via airmail. Principle 11 In addition to face-to-face meetings, meetings and discussions may be conducted online via secure communications. "Online" includes electronic mail, web-based communications, and teleconferences.

### **ARTICLE III- AGENDA**

#### **Principle 12**

A proposed agenda for the meeting shall be communicated to Members prior to the meeting.

#### **Principle 13**

Requests for items to be placed on the agenda of a forthcoming meeting shall be communicated to the Secretariat of the GAC in writing, either via electronic mail, telefacsimile or airmail.

### **ARTICLE IV – MEMBERSHIP**

#### **Principle 14**

Members of the GAC shall be national governments, multinational governmental organisations and treaty organisations, and public authorities, each of which may appoint one representative and one alternate representative to the GAC. The accredited representative of a Member may be accompanied by advisers. The accredited representative, alternate and advisers must hold a formal official position with the Member's public administration. The term 'official' includes a holder of an elected governmental office or a person who is employed by such government, public authority or multinational governmental or treaty organisation, and whose primary function with such government, public authority or organisation is to develop or influence governmental or public policies.

#### **Principle 15**

Membership is open to all national governments. Membership is also open to distinct economies as recognised in international fora. Multinational governmental organisations and treaty organisations, may also participate as observers, on the invitation of the GAC through the Chair.

#### **Principle 16**

Accredited representatives of governments and other public authorities, Members of GAC, have voting rights. Accredited representatives of International Organisations and entities other than public authorities participate fully in the GAC and its Committees and Working Groups, as Observers, but do not have voting rights.

**Principle 17**

Those who constitute the Current Membership are defined as those Members from whom the Chair has received formal notification of the name and contact details of their accredited representative. The list of current Members shall be updated regularly and be posted online.

**ARTICLE V – OBSERVERS**

**Principle 18**

Representatives of invited UN Inter-governmental Organisations, non-member public authorities and other relevant entities may attend meetings of the GAC as observers, at the discretion of the Chair.

**ARTICLE VI – REPRESENTATION**

**Principle 19**

If a Member's accredited representative, or alternate representative, is not present at a meeting, then it shall be taken that the Member government or organisation is not represented at that meeting. Any decision made by the GAC without the participation of a Member's accredited representative shall stand and nonetheless be valid.

**Principle 20**

In consideration of the GAC's commitment to efficiency, there shall be no attendance or voting by proxy. Members may only be represented at meetings, both face-to-face and electronic, by their accredited representative, or designated alternate representative. GAC Documents Operating Principles (EN) GAC Operating Principles 6

**ARTICLE VII – CHAIR, VICE CHAIRS, OTHER OFFICERS AND COMMITTEES**

**Principle 21**

If the GAC moves to require additional officers other than the Chair, then three (3) Vice-Chairs shall be elected from among the Members. To the extent possible, the Vice-Chairs should appropriately reflect the geographic and development diversity of the membership. The Chair shall hold office for a term of two (2) years, renewable once. The

Vice-Chairs shall hold office for a term of one (1) year and may be re-elected; however no person may serve as Vice-Chair for more than two consecutive terms.

**Principle 22**

The GAC Chair and Vice Chairs shall be elected by the Members of the GAC from among the accredited representatives of governments and other public authorities, Members of GAC, pursuant to procedures outlined under Article IX (Election of Office Holders) of these Operating Principles. The elections of the Chair and Vice Chairs will be concurrent, as provided for in Principle 34.

**Principle 23**

The GAC may designate other officers as necessary.

**Principle 24**

The Chair shall normally participate in the proceedings as such and not as the accredited representative of a Member, in which case the Member may accredit another representative. The Chair may, however, at any time request permission to act in either capacity. The Vice Chairs shall participate in the proceedings as accredited representatives of a Member.

**Principle 25**

If the Chair is absent from any meeting or part thereof, one of the three (3) Vice-Chairs shall perform the functions of the Chair. If no Vice-Chairs were elected or if no Vice-Chair is present the GAC shall elect an interim Chair for that meeting or that part of the meeting.

**Principle 26**

If the Chair can no longer perform the functions of the office, the GAC shall designate one of the Vice-Chairs referred to in Principle 22 of these Operating Principles to perform those functions pending election of a new Chair in pursuant to procedures outlined under Article IX (Election of Chair and Vice Chairs) of these Operating Principles. If no Vice-Chair was elected, the GAC shall elect an interim Chair to perform those functions pending the election of a new Chair.

**Principle 27**

The Chair may call for the creation of Committees and Working Groups to address matters that relate to concerns of governments and where they may affect public policy issues. Accredited representatives may designate advisers to serve on such committees.

**ARTICLE VIII – POWERS OF THE CHAIR**

**Principle 28**

In addition to exercising the power conferred elsewhere by these Principles, the Chair shall declare the opening and closing of each meeting shall direct the discussion, accord the right to speak, submit questions for decisions, announce decisions, rule on points of order and subject to these rules, have control of the proceedings. The Chairperson may also call a speaker to order if the remarks of the speaker are not relevant.

**Principle 29**

The Chair, with the consent of the meeting, may limit the time allowed to each speaker.

**Principle 30**

The Chair shall not normally have voting power; however in the event of a tie, the Chair shall have a casting vote.

**ARTICLE IX – ELECTION OF CHAIR AND VICE CHAIRS**

**Principle 31**

Elections for the GAC Chair shall take place during the final meeting of every second year (even years) unless the Chair can no longer perform the functions of the office. If Chair can no longer perform the functions during the first year in the office, the elections shall be organized for the remaining term in the office during the next GAC meeting. If Chair can no longer perform the functions during the second year in the office, the GAC shall decide which of the Vice Chairs should replace the Chair until the regular elections are held.

Elections for the three Vice Chairs shall normally take place during the final meeting of the year. If Vice Chair can no longer perform the functions before the full term has finished, new elections shall be organized for the remaining term in the office during the next GAC meeting. The results of each election shall formally be announced at the end of any meeting in which an election has taken place, and shall take effect at the end of the next GAC meeting.

**Principle 32**

In the event of a single candidate he or she shall be elected by acclamation. If there is more than one candidate for the position of Chair, or more than 3 candidates for the positions of Vice Chairs, an election will be held. For elections, the candidate or

candidates with the most votes shall be elected to the position(s) that he or she has stood for.

In case of a tie ballot for two leading candidates, an additional ballot shall be held restricted to these candidates after an interval of at least one hour.

Elections shall be valid if more than 1/3 of the GAC members participate in the voting in person and by electronic mail. In case of the second round of voting, only present at the meeting GAC members participate.

**Principle 33**

Nominations for candidates to the official position of Chair and/or Vice Chair of the GAC shall normally start during the GAC meeting which precedes the meeting in which the confirmation is due to take place. In any event, the nomination procedure will close 45 days before the start of the meeting at which the confirmation of appointment is due to take place and a list of candidates should be posted on the GAC website within 14 days. In the event that there are more candidates than positions available, the GAC Chair will notify members that an election will be organized in accordance with principles 34 to 36 of this document.

**Principle 34**

For elections, votes shall be taken by secret ballot. It will be a matter for each voting Member to decide if they wish to make his or her choice public. This includes the taking of votes in person, or ballots transmitted by electronic mail. The GAC Secretariat will organize the voting procedure and count the votes under the supervision of the Chair or Vice Chairs who do not stand for re-election.

**Principle 35**

For votes to be taken in person, the GAC Secretariat will distribute ballot papers to Members' accredited representatives at that meeting, and arrange for a ballot box to be placed in the conference room.

**Principle 36**

Members unable to attend in person, should notify the Secretariat no less than 7 days before the beginning of the meeting in which the election is due to take place. They will then be provided with the opportunity to cast their votes by electronic mail addressed to the Secretariat, which shall then be added to the votes cast by other members during

the meeting. Any Member from whom a vote has not been received within such a time-limit shall be regarded as not voting.

## **ARTICLE X – CONDUCT OF BUSINESS**

### **Principle 40**

One third of the representatives of the Current Membership with voting rights shall constitute a quorum at any meeting. A quorum shall only be necessary for any meeting at which a decision or decisions must be made. The GAC may conduct its general business face-to-face or online.

A Member may initiate an online discussion of a question by forwarding to the Chair a request for the opening of an online discussion on a specific topic. The GAC Secretariat will initiate this discussion and all Members may post their contributions during a period of time established by the Chair, the period of which is to be no longer than sixty (60) calendar days. At the end of this discussion period, the Chair will summarise the results of the discussion and may forward the results to the ICANN Board. Nothing in this Principle overrides the decision making processes set out elsewhere in these Operating Principles.

### **Principle 41**

Representatives of Members shall endeavour, to the extent that a situation permits, to keep their oral statements brief. Representatives wishing to develop their position on a particular matter in fuller detail may circulate a written statement for distribution to Members.

### **Principle 42**

Representatives should make every effort to avoid the repetition of a full debate at each meeting on any issue that has already been fully debated in the past and on which there appears to have been no change in Members' positions already on record.

### **Principle 43**

In order to expedite the conduct of business, the Chair may invite representatives who wish to express their support for a given proposal to show their hands, in order to be duly recorded in the records of the GAC as supporting statements; thus only representatives with dissenting view or wishing to make explicit points or proposals would actually be invited to make a statement. This procedure shall only be applied in order to avoid undue repetition of points already made, and will not preclude any

representative who so wishes from taking the floor. GAC Documents Operating Principles (EN) GAC Operating Principles 10

## **ARTICLE XI – THE SECRETARIAT**

### **Principle 44**

The Secretariat of the Governmental Advisory Committee shall undertake such administrative, coordination, liaison and research activities as shall be necessary for the efficient functioning of the GAC. The Secretariat shall facilitate communications among the GAC Chair, Vice Chairs, other Officers, the GAC membership and with ICANN. The Secretariat participates in all GAC meetings.

### **Principle 45**

The Secretariat shall be financed by such means as shall be agreed by the GAC members .

## **ARTICLE XII – PROVISION OF ADVICE TO THE ICANN BOARD**

### **Principle 46**

Advice from the GAC to the ICANN Board shall be communicated through the Chair.

### **Principle 47**

The GAC works on the basis of seeking consensus among its membership. Consistent with United Nations practice<sup>1</sup>, consensus is understood to mean the practice of adopting decisions by general agreement in the absence of any formal objection. Where consensus is not possible, the Chair shall convey the full range of views expressed by members to the ICANN Board.

---

<sup>1</sup> In United Nations practice, the concept of “consensus” is understood to mean the practice of adoption of resolutions or decisions by general agreement without resort to voting in the absence of any formal objection that would stand in the way of a decision being declared adopted in that manner. Thus, in the event that consensus or general agreement is achieved, the resolutions and decisions of the United Nations meetings and conferences have been adopted without a vote. In this connection, it should be noted that the expressions “without a vote”, “by consensus” and “by general agreement” are, in the practice of the United Nations, synonymous and therefore interchangeable.

**Principle 48**

The GAC may deliver advice on any other matter within the functions and responsibilities of ICANN, at the request of the ICANN Board or on its own initiative. The ICANN Board shall consider any advice from the GAC prior to taking action.

**ARTICLE XII – RECORDS****Principle 49**

Records of the meetings of the GAC shall be in the form of Executive Minutes. GAC Documents Operating Principles (EN) GAC Operating Principles 11

**ARTICLE XIII – PUBLICITY OF MEETINGS****Principle 50**

The meetings of the GAC shall ordinarily be held in private. The Chair may decide that a particular meeting, or part of a particular meeting, should be held in public.

**Principle 51**

After a private meeting has been held, the Chair may issue a communiqué to the Media, such communiqué having been approved by the GAC beforehand.

**ARTICLE XIV – REVISION****Principle 52**

The GAC may decide at any time to revise these Operating Principles or any part of them.

**Principle 53**

A Member or Members may move, at a meeting, for these Operating Principles to be open to revision. If so moved, the Chair shall call for the movement to be seconded. If so seconded, then the Chair shall call for a vote to support the resolution. The deciding vote may be by ballot, by the raising of cards, or by roll call, and shall constitute a simple majority of the Members who are present at the meeting at which it was moved for these Operating Principles to be revised. If so resolved in favour of a revision of these Operating Principles, then the proposal shall sit for consultation for a period of sixty (60) days. At the next meeting following the sixty days, the Chair shall call for a vote for or against the proposal. The deciding vote may be taken by ballot, by the raising of cards,

or by roll call, and shall be a simple majority of the Members who are present at the meeting at which the vote takes place.

**ARTICLE XV – GENERAL PROVISIONS**

**Principle 54**

Whenever there is a difference in interpretation between the principles set out in these Operating Principles and ICANN’s Articles of Incorporation and Bylaws, ICANN’s Articles of Incorporation and Bylaws shall prevail.

# **Board Report & GNSO Council Final Report Part A & B**

## **Introduction of New Generic Top-Level Domains**

**INSERT UPDATED TOC**

## ABSTRACT

This is the Board Report for the Generic Names Supporting Organization (GNSO) Council's policy development process on the Introduction of New Top-Level Domains. The Report is in two parts. Part A includes the requirements for a Board Report in addition to the GNSO Council's *Final Report* which includes their substantive discussion of the Principles, Policy Recommendations and Implementation Guidelines. Part B of the *Final Report* contains a range of supplementary materials that have been used by the Committee during the course of the Policy Development Process, most notably detailed Constituency Statements, Expert Papers and other reference materials.

The process for the introduction of new generic top-level domains (gTLDs) is central to fostering choice and competition in domain registration services, and as such is significant to the promotion of ICANN's core values. The evolution of the namespace toward enhanced diversity of services and service providers must be planned and managed effectively to ensure that the security, stability, reliability, and global interoperability of the Internet is maintained.

The proposed policy that would guide the introduction of new gTLDs was created by the GNSO over the last two years through its bottom-up, multi-stakeholder policy development process. The GNSO received assistance from ICANN staff to help ensure that their final recommendations and guidelines are implementable. The questions that have been addressed by the GNSO in the development of new gTLD policy are complex and involve technical, economic, operational, legal, public policy, and other considerations. The intended result is a straightforward process that awards new gTLDs if they satisfy the criteria and no objections are sustained.

Readers wishing immediate access the core substance of the suggested approach are advised to focus first on the [Recommendations \(click to get](#)

[there](#)), which give the fundamentals, in part based on the agreed [Principles](#). Next, implementation advice is provided in the [Implementation Guidelines](#). Reading of the documents in full will provide the comprehensive advice and discussions regarding the GNSO's new gTLD's policy recommendations.

## BOARD REPORT REQUIREMENTS

- 1.1 This is the Board Report for the *Introduction of New Top-Level Domains*. According to the GNSO's policy development process, the Board Report must contain the following elements.
- a. A clear statement of any Supermajority Vote recommendation of the Council.  
  
The GNSO Council considered the *Final Report* and the results of the 20 day public comment period at its meeting on 6 September 2007.  
  
The GNSO Council voted on the package of recommendations as follows, as quoted from the minutes, [insert after minutes and MP3 recording completed]  
  
[The motion carried with a supermajority vote as defined in the ICANN bylaws, section 16 (<http://www.icann.org/general/archive-bylaws/bylaws-28feb06.htm#AnnexA>)]
  - b. If a Supermajority Vote was not reached, a clear statement of all positions held by Council members. Each statement should clearly indicate (i) the reasons underlying each position and (ii) the constituency(ies) that held the position;
  - c. An analysis of how the issue would affect each constituency, including any financial impact on the constituency; [this is included in full in the Constituency Statements found in Part B of the *Final Report* in addition to the supplementary Minority Statements submitted by the NCUC and the personal comments made by Ms Avri Doria which are found in the Part A Annexes]
  - d. An analysis of the period of time that would likely be necessary to implement the policy; [this is found in the Implementation Team *Discussion Points* document along with the draft RFP, the draft base contract and the instructions to applicants]
  - e. The advice of any outside advisors relied upon, which should be accompanied by a detailed statement of the advisor's (i) qualifications and relevant experience; and (ii) potential conflicts of interest; [these are found in full in Part B in the Supplementary Materials]
  - f. The Final Report submitted to the Council; [the Final Report is included in full in the sections below]
  - g. A copy of the minutes of the Council deliberation on the policy issue, including the all opinions expressed during such deliberation,

accompanied by a description of who expressed such opinions. [insert the minutes of the meeting are found in full below once complete. The MP3 recording of the meeting can be found here insert URL]

## BACKGROUND

Following a succession of activities relating to the introduction of new gTLDs, since the inception of ICANN (for a complete history see the Final Report), the initial step for a PDP on new gTLDs was taken on 22 September 2005 when the GNSO Council requested ICANN staff to produce an Issues Report on the topic of new TLDs. The requested report covered four issue areas:

- Whether to continue to introduce new gTLDs
- Criteria for approving applications for new gTLDs
- Allocation methods
- Contractual conditions.

The Issues Report was discussed at the GNSO Council meeting on 28 November 2005 and the GNSO Council voted unanimously to initiate a formal PDP on this matter. Notice of the new PDP, along with draft terms of reference for the new initiative and a call for public reactions and substantive papers were published on 6 December 2005, with a 31 January 2006 deadline for all submissions. Formal terms of reference for the PDP were approved at the 2 December 2005 GNSO Council meeting, with a separate motion confirming that the PDP would be undertaken as a “committee of the whole” chaired by the GNSO Council chair Bruce Tonkin, who eventually was succeeded in both these respects by Avri Doria in May 2007.

A mailing list for the New gTLD Committee was established on 17 January 2006, and a draft Initial report was published on 19 February 2006, with a public comment period ending on 3 March 2006. The final Initial Report was published on 15 March 2006. The first Draft Final Report was publicly circulated on 14 November 2006, along with a Staff memo recommending additional considerations in several areas. Further Draft Final Report versions were released during 2007 and the last draft version was subject to public comments from 10 to 30 August 2007. The ultimate Final Report, dated 29 August, was adopted with a supermajority vote by the GNSO Council on 6 September 2007.

# FINAL REPORT

## Background

1. The Internet Corporation for Assigned Names and Numbers (ICANN) is responsible for the overall coordination of “the global Internet's system of unique identifiers” and ensuring the “stable and secure operation of the Internet's unique identifier systems. In particular, ICANN coordinates the “allocation and assignment of the three sets of unique identifiers for the Internet”. These are “domain names”(forming a system called the DNS); Internet protocol (IP) addresses and autonomous system (AS) numbers and Protocol port and parameter numbers”. ICANN is also responsible for the “operation and evolution of the DNS root name server system and policy development reasonably and appropriately related to these technical functions”. These elements are all contained in ICANN's Mission and Core Values<sup>1</sup> in addition to provisions which enable policy development work that, once approved by the ICANN Board, become binding on the organization. The results of the policy development process found here relate to the introduction of new generic top-level domains.
2. This document is the *Final Report* of the Generic Names Supporting Organisation's (GNSO) Policy Development Process (PDP) that has been conducted using ICANN's Bylaws and policy development guidelines that relate to the work of the GNSO. This *Report* reflects a comprehensive examination of four Terms of Reference designed to establish a stable and ongoing process that facilitates the introduction of new top-level domains. The policy development process (PDP) is part of the Generic Names Supporting Organisation's (GNSO) mandate within the ICANN structure. However, close consultation with other ICANN Supporting Organisations and Advisory Committees has been an integral part of the process. The

---

<sup>1</sup> <http://www.icann.org/general/archive-bylaws/bylaws-28feb06.htm#1>

- consultations and negotiations have also included a wide range of interested stakeholders from within and outside the ICANN community<sup>2</sup>.
3. The *Final Report* is in two parts. This document is Part A and contains the full explanation of each of the Principles, Recommendations and Implementation Guidelines that the Committee has developed since December 2005<sup>3</sup>. Part B of the *Report* contains a wide range of supplementary materials which have been used in the policy development process including Constituency Impact Statements (CIS), a series of Working Group Reports on important sub-elements of the Committee's deliberations, a collection of external reference materials, and the procedural documentation of the policy development process<sup>4</sup>.
  4. The finalisation of the policy for the introduction of new top-level domains is part of a long series of events that have dramatically changed the nature of the Internet. The 1969 ARPANET diagram shows the initial design of a network that is now global in its reach and an integral part of many lives and businesses. The policy recommendations found here illustrate the complexity of the Internet of 2007 and, as a package, propose a system to add new top-level domains in an orderly and transparent way. The ICANN Staff Implementation Team, consisting of policy, operational and legal staff members, has worked closely with the Committee on all aspects of the policy development process<sup>5</sup>. The ICANN Board has received regular information and updates about the process and the substantive results of the Committee's work.

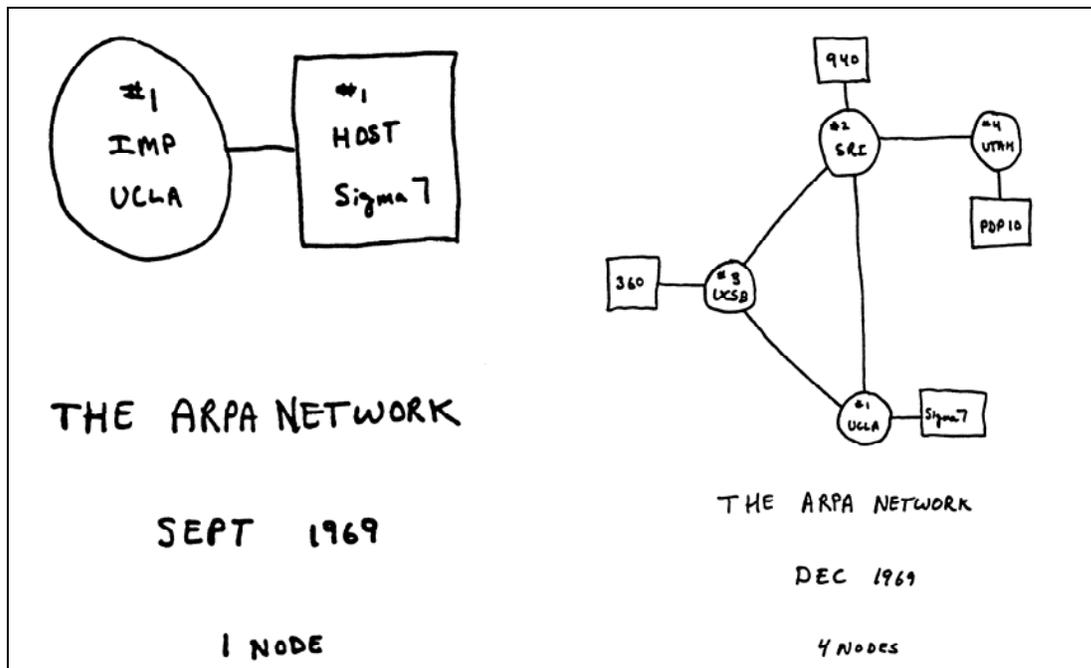

---

<sup>2</sup> The ICANN "community" is a complex matrix of intersecting organizations and which are represented graphically here. <http://www.icann.org/structure/>

<sup>3</sup> The *Final Report* is Step 9 in the GNSO's policy development process which is set out in full at <http://www.icann.org/general/archive-bylaws/bylaws-28feb06.htm#AnnexA>.

<sup>4</sup> Found here <http://gnso.icann.org/issues/new-gtlds/>.

<sup>5</sup> The ICANN Staff *Discussion Points* documents can be found at <http://gnso.icann.org/drafts/GNSO-PDP-Dec05-StaffMemo-14Nov06.pdf> and <http://gnso.icann.org/drafts/PDP-Dec05-StaffMemo-19-jun-07.pdf>

5. The majority of the early work on the introduction of new top-level domains is found in the IETF's Request for Comment series. RFC 1034<sup>6</sup> is a fundamental resource that explains key concepts of the naming system. Read in conjunction with RFC920<sup>7</sup>, an historical picture emerges of how and why the domain name system hierarchy has been organised. Postel & Reynolds set out in their RFC920 introduction about the "General Purpose Domains" that "...While the initial domain name "ARPA" arises from the history of the development of this system and environment, in the future most of the top level names will be very general categories like "government", "education", or "commercial". The motivation is to provide an organization name that is free of undesirable semantics."
6. In 2007, the Internet is multi-dimensional and its development is driven by widespread access to inexpensive communications technologies in many

<sup>6</sup> Authored in 1987 by Paul Mockapetris and found at <http://www.ietf.org/rfc/rfc1034>

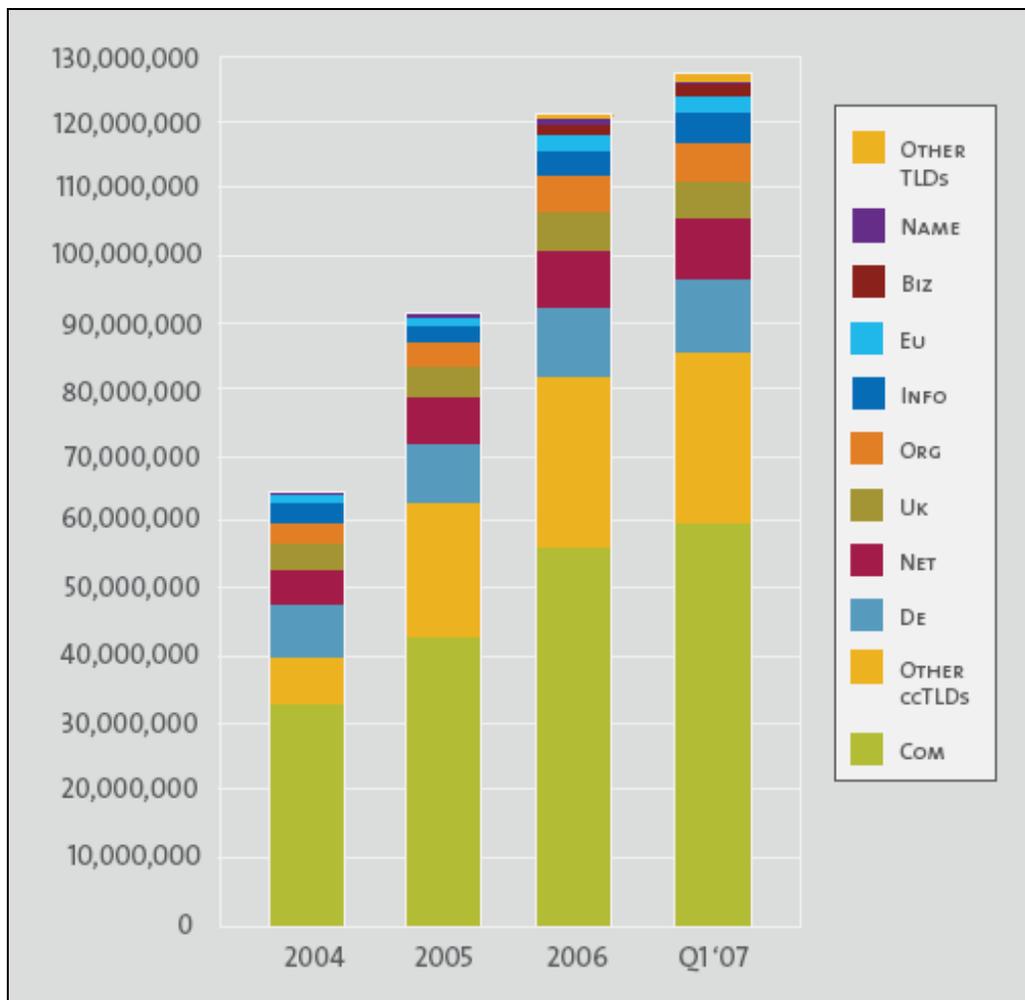

<sup>7</sup> Authored in October 1984 by Jon Postel and J Reynolds and found at <http://www.ietf.org/rfc/rfc920>

parts of the world. In addition, global travel is now relatively inexpensive, efficient and readily available to a diverse range of travellers. As a consequence, citizens no longer automatically associate themselves with countries but with international communities of linguistic, cultural or professional interests independent of physical location. Many people now exercise multiple citizenship rights, speak many different languages and quite often live far from where they were born or educated. The 2007 OECD *Factbook*<sup>8</sup> provides comprehensive statistics about the impact of migration on OECD member countries. In essence, many populations are fluid and changing due in part to easing labour movement restrictions but also because technology enables workers to live in one place and work in another relatively easily. As a result, companies and organizations are now global and operate across many geographic borders and jurisdictions. The following illustration<sup>9</sup> shows how rapidly the number of domain names under registration has increased and one could expect that trend to continue with the introduction of new top-level domains.

---

<sup>8</sup> Found at <http://www.oecd.org/dataoecd/15/37/38336539.pdf>

<sup>9</sup> From Verisign's June 2007 *Domain Name Industry Brief*.

7. A key driver of change has been the introduction of competition in the registration of domain names through ICANN Accredited Registrars<sup>10</sup>. In June 2007, there were more than 800 accredited registrars who register names for end users with ongoing downward pressure on the prices end-users pay for domain name registration.

8. ICANN's work on the introduction of new top-level domains has been underway since 1999. By mid-1999, Working Group C<sup>11</sup> had quickly reached consensus on two issues, namely that "...ICANN should add new

<sup>10</sup> The full list is available here <http://www.icann.org/registrars/accredited-list.html>

<sup>11</sup> Report found at <http://www.icann.org/dnso/wgc-report-21mar00.htm>

- gTLDs to the root. The second is that ICANN should begin the deployment of new gTLDs with an initial rollout of six to ten new gTLDs, followed by an evaluation period". This work was undertaken throughout 2000 and saw the introduction of, for example, .coop, .aero and .biz.
9. After an evaluation period, a further round of sponsored TLDs was introduced during 2003 and 2004 which included, amongst others, .mobi and .travel<sup>12</sup>.
  10. The July 2007 zone file survey statistics from [www.registrarstats.com](http://www.registrarstats.com)<sup>13</sup> shows that there are slightly more than 96,000,000 top level domains registered across a selection of seven top-level domains including .com, .net and .info. Evidence from potential new applicants provides more impetus to implement a system that enables the ongoing introduction of new top level domains<sup>14</sup>. In addition, interest from Internet users who could use Internationalised Domain Names (IDNs) in a wide variety of scripts beyond ASCII is growing rapidly.
  11. To arrive at the full set of policy recommendations which are found here, the Committee considered the responses to a Call for Expert Papers issued at the beginning of the policy development process<sup>15</sup>, and which was augmented by a full set of GNSO Constituency Statements<sup>16</sup>. These are all found in Part B of the *Final Report* and should be read in conjunction with this document. In addition, the Committee received detailed responses from the Implementation Team about proposed policy recommendations and the implementation of the recommendations package as an on-line application process that could be used by a wide array of potential applicants.
  12. The Committee reviewed and analysed a wide variety of materials including Working Group C's findings, the evaluation reports from the 2003

<sup>13</sup> <http://www.registrarstats.com/Public/ZoneFileSurvey.aspx>

<sup>14</sup> Verisign produce a regular report on the domain name industry.

[http://www.verisign.com/Resources/Naming\\_Services\\_Resources/Domain\\_Name\\_Industry\\_Brief/index.html](http://www.verisign.com/Resources/Naming_Services_Resources/Domain_Name_Industry_Brief/index.html)

<sup>15</sup> The announcement is here <http://icann.org/announcements/announcement-03jan06.htm> and the results are here <http://gns0.icann.org/issues/new-gtlds/new-gtld-pdp-input.htm>

<sup>16</sup> Found here <http://gns0.icann.org/issues/new-gtlds/new-gtld-pdp-input.htm>

& 2004 round of sponsored top-level domains and a full range of other historic materials<sup>17</sup>.

13. In the past, a number of different approaches to new top level domains have been considered including the formulation of a structured taxonomy<sup>18</sup> of names, for example, .auto, .books, .travel and .music. The Committee has opted to enable potential applicants to self-select strings that are either the most appropriate for their customers or potentially the most marketable. It is expected that applicants will apply for targeted community strings such as .travel for the travel industry and .cat for the Catalan community as well as some generic strings. The Committee identified five key drivers for the introduction of new top-level domains.

- (i) It is consistent with the reasons articulated in 1999 when the first proof-of-concept round was initiated
- (ii) There are no technical impediments to the introduction of new top-level domains as evidenced by the two previous rounds
- (iii) Expanding the domain name space to accommodate the introduction of both new ASCII and internationalised domain name (IDN) top-level domains will give end users more choice about the nature of their presence on the Internet. In addition, users will be able to use domain names in their language of choice.
- (iv) There is demand for additional top-level domains as a business opportunity. The GNSO Committee expects that this business opportunity will stimulate competition at the registry service level which is consistent with ICANN's Core Value 6.

---

<sup>17</sup> <http://gnso.icann.org/issues/new-gtlds/>

<sup>18</sup> For example, see the GA List discussion thread found at <http://gnso.icann.org/mailing-lists/archives/ga/msg03337.html> & earlier discussion on IANA lists <http://www.iana.org/comments/26sep1998-02oct1998/msg00016.html>. The 13 June 2002 paper regarding a taxonomy for non-ASCII TLDs is also illuminating <http://www.icann.org/committees/idn/registry-selection-paper-13jun02.htm>

- (v) No compelling reason has been articulated to not proceed with accepting applications for new top-level domains.

14. The remainder of this Report is structured around the four *Terms of Reference*. This includes an explanation of the Principles that have guided the work taking into account the Governmental Advisory Committee's March 2007 *Public Policy Principles for New gTLDs*<sup>19</sup>; a comprehensive set of Recommendations which has majority Committee support and a set of Implementation Guidelines which has been discussed in great detail with the ICANN Staff Implementation Team. The Implementation Team has released two *ICANN Staff Discussion Points* documents (in November 2006 and June 2007). Version 2 provides detailed analysis of the proposed recommendations from an implementation standpoint and provides suggestions about the way in which the implementation plan may come together. The ICANN Board will make the final decision about the actual structure of the application and evaluation process.

15. In each of the sections below the Committee's recommendations are discussed in more detail with an explanation of the rationale for the decisions. The recommendations have been the subject of numerous public comment periods and intensive discussion across a range of stakeholders including ICANN's GNSO Constituencies, ICANN Supporting Organisations and Advisory Committees and members of the broader Internet-using public that is interested in ICANN's work<sup>20</sup>. In particular, detailed work has been conducted through the Internationalised Domain Names Working Group (IDN-WG)<sup>21</sup>, the Reserved Names Working Group (RN-WG)<sup>22</sup> and the Protecting the Rights of Others Working Group (PRO-WG)<sup>23</sup>. The Working Group Reports are found in full in Part B of the *Final Report* along with the March 2007 GAC *Public*

*Policy Principles for New Top-Level Domains, Constituency Impact*  
Statements. A minority statement from the NCUC about Recommendations 6  
& 20 are found Annexes for this document along with individual comments  
from Nominating Committee appointee Ms Avri Doria.

## SUMMARY -- PRINCIPLES, RECOMMENDATIONS & IMPLEMENTATION GUIDELINES

1. This section sets out, in table form, the set of Principles, proposed Policy Recommendations and Guidelines that the Committee has derived through its work. The addition of new gTLDs will be done in accordance with ICANN's primary mission which is to ensure the security and stability of the DNS and, in particular, the Internet's root server system<sup>24</sup>.
2. The Principles are a combination of GNSO Committee priorities, ICANN staff implementation principles developed in tandem with the Committee and the March 2007 GAC Public Policy Principles on New Top-Level Domains. The Principles are supported by all GNSO Constituencies.<sup>25</sup>
3. ICANN's Mission and Core Values were key reference points for the development of the Committee's Principles, Recommendations and Implementation Guidelines. These are referenced in the right-hand column of the tables below.
4. The Principles have support from all GNSO Constituencies.

---

<sup>24</sup> The root server system is explained here <http://en.wikipedia.org/wiki/Rootserver>

<sup>25</sup> Ms Doria supports all of the Principles but expressed concern about Principle B by saying "...While I strongly support the introduction of IDN TLDS, I am concerned that the unresolved issues with IDN ccTLD equivalents may interfere with the introduction of IDN TLDs. I am also concerned that some of these issues could impede the introduction of some new ASCII TLDs dealing with geographically related identifiers" and Principle D "...While I favor the establishment of a minimum set of necessary technical criteria, I am concerned that this set actually be the basic minimum set necessary to protect the stability, security and global interoperability."

	PRINCIPLES	MISSION & CORE VALUES
A	New generic top-level domains (gTLDs) must be introduced in an orderly, timely and predictable way.	M1 & CV1 & 2, 4-10
B	Some new generic top-level domains should be internationalised domain names (IDNs) subject to the approval of IDNs being available in the root.	M1-3 & CV 1, 4 & 6
C	The reasons for introducing new top-level domains include that there is demand from potential applicants for new top-level domains in both ASCII and IDN formats. In addition the introduction of new top-level domain application process has the potential to promote competition in the provision of registry services, to add to consumer choice, market differentiation and geographical and service-provider diversity.	M3 & CV 4-10
D	A set of technical criteria must be used for assessing a new gTLD registry applicant to minimise the risk of harming the operational stability, security and global interoperability of the Internet.	M1-3 & CV 1
E	A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meet its obligations under the terms of ICANN's registry agreement.	M1-3 & CV 1
F	A set of operational criteria must be set out in contractual conditions in the registry agreement to ensure compliance with ICANN policies.	M1-3 & CV 1
G	The string evaluation process must not infringe the applicant's freedom of expression rights that are protected under internationally recognized principles of law.	

	RECOMMENDATIONS <sup>26</sup>	MISSION & CORE VALUES
1	<p>ICANN must implement a process that allows the introduction of new top-level domains.</p> <p>The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination.</p> <p>All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.</p>	M1-3 & CV1-11
2	Strings must not be confusingly similar to an existing top-level domain or a Reserved Name.	M1-3 & C1-6-11
3	<p>Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law.</p> <p>Examples of these legal rights that are internationally recognized include, but are not limited to, rights defined in the Paris Convention for the Protection of Industry Property (in particular trademark rights), the Universal Declaration of Human Rights (UDHR) and the International Covenant on Civil and Political Rights (ICCPR) (in particular freedom of expression rights).</p>	CV3
4	Strings must not cause any technical instability.	M1-3 & CV 1
5	Strings must not be a Reserved Word <sup>27</sup> .	M1-3 & CV 1 & 3

<sup>26</sup> Note the updated recommendation text sent to the gTLD-council list after the 7 June meeting. <http://forum.icann.org/lists/gTLD-council/msg00520.html>

<sup>27</sup> Reserved word limitations will be included in the base contract that will be available to applicants prior to the start of the application round.

6*	<p>Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law.</p> <p>Examples of such principles of law include, but are not limited to, the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR), the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) and the International Convention on the Elimination of All Forms of Racial Discrimination, intellectual property treaties administered by the World Intellectual Property Organisation (WIPO) and the WTO Agreement on Trade-Related Aspects of Intellectual Property (TRIPS).</p>	M3 & CV 4
7	Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.	M1-3 & CV1
8	Applicants must be able to demonstrate their financial and organisational operational capability.	M1-3 & CV1
9	There must be a clear and pre-published application process using objective and measurable criteria.	M3 & CV6-9
10	There must be a base contract provided to applicants at the beginning of the application process.	CV7-9
11	[Replaced with Recommendation 20 and Implementation Guideline P and inserted into Term of Reference 3 Allocation Methods section]	
12	Dispute resolution and challenge processes must be established prior to the start of the process.	CV7-9
13	Applications must initially be assessed in rounds until the scale of demand is clear.	CV7-9
14	The initial registry agreement term must be of a commercially reasonable length.	CV5-9

15	There must be renewal expectancy.	CV5-9
16	Registries must apply existing Consensus Policies and adopt new Consensus Policies as they are approved.	CV5-9
17	A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.	M1 & CV1
18	If an applicant offers an IDN service, then ICANN's IDN guidelines <sup>28</sup> must be followed.	M1 & CV1
19	Registries must use only ICANN accredited registrars in registering domain names and may not discriminate among such accredited registrars.	M1 & CV1
20*	An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.	

\* The NCUC submitted Minority Statements on Recommendations 6 and 20. The remainder of the Recommendations have support from all GNSO Constituencies.

	IMPLEMENTATION GUIDELINES	MISSION & CORE VALUES
IG A	The application process will provide a pre-defined roadmap for applicants that encourages the submission of applications for new top-level domains.	CV 2, 5, 6, 8 & 9
IG B	Application fees will be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process.  Application fees may differ for applicants.	CV 5, 6, 8 & 9
IG C	ICANN will provide frequent communications with applicants and the public including comment forums.	CV 9 & 10
IG D	A first come first served processing schedule within the application round will be implemented and will continue	CV 8-

<sup>28</sup> <http://www.icann.org/general/idn-guidelines-22feb06.htm>

	for an ongoing process, if necessary.	10
	Applications will be time and date stamped on receipt.	
IG E	The application submission date will be at least four months after the issue of the Request for Proposal and ICANN will promote the opening of the application round.	CV 9 & 10
IG F*	If there is contention for strings, applicants may <sup>29</sup> : <ul style="list-style-type: none"> <li>i) resolve contention between them within a pre-established timeframe</li> <li>ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and;</li> <li>iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.</li> </ul>	CV 7-10
IG H*	Where an applicant lays any claim that the TLD is intended to support a particular community such as a sponsored TLD, or any other TLD intended for a specified community, that claim will be taken on trust with the following exceptions: <ul style="list-style-type: none"> <li>(i) the claim relates to a string that is also subject to another application and the claim to support a community is being used to gain priority for the application; and</li> <li>(ii) a formal objection process is initiated.</li> </ul> <p>Under these exceptions, Staff Evaluators will devise criteria and procedures to investigate the claim.</p>	CV 7 - 10

---

<sup>29</sup> The Implementation Team sought advice from a number of auction specialists and examined other industries in which auctions were used to make clear and binding decisions. Further expert advice will be used in developing the implementation of the application process to ensure the fairest and most appropriate method of resolving contention for strings.

	Under exception (ii), an expert panel will apply the process, guidelines, and definitions set forth in IG P.	
IG H	External dispute providers will give decisions on objections.	CV 10
IG I	An applicant granted a TLD string must use it within a fixed timeframe which will be specified in the application process.	CV 10
IG J	The base contract should balance market certainty and flexibility for ICANN to accommodate a rapidly changing market place.	CV 4-10
IG K	ICANN should take a consistent approach to the establishment of registry fees.	CV 5
IG L	The use of personal data must be limited to the purpose for which it is collected.	CV 8
IG M	ICANN may establish a capacity building and support mechanism aiming at facilitating effective communication on important and technical Internet governance functions in a way that no longer requires all participants in the conversation to be able to read and write English <sup>30</sup> .	CV 3 - 7
IG N	ICANN may put in place a fee reduction scheme for gTLD applicants from economies classified by the UN as least developed.	CV 3 - 7
IG O	ICANN may put in place systems that could provide information about the gTLD process in major languages other than English, for example, in the six working languages of the United Nations.	CV 8 -10
IG P*	The following process, definitions and guidelines refer to Recommendation 20.	

### **Process**

Opposition must be objection based.

Determination will be made by a dispute resolution panel

---

<sup>30</sup> Detailed work is being undertaken, lead by the Corporate Affairs Department, on establishing a translation framework for ICANN documentation. This element of the Implementation Guidelines may be addressed separately.

constituted for the purpose.

The objector must provide verifiable evidence that it is an established institution of the community (perhaps like the RSTEP pool of panelists from which a small panel would be constituted for each objection).

### **Guidelines**

The task of the panel is the determination of substantial opposition.

- a) **substantial** – in determining substantial the panel will assess the following: signification portion, community, explicitly targeting, implicitly targeting, established institution, formal existence, detriment
- b) **significant portion** – in determining significant portion the panel will assess the balance between the level of objection submitted by one or more established institutions and the level of support provided in the application from one or more established institutions. The panel will assess significance proportionate to the explicit or implicit targeting.
- c) **community** – community should be interpreted broadly and will include, for example, an economic sector, a cultural community, or a linguistic community. It may be a closely related community which believes it is impacted.
- d) **explicitly targeting** – explicitly targeting means there is a description of the intended use of the TLD in the application.
- e) **implicitly targeting** – implicitly targeting means that the objector

makes an assumption of targeting or that the objector believes there may be confusion by users over its intended use.

- f) **established institution** – an institution that has been in formal existence for at least 5 years. In exceptional cases, standing may be granted to an institution that has been in existence for fewer than 5 years.

Exceptional circumstances include but are not limited to a re-organization, merger or an inherently younger community.

The following ICANN organizations are defined as established institutions: GAC, ALAC, GNSO, ccNSO, ASO.

- g) **formal existence** – formal existence may be demonstrated by appropriate public registration, public historical evidence, validation by a government, intergovernmental organization, international treaty organization or similar.
- h) **detriment** – the objector must provide sufficient evidence to allow the panel to determine that there would be a likelihood of detriment to the rights or legitimate interests of the community or to users more widely.

IG Q ICANN staff will provide an automatic reply to all those who submit public comments that will explain the objection procedure.

IG R Once formal objections or disputes are accepted for review there will be a cooling off period to allow parties to resolve the dispute or objection before review by the panel is initiated.

\* The NCUC submitted Minority Statements on Implementation Guidelines F, H & P. The remainder of the Implementation Guidelines have support from all GNSO Constituencies.

1. This set of implementation guidelines is the result of detailed discussion, particularly with respect to the two *ICANN Staff Discussion Points*<sup>31</sup> documents that were prepared to facilitate consultation with the GNSO Committee about the implementation impacts of the proposed policy Recommendations. The Implementation Guidelines will be used to inform the final Implementation Plan which is approved by the ICANN Board
2. The *Discussion Points* documents contain draft flowcharts which have been developed by the Implementation Team and which will be updated, based on the final vote of the GNSO Council and the direction of the ICANN Board. The *Discussion Points* documents have been used in the ongoing internal implementation discussions that have focused on ensuring that draft recommendations proposed by the Committee are implementable in an efficient and transparent manner<sup>32</sup>. The flowchart setting out the proposed Contention Evaluation Process is a more detailed component within the Application Evaluation Process and will be amended to take into account the inputs from Recommendation 20 and its related Implementation Guidelines.
3. This policy development process has been designed to produce a systemised and ongoing mechanism for applicants to propose new top-level domains. The Request for Proposals (RFP) for the first round will include scheduling information for the subsequent rounds to occur within one year. After the first round of new applications, the application system will be evaluated by ICANN's TLDs Project Office to assess the effectiveness of the application system. Success metrics will be developed and any necessary adjustments made to the process for subsequent rounds.
4. The following sections set out in detail the explanation for the Committee's recommendations for each Term of Reference.

---

<sup>31</sup> <http://gnso.icann.org/drafts/GNSO-PDP-Dec05-StaffMemo-14Nov06.pdf>

<sup>32</sup> Consistent with ICANN's commitments to accountability and transparency found at <http://www.icann.org/announcements/announcement-26jan07b.htm>

## TERM OF REFERENCE ONE -- WHETHER TO INTRODUCE NEW TOP-LEVEL DOMAINS

1. **Recommendation 1 Discussion – All GNSO Constituencies supported the introduction of new top-level domains.**
2. The GNSO Committee was asked to address the question of whether to introduce new top-level domains. The Committee recommends that ICANN should implement a process that allows the introduction of new top level domains and that work should proceed to develop policies that will enable the introduction of new generic top-level domains, taking into account the recommendations found in the latter sections of the *Report* concerning Selection Criteria (Term of Reference 2), Allocation Methods (Term of Reference 3) and Policies for Contractual Conditions (Term of Reference 4).
3. ICANN's work on the introduction of new top-level domains has been ongoing since 1999. The early work included the 2000 Working Group C Report<sup>33</sup> that also asked the question of "whether there should be new TLDs". By mid-1999, the Working Group had quickly reached consensus on two issues, namely that "...ICANN should add new gTLDs to the root. The second is that ICANN should begin the deployment of new gTLDs with an initial rollout of six to ten new gTLDs, followed by an evaluation period". This work was undertaken throughout 2000 and saw the introduction of, for example, .coop, .aero and .biz.
4. After an evaluation period, a further round of sponsored TLDs was introduced during 2003 and 2004 which included, amongst others, .mobi and .travel.
5. In addressing Term of Reference One, the Committee arrived at its recommendation by reviewing and analysing a wide variety of materials including Working Group C's findings; the evaluation reports from the 2003-

---

<sup>33</sup> Found at <http://www.icann.org/dns/wgc-report-21mar00.htm>

2004 round of sponsored top-level domains and full range of other historic materials which are posted at <http://gnso.icann.org/issues/new-gtlds/>

6. In addition, the Committee considered the responses to a Call for Expert Papers issued at the beginning of the policy development process<sup>34</sup>. These papers augmented a full set of GNSO Constituency Statements<sup>35</sup> and a set of Constituency Impact Statements<sup>36</sup> that addressed specific elements of the Principles, Recommendations and Implementation Guidelines.
7. The Committee was asked, at its February 2007 Los Angeles meeting, to confirm its rationale for recommending that ICANN introduce new top-level domains. In summary, there are five threads which have emerged:
  - (i) It is consistent with the reasons articulated in 1999 when the first proof-of-concept round was initiated
  - (ii) There are no technical impediments to the introduction of new top-level domains as evidenced by the two previous rounds
  - (iii) It is hoped that expanding the domain name space to accommodate the introduction of both new ASCII and internationalised domain name (IDN) top-level domains will give end users more choice about the nature of their presence on the Internet. In addition, users will be able to use domain names in their language of choice.
  - (iv) In addition, the introduction of a new top-level domain application process has the potential to promote competition in the provision of registry services, and to add to consumer choice, market differentiation and geographic and service-provider diversity which is consistent with ICANN's Core Value 6.
  - (v) No compelling reason has been articulated to not proceed with accepting applications for new top-level domains.

---

<sup>34</sup> The announcement is here <http://icann.org/announcements/announcement-03jan06.htm> and the results are here <http://gnso.icann.org/issues/new-gtlds/new-gtld-pdp-input.htm>

<sup>35</sup> Found here <http://gnso.icann.org/issues/new-gtlds/new-gtld-pdp-input.htm>

<sup>36</sup> Found here <http://forum.icann.org/lists/gtld-council/>

8. Article X, Part 7, Section E of the GNSO's Policy Development Process requires the submission of "constituency impact statements" which reflect the potential implementation impact of policy recommendations. By 4 July 2007 all GNSO Constituencies had submitted Constituency Impact Statements (CIS) to the gtld-council mailing list<sup>37</sup>. Each of those statements is referred to throughout the next sections<sup>38</sup> and are found in full in Part B of the *Report*. The NCUC submitted Minority Statements on Recommendations 6 & 20 and on Implementation Guidelines F, H & P. These statements are found in full here in Annex A & C, respectively, as they relate specifically to the finalised text of those two recommendations. GNSO Committee Chair and Nominating Committee appointee Ms Avri Doria also submitted individual comments on the recommendation package. Her comments are found in Annex B here.

9. All Constituencies support the introduction of new TLDs particularly if the application process is transparent and objective. For example, the ISPCP said that, "...the ISPCP is highly supportive of the principles defined in this section, especially with regards to the statement in [principle A] (A): New generic top-level domains must be introduced in an orderly, timely and predictable way. Network operators and ISPs must ensure their customers do not encounter problems in addressing their emails, and in their web searching and access activities, since this can cause customer dissatisfaction and overload help-desk complaints. Hence this principle is a vital component of any addition sequence to the gTLD namespace. The various criteria as defined in D, E and F, are also of great importance in contributing to minimise the risk of moving forward with any new gTLDs, and our constituency urges ICANN to ensure they are scrupulously observed during the applications evaluation process". The Business Constituency's (BC) CIS said that "...If the outcome is the best possible there will be a beneficial impact on business

---

<sup>37</sup> Archived at <http://forum.icann.org/lists/gtld-council/>

<sup>38</sup> Business Constituency <http://forum.icann.org/lists/gtld-council/msg00501.html>, Intellectual Property Constituency <http://forum.icann.org/lists/gtld-council/msg00514.html>, Internet Service Providers <http://forum.icann.org/lists/gtld-council/msg00500.html>, NCUC <http://forum.icann.org/lists/gtld-council/msg00530.html>, Registry Constituency <http://forum.icann.org/lists/gtld-council/msg00494.html>

users from: a reduction in the competitive concentration in the Registry sector; increased choice of domain names; lower fees for registration and ownership; increased opportunities for innovative on-line business models.” The Registrar Constituency (RC) agreed with this view stating that “...new gTLDs present an opportunity to Registrars in the form of additional products and associated services to offer to its customers. However, that opportunity comes with the costs of implementing the new gTLDs as well as the efforts required to do the appropriate business analysis to determine which of the new gTLDs are appropriate for its particular business model.”

10. The Registry Constituency (RyC) said that “...Regarding increased competition, the RyC has consistently supported the introduction of new gTLDs because we believe that: there is a clear demand for new TLDs; competition creates more choices for potential registrants; introducing new TLDs with different purposes increases the public benefit; new gTLDs will result in creativity and differentiation in the domain name industry; the total market for all TLDs, new and old, will be expanded.” In summary, the Committee recommended, “ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process”. Given that this recommendation has support from all Constituencies, the following sections set out the other Terms of Reference recommendations.

## TERM OF REFERENCE -- SELECTION CRITERIA

### 1. Recommendation 2 Discussion -- Strings must not be confusingly similar to an existing top-level domain.

- i) This recommendation has support from all the GNSO Constituencies. Ms Doria accepted the recommendation with the concern expressed below<sup>39</sup>.
- ii) The list of existing top-level domains is maintained by IANA and is listed in full on ICANN's website<sup>40</sup>. Naturally, as the application process enables the operation of new top-level domains this list will get much longer and the test more complex. The RyC, in its Impact Statement, said that "...This recommendation is especially important to the RyC. ... It is of prime concern for the RyC that the introduction of new gTLDs results in a ubiquitous experience for Internet users that minimizes user confusion. gTLD registries will be impacted operationally and financially if new gTLDs are introduced that create confusion with currently existing gTLD strings or with strings that are introduced in the future. There is a strong possibility of significant impact on gTLD registries if IDN versions of existing ASCII gTLDs are introduced by registries different than the ASCII gTLD registries. Not only could there be user

---

<sup>39</sup> "My concern involves using definitions that rely on legal terminology established for trademarks for what I believe should be a policy based on technical criteria.

In the first instance I believe that this is essentially a technical issue that should have been resolved with reference to typography, homologues, orthographic neighbourhood, transliteration and other technically defined attributes of a name that would make it unacceptable. There is a large body of scientific and technical knowledge and description in this field that we could have drawn on.

By using terms that rely on the legal language of trademark law, I believe we have created an implicit redundancy between recommendations 2 and 3. I.e., I believe both 2 and 3 can be used to protect trademarks and other intellectual property rights, and while 3 has specific limitations, 2 remains open to full and varied interpretation.

As we begin to consider IDNs, I am concerned that the interpretations of confusingly similar may be used to eliminate many potential TLDs based on translation. That is, when a translation may have the same or similar meaning to an existing TLD, that the new name may be eliminated because it is considered confusing to users who know both languages."

<sup>40</sup> <http://data.iana.org/TLD/tlds-alpha-by-domain.txt>

confusion in both email and web applications, but dispute resolution processes could be greatly complicated.” The ISPCP also stated that this recommendation was “especially important in the avoidance of any negative impact on network activities.” The RC stated that “...Registrars would likely be hesitant to offer confusingly similar gTLDs due to customer demand and support concerns. On the other hand, applying the concept too broadly would inhibit gTLD applicants and ultimately limit choice to Registrars and their customers”.

- iii) There are two other key concepts within this recommendation. The first is the issue of “confusingly similar”<sup>41</sup> and the second “likelihood of confusion”. There is extensive experience within the Committee with respect to trademark law and the issues found below have been discussed at length, both within the Committee and amongst the Implementation Team.
- iv) The Committee used a wide variety of existing law<sup>42</sup>, international treaty agreements and covenants to arrive at a common understanding that strings should not be confusingly similar either to existing top-level domains like .com and .net or to existing trademarks<sup>43</sup>. For example, the Committee considered the World Trade Organisation’s TRIPS agreement, in particular Article 16 which discusses the rights which are

---

<sup>41</sup> See section 4A -- <http://www.icann.org/udrp/udrp-policy-24oct99.htm>.

<sup>42</sup> In addition to the expertise within the Committee, the NCUC provided, as part of its Constituency Impact Statement expert outside advice from Professor Christine Haight Farley which said, in part, “...A determination about whether use of a mark by another is “confusingly similar” is simply a first step in the analysis of infringement. As the committee correctly notes, account will be taken of visual, phonetic and conceptual similarity. But this determination does not end the analysis. Delta Dental and Delta Airlines are confusingly similar, but are not like to cause confusion, and therefore do not infringe. ... In trademark law, where there is confusing similarity and the mark is used on similar goods or services, a likelihood of confusion will usually be found. European trademark law recognizes this point perhaps more readily than U.S. trademark law. As a result, sometimes “confusingly similar” is used as shorthand for “likelihood of confusion”. However, these concepts must remain distinct in domain name policy where there is no opportunity to consider how the mark is being used.”

<sup>43</sup> In addition, advice was sought from experts within WIPO who continue to provide guidance on this and other elements of dispute resolution procedures.

conferred to a trademark owner.<sup>44</sup> In particular, the Committee agreed upon an expectation that strings must avoid increasing opportunities for entities or individuals, who operate in bad faith and who wish to defraud consumers. The Committee also considered the Universal Declaration of Human Rights<sup>45</sup> and the International Covenant on Civil and Political Rights which address the “freedom of expression” element of the Committee’s deliberations.

- v) The Committee also benefited from the work of the Protecting the Rights of Others Working Group (PRO-WG). The PRO-WG presented its *Final Report*<sup>46</sup> to the Committee at the June 2007 San Juan meeting. The Committee agreed that the Working Group could develop some reference implementation guidelines on rights protection mechanisms that may inform potential new TLD applicants during the application process. A small ad-hoc group of interested volunteers are preparing those materials for consideration by the Council by mid-October 2007.
- vi) The Committee had access to a wide range of differing approaches to rights holder protection mechanisms including the United Kingdom, the USA, Jordan, Egypt and Australia<sup>47</sup>.

---

<sup>44</sup> Kristina Rosette provided the reference to the *Agreement on Trade-Related Aspects of Intellectual Property Rights* which is found online at [http://www.wto.org/english/tratop\\_e/trips\\_e/t\\_agm1\\_e.htm](http://www.wto.org/english/tratop_e/trips_e/t_agm1_e.htm)

“...*Article 16* Rights Conferred 1. The owner of a registered trademark shall have the exclusive right to prevent all third parties not having the owner's consent from using in the course of trade identical or similar signs for goods or services which are identical or similar to those in respect of which the trademark is registered where such use would result in a likelihood of confusion. In case of the use of an identical sign for identical goods or services, a likelihood of confusion shall be presumed. The rights described above shall not prejudice any existing prior rights, nor shall they affect the possibility of Members making rights available on the basis of use....”

<sup>45</sup> <http://www.ohchr.org/english/bodies/hrc/comments.htm>

<sup>46</sup> <http://gnso.icann.org/drafts/GNSO-PRO-WG-final-01Jun07.pdf>

<sup>47</sup> Charles Sha’ban provided a range of examples from Arabic speaking countries. For example, in Jordan, Article 7 Trademarks eligible for registration are 1- A trademark shall be registered if it is distinctive, as to words, letters, numbers, figures, colors, or other signs or any combination thereof and visually perceptible. 2- For the purposes of this Article, "distinctive" shall mean applied in a manner which secures distinguishing the goods of the proprietor of the trademark from those of other persons. Article 8 Marks which may not be registered as trademarks. The following may not be registered as trademarks: 10- A mark identical with one belonging to a different proprietor which is already entered in the register in respect of the same goods or class of goods for which the mark is

vii) In addition, the Committee referred to the 1883 *Paris Convention on the Protection of Industrial Property*<sup>48</sup>. It describes the notion of confusion and describes creating confusion as “to create confusion by any means whatever” {Article 10bis (3) (1)} and, further, being “liable to mislead the public” {Article 10bis (3) (3)}. The treatment of confusingly similar is also contained in European Union law (currently covering twenty-seven countries) and is structured as follows. “...because of its identity with or similarity to...there exists a likelihood of confusion on the part of the public...; the likelihood of confusion includes the likelihood of association...” {Article 4 (1) (b) of the 1988 EU Trade Mark directive 89/104/EEC}. Article 8 (1) (b) of the 1993 European Union Trade Mark regulation 40/94 is also relevant.

---

intended to be registered, or so closely resembling such trademark to the extent that it may lead to deceiving third parties.

12- The trademark which is identical or similar to, or constitutes a translation of, a well-known trademark for use on similar or identical goods to those for which that one is well-known for and whose use would cause confusion with the well-known mark, or for use of different goods in such a way as to prejudice the interests of the owner of the well-known mark and leads to believing that there is a connection between its owner and those goods as well as the marks which are similar or identical to the honorary badges, flags, and other insignia as well as the names and abbreviations relating to international or regional organizations or those that offend our Arab and Islamic age-old values.

In Oman for example, Article 2 of the Sultan Decree No. 38/2000 states:

“The following shall not be considered as trademarks and shall not be registered as such: □If the mark is identical, similar to a degree which causes confusion, or a translation of a trademark or a commercial name known in the Sultanate of Oman with respect to identical or similar goods or services belonging to another business, or if it is known and registered in the Sultanate of Oman on goods and service which are neither identical nor similar to those for which the mark is sought to be registered provided that the usage of the mark on those goods or services in this last case will suggest a connection between those goods or services and the owner of the known trademark and such use will cause damage to the interests of the owner of the known trademark.”

Although the laws In Egypt do not have specific provisions regarding confusion they stress in great detail the importance of distinctiveness of a trade mark.

Article 63 in the IP Law of Egypt No.82 for the year 2002 states:

“A trademark is any sign distinguishing goods, whether products or services, and include is particular names represented in a distinctive manner, signatures, words, letters, numerals, design, symbols, signposts, stamps, seal, drawings, engravings, a combination of distinctly formed colors and any other combination of these elements if used, or meant to be used, to distinguish the precedents of a particular industry, agriculture, forest or mining venture or any goods, or to indicate the origin of products or goods or their quality, category, guarantee, preparation process, or to indicate the provision of any service. In all cases, a trademark shall be a sign that is recognizable by sight.”

48 Found at [http://www.wipo.int/treaties/en/ip/paris/trtdocs\\_wo020.ht](http://www.wipo.int/treaties/en/ip/paris/trtdocs_wo020.ht) with 171 contracting parties.

- viii) In the United States, existing trade mark law requires applicants for trademark registration to state under penalty of perjury that "...to the best of the verifier's knowledge and belief, no other person has the right to use such mark in commerce either in the identical form thereof or in such near resemblance thereto as to be likely, when used on or in connection with the goods of such other person, to cause confusion, or to cause mistake, or to deceive..." which is contained in Section 1051 (3) (d) of the US Trademark Act 2005 (found at <http://www.bitlaw.com/source/15usc/1051.html>.)<sup>49</sup>
- ix) In Australia, the Australian Trade Marks Act 1995 Section 10 says that "...For the purposes of this Act, a trade mark is taken to be deceptively similar to another trade mark if it so nearly resembles that other trade mark that it is likely to deceive or cause confusion" (found at [http://www.ipaustralia.gov.au/resources/legislation\\_index.shtml](http://www.ipaustralia.gov.au/resources/legislation_index.shtml))
- x) A number of different trademark offices provide guidance on how to interpret confusion. For example, the European Union Trade Mark Office provides guidance on how to interpret confusion. *"...confusion may be visual, phonetic or conceptual. A mere aural similarity may create a likelihood of confusion. A mere visual similarity may create a likelihood of confusion. Confusion is based on the fact that the relevant public does not tend to analyse a word in detail but pays more attention to the distinctive and dominant components. Similarities are more significant than dissimilarities. The visual comparison is based on an analysis of the number and sequence of the letters, the number of words and the structure of the signs. Further particularities may be of relevance, such as the existence of special letters or accents that may be perceived as an indication of a specific language. For words, the visual comparison coincides with the phonetic comparison unless in the relevant language the word is not pronounced as it is written. It should*

---

<sup>49</sup> Further information can be found at the US Patent and Trademark Office's website <http://www.uspto.gov/>

*be assumed that the relevant public is either unfamiliar with that foreign language, or even if it understands the meaning in that foreign language, will still tend to pronounce it in accordance with the phonetic rules of their native language. The length of a name may influence the effect of differences. The shorter a name, the more easily the public is able to perceive all its single elements. Thus, small differences may frequently lead in short words to a different overall impression. In contrast, the public is less aware of differences between long names. The overall phonetic impression is particularly influenced by the number and sequence of syllables.”* (found at <http://oami.europa.eu/en/mark/marque/direc.htm>).

- xi) An extract from the United Kingdom’s Trade Mark Office’s Examiner’s Guidance Manual is useful in explaining further the Committee’s approach to developing its Recommendation. *“For likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average consumer. Likelihood of association is not an alternative to likelihood of confusion, “but serves to define its scope”. Mere association, in the sense that the later mark brings the earlier mark to mind is insufficient to find a likelihood of confusion, unless the average consumer, in bringing the earlier mark to mind, is led to expect the goods or services of both marks to be under the control of one single trade source. “The risk that the public might believe that the goods/services in question come from the same undertaking or, as the case may be, from economically-linked undertakings, constitutes a likelihood of confusion...”* (found at <http://www.patent.gov.uk/tm/t-decisionmaking/t-law/t-law-manual.htm>)
- xii) The Committee also looked in detail at the existing provisions of ICANN’s Registrar Accreditation Agreement, particularly Section 3.7.7.9<sup>50</sup> which says that “...The Registered Name Holder shall

---

<sup>50</sup> Found at <http://www.icann.org/registrars/ra-agreement-17may01.htm#3>

represent that, to the best of the Registered Name Holder's knowledge and belief, neither the registration of the Registered Name nor the manner in which it is directly or indirectly used infringes the legal rights of any third party.”

- xiii) The implications of the introduction of Internationalised Domain Names (IDNs) are, in the main, the same as for ASCII top-level domains. On 22 March 2007 the IDN-WG released its *Outcomes Report*<sup>51</sup> that the Working Group presented to the GNSO Committee. The Working Group's exploration of IDN-specific issues confirmed that the new TLD recommendations are valid for IDN TLDs. The full IDN WG Report is found in Part B of the *Report*.
- xiv) The technical testing for IDNs at the top-level is not yet completed although strong progress is being made. Given this and the other work that is taking place around the introduction of IDNs at the top-level, there are some critical factors that may impede the immediate acceptance of new IDN TLD applications. The conditions under which those applications would be assessed would remain the same as for ASCII TLDs.
- xv) Detailed work continues on the preparation of an Implementation Plan that reflects both the Principles and the Recommendations. The proposed Implementation Plan deals with a comprehensive range of potentially controversial (for whatever reason) string applications which balances the need for reasonable protection of existing legal rights and the capacity to innovate with new uses for top level domains that may be attractive to a wide range of users<sup>52</sup>.
- xvi) The draft Implementation Plan (included in the *Discussion Points* document), illustrates the flow of the application and evaluation process

---

<sup>51</sup> Found at <http://gnso.icann.org/drafts/idn-wg-fr-22mar07.htm>.

<sup>52</sup> The 2003 correspondence between ICANN's then General Counsel and the then GAC Chairman is also useful <http://www.icann.org/correspondence/touton-letter-to-tarmizi-10feb03.htm>.

and includes a detailed dispute resolution and extended evaluation tracks designed to resolve objections to applicants or applications.

- xvii) There is tension between those on the Committee who are concerned about the protection of existing TLD strings and those concerned with the protection of trademark and other rights as compared to those who wish, as far as possible, to preserve freedom of expression and creativity. The *Implementation Plan* sets out a series of tests to apply the recommendation during the application evaluation process.

**2. Recommendation 3 Discussion -- Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law. Examples of these legal rights that are internationally recognized include, but are not limited to, rights defined in the Paris Convention for the Protection of Industry Property (in particular trademark rights), the Universal Declaration of Human Rights (UDHR) and the International Covenant on Civil and Political Rights (ICCPR) (in particular freedom of expression rights).**

- i. This recommendation has support from all GNSO Constituencies. Ms Doria supported the recommendation with concern expressed below<sup>53</sup>.
- ii. This recommendation was discussed in detail in the lead up to the Committee's 7 June 2007 conference call and it was agreed that further work would be beneficial. That work was conducted through a series of teleconferences and email exchanges. The Committee decided to leave the recommendation text as it had been drafted and insert a new Principle G that reads "...The string evaluation process must not

---

<sup>53</sup> "My first concern relates to the protection of what can be called the linguistic commons. While it is true that much of trademark law and practice does protect general vocabulary and common usage from trademark protection, I am not sure that this is always the case in practice. I am also not convinced that trademark law and policy that applies to specific product type within a specific locale is entirely compatible with a general and global naming system."

infringe the applicant's freedom of expression rights that are protected under internationally recognized principles of law."

- iii. Prior to this, the Committee engaged in comprehensive discussion about this recommendation and took advice from a number of experts within the group<sup>54</sup>. The original text of the recommendation has been modified to recognise that an applicant would be bound by the laws of the country where they are located and an applicant may be bound by another country that has jurisdiction over them. In addition, the original formulation that included "freedom of speech" was modified to read the more generally applicable "freedom of expression".
- iv. Before reaching agreement on the final text, the IPC and the NCUC, in their respective Constituency Impact Statements (CIS), had differing views. The NCUC argued that "...there is no recognition that trade marks (and other legal rights have legal limits and *defenses*." The IPC says "agreed [to the recommendation], and, as stated before, appropriate mechanisms must be in place to address conflicts that may arise between any proposed new string and the IP rights of others."

### **3. Recommendation 4 Discussion -- Strings must not cause any technical instability.**

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. It was agreed by the Committee that the string should not cause any technical issues that threatened the stability and security of the Internet.
- iii. In its CIS, the ISPCP stated that "...this is especially important in the avoidance of any negative impact on network activities...The ISPCP considers recommendations 7 and 8 to be fundamental. The technical, financial, organizational and operational capability of the applicant are the evaluators' instruments for preventing potential negative impact on

---

<sup>54</sup> For example, David Maher, Jon Bing, Steve Metalitz, Philip Sheppard and Michael Palage.

a new string on the activities of our sector (and indeed of many other sectors).” The IPC also agreed that “technical and operational stability are imperative to any new gTLD introduction.” The RC said “...This is important to Registrars in that unstable registry and/or zone operations would have a serious and costly impact on its operations and customer service and support.”

- iv. The Security and Stability Advisory Committee (SSAC) has been involved in general discussions about new top level domains and will be consulted formally to confirm that the implementation of the recommendations will not cause any technical instability.
- v. A reserved word list, which includes strings which are reserved for technical reasons, has been recommended by the RN-WG. This table is found in the section below.

#### 4. Recommendation 5 Discussion -- Strings must not be a Reserved Word.<sup>55</sup>

- i. This recommendation is supported by all GNSO Constituencies. Ms Doria supported the recommendation but expressed some concerns outlined in the footnote below.<sup>56</sup>
- ii. The RN WG developed a definition of “reserved word” in the context of new TLDs which said “...depending on the specific reserved name category as well as the type (ASCII or IDN), the reserved name requirements recommended may apply in any one or more of the following levels as indicated:
  1. At the top level regarding gTLD string restrictions

---

<sup>55</sup> Reserved Word has a specific meaning in the ICANN context and includes, for example, the reserved word provisions in ICANN’s existing registry contracts. See <http://www.icann.org/registries/agreements.htm>.

<sup>56</sup> “Until such time as the technical work on IDNAbis is completed, I am concerned about establishing reserved name rules connected to IDNs. My primary concern involves policy decisions made in ICANN for reserved names becoming hard coded in the IDNAbis technical solution and thus becoming technical constraints that are no longer open to future policy reconsideration.”

2. At the second-level as contractual conditions
  3. At the third-level as contractual conditions for any new gTLDs that offer domain name registrations at the third-level.
- iii. The notion of “reserved words” has a specific meaning within the ICANN context. Each of the existing ICANN registry contracts has provisions within it that govern the use of reserved words. Some of these recommendations will become part of the contractual conditions for new registry operators.
  - iv. The Reserved Names Working Group (RN-WG) developed a series of recommendations across a broad spectrum of reserved words. The Working Group’s *Final Report*<sup>57</sup> was reviewed and the recommendations updated by the Committee at ICANN’s Puerto Rico meeting and, with respect to the recommendations relating to IDNs, with IDN experts. The final recommendations are included in the following table.

---

<sup>57</sup> Found online at <http://gnso.icann.org/issues/new-gtlds/final-report-rn-wg-23may07.htm> and in full in Part B of the *Report*.

	<b>Reserved Name Category</b>	<b>Domain Name Level(s)</b>	<b>Recommendation</b>
1	ICANN & IANA	All ASCII	The names listed as ICANN and IANA names will be reserved at all levels.
2	ICANN & IANA	Top level, IDN	Any names that appear in the IDN evaluation facility <sup>58</sup> which consist exclusively of translations of 'example' or 'test' that appear in the document at <a href="http://www.icann.org/topics/idn/idn-evaluation-plan-v2%209.pdf">http://www.icann.org/topics/idn/idn-evaluation-plan-v2%209.pdf</a> shall be reserved.
3	ICANN & IANA	2 <sup>nd</sup> & 3 <sup>rd</sup> levels, IDN	Any names that appear in the IDN evaluation facility which consist exclusively of translations of 'example' or 'test' that appear in the document at <a href="http://www.icann.org/topics/idn/idn-evaluation-plan-v2%209.pdf">http://www.icann.org/topics/idn/idn-evaluation-plan-v2%209.pdf</a> shall be reserved.
4	Symbols	All	We recommend that the current practice be maintained, so that no symbols other than the '-' [hyphen] be considered for use, with further allowance for any equivalent marks that may explicitly be made available in future revisions of the IDNA protocol.
5	Single and Two Character IDNs	IDNA-valid strings at all levels	Single and two-character U-labels on the top level and second level of a domain name should not be restricted in general. At the top level, requested strings should be analyzed on a case-by-case basis in the new gTLD process depending on the script and language used in order to determine whether the string should be granted for allocation in the DNS with particular caution applied to U-labels in Latin script (see Recommendation 10 below). Single and two character labels at the second level and the third level if applicable should be available for registration, provided they are consistent with the IDN Guidelines.
6	Single Letters	Top Level	We recommend reservation of single letters at the top level based on technical questions raised. If sufficient research at a later date demonstrates that the technical issues and concerns are addressed, the topic of releasing reservation status can be reconsidered.
7	Single Letters and Digits	2 <sup>nd</sup> Level	In future gTLDs we recommend that single letters and single digits be available at the second (and third level if applicable).

---

<sup>58</sup> The Committee are aware that the terminology used here for the purposes of policy recommendations requires further refinement and may be at odds with similar terminology developed in other context. The terminology may be imprecise in other contexts than the general discussion about reserved words found here.

	<b>Reserved Name Category</b>	<b>Domain Name Level(s)</b>	<b>Recommendation</b>
8	Single and Two Digits	Top Level	A top-level label must not be a plausible component of an IPv4 or IPv6 address. (e.g., .3, .99, .123, .1035, .0xAF, .1578234)
9	Single Letter, Single Digit Combinations	Top Level	Applications may be considered for single letter, single digit combinations at the top level in accordance with the terms set forth in the new gTLD process.  Examples include .3F, .A1, .u7.
10	Two Letters	Top Level	We recommend that the current practice of allowing two letter names at the top level, only for ccTLDs, remains at this time. <sup>59</sup>
11	Any combination of Two Letters, Digits	2 <sup>nd</sup> Level	Examples include .AU, .DE, .UK. Registries may propose release provided that measures to avoid confusion with any corresponding country codes are implemented. <sup>60</sup> Examples include ba.aero, ub.cat, 53.com, 3M.com, e8.org.
12	Tagged Names	Top Level ASCII	In the absence of standardization activity and appropriate IANA registration, all labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved at the top-level. <sup>61</sup>

<sup>59</sup> The subgroup was encouraged by the ccNSO not to consider removing the restriction on two-letter names at the top level. IANA has based its allocation of two-letter names at the top level on the ISO 3166 list. There is a risk of collisions between any interim allocations, and ISO 3166 assignments which may be desired in the future.

<sup>60</sup> The existing gTLD registry agreements provide for a method of potential release of two-character LDH names at the second level. In addition, two character LDH strings at the second level may be released through the process for new registry services, which process involves analysis of any technical or security concerns and provides opportunity for public input. Technical issues related to the release of two-letter and/or number strings have been addressed by the RSTEP Report on GNR's proposed registry service. The GAC has previously noted the WIPO II Report statement that "If ISO 3166 alpha-2 country code elements are to be registered as domain names in the gTLDs, it is recommended that this be done in a manner that minimises the potential for confusion with the ccTLDs."

<sup>61</sup> Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

	Reserved Name Category	Domain Name Level(s)	Recommendation
13	N/A	Top Level IDN	<p>For each IDN gTLD proposed, applicant must provide both the "ASCII compatible encoding" ("A-label") and the "Unicode display form" ("U-label")<sup>62</sup> For example:</p> <ul style="list-style-type: none"> <li>• If the Chinese word for 'Beijing' is proposed as a new gTLD, the applicant would be required to provide the A-label (xn--1lq90i) and the U-label (北京).</li> <li>• If the Japanese word for 'Tokyo' is proposed as a new gTLD, the applicant would be required to provide the A-label (xn--1qs71d) and the U-label (東京).</li> </ul>
14	Tagged Names	2 <sup>nd</sup> Level ASCII	<p>The current reservation requirement be reworded to say, "<i>In the absence of standardization activity and appropriate IANA registration, all labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved in ASCII at the second (2<sup>nd</sup>) level.</i>"<sup>63</sup> – added words in <i>italics</i>. (Note that names starting with "xn--" may only be used if the current ICANN IDN Guidelines are followed by a gTLD registry.)</p>
15	Tagged Names	3 <sup>rd</sup> Level ASCII	<p>All labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved in ASCII at the third (3<sup>rd</sup> level) for gTLD registries that register names at the third level."<sup>64</sup> – added words in <i>italics</i>. (Note that names starting with "xn--" may only be used if the current ICANN IDN Guidelines are followed by a gTLD registry.)</p>
16	NIC, WHOIS, WWW	Top ASCII	<p>The following names must be reserved: nic, whois, www.</p>
17	NIC, WHOIS, WWW	Top IDN	<p>Do not try to translate nic, whois and www into Unicode versions for various scripts or to reserve any ACE versions of such translations or transliterations if they exist.</p>

<sup>62</sup> Internet Draft IDNabis Issues: <http://www.ietf.org/internet-drafts/draft-klensin-idnabis-issues-01.txt> (J. Klensin), Section 3.1.1.1

<sup>63</sup> Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

<sup>64</sup> Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

	<b>Reserved Name Category</b>	<b>Domain Name Level(s)</b>	<b>Recommendation</b>
18	NIC, WHOIS, WWW	Second and Third* ASCII	The following names must be reserved for use in connection with the operation of the registry for the Registry TLD: nic, whois, www Registry Operator may use them, but upon conclusion of Registry Operator's designation as operator of the registry for the Registry TLD, they shall be transferred as specified by ICANN. (*Third level only applies in cases where a registry offers registrations at the third level.)
19	NIC, WHOIS, WWW	Second and Third* IDN	Do not try to translate nic, whois and www into Unicode versions for various scripts or to reserve any ACE versions of such translations or transliterations if they exist, except on a case by case basis as proposed by given registries. (*Third level only applies in cases where a registry offers registrations at the third level.)
20	Geographic and geopolitical	Top Level ASCII and IDN	There should be no geographical reserved names (i.e., no exclusionary list, no presumptive right of registration, no separate administrative procedure, etc.). The proposed challenge mechanisms currently being proposed in the draft new gTLD process would allow national or local governments to initiate a challenge, therefore no additional protection mechanisms are needed. Potential applicants for a new TLD need to represent that the use of the proposed string is not in violation of the national laws in which the applicant is incorporated.

However, new TLD applicants interested in applying for a TLD that incorporates a country, territory, or place name should be advised of the GAC Principles, and the advisory role vested to it under the ICANN Bylaws. Additionally, a summary overview of the obstacles encountered by previous applicants involving similar TLDs should be provided to allow an applicant to make an informed decision. Potential applicants should also be advised that the failure of the GAC, or an individual GAC member, to file a challenge during the TLD application process, does not constitute a waiver of the authority vested to the GAC under the ICANN Bylaws.

*Note New gTLD Recommendation 20*

	<b>Reserved Name Category</b>	<b>Domain Name Level(s)</b>	<b>Recommendation</b>
21	Geographic and geopolitical	All Levels ASCII and IDN	The term 'geopolitical names' should be avoided until such time that a useful definition can be adopted. The basis for this recommendation is founded on the potential ambiguity regarding the definition of the term, and the lack of any specific definition of it in the WIPO Second Report on Domain Names or GAC recommendations.

*Note New gTLD Recommendation 20*

22	Geographic and geopolitical	Second Level & Third Level if applicable, ASCII & IDN	The consensus view of the working group is given the lack of any established international law on the subject, conflicting legal opinions, and conflicting recommendations emerging from various governmental fora, the current geographical reservation provision contained in the sTLD contracts during the 2004 Round should be removed, and harmonized with the more recently executed .COM, .NET, .ORG, .BIZ and .INFO registry contracts. The only exception to this consensus recommendation is those registries incorporated/organized under countries that require additional protection for geographical identifiers. In this instance, the registry would have to incorporate appropriate mechanisms to comply with their national/local laws.
----	-----------------------------	---	---

For those registries incorporated/organized under the laws of those countries that have expressly supported the guidelines of the WIPO Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications as adopted by the WIPO General Assembly, it is strongly recommended (but not mandated) that these registries take appropriate action to promptly implement protections that are in line with these WIPO guidelines and are in accordance with the relevant national laws of the applicable Member State.

*Note New gTLD Recommendation 20*

	<b>Reserved Name Category</b>	<b>Domain Name Level(s)</b>	<b>Recommendation</b>
23	gTLD Reserved Names	Second & Third Level ASCII and IDN (when applicable)	Absent justification for user confusion <sup>65</sup> , the recommendation is that gTLD strings should no longer be reserved from registration for new gTLDs at the second or when applicable at the third level. Applicants for new gTLDs should take into consideration possible abusive or confusing uses of existing gTLD strings at the second level of their corresponding gTLD, based on the nature of their gTLD, when developing the startup process for their gTLD.
24	Controversial Names	All Levels, ASCII & IDN	There should not be a new reserved names category for Controversial Names.
25	Controversial Names	Top Level, ASCII & IDN	There should be a list of disputed names created as a result of the dispute process to be created by the new gTLD process. <i>Note New gTLD Recommendation 6</i>
26	Controversial Names	Top Level, ASCII & IDN	In the event of the initiation of a CN-DRP process, applications for that label will be placed in a HOLD status that would allow for the dispute to be further examined. If the dispute is dismissed or otherwise resolved favorably, the applications will reenter the processing queue. The period of time allowed for dispute should be finite and should be relegated to the CN-DRP process. The external dispute process should be defined to be objective, neutral, and transparent. The outcome of any dispute shall not result in the development of new categories of Reserved Names. <sup>66</sup> <i>Note New gTLD Recommendation 6</i>
27	Controversial Names	Top Level, ASCII & IDN	The new GTLD Controversial Names Dispute Resolution Panel should be established as a standing mechanism that is convened at the time a dispute is initiated. Preliminary elements of that process are provided in this report but further work is needed in this area. <i>Note New gTLD Recommendation 6</i>

<sup>65</sup> With its recommendation, the sub-group takes into consideration that justification for potential user confusion (i.e., the minority view) as a result of removing the contractual condition to reserve gTLD strings for new TLDs may surface during one or more public comment periods.

<sup>66</sup> Note that this recommendation is a continuation of the recommendation in the original RN-WG report, modified to synchronize with the additional work done in the 30-day extension period.

	<b>Reserved Name Category</b>	<b>Domain Name Level(s)</b>	<b>Recommendation</b>
28	Controversial Names	Top Level, ASCII & IDN	<p>Within the dispute process, disputes would be initiated by the ICANN Advisory Committees (e.g, ALAC or GAC) or supporting organizations (e.g, GNSO or ccNSO). As these organizations do not currently have formal processes for receiving, and deciding on such activities, these processes would need to be defined:</p> <ul style="list-style-type: none"> <li>○ The Advisory Groups and the Supporting Organizations, using their own processes and consistent with their organizational structure, will need to define procedures for deciding on any requests for dispute initiation.</li> <li>○ Any consensus or other formally supported position from an ICANN Advisory Committee or ICANN Supporting Organization must document the position of each member within that committee or organization (i.e., support, opposition, abstention) in compliance with both the spirit and letter of the ICANN bylaws regarding openness and transparency.</li> </ul> <p><i>Note New gTLD Recommendation 6</i></p>
29	Controversial Names	Top Level, ASCII & IDN	<p>Further work is needed to develop predictable and transparent criteria that can be used by the Controversial Resolution Panel. These criteria must take into account the need to:</p> <ul style="list-style-type: none"> <li>▪ Protect freedom of expression</li> <li>▪ Affirm the fundamental human rights, in the dignity and worth of the human person and the equal rights of men and women</li> <li>▪ Take into account sensitivities regarding terms with cultural and religious significance.</li> </ul> <p><i>Note New gTLD Recommendation 6</i></p>
30	Controversial Names	Top Level, ASCII & IDN	<p>In any dispute resolution process, or sequence of issue resolution processes, the Controversial name category should be the last category considered.</p> <p><i>Note New gTLD Recommendation 6</i></p>

- v. With respect to geographic terms, the NCUC's CIS stated that "...We oppose any attempts to create lists of reserved names. Even examples are to be avoided as they can only become prescriptive. We are

concerned that geographic names should not be fenced off from the commons of language and rather should be free for the use of all...Moreover, the proposed recommendation does not make allowance for the duplication of geographic names outside the ccTLDs – where the real issues arise and the means of resolving competing use and fair and nominative use.”

- vi. The GAC’s Public Policy Principle 2.2 states that “ICANN should avoid country, territory or place names, and country, territory or regional language or people descriptions, unless in agreement with the relevant government or public authorities.”
- vii. The Implementation Team has developed some suggestions about how this recommendation may be implemented. Those suggestions and the process flow were incorporated into the Version 2 of the ICANN Staff *Discussion Points* document for consideration by the Committee.

**5. Recommendation 6 Discussion -- Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law.**

**Examples of such principles of law include, but are not limited to, the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR), the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) and the International Convention of the Elimination of All Forms of Racial Discrimination, intellectual property treaties administered by the World Intellectual Property Organisation (WIPO) and the WTO Agreement on Trade-Related Aspects of Intellectual Property (TRIPS).**

- i. This Recommendation is supported by all GNSO Constituencies except the NCUC. The NCUC has submitted a Minority Statement which is found in full in Annex A. The NCUC’s earlier Constituency Impact Statement is found, along with all the GNSO Constituency Impact Statements, in Part B of this report. Ms Doria has submitted individual

comments<sup>67</sup>. The Committee has discussed this recommendation in great detail and has attempted to address the experiences of the 2003-2004 sTLD round and the complex issues surrounding the .xxx application. The Committee has also recognised the GAC's Public Policy Principles, most notably Principle 2.1 a) and b) which refer to both freedom of expression and terms with significance in a variety of contexts. In addition, the Committee recognises the tension respecting freedom of expression and being sensitive to the legitimate concerns others have about offensive terms. The NCUC's earlier CIS says "...we oppose any string criteria based on morality and public order".

- ii. Other Constituencies did not address this recommendation in their CISs. The Implementation Team has tried to balance these views by establishing an Implementation Plan that recognises the practical effect of opening a new top-level domain application system that will attract applications that some members of the community do not agree with. Whilst ICANN does have a technical co-ordination remit, it must also put in place a system of handling objections to strings or to applicants, using pre-published criteria, that is fair and predictable for applicants. It is also necessary to develop guidance for independent evaluators tasked with making decisions about objections.

---

<sup>67</sup> Ms Doria said "...My primary concern focuses on the term 'morality'. While public order is frequently codified in national laws and occasionally in international law and conventions, the definition of what constitutes morality is not generally codified, and when it is, I believe it could be referenced as public order. This concern is related to the broad set of definitions used in the world to define morality. By including morality in the list of allowable exclusions we have made the possible exclusion list indefinitely large and have subjected the process to the consideration of all possible religious and ethical systems. ICANN or the panel of reviewers will also have to decide between different sets of moral principles, e.g, a morality that holds that people should be free to express themselves in all forms of media and those who believe that people should be free from exposure to any expression that is prohibited by their faith or moral principles. This recommendation will also subject the process to the fashion and occasional demagoguery of political correctness. I do not understand how ICANN or any expert panel will be able to judge that something should be excluded based on reasons of morality without defining, at least de-facto, an ICANN definition of morality? And while I am not a strict constructionist and sometimes allow for the broader interpretation of ICANN's mission, I do not believe it includes the definition of a system of morality."

- iii. In its consideration of public policy aspects of new top-level domains the Committee examined the approach taken in a wide variety of jurisdictions to issues of morality and public order. This was done not to make decisions about acceptable strings but to provide a series of potential tests for independent evaluators to use should an objection be raised to an application. The use of the phrase “morality and public order” within the recommendation was done to set some guidelines for potential applicants about areas that may raise objections. The phrasing was also intended to set parameters for potential objectors so that any objection to an application could be analysed within the framework of broadly accepted legal norms that independent evaluators could use across a broad spectrum of possible objections. The Committee also sought to ensure that the objections process would have parameters set for who could object. Those suggested parameters are found within the Implementation Guidelines.
- iv. In reaching its decision about the recommendation, the Committee sought to be consistent with, for example, Article 3 (1) (f) of the 1988 European Union Trade Mark Directive 89/104/EEC and within Article 7 (1) (f) of the 1993 European Union Trade Mark Regulation 40/94. In addition, the phrasing “contrary to morality or public order and in particular of such a nature as to deceive the public” comes from Article 6quinques (B)(3) of the 1883 *Paris Convention*. The reference to the *Paris Convention* remains relevant to domain names even though, when it was drafted, domain names were completely unheard of.
- v. The concept of “morality” is captured in Article 19 United Nations Convention on Human Rights (<http://www.unhchr.ch/udhr/lang/eng.htm>) says “...Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.” Article 29 continues by saying that “...In the

exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society”.

- vi. The EU Trade Mark Office’s Examiner’s guidelines provides assistance on how to interpret morality and deceit. “...Contrary to morality or public order. Words or images which are offensive, such as swear words or racially derogatory images, or which are blasphemous are not acceptable. There is a dividing line between this and words which might be considered in poor taste. The latter do not offend against this provision.” The further element is deception of the public which is treated in the following way. “...Deceive the public. To deceive the public, is for instance as to the nature, quality or geographical origin. For example, a word may give rise to a real expectation of a particular locality which is untrue.” For more information, see Sections 8.7 and 8.8 at <http://oami.europa.eu/en/mark/marque/direc.htm>
- vii. The UK Trade Mark office provides similar guidance in its Examiner’s Guidance Manual. “Marks which offend fall broadly into three types: those with criminal connotations, those with religious connotations and explicit/taboo signs. Marks offending public policy are likely to offend accepted principles of morality, e.g. illegal drug terminology, although the question of public policy may not arise against marks offending accepted principles of morality, for example, taboo swear words. If a mark is merely distasteful, an objection is unlikely to be justified, whereas if it would cause outrage or would be likely significantly to undermine religious, family or social values, then an objection will be appropriate. Offence may be caused on matters of race, sex, religious belief or general matters of taste and decency. Care should be taken when words have a religious significance and which may provoke

greater offence than mere distaste, or even outrage, if used to parody a religion or its values. Where a sign has a very sacred status to members of a religion, mere use may be enough to cause outrage.”

For more information, see <http://www.patent.gov.uk/tm/t-decisionmaking/t-law/t-law-manual.htm>)

- viii. This recommendation has been the subject of detailed Committee and small group work in an attempt to reach consensus about both the text of the recommendation and the examples included as guidance about generally accepted legal norms. The work has been informed by detailed discussion within the GAC and through interactions between the GNSO Committee and the GAC.

**6. Recommendation 7 Discussion -- Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.**

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. The Committee agreed that the technical requirements for applicants would include compliance with a minimum set of technical standards and that this requirement would be part of the new registry operator's contractual conditions included in the proposed base contract. The more detailed discussion about technical requirements has been moved to the contractual conditions section.
- iii. Reference was made to numerous Requests for Comment (RFCs) and other technical standards which apply to existing registry operators. For example, Appendix 7 of the June 2005 .net agreement<sup>68</sup> provides a comprehensive listing of technical requirements in addition to other technical specifications in other parts of the agreement. These requirements are consistent with that which is expected of all current

---

<sup>68</sup> <http://www.icann.org/tlds/agreements/net/appendix7.html>

registry operators. These standards would form the basis of any new top-level domain operator requirements.

- iv. This recommendation is referred to in two CISs. “The ISPCP considers recommendations 7 and 8 to be fundamental. The technical, financial, organisational and operational capabilities of the applicant are the evaluators’ instruments for preventing potential negative impact on a new string on the activities of our sector (and indeed of many other sectors).” The NCUC submitted “...we record that this must be limited to transparent, predictable and minimum technical requirements only. These must be published. They must then be adhered to neutrally, fairly and without discrimination.”
- v. The GAC supported this direction in its Public Policy Principles 2.6, 2.10 and 2.11.

**7. Recommendation 8 Discussion -- Applicants must be able to demonstrate their financial and organisational operational capability.**

- i. This recommendation is supported by all GNSO Constituencies and accepted with concern by Ms Doria<sup>69</sup>.
- ii. The Committee discussed this requirement in detail and determined that it was reasonable to request this information from potential applicants. It was also consistent with past practices including the prior new TLD rounds in 2000 and 2003-2004; the .net and .org rebids and the conditions associated with ICANN registrar accreditation.
- iii. This is also consistent with best practice procurement guidelines recommended by the World Bank ([www.worldbank.org](http://www.worldbank.org)), the OECD

---

<sup>69</sup> While I accept that a prospective registry must show adequate operational capability, creating a financial criteria is of concern. There may be many different ways of satisfying the requirement for operational capability and stability that may not be demonstrable in a financial statement or traditional business plan. E.g., in the case of an less developed community, the registry may rely on volunteer effort from knowledgeable technical experts.

Another concern I have with financial requirements and high application fees is that they may act to discourage applications from developing nations or indigenous and minority peoples that have a different set of financial opportunities or capabilities than those recognized as acceptable within an expensive and highly developed region such as Los Angeles or Brussels.”

([www.oecd.org](http://www.oecd.org)) and the Asian Development Bank ([www.adb.org](http://www.adb.org)) as well as a range of federal procurement agencies such as the UK telecommunications regulator, Ofcom; the US Federal Communications Commission and major public companies.

- iv. The challenging aspect of this recommendation is to develop robust and objective criteria against which applicants can be measured, recognising a vast array of business conditions and models. This will be an important element of the ongoing development of the Implementation Plan.
- v. The ISPCP discussed the importance of this recommendation in its CIS, as found in Recommendation 7 above.
- vi. The NCUC's CIS addressed this recommendation by saying "...we support this recommendation to the extent that the criteria is truly limited to minimum financial and organizational operational capability...All criteria must be transparent, predictable and minimum. They must be published. They must then be adhered to neutrally, fairly and without discrimination."
- vii. The GAC echoed these views in its Public Policy Principle 2.5 that said "...the evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process."

**8. Recommendation 9 Discussion -- There must be a clear and pre-published process using objective and measurable criteria.**

- i. This recommendation is supported by all GNSO Constituencies and by Ms Doria. It is consistent with ICANN's previous TLD rounds in 2000

and 2003-2004 and with its re-bid of both the .net and .org registry contracts.

- ii. It is also consistent with ICANN's Mission and Core Values especially 7, 8 and 9 which address openness in decision-making processes and the timeliness of those processes.
- iii. The Committee decided that the "process" criteria for introducing new top-level domains would follow a pre-published application system including the levying of an application fee to recover the costs of the application process. This is consistent with ICANN's approach to the introduction of new TLDs in the previous 2000 and 2004 round for new top-level domains.
- iv. The RyC reiterated its support for this recommendation in its CIS. It said that "...this Recommendation is of major importance to the RyC because the majority of constituency members incurred unnecessarily high costs in previous rounds of new gTLD introductions as a result of excessively long time periods from application submittal until they were able to start their business. We believe that a significant part of the delays were related to selection criteria and processes that were too subjective and not very measurable. It is critical in our opinion that the process for the introduction of new gTLDs be predictable in terms of evaluation requirements and timeframes so that new applicants can properly scope their costs and develop reliable implementation plans." The NCUC said that "...we strongly support this recommendation and again stress the need for all criteria to be limited to minimum operational, financial, and technical considerations. We all stress the need that all evaluation criteria be objective and measurable."

**9. Recommendation 10 Discussion -- There must be a base contract provided to applicants at the beginning of the process.**

- i. This recommendation is supported by all GNSO Constituencies and by Ms Doria.

- ii. The General Counsel's office has been involved in discussions about the provision of a base contract which would assist applicants both during the application process and in any subsequent contract negotiations.
- iii. A framework for the base contract was developed for discussion at the June 2007 ICANN meeting in Puerto Rico. The base contract will not be completed until the policy recommendations are in place. Completion of the policy recommendations will enable the completion of a draft base contract that would be available to applicants prior to the start of the new gTLD process, that is, prior to the beginning of the four-month window preceding the application submittal period.
- iv. The RyC, in its CIS, said, "...like the comments for Recommendation 9, we believe that this recommendation will facilitate a more cost-effective and timely application process and thereby minimize the negative impacts of a process that is less well-defined and objective. Having a clear understanding of base contractual requirements is essential for a new gTLD applicant in developing a complete business plan."

**10. Recommendation 11 Discussion** -- (This recommendation has been removed and is left intentionally blank. Note Recommendation 20 and its Implementation Guidelines).

**11. Recommendation 12 Discussion -- Dispute resolution and challenge processes must be established prior to the start of the process.**

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. The Committee has provided clear direction on its expectations that all the dispute resolution and challenge processes would be established prior to the opening of the application round. The full system will be published prior to an application round starting. However, the finalisation of this process is contingent upon a completed set of

recommendations being agreed; a public comment period and the final agreement of the ICANN Board.

- iii. The draft Implementation Plan in the Implementation Team *Discussion Points* document sets out the way in which the ICANN Staff proposes that disputes between applicants and challenge processes may be handled. Expert legal and other professional advice from, for example, auctions experts is being sought to augment the Implementation Plan.

## TERM OF REFERENCE THREE -- ALLOCATION METHODS

### 12. Recommendation 13 Discussion -- Applications must initially be assessed in rounds until the scale of demand is clear.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. This recommendation sets out the principal allocation methods for TLD applications. The narrative here should be read in conjunction with the draft flowcharts and the draft Request for Proposals.
- iii. An application round would be opened on Day 1 and closed on an agreed date in the future with an unspecified number of applications to be processed within that round.
- iv. This recommendation may be amended, after an evaluation period and report that may suggest modifications to this system. The development of objective “success metrics” is a necessary part of the evaluation process that could take place within the new TLDs Project Office.
- v. The ISPCP expressed its support for this recommendation. Its CIS said that “...this is an essential element in the deployment of new gTLDs, as it enables any technical difficulties to be quickly identified and sorted out, working with reduced numbers of new strings at a time, rather than many all at once. Recommendation 18 on the use of IDNs is also important in preventing any negative impact on network operators and ISPs.”

### 13. Recommendation 20 Discussion -- An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.

- i. This recommendation is supported by the majority of GNSO Constituencies. Ms Doria supports the recommendation but has

concerns about its implementation<sup>70</sup>. The NCUC has submitted a Minority Statement which is found in full in Annex C about the recommendation and its associated Implementation Guidelines F, H and P.

- ii. This recommendation was developed during the preparations for the Committee's 7 June 2007 conference call and during subsequent Committee deliberations. The intention was to factor into the process the very likely possibility of objections to applications from a wide variety of stakeholders.
- iii. The language used here is relatively broad and the implementation impact of the proposed recommendation is discussed in detail in the Implementation Team's *Discussion Points* document.
- iv. The NCUC's response to this recommendation in its earlier CIS says, in part, "...recommendation 20 swallows up any attempt to narrow the string criteria to technical, operational and financial evaluations. It asks for objections based on entirely subjective and unknowable criteria and for unlimited reasons and by unlimited parties." This view has, in part, been addressed in the Implementation Team's proposed plan but this requires further discussion and agreement by the Committee.

---

<sup>70</sup> "In general I support the policy though I do have concerns about the implementation which I discuss below in relation to IG (P)".

## TERM OF REFERENCE FOUR -- CONTRACTUAL CONDITIONS

### 14. Recommendation 14 Discussion -- The initial registry agreement term must be of a commercially reasonable length.

- i. The remainder of the recommendations address Term of Reference Four on policies for contractual conditions and should be read in conjunction with Recommendation 10 on the provision of a base contract prior to the opening of an application round. The recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. This recommendation is consistent with the existing registry contract provisions found in, for example, the .com and .biz agreements.
- iii. These conditions would form the baseline conditions of term length for new TLD operators. It was determined that a term of ten years would reasonably balance the start up costs of registry operations with reasonable commercial terms.
- iv. The RyC commented on this recommendation in its CIS saying that "...the members of the RyC have learned first hand that operating a registry in a secure and stable manner is a capital intensive venture. Extensive infrastructure is needed both for redundant registration systems and global domain name constellations. Even the most successful registries have taken many years to recoup their initial investment costs. The RyC is convinced that these two recommendations [14 & 15] will make it easier for new applicants to raise the initial capital necessary and to continue to make investments needed to ensure the level of service expected by registrants and users of their TLDs. These two recommendations will have a very positive impact on new

gTLD registries and in turn on the quality of the service they will be able to provide to the Internet community.”

**15. Recommendation 15 -- There must be renewal expectancy.**

- i. This recommendation is consistent with the existing registry contract provisions found in, for example, the .com and .biz agreements and is supported by all Constituencies. Ms Doria supported the recommendation and provided the comments found in the footnote below.<sup>71</sup>
- ii. These conditions would form the baseline conditions of term length for new TLD operators. It was determined that a term of ten years would reasonably balance the start up costs of registry operations with reasonable commercial terms.
- iii. See the CIS comments from the RyC in the previous section.

**16. Recommendation 16 -- Registries must apply existing Consensus Policies<sup>72</sup> and adopt new Consensus Policies as they are approved.**

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. The full set of existing ICANN registry contracts can be found here <http://www.icann.org/registries/agreements.htm> and ICANN's seven current Consensus Policies are found at <http://www.icann.org/general/consensus-policies.htm>.

---

<sup>71</sup> “In general I support the idea that a registry that is doing a good job should have the expectancy of renewal. I do, however, believe that a registry, especially a registry with general market dominance, or specific or local market dominance, should be subject to comment from the relevant user public and to evaluation of that public comment before renewal. When performance is satisfactory, there should be an expectation of renewal. When performance is not satisfactory, there should be some procedure for correcting the situation before renewal.”

<sup>72</sup> Consensus Policies has a particular meaning within the ICANN environment. Refer to <http://www.icann.org/general/consensus-policies.htm> for the full list of ICANN's Consensus Policies.

- iii. ICANN develops binding Consensus Policies through its policy development processes, in this case, through the GNSO<sup>73</sup>.

**17. Recommendation 17 -- A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.**

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. Referring to the recommendations on contractual conditions above, this section sets out the discussion of the policies for contractual conditions for new top-level domain registry operators. The recommendations are consistent with the existing provisions for registry operators which were the subject of detailed community input throughout 2006<sup>74</sup>.
- iii. The Committee developed its recommendations during the Brussels and Amsterdam face-to-face consultations, with assistance from the ICANN General Counsel's office. The General Counsel's office has also provided a draft base contract which will be completed once the policy recommendations are agreed. Reference should also be made to Recommendation 5 on reserved words as some of the findings could be part of the base contract.
- iv. The Committee has focused on the key principles of consistency, openness and transparency. It was also determined that a scalable and predictable process is consistent with industry best practice standards for services procurement. The Committee referred in particular to standards within the broadcasting, telecommunications and Internet services industries to examine how regulatory agencies in those environments conducted, for

---

<sup>73</sup> <http://www.icann.org/general/bylaws.htm#AnnexA>

<sup>74</sup> <http://www.icann.org/registries/agreements.htm>

example, spectrum auctions, broadcasting licence distribution and media ownership frameworks.

- v. Since then ICANN has developed and published a new approach to its compliance activities. These are found on ICANN's website at <http://www.icann.org/compliance/> and will be part of the development of base contract materials.
- vi. The Committee found a number of expert reports<sup>75</sup> beneficial. In particular, the World Bank report on mobile licensing conditions provides some guidance on best practice principles for considering broader market investment conditions. "...A major challenge facing regulators in developed and developing countries alike is the need to strike the right balance between ensuring certainty for market players and preserving flexibility of the regulatory process to accommodate the rapidly changing market, technological and policy conditions. As much as possible, policy makers and regulators should strive to promote investors' confidence and give incentives for long-term investment. They can do this by favouring the principle of 'renewal expectancy', but also by promoting regulatory certainty and predictability through a fair, transparent and participatory renewal process. For example, by providing details for license renewal or reissue, clearly establishing what is the discretion offered to the licensing body, or ensuring sufficient lead-times and transitional arrangements in the event of non-renewal or changes in licensing conditions. Public consultation procedures and guaranteeing the right to appeal regulatory decisions maximizes the prospects for a successful renewal process. As technological changes and convergence and technologically neutral approaches gain importance, regulators and policy

---

<sup>75</sup> The full list of reports is found in the Reference section at the end of the document.

makers need to be ready to adapt and evolve licensing procedures and practices to the new environment.”

- vii. The Recommendations which the Committee has developed with respect to the introduction of new TLDs are consistent with the World Bank principles.

**18. Recommendation 18 Discussion -- If an applicant offers an IDN service, then ICANN’s IDN guidelines must be followed.**

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria. The introduction of internationalised domain names at the root presents ICANN with a series of implementation challenges. This recommendation would apply to any new gTLD (IDN or ASCII TLD) offering IDN services. The initial technical testing<sup>76</sup> has been completed and a series of live root tests will take place during the remainder of 2007.
- ii. The Committee recognises that there is ongoing work in other parts of the ICANN organisation that needs to be factored into the application process that will apply to IDN applications. The work includes the President’s Committee on IDNs and the GAC and ccNSO joint working group on IDNs.

**19. Recommendation 19 Discussion -- Registries must use only ICANN accredited registrars in registering domain names and may not discriminate among such accredited registrars.**

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. There is a long history associated with the separation of registry and registrar operations for top-level domains. The structural separation of VeriSign’s registry operations from Network Solutions registrar operations explains much of the ongoing policy to require the use of ICANN accredited registrars.

---

<sup>76</sup> <http://www.icann.org/announcements/announcement-4-07mar07.htm>

- iii. In order to facilitate the stable and secure operation of the DNS, the Committee agreed that it was prudent to continue the current requirement that registry operators be obliged to use ICANN accredited registrars.
- iv. ICANN's Registrar Accreditation Agreement has been in place since 2001<sup>77</sup>. Detailed information about the accreditation of registrars can be found on the ICANN website<sup>78</sup>. The accreditation process is under active discussion but the critical element of requiring the use of ICANN accredited registrars remains constant.
- v. In its CIS, the RyC noted that "...the RyC has no problem with this recommendation for larger gTLDs; the requirement to use accredited registrars has worked well for them. But it has not always worked as well for very small, specialized gTLDs. The possible impact on the latter is that they can be at the mercy of registrars for whom there is no good business reason to devote resources. In the New gTLD PDP, it was noted that this requirement would be less of a problem if the impacted registry would become a registrar for its own TLD, with appropriate controls in place. The RyC agrees with this line of reasoning but current registry agreements forbid registries from doing this. Dialog with the Registrars Constituency on this topic was initiated and is ongoing, the goal being to mutually agree on terms that could be presented for consideration and might provide a workable solution."

---

<sup>78</sup> Found at <http://www.icann.org/registrars/accreditation.htm>.

## NEXT STEPS

1. Under the GNSO's Policy Development Process, the production of this *Final Report* completes Stage 9. The next steps are to conduct a twenty-day public comment period running from 10 August to 30 August 2007. The GNSO Council is due to meet on 6 September 2007 to vote on the package of principles, policy recommendations and implementation guidelines.
2. After the GNSO Council have voted the Council Report to the Board is prepared. The GNSO's PDP guidelines stipulate that "the Staff Manager will be present at the final meeting of the Council, and will have five (5) calendar days after the meeting to incorporate the views of the Council into a report to be submitted to the Board (the "Board Report"). The Board Report must contain at least the following:
  - a. A clear statement of any Supermajority Vote recommendation of the Council;
  - b. If a Supermajority Vote was not reached, a clear statement of all positions held by Council members. Each statement should clearly indicate (i) the reasons underlying each position and (ii) the constituency(ies) that held the position;
  - c. An analysis of how the issue would affect each constituency, including any financial impact on the constituency;
  - d. An analysis of the period of time that would likely be necessary to implement the policy;
  - e. The advice of any outside advisors relied upon, which should be accompanied by a detailed statement of the advisor's (i) qualifications and

- relevant experience; and (ii) potential conflicts of interest;
- f. The Final Report submitted to the Council; and
  - g. A copy of the minutes of the Council deliberation on the policy issue, including the all opinions expressed during such deliberation, accompanied by a description of who expressed such opinions.
3. It is expected that, according to the Bylaws, "...The Board will meet to discuss the GNSO Council recommendation as soon as feasible after receipt of the Board Report from the Staff Manager. In the event that the Council reached a Supermajority Vote, the Board shall adopt the policy according to the Council Supermajority Vote recommendation unless by a vote of more than sixty-six (66%) percent of the Board determines that such policy is not in the best interests of the ICANN community or ICANN. In the event that the Board determines not to act in accordance with the Council Supermajority Vote recommendation, the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council. The Council shall review the Board Statement for discussion with the Board within twenty (20) calendar days after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for its current recommendation. In the event that the Council is able to reach a Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than sixty-six (66%) percent of the Board determines that such policy is not in the interests of the ICANN

community or ICANN. In any case in which the Council is not able to reach Supermajority, a majority vote of the Board will be sufficient to act. When a final decision on a GNSO Council Recommendation or Supplemental Recommendation is timely, the Board shall take a preliminary vote and, where practicable, will publish a tentative decision that allows for a ten (10) day period of public comment prior to a final decision by the Board.”

4. The final stage in the PDP is the implementation of the policy which is also governed by the Bylaws as follows, “...Upon a final decision of the Board, the Board shall, as appropriate, give authorization or direction to the ICANN staff to take all necessary steps to implement the policy.”

## Annex A – NCUC Minority Statement: Recommendation 6

### STATEMENT OF DISSENT ON RECOMMENDATION #6 OF GNSO'S NEW GTLD REPORT FROM THE NON-COMMERCIAL USERS CONSTITUENCY (NCUC) 20 July 2007

---

NCUC supports most of the recommendations in the GNSO's Final Report, but Recommendation #6 is one we cannot support.<sup>79</sup>

We oppose Recommendation #6 for the following reasons:

- 1) It will completely undermine ICANN's efforts to make the gTLD application process predictable, and instead make the evaluation process arbitrary, subjective and political;
- 2) It will have the effect of suppressing free and diverse expression;
- 3) It exposes ICANN to litigation risks;
- 4) It takes ICANN too far away from its technical coordination mission and into areas of legislating morality and public order.

We also believe that the objective of Recommendation #6 is unclear, in that much of its desirable substance is already covered by Recommendation #3. At a minimum, we believe that the words "relating to morality and public order" must be struck from the recommendation.

#### 1) Predictability, Transparency and Objectivity

Recommendation #6 poses severe implementation problems. It makes it impossible to achieve the GNSO's goals of predictable and transparent evaluation criteria for new gTLDs.

Principle 1 of the New gTLD Report states that the evaluation process must be "predictable," and Recommendation #1 states that the evaluation criteria

---

<sup>79</sup> Text of Recommendation #6: "Strings must not be contrary to generally accepted legal norms relating to morality and public order that are enforceable under generally accepted and internationally recognized principles of law. Examples of such principles of law include, but are not limited to, the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR), the Convention on the Elimination of all forms of Discrimination Against Women (CEDAW) and the International Convention on the Elimination of All Forms of Racial Discrimination, intellectual property treaties administered by the World Intellectual Property Organisation (WIPO) and the WTO Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS)."

must be transparent, predictable, and fully available to applicants prior to their application.

NCUC strongly supports those guidelines. But no gTLD applicant can possibly know in advance what people or governments in a far away land will object to as “immoral” or contrary to “public order.” When applications are challenged on these grounds, applicants cannot possibly know what decision an expert panel – which will be assembled on an ad hoc basis with no precedent to draw on – will make about it.

Decisions by expert panels on “morality and public order” *must* be subjective and arbitrary, because there is no settled and well-established international law regarding the relationship between TLD strings and morality and public order. There is no single “community standard” of morality that ICANN can apply to all applicants in every corner of the globe. What is considered “immoral” in Teheran may be easily accepted in Los Angeles or Stockholm; what is considered a threat to “public order” in China and Russia may not be in Brazil and Qatar.

## **2) Suppression of expression of controversial views**

gTLD applicants will respond to the uncertainty inherent in a vague “morality and public order” standard and lack of clear standards by suppressing and avoiding any ideas that might generate controversy. Applicants will have to invest sizable sums of money to develop a gTLD application and see it through the ICANN process. Most of them will avoid risking a challenge under Recommendation #6. In other words, the presence of Recommendation #6 will result in self-censorship by most applicants.

That policy would strip citizens everywhere of their rights to express controversial ideas because someone else finds them offensive. This policy recommendation ignores international and national laws, in particular freedom of expression guarantees that permit the expression of “immoral” or otherwise controversial speech on the Internet.

## **3) Risk of litigation**

Some people in the ICANN community are under the mistaken impression that suppressing controversial gTLDs will protect it from litigation. Nothing could be further from the truth. By introducing subjective and culturally divisive standards into the evaluation process Recommendation #6 will increase the likelihood of litigation.

ICANN operates under authority from the US Commerce Department. It is undisputed that the US Commerce Department is prohibited from censoring the expression of US citizens in the manner proposed by Recommendation #6. The US Government cannot “contract away” the constitutional protections of its citizens to ICANN any more than it can engage in the censorship itself.

Adoption of Recommendation #6 invites litigation against ICANN to determine whether its censorship policy is compatible with the US First Amendment. An ICANN decision to suppress a gTLD string that would be permitted under US law could and probably would lead to legal challenges to the decision as a form of US Government action.

If ICANN left the adjudication of legal rights up to courts, it could avoid the legal risk and legal liability that this policy of censorship brings upon it.

#### **4) ICANN's mission and core values**

Recommendation #6 exceeds the scope of ICANN's technical mission. It asks ICANN to create rules and adjudicate disputes about what is permissible expression. It enables it to censor expression in domain names that would be lawful in some countries. It would require ICANN and "expert panels" to make decisions about permitting top-level domain names based on arbitrary "morality" judgments and other subjective criteria. Under Recommendation #6, ICANN will evaluate domain names based on ideas about "morality and public order" -- concepts for which there are varying interpretations, in both law and culture, in various parts of the world. Recommendation #6 risks turning ICANN into the arbiter of "morality" and "appropriate" public policy through global rules.

This new role for ICANN conflicts with its intended narrow technical mission, as embodied in its mission and core values. ICANN holds no legitimate authority to regulate in this entirely non-technical area and adjudicate the legal rights of others. This recommendation takes the adjudication of people's rights to use domain names out of the hands of democratically elected representatives and into the hands of "expert panels" or ICANN staff and board with no public accountability.

Besides exceeding the scope of ICANN's authority, Recommendation #6 seems unsure of its objective. It mandates "morality and public order" in domain names, but then lists, as examples of the type of rights to protect, the WTO TRIPS Agreement and all 24 World Intellectual Property (WIPO) Treaties, which deal with economic and trade rights, and have little to do with "morality and public order". Protection for intellectual property rights was fully covered in Recommendation #3, and no explanation has been provided as to why intellectual property rights would be listed again in a recommendation on "morality and public order", an entirely separate concept.

In conclusion Recommendation #6 exceeds ICANN's authority, ignores Internet users' free expression rights, and its adoption would impose an enormous burden on and liability for ICANN. It should not be adopted by the Board of Directors in the final policy decision for new gtlds.

## Annex B – Nominating Committee Appointee Avri Doria<sup>80</sup>: Individual Comments

Comments from Avri Doria

The “Personal level of support” indications fall into 3 categories:

- Support: these are principles, recommendations or guidelines that are compatible with my personal opinions
- Support with concerns: While these principles, recommendations and guidelines are not incompatible with my personal opinions, I have some concerns about them.
- Accept with concern: these recommendations and guidelines do not necessarily correspond to my personal opinions, but I am able to accept them in that they have the broad support of the committee. I do, however, have concerns with these recommendations and guideline.

I believe these comments are consistent with comments I have made throughout the process and do not constitute new input.

### Principles

#	Personal level of support	Explanation
A	Support	
B	Support with concerns	While I strongly support the introduction of IDN TLDS, I am concerned that the unresolved issues with IDN ccTLD equivalents may interfere with the introduction of IDN TLDs. I am also concerned that some of these issues could impede the introduction of some new ASCII TLDs dealing with geographically related identifiers.
C	Support	
D	Support with concerns	While I favor the establishment of a minimum set of necessary technical criteria, I am concerned that this set actually be the basic minimum set necessary to protect the stability, security and global interoperability.

<sup>80</sup> Ms Doria took over from former GNSO Council Chairman (and GNSO new TLDs Committee Chairman) Dr Bruce Tonkin on 7 June 2007. Ms Doria’s term runs until 31 January 2008.

#	Personal level of support	Explanation
E-G	Support	

## Recommendations

#	Level of support	Explanation
1	Support	
2	Accept with concern	<p>My concern involves using definitions that rely on legal terminology established for trademarks for what I believe should be a policy based on technical criteria.</p> <ul style="list-style-type: none"> <li>• In the first instance I believe that this is essentially a technical issue that should have been resolved with reference to typography, homologues, orthographic neighbourhood, transliteration and other technically defined attributes of a name that would make it unacceptable. There is a large body of scientific and technical knowledge and description in this field that we could have drawn on.</li> <li>• By using terms that rely on the legal language of trademark law, I believe we have created an implicit redundancy between recommendations 2 and 3. I.e., I believe both 2 and 3 can be used to protect trademarks and other intellectual property rights, and while 3 has specific limitations, 2 remains open to full and varied interpretation.</li> <li>• As we begin to consider IDNs, I am concerned that the interpretations of confusingly similar may be used to eliminate many potential TLDs based on translation. That is, when a translation may have the same or similar meaning to an existing TLD, that the new name may be eliminated because it is considered confusing to users who know both languages.</li> </ul>

#	Level of support	Explanation
3	Support with concerns	<p>My first concern relates to the protection of what can be called the linguistic commons. While it is true that much of trademark law and practice does protect general vocabulary and common usage from trademark protection, I am not sure that this is always the case in practice.</p> <p>I am also not convinced that trademark law and policy that applies to specific product type within a specific locale is entirely compatible with a general and global naming system.</p>
4	Support	
5	Support with concerns	<p>Until such time as the technical work on IDNAbis is completed, I am concerned about establishing reserved name rules connected to IDNs. My primary concern involves policy decisions made in ICANN for reserved names becoming hard coded in the IDNAbis technical solution and thus becoming technical constraints that are no longer open to future policy reconsideration.</p>
6	Accept with concern	<p>My primary concern focuses on the term 'morality'. While public order is frequently codified in national laws and occasionally in international law and conventions, the definition of what constitutes morality is not generally codified, and when it is, I believe it could be referenced as public order.</p> <p>This concern is related to the broad set of definitions used in the world to define morality. By including morality in the list of allowable exclusions we have made the possible exclusion list indefinitely large and have subjected the process to the consideration of all possible religious and ethical systems. ICANN or the panel of reviewers will also have to decide between different sets of moral principles, e.g, a morality that holds that people should be free to express themselves in all forms of media and those who believe that people should be free from exposure to any expression that is prohibited by their faith or moral principles. This recommendation will also subject the process to the fashion and occasional demagoguery of political correctness. I do not understand how ICANN or any expert panel will be</p>

#	Level of support	Explanation
		able to judge that something should be excluded based on reasons of morality without defining, at least de-facto, an ICANN definition of morality? And while I am not a strict constructionist and sometimes allow for the broader interpretation of ICANN's mission, I do not believe it includes the definition of a system of morality.
7	Support	
8	Accept with concern	<p>While I accept that a prospective registry must show adequate operational capability, creating a financial criteria is of concern. There may be many different ways of satisfying the requirement for operational capability and stability that may not be demonstrable in a financial statement or traditional business plan. E.g., in the case of an less developed community, the registry may rely on volunteer effort from knowledgeable technical experts.</p> <p>Another concern I have with financial requirements and high application fees is that they may act to discourage applications from developing nations or indigenous and minority peoples that have a different set of financial opportunities or capabilities than those recognized as acceptable within an expensive and highly developed region such as Los Angeles or Brussels.</p>
9,10, 12-14	Support	
15	Support with concerns	<p>In general I support the idea that a registry that is doing a good job should have the expectancy of renewal. I do, however, believe that a registry, especially a registry with general market dominance, or specific or local market dominance, should be subject to comment from the relevant user public and to evaluation of that public comment before renewal. When performance is satisfactory, there should an expectation of renewal. When performance is not satisfactory, there should be some procedure for correcting the situation before renewal.</p>
16-19	Support	

#	Level of support	Explanation
20	Support with concerns	In general I support the policy though I do have concerns about the implementation which I discuss below in relation to IG (P)

### Implementation Guidelines

#	Level of support	Explanation
A-E	Support	
F	Accept with concern	In designing a New gTLD process, one of the original design goals had been to design a predictable and timely process that did not include the involvement of the Board of Directors except for very rare and exceptional cases and perhaps in the due diligence check of a final approval. My concern is that the use of Board in step (iii) may make them a regular part of many of the application procedure and may overload both the Board and the process. If every dispute can fall through to Board consideration in the process sieve, then the incentive to resolve the dispute earlier will be lessened.
G-M	Support	
N	Support with concerns	I strongly support the idea of financial assistance programs and fee reduction for less developed communities. I am concerned that not providing pricing that enables applications from less developed countries and communities may serve to increase the divide between the haves and the have nots in the Internet and may lead to a foreign 'land grab' of choice TLD names, especially IDN TLD names in a new form of resource colonialism because only those with well developed funding capability will be able to participate in the process as currently planned.
O	Support	
P	Support with concerns	While I essentially agree with the policy recommendation and its implementation guideline, its social justice and fairness depends heavily on the implementation issues. While the implementation

#	Level of support	Explanation
		<p>details are not yet settled, I have serious concerns about the published draft plans of the ICANN staff in this regard. The current proposal involves using fees to prevent vexatious or unreasonable objections. In my personal opinion this would be a cause of social injustice in the application of the policy as it would prejudice the objection policy in favor of the rich. I also believe that an objection policy based on financial means would allow for well endowed entities to object to any term they found objectionable, hence enabling them to be as vexatious as they wish to be.</p> <p>In order for an objection system to work properly, it must be fair and it must allow for any applicant to understand the basis on which they might have to answer an objection. If the policy and implementation are clear about objections only being considered when they can be shown to cause irreparable harm to a community then it may be possible to build a just process. In addition to the necessity for there to be strict filters on which potential objections are actually processed for further review by an objections review process, it is essential that an external and impartial professional review panel have a clear basis for judging any objections.</p> <p>I do not believe that the ability to pay for a review will provide a reasonable criteria, nor do I believe that financial barriers are an adequate filter for stopping vexatious or unreasonable objections though they are a sufficient barrier for the poor.</p> <p>I believe that ICANN should investigate other methods for balancing the need to allow even the poorest to raise an issue of irreparable harm while filtering out unreasonable disputes. I believe, as recommend in the Reserved Names Working group report, that the ALAC and GAC may be an important part of the solution. IG (P) currently includes support for treating ALAC and GAC as established institutions in regard to raising objections to TLD concerns. I believe this is an important part of the policy recommendation and should be retained in the implementation. I believe that it should be possible for the ALAC or GAC, through some internal procedure that they define, to take up the cause of the individual</p>

#	Level of support	Explanation
		complainant and to request a review by the external expert review panel. Some have argued that this is unacceptable because it operationalizes these Advisory Committees. I believe we do have precedence for such an operational role for volunteers within ICANN and that it is in keeping with their respective roles and responsibilities as representatives of the user community and of the international community of nations. I strongly recommend that such a solution be included in the Implementation of the New gTLD process.
Q	Support	

## **Annex C – NCUC Minority Statement: Recommendation 20 and Implementation Guidelines F, H & P**

### **STATEMENT OF DISSENT ON RECOMMENDATION #20 & IMPLEMENTATION GUIDELINES F, H, & P IN THE GNSO NEW GTLD COMMITTEE'S FINAL REPORT FROM THE NON-COMMERCIAL USERS CONSTITUENCY (NCUC)**

#### **RE: DOMAIN NAME OBJECTION AND REJECTION PROCESS**

25 July 2007

---

#### **Text of Recommendation #20:**

"An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted."

#### **Text of Implementation Guideline F:**

If there is contention for strings, applicants may:

- i) resolve contention between them within a pre-established timeframe
- ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and;
- iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.

#### **Text of Implementation Guideline H:**

External dispute providers will give decisions on complaints.

#### **Text of Implementation Guideline P:**

The following process, definitions, and guidelines refer to Recommendation 20.

#### **Process**

Opposition must be objection based.

Determination will be made by a dispute resolution panel constituted for the purpose.

The objector must provide verifiable evidence that it is an established institution of the community (perhaps like the RSTEP pool of panelists from which a small panel would be constituted for each objection).

Guidelines

The task of the panel is the determination of substantial opposition.

a) substantial

In determining substantial the panel will assess the following: significant portion, community, explicitly targeting, implicitly targeting, established institution, formal existence, detriment.

b) significant portion:

In determining significant portion the panel will assess the balance between the level of objection submitted by one or more established institutions and the level of support provided in the application from one or more established institutions. The panel will assess significance proportionate to the explicit or implicit targeting.

c) community

Community should be interpreted broadly and will include for example an economic sector, a cultural community, or a linguistic community. It may also be a closely related community which believes it is impacted.

d) explicitly targeting

Explicitly targeting means there is a description of the intended use of the TLD in the application.

e) implicitly targeting

Implicitly targeting means that the objector makes an assumption of targeting or that the objector believes there may be confusion by users over its intended use.

f) established institution

An institution that has been in formal existence for at least 5 years. In exceptional cases, standing may be granted to an institution that has been in existence for fewer than 5 years. Exceptional circumstance include but are not limited to reorganisation, merger, or an inherently younger community. The following ICANN organizations are defined as established institutions: GAC, ALAC, GNSO, ccNSO, ASO.

g) formal existence

Formal existence may be demonstrated by: appropriate public registration, public historical evidence, validation by a government, intergovernmental organization, international treaty organisation or similar.

h) detriment

<< A >> Evidence of detriment to the community or to users more widely must be provided.

<< B >> [A likelihood of detriment to the community or to users more widely must be provided.]

**Recommendation #20**

The Non-Commercial Users Constituency (NCUC) Dissenting Statement on Recommendation #20 of the New GTLD Committee's Final Report<sup>81</sup> should be read in combination with Implementation Guidelines F, H & P, which detail the implementation of Recommendation #20. This statement should also be read in conjunction with its statement<sup>82</sup> of 13 June 2007 on the committee's draft report.

NCUC cannot support the committee's proposal for ICANN to establish a broad objection and rejection process for domain names that empowers ICANN and its "experts" to adjudicate the legal rights of domain name applicants (and objectors). The proposal would also empower ICANN and its "experts" to invent entirely new rights to domain names that do not exist in law and that will compete with existing legal rights to domains.

However "good-intentioned", the proposal would inevitably set up a system that decides legal rights based on subjective beliefs of "expert panels" and the amount of insider lobbying. The proposal would give "established institutions" veto power over applications for domain names to the detriment of innovators and start-ups. The proposal is further flawed because it makes no allowances for generic words to which no community claims exclusive "ownership" of. Instead, it wants to assign rights to use language based on subjective standards and will over-regulate to the detriment of competition, innovation, and free expression.

There is no limitation on the type of objections that can be raised to kill a domain name, no requirement that actual harm be shown to deny an application, and no recourse for the wrongful denial of legal rights by ICANN and its experts under this proposal. An applicant must be able to appeal decisions of ICANN and its experts to courts, who have more competence and authority to decide the applicant's legal rights. Legal due process requires maintaining a right to appeal these decisions to real courts.

The proposal is hopelessly flawed and will result in the improper rejection of many legitimate domain names. The reasons permitted to object to a domain are infinite in number. Anyone may make an objection; and an application will automatically be rejected upon a very low threshold of "detriment" or an even lower standard of "a likelihood of detriment" to anyone. Not a difficult bar to meet.

If ICANN attempted to put this policy proposal into practice it would intertwine itself in general policy debates, cultural clashes, business feuds, religious wars, and national politics, among a few of the disputes ICANN would have to rule on through this domain name policy.

---

<sup>81</sup> Available at: <http://forum.icann.org/lists/gtld-council/pdfOQqgaRNrXf.pdf>

<sup>82</sup> Available at: <http://ipjustice.org/wp/2007/06/13/ncuc-newgtld-stmt-june2007/>

The proposal operates under false assumptions of “communities” that can be defined, and that parties can be rightfully appointed representatives of “the community” by ICANN. The proposal gives preference to “established institutions” for domain names, and leaves applicants’ without the backing of “established institutions” with little right to a top-level domain. The proposal operates to the detriment of small-scale start-ups and innovators who are clever enough to come up with an idea for a domain first, but lack the insider-connections and financial resources necessary to convince an ICANN panel of their worthiness.

It will be excessively expensive to apply for either a controversial or a popular domain name, so only well-financed “established institutions” will have both the standing and financial wherewithal to be awarded a top-level domain. The proposal privileges who is awarded a top-level domain, and thus discourages diversity of thought and the free flow of information by making it more difficult to obtain information on controversial ideas or from innovative new-comers.

### **Implementation Guideline F**

NCUC does not agree with the part of Implementation Guideline F that empowers ICANN identified “communities” to support or oppose applications. Why should all “communities” agree before a domain name can be issued? How to decide who speaks for a “community”?

NCUC also notes that ICANN’s Board of Directors would make the final decisions on applications and thus the legal rights of applicants under proposed IG-F. ICANN Board Members are not democratically elected, accountable to the public in any meaningful way, or trained in the adjudication of legal rights. Final decisions regarding legal rights should come from legitimate law-making processes, such as courts.

“Expert panels” or corporate officers are not obligated to respect an applicant’s free expression rights and there is no recourse for a decision by the panel or ICANN for rights wrongfully denied. None of the “expert” panelists are democratically elected, nor accountable to the public for their decisions. Yet they will take decisions on the boundaries between free expression and trademark rights in domain names; and “experts” will decide what ideas are too controversial to be permitted in a domain name under this process.

### **Implementation Guideline H**

Implementation Guideline H recommends a system to adjudicate legal rights that exists entirely outside of legitimate democratic law-making processes. The process sets up a system of unaccountable “private law” where “experts” are free to pick and choose favored laws, such as trademark rights, and ignore disfavored laws, such as free expression guarantees.

IG-H operates under the false premise that external dispute providers are authorized to adjudicate the legal rights of domain name applicants and objectors. It further presumes that such expert panels will be qualified to adjudicate the legal rights of applicants and others. But undertaking the creation of an entirely new international dispute resolution process for the adjudication of legal rights and the creation of new rights is not something that can be delegated to a team of experts. Existing international law that takes into account conflict of laws, choice of laws, jurisdiction, standing, and due process must be part of any legitimate process; and the applicant's legal rights including freedom of expression rights must be respected in the process.

### **Implementation Guideline P**

"The devil is in the details" of Implementation Guideline P as it describes in greater detail the proposed adversarial dispute process to adjudicate legal rights to top-level domain names in Recommendation #20. IG-P mandates the rejection of an application if there is "substantial opposition" to it according to ICANN's expert panel. But "substantial" is defined in such a way so as to actually mean "insubstantial" and as a result many legitimate domain names would be rejected by such an extremely low standard for killing an application.

Under IG-P, opposition against and support for an application must be made by an "established institution" for it to count as "significant", again favoring major industry players and mainstream cultural institutions over cultural diversity, innovative individuals, small niche, and medium-sized Internet businesses.

IG-P states that "community" should be interpreted broadly, which will allow for the maximum number of objections to a domain name to count against an application. It includes examples of "the economic sector, cultural community or linguistic community" as those who have a right to complain about an application. It also includes any "related community which believes it is impacted." So anyone who claims to represent a community and believes to be impacted by a domain name can file a complaint and have standing to object to another's application.

There is no requirement that the objection be based on legal rights or the operational capacity of the applicant. There is no requirement that the objection be reasonable or the belief about impact to be reasonable. There is no requirement that the harm be actual or verifiable. The standard for "community" is entirely subjective and based on the personal beliefs of the objector.

The definition of "implicitly targeting" further confirms this subjective standard by inviting objections where "the objector makes the assumption of targeting" and also where "the objector believes there may be confusion by users". Such a subjective process will inevitably result in the rejection of many

legitimate domain names.

Picking such a subjective standard conflicts with Principle A in the Final Report that states domain names must be introduced in a “predictable way”, and also with Recommendation 1 that states “All applicants for a new gTLD registry should be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process.” The subjectivity and unpredictability invited into the process by Recommendation #20 turn Principle A and Recommendation 1 from the same report upside down.

Besides the inherent subjectivity, the standard for killing applications is remarkably low. An application need not be intended to serve a particular community for “community-based” objections to kill the application under the proposal. Anyone who believed that he or she was part of the targeted community or who believes others face “detriment” have standing to object to a domain name, and the objection weighs in favor of “significant opposition”. This standard is even lower than the “reasonable person” standard, which would at least require that the belief be “reasonable” for it to count against an applicant. The proposed standard for rejecting domains is so low it even permits unreasonable beliefs about a domain name to weigh against an applicant.

If a domain name does cause confusion, existing trademark law and unfair competition law have dealt with it for years and already balanced intellectual property rights against free expression rights in domain names. There is neither reason nor authority for ICANN processes to overtake the adjudication of legal rights and invite unreasonable and illegitimate objections to domain names.

IG-P falsely assumes that the number of years in operation is indicative of one’s right to use language. It privileges entities over 5 years old with objection rights that will effectively veto innovative start-ups who cannot afford the dispute resolution process and will be forced to abandon their application to the incumbents.

IG-P sets the threshold for harm that must be shown to kill an application for a domain name remarkably low. Indeed harm need not be actual or verified for an application to be killed based on “substantial opposition” from a single objector.

Whether the committee selects the unbounded definition for “detriment” that includes a “likelihood of detriment” or the narrower definition of “evidence of detriment” as the standard for killing an application for a domain name is largely irrelevant. The difference is akin to re-arranging the deck chairs on the Titanic. ICANN will become bogged down with the approval of domain names either way, although it is worth noting that “likelihood of detriment” is a

very long way from “substantial harm” and an easy standard to meet, so will result in many more domain names being rejected.

The definitions and guidelines detailed in IG-P invite a lobby-fest between competing businesses, instill the “heckler’s veto” into domain name policy, privilege incumbents, price out of the market non-commercial applicants, and give third-parties who have no legal rights to domain names the power to block applications for those domains. A better standard for killing an application for non-technical reasons would be for a domain name to be shown to be illegal in the applicant’s jurisdiction before it can be rejected.

In conclusion, the committee’s recommendation for domain name objection and rejection processes are far too broad and unwieldy to be put into practice. They would stifle freedom of expression, innovation, cultural diversity, and market competition. Rather than follow existing law, the proposal would set up an illegitimate process that usurps jurisdiction to adjudicate peoples’ legal rights (and create new rights) in a process designed to favor incumbents. The adoption of this “free-for-all” objection and rejection process will further call into question ICANN’s legitimacy to govern and its ability to serve the global public interest that respects the rights of all citizens.

NCUC respectfully submits that ICANN will best serve the global public interest by resisting the temptation to stray from its technical mandate and meddle in international lawmaking as proposed by Rec. #20 and IG-F, IG-H, and IG-P of the New GTLD Committee Final Report.

## REFERENCE MATERIAL -- GLOSSARY<sup>83</sup>

TERM	ACRONYM & EXPLANATION
A-label	The A-label is what is transmitted in the DNS protocol and this is the ASCII-compatible (ACE) form of an IDNA string; for example "xn--11b5bs1di".
ASCII Compatible Encoding	ACE ACE is a system for encoding Unicode so each character can be transmitted using only the letters a-z, 0-9 and hyphens. Refer also to <a href="http://www.ietf.org/rfc/rfc3467.txt?number=3467">http://www.ietf.org/rfc/rfc3467.txt?number=3467</a>
American Standard Code for Information Exchange	ASCII ASCII is a common numerical code for computers and other devices that work with text. Computers can only understand numbers, so an ASCII code is the numerical representation of a character such as 'a' or '@'. See above referenced RFC for more information.
Advanced Research Projects Agency	ARPA <a href="http://www.darpa.mil/body/arpa_darpa.html">http://www.darpa.mil/body/arpa_darpa.html</a>
Commercial & Business Users Constituency	CBUC <a href="http://www.bizconst.org/">http://www.bizconst.org/</a>
Consensus Policy	A defined term in all ICANN registry contracts usually found in Article 3 (Covenants). See, for example, <a href="http://www.icann.org/tlds/agreements/biz/registry-agmt-08dec06.htm">http://www.icann.org/tlds/agreements/biz/registry-agmt-08dec06.htm</a>
Country Code Names Supporting Organization	ccNSO <a href="http://ccnso.icann.org/">http://ccnso.icann.org/</a>
Country Code Top Level Domain	ccTLD Two letter domains, such as .uk (United Kingdom), .de (Germany) and .jp (Japan) (for example), are called country code top level domains (ccTLDs) and correspond to a country, territory, or other geographic location. The rules and policies for registering domain names in the ccTLDs vary significantly and ccTLD registries limit use of the ccTLD to citizens of the corresponding country.  Some ICANN-accredited registrars provide registration services in the ccTLDs in addition to registering names in .biz, .com, .info, .name, .net and .org, however, ICANN does not specifically accredit registrars to provide ccTLD registration services.

<sup>83</sup> This glossary has been developed over the course of the policy development process. Refer here to ICANN's glossary of terms <http://www.icann.org/general/glossary.htm> for further information.

	For more information regarding registering names in ccTLDs, including a complete database of designated ccTLDs and managers, please refer to <a href="http://www.iana.org/cctld/cctld.htm">http://www.iana.org/cctld/cctld.htm</a> .
Domain Names	<p>The term <b>domain name</b> has multiple related meanings: A name that identifies a computer or computers on the internet. These names appear as a component of a Web site's URL, e.g. <a href="http://www.wikipedia.org">www.wikipedia.org</a>. This type of domain name is also called a hostname.</p> <p>The product that Domain name registrars provide to their customers. These names are often called <b>registered domain names</b>.</p> <p>Names used for other purposes in the Domain Name System (DNS), for example the special name which follows the @ sign in an email address, or the Top-level domains like .com, or the names used by the Session Initiation Protocol (VoIP), or DomainKeys.</p> <p><a href="http://en.wikipedia.org/wiki/Domain_names">http://en.wikipedia.org/wiki/Domain_names</a></p>
Domain Name System	The Domain Name System (DNS) helps users to find their way around the Internet. Every computer on the Internet has a unique address - just like a telephone number - which is a rather complicated string of numbers. It is called its "IP address" (IP stands for "Internet Protocol"). IP Addresses are hard to remember. The DNS makes using the Internet easier by allowing a familiar string of letters (the "domain name") to be used instead of the arcane IP address. So instead of typing 207.151.159.3, you can type <a href="http://www.internic.net">www.internic.net</a> . It is a "mnemonic" device that makes addresses easier to remember.
Generic Top Level Domain	<p>gTLD</p> <p>Most TLDs with three or more characters are referred to as "generic" TLDs, or "gTLDs". They can be subdivided into two types, "sponsored" TLDs (sTLDs) and "unsponsored TLDs" (uTLDs), as described in more detail below.</p> <p>In the 1980s, seven gTLDs (.com, .edu, .gov, .int, .mil, .net, and .org) were created. Domain names may be registered in three of these (.com, .net, and .org) without restriction; the other four have limited purposes.</p> <p>In 2001 &amp; 2002 four new unsponsored TLDs (.biz, .info, .name, and .pro) were introduced. The other three new TLDs (.aero, .coop, and .museum) were sponsored.</p> <p>Generally speaking, an unsponsored TLD operates under policies established by the global Internet community directly through the ICANN process, while a sponsored TLD is a specialized TLD that has a sponsor representing the narrower community that is most affected by the TLD. The sponsor thus carries out delegated policy-formulation responsibilities over many matters concerning the TLD.</p>
Governmental Advisory Committee	<p>GAC</p> <p><a href="http://gac.icann.org/web/index.shtml">http://gac.icann.org/web/index.shtml</a>  <a href="http://gac.icann.org/web/index.shtml">http://gac.icann.org/web/index.shtml</a></p>

Intellectual Property Constituency	IPC <a href="http://www.ipconstituency.org/">http://www.ipconstituency.org/</a>
Internet Service & Connection Providers Constituency	ISPCP
Internationalized Domain Names	IDNs IDNs are domain names represented by local language characters. These domain names may contain characters with diacritical marks (required by many European languages) or characters from non-Latin scripts like Arabic or Chinese.
Internationalized Domain Names in Application	IDNA IDNA is a protocol that makes it possible for applications to handle domain names with non-ASCII characters. IDNA converts domain names with non-ASCII characters to ASCII labels that the DNS can accurately understand. These standards are developed within the IETF ( <a href="http://www.ietf.org">http://www.ietf.org</a> )
Internationalized Domain Names – Labels	IDN A Label The A-label is what is transmitted in the DNS protocol and this is the ASCII-compatible ACE) form of an IDN A string. For example “xn-1lq90i”. IDN U Label The U-label is what should be displayed to the user and is the representation of the IDN in Unicode. For example “北京” (“Beijing” in Chinese). LDH Label The LDH-label strictly refers to an all-ASCII label that obeys the "hostname" (LDH) conventions and that is not an IDN; for example “icann” in the domain name “icann.org”
Internationalized Domain Names Working Group	IDN-WG <a href="http://forum.icann.org/lists/gnso-idn-wg/">http://forum.icann.org/lists/gnso-idn-wg/</a>
Letter Digit Hyphen	LDH The hostname convention used by domain names before internationalization. This meant that domain names could only practically contain the letters a-z, digits 0-9 and the hyphen “-”. The term “LDH code points” refers to this subset. With the introduction of IDNs this rule is no longer relevant for all domain names. The LDH-label strictly refers to an all-ASCII label that obeys the "hostname" (LDH) conventions and that is not an IDN; for example “icann” in the domain name “icann.org”.
Nominating Committee	NomCom <a href="http://nomcom.icann.org/">http://nomcom.icann.org/</a>
Non-Commercial Users Constituency	NCUC <a href="http://www.ncdnhc.org/">http://www.ncdnhc.org/</a>

Policy Development Process	PDP See <a href="http://www.icann.org/general/archive-bylaws/bylaws-28feb06.htm#AnnexA">http://www.icann.org/general/archive-bylaws/bylaws-28feb06.htm#AnnexA</a>
Protecting the Rights of Others Working Group	PRO-WG See the mailing list archive at <a href="http://forum.icann.org/lists/gnso-pro-wg/">http://forum.icann.org/lists/gnso-pro-wg/</a>
Punycode	Punycode is the ASCII-compatible encoding algorithm described in Internet standard [RFC3492]. This is the method that will encode IDNs into sequences of ASCII characters in order for the Domain Name System (DNS) to understand and manage the names. The intention is that domain name registrants and users will never see this encoded form of a domain name. The sole purpose is for the DNS to be able to resolve for example a web-address containing local characters.
Registrar	Domain names ending with .aero, .biz, .com, .coop, .info, .museum, .name, .net, .org, and .pro can be registered through many different companies (known as "registrars") that compete with one another. A listing of these companies appears in the Accredited Registrar Directory.  The registrar asks registrants to provide various contact and technical information that makes up the domain name registration. The registrar keeps records of the contact information and submits the technical information to a central directory known as the "registry."
Registrar Constituency	RC <a href="http://www.icann-registrars.org/">http://www.icann-registrars.org/</a>
Registry	A registry is the authoritative, master database of all domain names registered in each Top Level Domain. The registry operator keeps the master database and also generates the "zone file" which allows computers to route Internet traffic to and from top-level domains anywhere in the world. Internet users don't interact directly with the registry operator. Users can register names in TLDs including .biz, .com, .info, .net, .name, .org by using an ICANN-Accredited Registrar.
Registry Constituency	RyC <a href="http://www.gtldregistries.org/">http://www.gtldregistries.org/</a>
Request for Comment	RFC A full list of all Requests for Comment <a href="http://www.rfc-editor.org/rfcxx00.html">http://www.rfc-editor.org/rfcxx00.html</a> Specific references used in this report are shown in the next column.  This document uses language, for example, "should", "must" and "may", consistent with RFC2119.  <a href="ftp://ftp.rfc-editor.org/in-notes/rfc1591.txt">ftp://ftp.rfc-editor.org/in-notes/rfc1591.txt</a> <a href="ftp://ftp.rfc-editor.org/in-notes/rfc2119.txt">ftp://ftp.rfc-editor.org/in-notes/rfc2119.txt</a> <a href="ftp://ftp.rfc-editor.org/in-notes/rfc2606.txt">ftp://ftp.rfc-editor.org/in-notes/rfc2606.txt</a>

Reserved Names Working Group	<p>RN-WG</p> <p>See the mailing list archive at <a href="http://forum.icann.org/lists/gnso-rn-wg/">http://forum.icann.org/lists/gnso-rn-wg/</a></p>
Root server	<p>A <b>root nameserver</b> is a DNS server that answers requests for the root namespace domain, and redirects requests for a particular top-level domain to that TLD's nameservers. Although any local implementation of DNS can implement its own private root nameservers, the term "root nameserver" is generally used to describe the thirteen well-known root nameservers that implement the root namespace domain for the Internet's official global implementation of the Domain Name System.</p> <p>All domain names on the Internet can be regarded as ending in a full stop character e.g. "en.wikipedia.org.". This final dot is generally implied rather than explicit, as modern DNS software does not actually require that the final dot be included when attempting to translate a domain name to an IP address. The empty string after the final dot is called the root domain, and all other domains (i.e. .com, .org, .net, etc.) are contained within the root domain. <a href="http://en.wikipedia.org/wiki/Root_server">http://en.wikipedia.org/wiki/Root_server</a></p>
Sponsored Top Level Domain	<p>sTLD</p> <p>A Sponsor is an organization to which some policy making is delegated from ICANN. The sponsored TLD has a Charter, which defines the purpose for which the sponsored TLD has been created and will be operated. The Sponsor is responsible for developing policies on the delegated topics so that the TLD is operated for the benefit of a defined group of stakeholders, known as the Sponsored TLD Community, that are most directly interested in the operation of the TLD. The Sponsor also is responsible for selecting the registry operator and to varying degrees for establishing the roles played by registrars and their relationship with the registry operator. The Sponsor must exercise its delegated authority according to fairness standards and in a manner that is representative of the Sponsored TLD Community.</p>
U-label	<p>The U-label is what should be displayed to the user and is the representation of the Internationalized Domain Name (IDN) in Unicode.</p>
Unicode Consortium	<p>A not-for-profit organization found to develop, extend and promote use of the Unicode standard. See <a href="http://www.unicode.org">http://www.unicode.org</a></p>
Unicode	<p>Unicode is a commonly used single encoding scheme that provides a unique number for each character across a wide variety of languages and scripts. The Unicode standard contains tables that list the code points for each local character identified. These tables continue to expand as more characters are digitalized.</p>

RESPONDENT'S EXHIBIT

## The Internet Corporation for Assigned Names and Numbers

To All Prospective Applicants for New gTLDs –

Since ICANN's founding ten years ago as a not-for-profit, multi-stakeholder organization dedicated to coordinating the Internet's addressing system, one of its foundational principles has been to promote competition in the domain-name marketplace while ensuring Internet security and stability.

We are now engaging the Internet community in agreeing a way forward to introduce new gTLDs in the domain name space. Such expansion is driven by the demand for more innovation, choice and change to the Internet's addressing system, now constrained by only 21 generic top-level domain names. In a world with 1.5 billion Internet users—and growing—diversity, choice and competition are key to the continued success and reach of the global network.

The launch of these coming new gTLD application rounds followed a detailed and lengthy consultation process with all constituencies of the global Internet community. Representatives from a wide variety of stakeholders—governments, individuals, civil society, business and intellectual property constituencies, and the technology community—were engaged in discussions for more than 18 months. In October 2007, the Generic Names Supporting Organization (GNSO)—one of the groups that coordinate global Internet policy at ICANN—completed its policy development work on new gTLDs and approved a set of recommendations. Major contributors to this policy work were ICANN's Governmental Advisory Committee (GAC), At-Large Advisory Committee (ALAC), Country Code Names Supporting Organization (ccNSO) and Security and Stability Advisory Committee (SSAC). All this policy development work culminated with ICANN's Board of Directors deciding to adopt the community-developed policy at the ICANN Paris meeting in June 2008. You can see a thorough brief to the policy process and outcomes at <http://gns0.icann.org/issues/new-gtlds/>.

Please note that the Applicant Guidebook that follows this letter is a draft. Applicants should not rely on any of the proposed details of the new gTLD program, as the program remains subject to further consultation and revision. Also, some of the modules in this guidebook highlight areas of the process that remain under development. These areas will be made available for public consultation in the near future.

In addition to the Draft Applicant Guidebook, ICANN is posting a series of papers that serve as explanatory memoranda to assist the Internet community to better understand the implementation work.

ICANN expects to engage in a productive and robust dialogue with the Internet community through a consultative process. Comments will be used to revise and prepare the final Applicant Guidebook, to be released early in 2009.

The New gTLD Program enables the Internet community to open up the name space to new and innovative uses for top-level domains, and can meet some of the needs unmet by the current market. It has the potential to be one of the biggest influences on the future of the Internet.

Sincerely,

Paul Twomey  
President and CEO

# New gTLD Program: Draft Applicant Guidebook (Draft RFP)

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

# *New gTLD Program: Applicant Guidebook*

---

## *How to Use*

The Draft Applicant Guidebook (Request for Proposals) consists of a series of modules, each focused on specific topics within the application and evaluation process:

### **Module 1: Introduction to the Application Process**

*Provides an overview of the application process, documentation requirements, and fees*

### **Module 2: Evaluation Procedures**

*Describes the various reviews that occur during the evaluation process and criteria for approval of applications*

### **Module 3: Dispute Resolution Procedures**

*Contains the grounds for formal objection by third parties concerning gTLD applications submitted, and the dispute resolution procedure triggered by an objection*

### **Module 4: String Contention Procedures**

*Describes mechanisms for resolving contention when there is more than one qualified applicant for identical or similar gTLD strings*

### **Module 5: Transition to Delegation**

*Describes the final steps required of an applicant, including execution of a registry agreement and completion of pre-delegation tests*

### **Module 6: Terms and Conditions**

*Contains the terms and conditions applicable to all entities submitting an application*

### **Glossary**

*Contains definitions for terms used in the Applicant Guidebook*

ICANN is posting a series of explanatory memoranda to accompany this draft, to provide further details on the background work completed by ICANN. Links to these memoranda are noted within the relevant modules.

All materials contained in the Draft Applicant Guidebook are being presented for public comment. Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

# Draft Applicant Guidebook

## Module 1

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

---

# Module 1

---

## *Introduction to the gTLD Application Process*

This module gives applicants an overview of the process for applying for a new generic top-level domain, and includes instructions on how to complete and submit an application, the supporting documentation an applicant must submit with an application, the fees required and when and how to submit them.

This module also describes the conditions associated with particular types of applications, and the application life cycle.

For more about the origins, history and details of ICANN's policies on new gTLDs, please see <http://gns0.icann.org/issues/new-gtlds/>.

A glossary of relevant terms is included with the Draft Applicant Guidebook (Draft RFP).

Prospective applicants are encouraged to read and become familiar with the content of this entire module as well as the others, before starting the application process to make sure they understand what is required of them and what they can expect at each stage of the application evaluation process.

### *1.1 Application Life Cycle and Timelines*

---

This section provides a description of the stages that an application passes through once it is submitted. Some stages will occur for all applications submitted; others will only occur in specific circumstances. Applicants should be aware of the stages and steps involved in processing applications received.

#### *1.1.1 Application Submission Dates*

---

The application submission period opens at [time] UTC [date].

The application submission period closes at [time] UTC [date].

Applications may be submitted electronically through ICANN's online application system.

To receive consideration, all applications must be submitted electronically through the online application system by the close of the application submission period.

An application will not be considered, in the absence of exceptional circumstances, if:

- It is received after the due date.
- The application form is incomplete (either the questions have not been fully answered or required supporting documents are missing). Applicants will not ordinarily be permitted to supplement their applications after submission.
- The evaluation fee has not been paid by the deadline. Refer to Section 1.5 for fee information.

### 1.1.2 Application Processing Stages

This subsection provides an overview of the stages involved in processing an application submitted to ICANN. In Figure 1-1, the shortest and most straightforward path is marked with bold lines, while stages that may or may not apply in any given case are also shown. A brief description of each stage follows.

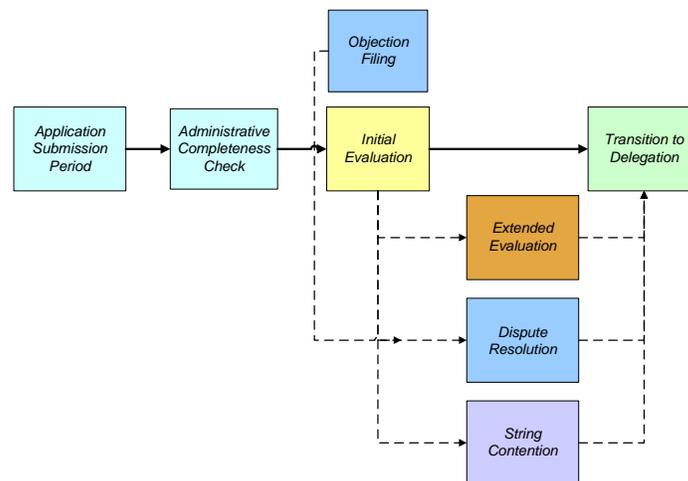

Figure 1-1 – Once submitted to ICANN, applications will pass through multiple stages of processing.

#### 1.1.2.1 Application Submission Period

At the time the application submission period opens, applicants wishing to apply for a new gTLD can become registered users of the online application system.

Through the application system, applicants will answer a series of questions to provide general information, demonstrate financial capability, and demonstrate technical and operational capability. The supporting documents listed in subsection 1.2.3 of this module must also be submitted through the application system.

Applicants must also submit their evaluation fees during this period. Refer to Section 1.5 of this module for additional information about fees and payments.

Following the close of the application period, applicants can continue to use the application system as a resource to track the progress of their applications, although they may receive communications from ICANN through other means.

#### ***1.1.2.2 Administrative Completeness Check***

Immediately following the close of the application period, ICANN will check all applications for completeness. This check ensures that:

- All questions are answered (except those questions identified as optional);
- Required supporting documents are provided in the proper format(s); and
- The evaluation fees have been received.

ICANN will post a list of applications considered complete and ready for evaluation as soon as practical after the close of the application period. The status information for each application will also be updated in the online application system.

#### ***1.1.2.3 Initial Evaluation***

Initial Evaluation will begin immediately after the administrative completeness check concludes. All complete applications will be reviewed during Initial Evaluation.

There are two main elements of the Initial Evaluation:

- String reviews (concerning the applied-for gTLD string); and
- Applicant reviews (concerning the entity applying for the gTLD and its proposed registry services).

Applicant reviews include a determination of whether the applicant has the requisite technical and financial capability to operate a registry.

- Panels of independent evaluators will perform these reviews based on the information provided by each applicant in its responses to the application form.
- There may be one round of questions and answers between the applicant and evaluators to clarify information contained in the application. Refer to Module 2 for further details on the evaluation process.

Evaluators will report whether the applicant passes or fails each of the parts of the Initial Evaluation. These reports will be available in the online application system.

At the conclusion of the Initial Evaluation period, ICANN will post a notice of all applications that have passed the Initial Evaluation. Depending on the volume of applications received, ICANN may post such notices in batches over the course of the Initial Evaluation period.

#### ***1.1.2.4 Objection Filing***

Formal objections to applications can be filed on any of four enumerated grounds by parties with standing to object. The objection filing period will open after ICANN posts the list of complete applications as described in paragraph 1.1.2.2. Objectors will file directly with dispute resolution service providers (DRSPs). Refer to Module 3, Dispute Resolution Procedures, for further details.

The objection filing phase will close following the end of the Initial Evaluation period (refer to paragraph 1.1.2.3). Objections that have been filed during the objection filing phase will be addressed in the dispute resolution phase, which is outlined in paragraph 1.1.2.6 and discussed in detail in Module 3.

All applicants should be aware that third parties have the opportunity to file objections to any application during this period. Applicants whose applications are the subject of a formal objection will have an opportunity to file a response according to the dispute resolution service provider's rules and procedures (refer to Module 3).

An applicant wishing to file a formal objection to another application that has been submitted would do so within

the objection filing period, following the objection filing procedures in Module 3.

#### **1.1.2.5 Extended Evaluation**

*Extended Evaluation applies only to applicants that do not pass Initial Evaluation.*

Applicants failing certain elements of the Initial Evaluation can request an Extended Evaluation. If the applicant does not expressly request an Extended Evaluation, the application will proceed no further. The Extended Evaluation period allows for one additional round of questions and answers between the applicant and evaluators to clarify information contained in the application. The reviews performed in Extended Evaluation do not introduce additional evaluation criteria.

An Extended Evaluation may also be required if the applied-for gTLD string or one or more proposed registry services raise technical issues that might adversely affect the security and stability of the DNS. The Extended Evaluation period provides a time frame for these issues to be investigated. Applicants will be informed if such reviews are required at the end of the Initial Evaluation period. Evaluators and any applicable experts consulted will communicate their conclusions at the end of the Extended Evaluation period. These reports will be available in the online application system.

At the conclusion of the Extended Evaluation period, ICANN will post all evaluator reports from the Initial and Extended Evaluation periods.

If an application passes the Extended Evaluation, it can then proceed to the next stage. If the application does not pass the Extended Evaluation, it will proceed no further.

#### **1.1.2.6 Dispute Resolution**

*Dispute resolution applies only to applicants that are the subject of a formal objection.*

Where formal objections are filed and filing fees paid during the objection filing phase, dispute resolution service providers will initiate and conclude proceedings based on the objections received. The formal objection procedure exists to provide a path for those who wish to object to an application that has been received by ICANN. Dispute resolution service providers provide the fora to adjudicate the proceedings based on the subject matter and the needed expertise.

As a result of the proceeding, either the applicant will prevail (in which case the application can proceed to the next stage), or the objector will prevail (in which case either the application will proceed no further or the application will be bound to a contention resolution procedure). Refer to Module 3, Objection and Dispute Resolution, for detailed information. Applicants will be notified by the Dispute Resolution Service Provider of the results of dispute proceedings. The online application system will also be updated with these results.

#### 1.1.2.7 *String Contention*

*String contention applies only when there is more than one qualified applicant for the same or similar gTLD strings.*

String contention refers to the scenario in which there is more than one qualified applicant for the same gTLD or for gTLDs that are so similar that they create a probability of detrimental user confusion if more than one is delegated. ICANN will resolve cases of string contention either through comparative evaluation or through an alternative mechanism for efficient resolution of string contention.

In the event of contention between applied-for strings that represent geographical names, the parties may be asked to follow a different process to resolve the contention.

Groups of applied-for strings that are either identical or confusingly similar are called contention sets. All applicants should be aware that if an application is identified as being part of a contention set, string contention resolution procedures will not begin until all applications in the contention set have completed all aspects of evaluation, including dispute resolution, if applicable.

To illustrate, as shown in Figure 1-2, Applicants A, B, and C all apply for .EXAMPLE and are identified as a contention set. Applicants A and C pass Initial Evaluation, but Applicant B does not. Applicant B elects Extended Evaluation. A third party files an objection to Applicant C's application, and Applicant C enters the dispute resolution proceeding. Applicant A must wait to see whether Applicants B and C successfully complete the Extended Evaluation and dispute resolution phases, respectively, before it can proceed to the string contention resolution stage. In this example, Applicant B passes the Extended Evaluation, but Applicant C does not prevail in the dispute resolution proceeding. String contention resolution then proceeds between Applicants A and B.

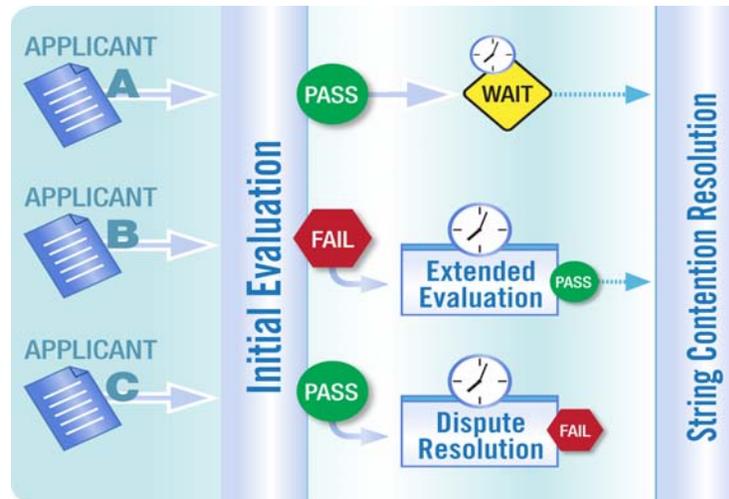

Figure 1-2 – All applications in a contention set must complete all previous evaluation and dispute resolution stages before string contention resolution can begin.

Applicants prevailing in a string contention resolution procedure will proceed toward delegation of applied-for gTLD strings. The online application system will be updated with the resolution of the string contention procedures.

#### 1.1.2.8 Transition to Delegation

Applicants that successfully complete all the relevant stages outlined in this subsection 1.1.2 are required to carry out a series of concluding steps before delegation of the applied-for gTLD string into the root zone. These steps include execution of a registry agreement with ICANN and completion of a pre-delegation technical test to validate information provided in the application.

Following execution of a registry agreement, the prospective registry operator must complete technical set-up and satisfactory performance on technical checks before delegation of the gTLD into the root zone. If the initial start-up requirements are not satisfied so that the gTLD can be delegated into the root zone within the time frame specified in the registry agreement, ICANN may in its sole and absolute discretion elect to terminate the registry agreement.

Once all of these steps have been successfully completed, the applicant is eligible for delegation of its applied-for gTLD string into the DNS root zone.

### *1.1.3 Accounting for Public Comment in the Evaluation of Applications once the New gTLD Process is Launched*

---

Public comment mechanisms are part of ICANN's policy development and implementation processes. As a private-public partnership, ICANN is dedicated to preserving the operational security and stability of the Internet, to promoting competition, to achieving broad representation of global Internet communities, and to developing policy appropriate to its mission through bottom-up, consensus-based processes. This necessarily involves the participation of many stakeholder groups in a public discussion.

In the new gTLD application process, public comments will be a mechanism for the public to bring relevant information and issues to the attention of those charged with handling new gTLD applications. ICANN will open a public comment forum at the time the applications are publicly posted on ICANN's website (refer to paragraph 1.1.2.2), which will remain open through the application round.

Public comments received will be provided to the evaluators during the Initial and Extended Evaluation periods. Evaluators will have discretion to take the information provided in these comments into consideration as deemed necessary. Consideration of the applicability of the information submitted through public comments will be included in the evaluators' reports.

Public comments may also be relevant to one or more objection grounds. (Refer to Module 3, Dispute Resolution Procedures, for the objection grounds.) ICANN will provide all public comments received to DRSPs, who will have discretion to consider them.

A distinction should be made between public comments, which may be relevant to ICANN's task of determining whether applications meet the established criteria, and formal objections that concern matters outside this evaluation. ICANN created the formal objection process to allow a full and fair consideration of objections based on subject areas outside ICANN's mission and expertise. A party contacting ICANN to pursue an objection will be referred to the formal objection channels designed specifically for resolving these matters in the new gTLD space. More information on the objection and dispute resolution processes is available in Module 3.

### 1.1.4 Sample Application Scenarios

The following scenarios briefly show a variety of ways in which an application may proceed through the evaluation process. The table that follows summarizes some processes and outcomes. This is not intended to be an exhaustive list of possibilities. There are other possible combinations of paths an application could follow.

Scenario Number	Initial Evaluation	Extended Evaluation	Objection(s) Raised	String Contention	Approved for Subsequent Steps
1	Pass	N/A	None	No	Yes
2	Fail	Pass	None	No	Yes
3	Pass	N/A	None	Yes	Yes
4	Pass	N/A	Applicant prevails	No	Yes
5	Pass	N/A	Objector prevails	N/A	No
6	Fail	Quit	n/a	N/A	No
7	Fail	Fail	n/a	N/A	No
8	Fail	Pass	Applicant prevails	Yes	Yes
9	Fail	Pass	Applicant prevails	Yes	No

**Scenario 1 – Pass Initial Evaluation, No Objection, No Contention** – In the most straightforward case, the application passes Initial Evaluation and there is no need for an Extended Evaluation. No objections are raised during the objection period, so there is no dispute to resolve. As there is no contention for the applied-for gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation.

**Scenario 2 – Extended Evaluation, No Objection, No Contention** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. As with Scenario 1, no objections are raised during the objection period, so there is no dispute to resolve. As there is no contention for the gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation.

**Scenario 3 – Pass Initial Evaluation, No Objection, Contention** – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. No objections are raised during the objection period, so there is no dispute to resolve and no appeal. However, there are

other applications for the same or a similar gTLD string, so there is contention. In this case, one application wins the contention resolution, and the other contenders are denied their applications, so the winning applicant can enter into a registry agreement and the application can proceed toward delegation.

**Scenario 4 – Pass Initial Evaluation, Win Objection, No Contention** – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection period, a valid objection is raised by an objector with standing on one of the objection grounds (refer to Module 3, Dispute Resolution Procedures). The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. The applicant can enter into a registry agreement and the application proceeds toward delegation.

**Scenario 5 – Pass Initial Evaluation, Lose Objection** – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection period, multiple valid objections are raised by one or more objectors with standing in one or more of the objection grounds. Each objection category for which there are objections is heard by a dispute resolution service provider panel. In this case, the panels find in favor of the applicant for most of the objections, but one finds in favor of the objector. As one of the objections has been upheld, the application does not proceed.

**Scenario 6 – Fail Initial Evaluation, Applicant Withdraws** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant decides to withdraw the application rather than continuing with Extended Evaluation. The application does not proceed.

**Scenario 7 – Fail Initial Evaluation, Fail Extended Evaluation**  
In this case, the application fails one or more steps in the Initial Evaluation. The applicant requests Extended Evaluation for the appropriate elements. However, the application fails Extended Evaluation also. The application does not proceed.

**Scenario 8 – Extended Evaluation, Win Objection, Pass Contention** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection period, one valid objection is raised by an objector with standing. The objection is heard by a dispute resolution service provider

panel that rules in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the applicant prevails over other applications in the contention resolution procedure, the applicant can enter into a registry agreement and the application can proceed toward the delegation phase.

***Scenario 9 – Extended Evaluation, Objection, Fail***

***Contention*** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection period, one valid objection is raised by an objector with standing. The objection is heard by a dispute resolution service provider that rules in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, another applicant prevails in the contention resolution procedure, and the application does not proceed.

***Transition to Delegation*** – After an application has completed Initial or Extended Evaluation, dispute resolution, if applicable, and string contention, if applicable, the applicant is required to complete a set of steps leading to delegation of the gTLD, including execution of a registry agreement with ICANN, and completion of pre-delegation testing. Refer to Module 5 for a description of the relevant steps in this phase.

### ***1.1.5 Subsequent Application Rounds***

---

ICANN's goal is to launch the next gTLD application rounds as quickly as possible. The exact timing will be based on experiences gained and changes required after this round is completed. The goal is for the next application round to begin within one year of the close of the application submission period for this round.

## ***1.2 Information for All Applicants***

---

### ***1.2.1 Eligibility***

---

Any established corporation, organization, or institution in good standing may apply for a new gTLD. Applications from individuals or sole proprietorships will not be considered.

## 1.2.2 *Two Application Types: Open or Community-Based*

---

All applicants are required to designate each application for a new gTLD as **open** or **community-based**.

### 1.2.2.1 *Definitions*

For purposes of this RFP, an **open gTLD** is one that can be used for any purpose consistent with the requirements of the application and evaluation criteria, and with the registry agreement. An open gTLD may or may not have a formal relationship with an exclusive registrant or user population. It may or may not employ eligibility or use restrictions.

For purposes of this RFP, a **community-based gTLD** is a gTLD that is operated for the benefit of a defined community consisting of a restricted population. An applicant designating its application as community-based will be asked to substantiate its status as representative of the community it names in the application, and additional information may be requested in the event of a comparative evaluation (refer to Section 4.2 of Module 4). An applicant for a community-based gTLD is expected to:

1. Demonstrate an ongoing relationship with a defined community that consists of a restricted population.
2. Have applied for a gTLD string strongly and specifically related to the community named in the application.
3. Have proposed dedicated registration and use policies for registrants in its proposed gTLD.
4. Have its application endorsed in writing by an established institution representing the community it has named.

### 1.2.2.2 *Implications of Application Designation*

Applicants should understand how their designation as open or community-based will affect application processing at particular stages, as described in the following paragraphs.

**Objection/Dispute Resolution** – All applicants should understand that an objection may be filed against any application on community opposition grounds, even if the applicant has not designated itself as community-based or declared the TLD to be aimed at a particular community. Refer to Module 3, Dispute Resolution Procedures.

**String Contention** – Any applicant that has been identified as part of a contention set (refer to Module 4.1) may be obliged to participate in either a comparative evaluation or another efficient mechanism for contention resolution if the application reaches the string contention stage and the applicant elects to proceed.

A **comparative evaluation** will take place if a community-based applicant in a contention set has elected comparative evaluation.

Another efficient mechanism for contention resolution will result in other cases. If a comparative evaluation occurs but does not produce a clear winner, the efficient mechanism will then result.

Refer to Module 4, String Contention Procedures, for detailed discussions of contention resolution procedures.

**Contract Execution and Post-Delegation** – A community-based gTLD applicant will be subject to certain post-delegation contractual obligations to operate the gTLD in a manner consistent with the restrictions associated with its community-based designation, once it begins operating the gTLD. ICANN must approve material changes to the community-based nature of the gTLD and any associated contract changes.

### 1.2.2.3 Changes to Application Designation

An applicant may not change its designation as open or community-based once it has submitted a gTLD application for processing.

### 1.2.3 Required Documents

---

Applicants should be prepared to submit the following documents, which are required to accompany each application:

1. **Proof of legal establishment** – Examples of acceptable documentation include articles or a certificate of incorporation, articles of association or equivalent documents relative to the type of entity and the jurisdiction in which it is formed, such as statutes or membership agreements of the entity.
2. **Proof of good standing** – Examples of acceptable documentation include a certificate of good standing or other equivalent official document issued by a competent government authority, if offered by a governmental authority for the jurisdiction.

Under some laws or jurisdictions, it may be possible to prove both establishment and good standing with a single document. That is, the same document may suffice for items 1 and 2.

If no such certificates or documents are available in the applicant's jurisdiction, an affidavit drafted and signed by a notary public or a legal practitioner duly qualified to represent clients before the courts of the country in which the applicant's organization is established, declaring that the organization is established and in good standing, must be submitted.

3. If the applicant is a government body or organization, it must provide a **certified copy of the act** wherein or governmental decision whereby the government body or organization was established.

ICANN is aware that practices and documentation standards vary from region to region, and has attempted to account for a variety of these practices when specifying the requirements. Applicants with exceptional circumstances should contact ICANN to determine how to provide appropriate documentation.

4. **Financial statements.** Applicants must provide audited financial statements for the most recently completed fiscal year for the applicant, and unaudited financial statements for the most recently ended interim financial period for the applicant.
5. Before delegation: **documentary evidence of ability to fund ongoing basic registry operations** for then-existing registrants for a period of three to five years in the event of registry failure, default or until a successor operator can be designated.

All documents must be valid at the time of submission.

Supporting documentation should be submitted in the original language. English translations are not required.

Some supporting documentation will be required only in certain cases:

1. **Community endorsement** – If an applicant has designated its application as community-based, it will be asked to submit a written endorsement of its application by an established institution representing the community it has named.
2. **Government support or non-objection** – If an applicant has applied for a string that is a geographical term, the

applicant is required to submit a statement of support or non-objection for its application from the relevant government(s) or public authorities. Refer to Section 2.1.1.4 for more information on the requirements for geographical names.

3. **Documentation of outside funding commitments** – If an applicant lists outside sources of funding in its application, it must provide evidence of commitment by the party committing the funds.

#### **1.2.4 Notice Concerning Technical Acceptance Issues with New gTLDs**

---

All applicants should be aware that acceptance of their applications by ICANN and entering into a registry agreement with ICANN does not guarantee that the new gTLD will immediately function throughout the Internet. Past experience indicates that ISPs and webhosters do not automatically allow passage of or access to new gTLD strings even when these strings are authorized by ICANN, since software modifications may be required that may not happen until there is a business case for doing so.

Similarly, web applications often validate namestrings on data entry and may filter out new or unknown strings. ICANN has no authority or ability to require acceptance of new gTLD namestrings although it does prominently publicize ICANN-authorized gTLD strings on its website. ICANN encourages applicants to familiarize themselves with these issues and account for them in startup and launch plans. Successful applicants may find themselves expending considerable efforts post-implementation in working with providers to achieve acceptance of their new gTLD namestring.

Applicants should review (Informational) RFC 3696 (see <http://www.ietf.org/rfc/rfc3696.txt?number=3696>) for background. IDN applicants should review the material concerning experiences with IDN test strings in the root zone (see <http://idn.icann.org/>).

#### **1.2.5 Terms and Conditions**

---

All applicants must agree to a standard set of Terms and Conditions for the application process. The Terms and Conditions are available in Module 6 of this RFP.

### 1.3 Information for Internationalized Domain Name Applicants

---

Some applied-for gTLD strings are expected to be Internationalized Domain Names (IDNs) that require the insertion of IDN-encoded A-labels into the DNS root zone. IDNs are labels that contain one or more letters or characters other than LDH (letters a,...z; digits 0,...9; and the hyphen "-").

If an applicant applies for such a string, it must provide accompanying information indicating compliance with the IDNA protocol and other requirements. The IDNA protocol is currently under revision and its documentation can be found at

<http://www.icann.org/en/topics/idn/rfcs.htm>. Applicants must provide applied-for gTLD strings in the form of both a **U-label** and an **A-label**.

An A-label is the ASCII-Compatible Encoding form of an IDNA-valid string. Every A-label begins with the IDNA ACE prefix, "xn--", followed by a string that is a valid output of the Punycode algorithm, and hence is a maximum of 59 ASCII characters in length. The prefix and string together must conform to all requirements for a label that can be stored in the DNS including conformance to the LDH (host name) rule described in RFC 1034, RFC 1123 and elsewhere.

A U-label is an IDNA-valid string of Unicode characters, including at least one non-ASCII character, expressed in a standard Unicode Encoding Form, normally UTF-8 in an Internet transmission context.

For example, using the current IDN test string in Cyrillic script, the U-label is <испытание> and the A-label is <**xn--80akhbyknj4f**>. An A-label must be capable of being produced by conversion from a U-label and a U-label must be capable of being produced by conversion from an A-label.

Applicants for IDN gTLDs will also be required to provide the following at the time of the application:

1. Short form of string (English). The applicant will provide a short description of what the string would mean in English.
2. Language of label (ISO 639-1). The applicant will specify the language of the applied-for TLD string, both

- according to the ISO's codes for the representation of names of languages, and in English.
3. Script of label (ISO 15924). The applicant will specify the script of the applied-for gTLD string, both according to the ISO code for the presentation of names of scripts, and in English.
  4. Unicode code points. The applicant will list all the code points contained in the U-label according to its Unicode form.
  5. Representation of label in phonetic alphabet. The applicant will provide its applied-for gTLD string notated according to the International Phonetic Alphabet (<http://www.arts.gla.ac.uk/IPA/ipachart.html>).
  6. Its IDN table. This table provides the list of characters eligible for registration in domain names according to registry policy. It will contain any multiple characters that can be considered "the same" for the purposes of registrations at the second level. For examples, see <http://iana.org/domains/idn-tables/>.
  7. Applicants must further demonstrate that they have made reasonable efforts to ensure that the encoded IDN string does not cause any rendering or operational problems. For example, problems have been identified in strings with characters of mixed right-to-left and left-to-right directionality when numerals are adjacent to the path separator. If an applicant were applying for a string with known issues, it should document steps that will be taken to mitigate these issues in applications.

## *1.4 Submitting an Application*

---

Applicants may complete the application form and submit supporting documents using ICANN's TLD Application System (TAS). To access the tool, applicants must first register as a TAS user, which involves paying a user registration fee of USD100.

As TAS users, applicants will be able to provide responses in open text boxes and submit required supporting documents as attachments. Restrictions on the size of attachments as well as the file formats are included in the instructions on the TAS site.

ICANN will not accept application forms or supporting materials submitted through other means than TAS (that is, hard copy, fax, email), unless such submission is in accordance with specific instructions from ICANN to applicants.

### ***1.4.1 Accessing the TLD Application System***

---

The TAS site is located at [URL to be inserted in final version of RFP].

TAS features include:

#### ***1.4.1.1 Sub-user Management***

This feature allows applicants to create sub-users with varying permission levels to assist in completing the application. For example, if an applicant wishes to designate a user to complete the technical section of the application, the applicant can create a sub-user account with access only to that section.

#### ***1.4.1.2 Workflow Management***

This feature allows applicants to check the status of their applications through TAS.

#### ***1.4.1.3 Security***

ICANN uses all reasonable efforts to protect applicant information submitted through TAS. TAS uses advanced Internet security technology to protect applicant information against unauthorized access. This technology includes:

***Secure Socket Layer (SSL)*** – To ensure that confidential information remains confidential, it is sent to TAS in a secure session using SSL technology. SSL technology scrambles or encrypts information as it moves between the user's browser and TAS.

***Limited TAS Authorized Users and Permission Levels*** – TAS is a hierarchical system with defined user roles and permissions. ICANN-authorized personnel have access only to the portions of the system they need. For example, an accounting user may only need access to perform updates to the portion of a record indicating whether an applicant's evaluation fee has been received.

Although ICANN intends to follow the security precautions outlined here, it offers no assurances that these procedures will keep an applicant's data confidential and secure from access by unauthorized third parties.

### ***1.4.2 Technical Support***

---

TAS users can refer to the FAQ/knowledge base or contact [email address to be inserted in final version of RFP] for help using the system. Users can expect to receive a tracking

ticket number and a response within 24 to 48 hours through the TAS submission tool.

### ***1.4.3 Backup Application Process***

---

If the online application system is not available, ICANN will provide alternative instructions for submitting applications.

## ***1.5 Fees and Payments***

---

This section describes the fees to be paid by the applicant. Payment instructions are also included here.

### ***1.5.1 Breakdown of Fees and Amounts***

---

The following fees are required from all applicants:

- ***TAS User Registration Fee*** – USD 100. This fee enables a user to enter the online application system. This fee is nonrefundable.
- ***gTLD Evaluation fee*** – USD 185,000. ICANN will not begin its evaluation of an application unless it has received the gTLD evaluation fee by the due date. Refer to subsection 1.5.4. The gTLD evaluation fee is set to recover costs associated with the new gTLD program. The fee is set to ensure that the program is fully funded, and doesn't take resources from other ICANN funding sources, including generic registries and registrars, cc TLD contributions and RIR contributions.

In certain cases, refunds of a portion of this fee may be available for applications that are withdrawn before the evaluation process is complete. The amount of refund will depend on the point in the process at which the withdrawal is made. (Refer to subsection 1.5.5.) Details will be made available when the application process is launched.

Applicants may be required to pay additional fees in certain cases. Those possible additional fees include:

- ***Registry Services Review Fee*** – If applicable, this fee is payable for additional costs incurred in referring an application to the RSTEP for an extended review. Applicants will be notified if such a fee is due. The fee for a three member RSTEP review team is anticipated to be USD 50,000. In some cases, five-member panels might be required, or there might be increased scrutiny at a greater cost. In every case, the applicant will be advised of the review

cost before its initiation. Refer to Section 2.1.3 of Module 2 on Registry Services review.

- **Dispute Resolution Filing Fee** – This amount must accompany any filing of a formal objection and any response that an applicant files to an objection. This fee is payable to the applicable dispute resolution service provider in accordance with the provider’s payment instructions. ICANN estimates that non-refundable filing fees could range from approximately USD 1,000 to USD 5,000 (or more) per party per proceeding. Refer to the appropriate provider for the relevant amount. Refer to Module 3 for dispute resolution procedures.
- **Dispute Resolution Adjudication Fee** – This fee is payable to the applicable dispute resolution service provider in accordance with that provider’s procedures and schedule of costs. Both parties in the dispute resolution proceeding will be required to submit an advance payment of costs in an estimated amount to cover the entire cost of the proceeding. This may be either an hourly fee based on the estimated number of hours the panelists will spend on the case (including review of submissions, facilitation of a hearing, if allowed, and preparation of a decision), or a fixed amount. The prevailing party in a dispute resolution proceeding will have its advance payment refunded, while the non-prevailing party will not receive a refund and thus will bear the cost of the proceeding.

ICANN estimates that a proceeding involving a fixed amount could range from USD 2,000 to USD 8,000 (or more) per proceeding. ICANN further estimates that an hourly rate based proceeding with a one-member panel could range from USD 32,000 to USD 56,000 (or more) and with a three-member panel it could range from USD 70,000 to USD 122,000 (or more). These estimates may be lower if the panel does not call for written submissions beyond the objection and response, and does not allow a hearing. Please refer to the appropriate provider for the relevant amounts or fee structures. Refer also to Section 3.2 of Module 3 for further details.

- **Comparative Evaluation Fee** – This fee is payable to the provider appointed to handle comparative evaluations, in the event that the applicant participates in a comparative evaluation.

Applicants will be notified if such a fee is due. Refer to Section 4.2 of Module 4.

This list does not include fees (that is, registry fees) that will be payable to ICANN following execution of a registry agreement. See <http://www.icann.org/en/topics/new-gtld-draft-agreement-24oct08-en.pdf>.

## 1.5.2 *Payment Methods*

---

Payments to ICANN may be submitted by wire transfer, ACH, money order, or check.

### 1.5.2.1 *Wire Transfer Payment*

Instructions for making a payment by **wire transfer** will be available in TAS.

### 1.5.2.2 *ACH Payment*

Instructions for making **ACH payments** will be available in TAS.

### 1.5.2.3 *Credit Card Payment*

To make a **credit card payment**, note:

ICANN accepts Visa, MasterCard/Maestro, American Express and Discover credit cards as forms of payment. The maximum amount accepted is USD 20,000 per invoice.

- Fill out and sign the Credit Card Payment Form at <http://www.icann.org/en/financials/credit.pdf>.
- Send the completed form to ICANN at fax:  
+1.310.823.8649

Or mail the form to:

Internet Corporation for Assigned Names and Numbers  
(ICANN)  
Attention: Finance Department  
4676 Admiralty Way, Suite 330  
Marina del Rey, CA 90292-6601 USA

### 1.5.2.4 *Check or Money Order Payment*

To make a **payment by check or money order** (USD only), mail or deliver by private carrier to:

Internet Corporation for Assigned Names and Numbers  
(ICANN)  
Attention: Finance Department  
4676 Admiralty Way, Suite 330  
Marina del Rey, CA 90292-6601 USA

### *1.5.3 Requesting an Invoice*

---

The TAS interface allows applicants to request issuance of an invoice for any of the fees payable to ICANN. This service is for the convenience of applicants that require an invoice to process payments.

### *1.5.4 Deadlines for Payments*

---

The Evaluation Fee must be received by [time] UTC [date].

ICANN or its providers will notify the applicants of due dates for payment in respect of additional fees (if applicable).

### *1.5.5 Withdrawals and Refunds*

---

Refunds may be available to applicants who choose to withdraw at certain stages of the process.

An applicant that wishes to withdraw an application must use the TAS interface to request a refund. ICANN will not consider any other form of request for refunds. Refunds will only be issued to the organization that submitted the original payment. All refunds are paid by wire transfer. Any bank transfer or transaction fees incurred by ICANN will be deducted from the amount paid.

Further details on refund amounts will be available in the final version of the RFP.

## *1.6 Questions about this RFP*

---

Applicants may submit questions about completing the application form to [email address to be inserted in final version of RFP]. To provide all applicants equitable access to information, ICANN will post all questions and answers in a centralized location on its website.

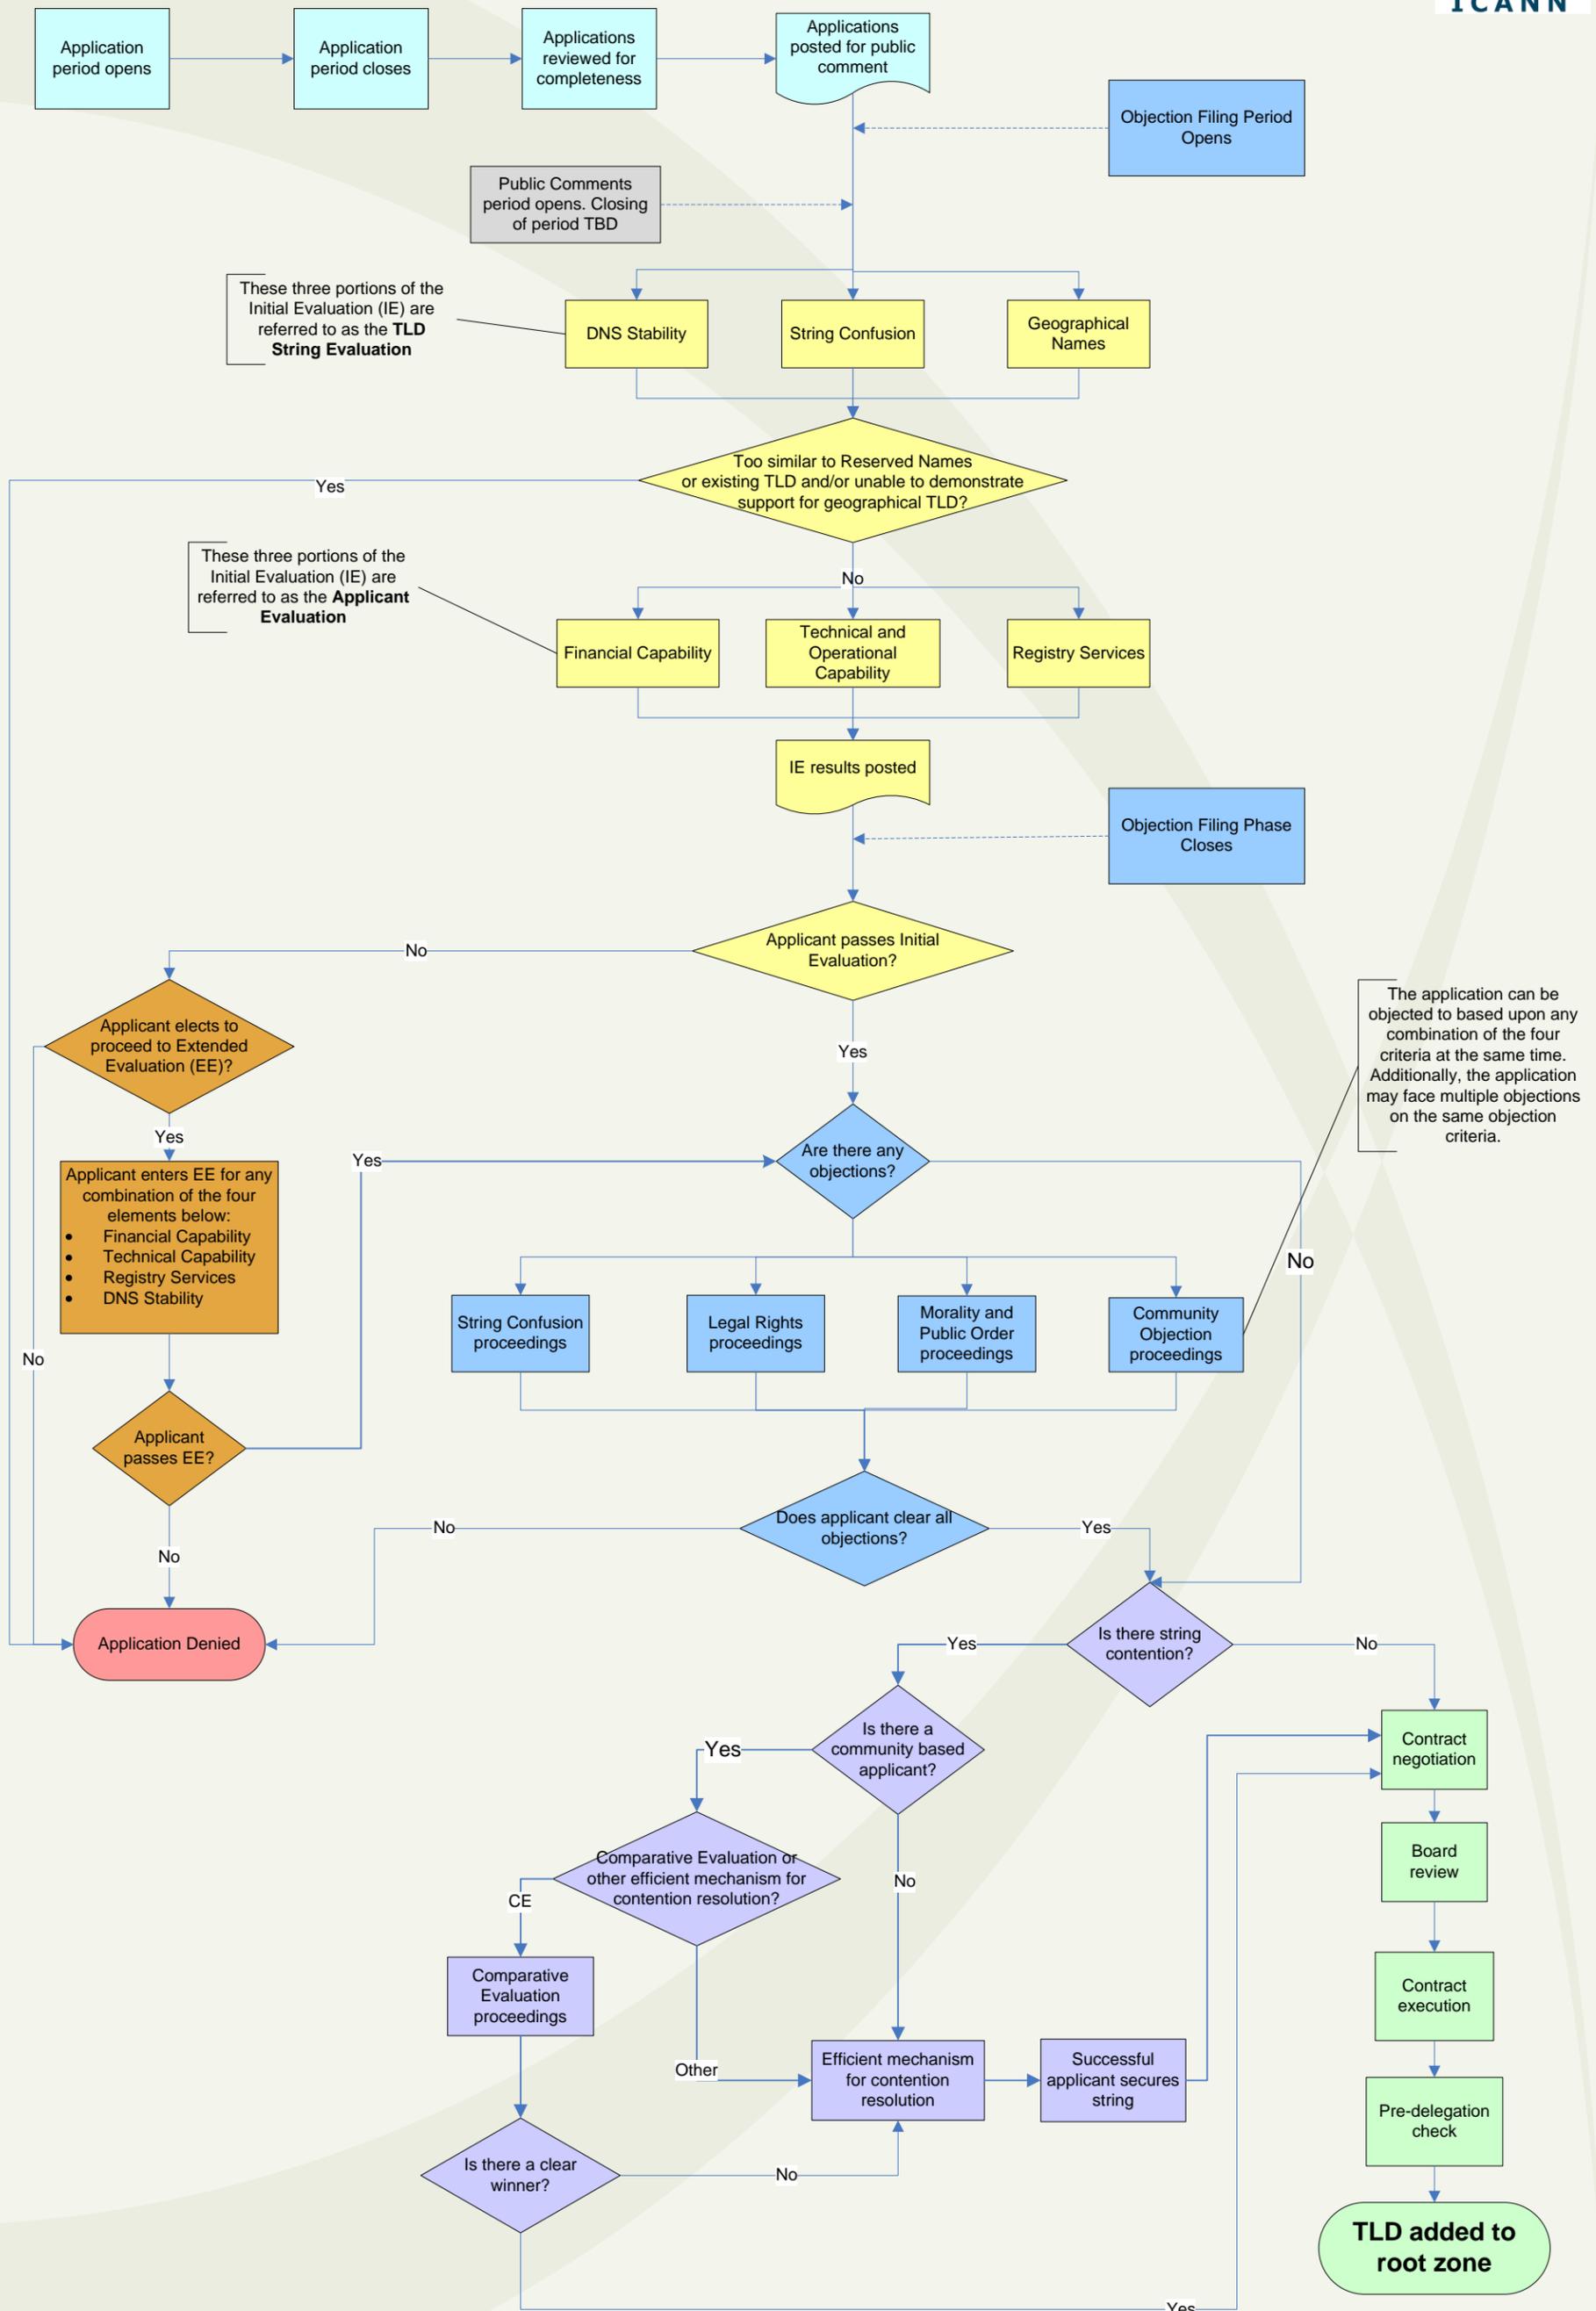

All requests to ICANN for information about the process or issues surrounding preparation of an application must be submitted in writing to the designated email address. ICANN will not grant requests from applicants for personal or telephone consultations regarding the preparation of an application. Applicants that contact ICANN for clarification about aspects of the application will be referred to the dedicated online question and answer area.

Answers to inquiries will only provide clarification about the application forms and procedures. ICANN will not provide consulting, financial, or legal advice.

# New gTLD Program - Evaluation Process

## DRAFT- For Discussion Purposes

The application can be objected to based upon any combination of the four criteria at the same time. Additionally, the application may face multiple objections on the same objection criteria.

# Draft Applicant Guidebook

## Module 2

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

---

# Module 2

---

## *Evaluation Procedures*

This module describes the evaluation procedures and criteria used to determine whether applications are approved for delegation as a gTLD. All applicants will undergo an Initial Evaluation and those that do not pass all phases may enter into an Extended Evaluation.

The first, required evaluation is the **Initial Evaluation**, during which ICANN first assesses an applied-for gTLD string, an applicant's qualifications, and proposed registry services.

The following elements make up **Initial Evaluation**:

- String Reviews
  - String confusion
  - Reserved Names
  - DNS stability
  - Geographical names
- Applicant Reviews
  - Demonstration of technical and operational capability
  - Demonstration of financial capability
  - Registry services

These elements, which are described in greater detail later in this module, are intended to ensure applied-for gTLD strings do not negatively impact DNS security or stability, and to ensure that applicants are capable of operating the gTLD in a stable and secure manner, and that new services can be introduced without adverse effect on the security or stability of the DNS.

An applicant must pass all these reviews to pass the Initial Evaluation. Failure to pass any one of these reviews will result in a failure to pass the Initial Evaluation.

**Extended Evaluation** may be applicable in cases in which an applicant does not pass the Initial Evaluation or additional inquiry is required.

## 2.1 Initial Evaluation

---

The Initial Evaluation consists of two types of examination. Each type is composed of several elements.

The first examination focuses on the applied for string to test:

- Whether the applied-for gTLD string is similar to others and would cause user confusion;
- Whether the applied-for gTLD string might disrupt DNS security or stability; and
- Whether requisite government approval is given in the case of certain geographical names.

The second examination focuses on the applicant to test:

- Whether the applicant has the requisite technical and financial capability; and
- Whether the registry services offered by the applicant might adversely affect DNS security or stability.

### 2.1.1 String Reviews

---

In the Initial Evaluation, ICANN reviews every applied-for gTLD string for string confusion, potential to introduce instability into the DNS, and whether relevant government approval is required. Those reviews are described in greater detail in the following paragraphs.

#### 2.1.1.1 String Confusion Review

The objective of this review is to prevent user confusion and loss of confidence in the DNS. This review involves a comparison of each applied-for gTLD string against existing TLDs and against other applied-for gTLD strings. The examination is to determine whether the applied-for gTLD string is so similar to one of the others that it would create a probability of detrimental user confusion if it were to be delegated to the root zone. ICANN will perform determinations of string similarity in accordance with the steps outlined here.

The similarity review will be conducted by a panel of String Similarity Examiners. This examination will be informed by an algorithmic score for the visual similarity between each applied-for string and each of other existing and applied-for TLDs. The score will provide one objective measure for consideration by the panel.

The examiners' task is to identify string similarities that would create a probability of detrimental user confusion. The examiners will use a common standard to test for whether string confusion exists, as follows:

**Standard for String Confusion** – String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

The standard will be applied in two sets of circumstances, when comparing:

- Applied-for gTLD strings against existing TLDs and reserved names.
- Applied-for gTLD strings against other applied for gTLD strings or strings requested in ccTLD processes).

**Existing String Similarity Examination** – This review involves cross-checking between each applied-for string and the list of existing TLD strings to determine whether the two strings are so similar to one another that they create a probability of detrimental user confusion.

All TLDs currently in the root zone can be found at <http://iana.org/domains/root/db/>.

An application that fails the string confusion review and is found too similar to an existing string will not pass the Initial Evaluation, and no further reviews will be available.

In the simple case in which an applied-for TLD string is identical to an existing TLD, the application system will recognize the existing TLD and not allow the application to be submitted.

Such testing for identical strings also takes into consideration the code point variants listed in any relevant language reference table.

For example, protocols treat equivalent labels as alternative forms of the same label, just as "foo" and "Foo" are treated as alternate forms of the same label (RFC 3490).

An applied-for gTLD string that passes the string confusion review is still subject to challenge by an existing TLD operator or by another gTLD applicant in the current

application round. That process requires that a specific objection be filed by an objector having the standing to make such an objection. Refer to Module 3, Dispute Resolution Procedures, for more information about the objection process.

***String Contention Sets: Similarity with Other Applied-for gTLD Strings*** – All applied-for gTLD strings will be reviewed against one another to identify any strings that are so similar that they create a probability of detrimental user confusion would result if more than one is delegated into the root zone. In performing the string confusion review, the panel of String Similarity Examiners will create contention sets that may be used later in the process. A contention set contains at least two applied-for strings identical to one another or so similar that string confusion would result if more than one were delegated into the root zone. Refer to Module 4, String Contention Procedures, for more information on contention sets and contention resolution. ICANN will notify applicants who are part of a contention set by the conclusion of the Initial Evaluation period. These contention sets will also be published on ICANN’s website.

***Similarity to TLD strings applied for as ccTLDs*** -- Applied-for gTLD strings will also be reviewed for similarity to TLD strings applied for in the IDN ccTLD Fast Track process (see <http://www.icann.org/en/topics/idn/fast-track/>). Should conflict with a prospective fast-track IDN ccTLD be identified, ICANN will take steps to resolve the conflict. (See process for Geographical Names in paragraph 2.1.1.4.)

***String Similarity Algorithm*** – The String Similarity Algorithm (Algorithm) is a tool the examiners use to provide one objective measure as part of the process of identifying strings likely to result in confusion. The Algorithm is also available to applicants for testing and informational purposes. The Algorithm and user guidelines are available at <http://80.124.160.66/icann-algorithm>.

The Algorithm calculates scores for visual similarity between any two strings, using factors such as letters in sequence, number of similar letters, number of dissimilar letters, common prefixes, common suffixes, and string length.

#### ***2.1.1.2 Review for Reserved Names***

The Reserved Names review involves comparison with the list of top-level Reserved Names to ensure that the applied-for gTLD string does not appear on that list.

**Top-Level Reserved Names List**

<i>AFRINIC</i>	<i>IANA-SERVERS</i>	<i>NRO</i>
<i>ALAC</i>	<i>ICANN</i>	<i>RFC-EDITOR</i>
<i>APNIC</i>	<i>IESG</i>	<i>RIPE</i>
<i>ARIN</i>	<i>IETF</i>	<i>ROOT-SERVERS</i>
<i>ASO</i>	<i>INTERNIC</i>	<i>RSSAC</i>
<i>CCNSO</i>	<i>INVALID</i>	<i>SSAC</i>
<i>EXAMPLE*</i>	<i>IRTF</i>	<i>TEST*</i>
<i>GAC</i>	<i>ISTF</i>	<i>TLD</i>
<i>GNSO</i>	<i>LACNIC</i>	<i>WHOIS</i>
<i>GTLD-SERVERS</i>	<i>LOCAL</i>	<i>WWW</i>
<i>IAB</i>	<i>LOCALHOST</i>	
<i>IANA</i>	<i>NIC</i>	
*Note that in addition to the above strings, ICANN will also reserve translations of the terms "test" and "example" in multiple languages.		

If an applicant enters a Reserved Name as its applied-for gTLD string, the application system will recognize the Reserved Name and not allow the application to be submitted.

In addition, applied-for gTLD strings are reviewed in a process identical to that described in the preceding section to determine whether they exceed a similarity threshold with a Reserved Name. An application for a gTLD string that is identified as too similar to a Reserved Name will not pass the Reserved Names review.

**2.1.1.3 Review for Potential DNS Instability**

This review determines whether an applied-for gTLD string might cause instability to the DNS. In all cases, this will involve a review for conformance with technical and other requirements for gTLD labels. In some exceptional cases, an extended review may be necessary to investigate possible technical stability problems with the applied-for gTLD string.

**2.1.1.3.1 String Stability Review**

New gTLD labels must not adversely affect on the security or stability of the DNS. Although no string complying with the requirements in paragraph 2.1.1.3.2 of this module is expected to adversely affect DNS security or stability, an extended review is possible if technical reviewers identify an issue with the applied-for gTLD string that requires further investigation.

***String Stability Review Procedure*** – During the Initial Evaluation period, ICANN will conduct a preliminary review on the set of applied-for gTLD strings to ensure that proposed strings comply with relevant standards provided in the preceding section and determine whether any strings raise significant technical stability issues that may require an Extended Evaluation.

There is low probability that this review will be necessary for a string that fully complies with the string requirements in paragraph 2.1.1.3.2 of this module. However, the technical stability review process provides an additional safeguard if unanticipated security or stability issues arise concerning an applied-for gTLD string.

See Section 2.2 for further information on the Extended Evaluation process.

#### ***2.1.1.3.2 String Requirements***

ICANN will review each applied-for gTLD string to ensure that it conforms with the requirements outlined in the following paragraphs.

If an applied-for gTLD string is found to violate any of these rules, the application will be denied. No further reviews are available.

***Technical Requirements for all Labels (Strings)*** – The technical requirements for the selection of top-level domain labels follow.

- The ASCII label (that is, the label as transmitted on the wire) must be valid as specified in the technical standards *Domain Names: Implementation and Specification* (RFC 1035), and *Clarifications to the DNS Specification* (RFC 2181). This includes the following:
  - The label must have no more than 63 characters.
  - Upper and lower case characters are treated as identical.
- The ASCII label must be a valid host name, as specified in the technical standards *DOD Internet Host Table Specification* (RFC 952), *Requirements for Internet Hosts — Application and Support* (RFC 1123), and *Application Techniques for Checking and Transformation of Names* (RFC 3696). This includes the following:

- The label must consist entirely of letters, digits and hyphens.
- The label must not start or end with a hyphen.
- There must be no possibility for confusing an ASCII label for an IP address or other numerical identifier by application software. For example, representations such as "255", "o377" or "0xff" representing decimal, octal, and hexadecimal strings, can be confused for IP addresses. As such, labels:
  - Must not be wholly composed of digits between "0" and "9".
  - Must not commence with "0x" or "x", and have the remainder of the label wholly composed of hexadecimal digits, "0" to "9" and "a" through "f".
  - Must not commence with "0o" or "o", and have the remainder of the label wholly composed of digits between "0" and "7".
- The ASCII label may only include hyphens in the third and fourth position if it represents a valid Internationalized Domain Name in its A-label form (ASCII encoding).
- The presentation format of the domain (that is, either the label for ASCII domains, or the U-label for Internationalized Domain Names) must not begin or end with a digit.

***Requirements for Internationalized Domain Names*** – These requirements apply only to prospective top-level domains that use non-ASCII characters. Applicants for these internationalized top-level domain labels are expected to be familiar with the IETF IDNA standards, Unicode standards, and the terminology associated with Internationalized Domain Names.

- The label must be a valid internationalized domain name, as specified in the technical standard *Internationalizing Domain Names in Applications* (RFC 3490). This includes the following nonexhaustive list of limitations:
  - Must only contain Unicode code points that are defined as "Valid" in *The Unicode Codepoints and IDNA* (<http://www.ietf.org/internet->

[drafts/draft-ietf-idnabis-tables-02.txt](#)) and be accompanied by unambiguous contextual rules where necessary.

- Must be fully compliant with Normalization Form C, as described in *Unicode Standard Annex #15: Unicode Normalization Forms*. See also examples in <http://unicode.org/faq/normalization.html>.
- Must consist entirely of characters with the same directional property.
- The label must meet the relevant criteria of the ICANN *Guidelines for the Implementation of Internationalised Domain Names*. See <http://www.icann.org/en/topics/idn/implementation-guidelines.htm>. This includes the following nonexhaustive list of limitations:
  - All code points in a single label must be taken from the same script as determined by the Unicode Standard Annex #24: Unicode Script Property.
  - Exceptions are permissible for languages with established orthographies and conventions that require the commingled use of multiple scripts. However, even with this exception, visually confusable characters from different scripts will not be allowed to co-exist in a single set of permissible code points unless a corresponding policy and character table is clearly defined.

The IDNA protocol used for internationalized labels is currently under revision through the Internet standardization process. As such, additional requirements may be specified that need to be adhered to as this revision is being completed. The current status of the protocol revision is documented at <http://tools.ietf.org/wg/idnabis>.

***Policy Requirements for Generic Top-Level Domains –***  
Applied-for strings must be composed of three or more visually distinct letters or characters in the script, as appropriate.

#### ***2.1.1.4 Geographical Names***

ICANN will review all applied-for strings to ensure that appropriate consideration is given to the interests of governments or public authorities in country or territory

names, as well as certain other types of sub-national place names. The requirements and procedure ICANN will follow is described in the following paragraphs.

#### 2.1.1.4.1 *Requirements for Strings Intended to Represent Geographical Entities*

The following types of applications must be accompanied by documents of support or non-objection from the relevant government(s) or public authority(ies).

- Applications for any string that is a meaningful representation of a *country or territory name* listed in the ISO 3166-1 standard (see [http://www.iso.org/iso/country\\_codes/iso\\_3166\\_data\\_bases.htm](http://www.iso.org/iso/country_codes/iso_3166_data_bases.htm)). This includes a representation of the country or territory name in any of the six official United Nations languages (French, Spanish, Chinese, Arabic, Russian and English) and the country or territory's local language.
- Applications for any string that represents a *sub-national place name*, such as a county, province, or state, listed in the ISO 3166-2 standard.
- Applications for a city name, where the applicant clearly intends to use the gTLD to leverage from the city name.
- An application for a string which represents a continent or UN region appearing on the

Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings list at <http://unstats.un.org/unsd/methods/m49/m49regin.htm>.

An applied-for gTLD string that falls into the above categories is considered to represent a geographical name. It is the applicant's responsibility to identify whether its applied-for gTLD string falls into the above categories and to determine the relevant government or governments, or the relevant public authority or authorities. In the case of an application for a string which represents a continent or UN region, evidence of support, or non-objection, will be required from a substantial number of the relevant governments and/or public authorities associated with the continent or the UN region.

The evidence of support or non-objection from the relevant government or public authority should include a signed

letter of support or non-objection from the minister with the portfolio responsible for domain name administration, ICT, foreign affairs or the Office of the Prime Minister or President of the relevant jurisdiction. If there are reasons for doubt about the authenticity of the communication, ICANN will consult with the diplomatic authorities or members of ICANN's Governmental Advisory Committee for the government or public authority concerned on the competent authority and appropriate point of contact with their administration for communications.

The letter must clearly express the government's or public authority's support or non-objection for the applicant's application and demonstrate the government's or public authority's understanding of the string being requested and what it will be used for.

The requirement to include evidence of support for certain applications does not preclude or exempt applications from being the subject of objections on community grounds (refer to section 3.1.1 of Module 3), under which applications may be rejected based on objections showing substantial opposition from the targeted community.

#### *2.1.1.4.2 Review Procedure for Geographical Names*

A Geographical Names Panel (GNP) will be established to evaluate applications and confirm whether each string represents a geographic term, and to verify the authenticity of the supporting documentation where necessary. The Geographic Names Panel may consult with additional experts as they consider appropriate.

The steps ICANN and the Geographical Names Panel intend to follow to ensure compliance with these requirements are described here.

1. During the Initial Evaluation period, ICANN evaluates each application for a geographical name to confirm that the applicant has provided a letter of support or nonobjection from the relevant government.
2. ICANN forwards applications considered complete to the GNP for confirmation that:
  - The strings are a meaningful representation of a country or territory name or a subnational place name, and

- The communication from the government or public authority is legitimate and contains the suggested content.
3. The GNP also reviews applications that are not self-identified as a geographical name to ensure that the applied-for string is not a meaningful representation of a country or territory name or a sub-national place name.
  4. All applications determined to be geographical but without necessary supporting documents will be considered incomplete. The applicant will be notified and the application will not pass Initial Evaluation.
  5. The GNP may consult additional expertise if uncertainty arises about the name the applied-for gTLD string is claimed to represent.

The results of the evaluation will be publicly posted on ICANN's website at the conclusion of the Initial Evaluation, and will also be available to applicants.

If there is more than one application for a string representing a certain geographical term as described in this section, and the applications are considered complete (that is, have requisite government approvals), the applications will be suspended pending resolution by the applicants. If there is contention between identical (or similar) applicants where one is identified as a geographical name, the string contention will be settled using the string contention methodology described in Module 4.

### *2.1.2 Applicant Reviews*

---

Concurrent with the applied-for gTLD string reviews described in subsection 2.1.1, ICANN will review the applicant's technical and operational capability, its financial capability, and its proposed registry services. Those reviews are described in greater detail in the following subsections.

#### *2.1.2.1 Information Sought*

The questions provided for applicants in the application form are available at <http://www.icann.org/en/topics/new-gtld-draft-evaluation-criteria-24oct08-en.pdf>. Applicants answer questions which cover the following three areas in relation to themselves: general information, technical and operational capability, and financial capability.

Applicants should be aware that the application materials submitted in the online application system, as well as any evaluation materials and correspondence, will be publicly posted on ICANN's website. The sections in the application that are marked CONFIDENTIAL will not be posted. Any sections of the application that ICANN has not designated CONFIDENTIAL will be posted.

The applicant questions cover the following three areas:

**General Information** – These questions are intended to gather information about an applicant's legal identity, contact information, and applied-for gTLD string. Failure to provide any of this information will result in an application being considered incomplete. Under specific areas of questions under this category are: the identification of the applied-for string; selection of TLD type; and requests for certain documents.

**Demonstration of Technical and Operational Capability** – These questions are intended to gather information about an applicant's technical capabilities and plans for operation of the proposed gTLD.

Applicants are not required to have deployed an actual registry to complete the requirements for a successful application. It will be sufficient at application time for an applicant to demonstrate a clear understanding and accomplishment of some groundwork toward the key technical and operational aspects of running a gTLD registry. Each applicant that passes the technical evaluation and all other steps will be required, following execution of a registry agreement, to complete a pre-delegation technical test before delegation of the applied-for gTLD. Refer to Module 5, Transition to Delegation, for additional information.

**Demonstration of Financial Capability** – These questions are intended to gather information about an applicant's financial capabilities to operate a gTLD registry business and its financial planning in preparation for long-term operation of a new gTLD.

#### 2.1.2.2 Evaluation Methodology

Initial Evaluations are conducted on the basis of the information each applicant makes available to ICANN in its response to the questions in the application form. ICANN and its evaluators are not obliged to take into account any information or evidence that is not made available in the application and submitted by the due date, unless explicitly requested by the evaluators.

Evaluators are entitled, but not obliged, to request further information or evidence from an applicant, and any such request will be made solely through TAS, rather than by direct means such as phone, letter, email, or other similar means. Only one exchange of information between the applicant and the evaluators may take place within the Initial Evaluation period.

Because different registry types and purposes may justify different responses to individual questions, evaluators will pay particular attention to the consistency of an application across all criteria. For example, an applicant's scaling plans noting hardware to ensure its capacity to operate at a particular volume level should be consistent with its financial plans to secure the necessary equipment.

### *2.1.3 Registry Services Review*

---

Concurrent with the string reviews described in subsection 2.1.1, ICANN will review the applicant's proposed registry services. The applicant will be required to provide a list of proposed registry services in its application.

Registry services are defined as: (1) operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry zone servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by the registry agreement; (2) other products or services that the registry operator is required to provide because of the establishment of a consensus policy; and (3) any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator.

A full definition of registry service can be found at <http://www.icann.org/en/registries/rsep/rsep.html> and in the draft registry agreement at <http://www.icann.org/en/topics/new-gtld-draft-agreement-24oct08-en.pdf>. Registry services will be examined to determine if the proposed registry service might raise significant stability or security issues. Examples of services submitted to the registry services process by established registries can be found at <http://www.icann.org/en/registries/rsep>.

The registration of domain names, for example, is a registry service. Lists of registry services currently provided by

registries can be found in registry agreement appendices. In general cases, these services successfully pass this inquiry. See

<http://www.icann.org/en/registries/agreements.htm>.

Review of all applicants' proposed registry services will occur during the Initial Evaluation.

**Procedure** – ICANN's first review will be a preliminary determination of whether a proposed registry service requires further consideration based on whether the registry service may raise significant security or stability issues.

If ICANN's preliminary determination reveals that there may be significant security or stability issues surrounding the proposed service, the application will be flagged for an extended review by the RSTEP (see <http://www.icann.org/en/registries/rsep/rstep.html>). This review will occur during the Extended Evaluation phase (refer to section 2.2).

Definitions for security and stability applied in the registry services review are:

**Security** – an effect on security by the proposed registry service means (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

**Stability** – an effect on stability means that the proposed registry service (1) does not comply with applicable relevant standards that are authoritative and published by a well-established, recognized, and authoritative standards body, such as relevant standards-track or best current practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant standards-track or best current practice RFCs and relying on registry operator's delegation information or provisioning services.

#### ***2.1.4 Applicant's Withdrawal of an Application***

---

An applicant who does not pass the Initial Evaluation may be permitted to withdraw its application at this stage for a partial refund (refer to subsection 1.5.5 of Module 1, Introduction to gTLD Application Process).

## 2.2 *Extended Evaluation*

---

An applicant may request an Extended Evaluation if the application has failed to pass the Initial Evaluation elements concerning:

- Demonstration of technical and operational capability (refer to paragraph 2.1.2.1).
- Demonstration of financial capability (refer to paragraph 2.1.2.1).

An Extended Evaluation may also result if ICANN identifies a need for further review on the following elements:

- DNS stability (refer to paragraph 2.1.1.3).
- Registry services (refer to subsection 2.1.3). Note that this investigation incurs an additional fee (the Registry Services Review Fee) if the applicant wishes to proceed. See Section 1.5 of Module 1 for fee and payment information.

From the time an applicant receives notice of failure to pass the Initial Evaluation, it has 15 calendar days to submit to ICANN the Notice of Request for Extended Evaluation through the online application interface. If the applicant does not explicitly request the Extended Evaluation, and pay any additional fees as applicable, the application will not proceed.

### 2.2.1 *Technical and Operational or Financial Extended Evaluation*

---

This subsection applies to an Extended Evaluation of an applicant's technical and operational capability or financial capability, as described in paragraph 2.1.2.1.

The Extended Evaluation allows one additional round of inquiry and answer between the evaluators and the applicant to clarify information contained in the application. This supplemental information will become part of the application. Applicants may not change the information submitted in their original applications. Through the online system, the evaluators will provide the applicant a set of questions describing any deficiencies in the application and request clarification. Such communications will include a deadline for the applicant to respond.

The same panel that reviewed an application during Initial Evaluation will conduct the Extended Evaluation, using the

same criteria as outlined at <http://www.icann.org/en/topics/new-gtld-draft-evaluation-criteria-24oct08-en.pdf>, to determine whether the application, now that certain information has been clarified, meets the criteria.

ICANN will notify applicants at the end of the Extended Evaluation period as to whether they have passed. If an applicant passes Extended Evaluation, its application continues to the next stage in the process. If an applicant does not pass Extended Evaluation, the application will proceed no further. No further reviews are available.

### *2.2.2 String Stability Extended Evaluation*

---

This section applies to an Extended Evaluation of DNS security or stability issues with an applied-for gTLD string, as described in paragraph 2.1.1.3.

If the evaluators determine that a string poses stability issues that require further investigation, the applicant must either confirm that it intends to move forward with the application process or withdraw its application.

If an application is subject to such an Extended Evaluation, an independent 3-member panel will be formed to review the security or stability issues identified during the Initial Evaluation.

The panel will review the string and determine whether the string complies with relevant standards or creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, and will communicate its findings to ICANN and to the applicant.

If the panel determines that the string does not comply with relevant standards or creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, the application cannot proceed.

### *2.2.3 Registry Services Extended Evaluation*

---

This section applies to an Extended Evaluation of Registry Services, as described in subsection 2.1.3.

If a proposed registry service has been referred to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review, the RSTEP will form a review team of members with the appropriate qualifications.

The review team will generally consist of 3 members, depending on the complexity of the registry service proposed. In a 3-member panel, the review could be conducted within 30 to 45 days. In cases where a 5-member panel is needed, this will be identified before the extended evaluation starts. In a 5-member panel, the review could be conducted in 45 days or fewer.

The cost of an RSTEP review will be covered by the applicant through payment of the Registry Services Review Fee. Refer to payment procedures in section 1.5 of Module 1. The RSTEP team review will not commence until payment has been received.

If the RSTEP finds that one or more of the applicant's proposed registry services may be introduced without risk of a meaningful adverse effect on security or stability, these services may be included in the applicant's contract with ICANN.

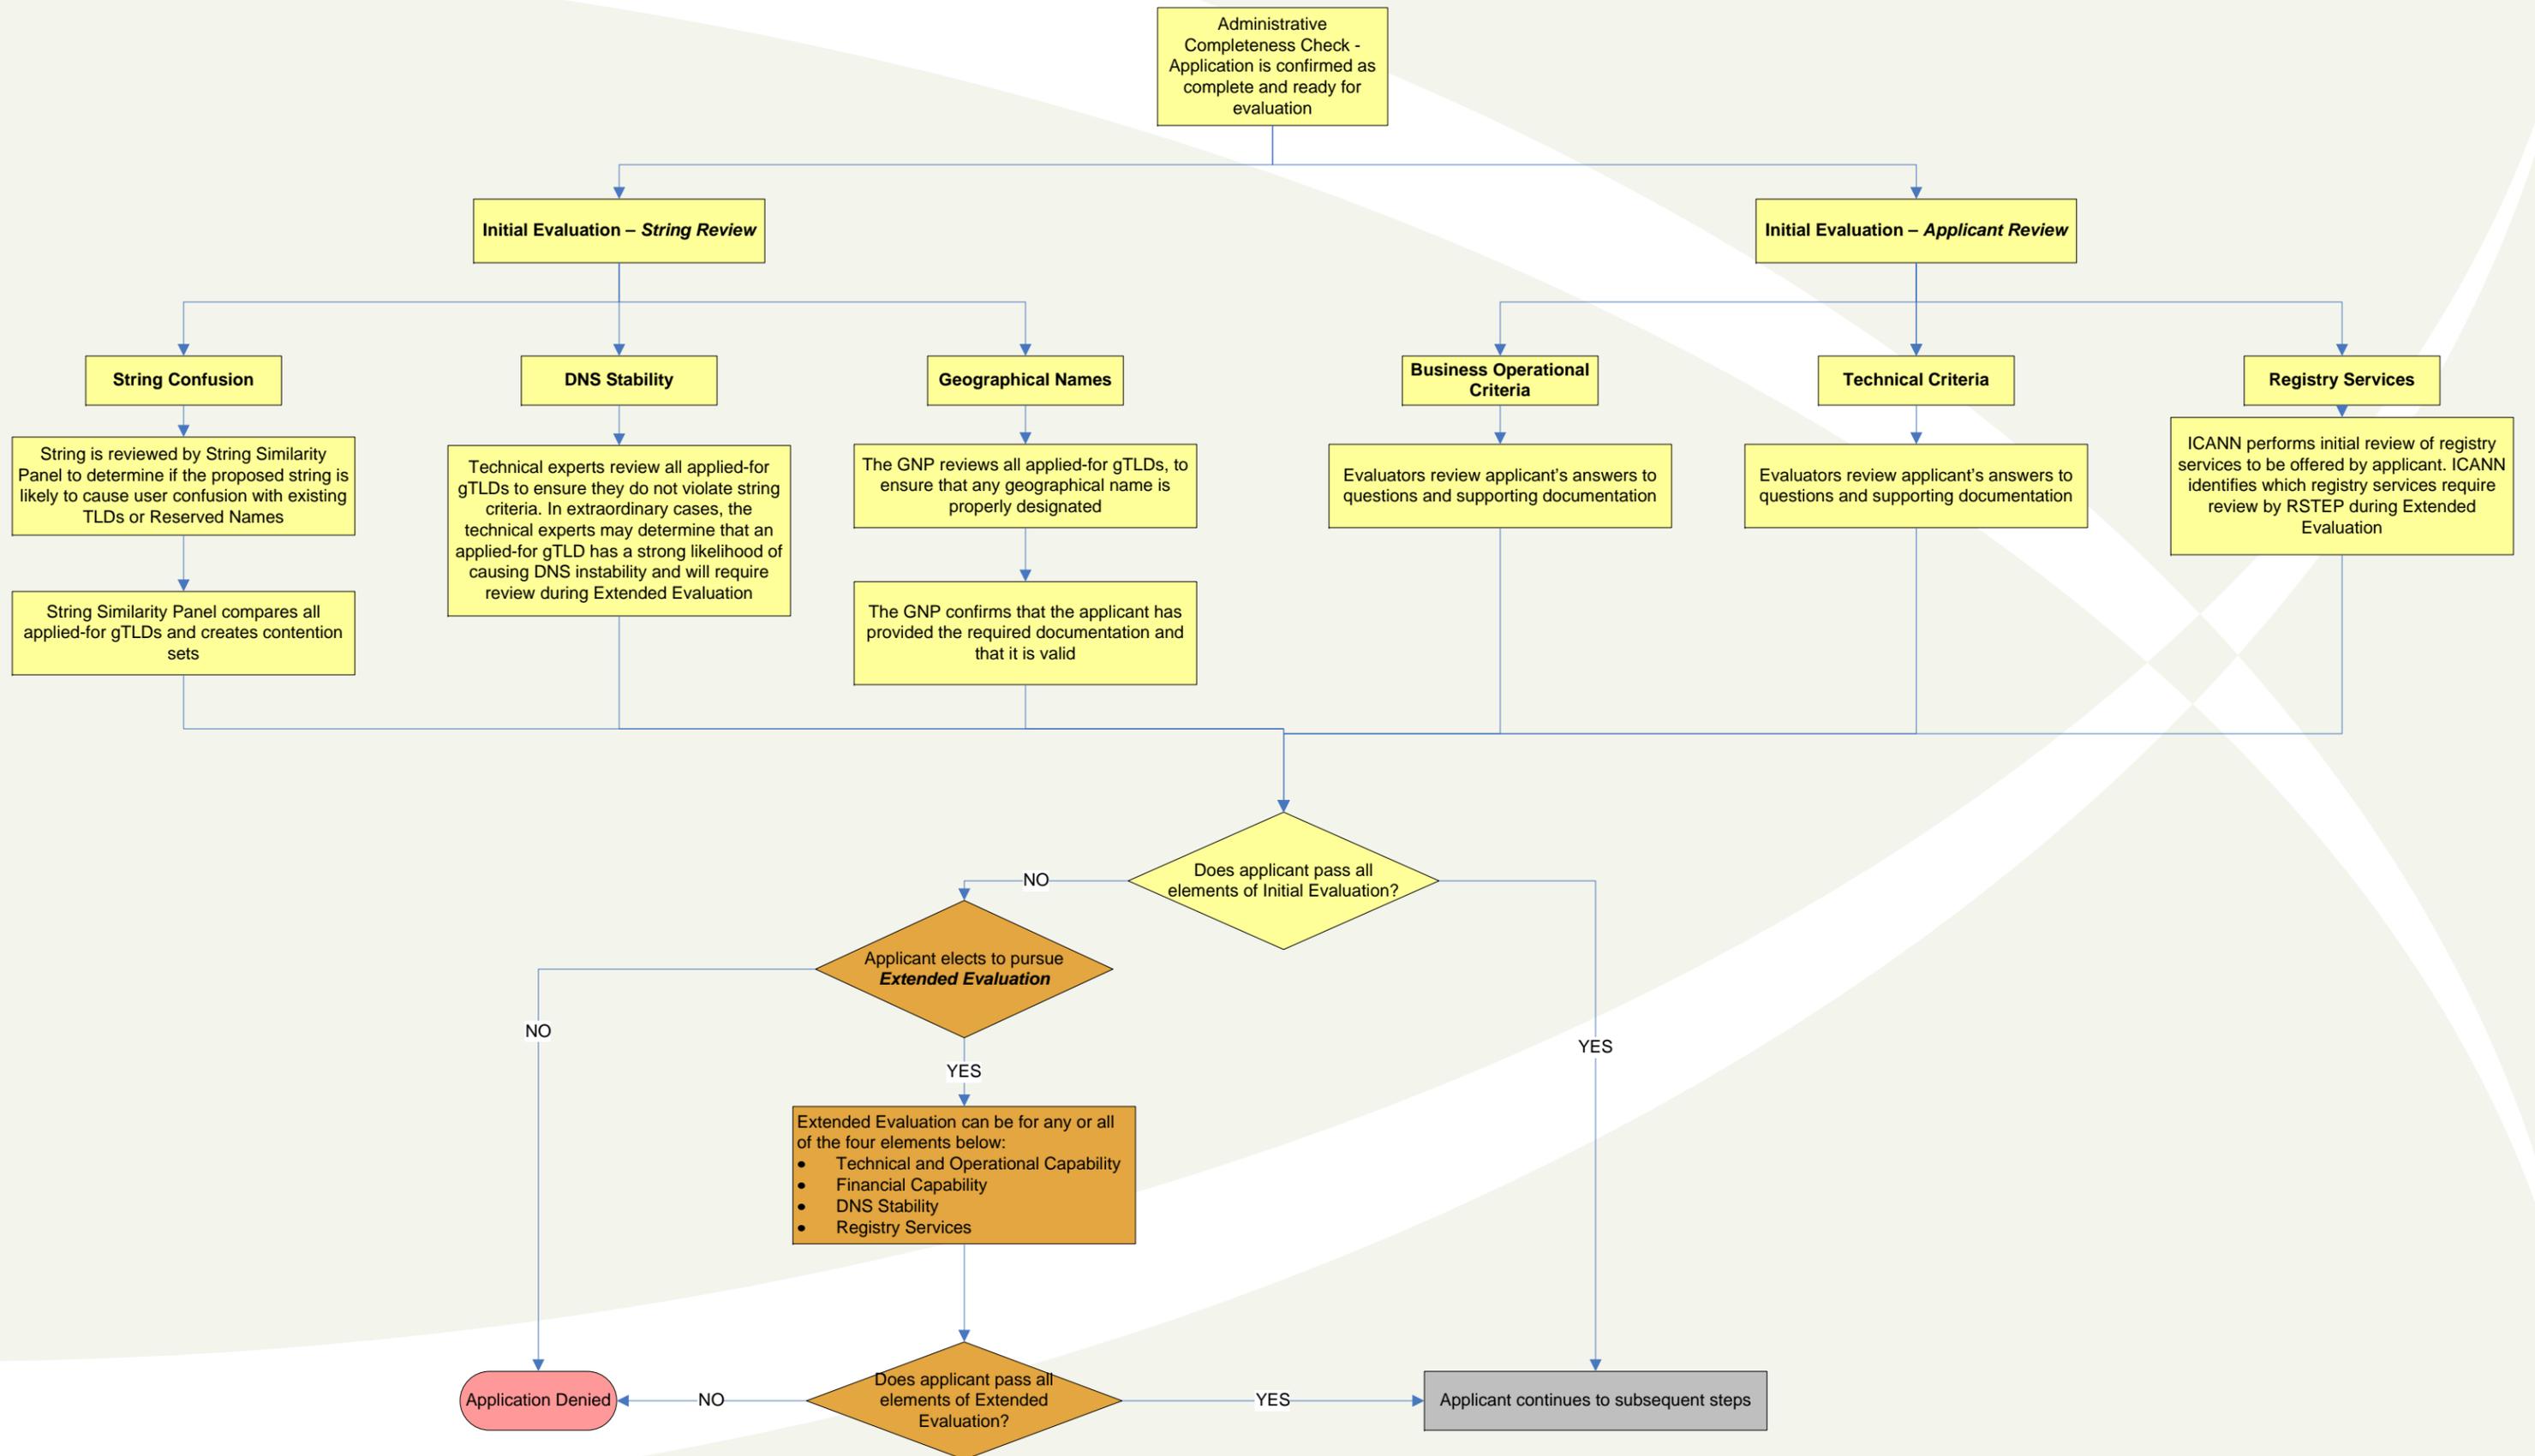

If the RSTEP finds that the proposed service would create a risk of a meaningful adverse effect on security or stability, the applicant may elect to proceed with its application without the proposed service, or withdraw its application for the gTLD.

### **2.3** *Probity and Conflicts of Interest*

---

ICANN staff and by various independent service providers will review all applications during **Initial Evaluation** and **Extended Evaluation**. During this entire evaluation process, applicants must not approach, or have any other person or entity approach on their behalf, any ICANN staff member, any ICANN Board member, or any person associated with the evaluation process, including any evaluators, experts, examiners, or reviewers retained by ICANN.

# DRAFT - New gTLD Program – Initial Evaluation and Extended Evaluation

# Draft Applicant Guidebook

## Module 3

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

---

# Module 3

---

## *Dispute Resolution Procedures*

This module describes the purpose of the objection and dispute resolution mechanisms, the grounds for lodging an objection to a gTLD application, the general procedures for filing or responding to an objection, and the manner in which dispute resolution proceedings are conducted.

This module also discusses the guiding principles, or standards, that each DRSP will apply in its decisions.

All applicants should be aware of the possibility that an objection may be filed against their applications, and of the options available in the event of such an objection.

### *3.1 Purpose and Overview of the Dispute Resolution Process*

---

The independent dispute resolution process is designed to protect certain interests and rights. The process provides a path for formal objections during evaluation of the applications. It allows certain parties with standing to have their objections considered before a panel of qualified experts. A formal objection can be filed only on four enumerated grounds, as described in this module. A formal objection initiates a dispute resolution proceeding. In filing an application for a gTLD, the applicant agrees to accept this gTLD dispute resolution process. Similarly, an objector accepts the gTLD dispute resolution process by filing its objection.

#### *3.1.1 Grounds for Objection*

---

An objection may be filed on any one of the following four grounds:

***String Confusion Objection*** – The applied-for gTLD string is confusingly similar to an existing TLD or to another applied-for gTLD string.

***Legal Rights Objection*** – The applied-for gTLD string infringes existing legal rights of the objector.

***Morality and Public Order Objection*** – The applied-for gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under international principles of law.

**Community Objection** – There is substantial opposition to the gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.

The rationales for these grounds are discussed in the final report of the ICANN policy development process for new gTLDs. For more information on this process, see <http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>.

### 3.1.2 *Standing to Object*

Objectors must satisfy standing requirements to have their objections considered. As part of the dispute proceedings, all objections will be reviewed by panelists designated by the applicable Dispute Resolution Service Provider (DRSP) to determine whether the objector has standing to object. Standing requirements for the four objection grounds are:

Objection Ground	Who may object
String confusion	Existing TLD operator or gTLD applicant in current round
Legal rights	Rightsholders
Morality and Public Order	To be determined
Community	Established institution

#### 3.1.2.1 *String Confusion Objection*

Two types of entities have standing to object:

- An existing TLD operator may file a string confusion objection to assert string confusion between an applied-for gTLD and the TLD that it currently operates.
- Any gTLD applicant in this application round may also file a string confusion objection to assert string confusion between an applied-for gTLD and the gTLD for which it has applied.

In the case where a gTLD applicant successfully asserts string confusion with another applicant, the only possible outcome is for both applicants to be placed in a contention set and to be referred to a contention resolution procedure (refer to Module 4). If an objection by a gTLD applicant to another gTLD applicant is unsuccessful, the applicants may both move forward in the process without being considered in contention with one another.

### 3.1.2.2 *Legal Rights Objection*

Only a rightsholder has standing to file a legal rights objection. The source and documentation of the existing legal rights the objector is claiming are infringed by the applied-for gTLD must be included in the filing.

### 3.1.2.3 *Morality and Public Order Objection*

Standing requirements for morality and public order objections remain under study. In the case of morality and public order objections, it may be appropriate to grant standing only to parties who have recognized authority in the arena of morality or public order, such as governments, or it may be appropriate to make this option available to any interested parties who assert harm due to an applied-for gTLD string.

### 3.1.2.4 *Community Objection*

Established institutions associated with defined communities are eligible to file a community objection. To qualify for standing for a community objection, the objector must prove both of the following:

***It is an established institution*** – Factors that may be considered in making this determination include:

- Level of global recognition of the institution;
- Length of time the institution has been in existence; and
- Public historical evidence of its existence, such as the presence of formal charter or national or international registration, or validation by a government, inter-governmental organization, or treaty. The institution must not have been established solely in conjunction with the gTLD application process.

***It has an ongoing relationship with a defined community that consists of a restricted population*** – Factors that may be considered in making this determination include:

- The presence of mechanisms for participation in activities, membership, and leadership;
- Institutional purpose related to benefit of the associated community;
- Performance of regular activities that benefit the associated community; and
- The level of formal boundaries around the community.

### *3.1.3 Options in the Event of Objection*

---

Applicants whose applications are the subject of an objection have the following options:

The applicant can file a response to the objection and enter the dispute resolution process (refer to subsection 3.3); or

The applicant can withdraw, in which case the objector will prevail by default and the application will not proceed further.

If for any reason the applicant does not file a response to an objection, the objector will prevail by default.

## *3.2 Procedure for Filing an Objection*

---

To trigger a dispute resolution proceeding, an objection must be filed by the posted deadline date. Objections must be filed directly with the appropriate DRSP for each objection ground.

The **International Centre for Dispute Resolution** has agreed in principle to administer disputes brought pursuant to string confusion objections.

The **Arbitration and Mediation Center of the World Intellectual Property Organization** has agreed in principle to administer disputes brought pursuant to legal rights objections.

The **International Chamber of Commerce** has agreed in principle to administer disputes brought pursuant to Morality and Public Order and Community Objections.

### *3.2.1 Objection Filing Procedures*

---

The procedures outlined in this subsection must be followed by any party wishing to file a formal objection to an application that has been posted by ICANN. These procedures are provided to applicants for reference and are intended to cover dispute resolution procedures generally. Each provider has its own rules and procedures that also must be followed when filing an objection.

Should an applicant wish to file a formal objection to another gTLD application, it would follow these procedures.

- All objections must be filed by the posted deadline date. Objections will not be accepted by the DRSPs after this date.

- All objections must be filed in English.
- Each objection must be filed separately. That is, if any objector wishes to object to several applications at the same time, the objector must file an objection and pay a filing fee for each application that is the subject of an objection. If an objector wishes to object to one application on different grounds, the objector must file an objection and pay a filing fee for each objection ground.
- All objections must be filed with the appropriate DRSP. If an objection is filed with a DRSP other than the DRSP specified for the objection ground, that DRSP will promptly notify the objector of the error. The objector then has 5 calendar days after receiving that notification to file its objection with the appropriate DRSP.
- Objections must be filed electronically and all interactions with the DRSPs during the objection process must be conducted online.

Each objection filed by an objector must include:

- The name and contact information, including address, phone, and email address, of all parties submitting an objection.
- The basis for standing; that is, why the objector believes it has the right to object.
- A statement of the nature of the dispute, which should include:
  - A statement giving the specific ground under which the objection is being filed.
  - A detailed explanation of how the objector's claim meets the requirements for filing a claim pursuant to that particular ground or standard.
  - A detailed explanation of the validity of the objection and why the application should be denied.
- Copies of any documents that the objector considers to be a basis for the objection.

Objections are limited to 2500 words, excluding attachments.

The DRSP will use electronic means to deliver copies of all materials filed to the applicant and to all objectors.

Each applicant and all objectors must provide copies of all submissions to the DRSP associated with the objection proceedings to one another, and to ICANN.

ICANN will publish a document on its website identifying all objections shortly after the deadline for filing objections has passed (refer to Item 1 above). Objections will not be published before that deadline.

### ***3.2.2 Objection Filing Fees***

---

At the time an objection is filed, the objector is required to pay a nonrefundable filing fee in the amount set and published by the relevant DRSP. If the filing fee is not paid, the DRSP will dismiss the objection without prejudice. See Section 1.5 of Module 1 regarding fees.

## ***3.3 Filing a Response to an Objection***

---

### ***3.3.1 Filing Procedures***

---

These procedures are intended to cover dispute resolution procedures generally. Each DRSP will have its own rules that also must be followed.

Upon notification that ICANN has published the list of objections filed (refer to subsection 3.2.1), the DRSPs will notify the parties that responses must be filed within 30 calendar days of receipt of that notice. DRSPs will not accept late responses. Any applicant that fails to respond to an objection within the 30-day response period will be in default, which will result in the objector prevailing.

- All responses must be filed in English.
- Each response must be filed separately. That is, if an applicant wishes to respond to several objections, the applicant must file a response and pay a filing fee to respond to each objection.
- All responses must be filed with the appropriate DRSP. If a response is filed with a DRSP other than the DRSP specified for the objection ground, that DRSP will promptly notify the applicant of the error. The applicant then has 5 calendar days after receiving the notification to file its objection with the appropriate DRSP.

- Responses must be filed electronically and all interactions with the DRSPs during the dispute resolution process must be conducted online.
- Each response filed by an applicant must include the name and contact information, including address, phone, and email address, of all parties submitting the response.
- Each responding applicant's response must contain a point-by-point confirmation or denial of the claims made by each objector. The applicant also should attach any copies of documents that it considers to be a basis for the response.
- Responses are limited to 2500, excluding attachments.
- The DRSP will use electronic means to deliver copies of all materials filed to the applicant and to all objectors.
- Each applicant and all objectors must provide copies of all submissions to the DRSP associated with the objection proceedings to one another and to ICANN.

### ***3.3.2 Response Filing Fees***

---

At the time an applicant files its response, it is required to pay a nonrefundable filing fee in the amount set and published by the relevant DRSP, which will be the same as the filing fee paid by the objector. If the filing fee is not paid, the response will be disregarded.

## ***3.4 Dispute Resolution Procedure***

---

### ***3.4.1 Preliminary Objection Processing***

---

Each DRSP will conduct an administrative review of each objection for compliance with all procedural rules within 14 calendar days of receiving the objection. Depending on the number of objections received, the DRSP may ask ICANN for a short extension of this deadline.

If the DRSP finds that the objection complies with procedural rules, the objection will be deemed filed, and the proceedings will continue. If the DRSP finds that the objection does not comply with procedural rules, the DRSP will dismiss the objection and close the proceedings without prejudice to the objector's submission of a new objection that complies with procedural rules. The DRSP's review or rejection of the objection will not interrupt the time limit for submitting an objection.

### ***3.4.2 Consolidation of Objections***

---

Once the DRSP receives and processes all objections, at its discretion the DRSP may elect to consolidate certain objections.

An example of circumstances in which consolidation might occur is multiple objections to the same application based on the same ground.

In assessing whether to consolidate objections, the DRSP will weigh the efficiencies in time, money, effort, and consistency that may be gained by consolidation against the prejudice or inconvenience consolidation may cause. The DRSPs will endeavor to have all objections resolved on a similar timeline. It is intended that no sequencing of objections will be established.

New gTLD applicants and objectors also will be permitted to propose consolidation of objections, but it will be at the DRSP's discretion whether to agree to the proposal.

### ***3.4.3 Negotiation and Mediation***

---

The parties to a dispute resolution proceeding are encouraged—but not required—to participate in a cooling off period to determine whether the dispute can be resolved by the parties. Each DRSP has panelists who can be retained as mediators to facilitate this process, should the parties elect to do so, and the DRSPs will communicate with the parties concerning this option and any associated fees.

If a mediator is appointed, that person may not serve on the panel to resolve the objection.

There are no automatic extensions of time associated with any cooling off period. The parties may submit joint requests for extensions of time to the DRSP according to its procedures, and the DRSP or the panel, if appointed, will decide whether to grant the requests, although extensions will be discouraged. The parties must limit their requests for extension to 30 calendar days.

### ***3.4.4 Selection and Number of Panelists***

---

Appropriately qualified panelists will be appointed to each proceeding by the designated DRSP.

Panelists must be independent of the parties to an objection resolution proceeding. Each DRSP will follow its adopted procedures for requiring such independence,

including procedures for challenging and replacing a panelist for lack of independence.

There will be one panelist in proceedings involving a **string confusion objection**.

There will be one panelist with relevant experience in intellectual property rights disputes in proceedings involving an existing **legal rights objection**.

There will be three panelists recognized as eminent jurists of international reputation, in proceedings involving a **morality and public order objection**.

There will be one panelist in proceedings involving a **community objection**.

Neither the panelists, the DRSP, ICANN, nor their respective employees, Board members, or consultants will be liable to any party in any action for damages or injunctive relief for any act or omission in connection with any proceeding under the dispute resolution procedures.

#### **3.4.5 Adjudication**

---

At its discretion, the panel appointed by the DRSP may request further statements or documents from the parties, although such requests will be limited and infrequent.

To keep costs down and limit delays, the panel will discourage and, if practicable, not permit any document production or other discovery-style requests from the parties.

Without its being requested by the parties, the panelists may appoint experts to be paid for by the parties, request live or written witness testimony, or request limited exchange of documents.

Any party may request a hearing; however, it is within the panel's discretion whether to allow such a hearing. The presumption is that the panel will render decisions based on written submissions and without a hearing.

If a request for a hearing is granted, videoconferences are to be used if possible. If not possible, then the DRSP panel will select a place for hearing if the parties cannot agree. The panel will determine whether the hearings are to be public or private. Hearings will last no more than one day, except in the most exceptional circumstances.

Typically, dispute resolution proceedings will be conducted in English, but may be conducted in another language in accordance with the rules of the provider.

### 3.4.6 *Decision*

---

The DRSPs' final decisions will be in writing and will include:

- A summary of the dispute and findings; and
- The reasoning upon which the decision is based.

Each DRSP will develop a single format for all final decisions that its panelists render. The DRSP will notify the parties of the decision via email.

ICANN will strongly encourage DRSPs to use reasonable efforts to issue all final decisions within 45 days of the panel appointment date unless, after both parties have completed their initial submissions, the parties jointly request a short postponement of their adjudication date to accommodate negotiation or mediation or to accommodate other aspects of the proceedings, and the panel agrees.

When the panel is composed of three panelists, the decision will be made by a majority of the panelists.

Unless the panel decides otherwise, each DRSP will publish all decisions rendered by its panels in full on its website.

A dispute resolution panel decision will be considered an expert determination, and will be considered by ICANN in making a final decision regarding the success of any application.

### 3.4.7 *Dispute Resolution Fees*

---

Before acceptance of objections, each DRSP will publish a schedule of costs for the proceedings that it administers under this procedure. These costs cover the fees and expenses of the members of the panel and the DRSP's administrative costs.

ICANN expects that string confusion and legal rights objection proceedings will involve a fixed amount charged by the panelists while morality and public order and community objection proceedings will involve hourly rates charged by the panelists.

Within 7 business days of constituting the panel, the DRSP will estimate the total costs and request advance payment in full of its costs from both the objector and the applicant.

Each party must make its advance payment within 15 calendar days of receiving the DRSP's request for payment. The respective filing fees paid by the parties will be credited against the amounts due for this advance payment of costs.

The DRSP may revise its estimate of the total costs and request additional advance payments from the parties during the resolution proceedings.

Additional fees may be required in specific circumstances; for example, if the DRSP receives supplemental submissions or elects to hold a hearing.

If an objector fails to pay these costs in advance, the DRSP will dismiss its objection and no fees paid by the objector will be refunded.

If an applicant fails to pay these costs in advance, the DRSP will sustain the objection and no fees paid by the applicant will be refunded.

After the hearing has taken place and the panel renders its decision, the DRSP will refund any costs paid in advance to the prevailing party.

### ***3.5 Dispute Resolution Principles (Standards)***

---

Each panel will use appropriate general principles (standards) to evaluate the merits of each objection. The principles for adjudication on each type of objection are specified in the paragraphs that follow. The panel may also refer to other relevant rules of international law in connection with the standards.

The objector bears the burden of proof in each case.

The principles outlined below are subject to evolution based on ongoing consultation with DRSPs, legal experts, and the public.

#### ***3.5.1 String Confusion Objection***

---

A DRSP panel hearing a string confusion objection will consider whether the applied-for gTLD string is likely to result in string confusion.

String confusion exists where a string so nearly resembles another that it is likely to deceive or cause confusion. For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the

average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

### 3.5.2 *Legal Rights Objection*

---

In interpreting and giving meaning to GNSO Recommendation 3 (“Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law”), a DRSP panel presiding over a legal rights objection will determine whether the potential use of the applied-for TLD by the applicant takes unfair advantage of the distinctive character or the reputation of the objector’s trademark or service mark (“mark”), or unjustifiably impairs the distinctive character or the reputation of the objector’s mark, or otherwise creates an impermissible likelihood of confusion between the applied-for TLD and the objector’s mark, by considering the following non-exclusive factors:

1. Whether the applied-for TLD is identical or similar, including in appearance, phonetic sound or meaning, to the objector’s existing mark.
2. Whether the objector’s acquisition and use of rights in the mark has been bona fide.
3. Whether and to what extent there is recognition in the relevant sector of the public of the sign corresponding to the TLD, as the mark of the objector, of the applicant or of a third party.
4. Applicant’s intent in applying for the TLD, including whether the applicant, at the time of application for the TLD, had knowledge of the objector’s mark, or could not have reasonably been unaware of that mark, and including whether the applicant has engaged in a pattern of conduct whereby it applied for or operates TLDs or registrations in TLDs which are identical or confusingly similar to the marks of others.
5. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the TLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise by the objector of its mark rights.
6. Whether the applicant has marks or other intellectual property rights in the sign corresponding to the TLD,

and, if so, whether any acquisition of such a right in the sign, and use of the sign, has been bona fide, and whether the purported or likely use of the TLD by the applicant is consistent with such acquisition or use.

7. Whether and to what extent the applicant has been commonly known by the sign corresponding to the TLD, and if so, whether any purported or likely use of the TLD by the applicant is consistent therewith and bona fide.
8. Whether the applicant's intended-use of the TLD would create a likelihood of confusion with the objector's mark as to the source, sponsorship, affiliation, or endorsement of the TLD.

### ***3.5.3 Morality and Public Order Objection***

---

This section is under construction. ICANN expects to implement a standard for morality and public order objections in accordance with international legal principles. Accordingly, ICANN has reviewed legal systems in all ICANN regions. ICANN has also consulted with judges, attorneys, and legal experts in many jurisdictions. The general principles guiding ICANN in the establishment of dispute resolution standards are: (1) everyone has the right to freedom of expression; and (2) such freedom of expression may be subject to certain narrowly interpreted exceptions that are necessary to protect other important rights. See Articles 19 and 20 of the International Covenant on Civil and Political Rights. ICANN continues to address the challenge of identifying standards appropriate for the global namespace.

### ***3.5.4 Community Objection***

---

The four tests described here will enable a DRSP panel to determine whether there is substantial opposition from a significant portion of the community to which the string may be targeted. For an objection to be successful, the objector must prove that:

- The community invoked by the objector is a defined community; and
- Community opposition to the application is substantial; and
- There is a strong association between the community invoked and the applied-for gTLD string; and

- There is a likelihood of detriment to the community named by the objector if the gTLD application is approved.

Each of these tests is described in further detail below.

**Community** – The objector must prove that the community expressing opposition can be regarded as a well-defined community. A panel could balance a number of factors to determine this, including:

- Level of public recognition of the group as a community at a local and / or global level;
- Level of formal boundaries around the community and what elements are considered to form the community;
- How long the community has been in existence;
- How globally distributed is the community (breadth, level of importance)(this may not apply if the community is territorial); and
- How many people make up the community.

If opposition by a number of people is found, but the group claiming opposition is not determined to be a distinct community, the objection will fail.

**Substantial opposition** – The objector must prove substantial opposition within the community it has identified. A panel could balance a number of factors to determine whether there is substantial opposition, including:

- Number of expressions of opposition relative to the composition of the community;
- Distribution or diversity among sources of expressions of opposition, including:
  - Regional
  - Subsectors of community
  - Leadership of community
  - Membership of community
- Nature/intensity of opposition; and
- Costs incurred by objector in expressing opposition, including what other channels they have used to convey their opposition.

If some opposition within the community is determined, but it does not meet the standard of substantial opposition, the objection will fail.

**Targeting** – The objector must prove an association between the applied-for gTLD string and the community expressing opposition. Factors that could be balanced by a panel to determine this include:

- Statements contained in application;
- Other public statements by the applicant;
- Associations by the public.

If opposition by a community is determined, but there is no clear connection between the community and the applied-for gTLD string, the objection will fail.

**Detriment** – The objector must prove that there is a likelihood of detriment to the rights or legitimate interests of its associated community. Factors that could be used by a panel in making this determination include:

- Damage to the reputation of the community that would result from the applicant's operation of the applied-for gTLD string;
- Evidence that the applicant is not acting or does not intend to act in accordance with the interests of the community;
- Interference with the core activities of the community that would result from the applicant's operation of the applied-for gTLD string; and
- Dependence of the community on the DNS for its core activities.

**Defenses** – Satisfaction of the standing requirements for filing a Community Objection (refer to paragraph 3.1.2.4) by the applicant is a complete defense to an objection filed on community grounds.

# DRAFT - New gTLD Program – Objection and Dispute Resolution

An applicant may face anywhere from zero objections to multiple objections in any of the four areas

Objection filing phase opens

Party with standing files objection directly with DRSP for these grounds:

- **String Confusion**
- **Legal Rights**
- **Morality and Public Order; and/or**
- **Community**

Objector pays filing fee directly to DRSP

Objection filing phase closes

Applicant responds to objection by paying filing fee and responding to claims made by objector

Once the DRSPs receive all objections, at their discretion, the DRSPs may elect to consolidate certain objections if there are multiple objections to the same application based on the same ground

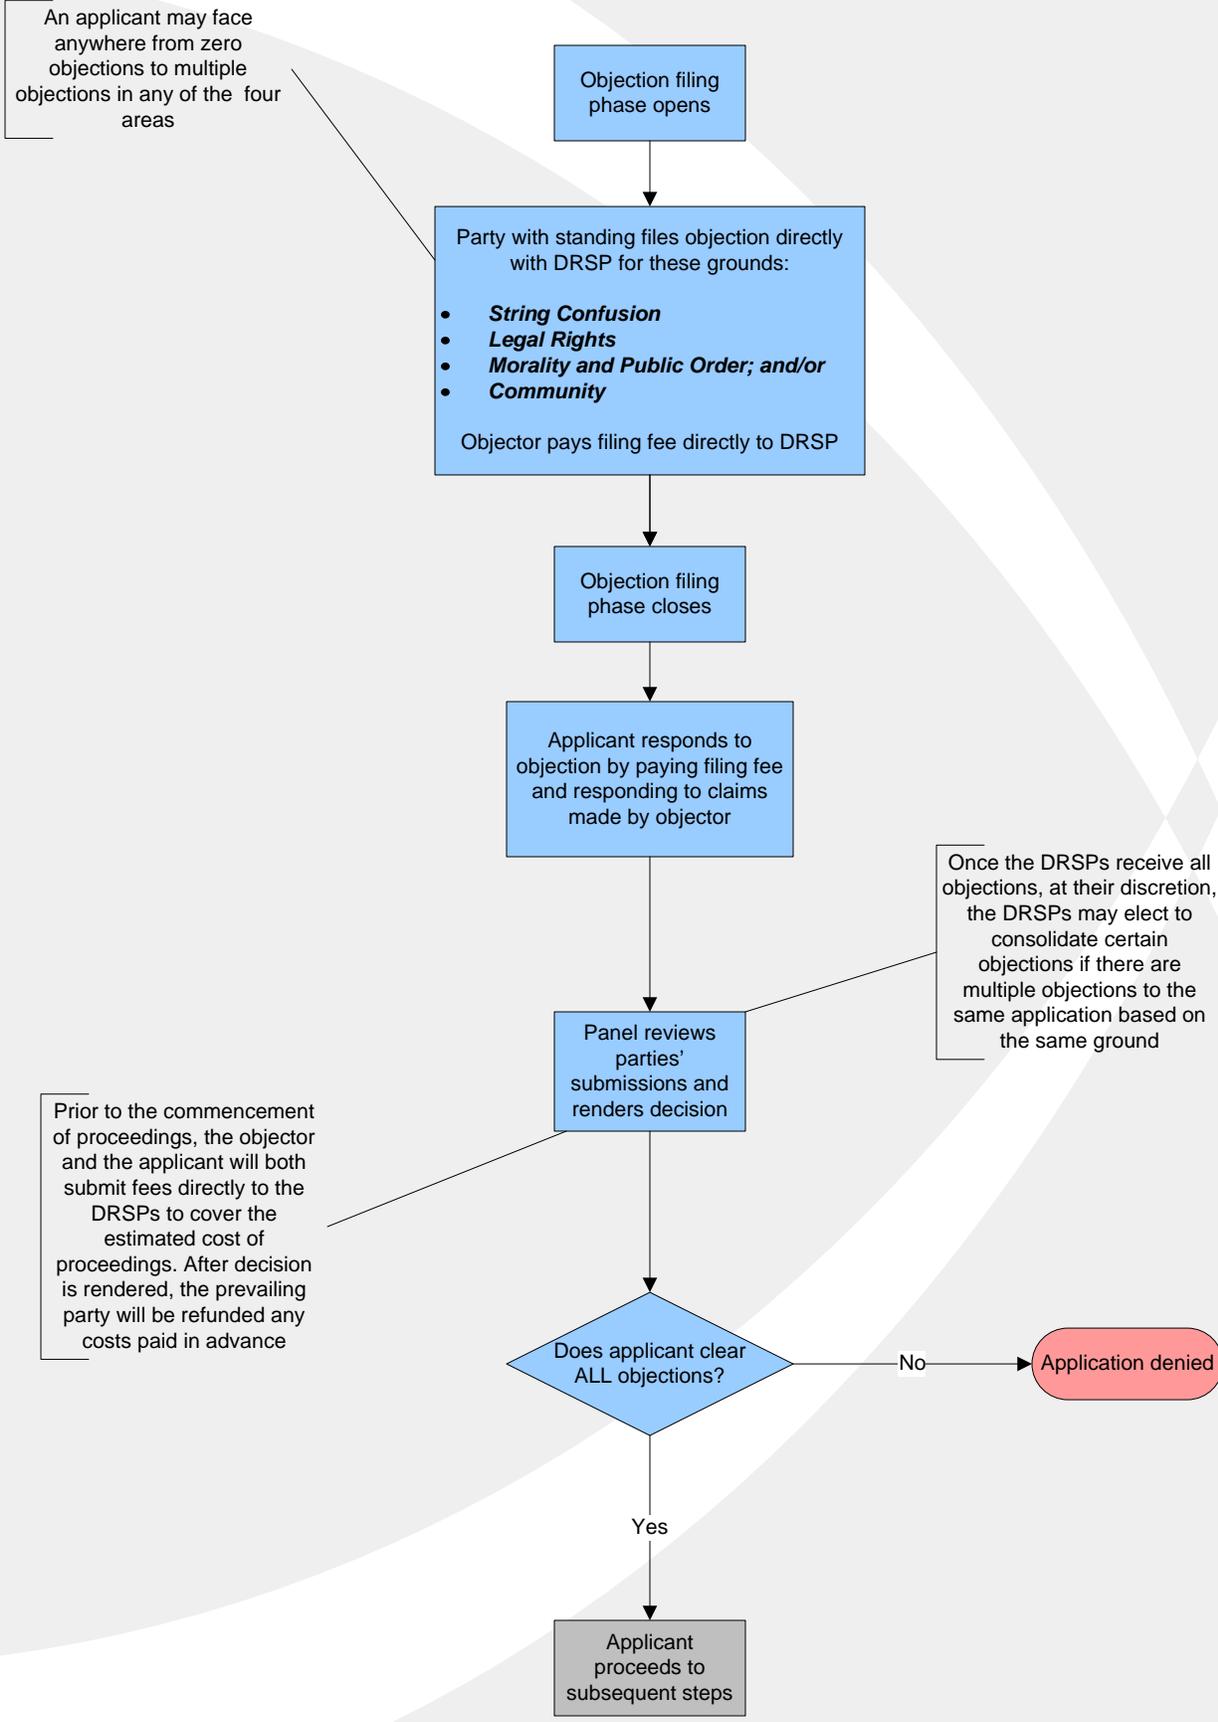

Panel reviews parties' submissions and renders decision

Prior to the commencement of proceedings, the objector and the applicant will both submit fees directly to the DRSPs to cover the estimated cost of proceedings. After decision is rendered, the prevailing party will be refunded any costs paid in advance

Does applicant clear ALL objections?

No → Application denied

Yes → Applicant proceeds to subsequent steps

# Draft Applicant Guidebook

## Module 4

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

---

# Module 4

---

## *String Contention Procedures*

This module describes situations in which contention over applied-for gTLD strings occurs, and the two methods available to applicants for resolving such contention cases.

### *4.1 String Contention*

---

String contention occurs when either:

1. Two or more applicants for an identical gTLD string successfully complete all previous stages of the evaluation and dispute resolution processes; or
2. Two or more applicants for similar gTLD strings successfully complete all previous stages of the evaluation and dispute resolution processes, and the similarity of the strings is identified as creating a probability of user confusion if more than one of the strings is delegated.

ICANN will not approve applications for proposed gTLD strings that are identical or that would result in string confusion, called contending strings. If either situation 1 or 2 above occurs, such applications will proceed to contention resolution through either comparative evaluation or an efficient mechanism for contention resolution, both of which are described in this module. A group of applications for contending strings is referred to as a contention set.

#### *4.1.1 Identification of Contention Sets*

---

Contention sets are groups of applications containing identical or similar applied-for gTLD strings. (In this RFP, “similar” means strings so similar that it is probable that detrimental user confusion would result if the two similar gTLDs are delegated into the root zone.) Contention sets are identified during Initial Evaluation from review of all applied-for TLD strings by the panel of String Similarity Examiners. ICANN will publish contention sets by the close of the Initial Evaluation period.

Applications for identical gTLD strings will be automatically assigned to a contention set. For example, if Applicant A and Applicant B both apply for .TLDSTRING, they will be

identified as being in a contention set. Such testing for identical strings also takes into consideration the code point variants listed in any relevant language reference table.

The String Similarity Examiners will also review the entire pool of applied-for strings to determine whether the strings proposed in any two or more applications are so similar that they would create a probability of user confusion if allowed to coexist in the DNS. The panel will make such a determination for each pair of applied-for gTLD strings. The outcome of the String Confusion Review described in subsection 2.1.1 is the identification of contention sets among applications that have direct or indirect contention relationships with one another.

Two strings are in **direct contention** if they are identical or so similar that there is a probability of user confusion if both were to be delegated as TLDs in the root zone. More than two applicants might be represented in a direct contention situation: if four different applicants applied for the same gTLD string, they would all be in direct contention with one another.

Two strings are in **indirect contention** if they are both in direct contention with a third string, but not with one another. Direct and indirect contention are explained in greater detail in the example that follows.

In Figure 4-1, Strings A and B are an example of direct contention. Strings C and G are an example of indirect contention. C and G both contend with B, but not with one another. The figure as a whole is one contention set. A contention set consists of all applications that are linked by string contention to one another, directly or indirectly.

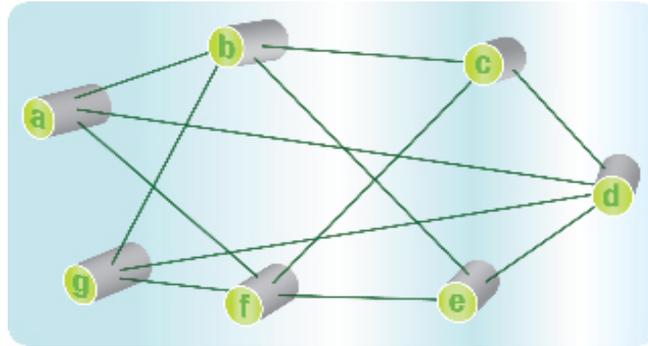

Figure 4-1 – This diagram represents one contention set, featuring both directly and indirectly contending strings.

While contention sets are determined during Initial Evaluation, the final configuration of the contention sets can only be established once the evaluation and dispute resolution process steps have concluded. This is because any application excluded through those steps might modify a contention set identified earlier. A contention set may be split into two sets or it may be eliminated altogether as a result of an Extended Evaluation or dispute resolution proceeding.

Refer to Figure 4-2: In contention set 1, applications D and G are eliminated. Application A is the only remaining application, so there is no contention left to resolve.

In contention set 2, all applications successfully complete Extended Evaluation and Dispute Resolution, so the original contention set remains to be resolved.

In contention set 3, application F is eliminated. Since application F was in direct contention with E and J, but E and J are not in contention with one other, the original contention set splits into two sets: one containing E and K in direct contention, and one containing I and J.

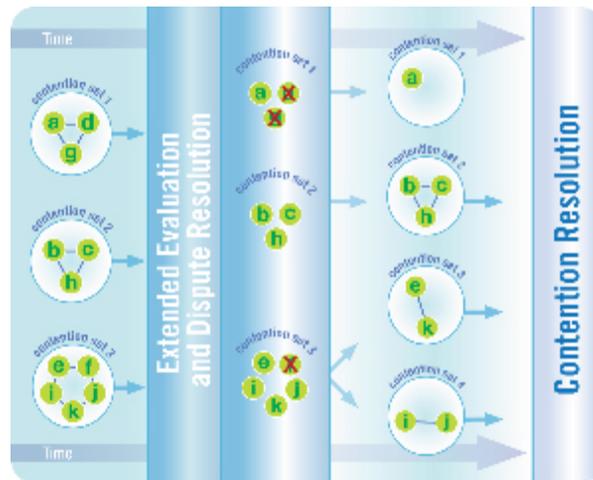

Figure 4-2 – Resolution of string contention cannot begin until all applicants within a contention set have completed all applicable previous stages.

The remaining contention cases must then be resolved through comparative evaluation or an efficient mechanism for contention resolution, depending on the circumstances. In this process, ICANN addresses each contention set to achieve an unambiguous resolution.

In their policy advice, the GNSO called for an efficient process to resolve cases of contention where there was no claim of community representation to be used as a factor for resolving the contention. While not settled, candidate means for this process are discussed below and in more detail in a companion paper to the Draft Applicant Guidebook called “Resolving string contention—a complete lifecycle including string contention resolution.”

#### 4.1.2 Impact of Dispute Resolution Proceedings on Contention Sets

If an applicant files a string confusion objection against another applicant (refer to Module 3), and the panel does find that string confusion exists; that is, rules in favor of the objector, the two applicants will be placed in direct contention with each other. Thus, the outcome of a proceeding based on a string confusion objection would result in a new contention set structure for the relevant applications.

### 4.1.3 Self-Resolution of String Contention

Applicants that are identified as being in contention may elect to reach a settlement or agreement among themselves whereby one or more applicants withdraws its application. This may occur at any stage of the process, once ICANN publicly posts the applications received on its website.

Applicants may not resolve a case of string contention by changing their applications by, for instance, selecting a new TLD string or creating a joint venture as a means to resolve the contention case.

### 4.1.4 Possible Contention Resolution Outcomes

Any application with no contention situation left to resolve is allowed to proceed to the next step. In some cases, an applicant who is not the outright winner of a string contention resolution process can still proceed. This situation is explained in the following paragraphs.

There may be more than one application that passes contention resolution within a contention set. If the strings within a given contention set are all identical, the applications are in direct contention with each other and there can only be one winner that proceeds to the next step.

However, where there are both direct and indirect contention situations within a set, more than one string may survive the resolution.

For example, if string A is in contention with B, B is in contention with C, but C is not in contention with A. If A wins the contention, B is eliminated but C can go on since C is not in direct contention with the winner and both strings can coexist in the DNS without risk for confusion.

## 4.2 Comparative Evaluation

Comparative evaluation can begin once all applicants in the contention set have completed all previous stages of the process.

The comparative evaluation is an independent analysis. Scores received in the applicant reviews are not carried forward to the comparative evaluation. Each applicant participating in the comparative evaluation begins with a score of zero.

#### 4.2.1 Eligibility for Comparative Evaluation

As described in subsection 1.2.2 of Module 1, all applicants are required to identify whether their application type is:

- Open; or
- Community-based.

Only community-based applicants may elect a comparative evaluation. ICANN policy states that if there is contention for strings, a claim to support a community by one party will be a reason to award priority to that application. If one community-based applicant within a contention set makes this election, all other community-based applicants in the same contention set will be part of the comparative evaluation.

Applicants designating their applications as community-based will also be asked to respond to a set of questions in the application form that would provide relevant information if a comparative evaluation occurs.

Before the comparative evaluation begins, all community-based applicants in the contention set may be asked to provide additional information relevant to the comparative evaluation. Additionally, the community-based applicants will be required to pay a Comparative Evaluation Fee (refer to Section 1.5 of Module 1) to participate in the comparative evaluation.

#### 4.2.2 Comparative Evaluation Procedure

Comparative evaluations for each contention set will be performed by a comparative evaluation provider appointed by ICANN to review all applications for contending gTLD strings. The panel's charter is to determine whether one of the community-based applications clearly and demonstrably would add more value to the Internet's Domain Name System. Open applicants within the contention set will not participate in the comparative evaluation.

If no single community-based applicant emerges as one that clearly and demonstrably adds more value to the namespace than all the competing contending applications, then all of the parties in the contention set (both open and community-based applicants) will proceed to an alternate mechanism for efficient contention resolution.

### 4.2.3 Comparative Evaluation Criteria

A panel appointed by the comparative evaluation provider will review and score the one or more community-based applicants who elected comparative evaluation against the criteria in the following table:

Criteria	Score		
	3	2	1
<b>Nexus between Proposed String and Community</b>	String is name or well-known abbreviation of community institution.	String is relevant to applicant's area of interest but also has other well-known associations.	No connection.
<b>Dedicated Registration Policies</b>	Registration eligibility is strictly limited to members of the pre-established community identified in the application. Registration policies also include name selection and use requirements consistent with the articulated scope and community-based nature of the TLD. Proposed policies include specific enforcement measures including investigation practices, penalties, takedown procedures and appeal mechanisms.	Registration eligibility is predominantly available to members of the pre-established community identified in the application, and also permits people or groups informally associated with the community to register. Policies include some elements of the above but one or more elements are missing.	No dedicated registration policies.
<b>Community Establishment</b>	Clearly identified, organized and pre-established community of considerable size and longevity.	The community addressed fulfills some but not all the requirements for a score of 3.	No community addressed.
<b>Community Endorsement</b>	Endorsement by a recognized institution or by member organizations.	Endorsement by some groups with apparent relevance, but also some opposition by groups with apparent relevance.	Assorted endorsements from individuals or groups of unknown relevance – or – no endorsement by any community.

If no applicant scores 11 or more, there is no clear winner. If only one applicant scores 11 or more, that applicant will be declared the winner.

If more than one applicant scores 11 or more, the evaluators will consider what portion of the community is represented by the application. *If one applicant represents*

*a much larger share of the relevant community than another, that will be a basis for awarding priority.*

Following the comparative evaluation, ICANN will review the results and reconfigure the contention set as needed. The same procedure will occur for remaining contention sets involving any community-based application that has elected comparative evaluation. If no community-based applicant that has elected comparative evaluation is left in the contention set, any applications remaining in contention will proceed to a subsequent contention resolution process. Applications not in contention will proceed toward delegation.

### ***4.3 Efficient Mechanism for Contention Resolution***

---

A tie-breaker mechanism will be developed for resolving string contention among the applicants within a contention set, if the contention has not been resolved by other means. Unless the specific conditions for comparative evaluation outlined in Section 4.2 apply, this mechanism will be used to resolve the contention. This mechanism may also be used if no clear winner is identified during the comparative evaluation process.

The GNSO policy recommendations call for an efficient means of resolution. Continued investigation regarding the availability of alternative methods will guide ICANN's development of this mechanism.

The first efficient means of resolution that will be employed is a settlement arrived at by contending parties. Applicants for identical or similar TLDs can arrive at an accommodation where all in direct contention withdraw except for one. As described earlier, those withdrawing cannot apply for a new string. Nor can contending parties combine to form a new applicant. It is expected that many cases of contention will be resolved in this manner as it will be the most efficient and economical for the contending parties.

Failing to arrive at accommodation of the type described just above, auctions are one means of last resort that is being explored to resolve the contention. The purpose of an auction is to resolve contention in a clear, objective manner.

**Auction proceeds** – The purpose of an auction is to resolve contention in a clear, objective manner. It is not to raise revenue. While there may be significant proceeds from auctions in the event they occur, it is important to understand that this in no way the purpose of the auction. The annual budget process sets ICANN’s funding and spending limits. ICANN has no authorization to spend beyond the budget. ICANN already has precedent of returning revenue to the community when last year and in 2006 ICANN reduced registration fees from 25¢ to 20¢ over two years as a result of an unforeseen growth in revenue. Proceeds from auctions will be reserved until the uses of the proceeds are determined through a community consultation. The proceeds will not go into ICANN’s general expense budget but will be separately earmarked for projects or uses identified by the community. This important aspect of the auction process and its result will be an important part of the communications plan for the new gTLD program.

The new gTLD application fee is designed to be cost/revenue neutral. It factors in costs already forgone, future processing costs and legal expenses that are significant and would be a large drain on the Corporation’s established budget.

See further details on the exploration of an auction model in the contention lifecycle at <http://www.icann.org/en/topics/string-contention-22oct08.pdf>.

In practice, ICANN expects that most contention cases will be resolved through other means before reaching this stage.

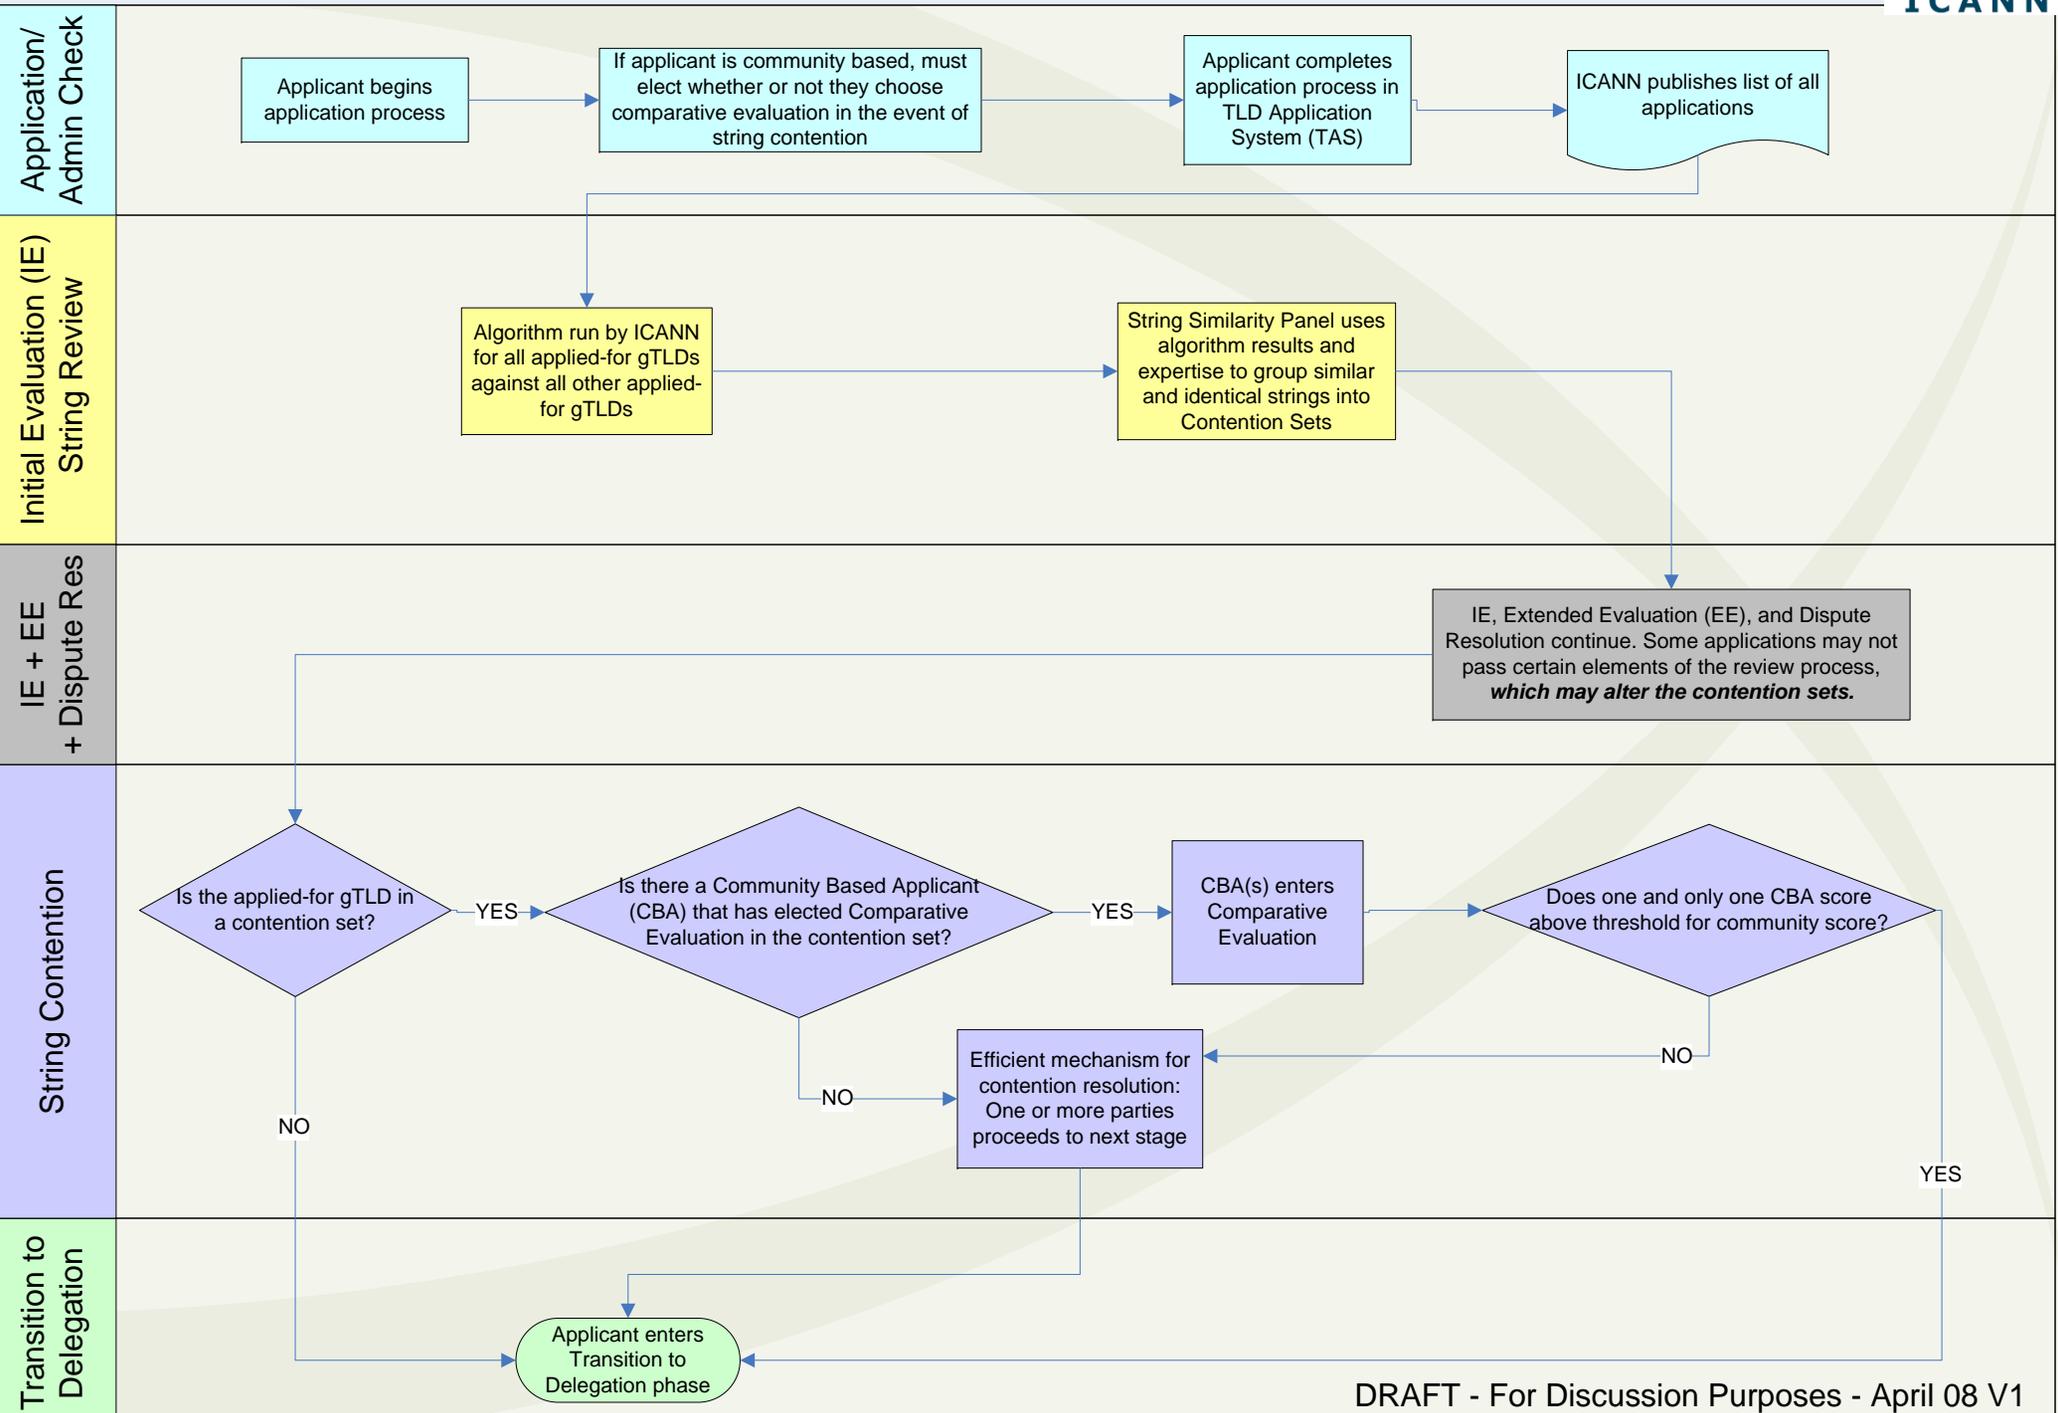

#### ***4.4 Contention Resolution and Contract Execution***

---

An applicant that has been declared winner of a contention resolution process will proceed by entering into the contract execution phase. (Refer to section 5.1 of Module 5.)

If the winner of the contention resolution has not executed a contract within 90 days of the decision, ICANN has the right to extend an offer to the runner-up applicant to proceed with its application. For example, in a comparative evaluation, the applicant with the second-

highest score (if equal to or greater than eleven, might be selected to go on to the next step, delegation. (Refer to Module 5.) Similarly, in an efficient mechanism for contention resolution, another applicant who would be considered the runner-up applicant might proceed to the delegation step. This offer is at ICANN's option only. The runner-up applicant in a contention resolution process has no automatic right to an applied-for gTLD string if the first place winner does not execute a contract within a specified time.

# Draft Applicant Guidebook

## Module 5

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

---

# Module 5

---

## *Transition to Delegation*

This module describes the final steps required of an applicant, including execution of a registry agreement with ICANN and preparing for delegation of the new gTLD string into the root zone.

### *5.1 Registry Agreement*

---

All applicants that have successfully completed the evaluation process—including, if necessary, the dispute resolution and string contention processes—are required to enter into a registry agreement with ICANN in order to proceed to delegation.

It is important to note that the agreement referred to below does not constitute a formal position by ICANN and has not been approved by the ICANN Board of Directors. The agreement is set out here for review and community discussion purposes and as a means to improve the effectiveness of the agreement in providing for increased competition and choice for consumers in a stable, secure DNS.

The contract terms can be reviewed at <http://www.icann.org/en/topics/new-gtld-draft-agreement-24oct08-en.pdf>. All successful applicants are expected to enter into the agreement substantially as written. The terms of the contract and, in particular, differences with existing registry agreements are explained in a companion paper to the agreement, *Summary of Changes to Base Agreement for New gTLDs*, <http://www.icann.org/en/topics/new-gtld-draft-summary-changes-24oct08-en.pdf>.

After an applicant has successfully completed the application process, ICANN may conduct a pre-contract review. To ensure that an applicant continues to be a going concern in good legal standing, ICANN reserves the right to ask the applicant to submit updated documentation and information before entering into the registry agreement.

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or

inaccurate, the applicant must promptly notify ICANN and submit updated information. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

## **5.2 Pre-Delegation Testing**

---

Following completion of the Board review, each applicant will be required to complete pre-delegation steps as a prerequisite to entering the IANA process for delegation into the root zone. The pre-delegation check must be completed within the time period specified in the registry agreement.

### **5.2.1 Technical Testing**

---

The purpose of the pre-delegation technical test is to verify the applicant has met its commitment to establish registry operations in accordance with the technical and operational criteria described, along with the applicant questions. (Refer to Module 2.) The checks are also intended to ensure that the applicant can operate the gTLD in a stable and secure manner. All applicants will be tested on a pass/fail basis according to the questions and criteria that follow.

Question	Criteria
<b>1</b>	<b>IDN (variant) tables</b>
If applicant will be supporting IDNs, was the IDN table attached to the application when originally submitted and does it fulfill IDN and IANA guidelines and requirements?	IDN tables must be developed and provided by the IDN string applicant at the time the application was submitted. The table must fulfill the requirements from the IDN Guidelines as well as the IANA repository requirements in order to be considered valid (see <a href="http://iana.org/procedures/idn-repository.html">http://iana.org/procedures/idn-repository.html</a> ).
<b>2</b>	<b>DNSSEC keys, materials</b>
If DNSSEC is offered as part of registry services at time of application, can applicant comply with requirements?	Trust anchor for the registry will be published in the IANA Interim Trust Anchor Repository. Validity will be determined by verifying that DNS resolvers that support DNSSEC can successfully retrieve and DNSSEC validate information from that zone when configured with the published trust anchor for the zone.
<b>3</b>	<b>Architecture load requirements</b>
Has the applicant implemented a network architecture necessary to support load characteristics, as outlined in its application?	Applicant will self-certify adherence to this requirement and provide materials to ICANN that demonstrate adherence. Examples of self-certification documents include but are not limited to a network/system diagram of the as-built network system (demonstrating correspondence to documentation in initial application), results of load testing performed by the applicant, and actual performance of the configuration in use for other registries. At ICANN's discretion, aspects of this self-certification documentation can be audited on-site at the services delivery point of the registry.

Question	Criteria
<b>4</b>	<b>IPv6 for registrants</b>
Does registry support provisioning of IPv6 services for its registrants?	Registry must support provisioning of IPv6 services on behalf of its registrants. This means that registrar systems will allow entry of IPv6 addresses in all relevant address fields, that the SRS system is set up to support the communication of IPv6 addresses, and that registry name servers can be provisioned with IPv6 addresses. Applicant will demonstrate successful provisioning of a test account with IPv6 name server entries.
<b>5</b>	<b>IPv6 reachability</b>
Does registry support access to DNS servers over an IPv6 network?	<i>Note: This requirement is under consideration and the community is urged to provide feedback on this requirement.</i> IANA currently has a minimum set of technical requirements for IPv4 name service. These include two nameservers separated by geography and by network topology, which each serve a consistent set of data, and are reachable from multiple locations across the globe. The registry will meet this same criterion for IPv6, requiring IPv6 transport to their network. Applicant will identify IPv6-reachable name servers that meet these requirements, and reachability will be verified by ICANN.
<b>6</b>	<b>Escrow deposit sample</b>
Has the applicant demonstrated the ability to conform to registry escrow requirements? See <a href="http://www.icann.org/en/topics/new-gtld-draft-escrow-spec-24oct-08-en.pdf">http://www.icann.org/en/topics/new-gtld-draft-escrow-spec-24oct-08-en.pdf</a> .	The applicant will provide a conforming sample of a dummy data deposit showing correct type and formatting of content. The applicant will also provide evidence of an agreement with an escrow provider complying with Part B of the Data Escrow Requirements.
<b>7</b>	<b>System monitoring</b>
Has the applicant implemented the system monitoring described by the applicant in the initial application?	Applicant will self-certify adherence to this requirement and provide materials to ICANN that demonstrate adherence. Examples of self-certification documents include but are not limited to: diagrams of monitoring systems (demonstrating correspondence to documentation provided in the application), output of periodic monitoring runs performed by the applicant demonstrating capability claimed in the application, and actual performance of this monitoring set up in use for other registries. At ICANN's discretion, aspects of this self-certification documentation can be audited on-site at the services delivery point of the registry.
<b>8</b>	<b>Registry continuity planning</b>
Has applicant demonstrated capability to comply with ICANN's Registry Continuity Plan? See <a href="http://www.icann.org/registries/failover/icann-registry-failover-plan-15jul08.pdf">http://www.icann.org/registries/failover/icann-registry-failover-plan-15jul08.pdf</a>	Applicant will self-certify adherence to this requirement and provide materials to ICANN that demonstrate adherence. Examples include identification of appropriate contact points and evidence of the registry's own continuity plan, and identification of a registry services continuity provider.
<b>9</b>	<b>System performance requirements</b>
Has applicant demonstrated capability to comply with the performance specifications? See <a href="http://www.icann.org/en/topics/new-gtld-draft-performance-spec-24oct08-en.pdf">http://www.icann.org/en/topics/new-gtld-draft-performance-spec-24oct08-en.pdf</a>	Applicant will self-certify adherence to this requirement and provide materials to ICANN that demonstrate adherence. Examples of self-certification documents include but are not limited to performance and availability results that demonstrate DNS availability at stated levels for at least one month, and Whois service availability for at least one month. At ICANN's discretion, aspects of this self-certification documentation can be audited on-site at the services delivery point of the registry.

### *5.2.2 Additional Requirements*

---

At the pre-delegation stage, an applicant must also provide documentary evidence of its ability to fund ongoing basic registry operations for then-existing registrants for a period of three to five years in the event of registry failure, default or until a successor operator can be designated. This obligation can be met by securing a financial instrument such as a bond or letter of credit (i.e., evidence of ability to provide financial security guaranteed by a creditworthy financial institution); contracting with and funding a services provider to extend services; segregating funding; or other means.

Once an applicant has met the requirements in 5.2.1 and 5.2.2 above, it is eligible to proceed to delegation of its applied-for gTLD string by IANA.

If an applicant does not complete the pre-delegation steps within the time period specified in the registry agreement, ICANN reserves the right to terminate the registry agreement.

### *5.3 IANA Delegation Process*

---

Upon notice of successful completion of the ICANN pre-delegation testing, applicants may initiate the process for delegation of the new gTLD into the root zone database. Information about the delegation process is available at <http://iana.org/domains/root/>.

### *5.4 Ongoing Operations*

---

ICANN will continue to provide support for gTLD registry operators as they launch and maintain registry operations. ICANN's gTLD registry liaison function provides a point of contact for gTLD registry operators for assistance on a continuing basis.

The registry agreement contains a provision for ICANN to perform audits to ensure that the registry operators remain in compliance with agreement obligations.

# Draft Applicant Guidebook

## Module 6

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

24 October 2008

---

# Module 6

---

## *Top-Level Domain Application - Terms and Conditions*

By submitting this application through ICANN's online interface for a generic Top Level Domain (gTLD) (this application), applicant (including all parent companies, subsidiaries, affiliates, agents, contractors, employees and any and all others acting on its behalf) agrees to the following terms and conditions (these terms and conditions) without modification. Applicant understands and agrees that these terms and conditions are binding on applicant and are a material part of this application.

1. Applicant warrants that the statements and representations contained in the application (including any documents submitted and oral statements made in connection with the application) are true and accurate and complete in all material respects, and that ICANN may rely on those statements and representations fully in evaluating this application. Applicant acknowledges that any material misstatement or misrepresentation (or omission of material information) will reflect negatively on this application and may cause ICANN and the evaluators to reject the application.
2. Applicant warrants that it has the requisite organizational power and authority to make this application on behalf of applicant, and is able to make all agreements, representations, waivers, and understandings stated in these terms and conditions and to enter into the form of registry agreement as posted with these terms and conditions.
3. Applicant acknowledges and agrees that ICANN has the right to reject any and all applications for new gTLDs, and that there is no assurance that any additional gTLDs will be created. The decision to proceed with review and consideration of an application to establish one or more gTLDs is entirely at ICANN's discretion. ICANN reserves the right to reject any application that ICANN is prohibited from considering for a gTLD under applicable law or policy, in which case any fees submitted in connection with such application will be returned to the applicant.

4. Applicant agrees to pay all fees that are associated with this application. These fees include the evaluation fee (which is to be paid in conjunction with the submission of this application), and any fees associated with the progress of the application to the extended evaluation stages of the review and consideration process with respect to the application, including any and all fees as may be required in conjunction with the dispute resolution process as set forth in the application. Applicant acknowledges that the initial fee due upon submission of the application is only to obtain consideration of an application. ICANN makes no assurances that an application will be approved or will result in the delegation of a gTLD proposed in an application. Applicant acknowledges that if it fails to pay fees within the designated time period at any stage of the application review and consideration process, applicant will forfeit any fees paid up to that point and the application will be cancelled.
5. Applicant shall indemnify, defend, and hold harmless ICANN (including its affiliates, subsidiaries, directors, officers, employees, consultants, evaluators, and agents, collectively the ICANN Affiliated Parties) from and against any and all third-party claims, damages, liabilities, costs, and expenses, including legal fees and expenses, arising out of or relating to: (a) ICANN's consideration of the application, and any approval or rejection of the application; and/or (b) ICANN's reliance on information provided by applicant in the application.
6. Applicant hereby releases ICANN and the ICANN Affiliated Parties from any and all claims by applicant that arise out of, are based upon, or are in any way related to, any action, or failure to act, by ICANN or any ICANN Affiliated Party in connection with ICANN's review of this application, investigation or verification, any characterization or description of applicant or the information in this application, or the decision by ICANN to recommend, or not to recommend, the approval of applicant's gTLD application. APPLICANT AGREES NOT TO CHALLENGE, IN COURT OR IN ANY OTHER JUDICIAL FORA, ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION, AND IRREVOCABLY WAIVES ANY RIGHT TO SUE OR PROCEED ON THE BASIS OF ANY OTHER LEGAL CLAIM AGAINST ICANN AND ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES AND

ACCEPTS THAT APPLICANT'S NONENTITLEMENT TO PURSUE ANY RIGHTS, REMEDIES, OR LEGAL CLAIMS AGAINST ICANN OR THE ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION SHALL MEAN THAT APPLICANT WILL FOREGO ANY RECOVERY OF ANY APPLICATION FEES, MONIES INVESTED IN BUSINESS INFRASTRUCTURE OR OTHER START-UP COSTS AND ANY AND ALL PROFITS THAT APPLICANT MAY EXPECT TO REALIZE FROM THE OPERATION OF A REGISTRY FOR THE TLD.

7. Applicant hereby authorizes ICANN to publish on ICANN's website, and to disclose or publicize in any other manner, any materials submitted to, or obtained or generated by, ICANN and the ICANN Affiliated Parties in connection with the application, including evaluations, analyses and any other materials prepared in connection with the evaluation of the application; provided, however, that information will not be published to the extent that the application specifically identifies such information as confidential. A general statement as the confidentiality of the application will not be sufficient for these purposes. Except for information that ICANN determines to treat as confidential, applicant understands and acknowledges that ICANN does not and will not keep the remaining portion of the application or materials submitted with the application confidential.
8. Applicant certifies that it has obtained permission for the posting of any personally identifying information included in this application or materials submitted with this application. Applicant acknowledges that the information that ICANN posts may remain in the public domain in perpetuity, at ICANN's discretion.
9. Applicant gives ICANN permission to use applicant's name and/or logo in ICANN's public announcements (including informational web pages) relating to top-level domain space expansion.
10. Applicant understands and agrees that it will acquire rights in connection with a gTLD only in the event that it enters into a registry agreement with ICANN, and that applicant's rights in connection with such gTLD will be limited to those expressly stated in the registry agreement. In the event ICANN agrees to recommend the approval of the application for applicant's proposed gTLD, applicant agrees to enter into the registry agreement with ICANN in the form published in

connection with the application materials. Applicant may not resell, assign, or transfer any of applicant's rights or obligations in connection with the application.

11. Applicant authorizes ICANN to:
  - a. Contact any person, group, or entity to request, obtain, and discuss any documentation or other information that, in ICANN's sole judgment, may be pertinent to the application;
  - b. Consult with persons of ICANN's choosing regarding the information in the application or otherwise coming into ICANN's possession.
12. For the convenience of applicants around the world, the application materials published by ICANN in the English language have been translated into certain other languages frequently used around the world. applicant recognizes that the English language version of the application materials (of which these terms and conditions is a part) is the version that binds the parties, that such translations are non-official interpretations and may not be relied upon as accurate in all respects, and that in the event of any conflict between the translated versions of the application materials and the English language version, the English language version controls.

---

# Glossary

---

## *Terms Applicable to this RFP and to the New gTLD Application Process*

A-Label	The ASCII-Compatible Encoding (ACE) form of an IDNA-valid string.
Applicant	An entity that has applied to ICANN for a new gTLD by submitting its application form through the online application system.
Application	An application for a new gTLD lodged in response to this RFP. An application includes the completed Application Form any supporting documents, and any other information that may be submitted by the applicant at ICANN's request.
Application form	The set of questions to which applicants provide responses, as at <a href="http://www.icann.org/en/topics/new-gtld-draft-evaluation-criteria-24oct08-en.pdf">http://www.icann.org/en/topics/new-gtld-draft-evaluation-criteria-24oct08-en.pdf</a> .
Application interface	The web-based interface operated by ICANN, available at [URL to be inserted in final version of RFP]
Application round	The complete succession of stages for processing the applications received during one application submission period for gTLDs. This RFP is for one application round. Any subsequent application rounds will be the subject of subsequent RFPs.
Application submission period	The period during which applicants may submit applications through the application interface.
Applied for gTLD string	A gTLD string that is subject of an application.
American Standard Code for Information Interchange (ASCII)	A character encoding based on the English alphabet. ASCII codes represent text in computers, communications equipment, and other devices that work with text. Most modern character encodings—which support many more characters than did the original—have a historical basis in ASCII.
AXFR	Asynchronous full transfer, a DNS protocol mechanism through which a DNS zone can be replicated to a remote DNS server.
Business ID	A number such as a federal tax ID number or employer information number.

ccTLD	Two-letter top-level domains corresponding with the ISO 3166-1 country code list. See <a href="http://iana.org/domains/root/db/">http://iana.org/domains/root/db/</a> .
Community-based TLD	A community-based gTLD is a gTLD that is operated for the benefit of a defined community consisting of a restricted population. An applicant designating its application as community-based must be prepared to substantiate its status as representative of the community it names in the application
Community objection	An objection based on the grounds that there is substantial opposition to a gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.
Comparative evaluation	A process to resolve string contention, which may be elected by a community-based applicant.
Consensus policy	A policy created through the GNSO policy development process listed in Annex A of the ICANN Bylaws. See <a href="http://www.icann.org/en/general/bylaws.htm#AnnexA">http://www.icann.org/en/general/bylaws.htm#AnnexA</a> . A list of current consensus policies is available at <a href="http://www.icann.org/en/general/consensus-policies.htm">http://www.icann.org/en/general/consensus-policies.htm</a> .
Contention sets	A group of applications containing identical or similar applied-for gTLD strings.
Country-code TLD	See ccTLD.
Delegation	The process through which the root zone is edited to include a new TLD, and the management of domain name registrations under such TLD is turned over to the registry operator.
Digit	Any digit between "0" and "9" (Unicode code points U+0030 to U+0039).
Dispute Resolution Service Provider (DRSP)	An entity engaged by ICANN to adjudicate dispute resolution proceedings in response to formally filed objections.
Domain name	A name consisting of two or more (for example, john.smith.name) levels, maintained in a registry database.
Domain Name System Security Extensions (DNSSEC)	DNSSEC secures domain name look-ups on the Internet by incorporating a chain of digital signatures into the DNS hierarchy.
Existing TLD	A string included on the list at <a href="http://iana.org/domains/root/db">http://iana.org/domains/root/db</a>

Extended Evaluation	The second stage of evaluation applicable for applications that do not pass the Initial Evaluation, but are eligible for further review.
Extended Evaluation period	The period that may follow the Initial Evaluation period, for eligible applications which do not pass the Initial Evaluation.
Evaluator	The individuals or organization(s) appointed by ICANN to perform review tasks within Initial Evaluation and Extended Evaluation under ICANN direction
Evaluation fee	The fee due from each applicant to obtain consideration of its application.
Geographical Names Panel (GNP)	A panel of experts charged by ICANN with reviewing applied-for TLD strings that relate to geographical names.
Generic Names Supporting Organization (GNSO)	ICANN's policy-development body for generic TLDs and the lead in developing the policy recommendations for the introduction of new gTLDs.
Generic top-level domain gTLD	See gTLD A TLD with three or more characters that does not correspond to any country code.
Hyphen	The hyphen "-" (Unicode code point U+0029).
Internet Assigned Numbers Authority (IANA)	IANA is the authority originally responsible for overseeing IP address allocation, coordinating the assignment of protocol parameters provided for in Internet technical standards, and managing the DNS, including delegating top-level domains and overseeing the root name server system. Under ICANN, IANA distributes addresses to the Regional Internet Registries, coordinate with the IETF and other technical bodies to assign protocol parameters, and oversees DNS operation.
ICANN	Internet Corporation for Assigned Names and Numbers
ICANN-accredited registrar	A company that registers domain names for Internet users. There are more than 900 ICANN-accredited registrars who provide domains to Internet users. The list of ICANN-accredited registrars is available at <a href="http://www.icann.org/en/registrars/accredited-list.html">http://www.icann.org/en/registrars/accredited-list.html</a>
Internationalized Domain Name (IDN)	A domain name including at least one character other than those in letters (a,...,z), digits (0,...,9) and the hyphen (-).
Internationalizing Domain Names in Applications (IDNA)	The technical protocol used for processing domain names containing non-ASCII characters in the DNS.

IDN ccTLD Fast Track	The process for introducing a limited number of IDN ccTLDs associated with the ISO-3166 two-letter codes. See <a href="http://www.icann.org/en/topics/idn/fast-track/">http://www.icann.org/en/topics/idn/fast-track/</a> .
IDN table	A table listing all those characters that a particular TLD registry supports. If one or more of these characters are considered a variant this is indicated next to that/those characters. It is also indicated which character a particular character is a variant to. The IDN tables usually hold characters representing a specific language, or they can be characters from a specific script. Therefore the IDN table is sometimes referred to as "language variant table", "language table", "script table" or something similar.
IGO	Inter-governmental organization.
Internet Engineering Task Force (IETF)	The IETF is a large, open international community of network designers, operators, vendors, and researchers concerned with the evolution of the Internet architecture and the smooth operation of the Internet.
Initial Evaluation period	The period during which ICANN will review an applied-for gTLD string, an applicant's technical and financial capabilities, and an applicant's proposed registry services.
International Phonetic Alphabet	A notational standard for phonetic representation in multiple languages. See <a href="http://www.arts.gla.ac.uk/IPA/IPA_chart_(C)2005.pdf">http://www.arts.gla.ac.uk/IPA/IPA_chart_(C)2005.pdf</a> .
IXFR	Incremental Zone Transfer, a DNS protocol mechanism through which a partial copy of a DNS zone can be replicated to a remote DNS server.
LDH (Letter Digit Hyphen)	The hostname convention defined in RFC 952, as modified by RFC 1123.
Legal Rights objection	An objection on the grounds that the applied-for gTLD string infringes existing legal rights of the objector.
Letter	Any character between "a" and "z" (in either case) (Unicode code points U+0061 to U+007A or U+0041 to U+005A).
LLC	Limited liability corporation.
Morality and public order objection	An objection made on the grounds that the applied-for gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under international principles of law.
Objection	A formal objection filed with a Dispute Resolution Service Provider in accordance with that provider's procedures.
Objection filing period	The period during which formal objections may be filed

	concerning a gTLD application submitted to ICANN
Objector	One or more persons or entities that have filed a formal objection against a new gTLD application with the appropriate DRSP.
Open TLD	An open TLD can be used for any purpose consistent with the requirements of the application and evaluation criteria, and with the registry agreement. An open TLD may or may not have a formal relationship with an exclusive registrant or user population. It may or may not employ eligibility or use restrictions.
Pre-delegation test	A technical test and other steps required of applicants before delegation of the applied-for gTLD string into the root zone.
Primary contact	The person named by the applicant as the main contact for the application, and having authority to execute decisions concerning the application.
Principal place of business	The location of the head office of a business or organization.
Registrar	See ICANN-accredited registrar.
Registry	A registry is the authoritative, master database of all domain names registered in each top-level domain. The registry operator keeps the master database and also generates the zone file that allows computers to route Internet traffic to and from top-level domains anywhere in the world.
Registry Agreement	The agreement executed between ICANN and successful gTLD applicants, which appears in draft form at <a href="http://www.icann.org/en/topics/new-gtld-draft-agreement-24oct08-en.pdf">http://www.icann.org/en/topics/new-gtld-draft-agreement-24oct08-en.pdf</a> .
Registry operator	The entity entering into the Registry Agreement with ICANN, responsible for setting up and maintaining the operation of the registry.
Registry services	(1) Operations of the registry critical to the following tasks: (i) the receipt of data from registrars concerning registrations of domain names and name servers; (ii) provision to registrars of status information relating to the zone servers for the TLD; (iii) dissemination of TLD zone files; (iv) operation of the registry zone servers; and (v) dissemination of contact and other information concerning domain name server registrations in the TLD as required by the registry agreement; and (2) other products or services that the registry operator is required to provide because of the establishment of a consensus policy; and (3) any other products or services that only a registry operator is capable of providing, by reason of its

	designation as the registry operator.
Registry Services Technical Evaluation Panel (RSTEP)	The Registry Services Technical Evaluation Panel is a group of experts in the design, management, and implementation of the complex systems and standards-protocols used in the Internet infrastructure and DNS. RSTEP members are selected by its chair. All RSTEP members and the chair have executed an agreement requiring that they consider the issues before the panel neutrally and according to the definitions of security and stability.
Reserved Name	A string included on the Top-Level Reserved Names List (Refer to paragraph 2.1.1.2 of Module 2.)
Request for Comments (RFC)	The RFC document series is the official publication channel for Internet standards documents and other publications of the IESG, IAB, and Internet community.
Rightholder	The person or entity that maintains a set of rights to a certain piece of property.
Root Zone	The root zone database represents the delegation details of top-level domains, including gTLDs and country-code TLDs. As manager of the DNS root zone, IANA is responsible for coordinating these delegations in accordance with its policies and procedures.
Round	See application round.
Script	<p>A collection of symbols used for writing a language. There are three basic kinds of script. One is the alphabetic (e.g. Arabic, Cyrillic, Latin), with individual elements termed "letters". A second is ideographic (e.g. Chinese), the elements of which are "ideographs". The third is termed a syllabary (e.g. Hangul), with its individual elements represent syllables. The writing systems of most languages use only one script but there are exceptions such as for example, Japanese, which uses four different scripts, representing all three of the categories listed here.</p> <p>It is important to note that scripts which do not appear in the Unicode Code Chart are completely unavailable for inclusion in IDNs.</p>
Security	In relation to a proposed registry service, an effect on security by the proposed Registry Service means (1) unauthorized disclosure, alteration, insertion, or destruction of registry data, or (2) unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.
Shared Registry System (SRS)	A system that allows multiple registrars to make changes

	to a registry simultaneously.
Stability	In relation to a proposed registry service, an effect on stability means that the proposed registry service (1) does not comply with applicable relevant standards that are authoritative and published by a well-established, recognized, and authoritative standards body, such as relevant standards-track or best current practice RFCs sponsored by the IETF; or (2) creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant standards-track or best current practice RFCs and relying on registry operator's delegation information or provisioning services.
String	The string of characters comprising an applied-for gTLD.
String confusion objection	An objection filed on the grounds that the applied-for gTLD string is confusingly similar to an existing TLD or to another applied-for gTLD.
String Similarity Algorithm	An algorithmic tool used to identify applied-for gTLD strings that may result in string confusion.
String Similarity Examiners	A panel charged with identifying applied-for gTLD strings that may result in string confusion.
String contention	The scenario in which there is more than one qualified applicant for the same gTLD or for gTLDs that are so similar that detrimental user confusion would be the probable result if more than one were to be delegated to the root zone.
TLD Application System (TAS)	The online interface for submission of applications to ICANN.
Top-level domain (TLD)	TLDs are the names at the top of the DNS naming hierarchy. They appear in domain names as the string of letters following the last (right-most) dot, such as "net" in <a href="http://www.example.net">www.example.net</a> . The TLD administrator controls what second-level names are recognized in that TLD. The administrators of the root domain or root zone control what TLDs are recognized by the DNS.
U-Label	A "U-label" is an IDNA-valid string of Unicode characters, including at least one non-ASCII character, expressed in a standard Unicode Encoding Form, normally UTF-8 in an Internet transmission context.
Uniform Domain Name Dispute Resolution Policy	A policy for resolving disputes arising from alleged abusive registrations of domain names (for example, cybersquatting), allowing expedited administrative

(UDRP)	proceedings that a trademark rights holder initiates by filing a complaint with an approved dispute resolution service provider.
User registration fee	The fee paid by prospective applicants for new TLDs to obtain access to the TLD Application System (TAS).
Whois	Records containing registration information about registered domain names.

**R-5**

**RESPONDENT'S EXHIBIT**

**ICANN Board-GAC Consultation:**

- **Objection Procedures, including requirements for governments to pay fees**
- **Procedures for the Review of Sensitive Strings**
- **Early warning to applicants: whether a proposed string would be considered controversial or to raise sensitivities (including geographical names)**

**EXPLANATION OF ISSUES/HISTORY**

The GNSO and ICANN Board approved policy recommendations for new gTLDs included four major areas where a third party can raise an objection to the creation of a new gTLD. A new gTLD string should: (i) not be confusingly similar to an existing top-level domain or a Reserved Name (Rec. 2); (ii) not infringe the existing legal rights of others (Rec 3); (iii) not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law (Rec 6); and (iv) be rejected if there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted (Rec. 20). See [http://gns0.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm#\\_Toc43798015](http://gns0.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm#_Toc43798015).

The GNSO also recommended that “[d]ispute resolution and challenge processes must be established prior to the start of the [new gTLD] process,” and “[e]xternal dispute providers will give decisions on objections.”

In Brussels in June 2010, and then in a letter to ICANN dated 4 August 2010 (<http://www.icann.org/en/correspondence/gac-to-dengate-thrush-04aug10-en.pdf>), the GAC:

[R]ecommends that community-wide discussions be facilitated by ICANN in order to ensure that an effective objections procedure be developed that both recognizes the relevance of national laws and effectively addresses strings that raise national, cultural, geographic, religious and/or linguistic sensitivities or objections that could result in intractable disputes. These objection procedures should apply to all pending and future TLDs.

In response to the GAC’s recommendation, a cross-community working group was formed to deal specifically with Rec 6 objections (“Rec6 CWG”). The Rec6 CWG has since issued recommendations on both Morality & Public Order, and Community based objections.<sup>1</sup>

(<http://gns0.icann.org/bitcache/27d221c45bd9d8c234246849d716202bacd6f3ee?vid=14699&disposition=attachment&op=download>).

---

<sup>1</sup> Suggesting the governments should be able to protect place names, and country, territory or regional language or people descriptions using the community based objection process

21 February 2011  
DRAFT

ICANN has responded to many of the working group's recommendations by revising the most current version of the Guidebook and has sought clarification on other recommendations.

Specifically, the newest version of the Guidebook includes the following Rec6 CWG recommended changes:

- A note encouraging applicants to pre-identify possible sensitivities.
- Language indicating that governments may send notifications re: national laws to applicants or via public comment forum (but clarified that this shall not be deemed a formal objection).
- Additional treaties as reference.
- A change in references from "international principles of law" to "principles of international law"
- Language stating that Expert Panel Determinations shall be based on the string itself, but also on stated context if available.
- The name of objection was changed from Morality and Public Order to "Limited Public Interest Objection".

No change was needed with respect to whether governments could utilize the community-based objection process, because that was always contemplated.

Subject to this consultation with the GAC, ICANN expects additional changes to be made, including whether the GAC may file objections on behalf of its members, (although that has not specifically been identified as a GAC request) and whether the GAC or individual Governments should pay dispute resolution fees.

#### **REMAINING AREAS OF DIFFERENCE WITH GAC:**

##### **A. Specific Differences**

1. The GAC suggests that the Independent Objector (IO) could be a possible avenue available to governments. See Letter from the GAC to ICANN, dated 18 August 2009 at <http://www.icann.org/en/correspondence/karklins-to-dengate-thrush-18aug09-en.pdf>

Under the Guidebook, the IO (Independent Objector) shall be independent and if the IO "determines that an objection should be filed, he or she will initiate and prosecute the objection in the public interest." See New gTLD Dispute Resolution Procedures at <http://www.icann.org/en/topics/new-gtlds/draft-dispute-resolution-procedures-clean-12nov10-en.pdf> at section 3.1.5, page 3-7.

21 February 2011  
DRAFT

2. The GAC suggests that Governments should not have to pay the same costs as others to file an objection. See Letter from GAC to ICANN, dated 23 September 2010 at <http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-23sep10-en.pdf>. The GAC points to the fact that it has a Bylaws process whereby it can provide advice to the Board for consideration. See Letter from the GAC to ICANN, dated 18 August 2009 at <http://www.icann.org/en/correspondence/karklins-to-dengate-thrush-18aug09-en.pdf>

Since publication of the last version of the Applicant Guidebook, the Board has considered the Rec6 CWG recommendation that the GAC (and ALAC), as a group, should be able to file some or all objections at no or a reduced cost. Although the Board has not reached a formal decision, there is a sense of the Board that it will agree to allow the GAC (and the ALAC) to file objections as a group on behalf of its members so long as doing so is based on some type of consensus of the group members. Further, the Board also thinks that providing some level of funding for objections filed by the GAC (or the ALAC) as a group is an appropriate change to the process.

3. The GAC states that the current objection procedures do not effectively address strings that raise national, cultural, geographic, religious and/or linguistic sensitivities or objections that could result in intractable disputes. See Letter from GAC to ICANN dated 4 August 2010 at <http://www.icann.org/en/correspondence/gac-to-dengate-thrush-04aug10-en.pdf>

Under the Guidebook, protections for these types of names are provided by a series of objections and processes: the requirement for government approval of certain geographical names, Community-based objections (Rec 20), and Limited Public Interest (or Morality & Public Order Rec 6) objections. The last provides that a string will be excluded if there is a determination that an applied-for gTLD string would be contrary to specific principles of international law as reflected in relevant international instruments of law. See Applicant Guidebook, Module 3, section 3.3.4 at <http://www.icann.org/en/topics/new-gtlds/draft-dispute-resolution-procedures-clean-12nov10-en.pdf>. It is recognized that principles from international treaties are incorporated into national laws in a range of different ways, and a panel would need to consider the relevant text in national laws.

4. The GAC suggests that the objection procedures should apply to all pending and future TLDs. See Letter from GAC to ICANN dated 4 August 2010 at <http://www.icann.org/en/correspondence/gac-to-dengate-thrush-04aug10-en.pdf>. ICANN has been asked to note that both the UK and New Zealand take the position that the objection procedures should apply only to new gTLDs.

The Guidebook, and all of the procedures developed for processing applications for and objections to new gTLDs, apply only to new gTLDs and not to existing TLDs or other TLDs (e.g IDN-ccTLDs) that will not be evaluated under the New gTLD Program.

21 February 2011  
DRAFT

5. The GAC believes that prior reviews of new gTLD strings can serve as an “early warning” to applicants, providing an opportunity to amend or modify the proposed string prior to proceeding further in the application process or provide opportunities to determine whether the applicant is the sole appropriate manager or relevant authority for that particular string, or whether the proposed string is either too broad to effectively identify a single entity as the relevant authority or appropriate manager, or is sufficiently contentious that an appropriate manager cannot be identified and/or agreed. See Letter from GAC to ICANN, dated 22 November 2010 at <http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-22nov10-en.pdf>

Language has been added to the Guidebook indicating that governments may send notifications regarding national laws directly to applicants or via public comment forum (see Applicant Guidebook, Module 1, section 1.1.2.5 <http://www.icann.org/en/topics/new-gtlds/draft-rfp-clean-12nov10-en.pdf>) once the applications are publicly posted. Such notifications are not meant to serve as formal objections or be cause for a modification to an application. It was decided early in the process development that applicants should not be able to amend applications or applied for strings in order to prevent abuses.

#### B. Discussion

##### *Independent Objector (IO)*

As noted above, the GAC suggests that the IO could be a possible avenue available to governments. See Letter from the GAC to ICANN, dated 18 August 2009 at <http://www.icann.org/en/correspondence/karklins-to-dengate-thrush-18aug09-en.pdf>.

The purpose of the IO is to act in the public interest as an independent party to stand in the shoes of a party that did not wish to object. The IO concept was developed partially with Governments in mind. Understanding that Governments may not want to enter into the objection process, the IO could object if the IO independently felt that such an objection would be warranted. All public statements made in response to applications will be available to the IO, who will pay careful attention to the arguments made by any party thinking an objection should be filed in the public interest. An IO may certainly take into account any public statements made by a Government or its representatives in making a determination of whether to file an objection. It is important to note, however, that it will be up to the IO to make the ultimate determination on whether to file an objection.

After understanding specific requirements for assistance or facilitation contemplated by the GAC, there might be other ways to meet the needs described by the GAC without using the IO.

21 February 2011  
DRAFT

### *Costs of Objection Process*

As noted above, the GAC suggests that Governments should not have to pay the same costs as others to file an objection. See Letter from GAC to ICANN, dated 23 September 2010 at <http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-23sep10-en.pdf>. At present there is no provision in the Applicant Guidebook for relief from dispute resolution fees for governments or any other objectors. Fees are paid directly to the dispute resolution providers.

As noted in his letter to the GAC on 23 September 2010 (<http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-23sep10-en.pdf>), Peter Dengate Thrush stated:

The Board discussed the GAC's position that governments should not be required to pay a fee for raising objections to new gTLD applications, and does not agree with the GAC on this point. It is the Board's view that governments that file objections should be required to cover costs of the objection process just like any other objector; the objection process will be run on a cost-recovery and loser-pays basis (so the costs of objection processes in which governments prevail will be borne by applicants). How would the dispute resolution process be funded: a speculative increase in application fees or increased fees to gTLD registrants? Either of these cases or others seem difficult to implement and unfair.

However, as stated above, the Board is presently thinking that providing some level of funding for objections filed by the GAC (or the ALAC) as a group is an appropriate change to the process, so long as the decision to bring the objections is based on a consensus of GAC (or ALAC) members, and not just one or a few members.

Further, with respect to the GAC's statement that it has the ability to provide public policy advice to the Board (see Letter from the GAC to ICANN, dated 18 August 2009 at <http://www.icann.org/en/correspondence/karklins-to-dengate-thrush-18aug09-en.pdf>), ICANN's Chairman noted in his letter to the GAC on 22 September 2009 (<http://www.icann.org/en/correspondence/dengate-thrush-to-karklins-22sep09-en.pdf>) that:

Governments that are members of the GAC have a mechanism to provide advice to ICANN's Board, in accordance with ICANN's Bylaws; however, it is not clear that Bylaw was intended to provide an avenue for governments to provide advice on operational matters of this nature. The ICANN Board wishes to have a neutral, expert determination, based upon certain published standards, when deciding whether to accept an application for a new gTLD or if an objection should be upheld.

*Procedures and Standards for Objections*

The goal of the objection procedures is to provide a path for people to block certain applied-for strings in the new gTLD Program defined in the Policy and provide a predictable, smooth running process. The elements needed to achieve such a goal are: (1) a predictable path for objecting; (2) a dispute resolution process outside of ICANN; (3) dispute resolution panelist with the appropriate expertise; and (4) the clearest and most uniform set of standards possible.

a. Predictable Path: The procedures for filing and the administration of an objection are clearly stated. Further, each selected dispute resolution provider has established, published rules with time frames, established standards and expected fees. Having existing and established rules makes the objection path as predictable as possible.

b. Process outside of ICANN: ICANN does not have the capacity or the expertise to manage the administration of an unknown number of objections. Further, without an independent provider selecting independent experts to issue expert determinations on an objection, ICANN will become embroiled in the facts and circumstances of each and every dispute.

c. Expert Panelists: The goal of having appropriately experienced expert panelists, is to ensure that those issuing determinations on such objections have experience in dispute resolution processes and also in the relevant areas. For Limited Public Interest objections, that experience should include resolving international disputes that involve the subject matter of those likely to be at issue in those type of objections. It is envisioned that such experts include retired or sitting judges on the International Court of Justice, or similar tribunals. The community objection process would similarly require panelists experienced in the relevant community or culture at issue, as well as having relevant linguistic skills.

d. Clear Standards: The standards for both Limited Public Interest and Community-based objections are described in the Applicant Guidebook. See sections 3.4.3 and 3.4.4 in Module 3 of the Applicant Guidebook at <http://www.icann.org/en/topics/new-gtlds/draft-dispute-resolution-procedures-clean-12nov10-en.pdf>

Significant research in numerous jurisdictions in every region of the world was conducted to arrive at the undeniably widely accepted legal norms found in the enumerated grounds set forth in the Rec 6 or Limited Public Interest standard. (See <http://www.icann.org/en/topics/new-gtlds/morality-public-order-30may09-en.pdf> for a summary of that research.)

Expanding the grounds for a Limited Public Interest objection, such as the GAC has suggested (see Letter from GAC to ICANN dated 4 August 2010 at

21 February 2011  
DRAFT

<http://www.icann.org/en/correspondence/gac-to-dengate-thrush-04aug10-en.pdf>), could lead to a lack of clarity on the grounds upon which such an objection could be filed or succeed. Note, however, that the already existing Community-based objection could be utilized to resolve many of the disputes arising from national, cultural, geographic religious and/or linguistic sensitivities. Rec 20 reads: “There is substantial opposition to the gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted. (See Module 1 of the Applicant Guidebook, section 3.1.1. at <http://www.icann.org/en/topics/new-gtlds/draft-dispute-resolution-procedures-clean-12nov10-en.pdf>

Finally, it is important to note that the GNSO’s policy recommendations were limited only to TLDs to be introduced by way of the new gTLD Program. Applying such process to existing or pending TLDs that are not evaluated under the New gTLD Program would require additional policy work by the community.

#### *Early Warning*

As noted above, the GAC believes that prior reviews of new gTLD strings can serve as an “early warning” to applicants, providing an opportunity to amend or modify the proposed string prior to proceeding further in the application process or provide opportunities to determine whether the applicant is the sole appropriate manager or relevant authority for that particular string. See Letter from GAC to ICANN, dated 22 November 2010 at <http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-22nov10-en.pdf> See Letter from GAC to ICANN, dated 22 November 2010 at <http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-22nov10-en.pdf>

There is language in the current version of Module 1 of the Applicant Guidebook at section 1.1.2.5 (<http://www.icann.org/en/topics/new-gtlds/draft-new-gtld-drp-clean-12nov10-en.pdf>) about providing notification to applicants once ICANN has published the applications. Specifically,

Governments may provide a notification using the public comment forum to communicate concerns relating to national laws. However, a government’s notification of concern will not in itself be deemed to be a formal objection. A notification by a government does not constitute grounds for rejection of a gTLD application.

Providing an opportunity for an applicant to amend or modify the proposed string (or to alter the applicant) prior to proceeding further in the application process if receiving such notification could result in substantial abuses of the process. For example, allowing for modification after applications are submitted could lead to the call for opening up the entire application process again and it could seemingly create delays that would unacceptable and render the program stagnant. Applications could become placeholders for applicants to view the marketplace after applications are published and gain an advantage with a modification to their application. While cures for specific

instances can be developed and debated, maintaining a fair environment becomes very difficult or impracticable.

#### **Procedures for the Review of Sensitive Strings**

#### **Early warning to applicants: whether a proposed string would be considered controversial or to raise sensitivities (including geographical names)**

- Efforts have been made to limit the costs to all parties, including governments, for participation in the objection procedure.
- The procedure includes provisions specifically aimed at reducing complexity and avoiding protracted proceedings. These include electronic filings, limits on length of submissions, time limits for submissions, and opportunities for consolidation of objections.
- The costs of the objection procedure are allocated on a “loser pays” basis. That is, while there is an investment up front, and there are some costs involved in preparing filings, the bulk of the cost is incurred by a party only where they do not prevail in the proceeding.
- ICANN will be proposing that funding for GAC or ALAC objections be made available.
- The Independent Objector has been instituted and may act as a backstop for cases where a group may be unable to file an objection for cost or other reasons.
- It has been indicated that the community objection policy was created to address concerns in the GAC Principles on new gTLDs so that appropriate consideration is given to sensitivities regarding terms of national, cultural, geographic and religious significance.

<p><b>18 August 2009: Comments on V2 of APPLICANT GUIDEBOOK</b> GAC notes sensitivities with regard to terms with national, cultural, geographic and religious significance. Serious concerns about the practical modalities for address objections on these grounds, including ICANN’s proposal to establish a panel of three judicial experts which may not fully take account of cultural and other national and differences in legal interpretation as to what is morally offensive or threatening to public order. More work is required on costs and the ability to object, noting that public interest groups may wish to object but may be unable to do so due to the costs involved. Governments should not have to follow the same procedures and pay the same costs as others. It is inappropriate for ICANN to require a public body to incur the same costs or subject itself to the limitations associated with a formal objection process primarily designed for non-governmental stakeholders. ICANN bylaws provide a more appropriate mechanism for the GAC or a member of the GAC to provide advice directly to the Board in issues of public policy. Noted that public comment is an avenue for governments and the Independent Objector could also be a possible avenue available to governments. The IO might also consider representations from governments at no cost to Them. Invited Board to include sub procedures in Applicant Guidebook version 3. Also points out that in many cases governments might already have to bear the costs associated with industry stakeholder and cross-government consultation, and increase their monitoring of the application process more generally just to make sure they are aware of the issues raised by the applications for new gTLDs.</p>	<p><b>22 September 2009: Reply from ICANN Chairman</b> <a href="http://www.icann.org/en/correspondence/dengate-thrush-to-karklins-22sep09-en.pdf">http://www.icann.org/en/correspondence/dengate-thrush-to-karklins-22sep09-en.pdf</a></p> <p>With regard to the issues raised regarding procedure and cost, the New gTLD Dispute Resolution Procedure (the “Procedure”) was designed to be a well, defined, smooth procedure. The procedures can be found at <a href="http://www.icann.org/en/topics/new-gtlds/draft-dispute-resolution-procedure-18feb09-en.pdf">http://www.icann.org/en/topics/new-gtlds/draft-dispute-resolution-procedure-18feb09-en.pdf</a> and are summarized in Module 3 of the Guidebook. The Procedure includes provisions that are specifically aimed at reducing complexity and avoiding protracted proceedings, such as:</p> <ul style="list-style-type: none"> <li>▪ Electronic filings (Article 6(a));</li> <li>▪ Limits upon the length of written submissions (Articles 8(b) &amp; 11(e));</li> <li>▪ Short time limits for submissions and other steps in the procedure (Articles 7(a), 7(e), 9(a), 10(a), 11(b), 13(a), 17(b), &amp; 21(a));</li> <li>▪ Consolidation of objections (Article 12);</li> <li>▪ Strict limits upon document production (Article 18); and</li> <li>▪ Strict limits upon hearings (Article 19).</li> </ul> <p>ICANN would welcome specific suggestions for improving the Procedure. However, the benefits that may be derived from further reducing the complexity and duration of the proceedings must be balanced against the panel’s duty to ensure that the parties are treated with equality and that each party is given a reasonable opportunity to present its position (Procedure, Article 4(e)).</p> <p>It is foreseen that morality and public order objections will be heard and decided by panels of experts who are eminent jurists of international reputation. The panels will comprise three experts, in order to ensure that diverse backgrounds and perspectives are present in the Panel. See Procedure, Article 13(b)(iii). Such proceedings will necessarily involve a certain level of costs, for example, to cover</p>

21 February 2011  
DRAFT

the time and costs associated with engaging the eminent jurists who serve on the panel.

It is difficult to predict with accuracy whether the costs of the objection procedure will prove to be a barrier to legitimate objections; however, it is felt that the existence of a fee to lodge an objection is necessary as a deterrent to frivolous objections. Interested parties may pool their resources to finance an objection that they consider to be legitimate and important. The rule that the prevailing party will be fully reimbursed for the filing fee and advance payment of costs that it paid (Article 14(e)) is intended to lessen the financial burden upon parties that file a well-founded objection. Finally, it should be recalled that the Independent Objector may also file an objection where, for various reasons (including cost), no other objection had been filed.

Considerable legal research was undertaken which examined the rules of public policy, as they apply to freedom of speech and encompassed the treatment of names of that may have national, cultural, geographic and religious sensitivities in a representative sample of countries, which included Brazil, Egypt, France, Hong Kong, Malaysia, South Africa, Switzerland and the United States of America. The possibility of objecting to an applied-for gTLD on the grounds of morality and public order is derived from the GNSO's Recommendation No. 6, which states, in part, that "Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law." Various competing interests are potentially involved, for example the rights of freedom of expression versus sensitivities associated with terms of national, cultural, geographic and religious significance. While freedom of expression in gTLDs is not absolute, those claiming to be offended on national, cultural, geographic or religious grounds do not have an automatic veto over gTLDs. The standards summarized by Recommendation No. 6 indicate that a morality and public order objection should be based upon norms that are widely accepted in the international community. It is felt that a rule that did not require wide acceptance would facilitate pressure to align the standards with those imposed by the most repressive regimes. In addition to the Draft Applicant Guidebook (Module 3), ICANN has published explanatory memoranda, dated 29 October 2008 <http://www.icann.org/en/announcements/announcement-29oct08-en.htm> and 30 May 2009 <http://www.icann.org/en/topics/new-gtlds/morality-public-order-30may09-en.pdf>, that set out the specific standards that have been adopted for such objections and the legal research upon which those standards is based.

21 February 2011  
DRAFT

	<p>ICANN considers that a rule-based dispute resolution procedure, leading to a reasoned expert determination (that will normally be published) by three jurists of international renown, is an appropriate method of addressing and resolving disputes arising from objections based upon morality or public order. Indeed, no viable alternative has been suggested.</p> <p>The Draft Applicant Guidebook does require governments to follow the same procedures and to pay the same costs as other objectors; however, it must be emphasised that the process has been developed to provide more than one avenue for governments, or anyone else, to raise concerns about an application. It has become quite common for governments and other public entities to participate in international dispute resolution proceedings with private parties (e.g., arbitration and other alternative dispute resolution procedures). For example, international arbitration is generally stipulated for the resolution of disputes between States and private investors under bilateral investment treaties (BITs). Such arbitrations may be conducted under rules such as those of the International Centre for the Settlement of Investment Disputes (ICSID), the United Nations Commission on International Trade Law (UNCITRAL) or the International Chamber of Commerce (ICC). Recent years have seen a great increase in the conclusion of BITs. The United Nations Conference on Trade and Development (UNCTAD) has reported that the number of BITs increased dramatically in the 1990s, from 385 in 1989 to a total of 2,265 in 2003, involving 176 countries.<sup>2</sup> The total reached 2,676 by the end of 2008.<sup>3</sup></p> <p>Governments that are members of the GAC have a mechanism to provide advice to ICANN’s Board, in accordance with ICANN’s Bylaws; however, it is not clear that Bylaw was intended to provide an avenue for governments to provide advice on operational matters of this nature. The ICANN Board wishes to have a neutral, expert determination, based upon certain published standards, when deciding whether to accept an application for a new gTLD or if an objection should be upheld.</p> <p>Finally, it should be recalled again in this context that the Independent Objector may file an objection against an applied-for gTLD in cases where governments (and others) choose not to do so. The Independent Objector will be entitled to take into</p>

<p><b>10 March 2010: Comments on V3 of APPLICANT GUIDEBOOK</b>                  Objection mechanism should be improved, included to ensure that objection fees are cost based rather than set a high deterrence level and governments should not be subject to paying fees. Restates previous position that GAC members can provide advise directly to the ICAN Board as foreseen in the bylaws, and not be required to subject objections to an independent third party service provider.</p>	<p><b>5 August 2010:Reply from ICANN Chairman</b>  <a href="http://www.icann.org/en/correspondence/dengate-thrush-to-dryden-05aug10-en.pdf">http://www.icann.org/en/correspondence/dengate-thrush-to-dryden-05aug10-en.pdf</a>                   I reiterate my response of 22 September 2009, to the GAC on this issue:   <i>“It is difficult to predict with accuracy whether the costs of the objection procedure will prove to be a barrier to legitimate objections; however, it is felt that the existence of a fee to lodge an objection is necessary as a deterrent to frivolous objections. Interested parties may pool their resources to finance an objection that they consider to be legitimate and important. The rule that the prevailing party will be fully reimbursed for the filing fee and advance payment of costs that it paid (Article 14(e)) is intended to lessen the financial burden upon parties that file a well-founded objection. Finally, it should be recalled that the Independent Objector may also file an objection where, for various reasons (including cost), no other objection had been filed.”</i>   <i>“Governments that are members of the GAC have a mechanism to provide advice</i></p>

	<p><i>to ICANN’s Board, in accordance with ICANN’s Bylaws; however, it is not clear that Bylaw was intended to provide an avenue for governments to provide advice on operational matters of this nature. The ICANN Board wishes to have a neutral, expert determination, based upon certain published standards, when deciding whether to accept an application for a new gTLD or if an objection should be upheld.”</i></p> <p>Reviewing that response and the issues posed in your letter, I would add the following. ICANN (and the community) devoted substantial resources to develop the policy and implementation models to protect important interests through an objection based dispute resolution benefit. Still, specific suggestions for improvements are encouraged and I understand some Supporting Organizations and Advisory Committees are forming groups to study the issue. ICANN staff will support that work. The costs of that process are paid directly to the dispute resolution provider – no fees are added as a deterrent to potential objectors. In fact, one intended result of the process is to discourage applicants of controversial names that may infringe upon those important interests.</p> <p>We note that governments pay fees for other services, enter into agreements, and pursue conflict resolution. We do not believe that governments should be afforded special consideration by exempting them from paying fees associated with filing an objection. To do so would result in an inflation of costs for other objectors to cover the costs incurred by government requests. This is different, however, from arrangements to assist impecunious governments. If the GAC is able to provide the principle on which they base their request for exemption, it will be considered for inclusion into the procedure.</p>
<p><b>4 August 2010: Comments on Morality and Public Order</b></p> <p>The GAC firmly believes that the absence of any controversial strings in the current universe of top level domains (TLDs) to date contributes directly to the security and stability of the domain name and addressing system (DNS) and the universal resolvability of the system. As a matter of principle, and consistent with Sections 3(b) and 8(a) of the Affirmation of Commitments and the core values contained in Article 1, Section 2 of ICANN’s Bylaws, the GAC believes that the objective of stability, security and universal resolvability must be preserved in the course of expanding the DNS with the addition of new top level domains to the root. The GAC urges the Board to ensure that his fundamental value, which preserves the integrity of the DNS, is incorporated as an element of the public interest standard to which it has committed in the Affirmation of Commitments.</p>	<p><b>23 November 2010: Reply from ICANN Chairman</b></p> <p><a href="http://www.icann.org/en/correspondence/dengate-thrush-to-dryden-23nov10-en.pdf">http://www.icann.org/en/correspondence/dengate-thrush-to-dryden-23nov10-en.pdf</a></p> <p>In accordance with the GAC request, ICANN has facilitated the cross-community discussions on the process for addressing the GNSO policy recommendation that, “[s]trings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law.”</p> <p>The Board welcomes the report from the Recommendation 6 Working Group and has requested staff to undertake analysis of the report to determine how recommendations could be incorporated into the Guidebook and conduct a</p>

In this regard, the GAC believes that procedures to identify strings that could raise national, cultural, geographic, religious and/or linguistic sensitivities or objections are wanted so as to mitigate the risks of fragmenting the DNS that could result from the introduction of controversial strings.

While the GAC appreciates that the proposed objection procedure on “Morality and Public Order” grounds included in DAGv4 was intended to satisfy the concern noted above, the GAC strongly advises the Board to replace the proposed approach to addressing objections to new gTLDs applications based on “morality and public order” concerns with an alternative mechanism for addressing concerns related to objectionable strings. The terms “morality and public order” are used in various international instruments, such as the Paris Convention for the Protection of Industrial Property, the Universal Declaration of Human Rights, and the International Covenant on Civil and Political Rights (ICCPR). Generally, these terms are used to provide the basis for countries to either make an exemption from a treaty obligation or to establish by law limitations on rights and freedoms at the national level. Judicial decisions taken on these grounds are based on national law and vary from country to country. Accordingly, the GAC advises that using these terms as the premise for the proposed approach is flawed as it suggests that there is an internationally agreed definition of “morality and public order”. This is clearly not the case.

The GAC therefore recommends that community-wide discussions be facilitated by ICANN in order to ensure that an effective objections procedure be developed that both recognizes the relevance of national laws and effectively addresses strings that raise national, cultural, geographic, religious and/or linguistic sensitivities or objections that could result in intractable disputes. These objection procedures should apply to all pending and future TLDs.

consultation with the Working Group before the Cartagena meeting with the aim of finding additional areas of agreement for incorporation into the Applicant Guidebook.

I wish to make a few points regarding the GAC letter of 4 August on this topic. I do not consider this to be a stability issue per se but rather a policy issue where ICANN is implementing the consensus position developed by the GNSO. There are controversial names delegated and registered now at different levels of the domain name system that do not result in security or stability issues.

Additionally, the new gTLD implementation to date has addressed the issues described in the Affirmation of Commitments: competition, consumer protection, security, stability and resiliency, malicious abuse issues, sovereignty concerns, and rights protection. The issues raised by the GAC are neither stability / security nor AoC issues – but they merit the full attention of the community.

The solution that appears in version 4 of the Applicant Guidebook was developed following extensive legal research that examined restrictions in a representative sample of countries, which included Brazil, Egypt, France, Hong Kong, Malaysia, South Africa, Switzerland and the United States of America. Various competing interests are potentially involved, for example the rights of freedom of expression versus sensitivities associated with terms of national, cultural, geographic and religious significance. While freedom of expression in gTLDs is not absolute, those claiming to be offended on national, cultural, geographic or religious grounds do not have an automatic veto over gTLDs. The standards summarized by Recommendation No. 6 indicate that a morality and public order objection should be based upon norms that are widely accepted in the international community.

In addition to the Draft Applicant Guidebook (Module 3), ICANN has published explanatory memoranda, dated 29 October 2008 <http://www.icann.org/en/announcements/announcement-29oct08-en.htm> and 30 May 2009 <http://www.icann.org/en/topics/new-gtlds/morality-public-order-30may09-en.pdf>, that set out the specific standards that have been adopted for such objections and the legal research upon which those standards is based.

Importantly, in addition to the Morality and Public Order objection and dispute resolution processes, the Community Objection standards were developed to address potential registration of names that have national, cultural, geographic and religious sensitivities.

I understand that some GAC members have expressed dissatisfaction with this

21 February 2011  
DRAFT

	<p>process as it was first described in version 2 of the Guidebook. The treatment of this issue in the new gTLD context, was the result of a well-studied and documented process which involved consultations with internationally recognized experts in this area. Advice containing thoughtful proposals for amending the treatment of this issue that maintains the integrity of the policy recommendation would be welcomed. The expression of dissatisfaction without a substantive proposal, does not give the Board or staff a toehold for considering alternative solutions. While the report of the recently convened working group still does not constitute a policy statement as conceived in the ICANN bylaws, ICANN staff and Board are working to collaborate with the community to adopt many of the recommendations.</p>
	<p><b>28 May 2010: Applicant Guidebook Version 4</b>  <a href="http://www.icann.org/en/topics/new-gtlds/draft-rfp-clean-28may10-en.pdf">http://www.icann.org/en/topics/new-gtlds/draft-rfp-clean-28may10-en.pdf</a></p> <p><b>28 May 2010: Explanatory Memo—“Quick Look” Procedure for Morality and Public Order Objections</b>  <a href="http://www.icann.org/en/topics/new-gtlds/morality-public-order-quick-look-28may10-en.pdf">http://www.icann.org/en/topics/new-gtlds/morality-public-order-quick-look-28may10-en.pdf</a></p> <p><b>12 November 2010: Summary and analysis of comments version 4</b>  <a href="http://www.icann.org/en/topics/new-gtlds/summary-analysis-agv4-12nov10-en.pdf">http://www.icann.org/en/topics/new-gtlds/summary-analysis-agv4-12nov10-en.pdf</a></p>
<p><b>23 September 2010: Comments on V4 of AG</b>  Reiterates its position that governments should not be required to pay a fee for raising objections to new gTLD applications. There are a number of reasons why sovereign nations should not pay fees to object to strings which they consider to be objectionable:</p> <ul style="list-style-type: none"> <li>- sovereign nations are not protecting a commercial interest (as opposed, for example, to the protection of trademarks) but are instead protecting their national interests and the public interest (as they see it);</li> <li>- the cost of blocking a controversial gTLD for a Government may be less than the upfront cost of opposing a controversial gTLD. If ICANN’s policy objective is for one unified Internet, it should ensure that sovereign nations have low costs in raising their concerns about individual gTLDs in the first instance; and</li> <li>- as a general principle of public policy, the group responsible for causing a regulatory response should bear the cost of that regulatory response. This is</li> </ul>	<p><b>23 November 2010: Reply from ICANN Chairman</b>  <a href="http://www.icann.org/en/correspondence/dengate-thrush-to-dryden-23nov10-en.pdf">http://www.icann.org/en/correspondence/dengate-thrush-to-dryden-23nov10-en.pdf</a></p> <p>The criteria for community objections was created with the possible objections to place names in mind and as such the objection process “appropriately enables governments to use this.” The <i>New gTLD Dispute Resolution Procedure</i> is outlined in an Attachment to Module 3, pp P-1 to P-11 and was also developed so that it is equally accessible to those who wish to utilize the process.</p> <p>The Board discussed the GAC’s position that governments should not be required to pay a fee for raising objections to new gTLD applications, and does not agree with the GAC on this point. It is the Board’s view that governments that file objections should be required to cover costs of the objection process just like any other objector; the objection process will be run on a cost-recovery and loser-pays basis (so the costs of objection processes in which governments prevail will be</p>

<p>consistent with the principle that the collective (i.e. tax payers, citizens) does not bear a burden caused by special interest groups, without a substantial and identifiable public benefit.</p>	<p>borne by applicants). How would the dispute resolution process be funded: a speculative increase in application fees or increased fees to gTLD registrants? Either of these cases or others seem difficult to implement and unfair.</p>
	<p><b>25 September 2010, Board Retreat Trondheim</b>  <a href="http://www.icann.org/en/minutes/resolutions-25sep10-en.htm">http://www.icann.org/en/minutes/resolutions-25sep10-en.htm</a></p> <p><b>GNSO New gTLD Recommendation 6 Objection Process</b>          The Board acknowledges receipt of the Rec6CWG report. This is a difficult issue, and the work of the community in developing these recommendations is appreciated. The Board has discussed this important issue for the past three years. The Board agrees that ultimate responsibility for the new gTLD program rests with the Board. The Board, however, wishes to rely on the determinations of experts regarding these issues.          The Board will accept the Rec6 CWG recommendations that are not inconsistent with the existing process, as this can be achieved before the opening of the first gTLD application round, and will work to resolve any inconsistencies. Staff will consult with the Board for further guidance as required.</p> <p>Board Briefing Materials:  <a href="#">One</a> [PDF, 3.23 MB]  <a href="#">Two</a> [PDF, 2.03 MB]  <a href="#">Three</a> [PDF, 816 KB]  <a href="#">Four</a> [PDF, 240 KB]  <a href="#">Five</a> [PDF, 546 KB]</p>
	<p><b>12 November 2010: Proposed Final Applicant Guidebook</b>  <a href="http://www.icann.org/en/topics/new-gtlds/draft-rfp-clean-12nov10-en.pdf">http://www.icann.org/en/topics/new-gtlds/draft-rfp-clean-12nov10-en.pdf</a></p> <p><b>12 November 2010: Explanatory Memo—Morality &amp; Public Order</b>  <a href="http://www.icann.org/en/topics/new-gtlds/explanatory-memo-morality-public-order-12nov10-en.pdf">http://www.icann.org/en/topics/new-gtlds/explanatory-memo-morality-public-order-12nov10-en.pdf</a></p>
<p><b>22 Nov 2010: Interim GAC comments relating to new gTLDs</b>          The GAC notes the work undertaken by the cross constituency Recommendation 6 Working Group which was set up to address the concerns raised by the GAC and ALAC during the Brussels meeting and in whose deliberations three GAC members participated. The GAC will be interested in the Board’s views of the recommendations contained in the report of the Group. The GAC believes it is necessary that further discussion and development of string review processes to</p>	

<p>identify those proposed strings that are: contrary to national law, policy or regulation (for example, several governments restrict the registration of certain terms of their ccTLDs); and/or that refer to religions, ethnicity, languages, or other cultural identifiers that might raise national sensitivities. The GAC believes the integration of prior reviews into the implementation of new gTLDs can serve as an “early warning” to applicants, providing an opportunity to amend or modify the proposed string prior to proceeding further in the application process. The prior reviews would also provide opportunities to determine whether the applicant is the sole appropriate manager or relevant authority for that particular string, or whether the proposed string is either too broad to effectively identify a single entity as the relevant authority or appropriate manager, or is sufficiently contentious that an appropriate manager cannot be identified and/or agreed.</p>	
<p><b>9 December 2010: Communiqué Cartagena</b> That the GAC will provide the Board at the earliest opportunity with a list or "scorecard" of the issues which the GAC feels are still outstanding and require additional discussion between the Board and the GAC. These include:</p> <ul style="list-style-type: none"> <li>• The objection procedures including the requirements for governments to pay fees;</li> <li>• Procedures for the review of sensitive strings;</li> <li>• The need for an early warning to applicants whether a proposed string would be considered controversial or to raise sensitivities (including geographical names).</li> </ul> <p>----</p> <p>The GAC commends the initiative of the Recommendation 6 Cross Constituency Working Group (Rec6CCWG).</p> <p>The GAC will take into account the Board’s responses to the recommendations of the Rec6CWG in its further consideration of gTLD issues.</p> <p>Consistent with the GAC’s letter of 22 November 2010, the GAC anticipates working with the Board and other members of the ICANN constituencies, in particular the ALAC, in further consideration of the integration of prior reviews to serve as an early warning to applicants whether a proposed string would be considered controversial or to raise sensitivities.</p>	<p><b>10 December 2010, Board meeting</b></p> <p>New gTLD Remaining Issues <a href="http://www.icann.org/en/minutes/resolutions-10dec10-en.htm#2">http://www.icann.org/en/minutes/resolutions-10dec10-en.htm#2</a></p> <p>Resolved (2010.12.10.21), the Board:</p> <ol style="list-style-type: none"> <li>1. Appreciates the GAC's acceptance of the Board's invitation for an inter-sessional meeting to address the GAC's outstanding concerns with the new gTLD process. The Board anticipates this meeting occurring in February 2011, and looks forward to planning for this meeting in consultation and cooperation with the GAC, and to hearing the GAC's specific views on each remaining issue.</li> <li>2. Directs staff to make revisions to the guidebook as appropriate based on the comments received during the public comment period on the Proposed Final Applicant Guidebook and comments on the New gTLD Economic Study Phase II Report.</li> <li>3. **RESPONDENT'S EXHIBIT**

## **GAC indicative scorecard on new gTLD outstanding issues listed in the GAC Cartagena Communiqué**

- scorecard to serve as the basis of the GAC approach to Brussels ICANN Board/GAC consultation meeting 28 February-1 March 2011

### **Introduction**

The scorecard below represents the considered efforts of the GAC to distil the key elements of consensus advice regarding the introduction of new gTLDs it has been providing the ICANN Board since March, 2007.

As the GAC noted in its Cartagena Communiqué, the GAC's initial advice, presented in the form of Principles, pre-dated both the completion of the GNSO's Recommendations on new gTLDs and the ICANN Board's subsequent adoption of those Recommendations in June, 2008. The GAC has sought from the outset of its deliberations regarding the public policy aspects related to the introduction of new gTLDs to contribute to the bottom-up, consensus-based policy development process within ICANN. As per the ICANN Bylaws, the GAC provides advice directly to the ICANN Board. Once the GAC forwards its advice to the ICANN Board, the GAC understands that it is within the ICANN Board's remit to instruct ICANN staff to take the GAC's advice into account in the development of the implementation plan for the introduction of new gTLDs. The GAC therefore welcomes the opportunity presented by the ICANN Board's agreement to hold a meeting with the GAC to review its longstanding and outstanding concerns regarding ICANN's proposed implementation plan for the introduction of new gTLDs. From the GAC's perspective, the Brussels meetings are not only an appropriate but a critical next step in ensuring the perspectives of governments are fully taken into account in the ICANN private sector-led, multi-stakeholder model that ICANN represents.

### **Twelve outstanding issues**

1. The objection procedures including the requirements for governments to pay fees .....	3
2. Procedures for the review of sensitive strings .....	3
1. String Evaluation and Objections Procedure .....	3
2. Expand Categories of Community-based Strings .....	4
3. Root Zone Scaling .....	5

5. Providing opportunity for all stakeholders including those from developing countries.....	26

## 1. The objection procedures including the requirements for governments to pay fees

### **Recommended GAC Advice:**

The GAC advises the ICANN Board to instruct ICANN staff to delete the procedures related to “Limited Public Interest Objections” in Module 3.

### **Explanation:**

Although the new heading has been renamed from “Morality and Public Order Objections”, the body of the text remains unchanged and contains the same fundamental flaws which can only be remedied through deletion.

Specifically, the requirement that governments pay fees and must be bound by determinations by the International Centre for Expertise of the International Chamber of Commerce, which will in turn be guided by the findings of “three experts recognized as eminent jurists of international reputation”, is contrary to the sovereign right of governments to interpret and apply principles of international law on a country-by-country basis. Governments cannot be bound by the determinations of private individuals or organizations on matters that pertain to national law.

The requirement is also inconsistent with the provisions in ICANN’s Bylaws that call for governments to provide public policy advice to the ICANN Board through the Governmental Advisory Committee.

Lastly, there are no “generally accepted legal norms relating to morality and public order that are recognized under international principles of law” (Module 3, Article 2, e, iii), nor is it feasible to expect that any panel of “experts” could reach a determination whether a particular proposed new gTLD string would be considered objectionable on such grounds.

## 2. Procedures for the review of sensitive strings

### ***1. String Evaluation and Objections Procedure***

The GAC advises the ICANN Board to instruct ICANN staff to amend the following procedures related to the Initial Evaluation called for in Module 2 to include review by governments, via the GAC.

At the beginning of the Initial Evaluation Period, ICANN will provide the GAC with a detailed summary of all new gTLD applications. Any GAC member may raise an objection to a proposed string for any reason.

The GAC will consider any objection raised by a GAC member or members, and agree on advice to forward to the ICANN Board.

GAC advice could also suggest measures to mitigate GAC concerns. For example, the GAC could advise that additional scrutiny and

conditions should apply to strings that could impact on public trust (e.g. ‘.bank’).

In the event the Board determines to take an action that is not consistent with GAC advice pursuant to Article XI Section 2.1 j and k, the Board will provide a rationale for its decision.

**Explanation:**

This proposal meets a number of compelling goals. First it provides governments with a more appropriate mechanism than the “Limited Public Interest Objections” procedure to communicate objections via the GAC. It is also intended to diminish the potential for blocking of top level domain strings considered objectionable by governments, which harms the architecture of the DNS and undermines the goal of universal resolvability.

Affording governments the early opportunity, through the GAC, to provide advice to the ICANN Board about particular proposed strings is supportive of ICANN’s commitment to ensure that its decisions are in the global public interest and represent community consensus.

**2. *Expand Categories of Community-based Strings***

The GAC advises the ICANN Board to instruct ICANN staff to amend the provisions and procedures contained in Modules 1 and 3 to clarify the following:

1. “Community-based strings” include those that purport to represent or that embody a particular group of people or interests based on historical, cultural or social components of identity, such as nationality, race or ethnicity, religion, belief, culture or particular social origin or group, political opinion, membership of a national minority, disability, age, and/or a language or linguistic group (non exhaustive). In addition, those strings that refer to particular sectors, such as those subject to national regulation (such as .bank, .pharmacy) or those that describe or are targeted to a population or industry that is vulnerable to online fraud or abuse, should also be considered “community-based” strings.
2. Applicants seeking such strings should be required to affirmatively identify them as “community-based strings” and must demonstrate their affiliation with the affected community, the specific purpose of the proposed TLD, and –when opportune– evidence of support or non-objection from the relevant authority/ies that the applicant is the appropriate or agreed entity for purposes of managing the TLD.
3. In the event the proposed string is either too broad to effectively identify a single entity as the relevant authority or appropriate manager, or is sufficiently contentious that an appropriate manager cannot be identified and/or agreed, the application should be rejected.
4. The requirement that objectors must demonstrate “material detriment to the broader Internet community” should be amended to reflect simply “material detriment”, as the former represents an extremely vague standard that may prove impossible to

satisfy.

5. Individual governments that choose to file objections to any proposed “community-based” string should not be required to pay fees.

**Explanation:**

The proposed approach would remedy the failure in the draft Applicant Guidebook to incorporate the GAC’s previous advice that ICANN’s new gTLD process should respect the legitimate interests of governments regarding terms with national, cultural, geographic and religious significance. It also anticipates the strong possibility that there will be proposed new gTLD strings for which an appropriate manager cannot be identified and/or agreed, which should cause the application to be rejected as a community-based string. It corrects an impossibly vague standard of “detriment to the broader Internet community” with a more practical and realistic standard of “material detriment” to the community in question. Finally, this proposal recognizes the right of governments to protect their perceived national interests through the Community objections process without the obligation to pay fees.

### **3. Root Zone Scaling**

**Recommended GAC Advice:**

1. The Board should continue implementing a monitoring and alerting system and ensure a) that ICANN can react predictably and quickly when there are indicators that new additions and changes are straining the root zone system, and b) that the processes and possible resulting restorative measures that flow from its results are fully described in the Application Guidebook before the start of the first application round.
2. The Board commits to defer the launch of a second round or batch of applications unless an evaluation shows that there are indications from monitoring the root system etc. that a first (limited) round did not in any way jeopardize the security and stability of the root zone system.
3. The Board commits to make the second round or batch of applications contingent on a clean sheet from full technical and administrative assessment of impact of the first round with recommendations which should go out to public comment for approval.
4. The Board commits to avoid the possibility that other activities will be impacted by the possible diversion of resources to processing new gTLD applications.
5. The Board should ensure that ICANN can effectively address the specific needs of applicants from different, perhaps non-English speaking cultures, and with different legal environments.
6. The Board should monitor the pace and effectiveness of ICANN’s management of contract negotiations for new gTLDs in a potential situation of 200 to 300 simultaneous applications and evaluations.
7. The Board is confident that all relevant actors (IANA, root server operators, etc) are sufficiently informed about what is expected from them in terms of work loadings and resources in order to fulfil their respective roles, in particular the pre-

delegation checking, approvals, implementation of potentially 200 to 300 root zone changes a year and expected post-delegation changes.

#### **4. Market and Economic Impacts**

The GAC advises the ICANN Board to instruct ICANN staff to amend the final Draft Applicant Guidebook to incorporate the following:

1. Criteria to facilitate the weighing of the potential costs and benefits to the public in the evaluation and award of new gTLDs.
2. A requirement that new gTLD applicants provide information on the expected benefits of the proposed gTLD, as well as information and proposed operating terms to eliminate or minimize costs to registrants and consumers.
3. Due diligence or other operating restrictions to ensure that Community-based gTLDs will in fact serve their targeted communities and will not broaden their operations in a manner that makes it more likely for the registries to impose costs on existing domain owners in other TLDs.

**Explanation:**

The economic studies conducted by Katz, Rosston and Sullivan contain important findings that the past introduction of new gTLDs provided minimal public benefits in terms of competition for existing gTLDs and relieving name scarcity. The studies further state clearly that the introduction of new gTLDs had imposed costs on intellectual property owners in diluted brand strength, defensive registrations, and other costs associated with protecting their brands.

#### **5. Registry – Registrar Separation**

The GAC advises the ICANN Board to instruct ICANN staff to amend the proposed new registry agreement to restrict cross-ownership between registries and registrars, in those cases where it can be determined that the registry does have, or is likely to obtain, market power. The GAC further advises the ICANN Board that it considers the absence of a thorough and reasoned explanation of its decision in November 2010 to reverse its earlier decision of March 2010 to maintain "strict separation of entities offering registry services and those acting as registrars" and that "no co-ownership will be allowed" to be inconsistent with its commitments under the Affirmation of Commitments.

**Explanation:**

The CRA International report commissioned by ICANN noted that vertical integration between registries and registrars could foster both pre-competitive and anticompetitive outcomes. As the key issue is whether a gTLD has market power, it would only be

appropriate for ICANN to relax or lift restrictions on vertical integration in cases where it is clear that a gTLD faces or will face substantial competition. Such analysis would benefit from consultations with relevant antitrust authorities.

Further, ICANN has committed to provide a thorough and reasoned explanation of ICANN decisions, the rationale thereof and the sources of data and information on which ICANN relies. This has not been done yet to explain how the Board moved from a position in March 2010, as articulated in a Board resolution, of no cross ownership, to the May 31, 2010 staff proposal contained in draft Applicant Guidebook, version 4 of de minimus (i.e., no more than 2%) cross ownership, to the November 5, 2010 decision allowing full cross ownership. ICANN staff have provided an justification for the second decision but not an explanation of why ICANN's position changed so dramatically in the space of 8 months.

## **6. Protection of Rights Owners and consumer protection issue**

### ***1. Rights Protection: Trademark Clearing House (TC)***

#### **GAC Advice**

The GAC proposes the following refining changes that significantly improve the operation and achieve the maximum impact of the TC:

- The TC should be permitted to accept all types of intellectual property rights that are recognized under the national law of the country or countries under which the registry is organized or has its principal place of business. The only mandatory requirement for new registry operators will be to recognize national and supranational trademark registrations issued before June 26, 2008 and court-validated common law trademarks.
- Sunrise services and IP claims should both be mandatory for registry operators because they serve different functions with IP claims serving a useful notice function beyond the introductory phase.
- IP claims services and sunrise services should go beyond exact matches to include exact match plus key terms associated with goods or services identified by the mark ) e.g. “Kodakonlineshop”) and typographical variations identified by the rights holder.
- All trademark registrations of national and supranational effect, regardless of whether examined on substantive or relative grounds, must be eligible to participate in the pre-launch sunrise mechanisms.
- Protections afforded to trademark registrations do not extend to applications for registrations, marks within any opposition period or registered marks that were the subject of successful invalidation, cancellation or rectification proceedings.
- The IP claims service should notify the potential domain name registrant of the rights holder’s claim and also notify the rights holder of the registrant’s application for the domain name.
- The TC should continue after the initial launch of each gTLD.

- Rights holders, registries and registrars should all contribute to the cost of the TC because they all benefit from it.

### **Explanation and argument**

The GAC believes that the TC as currently framed in the Applicant Guidebook needs to be significantly improved because a) there is lack of clarity as to the modalities of the TC process and operation and b) there are problems with its applicability. While the GAC recognizes that the Trademark Clearing House (TC) mechanism was not introduced as a rights protection mechanism but as a cost reduction tool, the GAC believes it can provide effective and efficient means to enable rights holders to submit their trade mark registrations with a single entity rather than with every registry in which they may wish to obtain a second-level registration.

There is also a major inconsistency between Sunrise and IP Claims services because Sunrise services only recognize trademarks that are registered in countries conducting a so-called substantive review or examination. The consequences of this are significant in terms of eligibility. In Europe, for example, all “Community Trademarks” (i.e. any trademark which is pending registration or has been registered in the European Union as a whole rather than on a national level within the EU) and most national trademarks are excluded from the Sunrise service. These amendments would ensure that all trademark registrations could qualify for participation in the pre-launch sunrise mechanism, consistent with existing best practices (e.g. the policies for .eu, .tel, and .asia).

With regard to presentation in the Applicant Guidebook, the GAC recommends that the text could more clearly indicate (perhaps with a flow chart) at what time during the evaluation process, and by what entity, objections to potential trademark infringements should be submitted.

## ***2. Rights Protection: Uniform Rapid Suspension (URS):***

### **GAC Advice:**

- Significantly reduce the timescales. See attached table for proposed changes.
- The URS processes should be streamlined as follows:
  - The complaint should be simplified by replacing the 5,000 word free text limit + unlimited attachments [para 1.2] with a simple pro forma standardised wording with the opportunity for not more than 500 words of freeform text and limit the attachments to copies of the offending website.
  - Decisions should be taken by a suitably qualified ‘Examiner’ and not require panel appointments..
  - Where the complaint is based upon a valid registration, the requirement that the jurisdiction of registration incorporate substantive examination (paras 1.2f (i) and 8.1a) should be removed.
  - If, as is expected in the majority of cases, there is no response from the registrant, the default should be in favour of the

complainant and the website locked. The examination of possible defences in default cases according to para 8.4(2) would otherwise give an unjustified privilege to the non-cooperating defendant.

- The standard of proof (para 8.2) should be lowered from “clear and convincing evidence” to a preponderance of evidence”.
- The “bad faith” requirement in paras 1.2f), 1.2g) and 8.1c) is not acceptable. Complainants will in only rare cases prevail in URS proceedings if the standards to be fulfilled by registrants are lax. Correspondingly, the factors listed in paras 5.7a) (“bona fide”) and b) “been commonly known by the domain name”) can hardly allow a domain name owner to prevail over the holders of colliding trademarks.
- A ‘loser pays’ mechanism should be added. In addition, registrants who have lost five or more URS proceedings should be deemed to have waived the opportunity to respond to future URS complaints (this amendment corresponds to the “two strikes” provision which applies to rights holders).
- However, there should be a clear rationale for appeal by the complainant. The time for filing an appeal in default cases must be reduced from 2 years to not more than 6 months. In addition, the examination of possible defences in default cases according to para 8.4(2) means an unjustified privilege of the non-cooperating defendant.
- The URS filing fee should be US\$200-US\$300 and minor administrative deficiencies should not result in dismissal of the URS complaint.
- A successful complainant should have the right of first refusal for transfer of the disputed domain name after the suspension period so that the complainant is not forced to pursue a UDRP proceeding to secure a transfer.
- The URS should go beyond ‘exact’ matches and should at least include exact + goods/other generic words e.g. “Kodakonlineshop”.

### **Explanation and argument**

The generally acknowledged rapid escalation of the opportunity for cybersquatting caused by the proposed new gTLD round is an issue of major concern for governments in view of its likely impact on business, consumer and economic welfare, both nationally and globally. The URS mechanism was recommended specifically to tackle obvious examples of opportunistic cybersquatting by providing rights holders with a cost effective and swift remedy.

The GAC advises therefore that these proposed amendments to the URS are most important. Without these amendments, the GAC believes that URS will fail to meet its stated purpose and will be rendered ineffective and useless.

In particular, the GAC considers that the current proposals are too cumbersome and lengthy to support public policy objectives of harm reduction. Surveys and consultations undertaken by GAC representatives show that few in-house trade mark counsel believe that the proposed URS system in the final DAG provides a cost effective, expedited process in clear cut cases of trade mark abuse. Furthermore, the process too closely mirrors the UDRP mechanisms which are intended to deal with more complex disputes. The URS

as currently devised does not contain sufficient deterrence to serial cybersquatters. These changes would bring the URS back into line with its original objectives as agreed by the IRT and STI by ensuring that the URS provides an effective and rapid remedy, with more streamlined processes and faster turn round of decisions.

While it is noted that that the URS only covers intentional bad faith conduct, the GAC underlines that ICANN should make every effort to ensure that safeguards are in place to facilitate reinstatement as soon as possible in a genuine case of accidental rights infringement, through illness or some other legitimate absence, an individual or small/medium sized enterprise, has failed to respond within the timescale available.

### ***3. Rights Protection: Post-delegation Dispute Resolution Procedure (PDDRP)***

#### **GAC Advice:**

The GAC recommends that:

- The standard of proof be changed from “clear and convincing evidence” to a “preponderance of evidence”.
- The second level registrations that form the underlying basis of a successful PDDRP complaint should be deleted.
- The requirement of “substantive examination” in para 9.2.1(i) should be deleted.
- A new para 6.1 a) be added: “being identical to the complainant’s mark in relation to goods and services which are identical to those for which the complainant’s mark is registered. This would not apply if the registrant has a better right to the mark. In particular the registrant will in normal circumstances have a better right if the mark has been registered prior to the registration of the complainant’s mark.”
- Regarding the second level (para 6.2), the registrant operator should be liable if he/she acts in bad faith or is grossly negligent in relation to the circumstances listed in para 6.a)-d).
- The requirement in para 7.2.3 lit.d) that the complainant has to notify the registry operator at least 30 days prior to filing a complaint is burdensome and should be reduced to 10 days if not deleted entirely.

Para 19.5 should be amended as follows: “In cases where the Expert Determination decides that a registry operator is liable under the standards of the Trademark PDDRP, ICANN will impose appropriate remedies that are in line with the Determination.

**Explanation and Argument** These changes would ensure that the PDDRP is consistent with the requirements in a civil action for contributory trademark infringement action or unfair competition and that the abusive second level registrations are deleted after a successful PDDRP complaint.

The GAC believes that the liability criteria in the Applicant Guidebook are too lax. In particular, according to para 6, the liability of the registry operator is only triggered by behaviours such as “taking unfair advantage”, “unjustifiable impairment of the distinctive

character of the reputation of the complainant's mark" or "impermissible likelihood of confusion with the complainant's mark". The proposed changes to para 6 are therefore intended to strengthen the criteria.

The GAC considers that para 19.5 grants ICANN too much discretion in choosing the remedies it imposes on the registry operators and recommends that the remedies be consistent with the Expert Determination.

Ensuring full and effective compliance with the rules is a crucial issue post-delegation. The GAC believes therefore that ICANN needs to deploy a sufficiently large team for this purpose with an appropriate budget allocation.

#### ***4. Consumer Protection***

##### **Recommended GAC Advice:**

**Points of Contact for Abuse:** The GAC proposes the following amendment to the "Maintain an abuse point of contact" paragraph in the DAG to include government agencies which address consumer protection:

A registry operator must assist law enforcement, government agencies and agencies endorsed by governments with their enquiries about abuse complaints concerning all names registered in the TLD, including taking timely action, as required, to resolve abuse issues.

**Effective Contract Compliance:** The GAC advises the Board to ensure that ICANN's contract compliance function is adequately resourced to build confidence in ICANN's ability to enforce agreements between ICANN and registries and registrars.

##### **Explanation and argument:**

There are concerns that internationally, "law enforcement" is interpreted as solely referring to police agencies, which would exclude other enforcers that do not fall under this category. Specifically stating "government agencies and agencies endorsed by a government" should (in theory) quash any ambiguity. In addition, the challenges facing ICANN's current contract compliance efforts are expected to be magnified with the introduction of an unknown number of new gTLDs.

##### **Vetting of certain strings**

The GAC proposes that gTLD strings which relate to any generally regulated industry (e.g. .bank, .dentist, .law) should be subject to more intensive vetting than other non-geographical gTLDs.

##### **Explanation and argument**

The evaluation processes in the Applicant Guidebook offer safeguards to minimise abuse through for example objections on "community grounds." However, government authorities and agencies are concerned about the lack of proper safeguards provided by additional rigorous procedures for vetting applicants.

**Why does the GAC believe that there is a need to enhance consumer protection?**

National consumer protection authorities and fair trading agencies have expressed concern that the expansion of the number of gTLDs will establish certain consumer-orientated gTLDs that will be particularly prone to abuse and risk of increased opportunities for misrepresentation to consumers and generally expansion of the means for conducting online consumer fraud. Moreover, there is a perceived risk that certain gTLDs may become synonymous with criminal activity which may ultimately undermine consumer trust in online markets generally.

**7. Post-Delegation Disputes**

The GAC advises the ICANN Board to instruct ICANN staff to amend the Applicant Guidebook in the following way:

1. Change the wording in the sample letter of Government support in AG back to the wording in DAGv4 and keeping the new paragraph 7.13 of the new gTLD registry agreement with the changed wording from “may implement” to “will comply”. E.g change the wording from “may implement” back to “will comply” with a legally binding decision in the relevant jurisdiction.
2. In addition describe in the AG that ICANN will comply with a legally binding decision in the relevant jurisdiction where there has been a dispute between the relevant government or public authority and registry operator.

**Explanation:**

Even though ICANN’s commitment to comply with court orders or legally binding decisions by public authorities, the registry agreement between ICANN and the registry should have clear wording on this commitment to make sure that this obligation to the Government stands out as a clear and underlying premise for entering into the agreement

**8. Use of geographic names:**

*1. Definition of geographic names*

**Recommended GAC Advice:**

**The GAC asks ICANN to ensure that the criteria for community objections are implemented in a way that appropriately enables governments to use this instrument to protect their legal interest.**

ICANN refers to detailed explanations given in the “Final Draft Applicant Guidebook”.

The GAC is of the view that the criteria for community objections do still not meet these requirements. The problem could be solved, if a free of charge objection mechanism would allow governments to protect their interest and to define names that are to be considered geographic names. This implies that ICANN will exclude an applied for string from entering the new gTLD process when the government formally states that this string is considered to be a name for which this country is commonly known as

**The GAC considers that the provisions in DAG4 in relation to city names carry the danger that an applicant could seek to avoid the safeguard of government support or non-objection if the applicant simply states that the intended use of the name is for non-community purposes.**

The GAC asks ICANN to review the proposal in the DAG in order to ensure that this potential does not arise.

ICANN states that applicants are required to provide a description/purpose for the TLD, and to adhere to the terms and condition of submitting an application including confirming that all statements and representations contained in the application are true and accurate.

The GAC is of the view that this statement does not reflect fully its concerns and asks for further explanations. The problem could be solved, if a free objection mechanism would allow governments to protect their interest.

**The GAC reminds the Board that governments need time to consult internally before deciding on whether or not to deliver a letter of approval or non-objection.**

ICANN explains that it has not been decided how long the application period will be open from the launching of the gTLD program and recalls that there will be a four months communications campaign prior to the launch.

No further action required by now.

**The GAC reiterates its position that governments should not be required to pay a fee for raising objections to new gTLD applications.**

It is the view of the ICANN Board that governments that file objections should be required to cover costs of the objection process just like any other objector.

The problem could be solved, if a free objection mechanism would allow governments to protect their interest.

## ***2. Further requirements regarding geographic names***

The GAC clarifies that it is a question of national sovereignty to decide which level of government or which administration is responsible for the filing of letters of support or non-objection. There may be countries that require that such documentation has to be filed by the central government - also for regional geoTLDs; in other countries the responsibility for filing letters of support may rest

with sub-national level administrations even if the name of the capital is concerned. GAC requests some clarification on this in the next version of the Applicants Guidebook.

According to the current DAG applications will be suspended (pending resolution by the applicants), if there is more than one application for a string representing a certain geographic name, and the applications have requisite government approvals. The GAC understands such a position for applications that have support of different administrations or governmental entities. In such circumstances it is not considered appropriate for ICANN to determine the most relevant governmental entity; the same applies, if one string represents different geographic regions or cities. Some governments, however, may prefer not to select amongst applicants and support every application that fulfils certain requirements. Such a policy may facilitate decisions in some administrations and avoid time-consuming calls for tenders. GAC encourages ICANN to process those applications as other competing applications that apply for the same string.

## **9. Legal Recourse for Applications:**

In commenting DAG4 GAC emphasised that a denial of any legal recourse – as stipulated in the guidebook - is inappropriate. In its response the ICANN Board stated that it does not believe that ICANN should expose itself to costly lawsuits any more than is appropriate.

The GAC reiterates its concern that excluding the possibility of legal recourse might raise severe legal problems. GAC therefore urges the ICANN Board to seek legal advice in major jurisdiction whether such a provision might cause legal conflicts – in particular but not limited to US and European competition laws. If ICANN explains that it has already examined these legal questions carefully and considering the results of these examinations still adheres to that provision, GAC will no longer insist on its position. However, the GAC expects that ICANN will continue to adhere to the rule of law and follow broad principles of natural justice. For example, if ICANN deviates from its agreed processes in coming to a decision, the GAC expects that ICANN will provide an appropriate mechanism for any complaints to be heard.

## **10. Providing opportunities for all stakeholders including those from developing countries**

### *Main issues*

#### **1. Cost Considerations**

“GAC urged ICANN to set technical and other requirements, including cost considerations, at a reasonable and proportionate level in order not to exclude stakeholders from developing countries from participating in the new gTLD process.”

GAC: new gTLD applications from municipalities and local governments in developing countries

**2. Language diversity**

Key documents produced by ICANN must be available in all UN languages within a reasonable period in advance of the launch of the gTLD round. The GAC strongly recommends that the communications strategy for the new gTLD round be developed with this issue of inclusiveness as a key priority”.

**3. Technical and logistics support**

**4. Outreach – as per Joint AC/SO recommendations**

**5. Joint AC/SO Working Group on support for new gTLD applicants.**

On 10th December 2010 the GAC through its Cartagena GAC communiqué stated as follows: “The GAC welcomed an update on the work of the Joint AC/SO Working Group on support, and encourages the Working Group to continue their efforts, particularly with regard to further outreach with developing countries” further, the GAC urged ICANN to adopt recommendations of the Joint AC/SO Working Group.

**Recommendations of the Joint AC/SO Working Group:**

Who should receive Support?

- Non-governmental Organizations (NGOs), civil society and not-for-profit organizations
- Limited Community based applications such as cultural, linguistic and ethnic
- Applications in languages whose presence on the web is limited
- Local entrepreneurs, in those markets where market constraints make normal business operations more difficult
- Applicants located in emerging economies

Type of support:

- Cost Reduction Support
- Sponsorship and other funding support
- Modifications to the financial continued operation instrument obligation
- Technical support
- Logistical support
- Obligation Technical support for applicants in operating or qualifying to operate a gTLD
- gTLD Exception to the rules requiring separation of the Registry and Registrar function

**6. Applications from Governments or National authorities (especially municipal councils and provincial authorities) – special consideration for applications from developing countries**

GAC communiqué’s on the issue:

- i. Brussels Communiqué

The GAC commented that the new gTLD process should meet the global public interest consistent with the Affirmation of Commitments. It therefore urged ICANN to set technical and other requirements, including cost considerations, at a reasonable and proportionate level in order not to exclude developing country stakeholders from participating in the new gTLD-process. Key documents should be available in all UN languages. The GAC urges that the communications and outreach strategy for the new gTLD round be developed with this issue of inclusiveness as a key priority.

ii. Nairobi Communiqué

The GAC believed that instead of the then proposal of single-fee requirement, a cost-based structure of fees appropriate to each category of TLD would:

- a) prevent cross subsidization and
- b) better reflect the project scale,

This would improve logistical requirements and financial position of local community and developing country stakeholders who should not be disenfranchised from the new TLD round.

Further the board believes that :

- a. New gTLD process is developed on a cost recovery model.
- b. Experience gained from first round will inform decisions on fee levels, and the scope for discounts and subsidies in subsequent rounds.
- c. Non-financial means of support are being made available to deserving cases.
  - i. Proposed that the following be entertained to achieve cost reduction:
    - Waiving the cost of Program Development (\$26k).
    - Waiving the Risk/Contingency cost (\$60k).
    - Lowering the application cost (\$100k)
    - Waiving the Registry fixed fees (\$25k per calendar year), and charge the Registry- Level Transaction Fee only (\$0.25 per domain name registration or renewal).
  - ii. Proposed that the reduced cost be paid incrementally, which will give the applicants/communities from developing countries more time to raise money, and investors will be more encouraged to fund an application that passes the initial evaluation.
  - iii. Believe that communities from developing countries apply for new gTLDs according to an appropriate business model taking into consideration the realities of their regions. ICANN's commitment towards supporting gTLD applicants in communities from developing countries will be a milestone to the development of the overall Internet community in Africa and other developing regions.

**A. Other Developing world Community comments**

Rolling out new gTLD and IDNs was done in a hurry and without basis on a careful feasibility study on the impact that this rollout will have on developing countries. For some representatives, this is a massive roll out of gTLDs and IDNs that will find many developing countries unprepared and unable to absorb it. There is the fear that there might be serious consequence in terms of economic impact to developing countries.

**11. Law enforcement due diligence recommendations to amend the Registrar Accreditation Agreement as noted in the Brussels Communiqué**

The GAC advises the ICANN Board to instruct ICANN staff to amend the final Draft Applicant Guidebook as follows:

**Module 1:**

1. Include other criminal convictions as criteria for disqualification, such as Internet-related crimes (felony or misdemeanor) or drugs.
2. Assign higher weight to applicants offering the highest levels of security to minimize the potential for malicious activity, particularly for those strings that present a higher risk of serving as venues for criminal, fraudulent or illegal conduct (e.g. such as those related to children, health-care, financial services, etc.)

**Module 2:**

1. Add domestic screening services, local to the applicant, to the international screening services.
2. Add criminal background checks to the Initial Evaluation.
3. Amend the statement that the results of due diligence efforts will not be posted to a positive commitment to make such results publicly available
4. Maintain requirements that WHOIS data be accurate and publicly available.

**Explanation:**

These amendments will improve the prospects for mitigating malicious conduct and ensuring that criminal elements are hindered from using the DNS for criminal and illegal activities. The GAC also strongly encourages, and will contribute LEA expertise to this activity, further work on the high level security zone requirements.

**12. The need for an early warning to applicants whether a proposed string would be considered controversial or to raise sensitivities (including geographical names)**

In conjunction with the GAC's proposed amendments to the Objections Procedures, to Community-based strings, and Geographic

Names, the GAC advises ICANN to reconsider its objection to an “early warning” opportunity for governments to review potential new gTLD strings and to advise applicants whether their proposed strings would be considered controversial or to raise national sensitivities.

## **Appendix: Background Material**

### ***1. Intellectual Property Rights***

National governments have significant public policy concerns that the expansion of gTLDs will increase the level of fraud and abuse on the Internet, which will harm consumers, businesses, and other users of the Internet. The GAC advises the ICANN Board that the current proposed mechanisms to protect consumers and trademark rights from harm and abuse are inadequate and unacceptable. It is crucial that adequate mechanisms be adopted now -- and not after the first round of new gTLDs is introduced -- to ensure that the risk of such increased fraud and abuse is mitigated.

The GAC restates its previously articulated concerns that ICANN have in place an effective compliance program with sufficient staff and resources before ICANN launches the new gTLD program.

#### **Why is this an issue of public policy concern for the GAC?**

Trademark law protects consumers from deception and confusion and protects trademark owners' property rights from infringement. This dual basis, which is reflected in the laws of every GAC member country, mirrors the GAC's public policy concern in the rights protection issue.

The GAC acknowledges the potential commercial opportunities associated with the introduction of new gTLDs subject to a set of rules with adequate mechanisms for rights protection.

However, the GAC has nonetheless always regarded the risks to brand-owners associated with a major expansion of the gTLD space as a major public policy concern that must be carefully addressed to ensure that the opportunities and benefits outweigh the costs. In particular, many trademark owners will be forced to purchase second level defensive registrations in order to avoid misuse of their trademarks. Purchasing second level registrations will be costly and unlikely to prevent all possible misuse. The GAC notes that the significant cost burden for business arising from defensive registrations to protect brands and trade marks was described in the economic analysis undertaken by Katz, Rosston and Sullivan

The rights protection mechanisms to be established in the Applicant Guidebook are therefore crucial and must offer practical and

comprehensive approaches consistent with existing national legal frameworks and established best practice.

Once implemented in the first round of gTLD applications, ICANN should commission an independent review of the operation of the rights protections mechanisms in order to establish their effectiveness and practicability, to identify any deficiencies and scope for further improvement, and to make recommendations for public comment on how they might be changed prior to the second round of applications.

Relevant history:

### **The GAC's recent interaction with the Board on Protection of Rights Owners and consumer protection during 2010**

The GAC noted in its Nairobi communiqué the recommendations of the Special Trade Marks Issues Review Team. The GAC Chair stated in his letter dated 10 March 2010 to the ICANN Chair regarding DAGv3 that it

*is important to ensure that intellectual property rights are properly respected in the new gTLD space consistent with national and international law and standards. The GAC expects that the proposed Trademark Clearing House should be made available to all trademark owners, irrespective of the legal regime they operate under, and that an effective and sustainable Uniform Rapid Suspension (URS), with appropriate remedies, and a Post Delegation Dispute Resolution Policy are established to ensure appropriate trade mark protection. While these initiatives are broadly welcomed therefore in serving to help address the concerns of brand owners, the GAC believes that they require further refining. In particular, “substantive examination” should be re-defined so that registrations examined on “absolute grounds” are included in order to ensure broader availability of the URS.*

The Chair of ICANN responded on 5 August 2010 as follows:

*The GAC comments, in concert with other comments, were taken in account in version 4 of the Applicant Guidebook that, for the first time, included the set of proposed intellectual property rights protection mechanisms. In particular, ICANN has broadened the types of trademark registrations that must be honored in offering a “Sunrise” service and all new registries employing an IP Claims service must honor trademarks registered in all jurisdictions. The types of registrations offered protections have also been broadened for the Uniform Rapid Suspension Service, one of the new post-delegation rights protection mechanisms. The Post Delegation Dispute Resolution Policy has also been amended in response to specific recommendations from the ICANN community.*

**After due consideration of this response and the amendments contained in DAGv4, the GAC took the view, however, that the ICANN response to the GAC's advice and proposals were insufficient. This was communicated in the GAC Chair's letter of 23 September 2010 to the ICANN Chair, with particular reference to the Trademark Clearing House (TC) and the Uniform Rapid Suspension System (URS), as follows:**

*The GAC notes with great concern that brand-owners continue to be faced with substantial and often prohibitive defensive registration costs which constitute a negative impact on their business planning and budgeting over which they have no control. Consultations by individual GAC members with business stakeholders underline how this issue remains a fundamental downside to the expansion of the gTLD space, far outweighing any perception of opportunities for innovation and customer-orientated benefits from the creation of corporate brand TLDs.*

*In the current financial and economic climate, these consultations reveal that many individual brands and businesses and media entities – some with large families of brands - find themselves without a sound business case to justify high levels of expenditure on large numbers of domain name registrations, most of which they are unlikely ever to use. Many of those that do decide to commit valuable financial resources for acquiring such defensive registrations will need to take some difficult decisions as to how to prioritise their efforts to avoid as much abuse of their trademarks as possible, in the knowledge that they will not be able to prevent all the potential abuse of their brands that the new gTLD round will facilitate.*

*This problem is exacerbated by lack of awareness: a recent survey carried out by 'World Trademark Review' showed that over 50% of respondents did not understand the implications for them of the gTLD programme.*

*The GAC remains of the view, therefore, that more concerted attention needs to be paid by ICANN to mitigate the costs to brandowners of new gTLDs arising from the need to acquire defensive registrations. The GAC urges ICANN therefore to reach out more effectively to the business community to set out both the opportunities for corporate business and the cost implications for brandholders of the expansion of the gTLD space.*

*The GAC notes the efforts to enhance through process the protection of rights owners as recounted in your letter of 5 August and developed in version 4 of the DAG.*

*In particular the GAC welcomes the expansion of the Trademark Clearing House to allow all nationally registered trademarks including those not substantially reviewed. However, the GAC shares the views of the World Intellectual Property Organisation (WIPO) that ICANN should ensure that the Trademark Clearing House operates on non-discriminatory terms and not impose a validation fee depending on the source of the trademark. The GAC also recommends that the match criteria*

*for searches be extended to include results that combine a trademark and a generic term (e.g. “Kopdakcameras”).*

*The GAC also urges ICANN to ensure that all new rights protection mechanisms complement the existing UDRP mechanism. The GAC has serious concerns with regard to the way in which the draft Uniform Rapid Suspension System which governments had supported has evolved so as to require a much higher burden of proof while limiting marks eligible for a URS claim to only those which have been subject to substantive review or validated in the Clearing House with the associated cost and time implications. As a result, the GAC believes that the aim of achieving a light-weight mechanism has been compromised with the successive drafting of the URS, to the extent that it no longer serves as a viable alternative for rightsholders to the UDRP in securing the timely suspension of domain names.*

**The ICANN Chair responded in his letter of 23 November to the GAC Chair as follows:**

*The Board understands the concerns expressed by the GAC regarding the potential costs of defensive registrations, and notes that the community spent a significant amount of time considering this issue, notably through the Implementation Recommendation Team and the Special Trademark Issues Working Group. The Board considered the many recommendations and supports the resulting protections now outlined in the Applicant Guidebook. These include:*

- *The requirement for all new registries to offer a Trademark Claims service or a sunrise period at launch.*
- *The establishment of a Trademark Clearinghouse as a central repository for rights information, creating efficiencies for TM holders, registries, and registrars.*
- *The existing Uniform Domain Name Dispute Resolution Policy (UDRP) continues to be available where complainant seeks transfer of names. Compliance with UDRP decisions is required in all new, as well as existing, gTLDs.*
- *Implementation of a Uniform Rapid Suspension (URS) system that provides a streamlined, lower-cost mechanism to suspend infringing names.*
- *The requirement for all new gTLD operators to provide access to “thick” Whois data. This access to registration data aids those seeking responsible parties as part of rights enforcement activities.*

**Following further individual GAC member national consultations with domestic rights protection agencies and stakeholders, and due consideration of**

- a) the ICANN Chair’s letter of 23 November 2010;**
- b) the non-adoption in the “final” version of the DAG of the GAC’s proposals for the TC and the URS contained in the GAC Chair’s letter of 23 September 2010;**

- c) the briefing the GAC received in Cartagena from ICANN staff on the changes incorporated in the “final” version of the DAG;
- and d) the GAC’s discussions in Cartagena with the GNSO;

at its meeting with the ICANN Board in Cartagena the GAC expressed that it continued to have fundamental concerns about the inadequacy of the proposed rights protection mechanisms.

Furthermore, the Cartagena communiqué stated that

*as a result of the GAC's exchange with the GNSO, the GAC is also mindful that major stakeholder groups within ICANN (such as the Business and Intellectual Property constituencies) do not believe the most recent version of the DAG reflects their advice and concerns.*

## **2. Root Zone Scaling**

### **1. Introduction**

This scorecard summarizes the GAC’s remaining concerns that ICANN provide sufficient safeguards so that the expected scale and rate of change of introduction of new gTLDs will not have a negative impact on the security, stability and resilience of the DNS.

References are made to ICANN Chair’s letter to the GAC Chair of 23 November 2010 in response of the letter of 10th March 2010 from the GAC Chair (‘ICANN’s response’) and to and to the Draft Applicants Guidebook version 4 (‘DAG4’)

### **2. Root growth control and monitoring / early warning system**

In ICANN’s response reference is made to the intention (DAG4) to delegate 200 to 300 TLDs annually, and that in no case more than 1000 new gTLDs be added to the root zone in a year.

The GAC understands that the robustness of the root server system and the way it will react following substantive additions can only be fully understood by the practice and experience of the first round. Therefore the establishment of a monitoring system, as recommended by the community and taken on board by ICANN, is fully supported by the GAC. According to ICANN’s response “(it will) ensure that changes relating to scaling of the root management systems don’t go unnoticed prior to those changes becoming an

issue” This addresses the GAC’s advice that there should be a control mechanism to allow for the mitigation of any strain or unwanted effects of a large scale introduction of new TLDs.

However, the GAC believes that the implications and processes needed to act upon the outcome of such an early warning system need to be elaborated further in the Applicant Guidebook. The GAC accordingly now tables the following questions and proposals for the Board’s consideration:

1. What will be the modus operandi when the system issues a warning that the introduction should slow down or even stopped?
2. There should be scenarios and system responses clearly set out so that ICANN reacts predictably and quickly when there are indicators that new additions and changes are straining the root zone system. The level of detriment should be graded and described, with the resulting restorative measures outlined. These would include stopping further additions for defined periods, more intensive monitoring and in extreme cases suspension of new gTLDs.
3. Such scenarios should be described in the Applicants Guidebook with detailed explanations of how applicants will be informed about potential slowing down or even stopping of their application If the situations are defined and documented then applicants should also be advised of the consequences in certain cases.

The GAC recommends that the control mechanism should be carefully designed and there should be clearly understood (policy) implications reflected in the Applicant Guidebook before ICANN launches the round to open up the gTLD space. In view of the widely acknowledged unpredictability of all the effects of a massive introduction of gTLDs in the root zone system, the GAC also believes that there should be an in depth evaluation of the impacts of the first introduction round on the root zone system followed by a public comment period before a decision is taken to start the second round. The monitoring system for this purpose should therefore be fully operational from the start of the first round in order to deliver the necessary relevant data before the second round starts.

Therefore the GAC requests the Board,

4. to continue implementing a monitoring system and ensure that the processes that flow from its results are fully described in the Application Guidebook before the start of the first application round;
5. not to launch a second round of applications (1) unless there are indications from monitoring the root system that the first round did not in any way jeopardize the security and stability of the root zone system.

---

<sup>1</sup> assuming the first one does not exceed 200- 300 application

### **3. Operational and resource issues to avoid root change congestion and maintain continued integration of the system**

The GAC expressed on several occasions its concern that the root change processes could face congestion at the operational level. ICANN's response made clear that the scaling effects can be absorbed by the root zone operators but that these effects are much more likely to be felt within the context of ICANN's internal systems, such as application processing, legal review, IANA process, etc. Therefore the GAC remains concerned as to whether both ICANN's internal systems and the resources of external actors can scale up sufficiently to meet the demands in order to process 200 to 300 applications a year.

The GAC accordingly now tables the following questions for the Board's consideration:

1. How will the necessary increase in resources be accomplished, is there flexibility to deal with changing demands, and how will ICANN avoid the possibility that other activities will be impacted by the possible diversion of resources to processing new gTLD applications?
2. How will ICANN address the specific needs of applicants from different, perhaps non-English speaking cultures, and with different legal environments?
3. How quickly would ICANN expect to complete contract negotiations for new gTLDs in a potential situation of 200 to 300 simultaneous applications and evaluations?
4. Are all the external actors (IANA, USG, root server operators, etc) sufficiently informed about what is expected from them in terms of work loadings and resources in order to fulfill their respective roles, in particular the pre-delegation checking, approvals, and implementation of potentially 200 to 300 root zone changes a year?
5. Following delegation of so many additional TLDs, what is ICANN's projection for the administrative workload for ICANN and IANA for processing requests for changes and additions to TLDs once they have been established in the root? What is ICANN's plan for resourcing these day-to-day operational functions, including staff requirements?

### **3. Geographic Names: Analysis of GAC's DAG4 comments and ICANN's answers**

- a) The GAC underlines that country and territory names should be excluded from applications until the ccPDP.

The Board will not consider such applications in the first round.

- The GAC reiterates its understanding that the IDN ccPDP and the use of country and territory names are related. Therefore the question, whether country and territory names need to be excluded has to be reconsidered before the next application round.

The GAC notes that ICANN considers that the use of country and territory names in general is out of scope of the IDN ccPDP, and therefore linking the two processes does not appear appropriate. ICANN therefore suggests that it is a possibility that the use of country and territory names may be considered after the first round of gTLD applications. Modalities for subsequent rounds will be determined by ICANN based on recommendations from the ICANN community and GAC Advice. It is important that GAC restates advice on this issue; see Annex B to Nairobi Communiqué. The GACs main point was that strings that are a meaningful representation or abbreviation of a country or territory name should be treated outside the gTLD process. If they should be considered as new TLDs, they should be handled through a policy development process in ccNSO.

**b) GAC reiterated its concern about insufficient protection of geographic names.**

The Board does not refer to this concern.

For the GAC appropriate and free objection procedures would be acceptable to provide the protection of geographic names (see also c and e).

**4. GAC's position on "Definition of geographic names"**

The public comment period allows free of charge comments on every applied for string. Individual governments as the entire GAC can inform ICANN, which strings they consider to be geographic names. ICANN commits to process applications for strings that governments consider to be geographic names only if the respective government does support or not object to the use of that string.

GAC recalls that in cases in which geographic names correspond with generic names or brands, such a regulation would not exclude per se the use of generic names and brands as Top-Level Domains. It would, however, be in the area of responsibility of the adequate government to define requirements and safeguards to prevent the use of those Top-Level Domains as geoTLDs.

**5. Providing opportunity for all stakeholders including those from developing countries**

**SUMMARY TABLE**

**A. GAC & ICANN Board Positions**

No.	Issue Topic	GAC Position	ICANN Board Position	Remarks
1.	Recommendations of the Joint AC/SO Working Group	Supported	Supported	Board encouraged to adopt the recommendations
2.	Support on Technical operations and other requirements	ICANN to set technical and other requirements, including cost considerations, at a reasonable and proportionate level in order not to exclude developing country stakeholders from participating in the new gTLD-process	<ul style="list-style-type: none"> <li>• New gTLD process is developed on a cost recovery model</li> <li>• Experience gained from first round will inform decisions on fee levels, and the scope for discounts and subsidies in subsequent rounds</li> <li>• Non-financial means of support are being made available to deserving cases.</li> </ul>	
3.	Concerns from the Internet Government Forum (IGF), Vilnius, Lithuania	Letter from GAC to ICANN 23 <sup>rd</sup> September 2010. The GAC reiterates its strong belief that the new gTLD process should meet the global public interest in promoting a fully inclusive and diverse Internet community and infrastructure, consistent with the Affirmation of Commitments. The GAC therefore urges ICANN to set		

No.	Issue Topic	GAC Position	ICANN Board Position	Remarks
		<p>technical and other requirements, including cost considerations, at a reasonable and proportionate level in order not to exclude stakeholders from developing countries from participating in the new gTLD process. Key documents produced by ICANN must be available in all UN languages within a reasonable period in advance of the launch of the gTLD round. The GAC strongly recommends that the communications strategy for the new gTLD round be developed with this issue of inclusiveness as a key priority.</p>		

**B. Developing Countries/Communities Position.**

No.	Issue Topic	Community Position	Joint SO/AC working Group Recommendation.	ICANN Board Position	Remarks
1.	Roll out of new gTLD's and IDN's.	Rolling out new gTLD's and IDNs was done in a hurry without basis on a careful feasibility study on the impact that this rollout will have on developing countries		The position of ICANN is that in no way this is a massive roll out and in fact there have been only 900 applications for new gTLD for a year and only 200 of them will be reviewed. ICANN holds the position that it has been fair and inclusive in its decision and that also it will help any country in this process	
2.	Eligibility for support	<p>Developing communities strongly believe that entrepreneur applicants from developing countries, where the market is not wide enough for a reasonable profit making industry, are eligible for support. The African Community believe:</p> <ul style="list-style-type: none"> <li>• Entrepreneur applicants from African countries are</li> </ul>	<p>Who should receive Support?</p> <ul style="list-style-type: none"> <li>• Governments, Municipal and local authorities from developing countries</li> <li>• Non-governmental Organizations (NGOs), civil society and not-for-profit organizations</li> <li>• Limited Community</li> </ul>	ICANN board is considering the proposals from the SO/AC joint working group.	

No.	Issue Topic	Community Position	Joint SO/AC working Group Recommendation.	ICANN Board Position	Remarks
		<p>eligible for support.</p> <ul style="list-style-type: none"> <li>• Deem that Civil society, NGOs and non for profit organizations in Africa are the most in need of such support,</li> <li>• Believe that support is of utmost importance for geographic, cultural linguistic, and more generally community based applications.</li> <li>• Support to new gTLD applicants in Africa be prioritized</li> <li>• Support to be provided to applicants of new gTLDs in Africa should include, financial, linguistic, legal and technical</li> <li>• Proposed cost reduction:</li> <li>• Proposed that the reduced cost be paid incrementally,</li> <li>• Applications to be according to the</li> </ul>	<p>based applications such as cultural, linguistic and ethnic</p> <ul style="list-style-type: none"> <li>• Applications in languages whose presence on the web is limited</li> <li>• Local entrepreneurs, in those markets where market constraints make normal business operations more difficult</li> <li>• Applicants located in emerging economies</li> </ul> <p>Type of support</p> <ul style="list-style-type: none"> <li>• Cost Reduction Support</li> <li>• Sponsorship and other funding support</li> <li>• Modifications to the financial continued operation instrument obligation</li> <li>• Technical support</li> <li>• Logistical support</li> <li>• Obligation Technical</li> </ul>		

No.	Issue Topic	Community Position	Joint SO/AC working Group Recommendation.	ICANN Board Position	Remarks
		<p>appropriate business models.</p> <ul style="list-style-type: none"> <li>• Supplementary support and additional cost reduction for gTLDs applications from African countries.</li> </ul>	<p>support for applicants in operating or qualifying to operate a gTLD</p> <ul style="list-style-type: none"> <li>• gTLDs Exception to the rules requiring separation of the Registry and Registrar function</li> </ul>

## New gTLD Program Explanatory Memorandum

### GAC and Government Objections; Handling of Sensitive Strings; Early Warning

Date of Original Publication:

15 April 2011

#### **Background—New gTLD Program**

This is one of a series of new Explanatory Memos related to recent consultations between ICANN's Board and Governmental Advisory Committee concerning ICANN's New gTLD Program.

These memos were developed to document the latest position on these topics by taking into account the current thinking, discussions and public comments received. Each memo not only reflects GAC advice but also contains the reasoning and rationale on each of the relevant issues regarding the Applicant Guidebook and the launch of the New gTLD Program.

For current information, timelines and activities related to the New gTLD Program, please go to <<http://www.icann.org/en/topics/new-gtld-program.htm>>.

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

## Introduction

### **Current Environment**

The current version of the Applicant Guidebook, in accordance with the GNSO New gTLD Policy Recommendations, provides for objection and independent dispute resolution processes in order to provide protections for certain important interests such as intellectual property rights and community names.

The GAC, in its Indicative Scorecard on New gTLD Outstanding Issues, provided several recommendations regarding the handling of sensitive strings and the objection processes, among them (excerpted):

Delete the procedures related to “Limited Public Interest Objections”

Amend the evaluation process to include review by governments, via the GAC.

Expand categories and consideration of community-based strings and geographical place names (including names relating to particular sectors, such as those subject to national regulation).

Implement a free objection mechanism that would allow governments to protect their interests.

Provide for an early warning to applicants when a proposed string would be considered controversial or to raise sensitivities.

### **Recommendation**

Based on consideration of the GAC’s advice and consultations between the GAC and Board, it is recommended that:

The current application evaluation process flow be augmented to include a GAC Early Warning procedure and a GAC Advice on New gTLDs (i.e., objection) procedure. GAC Early Warning and GAC Advice on New gTLDs can be applied to any application, e.g., sensitive, community, sector, or geographic strings of any type.

### **Key aspects of the GAC Early Warning process are:**

The GAC Early Warning Notice should be submitted in the 60 days following the posting of the applications.

The Early Warning Notice is a notice to the applicant from the GAC that the application or proposed string would be considered controversial or raise national sensitivities.

The Early Warning Notice does not require GAC consensus; it requires a GAC decision to issue a notice based upon statements of member states or governments.

The GAC will forward the Early Warning Notice to the Board, and ICANN will notify the applicants. Applicants who withdraw within, say, 21 days of receiving the Notice will receive an 80% refund in order to incent resolution of the issue or withdrawal of applications where appropriate.

**Key aspects of the GAC Advice on New gTLDs procedure are:**

The GAC can provide advice to the Board on any application. To be considered by the Board during the application evaluation and delegation processes, the Advice must be submitted within a five-month timeframe after the applications are posted.

GAC advice that is stated to be a “GAC consensus” position and that states, this application should not proceed, will create a strong presumption for the Board that the application should not be approved. If the Board decides to approve the application, the Governmental Advisory Committee and the ICANN Board will then try, in good faith and in a timely and efficient manner, to find a mutually acceptable solution.

GAC advice that does not indicate consensus or does not state that the TLD should not be delegated will be passed on to the applicant but will not trigger a Bylaws-required good-faith attempt at reconciliation if the Board decides to delegate the string. (Notwithstanding, of course, that the Board will take seriously any other advice that GAC might provide.)

GAC advice that is stated to be a “GAC consensus” position and that states, “the TLD in this application should not be delegated unless remediated” will raise a strong presumption for the Board that the application should be turned away. If there is a remediation method available in the Guidebook (such as securing government approval) that action may be taken. But material amendments to applications are generally prohibited and if there is no remediation method available, the application will be rejected and the applicant can re-apply in the second round.

Since ICANN and its constituent bodies are committed to operate to the maximum extent feasible in an open and transparent manner (consistent with

procedures designed to ensure fairness), ICANN will expect that GAC advice addressing new gTLD applications would identify objecting countries, the public policy basis for the objection, and the process by which consensus was reached.

The Board will consider the GAC advice as soon as practicable.

The creation of the new procedures obviates the need to eliminate the existing objection procedures, as they will continue to be available to other entities and individuals.

While category definitions will not be expanded, proposed GAC Early Warning and GAC Advice on New gTLDs procedures are designed so the GAC can provide input on any application for any reason, eliminating the need for specific definitions. Therefore, the procedures will address sensitive, community, geographic and sector (regulated industry) string issues where these are of concern to governments and also give indications to applicants on ways to avoid formal objections.

A limited “free” objection mechanism for governments wishing to participate in the dispute resolution process is proposed under separate cover that provides a finite amount of fees and also limits ICANN’s significant financial risk.

### ***Rationale for recommendation***

1. Delete the procedures related to “Limited Public Interest Objections”

The GAC indicated in Brussels that its concern relates to requiring governments to use this objection process. The Board and GAC therefore agreed that it would be consistent with GAC advice to leave the provision for Limited Public Interest Objections in the Guidebook, but the GAC (as a whole) would not be obligated to use the objection process in order to give advice.

2. Amend the evaluation process to include review by governments, via the GAC and provide for an early warning to applicants when a proposed string would be considered controversial or to raise sensitivities

Refer to the attached graphic, describing the new process flows. The existing procedures are in black and the proposed procedures, “GAC Early Warning” and GAC Advice on New gTLDs” are in blue.

The GAC Early Warning procedure is merely a notice but it is meant to advise applicants that government objection or GAC Advice on New gTLDs to not delegate the TLD is likely. The refund is set at a higher rate than the otherwise

maximum refund in order to encourage withdrawal in the face of the potential government-level objection. While the higher refund might seem to suggest that GAC statements are of greater import than other objections, this is justified. This is because GAC Early Warning need not be based on existing objection criteria in the Guidebook, so the Early Warning may be unanticipated by the applicant. This “surprise” is partially addressed by increasing the refund.

The GAC Advice on New gTLDs procedure is intended to address the concerns of governments and also to retain some certainty for applicants. It attempts to have the GAC clearly label its advice as consensus, if it is, and to specify that the TLD should not be delegated so it is clear when the Board might be disagreeing with GAC advice.

The Board will consider the GAC advice as soon as practicable, rather than waiting for the rest of the evaluation and any dispute resolution process to conclude.

3. Expand categories and consideration of community-based strings and geographical place names (including particular sectors, such as those subject to national regulation).

Expansion of categories in a clear way is extremely difficult. This is reflected in the public comment received. Community definitions have been drawn narrowly in the Guidebook to prevent abuses. Even expansion of categories will probably not address GAC concerns in some way as even the expanded definition might leave some genuine area of sensitivity unaddressed.

The proposed GAC Early Warning and GAC Advice on New gTLDs procedures are designed so the GAC can provide input any application for any reason, eliminating the need for specific definitions. Therefore, the procedures will address sensitive, community, geographic and sector (regulated industry) string issues. The GAC will not be barred from protecting its members interests by existing or even expanded limitations.

4. Implement a free objection mechanism that would allow governments to protect their interests.

It is understood that governments are reticent to pay for objections. However, governments are often the best suited to drive objections, and they do pay for similar services regularly, including resolution of disputes. The GAC also mentioned that governments must budget for dispute resolution fees if they anticipate the need to object to applications. There still is time for that and now is the time.

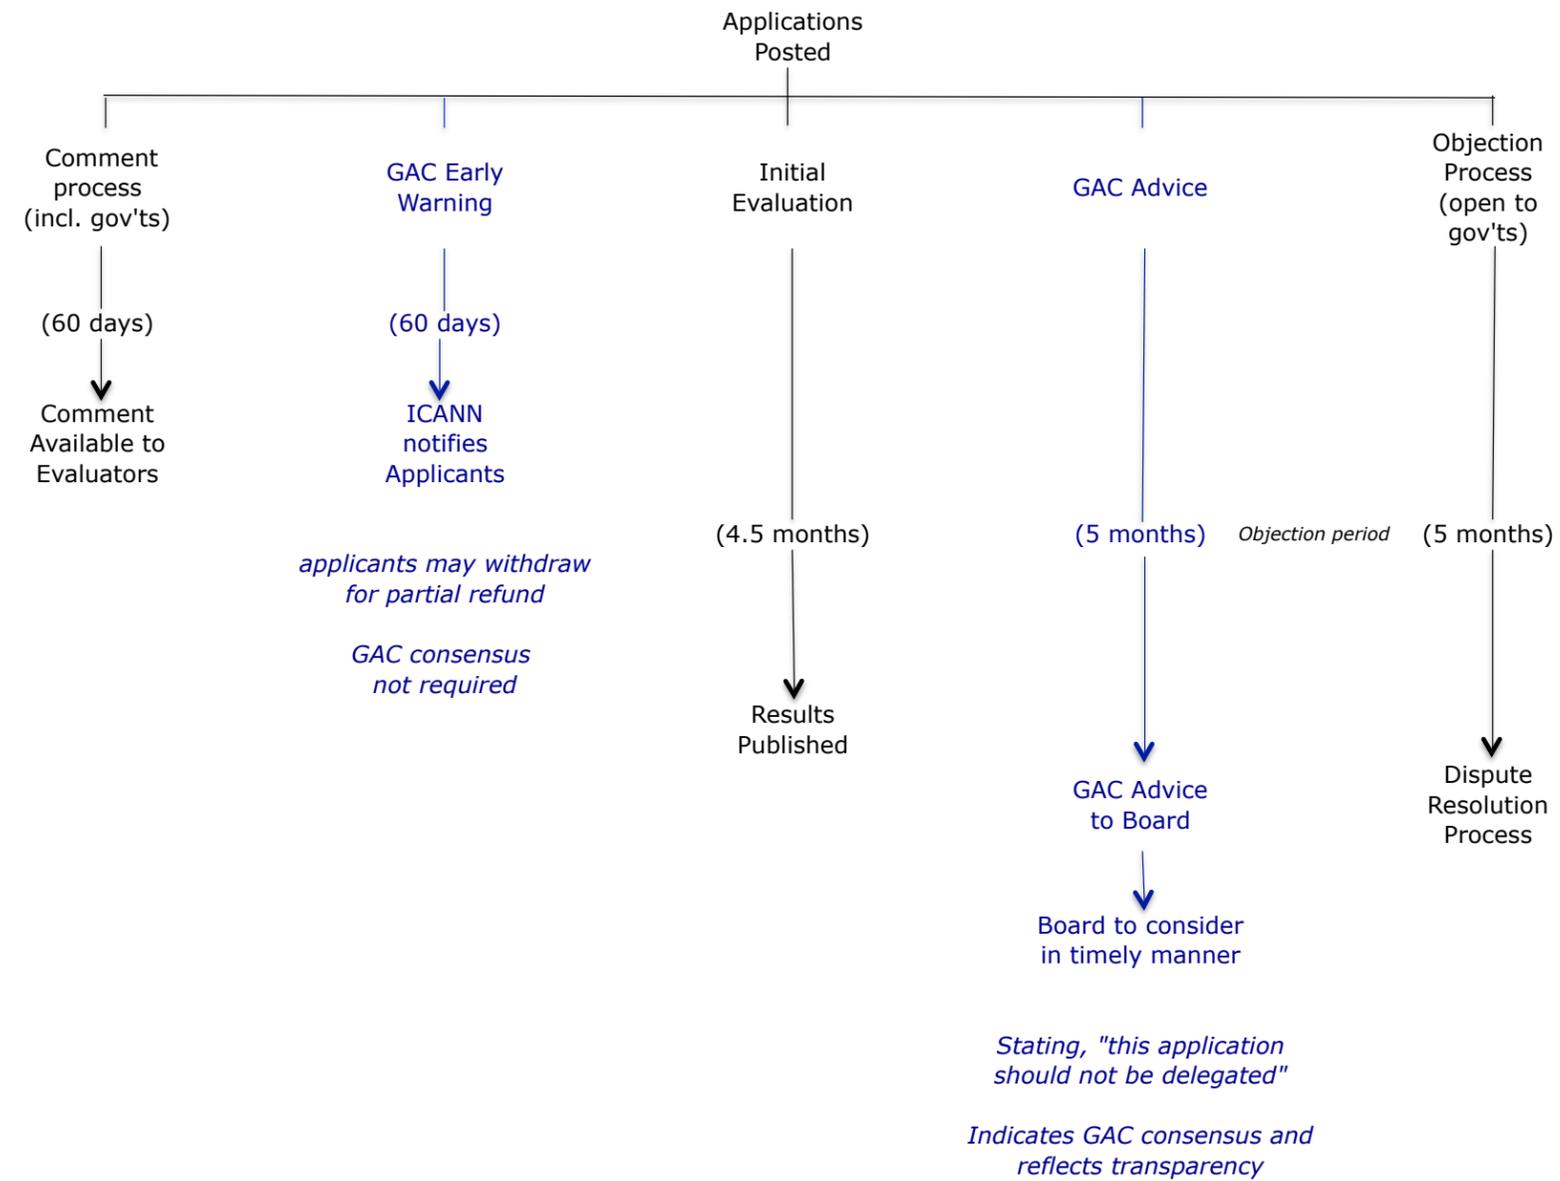

Payment of dispute resolution fees, multiplied by several times would pose a significant risk for ICANN. There is no provision in the current evaluation fee for recovering these costs. The costs must either be limited in some way, or allocated to other applicants. The latter seems inappropriate and, in any case, would be extremely difficult to calculate a priori.

Providing unlimited dispute resolution to governments would be the subject of abuses, as governments might become proxies for objectors seeking to block applications.

In order to protect government interests, ICANN will set aside a limited amount from reserves, say \$1MM to \$2MM. A model for limiting the number of ICANN-funded objections is published under separate cover. The money that is expended in providing limited fee exemptions will be recouped out of the \$25K in each evaluation fee that is earmarked for development costs. When development costs are recovered and dispute resolution fees reach a steady state, that portion of the fee will be eliminated.

Public comment has suggested that if the government does not pay a dispute resolution fee, neither should the applicant. This feature is not included in the model. If the applicant wins, the loser pays model means the applicant does not pay. If the applicant loses it means that the objection has merit, the applicant for TLD would violate the interests protected in the process, and it is reasonable for the applicant to bear those costs.

**NEW gTLDs: GAC OBJECTION AND ADVICE PROCESSES**  
 (Draft: Best Current Thinking)

- Notes:
1. GAC Early Warning and GAC advice can be applied to any application: e.g., sensitive, community, sector, or geographic strings of any type
  2. Refunds increased to 80% for applicants who withdraw within, say, 21 days of GAC Early Warning
  3. Limited fee relief for governments participating in objection process
  4. Time spans are minimums and may be extended

**R-8**

**RESPONDENT'S EXHIBIT**

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

This document contains the ICANN reply notes to the:

- "[GAC indicative scorecard on new gTLD outstanding issues](#)" of 23 February 2011, and
- "[GAC comments on the ICANN Board's response to the GAC Scorecard](#)" of 12 April 2011.

The original "[Notes](#)" document has been revised to reflect the ICANN reasoning based on discussions in San Francisco and the GAC Response dated 12 April 2011. In order to keep the document from becoming unwieldy and to make it relatively easy to follow, the original Board Notes column has been "redlined." However the rest of the document remains the same and does not contain the most recent "GAC comments", which are posted at the link indicated above. (Note: the simple formatting has some drawbacks. For example, the issue numbers no longer completely match those in the new "GAC comments" where the GAC have realigned the comments in a way that makes more sense.)

As before, each GAC scorecard item is noted with a "1A", "1B", or "2". Some scores have been adjusted to reflect changes made by the GAC and Board.

- "1A" indicates that the Board's position is consistent with GAC advice as described in the Scorecard.
- "1B" indicates that the Board's position is consistent with GAC advice as described in the Scorecard in principle, but that the implementation of the advice might be different than the GAC's recommendation.
- "2" indicates that the Board's current position is not consistent with GAC advice as described in the Scorecard and GAC Response.

### Results:

The recent ICANN Board – GAC consultations were successful in a number of ways. They were substantive, effective, results-oriented working sessions that created the gravamen for an effective ICANN - government working model going forward.

These consultations have resulted in several victories for ICANN and the GAC: the GAC agreed that ICANN should prepare for an economic study to be undertaken after the first round to measure program effectiveness and indicate improvements;

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

ICANN agreed to implement a “GAC Advice for New gTLDs” process. In these and other areas, both sides have made accommodations and also reached areas of agreement.

It should be noted that in any negotiation of 80 separate points, such as we have here, the final score is not going to be 80 to zero. At the end of the day, it seems the Board is going to have to say in some cases, “we are going against GAC advice,” but the Board has made serious and effective changes in response to the first GAC scorecard – as has the GAC. It is important to recognize that although there are “2’s” remaining, some of the solutions generated were intended to address the set of GAC concerns, even if they do not specifically address each point.

For example, the GAC Early Warning and the GAC Advice processes are intended to address specific GAC concerns about their role vis-à-vis the Board, but these processes were designed to address other GAC issues as well, e.g., broadening definitions of community and geographic TLDs. So while the Scorecard indicates that there are still areas of disagreement (i.e., “2s”) some of those areas are addressed in the broad nature of some of the solutions.

Item #	GAC Scorecard Actionable Item	Position	Notes
<b>1.</b>	<b>The objection procedures including the requirements for governments to pay fees</b>		
1.	Delete the procedures related to “Limited Public Interest Objections” in Module 3.	<b>1A</b>	The GAC indicated in Brussels and its 12 April “GAC comments” that it would be consistent with GAC advice to leave the provision for Limited Public Interest Objections in the Guidebook for entities other than GAC members and other governments, instead of the original GAC recommendation that the entire section be deleted. New, proposed GAC review procedures have been created (please see below). ICANN will also adopt the GAC recommendation that ICANN amend the title of Module 3 to “Objection Procedures” to more accurately reflect the intention to provide the GAC with a separate procedure for objections based on public policy concerns.
<b>2.</b>	<b>Procedures for the review of sensitive strings</b>		

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
2.1.1.1	<p><b>1. String Evaluation and Objections Procedure</b></p> <p>Amend the following procedures related to the Initial Evaluation called for in Module 2 to include review by governments, via the GAC.</p> <p>At the beginning of the Initial Evaluation Period, ICANN will provide the GAC with a detailed summary of all new gTLD applications.</p> <p>Any GAC member may raise an objection to a proposed string for any reason. The GAC will consider any objection raised by a GAC member or members, and agree on advice to forward to the ICANN Board.</p>	<b>1B</b>	<p>The Board certainly respects that there are no mandated timeframes for GAC policy advice, nor a requirement to provide consensus advice to the Board. It is nonetheless useful for the efficiency of the process that GAC advice be timely, useful and documented. The Board appreciates that the GAC will endeavor to respond within the comment period and agrees that ICANN should attempt to set the time for the early warning period to be at 60 days.</p> <p>Coincident with the posting of this summary is also a proposal where the current application evaluation process flow would be augmented to include a GAC Early Warning procedure and a GAC Advice on New gTLDs (i.e., objection) procedure. GAC Early Warning and GAC Advice on New gTLDs can be applied to any application, e.g., sensitive, community, sector, or geographic strings of any type.</p> <p>The Early Warning Notice does not require GAC consensus; it requires a GAC decision to issue a notice based upon statements of member states or governments.</p> <p>The GAC Advice on New gTLDs procedure does not require GAC consensus but GAC advice that is stated to be a “GAC consensus” position and that states “this application should not proceed,” will create a strong presumption for the Board that the application should not be approved. If the Board then decides to approve the application, a Bylaws-required good faith attempt at reconciliation would be triggered.</p> <p>Additional detail and rationale for the positions is included in the companion paper posted with this summary.</p>
2.1.2	GAC advice could also suggest measures to	<b>2</b>	The Board appreciates that the Bylaws do not limit the GAC’s ability to

### Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
	mitigate GAC concerns. For example, the GAC could advise that additional scrutiny and conditions should apply to strings that could impact on public trust (e.g. '.bank').		<p>provide advice on public policy matters. We hope that GAC Early Warning would encourage applicants to resolve the issue or withdraw if appropriate. The refund is set at a higher rate than the otherwise maximum refund in order to encourage withdrawal in the face of the potential government-level objection.</p> <p>If the GAC were to provide suggested changes to mitigate concerns that lead to changes in the application, we are concerned that the advice would lead to ad hoc changes to the evaluation process based on subjective assessments.</p> <p>The current process, for good reason, provides very limited ability for applicants to amend their application. Allowing amendments would encourage abuses and, we believe, actually increase the number of controversial applications. For example, if the GAC Early Warning required government approval for an application to go forward, that could be remedied. However, if the GAC advised that the string itself raised impermissible sensitivities, the applicant is not allowed to amend the application to change the string. That applicant could withdraw for a greater refund.</p>
2.1.3	In the event the Board determines to take an action that is not consistent with GAC advice pursuant to Article XI Section 2.1 j and k, the Board will provide a rationale for its decision.	<b>1A</b>	This is settled.
2.2	<b>2. Expand Categories of Community-based Strings</b>		

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
	Amend the provisions and procedures contained in Modules 1 and 3 to clarify the following:		
2.2.1	<p>“Community-based strings” include those that purport to represent or that embody a particular group of people or interests based on historical, cultural or social components of identity, such as nationality, race or ethnicity, religion, belief, culture or particular social origin or group, political opinion, membership of a national minority, disability, age, and/or a language or linguistic group (non exhaustive). In addition, those strings that refer to particular sectors, such as those subject to national regulation (such as .bank, .pharmacy) or those that describe or are targeted to a population or industry that is vulnerable to online fraud or abuse, should also be considered “community-based” strings.</p>	<b>2</b>	<p>It is true that the Board has rejected the idea that community name definitions be expanded to include other sectors and regulated business, but it the Board does not suggest substituting a Community objections procedure for the more proactive and preventative mechanism that would require an affirmative demonstration of Community support.</p> <p>Expansion of categories in a clear way is extremely difficult. This is reflected in the public comment received. Community definitions have been drawn narrowly in the Guidebook to prevent abuses. Even expansion of categories will probably not address GAC concerns in some way as even the expanded definition might leave some genuine area of sensitivity unaddressed.</p> <p>The proposed GAC Early Warning and GAC Advice on New gTLDs procedures are designed to address the GAC concern, i.e., so the GAC can provide input on any application for any reason, eliminating the need for specific definitions. Therefore, the procedures will address sensitive, community, geographic and sector (regulated industry) string issues and give indications to applicants on ways to avoid formal objections.</p>
2.2.2	Applicants seeking such strings should be required to affirmatively identify them as “community-based strings” and must demonstrate their affiliation with the affected community, the specific purpose	<b>2</b>	<p>See section above. The GAC Early Warning and GAC Advice procedures can be applied to any application, regardless of whether the applicant has been self-designated as a community TLD.</p> <p>The GAC’s suggestion would require applicants to designate</p>

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
	of the proposed TLD, and –when opportune evidence of support or non-objection from the relevant authority/ies that the applicant is the appropriate or agreed entity for purposes of managing the TLD.		<p>themselves as a community, even if they might not be.</p> <p>Strings may have many meanings, not all of which might implicate a community.</p> <p>Reducing the context for how strings may be used is contrary to an important goal of the new gTLD program, which is to help encourage competition, innovation and consumer choice.</p>
2.2.3	In the event the proposed string is either too broad to effectively identify a single entity as the relevant authority or appropriate manager, or is sufficiently contentious that an appropriate manager cannot be identified and/or agreed, the application should be rejected.	<b>2</b>	As described above and in the accompanying paper, the GAC may object to any application.
2.2.4	The requirement that objectors must demonstrate “material detriment to the broader Internet community” should be amended to reflect simply “material detriment”, as the former represents an extremely vague standard that may prove impossible to satisfy.	<b>1A</b>	<p>Applicant Guidebook has been revised to clarify this aspect of the standards.</p> <p>The new standard in the Guidebook reads: “The objector must prove that the application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted.”</p>
2.2.5	Individual governments that choose to file objections to any proposed “community-based” string should not be required to pay fees.	<b>1B</b>	A companion paper considers several models that balance the government interests and the need for ICANN to maintain a reasonable extent of control over expenditures. It recommends that a pre-determined amount of funding be designated by ICANN for each individual government, for the purpose of funding objection fees where a government wished to file a formal objection. Each

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>government would be allotted an equal amount, and could continue to draw on such funds up to the maximum at its discretion, with the guarantee that at least one objection be fully funded. By fixing the funding amount (instead of the number of objections), governments could tailor the objections to minimize dispute resolution costs. This would provide ability for governments to object without cost and even collaborate on which governments will file objections, while putting a ceiling on the maximum costs.</p> <p>This leaves several options for governments: GAC Early Warning and GAC Advice on New gTLDs (no fee); the loser pays model where governments who win their objections pay no fees; limited number of objections paid by ICANN; and, in an option to be explored further, the possibility that governments faced with high numbers of objectionable applications in their region request extraordinary funding from ICANN or some other source to be identified.</p> <p>Detail and rationale are provided in the paper.</p>
<b>3.</b>	<b>Root Zone Scaling</b>		
3.1.1	<p>The Board should continue implementing a monitoring and alerting system and ensure a) that ICANN can react predictably and quickly when there are indicators that new additions and changes are straining the root zone system, and</p>	<b>1A</b>	<p>Root zone monitoring systems are currently in place. ICANN will work with root zone operators to identify relevant reporting metrics and establish a process to report such metrics to the GAC and the Internet community.</p> <p>Furthermore, a process will be implemented that enables the delegation of TLDs to be slowed or stopped in the event there is a strain to the root zone system.</p> <p>ICANN also commits to review the effects of the new gTLD program on the operations of the root zone system, and defer the delegations in</p>

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>the second round until it is determined that the delegations in the first round did not jeopardize root zone system security or stability.</p> <p>Pleased with concurrence on this issue and taking the next step to execute on its commitments, ICANN has drafted a companion paper to this document describing root zone scaling efforts: monitoring root zone stability and planning ICANN operations for increased delegation rates and provision of services to larger numbers of registries. This plan includes a hold on new delegations after the first round until stability is tested and assured. Included as an annex to that paper is a draft document: Root Server System Management Strategy. This document is the first draft of the plan to monitor root zone performance.</p>
3.1.2	b) that the processes and possible resulting restorative measures that flow from its results are fully described in the Application Guidebook before the start of the first application round.		See 3.1.1
3.2	The Board commits to defer the launch of a second round or batch of applications unless an evaluation shows that there are indications from monitoring the root system etc. that a first (limited) round did not in any way jeopardize the security and stability of the root zone system.		See 3.1.1
3.3	The Board commits to make the second round or batch of applications contingent on a clean sheet from full technical and administrative assessment of impact of the first round with recommendations which should go out to public comment for		See 3.1.1

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
	approval.		
3.4	The Board commits to avoid the possibility that other activities will be impacted by the possible diversion of resources to processing new gTLD applications.	<b>1A</b>	ICANN commits that the operation of the IANA functions and ICANN's coordination of the root zone system will not be negatively affected. The companion paper on Root Zone Scaling describes staffing plans to ensure ongoing day-to-day operations at ICANN. These operations include delegation, redelegation, root zone changes, contractual compliance and registry liaison. Be advised that these calculations of manpower are not yet part of the ICANN operational plan. ICANN will continue to test these assumptions in order to create and execute an operating plan that addresses these requirements.
3.5	The Board should ensure that ICANN can effectively address the specific needs of applicants from different, perhaps non-English speaking cultures, and with different legal environments.	<b>1A</b>	ICANN's planning routinely takes into account non-English speaking and different legal environments. We will ensure that planning is included for handling new gTLDs.
3.6	The Board should monitor the pace and effectiveness of ICANN's management of contract negotiations for new gTLDs in a potential situation of 200 to 300 simultaneous applications and evaluations.	<b>1A</b>	
3.7	The Board is confident that all relevant actors (IANA, root server operators, etc) are sufficiently informed about what is expected from them in terms of work loadings and resources in order to fulfil their respective roles, in particular the pre delegation checking, approvals, implementation of potentially 200 to 300	<b>1A</b>	

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
	root zone changes a year and expected post-delegation changes.		
<b>4.</b>	<b>Market and Economic Impacts</b>		
4.1	<p>Amend the final Draft Applicant Guidebook to incorporate the following:</p> <p style="padding-left: 40px;">Criteria to facilitate the weighing of the potential costs and benefits to the public in the evaluation and award of new gTLDs.</p>	<b>1A</b>	<p>The Board notes and appreciates the revised GAC proposal that the Board should identify criteria to facilitate the weighing of the potential costs and benefits to the public in the evaluation and award of new gTLDs as part of the new gTLD program review as specified in section 9.3 of the Affirmation of Commitments.</p> <p>The New gTLD Program will be reviewed, as specified in section 9.3 of the Affirmation of Commitments. This will include consideration of the “extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of: (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion.”</p>
4.2	A requirement that new gTLD applicants provide information on the expected benefits of the proposed gTLD, as well as information and proposed operating terms to eliminate or minimize costs to registrants and consumers.	<b>1A</b>	<p>The Guidebook will be amended, i.e., the applicant questions will be augmented, to include questions requiring new gTLD applicants to provide information on the expected benefits of the proposed gTLD, as well as information and proposed operating terms to eliminate or minimize costs to registrants and consumers.</p> <p>ICANN retained economists familiar with these issues to suggest which questions should be asked.</p> <p>After some discussion and iteration, questions have been developed and are provided in the annex to the explanatory memorandum on this topic. The questions will be public facing, i.e., the answers will be published. The answers will not be used to score or otherwise evaluate the applications.</p>

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>Two series or sets of questions are now included in the Guidebook, (see explanatory memorandum on this subject) headed by:</p> <ol style="list-style-type: none"> <li>1. How do you expect that your proposed gTLD will benefit registrants, Internet users, and others?</li> <li>2. What operating rules will you adopt to eliminate or minimize social costs (e.g., time or financial resource costs, as well as various types of consumer vulnerabilities)? What other steps will you take to minimize negative consequences/costs imposed upon consumers?</li> </ol>
4.3	Due diligence or other operating restrictions to ensure that Community-based gTLDs will in fact serve their targeted communities and will not broaden their operations in a manner that makes it more likely for the registries to impose costs on existing domain owners in other TLDs.	<b>1A</b>	ICANN will continue to work to ensure that post-delegation dispute mechanisms adequately address this concern. The ICANN Board resolved that the GNSO should be provided a briefing paper and should examine this question (see, <a href="http://icann.org/en/minutes/resolutions-10dec10-en.htm">http://icann.org/en/minutes/resolutions-10dec10-en.htm</a> - 8). The GNSO was provided that paper, including a proposed model for determining under which circumstances a community TLD registry operator may amend the registration restriction in the registry agreement. The procedure is intended to allow changes to Community TLD restrictions, recognizing that changes will be necessary to best meet community needs.
<b>5.</b>	<b>Registry – Registrar Separation</b>		
	Amend the proposed new registry agreement to restrict cross-ownership between registries and registrars, in those cases where it can be determined that the registry does have, or is likely to obtain, market power.	<b>2</b>	As indicated in the original Board Notes: "ICANN sought to implement a marketplace model that would enhance competition, opportunities for innovation and increase choice for consumers while preventing abuses in cases where the registry could wield market power. While lifting restrictions on cross-ownership, ICANN reserves the right to refer issues to appropriate competition authorities if there are apparent abuses of market power. As previously resolved by the Board, registry agreements will include requirements and restrictions on any inappropriate or abusive conduct arising out of registry-registrar cross

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>ownership, including without limitations provisions protecting against misuse of data or violations of a registry code of conduct."</p> <p>The GAC Comments from 12 April 2011 stated that "The Board response is considered insufficient by the colleagues of some GAC members who are responsible for Competition and anti-Trust issues. They have requested that ICANN provide a more reasoned argument as to why they have rejected the GAC's proposal and why the Board feels that ex-ante measures are less preferable to ex-post measures for minimising problems associated with anti-competitive behavior."</p> <p>To answer: ICANN considered several options with respect to the vertical separation issue, including a blanket prohibition against cross-ownership by registries with market power. The problem with such an ex ante prohibition is that it is overly restrictive; that is, a prohibition of vertical integration based purely on market power is likely to deprive consumers of the competitive benefits of cross-ownership. From a consumer welfare perspective, a better approach is to allow generally pro-competitive vertical integration while referring any potentially suspect arrangements to expert competition enforcement authorities, who can then take action when their ex post expert evaluation determines it is appropriate. This is particularly important because it is difficult to accurately measure market power. Market definition and the evaluation of market power are contentious issues in most antitrust cases and often require complex economic and econometric analysis. Market share can be used as a proxy, but antitrust authorities around the world recognize that it is an imperfect proxy. Moreover, there are various ways to measure market share. Delegating this expert analysis and post ante determination to competition authorities avoids the problem of mistakenly ex ante deterring competitively beneficial vertical integration while also ensuring that consumers are protected</p>

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
			when economic conditions merit competition policy intervention.
<b>6.</b>	<b>Protection of Rights Owners and consumer protection issue</b>		
6.1.1	<p><b>1. Rights Protection: Trademark Clearing House (TC)</b></p> <p>The TC should be permitted to accept all types of intellectual property rights that are recognized under the national law of the country or countries under which the registry is organized or has its principal place of business. The only mandatory requirement for new registry operators will be to recognize national and supranational trademark registrations issued before June 26, 2008 and court-validated common law trademarks.</p>	<b>1A</b>	<p>Overall - Based on the GAC Indicative Scorecard, discussions in the Silicon Valley meeting, and follow-up with stakeholder groups, ICANN has made several changes in Trademark Protections in an effort to meet GAC Scorecard requests.</p> <p>(a) All nationally or multi-nationally registered trademarks will be accepted into the Clearinghouse. The proposed date cut-off will not be utilized as a requirement for entry into the Clearinghouse.</p> <p>(b) All trademarks that have been validated via court proceeding, or have protection under statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion, will be accepted into the Clearinghouse.</p> <p>(c) All marks that constitute intellectual property will now be accepted into the Clearinghouse.</p> <p>(d) Protections afforded to trademark registrations do not extend to applications for registrations, marks within any opposition period or registered marks that were the subject of successful invalidation, cancellation or rectification proceedings.</p> <p>For Trademark Claims services - Registries must recognize and honor all marks in (a) and (b) above.</p> <p>For Sunrise services – Registries must recognize and honor all marks in (a) and (b) above, provided that:</p> <p>(i) the holders of marks in (a) above have submitted proof of</p>

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>(ii) use of the mark, which can be demonstrated by a declaration and one specimen of current use; and the holders of marks in (b) above have been validated by a court or protected by a statute or treaty on or before 26 June 2008.</p> <p>The Clearinghouse must clearly note when entering the marks into the database, which marks are registered trademarks and which marks have been submitted with proof of use.</p>
6.1.2	Sunrise services and IP claims should both be mandatory for registry operators because they serve different functions with IP claims serving a useful notice function beyond the introductory phase.	<b>1A</b>	<p>The IRT and STI suggested an either/or approach. After discussion with the GAC and some other community members, including those representing trademark interests, the Board has determined to make both a limited Trademark Claims service, and Sunrise service, mandatory. All registries will be required to offer: (i) a Sunrise program, and (ii) for at least 60 days from launch, a Trademark Claims service using the Clearinghouse database. Thereafter, utilization of Trademark Claims services will be at the registry’s discretion.</p> <p>The adjusted program provides flexibility to holders of registered trademarks from all jurisdictions because it provides the trademark holders with the option to receive notice through the Clearinghouse when someone else is attempting to register a domain name using the mark, rather than paying to obtain a sunrise registration itself.</p>
6.1.3	IP claims services and sunrise services should go beyond exact matches to include exact match plus key terms associated with goods or services identified by the mark) e.g. “Kodakonlineshop”) and typographical variations identified by the rights holder.	<b>2</b>	Sunrise services provide trademark holders with “first rights” in domain names, and as such must be limited to identical matches. Moreover, unlike the URS, where a qualified Examiner will be capable of using discretion to determine if a mark is identical or confusingly similar, no such discretion is afforded the Trademark Clearinghouse that will be used for the mandatory 60-day Trademark Claims services. The Clearinghouse should not and will not have discretion in what marks

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			are deemed anything but an identical match.
6.1.4	All trademark registrations of national and supranational effect, regardless of whether examined on substantive or relative grounds, must be eligible to participate in the pre-launch sunrise mechanisms.	<b>1A</b>	<p>All nationally or multi-nationally (supranational) registered trademarks, regardless of where registered and whether examined on substantive or relative grounds, will be eligible to participate in either the 60-day Trademark Claims service or Sunrise service, subject to the following:</p> <ul style="list-style-type: none"> <li>(a) For marks in the Clearinghouse to be recognized and honored in Sunrise services, proof of current use of those mark must have been submitted to the Clearinghouse before the Sunrise service begins.</li> <li>(b) Use of the trademark may be demonstrated by providing a declaration from the trademark holder and one specimen of current use.</li> </ul>
6.1.5	Protections afforded to trademark registrations do not extend to applications for registrations, marks within any opposition period or registered marks that were the subject of successful invalidation, cancellation or rectification proceedings.	<b>1A</b>	Agreed.
6.1.6	The IP claims service should notify the potential domain name registrant of the rights holder's claim and also notify the rights holder of the registrant's application for the domain name.	<b>1A</b>	Agreed. Note: the notification to the rights holder will be sent promptly after the potential registrant has acknowledged the Trademark Claim and registers the name.
6.1.7.1	The TC should continue after the initial launch of each gTLD.	<b>1A</b>	The Trademark Clearinghouse will be an ongoing operation. The Sunrise services operate as a pre-launch mechanism and Trademark

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>Claims services operate during the first 60 days that registration in the registry is open for general registration.</p> <p>Trademark holders will continue to be able to subscribe to ongoing "watch" services that will be able to utilize the Centralized Zone File Access system in order to efficiently monitor registrations across multiple gTLDs.</p> <p>The Board originally marked this as a 2 and asked for clarification from the GAC. Based on discussions and comments, the Board has determined that the parties were in agreement and thus this item should have been marked 1A.</p>
6.1.7.2	Rights holders, registries and registrars should all contribute to the cost of the TC because they all benefit from it.	<b>1B</b>	Trademark holders will pay the Trademark Clearinghouse when the rights holders register their marks, registries will pay the Trademark Clearinghouse when administering their Trademark Claims and Sunrise services. In turn registrars will pay the registries when using their rights protection mechanisms, and registrants will pay the registrars when using the registrars' services to manage access to rights protection mechanisms.
6.2.1	<p><b>2. Rights Protection: Uniform Rapid Suspension (URS):</b></p> <p>Significantly reduce the timescales. See attached table for proposed changes.</p>	<b>1A</b>	Agreed.
6.2.2	The complaint should be simplified by replacing the 5,000 word free text limit + unlimited attachments [para 1.2] with a simple pro forma standardised wording	<b>1A</b>	Agreed. Note: The word limit will not apply to respondents.

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
	with the opportunity for not more than 500 words of freeform text and limit the attachments to copies of the offending website.		
6.2.3	Decisions should be taken by a suitably qualified 'Examiner' and not require panel appointments.	<b>1A</b>	Examiners with demonstrably relevant legal background, such as in trademark law, will be appointed by the URS Provider. Only one Examiner will be appointed per URS proceeding.
6.2.4	Where the complaint is based upon a valid registration, the requirement that the jurisdiction of registration incorporate substantive examination (paras 1.2f (i) and 8.1a) should be removed.	<b>1A</b>	<p>There is no requirement that any registration of a trademark must include substantive evaluation.</p> <p>Each trademark registration must be supported by evidence of use in order to be the basis of a URS complaint.</p> <p>Use of the trademark may be demonstrated by providing a declaration from the trademark holder along with one specimen of current use that the Clearinghouse will validate upon receipt. Proof may also be provided directly with the URS Complaint.</p> <p>After review of the comments above, the Board has determined that this item be changed to 1A.</p>
6.2.5	If, as is expected in the majority of cases, there is no response from the registrant, the default should be in favour of the complainant and the website locked. The examination of possible defences in default cases according to para 8.4(2) would otherwise give an unjustified privilege to the non-cooperating defendant.	<b>1A</b>	<p>An Examiner will review the merits of each Complaint to ensure that the standard is met, even in the event of a default. The Examiner will not be required to imagine possible defenses.</p> <p>Seeking clarification on this GAC advice, the Board posed the following question to the GAC during the Brussels meeting "Is the GAC advising that, when no response is filed, there be no Examination of a complaint? Or it is just advising that the reference to possible defenses</p>

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>be omitted?" <a href="http://icann.org/en/topics/new-gtlds/questions-on-scorecard-protection-of-rights-28feb11-en.pdf">http://icann.org/en/topics/new-gtlds/questions-on-scorecard-protection-of-rights-28feb11-en.pdf</a></p> <p>In response, the GAC stated "The GAC is advising that the Guidebook be amended by deleting 8.4 (2) because the Examiner should not be placed in the position of having to anticipate all potential defences where none was presented. However, the Examiner should still evaluate the complaint on its merits. The complainant must still meet his/her burden." <a href="http://icann.org/en/topics/new-gtlds/gac-replies-rights-protection-questions-09mar11-en.pdf">http://icann.org/en/topics/new-gtlds/gac-replies-rights-protection-questions-09mar11-en.pdf</a></p> <p>In light of the GAC's clarification, this point has been changed to 1A.</p>
6.2.6	The standard of proof (para 8.2) should be lowered from "clear and convincing evidence" to a preponderance of evidence".	<b>2</b>	<p>The principle of the URS is that it should only apply to clear-cut cases of abuse.</p> <p>"Clear and convincing" is the burden of proof that was recommended by the IRT and endorsed by the STI.</p>
6.2.7	The "bad faith" requirement in paras 1.2f), 1.2g) and 8.1c) is not acceptable. Complainants will in only rare cases prevail in URS proceedings if the standards to be fulfilled by registrants are lax. Correspondingly, the factors listed in paras 5.7a) ("bona fide") and b) "been commonly known by the domain name") can hardly allow a domain name owner to prevail over the holders of colliding trademarks.	<b>2</b>	The standard applied for the URS is based on the UDRP standard. Both require a finding of bad faith. Given that the URS is meant only to apply to the most clear-cut cases of abuse, bad faith shall remain a requirement.
6.2.8	A 'loser pays' mechanism should be added.	<b>1B</b>	A straight loser pays mechanism was considered and discussed

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>extensively by the IRT, but ultimately not recommended. Rationale includes that the UDRP does not have a loser-pays mechanism and the fact that it is unlikely complainants would be able to effectively collect based on clear-cut cases of abuse, since the names in question will already have been suspended.</p> <p>Notwithstanding, after participating in further consultations with the GAC and representative of trademark interests, the Board has decided to include a limited “loser pays” mechanism that was originally developed by the IRT. Specifically, complaints involving twenty-six (26) or more domain names will be subject to a “Response Fee” which will be refundable to the prevailing party. Under no circumstances shall the Response Fee exceed the fee charged to the Complainant.</p> <p>Given the inclusion of the Response Fee, this item is now 1B.</p>
6.2.9	Registrants who have lost five or more URS proceedings should be deemed to have waived the opportunity to respond to future URS complaints (this amendment corresponds to the “two strikes” provision which applies to rights holders).	<b>2</b>	Due process principles require that every registrant should always have the opportunity to present a defense.
6.2.10.1	However, there should be a clear rationale for appeal by the complainant.	<b>1A</b>	<p>In response to the Board’s request for clarification, the GAC clarified that either party seeking appeal should demonstrate a clear basis for objecting to the decision. The Board agrees that an appellant must identify the specific grounds on which the party is appealing, including why the appellant claims the Examiner’s Determination was incorrect.</p> <p>In light of the GAC’s clarification, this item is now 1A.</p>
6.2.10.2	The time for filing an appeal in default	<b>1B</b>	The IRT originally suggested a URS without any appeal process. The STI

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
	cases must be reduced from 2 years to not more than 6 months.		<p>suggested the inclusion of an appeal process (without any mention of a limitation on the ability to seek relief from a default). In response to comments, the Applicant Guidebook was revised to include a two-year limitation period on the opportunity to seek relief from a default.</p> <p>After consideration of the GAC advice, the Board has determined that the time for a Registrant to seek relief from default should be limited to six months, but the Respondent may seek an extension of up to a further six months (for the total of up to one year) if the Respondent requests the additional time before the initial six month period has expired.</p>
6.2.10.3	In addition, the examination of possible defences in default cases according to para 8.4(2) means an unjustified privilege of the non-cooperating defendant.	<b>1A</b>	See 6.2.5
6.2.11	The URS filing fee should be US\$200-US\$300 and minor administrative deficiencies should not result in dismissal of the URS complaint.	<b>1B</b>	ICANN will negotiate with URS service providers for the best prices and services. The fee range mentioned will be a target.
6.2.12	A successful complainant should have the right of first refusal for transfer of the disputed domain name after the suspension period so that the complainant is not forced to pursue a UDRP proceeding to secure a transfer.	<b>2</b>	The Board initially agreed to this item in the GAC scorecard. Upon consideration of significant community feedback, however, the Board has determined that the Guidebook position on the available remedy in a URS proceeding should stand. That is, domains shall be suspended for the duration of the registration period and the successful complainant will be provided an option to extend the registration period of the name for an additional year after expiration of the initial registration period (at commercial rates). The suspension remedy was what the IRT recommended and the additional one-year extended-registration was recommended by the STI. Moreover, as stated in

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			public comments on this issue, the URS was and is not meant to replace or mirror the UDRP transfer remedy. Accordingly, this item has been changed to a 2.
6.2.13	The URS should go beyond 'exact' matches and should at least include exact + goods/other generic words e.g. "Kodakonlineshop".	<b>1A</b>	As recommended by the IRT, the URS applies to registrations that are identical or confusingly similar to protected marks as described in the Guidebook. As part of the public comment period, trademark owners stated that they agree that this standard is appropriate here, and that this is what was meant by this GAC comment.
6.3.1	<p><b>3. Rights Protection: Post-delegation Dispute Resolution Procedure (PDDRP)</b></p> <p>The standard of proof be changed from "clear and convincing evidence" to a "preponderance of evidence".</p>	<b>2</b>	This was the standard developed by the IRT and will not be revised.
6.3.2	The second level registrations that form the underlying basis of a successful PDDRP complaint should be deleted.	<b>2</b>	The registrants are not parties to the proceedings, thus keeping a registrant from using the domain name or stripping the name from the registrant should be effected through an alternative proceeding, such as URS or UDRP. Note that to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator, then deletion of registrations may be a recommended remedy.
6.3.3	The requirement of "substantive examination" in para 9.2.1(i) should be deleted.	<b>1A</b>	<p>There is no requirement that any registration of a trademark must include substantive evaluation.</p> <p>Each trademark registration must be supported by evidence of use in the Clearinghouse in order to be the basis of a PDDRP complaint.</p>

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			Use of the trademark may be demonstrated by providing a declaration from the trademark holder along with one specimen of current use. Further discussion should take place relating to proof of use.
6.3.4	A new para 6.1 a) be added: “being identical to the complainant’s mark in relation to goods and services which are identical to those for which the complainant’s mark is registered. This would not apply if the registrant has a better right to the mark. In particular the registrant will in normal circumstances have a better right if the mark has been registered prior to the registration of the complainant’s mark.”	<b>2</b>	Section 6.1 sets out the standards for filing a PDDRP against a Registry Operator relating to the top-level domain. The GAC is requesting that, in some cases, a PDDRP complainant would prevail merely by having a mark identical to the registration and “a better right” to that mark. The existing standard requires that some harm must result to the trademark holder as a result of the registration. The Board does not believe that being identical to the complainant’s mark is proper as a sole basis for allowing a PDDRP complaint. If a competing trademark holder wants to challenge the Registry Operator for simply operating the TLD, it has the right to file a Protection of rights pre-delegation objection and seek a variety of other court remedies.
6.3.5	Regarding the second level (para 6.2), the registrant operator should be liable if he/she acts in bad faith or is grossly negligent in relation to the circumstances listed in para 6.a)-d).	<b>2</b>	Changing the standard from requiring "affirmative conduct" to “gross negligence” would effectively create a new policy imposing liability on registries based on actions of registrants.
6.3.6	The requirement in para 7.2.3 lit.d) that the complainant has to notify the registry operator at least 30 days prior to filing a complaint is burdensome and should be reduced to 10 days if not deleted entirely.	<b>2</b>	The current requirement is in place to provide the registry with a reasonable amount of time to investigate and take appropriate action if a trademark holder notifies the registry that there may be infringing names in the registry.
6.3.7	Para 19.5 should be amended as follows: “In cases where the Expert Determination decides that a registry operator is liable	<b>1A</b>	ICANN agrees that it will impose appropriate remedies that are "in line" with the determination. It should be noted however that ICANN is ultimately responsible for determining the appropriate remedy.

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
	under the standards of the Trademark PDDRP, ICANN will impose appropriate remedies that are in line with the Determination.		
6.4.1	<p><b>4. Consumer Protection</b></p> <p>Amend the "Maintain an abuse point of contact" paragraph in the DAG to include government agencies which address consumer protection:</p>	<b>1B</b>	<p>In its letter dated 12 April 2011, the GAC has provided suggested changes to the Registry Agreement as follows:</p> <p>A registry operator must respond in a timely manner to a request concerning any name registered in the TLD from any government agency that is conducting a lawful investigation or official proceeding inquiring into a violation of or failure to comply with any criminal or civil statute or any regulation, rule, or order legally issued pursuant thereto.</p> <p>ICANN appreciates this input and has amended to the text to require Registry Operators to take reasonable steps and respond to any reports (including from law enforcement and governmental consumer protection agencies) of illegal conduct utilizing the Registry TLD.</p> <p>The purpose of this text amendment is to ensure that all reports of abuse are appropriately considered within a reasonable time period.</p>
6.4.2	A registry operator must assist law enforcement, government agencies and agencies endorsed by governments with their enquiries about abuse complaints concerning all names registered in the TLD, including taking timely action, as required, to resolve abuse issues.	<b>1B</b>	See 6.4.1
6.4.3	Ensure that ICANN's contract compliance	<b>1A</b>	In its letter dated 12 April 2011, the GAC respectfully requests ICANN,

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
	<p>function is adequately resourced to build confidence in ICANN’s ability to enforce agreements between ICANN and registries and registrars.</p>		<p>in the upcoming weeks, to identify the amount of personnel it intends to hire to support the compliance function and the timeline for hiring. In addition the GAC would like to know how many staff ICANN intends to have in place prior to the expected launch of new gTLDs.</p> <p>ICANN has undertaken studies across various departments, including contract compliance, to determine the impact to processes, people, and systems resulting from the delegation of strings. An initial analysis projects contract compliance staff to grow from its current level to specified numbers indicated in an explanatory memo. These numbers will continue to be refined as analysis continues.</p> <p>Note, the delegation of new strings may not occur until approximately one year after the launch of the program. However, ICANN will continue to update these plans as the number of delegations becomes clearer and processes change and those plans will be shared with the GAC and other community members when available.</p>
6.4.4	<p><b>Vetting of certain strings</b> gTLD strings which relate to any generally regulated industry (e.g. .bank, .dentist, .law) should be subject to more intensive vetting than other non-geographical gTLDs.</p>	<b>1B</b>	<p>In its letter dated 12 April 2011, the GAC has requested that ICANN conduct more stringent vetting of all new gTLD applicants to ensure that registries are not operated by entities/individuals who will use the platform for criminal purposes or otherwise abuse the domain name system.</p> <p>ICANN agrees with this recommendation. Although it is nearly impossible to ensure no "bad actors" secure a new top-level domain ICANN has implemented several measures to minimize this risk. Those measures include:</p> <ul style="list-style-type: none"> <li>• Expanding the scope of the background screening check to include other crimes as suggested by the GAC. This also includes obtaining input from selected law enforcement on the selection of a</li> </ul>

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>background screening service provider – see 11.3.</p> <ul style="list-style-type: none"> <li>• Adding language to the Registry Agreement that requires Registry Operators to take reasonable steps and respond to any reports (including from law enforcement and governmental consumer protection agencies) of illegal conduct utilizing the Registry TLD. Failing to comply with this provision could lead to termination of the Registry Agreement.</li> <li>• Making public the names and titles of key officers, directors, partners and controlling shareholders of each applicant for comment.</li> <li>• Providing a GAC Early Warning process that allows members of the GAC or any individual government through the GAC to provide a notice to certain applicants.</li> </ul>
<b>7.</b>	<b>Post-Delegation Disputes</b>		
7.1	<p>Change the wording in the sample letter of Government support in AG back to the wording in DAGv4 and keeping the new paragraph 7.13 of the new gTLD registry agreement with the changed wording from “may implement” to “will comply”. E.g change the wording from “may implement” back to “will comply” with a legally binding decision in the relevant jurisdiction.</p>	<b>1B</b>	<p>ICANN has previously indicated that it will modify the suggested wording of the letter of support or non-objection, and make clear its commitments to governments in additional text of the Applicant Guidebook, and in its response the GAC has acknowledged and accepted that modification.</p> <p>The original Board Notes stated that "the registry agreement will continue to indicate that ICANN 'may implement' instead of 'will comply' with such decisions for legal reasons. As discussed previously with the GAC, ICANN’s commitment to comply with legally binding decisions is made to governments, not to registries, Therefore, it is not necessarily in the interests of ICANN, or of governments, to place that obligation in registry agreements, giving registry operators the ability, and perhaps duty, to force ICANN to implement decisions in every</p>

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>case. (ICANN has a mechanism to enforce its contracts with registry operators.)"</p> <p>In order to attempt to address the GAC's concerns and provide further comfort to governments that ICANN will implement court orders, ICANN proposes to modify section 7.13 of the registry agreement to read as follows: "ICANN will respect any order from a court of competent jurisdiction, including any orders from any jurisdiction where the consent or non-objection of the government was a requirement for the delegation of the TLD. Notwithstanding any other provision of this agreement, ICANN's implementation of any such order will not be a breach of this Agreement."</p> <p>In its response, the GAC position is that ICANN change the agreement provision from a right of ICANN (ICANN may implement) into a duty that ICANN will owe the registry (ICANN will implement). The GAC's rationale asserts that this will give governments assurance that governments will be able to "enforce the conditions given when providing a letter of support or non-objection." The GAC argues that if ICANN does not give registry operators the power to force ICANN to implement such court orders that this will discourage governments from granting the support that governments have asked ICANN to require as a condition necessary for ICANN to delegate certain "geographic" TLD strings.</p> <p>ICANN has previously suggested that governments could enforce any conditions agreed to with the registry operator through other means, either through an enforceable bilateral agreement between the</p>

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>government and operator, or by insisting that the operator subject itself to the government's jurisdiction either through consent or a requirement that the operator maintain a presence inside the jurisdiction.</p>
7.2	<p>In addition describe in the AG that ICANN will comply with a legally binding decision in the relevant jurisdiction where there has been a dispute between the relevant government or public authority and registry operator.</p>	<b>1B</b>	<p>The Guidebook language now states that, “Applicants should be aware that ICANN has committed to governments that, in the event of a dispute between a government (or public authority) and a registry operator that submitted documentation of support from that government or public authority, ICANN will comply with a legally binding order from a court in the jurisdiction of the government or public authority that has given support to an application.”</p> <p>The initial Board Notes stated that this required further discussion as it may in some cases amount to a redelegation request. The notes also stated that there could be multiple jurisdictions that have given their support to one application (e.g., multiple "Springfield"s), thus, it may not be appropriate to implement a particular action based on one such decision.</p> <p>The GAC response suggests changing the wording to “final legally binding decision”.</p> <p>The GAC is essentially asking ICANN to expand the respect afforded to court orders to also include any "final legally binding decision", which the GAC notes would include "an administrative decision." ICANN is concerned that such a provision could have a very broad scope (including "decisions" from multiple overlapping or competing local and national governmental agencies. (For example, agencies from the</p>

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			governments of the City of Los Angeles and the County of Los Angeles might theoretically issue inconsistent administrative decisions regarding the operation of a TLD registry operating in Los Angeles.) ICANN is not equipped to sort out what constitutes a "final legally binding decision" in every jurisdiction in the world, and will be on much clearer ground working with orders from courts. Courts would presumably be available to confirm any legally binding decisions, and as noted above ICANN has committed to respect such orders.
<b>8.</b>	<b>Use of geographic names</b>		
8.1.1.1	<b>1. Definition of geographic names</b> Implement a free of charge objection mechanism would allow governments to protect their interest	<b>1B</b>	As described in Issue 2 above, ICANN proposes procedures for GAC Early Warning and GAC Advice that may be applied to geographic names. In addition, the response to issue 2 also describes a process where, for individual governments, ICANN will provide limited financial support for objections.
8.1.1.2	and to define names that are to be considered geographic names.	<b>2</b>	The proposed GAC Early Warning and GAC Advice on New gTLDs procedures are designed to address the GAC concern, i.e., so the GAC can provide input any application for any reason, eliminating the need for specific definitions. Therefore, the procedures will address sensitive, community, geographic and sector (regulated industry) string issues and encourage efforts to prevent formal objections.
8.1.2	This implies that ICANN will exclude an applied for string from entering the new gTLD process when the government formally states that this string is considered to be a name for which this country is commonly known as.	<b>1B</b>	The Board appreciates the need to ensure national interests in those cases where country names are not listed in the established list.  Language has been added to the Guidebook, augmenting the definition of geographic names that, "A string shall be considered to be a country or territory name if: ... it is a name by which a country is commonly known, as demonstrated by evidence that the country is recognized by that name by an intergovernmental or treaty organization."
8.1.3	Review the proposal in the DAG in order to ensure that this potential [city name	<b>2</b>	The Board notes the GAC comment that the post-delegation mechanisms might not be effective in cases where the application has

### Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
	<p>applicants avoiding government support requirement by stating that use is for non-community purposes] does not arise. Provide further explanations on statements that applicants are required to provide a description/purpose for the TLD, and to adhere to the terms and condition of submitting an application including confirming that all statements and representations contained in the application are true and accurate.</p>		<p>not been designated as a community-based TLD or a geographic TLD, or where the government has some legal right to the name. The GAC Early Warning and GAC Advice on New gTLDs processes provide the best opportunities to address the situation. Applications including city-names as TLD strings can be the subject of both those processes.</p> <p>It should be noted that the application requires applicants to describe the purpose of the TLDs, this information will be used to inform evaluation, objections, and importantly, the GAC as it considers public policy implications of the application and string.</p>
8.1.4	<p>Governments should not be required to pay a fee for raising objections to new gTLD applications. Implement a free objection mechanism would allow governments to protect their interest.</p>	<b>1B</b>	<p>Borrowing from the same issue as in section 2:</p> <p>A companion paper considers several models that balance the government interests and the need for ICANN to maintain a reasonable extent of control over expenditures. It recommends that a pre-determined amount of funding be designated by ICANN for each individual government, for the purpose of funding objection fees where a government wished to file a formal objection. Each government would be allotted an equal amount, and could continue to draw on such funds up to the maximum at its discretion, with the guarantee that at least one objection be fully funded. By fixing the funding amount (instead of the number of objections), governments could tailor the objections to minimize dispute resolution costs. This would provide ability for governments to object without cost and even collaborate on which governments will file objections, while putting a ceiling on the maximum costs.</p> <p>Detail and rationale are provided in the paper.</p>

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
8.2.1	<p><b>2. Further requirements regarding geographic names</b></p> <p>The GAC clarifies that it is a question of national sovereignty to decide which level of government or which administration is responsible for the filing of letters of support or non-objection. There may be countries that require that such documentation has to be filed by the central government - also for regional geoTLDs; in other countries the responsibility for filing letters of support may rest with sub-national level administrations even if the name of the capital is concerned. GAC requests some clarification on this in the next version of the Applicants Guidebook.</p>	<b>1A</b>	<p>This principle is agreed, and this can be clarified in the Guidebook. ICANN invites governments to identify appropriate points of contact on this issue.</p>
8.2.2	<p>According to the current DAG applications will be suspended (pending resolution by the applicants), if there is more than one application for a string representing a certain geographic name, and the applications have requisite government approvals. The GAC understands such a position for applications that have support of different administrations or governmental entities. In such circumstances it is not considered appropriate for ICANN to determine the most relevant governmental entity; the</p>	<b>1A</b>	<p>ICANN will continue to suspend processing of applications with inconsistent/conflicting support, but will allow multiple applicants all endorsed by the same authority to go forward, when requested by the government.</p> <p>This area needs further discussion on the potential situations that could lead to redelegation requests.</p>

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
	<p>same applies, if one string represents different geographic regions or cities. Some governments, however, may prefer not to select amongst applicants and support every application that fulfils certain requirements. Such a policy may facilitate decisions in some administrations and avoid time-consuming calls for tenders. GAC encourages ICANN to process those applications as other competing applications that apply for the same string.</p>		
<b>9.</b>	<b>Legal Recourse for Applications</b>		
9.	<p>Seek legal advice in major jurisdiction whether such a provision might cause legal conflicts – in particular but not limited to US and European competition laws. If ICANN explains that it has already examined these legal questions carefully and considering the results of these examinations still adheres to that provision, GAC will no longer insist on its position. However, the GAC expects that ICANN will continue to adhere to the rule of law and follow broad principles of natural justice. For example, if ICANN deviates from its agreed processes in coming to a decision, the GAC expects that ICANN will provide an appropriate mechanism for any complaints to be heard.</p>	<b>1A</b>	<p>As discussed with the GAC, ICANN has examined these legal questions carefully and considering the results of these examinations still adheres to this provision. ICANN will clarify in the Applicant Guidebook that: if ICANN deviates from its agreed processes in coming to a decision, ICANN's internal accountability mechanisms will allow complaints to be heard.</p> <p>In its response, the GAC stated that it "welcomes the Board's clarification that the legal implications of the clause have been considered for various jurisdictions. The GAC appreciates the Board's notice that the Applicant Guidebook will be amended to clarify that internal accountability mechanisms will allow complaints to be heard."</p>

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
<b>10.</b>	<b>Providing opportunities for all stakeholders including those from developing countries</b>		
10.1	<p><b>Main issues</b></p> <p><b>1. Cost Considerations</b></p> <p>Set technical and other requirements, including cost considerations, at a reasonable and proportionate level in order not to exclude stakeholders from developing countries from participating in the new gTLD process.</p>	TBD	<p>ICANN’s Board recognized the importance of an inclusive New gTLD Program and issued a Resolution forming a Joint Working Group (JAS WG) which is underway. ICANN would like to receive the report of the JAS WG as soon as possible. JAS WG is requested to provide a possible deadline for his work during the ICANN meeting in SFO allowing the Board to act.</p> <p>It is noted that one of the challenges in developing support mechanisms for applicants is to ensure that such support is actually received by those applicants with the most need, rather than being used advantageously by other participants. This issue has also been taken into account in the work of the JAS WG.</p> <p>The minimum technical requirements for operating a registry are expected to be consistent across applications.</p> <p>The Board notes that the GAC recommends a 70% fees reduction for developing country applicants, free for least developed countries and shares the concern to determine real needy applicants. The fees reductions recommended by the GAC have been passed on to the JAS WG. The Board is looking forward to receiving the Final Report and notes that, given the cost recovery policy, sources of funds must be identified.</p> <p>The Board notes the GAC seeks further clarification about the certain mechanisms for technical and logistical support. ICANN has budgeted a sum of \$300,000 to provide non-financial support to potential applicants. The Board has resolved that the targets include outreach and education to encourage participation across all regions.</p>

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>ICANN will publish a list of organizations that request assistance and organizations that state an interest in assisting with additional program development, for example pro-bono consulting advice, pro-bono in-kind support, or financial assistance so that those needing assistance and those willing to provide assistance can identify each other and work together.</p>
10.2.1	<p><b>2. Language diversity</b> Key documents produced by ICANN must be available in all UN languages within a reasonable period in advance of the launch of the gTLD round.</p>	<b>1A</b>	<p>Some documents are already available in the 6 UN languages. The Final Application Guidebook will be also in due course, and the web site will be organize to find easily all the documents available in each language. The Board notes GAC’s recommendation to extend the communications beyond the 6 UN languages and is taking into account the additional language needs in its communications strategy.</p>
10.2.2	<p>The GAC strongly recommends that the communications strategy for the new gTLD round be developed with this issue of inclusiveness as a key priority.</p>	<b>1A</b>	<p>The Board agrees with the GAC and staff is committed to a global communications approach. The goal of that approach is ensure that any person that would take steps to take advantage of or mitigate cost due to the new gTLD program, is aware of the program.</p>
10.3	<p><b>3. Technical and logistics support</b></p>	<b>1B</b>	<p>ICANN has agreed to provide certain mechanisms for technical and logistical support, such as assisting with matching needs to providers. ICANN is also considering setting up regional help desks to provide more responsive and relevant technical support to new gTLD applicants in developing countries.</p> <p>The Board agrees with the GAC and has directed staff to produce a webpage where entities willing to assist applicants and applicants seeking assistance can find each other. The webpage is expected by end of June.</p> <p>Other targets include outreach and education to encourage participation across all regions.</p>

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
10.4	<b>4. Outreach – as per Joint AC/SO recommendations</b>	<b>1A</b>	
10.5	<b>5. Joint AC/SO Working Group on support for new gTLD applicants.</b> GAC urged ICANN to adopt recommendations of the Joint AC/SO Working Group.	<b>TBD</b>	This item from the GAC Scorecard appears to reflect the interim report (Milestone Report) of the JAS WG published 11 Nov 2010 <a href="http://www.icann.org/en/announcements/announcement-11nov10-en.htm">http://www.icann.org/en/announcements/announcement-11nov10-en.htm</a> . ICANN is awaiting their final report that is targeted to be published by end of May.
10.6	<b>6. Applications from Governments or National authorities (especially municipal councils and provincial authorities) – special consideration for applications from developing countries</b> The GAC commented that the new gTLD process should meet the global public interest consistent with the Affirmation of Commitments. It therefore urged ICANN to set technical and other requirements, including cost considerations, at a reasonable and proportionate level in order not to exclude developing country stakeholders from participating in the new gTLD-process. Key documents should be available in all UN languages. The GAC urges that the communications and outreach strategy for the new gTLD round be developed with this issue of inclusiveness as a key priority.  ii. Nairobi Communiqué	<b>TBD</b>	This set of issues overlaps with and is addressed in the other items in this section. The JAS WG interim report (Milestone Report) has addressed the fees. The Board is looking forward to receiving the Final Report with a more detailed proposal.  The Board notes the GAC is recommending a different cost structure given to Governments and National Authorities from developing and least developed countries. This recommendation has been passed to the JAS WG and the Board is looking forward to receiving the Final Report. The Board notes that, given the cost recovery policy, sources of funds must be identified.

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
	<p>The GAC believed that instead of the then proposal of single-fee requirement, a cost-based structure of fees appropriate to each category of TLD would:</p> <ul style="list-style-type: none"> <li>a) prevent cross subsidization and</li> <li>b) better reflect the project scale,</li> </ul> <p>This would improve logistical requirements and financial position of local community and developing country stakeholders who should not be disenfranchised from the new TLD round.</p> <p>Further the board believes that :</p> <ul style="list-style-type: none"> <li>a. New gTLD process is developed on a cost recovery model.</li> <li>b. Experience gained from first round will inform decisions on fee levels, and the scope for discounts and subsidies in subsequent rounds.</li> <li>c. Non-financial means of support are being made available to deserving cases.</li> <li>i. Proposed that the following be entertained to achieve cost reduction:               <ul style="list-style-type: none"> <li>• Waiving the cost of Program Development (\$26k).</li> <li>• Waiving the Risk/Contingency cost (\$60k).</li> <li>• Lowering the application cost (\$100k)</li> <li>• Waiving the Registry fixed fees (\$25k per calendar year), and charge the Registry- Level</li> </ul> </li> </ul>		

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
	<p>Transaction Fee only (\$0.25 per domain name registration or renewal).</p> <p>ii. Proposed that the reduced cost be paid incrementally, which will give the applicants/communities from developing countries more time to raise money, and investors will be more encouraged to fund an application that passes the initial evaluation.</p> <p>iii. Believe that communities from developing countries apply for new gTLDs according to an appropriate business model taking into consideration the realities of their regions. ICANN’s commitment towards supporting gTLD applicants in communities from developing countries will be a milestone to the development of the overall Internet community in Africa and other developing regions.</p>		
10.7	<p><b>A. Other Developing world Community comments</b></p> <p>Rolling out new gTLD and IDNs was done in a hurry and without basis on a careful feasibility study on the impact that this rollout will have on developing countries. For some representatives, this is a massive roll out of gTLDs and IDNs that will find many developing countries unprepared and unable to absorb it. There is the fear that</p>	<b>1B</b>	<p>ICANN is investigating and intends to provide mechanisms for assisting with matching needs to providers, and will continue to investigate mechanisms for providing additional forms of support (such as providing documents in additional languages beyond the official U.N. languages).</p> <p>As described above, the Board has directed staff to produce a webpage where entities willing to assist applicants and applicants seeking assistance can find each other. The webpage is expected by end of June.</p>

## Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response

Item #	GAC Scorecard Actionable Item	Position	Notes
	there might be serious consequence in terms of economic impact to developing countries.		
<b>11.</b>	<b>Law enforcement due diligence recommendations [to amend the Registrar Accreditation Agreement as noted in the Brussels Communiqué]</b> (Note: ICANN will provide an update on the status of the RAA-related recommendations from law enforcement)		
11.1	Include other criminal convictions as criteria for disqualification, such as Internet-related crimes (felony or misdemeanor) or drugs.	<b>1A</b>	<p>In its letter dated 12 April 2011 the GAC is confirming responses held in the Brussels and San Francisco meetings to add a broad number of convictions to the background screening process. The inclusion of certain crimes without a standard definition across international, and in some cases, national jurisdictions remains a concern, for the following reasons:</p> <ul style="list-style-type: none"> <li>• It will lead to a background screening process that will not be consistent and fair for all applicants and</li> <li>• It puts ICANN in a position of trying to implement a set of standards that are not agreed to among various nations, including members of the GAC</li> </ul> <p>However, ICANN has continued to investigate this concern and has, with the help of subject matter experts, agreed to expand the scope of the background screening to cover some of the concerns raised by the GAC. Accordingly, the following will now be included in the background screening process:</p> <ul style="list-style-type: none"> <li>• Has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988[1];</li> <li>• Has ever been convicted or successfully extradited for any offense</li> </ul>

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>described in the United Nations Convention against Transnational Organized Crime (all Protocols)[2]; and</p> <ul style="list-style-type: none"> <li>• Has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications, or the Internet to facilitate the commission of crimes.</li> </ul> <p>[1] <a href="http://www.unodc.org/unodc/en/treaties/illicit-trafficking.html">http://www.unodc.org/unodc/en/treaties/illicit-trafficking.html</a>            [2] <a href="http://www.unodc.org/unodc/en/treaties/CTOC/index.html">http://www.unodc.org/unodc/en/treaties/CTOC/index.html</a></p> <p>It is recognized that not all countries have signed on to the UN conventions reference above. These conventions are solely being used for identifying a list of crimes for which background checks will be performed. It is not intended that an applicant have been convicted pursuant to the UN convention but merely convicted of a crime listed under these conventions.</p> <p>Other crimes suggested by the GAC have not been included due to the lack of any consistent internationally accepted definitions for such crimes or based on significant public comment against such an inclusion (i.e., terrorism) when last placed in the Guidebook.</p>
11.2.1	Assign higher weight to applicants offering the highest levels of security to minimize the potential for malicious activity, particularly for those strings that present a higher risk of serving as venues for criminal, fraudulent or illegal conduct (e.g. such as those related to children, health-care, financial services, etc.)	<b>1B</b>	<p>In its letter dated 12 April 2011, the GAC has reiterated its request to provide a greater weight to those applicants who offer more security. The GAC also requests that ICANN publicly disclose whether the applicant has offered augmented security levels. ICANN has carefully considered this advice and has amended the following in the AGB:</p> <ul style="list-style-type: none"> <li>• Security –the application questionnaire has been amended to reflect two sections for Security;               <ol style="list-style-type: none"> <li>1. A section, open to comment, that describes the:                   <ol style="list-style-type: none"> <li>a. Augmented security levels or capabilities commensurate with the nature of the applied-for string including the</li> </ol> </li> </ol> </li> </ul>

**Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response**

Item #	GAC Scorecard Actionable Item	Position	Notes
			<p>identification of international or industry-relevant standards and</p> <p>b. The commitments made to registrants concerning security levels.</p> <p>2. A section that will continue to remain confidential which requires that applicants provide the security policy that aligns with the first section of this question.</p> <ul style="list-style-type: none"> <li>• Abuse Prevention and Mitigation – the application questionnaire has been amended to provide an extra point to applicants where they include measures that promote Whois accuracy and include:               <ol style="list-style-type: none"> <li>1. A description of policies and procedures that define malicious or abusive behavior, capture metrics, and establish Service Level Agreements for resolution or</li> <li>2. Adequate controls to ensure proper access to domain functions.</li> </ol> </li> </ul> <p>The additional information being provided by the applicant in these questions in conjunction with application comments received from the Internet community will enable careful consideration by the evaluation panels of the measures to be implemented by applicants.</p> <p>It should be noted that results from the evaluation process will be in the form of “Pass” or “Fail” for each application. The scoring methodology requires that an application receive at least a minimum passing score for each question as well as an “exceeds” score for at least two questions to pass the technical/operational evaluation. Therefore, the scoring methodology (while not assigning a “higher weight” to applicants offering the highest levels of security), does create a limited incentive to meet the higher standard.</p>
11.3	Add domestic screening services, local to	<b>1A</b>	In its letter dated 12 April 2011, the GAC has requested more

# gTLD Applicant Guidebook

April 2011 Discussion Draft

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

15 April 2011

15 April 2011

Dear Prospective Applicant,

ICANN works toward the common good of providing a stable and secure global Internet. In performing its core functions of supplying oversight for the Internet's unique identifier systems, ICANN also promotes competition and consumer choice.

When ICANN was created in 1998, the generic top-level (gTLD) domain space was limited to eight generic Top-Level Domains. After rounds to introduce a limited number of gTLDs in 2000 and 2004, the generic domain name space had only expanded to 22 gTLDs.

The launch of the New gTLD Program will create more choice for Internet users, empower innovation, stimulate economic activity, and generate new business opportunities around the world.

This April 2011 Discussion Draft of the Applicant Guidebook highlights the resolutions of the Board dialogues with the Governmental Advisory Committee (GAC) concerning the outstanding New gTLD implementation issues. This unprecedented consultative process between the Board and governments via the GAC has been a positive improvement to the multi-stakeholder model.

This version of the Applicant Guidebook is the latest in a series of updates which incorporates not only public comments received to date but also takes into account additional feedback received from the recent Board/GAC consultations.

We look forward to an additional round of public comments followed by a meeting in Singapore where the Board will review the New gTLD Program progress and the Applicant Guidebook.

Respectfully,

Rod Beckstrom  
President and CEO

# Preamble

---

## *New gTLD Program Background*

New gTLDs have been in the forefront of ICANN's agenda since its creation. The new gTLD program will open up the top level of the Internet's namespace to foster diversity, encourage competition, and enhance the utility of the DNS.

Currently the namespace consists of 21 gTLDs and over 250 ccTLDs operating on various models. Each of the gTLDs has a designated "registry operator" and, in most cases, a Registry Agreement between the operator (or sponsor) and ICANN. The registry operator is responsible for the technical operation of the TLD, including all of the names registered in that TLD. The gTLDs are served by over 900 registrars, who interact with registrants to perform domain name registration and other related services. The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market. When the program launches its first application round, ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

The program has its origins in carefully deliberated policy development work by the ICANN community. In October 2007, the Generic Names Supporting Organization (GNSO)—one of the groups that coordinate global Internet policy at ICANN—formally completed its policy development work on new gTLDs and approved a set of 19 policy recommendations. Representatives from a wide variety of stakeholder groups—governments, individuals, civil society, business and intellectual property constituencies, and the technology community—were engaged in discussions for more than 18 months on such questions as the demand, benefits and risks of new gTLDs, the selection criteria that should be applied, how gTLDs should be allocated, and the contractual conditions that should be required for new gTLD registries going forward. The culmination of this policy development process was a decision by the ICANN Board of Directors to adopt the community-developed policy in June 2008. A thorough brief to the policy process and outcomes can be found at <http://gnso.icann.org/issues/new-gtlds>.

ICANN's work is now focused on implementation: creating an application and evaluation process for new gTLDs that is aligned with the policy recommendations and provides a clear roadmap for applicants to reach delegation, including Board approval. This implementation work is reflected in the drafts of the applicant guidebook that have been released for public comment, and in the explanatory papers giving insight into rationale behind some of the conclusions reached on specific topics. Meaningful community input has led to revisions of the draft applicant guidebook. In parallel, ICANN is establishing the resources needed to successfully launch and operate the program.

This draft of the Applicant Guidebook is available for public comment to enable completion of the implementation work on the program.

For current information, timelines and activities related to the New gTLD Program, please go to <http://www.icann.org/en/topics/new-gtld-program.htm>.

# Applicant Guidebook

## April 2011 Discussion Draft Module 1

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

15 April 2011

---

# Module 1

---

## *Introduction to the gTLD Application Process*

This module gives applicants an overview of the process for applying for a new generic top-level domain, and includes instructions on how to complete and submit an application, the supporting documentation an applicant must submit with an application, the fees required, and when and how to submit them.

This module also describes the conditions associated with particular types of applications, and the stages of the application life cycle.

A glossary of relevant terms is included at the end of this Applicant Guidebook.

Prospective applicants are encouraged to read and become familiar with the contents of this entire module, as well as the others, before starting the application process to make sure they understand what is required of them and what they can expect at each stage of the application evaluation process.

For the complete set of the supporting documentation and more about the origins, history and details of the policy development background to the New gTLD Program, please see <http://gnso.icann.org/issues/new-gtlds/>.

This Applicant Guidebook is the implementation of Board-approved consensus policy concerning the introduction of new gTLDs, and has been revised extensively via public comment and consultation over a two-year period.

### *1.1 Application Life Cycle and Timelines*

---

This section provides a description of the stages that an application passes through once it is submitted. Some stages will occur for all applications submitted; others will only occur in specific circumstances. Applicants should be aware of the stages and steps involved in processing applications received.

#### *1.1.1 Application Submission Dates*

---

The application submission period opens at [time] UTC [date].

The User Registration period closes at ([time] UTC [date])

The application submission period closes at [time] UTC [date].

To receive consideration, all applications must be submitted electronically through the online application system by the close of the application submission period.

An application will not be considered, in the absence of exceptional circumstances, if:

- It is received after the close of the application submission period.
- The application form is incomplete (either the questions have not been fully answered or required supporting documents are missing). Applicants will not ordinarily be permitted to supplement their applications after submission.
- The evaluation fee has not been paid by the deadline. Refer to Section 1.5 for fee information.

Applicants should be aware that, due to required processing steps (i.e., online registration, application submission, fee submission, and fee reconciliation) and security measures built into the online system, it might take substantial time to perform all of the necessary steps to submit a complete application. Accordingly, applicants are encouraged to submit their completed application and fees as soon as practicable after the Application Submission Period opens. Waiting until the end of this period to begin the process may not provide sufficient time to submit a complete application before the period closes. As such, new user registrations will not be accepted after the date indicated above.

ICANN has gone to significant lengths to ensure that the online application system will be available for the duration of the application submission period. In the event that the system is not available, ICANN will provide alternative instructions for submitting applications on its website.

### 1.1.2 Application Processing Stages

This subsection provides an overview of the stages involved in processing an application submitted to ICANN. ~~In~~ Figure 1-1 provides a simplified depiction of the process. ~~The~~

shortest and most straightforward path is marked with bold lines, while certain stages that may or may not be applicable in any given case are also shown. A brief description of each stage follows.

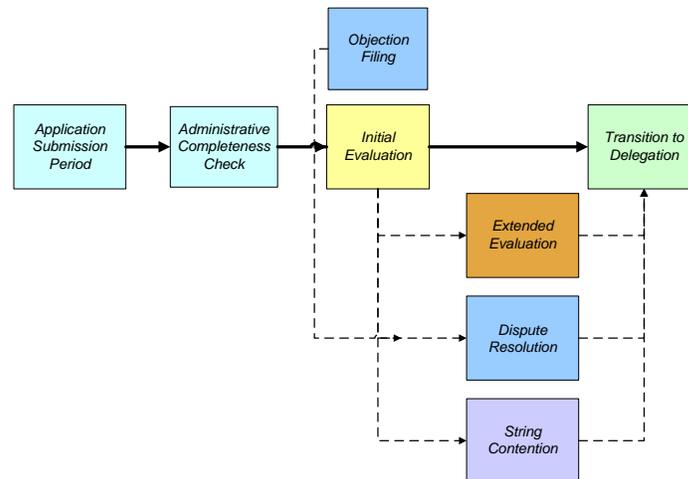

Figure 1-1 – Once submitted to ICANN, applications will pass through multiple stages of processing.

### 1.1.2.1 Application Submission Period

At the time the application submission period opens, those wishing to submit new gTLD applications can become registered users of the TLD Application System (TAS).

After completing the registration, applicants will supply a deposit for each requested application slot (see section 1.4), after which they will receive access to the full application form. To complete the application, users will answer a series of questions to provide general information, demonstrate financial capability, and demonstrate technical and operational capability. The supporting documents listed in subsection 1.2.2 of this module must also be submitted through the application system as instructed in the relevant questions.

Applicants must also submit their evaluation fees during this period. Refer to Section 1.5 of this module for additional information about fees and payments.

Each application slot is for one gTLD. An applicant may submit as many applications as desired. There is no means to apply for more than one gTLD in a single application.

The application submission period is expected to last for 60 days. Following the close of the application submission period, ICANN will provide applicants with periodic status updates on the progress of their applications.

### *1.1.2.2 Administrative Completeness Check*

Immediately following the close of the application submission period, ICANN will begin checking all applications for completeness. This check ensures that:

- All mandatory questions are answered;
- Required supporting documents are provided in the proper format(s); and
- The evaluation fees have been received.

ICANN will post the public portions of all applications considered complete and ready for evaluation ~~as soon as practicable after~~ within two weeks of the close of the application submission period. Certain questions relate to internal processes or information: applicant responses to these questions will not be posted. Each question is labeled in the application form as to whether the information will be posted. See posting designations for the full set of questions in the attachment to Module 2.

The administrative completeness check is expected to be completed for all applications in a period of approximately 48 weeks, subject to extension depending on volume. In the event that all applications cannot be processed within ~~this 4-week~~ period, ICANN will post updated process information and an estimated timeline.

### *1.1.2.35 Public Comment Period*

Public comment mechanisms are part of ICANN's policy development, implementation, and operational processes. As a private-public partnership, ICANN is dedicated to: preserving the operational security and stability of the Internet, promoting competition, achieving broad representation of global Internet communities, and developing policy appropriate to its mission through bottom-up, consensus-based processes. This necessarily involves the participation of many stakeholder groups in a public discussion.

ICANN will open a public comment period at the time applications are publicly posted on ICANN's website (refer to subsection 1.1.2.2) ~~which will remain open for 45 calendar days~~. This period will allow time for the

community to review and submit comments on posted application materials (referred to as "application comments."), ~~and will allow for subsequent consolidation of the received comments, distribution to the panels performing reviews, and analysis and consideration of the comments by the evaluators within the 5-month timeframe allotted for Initial Evaluation.~~ The comment forum will require commenters to associate comments with specific applications and the relevant panel. Comments received within a 60-day period from the posting of the application materials will be available to the evaluation panels performing the Initial Evaluation reviews. This ~~public comment~~ period is subject to extension, should the volume of applications or other circumstances require. **To be considered by evaluators, comments must be received in the designated **public** comment forum within the stated time period.**

~~Comments received during the public comment period will be tagged to a specific application.~~ Evaluators will perform due diligence on the application comments (i.e., determine their relevance to the evaluation, verify the accuracy of claims, analyze meaningfulness of references cited) and take the information provided in these comments into consideration. In cases where consideration of the comments has impacted the scoring of the application, the evaluators will seek clarification from the applicant. Consideration of the applicability of the information submitted through public comments will be included in the evaluators' reports. Application comments that have impacted the application scoring will be reflected in the evaluators' summary reports, which will be published at the end of Extended Evaluation.

Comments received after the 60-day period will be stored and available for other considerations, such as the dispute resolution process.

In the new gTLD application process, all applicants should be aware that ~~public~~ comment fora are a mechanism for the public to bring relevant information and issues to the attention of those charged with handling new gTLD applications. Anyone may submit a comment in a public comment forum.

**Comments and the Objection Process:** A distinction should be made between ~~public~~application comments, which may be relevant to ICANN's task of determining whether applications meet the established criteria, and formal objections that concern matters outside those evaluation criteria. The formal objection process was created to allow

a full and fair consideration of objections based on certain limited grounds outside ICANN's evaluation of applications on their merits.

Public comments will not be considered as potential formal objections. Public comments on matters associated with formal objections will not be considered by panels during Initial Evaluation; however, the Evaluation. These comments will be available to and may be subsequently considered by an expert panel during a dispute resolution proceeding (see subsection 1.1.2.79). However, in general, application comments have a very limited role in the dispute resolution process.

**String Contention:** Comments designated for the Community Priority Panel, as relevant to the criteria in Module 4, may be taken into account during a Community Priority Evaluation.

**Government Notifications:** Governments may provide a notification using the application public comment forum to communicate concerns relating to national laws. However, a government's notification of concern will not in itself be deemed to be a formal objection. A notification by a government does not constitute grounds for rejection of a gTLD application. A government may elect to use this comment mechanism to provide such a notification, in addition to or as an alternative to the GAC Early Warning procedure described in subsection 1.1.2.4 below.

Governments may also communicate directly to applicants using the contact information posted in the application, e.g., to send a notification that an applied-for gTLD string might be contrary to a national law, and to try to address any concerns with the applicant.

As noted above, applicants are encouraged to identify potential sensitivities in advance and work with the relevant parties, including governments, to mitigate concerns related to the application.

A general public comment forum will remain open through all stages of the evaluation process, to provide a means for the public to bring forward any other relevant information or issues.

#### **1.1.2.4 GAC Early Warning**

Concurrent with the 60-day comment period, ICANN's Governmental Advisory Committee (GAC) may issue a GAC Early Warning notice concerning an application. This

provides the applicant with an indication that the application is seen as potentially problematic by one or more governments.

The GAC Early Warning is a notice only. It is not a formal objection, nor does it directly lead to a process that can result in rejection of the application. However, a GAC Early Warning should be taken seriously as it raises the likelihood that the application could be the subject of GAC Advice on New gTLDs (see subsection 1.1.2.7) or of a formal objection at a later stage in the process.

A GAC Early Warning typically results from a notice to the GAC by one or more governments that an application might be problematic, e.g., potentially violate national law or raise sensitivities. The GAC may then send that notice to the Board – constituting the GAC Early Warning. ICANN will notify applicants of GAC Early Warnings as soon as practicable after receipt from the GAC

GAC consensus is not required for a GAC Early Warning to be issued. Minimally, the GAC Early Warning must be provided in writing to the ICANN Board, and be clearly labeled as a GAC Early Warning. This may take the form of an email from the GAC Chair to the ICANN Board. For GAC Early Warnings to be most effective, the notice should be accompanied by the reason for the warning and identify the objecting countries.

Upon receipt of a GAC Early Warning from the GAC, the applicant may elect to withdraw the application for a partial refund (see subsection 1.5.1), or may elect to continue with the application (this may include meeting with representatives from the relevant government(s) to try to address the concern). To qualify for the refund described in subsection 1.5.1, the applicant must provide notification to ICANN of its election to withdraw the application within 21 days of the GAC Early Warning delivery.

To reduce the possibility of a GAC Early Warning, all applicants are encouraged to identify potential sensitivities in advance of application submission, and to work with the relevant parties (including governments) beforehand to mitigate concerns related to the application.

### **1.1.2.53** *Initial Evaluation*

Initial Evaluation will begin immediately after the administrative completeness check concludes. All complete applications will be reviewed during Initial

Evaluation. At the beginning of this period, background screening on the applying entity and the individuals named in the application will be conducted. Applications must pass this step before the Initial Evaluation reviews are carried out.

There are two main elements of the Initial Evaluation:

1. String reviews (concerning the applied-for gTLD string). String reviews include a determination that the applied-for gTLD string is not likely to cause security or stability problems in the DNS, including problems caused by similarity to existing TLDs or reserved names.
2. Applicant reviews (concerning the entity applying for the gTLD and its proposed registry services). Applicant reviews include a determination of whether the applicant has the requisite technical, operational, and financial capability to operate a registry.

By the conclusion of the Initial Evaluation period, ICANN will post notice of all Initial Evaluation results. Depending on the volume of applications received, such notices may be posted in batches over the course of the Initial Evaluation period.

The Initial Evaluation is expected to be completed for all applications in a period of approximately 5 months. If the volume of applications received significantly exceeds 500, applications will be processed in batches and the 5-month timeline will not be met. The first batch will be limited to 500 applications and subsequent batches will be limited to 400 to account for capacity limitations due to managing extended evaluation, string contention, and other processes associated with each previous batch.

A process external to the application submission process will be employed to establish evaluation priority. This process will be based on an online ticketing system or other objective criteria.

If batching is required, the String Similarity review will be completed on all applications prior to the establishment of evaluation priority batches. For applications identified as part of a contention set, the entire contention set will be kept together in the same batch.

If batches are established, ICANN will post updated process information and an estimated timeline.

Note that the processing constraints will limit delegation rates to a steady state even in the event of an extremely high volume of applications. The annual delegation rate will not exceed 1,000 per year in any case, no matter how many applications are received.<sup>1</sup>

### **1.1.2.64** *Objection Filing*

Formal objections to applications can be filed on any of four enumerated grounds, by parties with standing to object. The objection filing period will open after ICANN posts the list of complete applications as described in subsection 1.1.2.2, and will last for approximately ~~75~~<sup>75½</sup> months.

Objectors must file such formal objections directly with dispute resolution service providers (DRSPs), not with ICANN. The objection filing period will close following the end of the Initial Evaluation period (refer to subsection 1.1.2.53), with a two-week window of time between the posting of the Initial Evaluation results and the close of the objection filing period. Objections that have been filed during the objection filing period will be addressed in the dispute resolution stage, which is outlined in subsection 1.1.2.97 and discussed in detail in Module 3.

All applicants should be aware that third parties have the opportunity to file objections to any application during the objection filing period. Applicants whose applications are the subject of a formal objection will have an opportunity to file a response according to the dispute resolution service provider's rules and procedures. An applicant wishing to file a formal objection to another application that has been submitted would do so within the objection filing period, following the objection filing procedures in Module 3.

Applicants are encouraged to identify possible regional, cultural, property interests, or other sensitivities regarding TLD strings and their uses before applying and, where possible, consult with interested parties to mitigate any concerns in advance.

### **1.1.2.7** *Receipt of GAC Advice on New gTLDs*

The GAC may provide public policy advice directly to the ICANN Board on any application. The "GAC Advice" procedure described in Module 3 indicates that, to be considered by the Board during the evaluation process,

<sup>1</sup> See "Delegation Rate Scenarios for New gTLDs" at <http://icann.org/en/topics/new-gtlds/delegation-rate-scenarios-new-gtlds-06oct10-en.pdf> for additional discussion.

the GAC Advice on New gTLDs must be submitted by the close of the Objection Filing Period.

Receipt of a GAC Early Warning is not a prerequisite to use of the GAC Advice process.

GAC Advice on New gTLDs that includes a consensus statement from the GAC that an application should not proceed as submitted, and that includes a thorough explanation of the public policy basis for such advice, will create a strong presumption for the Board that the application should not be approved.

See Module 3 for additional detail on the procedures concerning GAC Advice on New gTLDs.

### **1.1.2.86**      *Extended Evaluation*

*Extended Evaluation is available only to certain applicants that do not pass Initial Evaluation.*

Applicants failing certain elements of the Initial Evaluation can request an Extended Evaluation. If the applicant does not pass Initial Evaluation and does not expressly request an Extended Evaluation, the application will proceed no further. The Extended Evaluation period allows for an additional exchange of information between the applicant and evaluators to clarify information contained in the application. The reviews performed in Extended Evaluation do not introduce additional evaluation criteria.

An application may be required to enter an Extended Evaluation if one or more proposed registry services raise technical issues that might adversely affect the security or stability of the DNS. The Extended Evaluation period provides a time frame for these issues to be investigated. Applicants will be informed if such a review is required by the end of the Initial Evaluation period.

Evaluators and any applicable experts consulted will communicate the conclusions resulting from the additional review by the end of the Extended Evaluation period.

At the conclusion of the Extended Evaluation period, ICANN will post summary reports, by panel, from the Initial and Extended Evaluation periods.

If an application passes the Extended Evaluation, it can then proceed to the next relevant stage. If the application does not pass the Extended Evaluation, it will proceed no further.

The Extended Evaluation is expected to be completed for all applications in a period of approximately 5 months, though this timeframe could be increased based on volume. In this event, ICANN will post updated process information and an estimated timeline.

### 1.1.2.97 *Dispute Resolution*

*Dispute resolution applies only to applicants whose applications are the subject of a formal objection.*

Where formal objections are filed and filing fees paid during the objection filing period, independent dispute resolution service providers (DRSPs) will initiate and conclude proceedings based on the objections received. The formal objection procedure exists to provide a path for those who wish to object to an application that has been submitted to ICANN. Dispute resolution service providers serve as the fora to adjudicate the proceedings based on the subject matter and the needed expertise. Consolidation of objections filed will occur where appropriate, at the discretion of the DRSP.

PublicApplication comments may also be relevant to one or more objection grounds. (Refer to Module 3, Dispute Resolution Procedures, for the objection grounds.) The DRSPs will have access to all applicationpublic comments received, and will have discretion to consider them.

As a result of a dispute resolution proceeding, either the applicant will prevail (in which case the application can proceed to the next relevant stage), or the objector will prevail (in which case either the application will proceed no further or the application will be bound to a contention resolution procedure). In the event of multiple objections, an applicant must prevail in all dispute resolution proceedings concerning the application to proceed to the next relevant stage. Applicants will be notified by the DRSP(s) of the results of dispute resolution proceedings.

Dispute resolution proceedings, where applicable, are expected to be completed for all applications within approximately a 5-month time frame. In the event that volume is such that this timeframe cannot be accommodated, ICANN will work with the dispute resolution service providers to create processing procedures and post updated timeline information.

### 1.1.2.108 *String Contention*

*String contention applies only when there is more than one qualified application for the same or similar gTLD strings.*

String contention refers to the scenario in which there is more than one qualified application for the identical gTLD string or for similar gTLD strings. In this Applicant Guidebook, "similar" means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.

Applicants are encouraged to resolve string contention cases among themselves prior to the string contention resolution stage. In the absence of resolution by the contending applicants, string contention cases are resolved either through a community priority evaluation (if a community-based applicant elects it) or through an auction.

In the event of contention between applied-for gTLD strings that represent geographical names, the parties may be required to follow a different process to resolve the contention. See subsection 2.2.1.4 of Module 2 for more information.

Groups of applied-for strings that are either identical or similar are called contention sets. All applicants should be aware that if an application is identified as being part of a contention set, string contention resolution procedures will not begin until all applications in the contention set have completed all aspects of evaluation, including dispute resolution, if applicable.

To illustrate, as shown in Figure 1-2, Applicants A, B, and C all apply for .EXAMPLE and are identified as a contention set. Applicants A and C pass Initial Evaluation, but Applicant B does not. Applicant B requests Extended Evaluation. A third party files an objection to Applicant C's application, and Applicant C enters the dispute resolution process. Applicant A must wait to see whether Applicants B and C successfully complete the Extended Evaluation and dispute resolution phases, respectively, before it can proceed to the string contention resolution stage. In this example, Applicant B passes the Extended Evaluation, but Applicant C does not prevail in the dispute resolution proceeding. String contention resolution then proceeds between Applicants A and B.

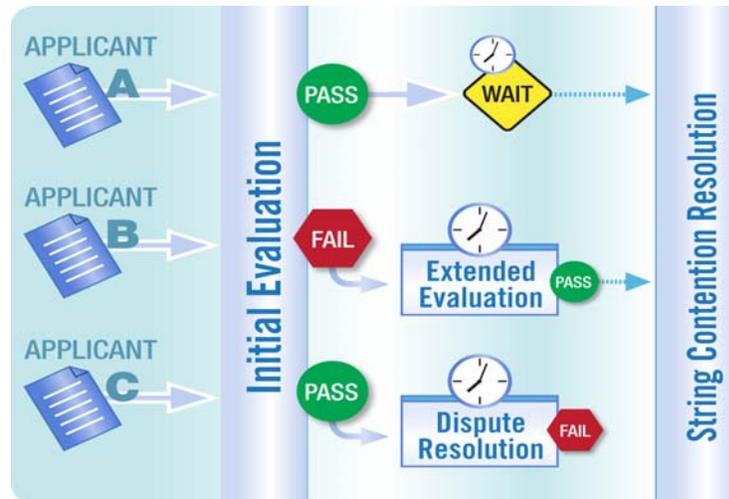

Figure 1-2 – All applications in a contention set must complete all previous evaluation and dispute resolution stages before string contention resolution can begin.

Applicants prevailing in a string contention resolution procedure will proceed toward delegation of the applied-for gTLDs.

In the event of a community priority evaluation (see Module 4, String Contention Procedures), ICANN will provide the comments received during the public comment period to the evaluators with instructions to take the relevant information into account in reaching their conclusions.

String contention resolution for a contention set is estimated to take from 2.5 to 6 months to complete. The time required will vary per case because some contention cases may be resolved in either a community priority evaluation or an auction, while others may require both processes.

### 1.1.2.119 Transition to Delegation

Applicants successfully completing all the relevant stages outlined in this subsection 1.1.2 are required to carry out a series of concluding steps before delegation of the applied-for gTLD into the root zone. These steps include execution of a registry agreement with ICANN and completion of a pre-delegation technical test to validate information provided in the application.

Following execution of a registry agreement, the prospective registry operator must complete technical set-up and show satisfactory performance on a set of technical tests before delegation of the gTLD into the root

zone may be initiated. If the pre-delegation testing requirements are not satisfied so that the gTLD can be delegated into the root zone within the time frame specified in the registry agreement, ICANN may in its sole and absolute discretion elect to terminate the registry agreement.

Once all of these steps have been successfully completed, the applicant is eligible for delegation of its applied-for gTLD into the DNS root zone.

It is expected that the transition to delegation steps can be completed in approximately 2 months, though this could take more time depending on the applicant's level of preparedness for the pre-delegation testing and the volume of applications undergoing these steps concurrently.

### 1.1.3 Lifecycle Timelines

Based on the estimates for each stage described in this section, the lifecycle for a straightforward application could be approximately ~~28~~ months, as follows:

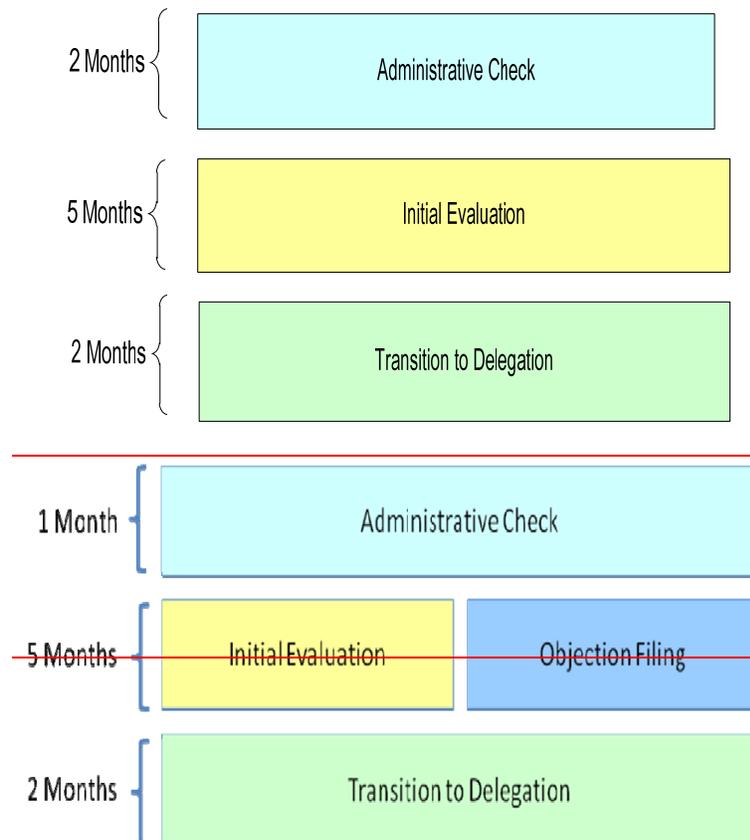

Figure 1-3 – A straightforward application could have an approximate 98-month lifecycle.

The lifecycle for a highly complex application could be much longer, such as 2019 months in the example below:

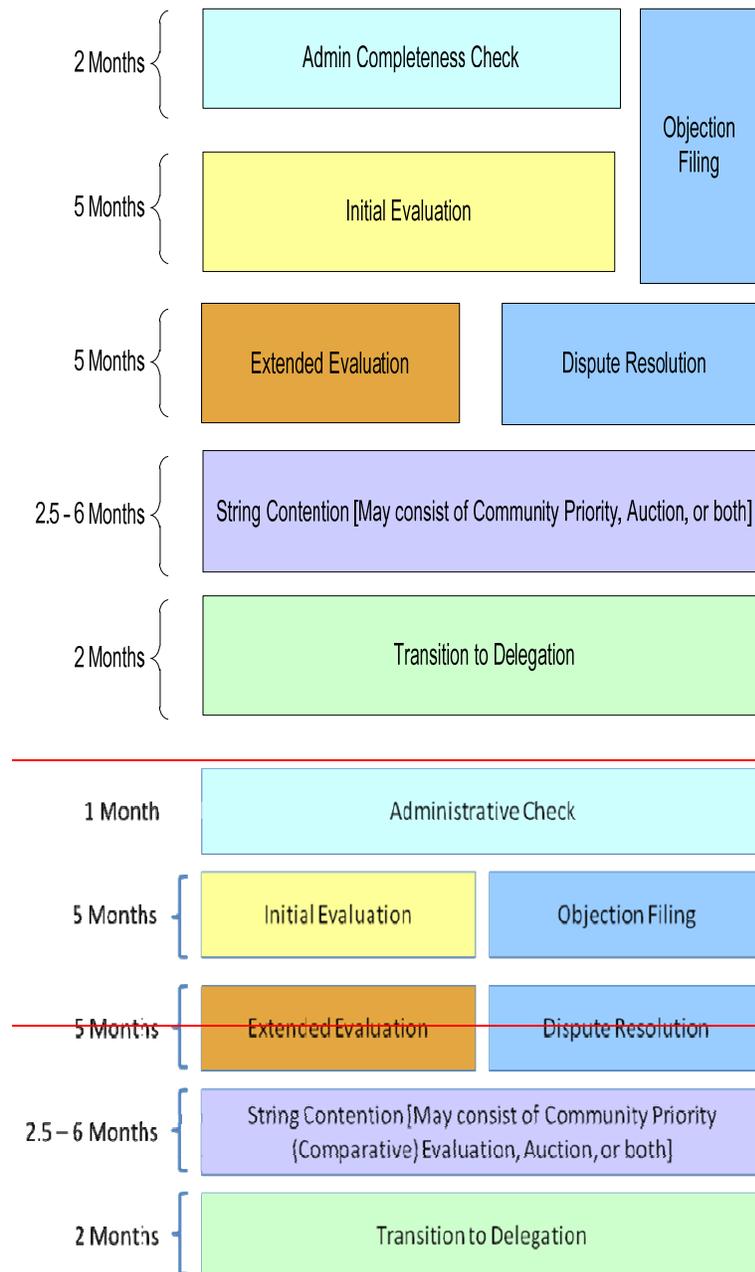

Figure 1-4 – A complex application could have an approximate 2019-month lifecycle.

### 1.1.4 Posting Periods

The results of application reviews will be made available to the public at various stages in the process, as shown below.

Period	Posting Content
<del>During</del> End of Administrative Completeness Check	Public portions of all applications <u>will be posted within 2 weeks of the start of that have passed</u> the Administrative Completeness Check.
End of Administrative Completeness Check	<u>Results of Administrative Completeness Check.</u>
GAC Early Warning Period	<u>GAC Early Warnings received.</u>
During Initial Evaluation	Status updates for applications withdrawn or ineligible for further review. Contention sets resulting from String Similarity review.
End of Initial Evaluation	Application status updates with all Initial Evaluation results.
GAC Advice on New gTLDs	<u>GAC Advice received.</u>
End of Extended Evaluation	Application status updates with all Extended Evaluation results. Evaluation summary reports from the Initial and Extended Evaluation periods.
During Objection Filing/Dispute Resolution	Information on filed objections and status updates available via Dispute Resolution Service Provider websites. Notice of all objections posted by ICANN after close of Objection Filing period.
During Contention Resolution (Community Priority Evaluation)	Results of each Community Priority Evaluation posted as completed.
During Contention Resolution (Auction)	Results from each auction posted as completed.
Transition to Delegation	Registry Agreements posted when executed. Pre-delegation testing status updated.

### 1.1.5 Sample Application Scenarios

The following scenarios briefly show a variety of ways in which an application may proceed through the evaluation process. The table that follows exemplifies various processes and outcomes. This is not intended to be an exhaustive list of possibilities. There are other possible combinations of paths an application could follow.

Estimated time frames for each scenario are also included, based on current knowledge. Actual time frames may vary depending on several factors, including the total number of applications received by ICANN during the application submission period. It should be emphasized that most applications are expected to pass through the process in the shortest period of time, i.e., they will not go through extended evaluation, dispute resolution, or string contention resolution processes. Although most of the scenarios below are for processes extending beyond ~~nine~~~~eight~~ months, it is expected that most applications will complete the process within the ~~nine~~~~eight~~-month timeframe.

Scenario Number	Initial Evaluation	Extended Evaluation	Objection(s) Filed	String Contention	Approved for Delegation Steps	Estimated Elapsed Time
1	Pass	N/A	None	No	Yes	<del>98</del> months
2	Fail	Pass	None	No	Yes	<del>143</del> months
3	Pass	N/A	None	Yes	Yes	<del>119.5 – 154</del> months
4	Pass	N/A	Applicant prevails	No	Yes	<del>143</del> months
5	Pass	N/A	Objector prevails	N/A	No	<del>124</del> months
6	Fail	Quit	N/A	N/A	No	<del>76</del> months
7	Fail	Fail	N/A	N/A	No	<del>124</del> months
8	Fail	Pass	Applicant prevails	Yes	Yes	<del>165.5 – 2049</del> months
9	Fail	Pass	Applicant prevails	Yes	No	<del>143.5 – 187</del> months

**Scenario 1 – Pass Initial Evaluation, No Objection, No**

**Contention** – In the most straightforward case, the application passes Initial Evaluation and there is no need for an Extended Evaluation. No objections are filed during the objection period, so there is no dispute to resolve. As there is no contention for the applied-for gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD. Most applications are expected to complete the process within this timeframe.

**Scenario 2 – Extended Evaluation, No Objection, No Contention** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. As with Scenario 1, no objections are filed during the objection period, so there is no dispute to resolve. As there is no contention for the gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

**Scenario 3 – Pass Initial Evaluation, No Objection, Contention** – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. No objections are filed during the objection period, so there is no dispute to resolve. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the application prevails in the contention resolution, so the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

**Scenario 4 – Pass Initial Evaluation, Win Objection, No Contention** – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing (refer to Module 3, Dispute Resolution Procedures). The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. The applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

**Scenario 5 – Pass Initial Evaluation, Lose Objection** – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection period, multiple objections are filed by one or more objectors with standing for one or more of the four enumerated objection grounds. Each objection is heard by a dispute resolution service provider panel. In this case, the panels find in favor of the applicant for most of the objections, but one finds in favor of the objector. As one of the objections has been upheld, the application does not proceed.

**Scenario 6 – Fail Initial Evaluation, Applicant Withdraws** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant decides to withdraw the

application rather than continuing with Extended Evaluation. The application does not proceed.

***Scenario 7 – Fail Initial Evaluation, Fail Extended Evaluation***

-- In this case, the application fails one or more aspects of the Initial Evaluation. The applicant requests Extended Evaluation for the appropriate elements. However, the application fails Extended Evaluation also. The application does not proceed.

***Scenario 8 – Extended Evaluation, Win Objection, Pass***

***Contention*** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing. The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the applicant prevails over other applications in the contention resolution procedure, the applicant can enter into a registry agreement, and the application can proceed toward delegation of the applied-for gTLD.

***Scenario 9 – Extended Evaluation, Objection, Fail***

***Contention*** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing. The objection is heard by a dispute resolution service provider that finds in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, another applicant prevails in the contention resolution procedure, and the application does not proceed.

***Transition to Delegation*** – After an application has successfully completed Initial Evaluation, and other stages as applicable, the applicant is required to complete a set of steps leading to delegation of the gTLD, including execution of a registry agreement with ICANN, and completion of pre-delegation testing. Refer to Module 5 for a description of the steps required in this stage.

### 1.1.6 Subsequent Application Rounds

---

ICANN's goal is to launch subsequent gTLD application rounds as quickly as possible. The exact timing will be based on experiences gained and changes required after this round is completed. The goal is for the next application round to begin within one year of the close of the application submission period for the initial round.

ICANN has committed to reviewing the effects of the New gTLD Program on the operations of the root zone system after the first application round, and will defer the delegations in a second application round until it is determined that the delegations resulting from the first round did not jeopardize root zone system security or stability.

## 1.2 Information for All Applicants

---

### 1.2.1 Eligibility

---

Established corporations, organizations, or institutions in good standing may apply for a new gTLD. Applications from individuals or sole proprietorships will not be considered. Applications from or on behalf of yet-to-be-formed legal entities, or applications presupposing the future formation of a legal entity (for example, a pending Joint Venture) will not be considered.

ICANN has designed the New gTLD Program with multiple stakeholder protection mechanisms. Background screening, features of the gTLD Registry Agreement, data and financial escrow mechanisms are all intended to provide registrant and user protections.

The application form requires applicants to provide information on the legal establishment of the applying entity, as well as the identification of directors, officers, partners, and major shareholders of that entity. The names and positions of individuals included in the application will be published as part of the application; other information collected about the individuals will not be published.

Background screening at both the entity level and the individual level will be conducted for all applications to confirm eligibility. This inquiry is conducted on the basis of the information provided in questions 1-11 of the application form. ICANN may take into account

information received from any source if it is relevant to the criteria in this section.

ICANN will perform background screening in only two areas: (1) General business diligence and criminal history; and (2) History of cybersquatting behavior. The criteria used for criminal history are aligned with the "crimes of trust" standard sometimes used in the banking and finance industry.

Background screening is in place to protect the public interest in the allocation of critical Internet resources, and ICANN reserves the right to deny an otherwise qualified application, or to contact the applicant with additional questions, based on the information obtained in the background screening process.

**In the absence of exceptional circumstances, applications from any entity with or including any individual Applicants with confirmed convictions of the types listed in (a) – (mk) below will be automatically disqualified from the program.**

~~Circumstances where ICANN may deny an otherwise qualified application include, but are not limited to instances where the applicant, or any individual named in the application:~~

- a. within the past ten years, has been convicted of any crime~~a felony, or of a misdemeanor~~ related to financial or corporate governance activities, or has been judged by a court to have committed fraud or breach of fiduciary duty, or has been the subject of a judicial determination that ICANN deemed as the substantive equivalent of any of these;
- b. within the past ten years, has been disciplined by any government or industry regulatory body for conduct involving dishonesty or misuse of the funds of others;
- c. within the past ten years has been convicted of any willful tax-related fraud or willful evasion of tax liabilities;
- d. within the past ten years has been convicted of perjury, forswearing, failing to cooperate with a law enforcement investigation, or making false statements to

a law enforcement agency or representative;

d.e. \_\_\_\_\_ has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications or the internet to facilitate the commission of crimes;

e.f. \_\_\_\_\_ has ever been convicted of any crime involving the use of a weapon, force, or the threat of force;

g. \_\_\_\_\_ has ever been convicted of any violent or sexual offense victimizing children, the elderly, or individuals with disabilities;

h. \_\_\_\_\_ has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988<sup>2</sup>;

f.i. \_\_\_\_\_ has ever been convicted or successfully extradited for any offense described in the United Nations Convention against Transnational Organized Crime (all Protocols)<sup>3,4</sup>;

g.i. \_\_\_\_\_ has been convicted of aiding, abetting, facilitating, enabling, conspiring to commit, or failing to report any of the listed crimes within the respective timeframes specified above;

k. \_\_\_\_\_ has entered a guilty plea as part of a plea agreement or has a court case in any jurisdiction with a disposition of Adjudicated Guilty or Adjudication Withheld (or regional equivalents) for any of the listed crimes within the respective timeframes listed above;

<sup>2</sup> <http://www.unodc.org/unodc/en/treaties/illicit-traffic.html>

<sup>3</sup> <http://www.unodc.org/unodc/en/treaties/CTOC/index.html>

<sup>4</sup> It is recognized that not all countries have signed on to the UN conventions referenced above. These conventions are being used solely for identification of a list of crimes for which background screening will be performed. It is not necessarily required that an applicant would have been convicted pursuant to the UN convention but merely convicted of a crime listed under these conventions, to trigger these criteria.

h.l. is the subject of a disqualification imposed by ICANN and in effect at the time the application is considered;

i.m. has been involved in of a pattern of adverse, final decisions indicating that the applicant or individual named in the application was engaged in cybersquatting as defined in the UDRP, ACPA, or other equivalent legislation, or was engaged in reverse domain name hijacking under the UDRP or bad faith or reckless disregard under the ACPA or other equivalent legislation. Three or more such decisions with one occurring in the last four years will generally be considered to constitute a pattern.

j.n. fails to provide ICANN with the identifying information necessary to confirm identity at the time of application or to resolve questions of identity during the background screening process;

k.o. fails to provide a good faith effort to disclose all relevant information relating to items (a) – (mk).

All applicants are required to provide complete and detailed explanations regarding any of the above events as part of the application. Crimes of a personal nature that do not meet any of the criteria listed in (a) – (ok) will not be considered for the purpose of criminal background screening and do not need to be disclosed. Background screening information will not be made publicly available by ICANN.

**Registrar Cross-Ownership** -- ICANN-accredited registrars are eligible to apply for a gTLD. However, all gTLD registries are required to abide by a Code of Conduct addressing, *inter alia*, non-discriminatory access for all authorized registrars. ICANN reserves the right to refer any application to the appropriate competition authority relative to any cross-ownership issues.

**Legal Compliance** -- ICANN must comply with all U.S. laws, rules, and regulations. One such set of regulations is the economic and trade sanctions program administered by the Office of Foreign Assets Control ("OFAC") of the U.S. Department of the Treasury. These sanctions have been imposed on certain countries, as well as individuals and

entities that appear on OFAC's List of Specially Designated Nationals and Blocked Persons (the "SDN List"). ICANN is prohibited from providing most goods or services to residents of sanctioned countries or their governmental entities or to SDNs without an applicable U.S. government authorization or exemption. ICANN generally will not seek a license to provide goods or services to an individual or entity on the SDN List. In the past, when ICANN has been requested to provide services to individuals or entities that are not SDNs, but are residents of sanctioned countries, ICANN has sought and been granted licenses as required. In any given case, however, OFAC could decide not to issue a requested license.

### *1.2.2 Required Documents*

---

All applicants should be prepared to submit the following documents, which are required to accompany each application:

1. **Proof of legal establishment** – Documentation of the applicant's establishment as a specific type of entity in accordance with the applicable laws of its jurisdiction.
2. **Financial statements.** Applicants must provide audited or independently certified financial statements for the most recently completed fiscal year for the applicant. In some cases, unaudited financial statements may be provided.

Supporting documentation should be submitted in the original language. English translations are not required.

All documents must be valid at the time of submission. Refer to the Evaluation Criteria, attached to Module 2, for additional details on the requirements for these documents.

Some types of supporting documentation are required only in certain cases:

1. **Community endorsement** – If an applicant has designated its application as community-based (see section 1.2.3), it will be asked to submit a written endorsement of its application by one or more established institutions representing the community it has named. An applicant may submit written endorsements from multiple institutions. If applicable, this will be submitted in the section of the application concerning the community-based designation.

At least one such endorsement is required for a complete application. The form and content of the

endorsement are at the discretion of the party providing the endorsement; however, the letter must include an express statement of support for the application as submitted and the contact information of the entity providing the endorsement.

Written endorsements from individuals need not be submitted with the application, but may be submitted in the application comment forum.

~~1.2.~~ **Government support or non-objection** – If an applicant has applied for a gTLD string that is a geographic name, the applicant is required to submit ~~documentation~~ documentation ~~statement~~ of support for or non-objection to its application from the relevant governments or public authorities. Refer to subsection 2.2.1.4 for more information on the requirements for geographic names. If applicable, this will be submitted in the geographic names section of the application.

~~2.3.~~ **Documentation of third-party funding commitments** – If an applicant lists funding from third parties in its application, it must provide evidence of commitment by the party committing the funds. If applicable, this will be submitted in the financial section of the application.

### 1.2.3 Community-Based Designation

---

All applicants are required to designate whether their application is **community-based**.

#### 1.2.3.1 Definitions

For purposes of this Applicant Guidebook, a **community-based gTLD** is a gTLD that is operated for the benefit of a clearly delineated community. Designation or non-designation of an application as community-based is entirely at the discretion of the applicant. Any applicant may designate its application as community-based; however, each applicant making this designation is asked to substantiate its status as representative of the community it names in the application by submission of written endorsements in support of the application. Additional information may be requested in the event of a community priority evaluation (refer to section 4.2 of Module 4). An applicant for a community-based gTLD is expected to:

1. Demonstrate an ongoing relationship with a clearly delineated community.

2. Have applied for a gTLD string strongly and specifically related to the community named in the application.
3. Have proposed dedicated registration and use policies for registrants in its proposed gTLD, including appropriate security verification procedures, commensurate with the community-based purpose it has named.
4. Have its application endorsed in writing by one or more established institutions representing the community it has named.

For purposes of differentiation, an application that has not been designated as community-based will be referred to hereinafter in this document as a **standard application**. A standard gTLD can be used for any purpose consistent with the requirements of the application and evaluation criteria, and with the registry agreement. A standard applicant may or may not have a formal relationship with an exclusive registrant or user population. It may or may not employ eligibility or use restrictions. Standard simply means here that the applicant has not designated the application as community-based.

### *1.2.3.2 Implications of Application Designation*

Applicants should understand how their designation as community-based or standard will affect application processing at particular stages, and, if the application is successful, execution of the registry agreement and subsequent obligations as a gTLD registry operator, as described in the following paragraphs.

***Objection / Dispute Resolution*** – All applicants should understand that an objection may be filed against any application on community grounds, even if the applicant has not designated itself as community-based or declared the gTLD to be aimed at a particular community. Refer to Module 3, Dispute Resolution Procedures.

***String Contention*** – Resolution of string contention may include one or more components, depending on the composition of the contention set and the elections made by community-based applicants.

- A **settlement between the parties** can occur at any time after contention is identified. The parties will be encouraged to meet with an objective to settle the contention. Applicants in contention always have the opportunity to resolve the contention voluntarily, resulting in the withdrawal of one or

more applications, before reaching the contention resolution stage.

- A **community priority evaluation** will take place only if a community-based applicant in a contention set elects this option. All community-based applicants in a contention set will be offered this option in the event that there is contention remaining after the applications have successfully completed all previous evaluation stages.
- An **auction** will result for cases of contention not resolved by community priority evaluation or agreement between the parties. Auction occurs as a contention resolution means of last resort. If a community priority evaluation occurs but does not produce a clear winner, an auction will take place to resolve the contention.

Refer to Module 4, String Contention Procedures, for detailed discussions of contention resolution procedures.

***Contract Execution and Post-Delegation*** – A community-based applicant will be subject to certain post-delegation contractual obligations to operate the gTLD in a manner consistent with the restrictions associated with its community-based designation. ICANN must approve all material changes to the contract, including changes to the community-based nature of the gTLD and any associated provisions, may only be made with ICANN's approval. The determination of whether to approve changes requested by the applicant will be at ICANN's discretion.

Community-based applications are intended to be a narrow category, for applications where there are unambiguous associations among the applicant, the community served, and the applied-for gTLD string. Evaluation of an applicant's designation as community-based will occur only in the event of a contention situation that results in a community priority evaluation. However, any applicant designating its application as community-based will, if the application is approved, be bound by the registry agreement to implement the community-based restrictions it has specified in the application. This is true even if there are no contending applicants.

### ***1.2.3.3 Changes to Application Designation***

An applicant may not change its designation as standard or community-based once it has submitted a gTLD application for processing.

### *1.2.4 Notice concerning Technical Acceptance Issues with New gTLDs*

---

All applicants should be aware that approval of an application and entry into a registry agreement with ICANN do not guarantee that a new gTLD will immediately function throughout the Internet. Past experience indicates that network operators may not immediately fully support new top-level domains, even when these domains have been delegated in the DNS root zone, since third-party software modification may be required and may not happen immediately.

Similarly, software applications sometimes attempt to validate domain names and may not recognize new or unknown top-level domains. ICANN has no authority or ability to require that software accept new top-level domains, although it does prominently publicize which top-level domains are valid and has developed a basic tool to assist application providers in the use of current root-zone data.

ICANN encourages applicants to familiarize themselves with these issues and account for them in their startup and launch plans. Successful applicants may find themselves expending considerable efforts working with providers to achieve acceptance of their new top-level domain.

Applicants should review <http://www.icann.org/en/topics/TLD-acceptance/> for background. IDN applicants should also review the material concerning experiences with IDN test strings in the root zone (see <http://idn.icann.org/>).

### *1.2.5 Notice concerning TLD Delegations*

---

ICANN is only able to create TLDs as delegations in the DNS root zone, expressed using NS records with any corresponding DS records and glue records. There is no policy enabling ICANN to place TLDs as other DNS record types (such as A, MX, or DNAME records) in the root zone.

### *1.2.6 Terms and Conditions*

---

All applicants must agree to a standard set of Terms and Conditions for the application process. The Terms and Conditions are available in Module 6 of this guidebook.

### *1.2.7 Notice of Changes to Information*

---

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or

inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.

Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

### *1.2.8 Voluntary Designation for High Security Zones*

---

ICANN and its stakeholders are currently developing a special designation for "High Security Zone Top Level Domains" ("HSTLDs"). This work is currently focusing on developing a standard for possible adoption by an international standards body who can administer audits and certifications on an independent basis.

This voluntary designation is for top-level domains that demonstrate and uphold enhanced security-minded practices and policies. While any registry operator, including successful new gTLD applicants, will be eligible to participate in this program, its development and operation are beyond the scope of this guidebook. An applicant's election to pursue an HSTLD designation is entirely independent of the evaluation process and will require completion of an additional set of requirements.

For more information on the HSTLD program, including current program development material and activities, please refer to <http://www.icann.org/en/topics/new-gtlds/hstld-program-en.htm>.

### *1.2.9 Security and Stability*

---

*Root Scaling:* There has been significant study, analysis, and consultation in preparation for launch of the New gTLD Program: indicating that the addition of gTLDs to the root zone will not negatively impact the security or stability of the DNS.

It is estimated that 200-300 TLDs will be delegated annually, and determined that in no case will more than 1000 new gTLDs be added to the root zone in a year. The delegation

rate analysis, consultations with the technical community, and anticipated normal operational upgrade cycles all lead to the conclusion that the new gTLD delegations will have no significant impact on the stability of the root system. Modeling will continue during, and after, the first application round so that root-scaling discussions can continue and the delegation rates can be managed as the program goes forward.

All applicants should be aware that delegation of any new gTLDs is conditional on the continued absence of significant negative impact on the security or stability of the DNS.

### *1.2.10 Resources for Applicant Assistance*

---

A variety of support resources are available to gTLD applicants. More information will be available on ICANN's website at <http://www.icann.org/en/topics/new-gtld-program.htm>.<sup>5</sup>

## *1.3 Information for Internationalized Domain Name Applicants*

---

Some applied-for gTLD strings are expected to be Internationalized Domain Names (IDNs). IDNs are domain names including characters used in the local representation of languages not written with the basic Latin alphabet (a - z), European-Arabic digits (0 - 9), and the hyphen (-). As described below, IDNs require the insertion of A-labels into the DNS root zone.

### *1.3.1 IDN-Specific Requirements*

---

An applicant for an IDN string must provide information indicating compliance with the IDNA protocol and other technical requirements. The IDNA protocol and its documentation can be found at <http://icann.org/en/topics/idn/rfcs.htm>.

Applicants must provide applied-for gTLD strings in the form of both a **U-label** (the IDN TLD in local characters) and an **A-label**.

An A-label is the ASCII form of an IDN label. Every IDN A-label begins with the IDNA ACE prefix, "xn--", followed by a string that is a valid output of the Punycode algorithm,

---

<sup>5</sup> The Joint SO/AC New gTLD Applicant Support Working Group is currently developing recommendations for support resources that may be available to gTLD applicants. Information on these resources will be published on the ICANN website once identified.

making a maximum of 63 total ASCII characters in length. The prefix and string together must conform to all requirements for a label that can be stored in the DNS including conformance to the LDH (host name) rule described in RFC 1034, RFC 1123, and elsewhere.

A U-label is the Unicode form of an IDN label, which a user expects to see displayed in applications.

For example, using the current IDN test string in Cyrillic script, the U-label is <испытание> and the A-label is <xn--80akhbyknj4f>. An A-label must be capable of being produced by conversion from a U-label and a U-label must be capable of being produced by conversion from an A-label.

Applicants for IDN gTLDs will also be required to provide the following at the time of the application:

1. Meaning or restatement of string in English. The applicant will provide a short description of what the string would mean or represent in English.
2. Language of label (ISO 639-1). The applicant will specify the language of the applied-for TLD string, both according to the ISO codes for the representation of names of languages and in English.
3. Script of label (ISO 15924). The applicant will specify the script of the applied-for gTLD string, both according to the ISO codes for the representation of names of scripts, and in English.
4. Unicode code points. The applicant will list all the code points contained in the U-label according to its Unicode form.
5. Applicants must further demonstrate that they have made reasonable efforts to ensure that the encoded IDN string does not cause any rendering or operational problems. For example, problems have been identified in strings with characters of mixed right-to-left and left-to-right directionality when numerals are adjacent to the path separator (i.e., the dot).<sup>6</sup>

If an applicant is applying for a string with known issues, it should document steps that will be taken to mitigate these issues in applications. While it is not possible to ensure that all rendering problems are avoided, it is important that as many as possible are identified early and that the potential registry operator is aware of

---

<sup>6</sup> See examples at <http://stupid.domain.name/node/683>

these issues. Applicants can become familiar with these issues by understanding the IDNA protocol (see <http://www.icann.org/en/topics/idn/rfcs.htm>), and by active participation in the IDN wiki (see <http://idn.icann.org/>) where some rendering problems are demonstrated.

6. **[Optional]** - Representation of label in phonetic alphabet. The applicant may choose to provide its applied-for gTLD string notated according to the International Phonetic Alphabet (<http://www.langsci.ucl.ac.uk/ipa/>). Note that this information will not be evaluated or scored. The information, if provided, will be used as a guide to ICANN in responding to inquiries or speaking of the application in public presentations.

### 1.3.2 IDN Tables

---

An IDN table provides the list of characters eligible for registration in domain names according to the registry's policy. It identifies any multiple characters that are considered equivalent for domain name registration purposes ("variant characters"). Variant characters occur where two or more characters can be used interchangeably.

Examples of IDN tables can be found in the IANA IDN Repository at <http://www.iana.org/procedures/idn-repository.html>.

In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string (the "top level tables"). IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second or lower levels.

Each applicant is responsible for developing its IDN Tables, including specification of any variant characters. Tables must comply with ICANN's IDN Guidelines<sup>7</sup> and any updates thereto, including:

- Complying with IDN technical standards.
- Employing an inclusion-based approach (i.e., code points not explicitly permitted by the registry are prohibited).
- Defining variant characters.

---

<sup>7</sup> See <http://www.icann.org/en/topics/idn/idn-guidelines-26apr07.pdf>

- Excluding code points not permissible under the guidelines, e.g., line-drawing symbols, pictographic dingbats, structural punctuation marks.
- Developing tables and registration policies in collaboration with relevant stakeholders to address common issues.
- Depositing IDN tables with the IANA Repository for IDN Practices (once the TLD is delegated).

An applicant's IDN tables should help guard against user confusion in the deployment of IDN gTLDs. Applicants are strongly urged to consider specific linguistic and writing system issues that may cause problems when characters are used in domain names, as part of their work of defining variant characters.

To avoid user confusion due to differing practices across TLD registries, it is recommended that applicants cooperate with TLD operators that offer domain name registration with the same or visually similar characters.

As an example, languages or scripts are often shared across geographic boundaries. In some cases, this can cause confusion among the users of the corresponding language or script communities. Visual confusion can also exist in some instances between different scripts (for example, Greek, Cyrillic and Latin).

Applicants will be asked to describe the process used in developing the IDN tables submitted. ICANN may compare an applicant's IDN table with IDN tables for the same languages or scripts that already exist in the IANA repository or have been otherwise submitted to ICANN. If there are inconsistencies that have not been explained in the application, ICANN may ask the applicant to detail the rationale for differences. For applicants that wish to conduct and review such comparisons prior to submitting a table to ICANN, a table comparison tool will be available.

ICANN will accept the applicant's IDN tables based on the factors above.

Once the applied-for string has been delegated as a TLD in the root zone, the applicant is required to submit IDN tables for lodging in the IANA Repository of IDN Practices. For additional information, see existing tables at <http://iana.org/domains/idn-tables/>, and submission guidelines at <http://iana.org/procedures/idn-repository.html>.

### 1.3.3 IDN Variant TLDs

---

A variant TLD string results from the substitution of one or more characters in the applied-for gTLD string with variant characters based on the applicant's IDN table.

Each application contains one applied-for gTLD string. The applicant may also declare any variant strings for the TLD in its application. However, no variant gTLD strings will be delegated through the New gTLD Program until variant management solutions are developed and implemented.<sup>8</sup>

When a variant delegation process is established, applicants may be required to submit additional information such as implementation details for the variant TLD management mechanism, and may need to participate in a subsequent evaluation process, which could contain additional fees and review steps.

The following scenarios are possible during the evaluation process:

- a. Applicant declares variant strings to the applied-for gTLD string in its application. If the application is successful, the applied-for gTLD string will be delegated to the applicant. The declared variant strings are noted for future reference. These declared variant strings will not be delegated to the applicant along with the applied-for gTLD string, nor will the applicant have any right or claim to the declared variant strings.

Variant strings listed in successful gTLD applications will be tagged to the specific application and added to a "Declared Variants List" that will be available on ICANN's website. A list of pending (i.e., declared) variant strings from the IDN ccTLD Fast Track is available at

<http://icann.org/en/topics/idn/fast-track/string-evaluation-completion-en.htm>.

ICANN may independently determine which strings are variants of one another, and will not necessarily treat the applicant's list of purported variants as dispositive in the process.

- b. Multiple applicants apply for strings that are identified by ICANN as variants of one another.

---

<sup>8</sup> The ICANN Board directed that work be pursued on variant management in its resolution on 25 Sep 2010, <http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2.5>.

These applications will be placed in a contention set and will follow the contention resolution procedures in Module 4.

- c. Applicant submits an application for a gTLD string and does not indicate variants to the applied-for gTLD string. ICANN will not identify variant strings unless scenario (b) above occurs.

Each variant string listed must also conform to the string requirements in section 2.2.1.3.2.

Variant strings listed in the application will be reviewed for consistency with the IDN tables submitted in the application. Should any declared variant strings not be based on use of variant characters according to the submitted top-level tables, the applicant will be notified and the declared string will no longer be considered part of the application.

Declaration of variant strings in an application does not provide the applicant any right or reservation to a particular string. Variant strings on the Declared Variants List may be subject to subsequent additional review per a process and criteria to be defined.

It should be noted that while variants for second and lower-level registrations are defined freely by the local communities without any ICANN validation, there may be specific rules and validation criteria specified for variant strings to be allowed at the top level. It is expected that the variant information provided by applicants in the first application round will contribute to a better understanding of the issues and assist in determining appropriate review steps and fee levels going forward.

## *1.4 Submitting an Application*

---

Applicants may complete the application form and submit supporting documents using ICANN's TLD Application System (TAS). To access the system, each applicant must first register as a TAS user.

As TAS users, applicants will be able to provide responses in open text boxes and submit required supporting documents as attachments. Restrictions on the size of attachments as well as the file formats are included in the instructions on the TAS site.

ICANN will not accept application forms or supporting materials submitted through other means than TAS (that is, hard copy, fax, email), unless such submission is in accordance with specific instructions from ICANN to applicants.

### 1.4.1 Accessing the TLD Application System

---

The TAS site will be accessible from the New gTLD webpage (<http://www.icann.org/en/topics/new-gtld-program.htm>), and will be highlighted in communications regarding the opening of the application submission period. Users of TAS will be expected to agree to a standard set of terms of use including user rights, obligations, and restrictions in relation to use of the system.

#### 1.4.1.1 User Registration

---

TAS user registration ([creating a TAS user profile](#)) requires submission of preliminary information, which will be used to validate the identity of the parties involved in the application. An overview of the information collected in the user registration process is below:

No.	Questions
1	Full legal name of Applicant
2	Principal business address
3	Phone number of Applicant
4	Fax number of Applicant
5	Website or URL, if applicable
6	Primary Contact: Name, Title, Address, Phone, Fax, Email
7	Secondary Contact: Name, Title, Address, Phone, Fax, Email
8	Proof of legal establishment
9	Trading, subsidiary, or joint venture information
10	Business ID, Tax ID, VAT registration number, or equivalent of Applicant
11	Applicant background: previous convictions, cybersquatting activities

12(a)	Deposit payment confirmation
-------	------------------------------

A subset of identifying information will be collected from the entity performing the user registration, in addition to the applicant information listed above. The registered user could be, for example, an agent, representative, or employee who would be completing the application on behalf of the applicant.

The registration process will require the user to request the desired number of application slots. For example, a user intending to submit five gTLD applications would request five application slots, and the system would assign the user a unique ID number for each of the five applications.

Users will also be required to submit a deposit of USD 5,000 per application slot. This deposit amount will be credited against the evaluation fee for each application. The deposit requirement is in place to help reduce the risk of frivolous access to the application system.

After completing the registration, TAS users will receive access enabling them to enter the rest of the application information into the system. Application slots will be populated with the registration information provided by the applicant, which may not ordinarily be changed once slots have been assigned.

No new user registrations will be accepted after [date to be inserted in final version of Applicant Guidebook].

ICANN will take commercially reasonable steps to protect all applicant data submitted from unauthorized access, but cannot warrant against the malicious acts of third parties who may, through system corruption or other means, gain unauthorized access to such data.

#### ***1.4.1.2 Application Form***

---

Having obtained the requested application slots, the applicant will complete the remaining application questions. An overview of the areas and questions contained in the form is shown here:

No.	Application and String Information
12(b)	Payment confirmation for remaining evaluation fee amount

13	Applied-for gTLD string
14	IDN string information, if applicable
15	IDN tables, if applicable
16	Mitigation of IDN operational or rendering problems, if applicable
17	Representation of string in International Phonetic Alphabet (Optional)
18	Mission/purpose of the TLD
19	Is the application for a community-based TLD?
20	If community based, describe elements of community and proposed policies
21	Is the application for a geographical name? If geographical, documents of support required
22	Measures for protection of geographical names at second level
23	Registry Services: name and full description of all registry services to be provided
No.	<b>Technical and Operational Questions (External)</b>
24	Shared registration system (SRS) performance
25	EPP
26	Whois
27	Registration life cycle
28	Abuse prevention & mitigation
29	Rights protection mechanisms
<u>30(a)</u>	<u>Security</u>
	<b>Technical and Operational Questions (Internal)</b>
<u>30(b)</u>	<u>Security</u> <del>Technical overview of proposed registry</del>
<u>31</u>	<u>Technical overview of proposed registry</u>
<u>32</u>	Architecture

332	Database capabilities
343	Geographic diversity
354	DNS service compliance
35	Security
36	IPv6 reachability
37	Data backup policies and procedures
38	Escrow
39	Registry continuity
40	Registry transition
41	Failover testing
42	Monitoring and fault escalation processes
43	DNSSEC
44	IDNs (Optional)
<b>No.</b>	<b>Financial Questions</b>
45	Financial statements
46	Projections template: costs and funding
47	Costs: setup and operating
48	Funding and revenue
49	Contingency planning: barriers, funds, volumes
50	Continuity: financial instrument

#### 1.4.2 Customer Support during the Application Process

TAS will also provide applicants with access to support mechanisms during the application process. A support link will be available in TAS where users can refer to reference

documentation (such as FAQs or user guides), or contact customer support.

When contacting customer support, users can expect to receive a tracking ticket number for a support request, and a response within [established service-level agreements](#) 48 hours. Support requests will be routed to the appropriate person, depending upon the nature of the request. For example, a technical support request would be directed to the personnel charged with resolving TAS technical issues, while a question concerning the nature of the required information or documentation would be directed to an appropriate contact. The response will be added to the reference documentation available for all applicants.

### ***1.4.3 Backup Application Process***

---

If the online application system is not available, ICANN will provide alternative instructions for submitting applications.

## ***1.5 Fees and Payments***

---

This section describes the fees to be paid by the applicant. Payment instructions are also included here.

### ***1.5.1 gTLD Evaluation Fee***

---

The gTLD evaluation fee is required from all applicants. This fee is in the amount of USD 185,000. The evaluation fee is payable in the form of a 5,000 deposit submitted at the time the user requests [an](#) application slots within TAS, and a payment of the remaining 180,000 submitted with the full application. ICANN will not begin its evaluation of an application unless it has received the full gTLD evaluation fee by [time] UTC [date].

The gTLD evaluation fee is set to recover costs associated with the new gTLD program. The fee is set to ensure that the program is fully funded and revenue neutral and is not subsidized by existing contributions from ICANN funding sources, including generic TLD registries and registrars, ccTLD contributions and RIR contributions.

The gTLD evaluation fee covers all required reviews in Initial Evaluation and, in most cases, any required reviews in Extended Evaluation. If an extended Registry Services review takes place, an additional fee will be incurred for this review (see section 1.5.2). There is no additional fee to the applicant for Extended Evaluation for geographic [.ca](#) names, technical and operational, or financial reviews. The

evaluation fee also covers community priority evaluation fees in cases where the applicant achieves a passing score.

**Refunds** -- In certain cases, refunds of a portion of the evaluation fee may be available for applications that are withdrawn before the evaluation process is complete. An applicant may request a refund at any time until it has executed a registry agreement with ICANN. The amount of the refund will depend on the point in the process at which the withdrawal is made, as follows:

Refund Available to Applicant	Percentage of Evaluation Fee	Amount of Refund
<u>Within 21 days of a GAC Early Warning</u>	<u>80%</u>	<u>USD 148,000</u>
After posting of applications until posting of Initial Evaluation results	70%	USD 130,000
After posting Initial Evaluation results	35%	USD 65,000
After the applicant has completed Dispute Resolution, Extended Evaluation, or String Contention Resolution(s)	20%	USD 37,000
After the applicant has entered into a registry agreement with ICANN		None

Thus, any applicant that has not been successful is eligible for at least a 20% refund of the evaluation fee if it withdraws its application.

An applicant that wishes to withdraw an application must initiate the process through TAS and submit the required form to request a refund, including agreement to the terms and conditions for withdrawal. Refunds will only be issued to the organization that submitted the original payment. All refunds are paid by wire transfer. Any bank transfer or transaction fees incurred by ICANN will be deducted from the amount paid.

**Note on 2000 proof-of-concept round applicants** -- Participants in ICANN's proof-of-concept application process in 2000 may be eligible for a credit toward the evaluation fee. The credit is in the amount of USD 86,000 and is subject to:

- submission of documentary proof by the applicant that it is the same entity, a successor in interest to the same entity, or an affiliate of the same entity that applied previously;
- a confirmation that the applicant was not awarded any TLD string pursuant to the 2000 proof-of-concept application round and that the applicant has no legal claims arising from the 2000 proof-of-concept process; and
- submission of an application, which may be modified from the application originally submitted in 2000, for the same TLD string that such entity applied for in the 2000 proof-of-concept application round.

Each participant in the 2000 proof-of-concept application process is eligible for at most one credit. A maximum of one credit may be claimed for any new gTLD application submitted according to the process in this guidebook. Eligibility for this credit is determined by ICANN.

### *1.5.2 Fees Required in Some Cases*

---

Applicants may be required to pay additional fees in certain cases where specialized process steps are applicable. Those possible additional fees include:

- **Registry Services Review Fee** – If applicable, this fee is payable for additional costs incurred in referring an application to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review. Applicants will be notified if such a fee is due. The fee for a three-member RSTEP review team is anticipated to be USD 50,000. In some cases, five-member panels might be required, or there might be increased scrutiny at a greater cost. The amount of the fee will cover the cost of the RSTEP review. In the event that reviews of proposed registry services can be consolidated across multiple applications or applicants, ICANN will apportion the fees in an equitable manner. In every case, the applicant will be advised of the cost before initiation of the review. Refer to subsection 2.2.3 of Module 2 on Registry Services review.
- **Dispute Resolution Filing Fee** – This amount must accompany any filing of a formal objection and

any response that an applicant files to an objection. This fee is payable directly to the applicable dispute resolution service provider in accordance with the provider's payment instructions. ICANN estimates that filing fees could range from approximately USD 1,000 to USD 5,000 (or more) per party per proceeding. Refer to the appropriate provider for the relevant amount. Refer to Module 3 for dispute resolution procedures.

- **Advance Payment of Costs** – In the event of a formal objection, this amount is payable directly to the applicable dispute resolution service provider in accordance with that provider's procedures and schedule of costs. Ordinarily, both parties in the dispute resolution proceeding will be required to submit an advance payment of costs in an estimated amount to cover the entire cost of the proceeding. This may be either an hourly fee based on the estimated number of hours the panelists will spend on the case (including review of submissions, facilitation of a hearing, if allowed, and preparation of a decision), or a fixed amount. In cases where disputes are consolidated and there are more than two parties involved, the advance payment will occur according to the dispute resolution service provider's rules.

The prevailing party in a dispute resolution proceeding will have its advance payment refunded, while the non-prevailing party will not receive a refund and thus will bear the cost of the proceeding. In cases where disputes are consolidated and there are more than two parties involved, the refund of fees will occur according to the dispute resolution service provider's rules.

ICANN estimates that adjudication fees for a proceeding involving a fixed amount could range from USD 2,000 to USD 8,000 (or more) per proceeding. ICANN further estimates that an hourly rate based proceeding with a one-member panel could range from USD 32,000 to USD 56,000 (or more) and with a three-member panel it could range from USD 70,000 to USD 122,000 (or more). These estimates may be lower if the panel does not call for written submissions beyond the objection and response, and does not allow a hearing. Please refer to the appropriate provider for the relevant amounts or fee structures.

- **Community Priority Evaluation Fee** – In the event that the applicant participates in a community priority evaluation, this fee is payable as a deposit in an amount to cover the cost of the panel's review of that application (currently estimated at USD 10,000). The deposit is payable to the provider appointed to handle community priority evaluations. Applicants will be notified if such a fee is due. Refer to Section 4.2 of Module 4 for circumstances in which a community priority evaluation may take place. An applicant who scores at or above the threshold for the community priority evaluation will have its deposit refunded.

ICANN will notify the applicants of due dates for payment in respect of additional fees (if applicable). This list does not include fees (annual registry fees) that will be payable to ICANN following execution of a registry agreement.

### *1.5.3 Payment Methods*

---

Payments to ICANN should be submitted by **wire transfer**. Instructions for making a payment by wire transfer will be available in TAS.<sup>9</sup>

Payments to Dispute Resolution Service Providers should be submitted in accordance with the provider's instructions.

### *1.5.4 Requesting a Remittance Form*

---

The TAS interface allows applicants to request issuance of a remittance form for any of the fees payable to ICANN. This service is for the convenience of applicants that require an invoice to process payments.

## *1.6 Questions about this Applicant Guidebook*

---

For assistance and questions an applicant may have in the process of completing the application form, applicants should use the customer support resources available through TAS. Applicants who are unsure of the information being sought in a question or the parameters for acceptable documentation are encouraged to communicate these questions through the appropriate support channels before the application is submitted. This helps avoid the need for exchanges with evaluators to

---

<sup>9</sup> Wire transfer is the preferred method of payment as it offers a globally accessible and dependable means for international transfer of funds. This enables ICANN to receive the fee and begin processing applications as quickly as possible.

clarify information, which extends the timeframe associated with the application.

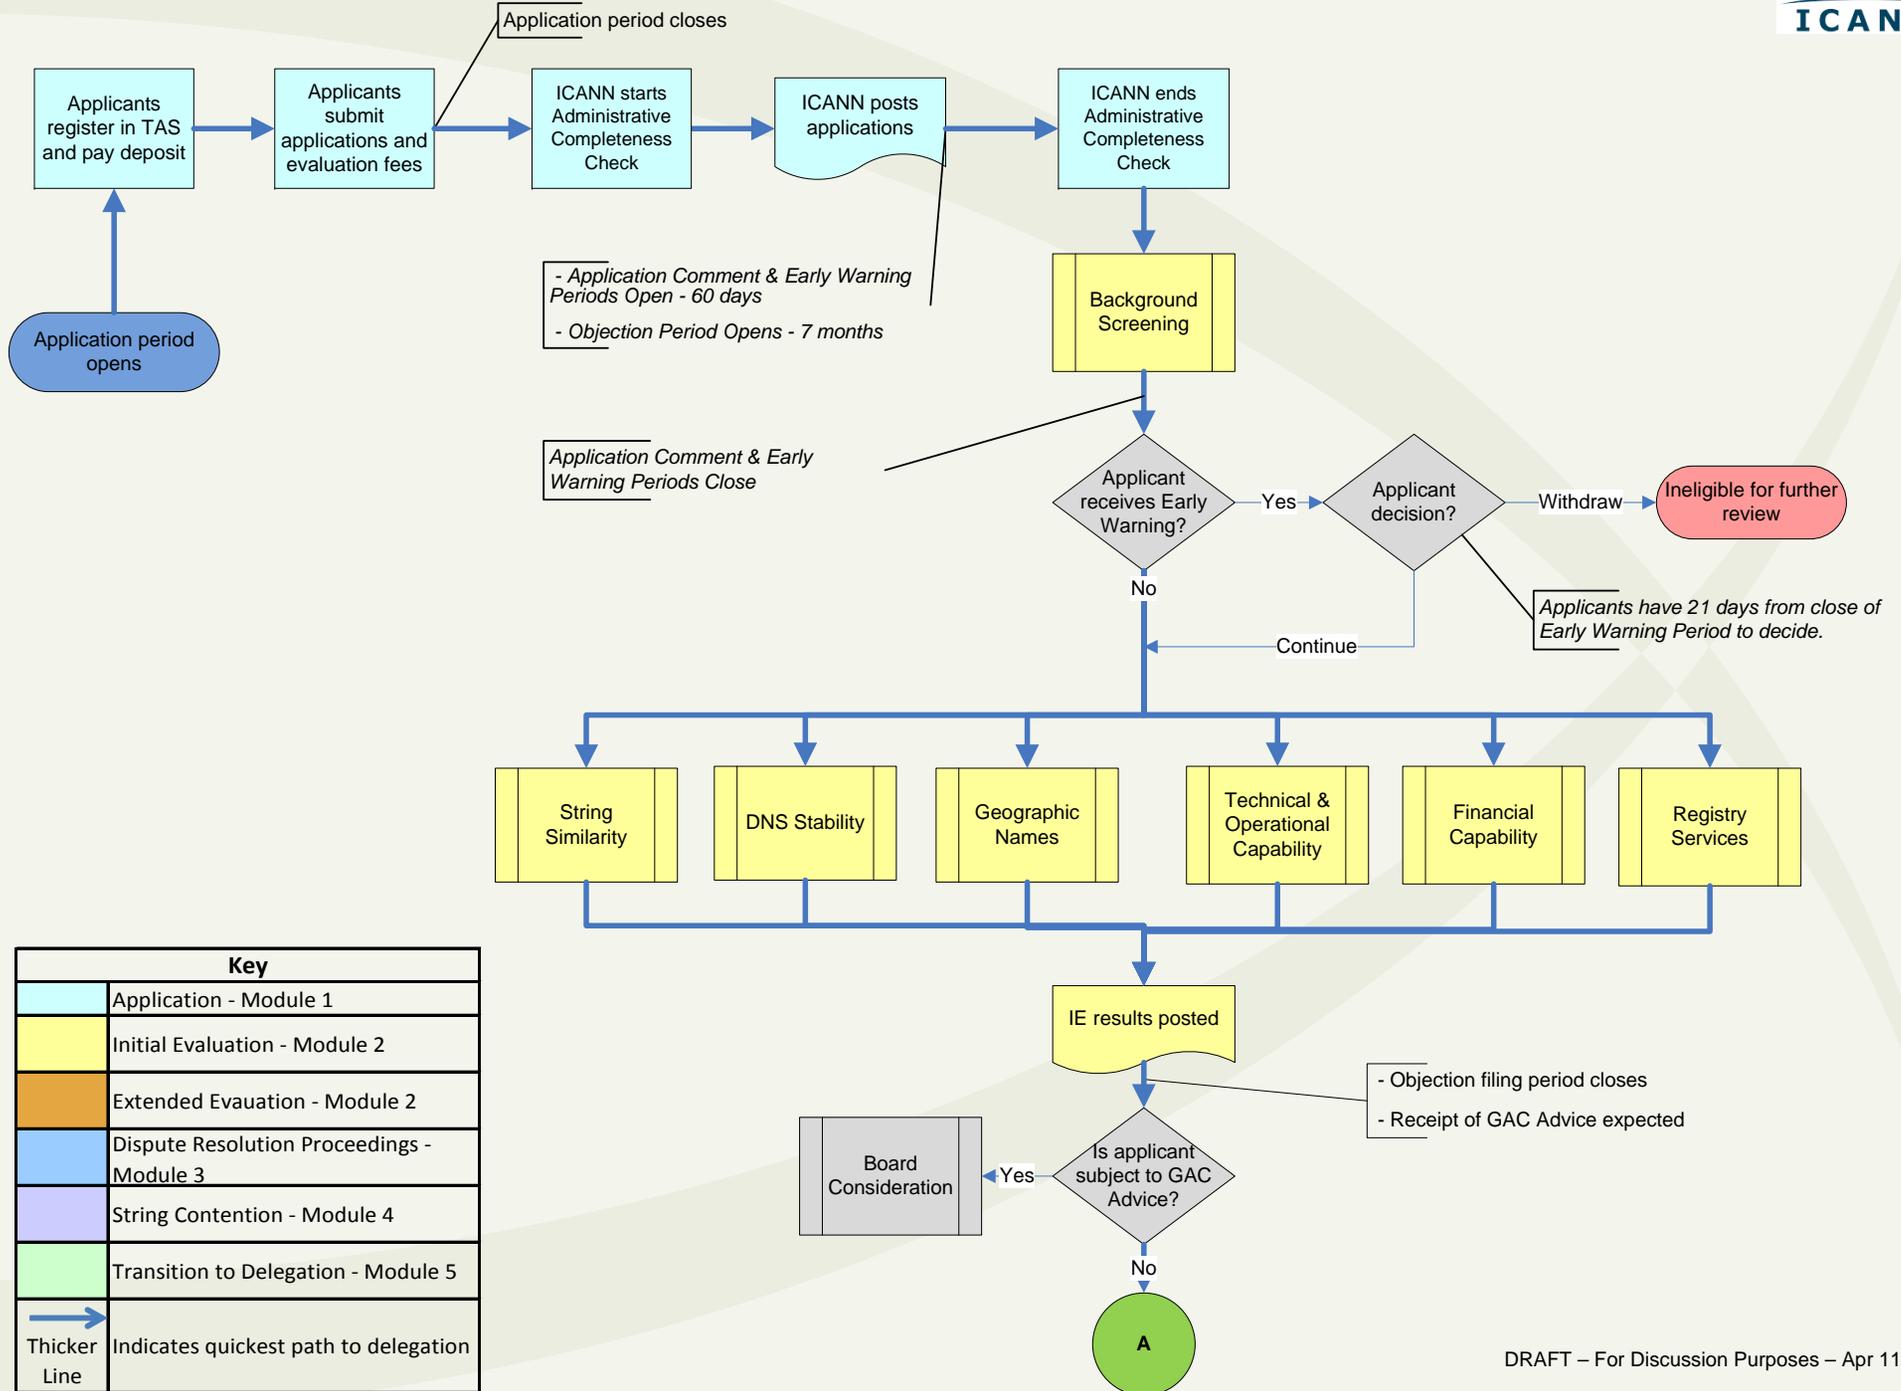

Questions may be submitted via the TAS support link. To provide all applicants equitable access to information, ICANN will make all questions and answers publicly available.

All requests to ICANN for information about the process or issues surrounding preparation of an application must be submitted in writing via the designated support channels. ICANN will not grant requests from applicants for personal or telephone consultations regarding the preparation of an application. Applicants that contact ICANN for clarification about aspects of the application will be referred to the dedicated online question and answer area.

Answers to inquiries will only provide clarification about the application forms and procedures. ICANN will not provide consulting, financial, or legal advice.

## April 2011 Discussion Draft Module 2

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

15 April 2011

---

# Module 2

---

## *Evaluation Procedures*

This module describes the evaluation procedures and criteria used to determine whether applied-for gTLDs are approved for delegation. All applicants will undergo an Initial Evaluation and those that do not pass all elements may request Extended Evaluation.

The first, required evaluation is the **Initial Evaluation**, during which ICANN assesses an applied-for gTLD string, an applicant's qualifications, and its proposed registry services.

The following assessments are performed in the **Initial Evaluation**:

- String Reviews
  - String similarity
  - Reserved names
  - DNS stability
  - Geographic names
- Applicant Reviews
  - Demonstration of technical and operational capability
  - Demonstration of financial capability
  - Registry services reviews for DNS stability issues

An application must pass all these reviews to pass the Initial Evaluation. Failure to pass any one of these reviews will result in a failure to pass the Initial Evaluation.

**Extended Evaluation** may be applicable in cases in which an applicant does not pass the Initial Evaluation. See Section 2.3 below.

### *2.1 Background Screening*

---

Background screening will be conducted in two areas:

- (a) General business diligence and criminal history; and
- (b) History of cybersquatting behavior.

The application must pass both background screening areas to be eligible to proceed. Background screening results are evaluated according to the criteria described in section 1.2.1. Due to the potential sensitive nature of the material, applicant background screening reports will not be published.

The following sections describe the process ICANN will use to perform background screening.

### *2.1.1 General business diligence and criminal history*

---

Applying entities that are publicly traded corporations listed and in good standing on any of the world's largest 25 stock exchanges (as listed by the World Federation of Exchanges) will be deemed to have passed the general business diligence and criminal history screening. The largest 25 will be based on the domestic market capitalization reported at the end of the most recent calendar year prior to launching each round.<sup>1</sup>

Before an entity is listed on an exchange, it must undergo significant due diligence including an investigation by the exchange, regulators, and investment banks. As a publicly listed corporation, an entity is subject to ongoing scrutiny from shareholders, analysts, regulators, and exchanges. All exchanges require monitoring and disclosure of material information about directors, officers, and other key personnel, including criminal behavior. In totality, these requirements meet or exceed the screening ICANN will perform.

For applicants not listed on one of these exchanges, ICANN will submit identifying information for the entity, officers, directors, and major shareholders to an international background screening service. This service will use the criteria listed in section 1.2.1 and return results that match these criteria. Only publicly available information will be used in this inquiry.

Note that the applicant is expected to disclose potential problems in meeting the criteria in the application, and provide any clarification or explanation at the time of application submission. If any hits are Results returned from the background screening process, they will be matched with the disclosures provided by the applicant and those cases will be followed up to resolve issues of discrepancies or potential false positives.

---

<sup>1</sup> See <http://www.world-exchanges.org/files/statistics/excel/EQUITY109.xls>

If no hits are returned, the application will pass this portion of the background screening.

### *2.1.2 History of cybersquatting*

---

ICANN will screen applicants against UDRP cases and legal databases as financially feasible for data that may indicate a pattern of cybersquatting behavior pursuant to the criteria listed in section 1.2.1.

The applicant is required to make specific declarations regarding these activities in the application. ~~If any hits are~~ Results returned, ~~the application~~ will be matched with the disclosures provided by the applicant and those instances ~~issues~~ will be followed up to resolve issues of discrepancies or potential false positives.

If no hits are returned, the application will pass this portion of the background screening.

## *2.2 Initial Evaluation*

---

The Initial Evaluation consists of two types of review. Each type is composed of several elements.

String review: The first review focuses on the applied-for gTLD string to test:

- Whether the applied-for gTLD string is so similar to other strings that it would create a probability of user confusion;
- Whether the applied-for gTLD string might adversely affect DNS security or stability; and
- Whether evidence of requisite government approval is provided in the case of certain geographic names.

Applicant review: The second review focuses on the applicant to test:

- Whether the applicant has the requisite technical, operational, and financial capability to operate a registry; and
- Whether the registry services offered by the applicant might adversely affect DNS security or stability.

## 2.2.1 *String Reviews*

---

In the Initial Evaluation, ICANN reviews every applied-for gTLD string. Those reviews are described in greater detail in the following subsections.

### 2.2.1.1 *String Similarity Review*

This review involves a preliminary comparison of each applied-for gTLD string against existing TLDs, Reserved Names (see subsection 2.2.1.2), and other applied-for strings. The objective of this review is to prevent user confusion and loss of confidence in the DNS resulting from delegation of many similar strings.

Note: In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.

The visual similarity check that occurs during Initial Evaluation is intended to augment the objection and dispute resolution process (see Module 3, Dispute Resolution Procedures) that addresses all types of similarity.

This similarity review will be conducted by an independent String Similarity Panel.

#### 2.2.1.1.1 *Reviews Performed*

The String Similarity Panel’s task is to identify visual string similarities that would create a probability of user confusion.

The panel performs this task of assessing similarities that would lead to user confusion in four sets of circumstances, when comparing:

- Applied-for gTLD strings against existing TLDs and reserved names;
- Applied-for gTLD strings against other applied-for gTLD strings;
- Applied-for gTLD strings against strings requested as IDN ccTLDs; and
- Applied-for 2-character IDN gTLD strings against:
  - Every other single character.
  - Any other 2-character ASCII string (to protect possible future ccTLD delegations).

**Similarity to Existing TLDs or Reserved Names** – This review involves cross-checking between each applied-for string and the lists of existing TLD strings and Reserved Names to determine whether two strings are so similar to one another that they create a probability of user confusion.

In the simple case in which an applied-for gTLD string is identical to an existing TLD or reserved name, the application system will not allow the application to be submitted.

Testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. For example, protocols treat equivalent labels as alternative forms of the same label, just as “foo” and “Foo” are treated as alternative forms of the same label (RFC 3490).

All TLDs currently in the root zone can be found at <http://iana.org/domains/root/db/>.

IDN tables that have been submitted to ICANN are available at <http://www.iana.org/domains/idn-tables/>.

**Similarity to Other Applied-for gTLD Strings (String Contention Sets)** – All applied-for gTLD strings will be reviewed against one another to identify any similar strings. In performing this review, the String Similarity Panel will create contention sets that may be used in later stages of evaluation.

A contention set contains at least two applied-for strings identical or similar to one another. Refer to Module 4, String Contention Procedures, for more information on contention sets and contention resolution.

ICANN will notify applicants who are part of a contention set as soon as the String Similarity review is completed. (This provides a longer period for contending applicants to reach their own resolution before reaching the contention resolution stage.) These contention sets will also be published on ICANN’s website.

**Similarity to TLD strings requested as IDN ccTLDs** -- Applied-for gTLD strings will also be reviewed for similarity to TLD strings requested in the IDN ccTLD Fast Track process (see <http://www.icann.org/en/topics/idn/fast-track/>). Should a conflict with a prospective fast-track IDN ccTLD be identified, ICANN will take the following approach to resolving the conflict.

If one of the applications has completed its respective process before the other is lodged, that TLD will be delegated. A gTLD application that has successfully completed all relevant evaluation stages, including dispute resolution and string contention, if applicable, and is eligible for entry into a registry agreement will be considered complete, and therefore would not be disqualified by a newly-filed IDN ccTLD request. Similarly, an IDN ccTLD request that has completed evaluation (i.e., is “validated”) will be considered complete and therefore would not be disqualified by a newly-filed gTLD application.

In the case where neither application has completed its respective process, where the gTLD application does not have the required approval from the relevant government or public authority, a validated request for an IDN ccTLD will prevail and the gTLD application will not be approved. The term “validated” is defined in the IDN ccTLD Fast Track Process Implementation, which can be found at <http://www.icann.org/en/topics/idn>.

In the case where a gTLD applicant has obtained the support or non-objection of the relevant government or public authority, but is eliminated due to contention with a string requested in the IDN ccTLD Fast Track process, a full refund of the evaluation fee is available to the applicant if the gTLD application was submitted prior to the publication of the ccTLD request.

**Review of 2-character IDN strings** — In addition to the above reviews, an applied-for gTLD string that is a 2-character IDN string is reviewed by the String Similarity Panel for visual similarity to:

- a) Any one-character label (in any script), and
- b) Any possible two-character ASCII combination.

An applied-for gTLD string that is found to be too similar to a) or b) above will not pass this review.

#### **2.2.1.1.2 Review Methodology**

The String Similarity Panel is informed in part by an algorithmic score for the visual similarity between each applied-for string and each of other existing and applied-for TLDs and reserved names. The score will provide one objective measure for consideration by the panel, as part of the process of identifying strings likely to result in user confusion. In general, applicants should expect that a higher visual similarity score suggests a higher probability

that the application will not pass the String Similarity review. However, it should be noted that the score is only indicative and that the final determination of similarity is entirely up to the Panel's judgment.

The algorithm, user guidelines, and additional background information are available to applicants for testing and informational purposes.<sup>2</sup> Applicants will have the ability to test their strings and obtain algorithmic results through the application system prior to submission of an application.

The algorithm supports the common characters in Arabic, Chinese, Cyrillic, Devanagari, Greek, Japanese, Korean, and Latin scripts. It can also compare strings in different scripts to each other.

The panel will also take into account variant characters, as defined in any relevant language table, in its determinations. For example, strings that are not visually similar but are determined to be variant TLD strings based on an IDN table would be placed in a contention set. Variant TLD strings that are listed as part of the application will also be subject to the string similarity analysis.<sup>3</sup>

The panel will examine all the algorithm data and perform its own review of similarities between strings and whether they rise to the level of string confusion. In cases of strings in scripts not yet supported by the algorithm, the panel's assessment process is entirely manual.

The panel will use a common standard to test for whether string confusion exists, as follows:

***Standard for String Confusion*** – String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

#### ***2.2.1.1.3 Outcomes of the String Similarity Review***

An application that fails the String Similarity review due to similarity to an existing TLD will not pass the Initial Evaluation,

---

<sup>2</sup> See <http://icann.sword-group.com/algorithm/>

<sup>3</sup> In the case where an applicant has listed Declared Variants in its application (see subsection 1.3.3), the panel will perform an analysis of the listed strings to confirm that the strings are variants according to the applicant's IDN table. This analysis may include comparison of applicant IDN tables with other existing tables for the same language or script, and forwarding any questions to the applicant.

and no further reviews will be available. Where an application does not pass the String Similarity review, the applicant will be notified as soon as the review is completed.

An application for a string that is found too similar to another applied-for gTLD string will be placed in a contention set.

An application that passes the String Similarity review is still subject to objection by an existing TLD operator or by another gTLD applicant in the current application round. That process requires that a string confusion objection be filed by an objector having the standing to make such an objection. Such category of objection is not limited to visual similarity. Rather, confusion based on any type of similarity (including visual, aural, or similarity of meaning) may be claimed by an objector. Refer to Module 3, Dispute Resolution Procedures, for more information about the objection process.

An applicant may file a formal objection against another gTLD application on string confusion grounds. Such an objection may, if successful, change the configuration of the preliminary contention sets in that the two applied-for gTLD strings will be considered in direct contention with one another (see Module 4, String Contention Procedures). The objection process will not result in removal of an application from a contention set.

**2.2.1.2 Reserved Names**

All applied-for gTLD strings are compared with the list of top-level Reserved Names to ensure that the applied-for gTLD string does not appear on that list.

**Top-Level Reserved Names List**

<i>AFRINIC</i>	<i>IANA-SERVERS</i>	<i>NRO</i>
<i>ALAC</i>	<i>ICANN</i>	<i>RFC-EDITOR</i>
<i>APNIC</i>	<i>IESG</i>	<i>RIPE</i>
<i>ARIN</i>	<i>IETF</i>	<i>ROOT-SERVERS</i>
<i>ASO</i>	<i>INTERNIC</i>	<i>RSSAC</i>
<i>CCNSO</i>	<i>INVALID</i>	<i>SSAC</i>
<i>EXAMPLE*</i>	<i>IRTF</i>	<i>TEST*</i>
<i>GAC</i>	<i>ISTF</i>	<i>TLD</i>
<i>GNSO</i>	<i>LACNIC</i>	<i>WHOIS</i>
<i>GTLD-SERVERS</i>	<i>LOCAL</i>	<i>WWW</i>
<i>IAB</i>	<i>LOCALHOST</i>	
<i>IANA</i>	<i>NIC</i>	

\*Note that in addition to the above strings, ICANN will reserve translations of the terms "test" and "example" in multiple languages. The remainder of the strings are reserved only in the form included above.

If an applicant enters a Reserved Name as its applied-for gTLD string, the application system will recognize the Reserved Name and will not allow the application to be submitted.

In addition, applied-for gTLD strings are reviewed during the String Similarity review to determine whether they are similar to a Reserved Name. An application for a gTLD string that is identified as too similar to a Reserved Name will not pass this review.

Names appearing on the Declared Variants List (see section 1.3.3) will be posted on ICANN's website and will be treated essentially the same as Reserved Names, until such time as variant management solutions are developed and variant TLDs are delegated. That is, an application for a gTLD string that is identical or similar to a string on the Declared Variants List will not pass this review.

### *2.2.1.3 DNS Stability Review*

This review determines whether an applied-for gTLD string might cause instability to the DNS. In all cases, this will involve a review for conformance with technical and other requirements for gTLD strings (labels). In some exceptional cases, an extended review may be necessary to investigate possible technical stability problems with the applied-for gTLD string.

Note: All applicants should recognize issues surrounding invalid TLD queries at the root level of the DNS.

Any new TLD registry operator may experience unanticipated queries, and some TLDs may experience a non-trivial load of unanticipated queries. For more information, see the Security and Stability Advisory Committee (SSAC)'s report on this topic at <http://www.icann.org/en/committees/security/sac045.pdf>. Some publicly available statistics are also available at <http://stats.l.root-servers.org/>.

ICANN will take steps to alert applicants of the issues raised in SAC045, and encourage the applicant to prepare to minimize the possibility of operational difficulties that would pose a stability or availability problem for its registrants and users. However, this notice is merely an advisory to applicants and is not part of the evaluation, unless the

[string raises significant security or stability issues as described in the following section.](#)

#### 2.2.1.3.1 *DNS Stability: String Review Procedure*

New gTLD labels must not adversely affect the security or stability of the DNS. During the Initial Evaluation period, ICANN will conduct a preliminary review on the set of applied-for gTLD strings to:

- ensure that applied-for gTLD strings comply with the requirements provided in section 2.2.1.3.2, and
- determine whether any strings raise significant security or stability issues that may require further review.

There is a very low probability that extended analysis will be necessary for a string that fully complies with the string requirements in subsection 2.2.1.3.2 of this module. However, the string review process provides an additional safeguard if unanticipated security or stability issues arise concerning an applied-for gTLD string.

In such a case, the DNS Stability Panel will perform an extended review of the applied-for gTLD string during the Initial Evaluation period. The panel will determine whether the string fails to comply with relevant standards or creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, and will report on its findings.

If the panel determines that the string complies with relevant standards and does not create the conditions described above, the application will pass the DNS Stability review.

If the panel determines that the string does not comply with relevant technical standards, or that it creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, the application will not pass the Initial Evaluation, and no further reviews are available. In the case where a string is determined likely to cause security or stability problems in the DNS, the applicant will be notified as soon as the DNS Stability review is completed.

#### 2.2.1.3.2 *String Requirements*<sup>4</sup>

---

<sup>4</sup>The string requirements have been revised according to revisions of RFC 1123 in progress in the IETF. See <http://tools.ietf.org/html/draft-lian-ld-names-04>.

ICANN will review each applied-for gTLD string to ensure that it complies with the requirements outlined in the following paragraphs.

If an applied-for gTLD string is found to violate any of these rules, the application will not pass the DNS Stability review. No further reviews are available.

**Part I -- Technical Requirements for all Labels (Strings)** – The technical requirements for top-level domain labels follow.

- 1.1 The ASCII label (i.e., the label as transmitted on the wire) must be valid as specified in technical standards *Domain Names: Implementation and Specification* (RFC 1035), and *Clarifications to the DNS Specification* (RFC 2181) and any updates thereto. This includes the following:
  - 1.1.1 The label must have no more than 63 characters.
  - 1.1.2 Upper and lower case characters are treated as identical.
- 1.2 The ASCII label must be a valid host name, as specified in the technical standards *DOD Internet Host Table Specification* (RFC 952), *Requirements for Internet Hosts — Application and Support* (RFC 1123), and *Application Techniques for Checking and Transformation of Names* (RFC 3696), *Internationalized Domain Names in Applications (IDNA)* (RFCs 5890-5894), and any updates thereto. This includes the following:
  - 1.2.1 The ASCII label must consist entirely of letters (alphabetic characters a-z), or
  - 1.2.2 The label must be a valid IDNA A-label (further restricted as described in Part II below).

**Part II -- Requirements for Internationalized Domain Names** – These requirements apply only to prospective top-level domains that contain non-ASCII characters. Applicants for these internationalized top-level domain labels are expected to be familiar with the IETF IDNA standards, Unicode standards, and the terminology associated with Internationalized Domain Names.

- 2.1 The label must be an A-label as defined in IDNA, converted from (and convertible to) a U-label that is consistent with the definition in IDNA, and further

restricted by the following, non-exhaustive, list of limitations:

- 2.1.1 Must be a valid A-label according to IDNA.
  - 2.1.2 The derived property value of all codepoints used in the U-label, as defined by IDNA, must be PVALID or CONTEXT (and be accompanied by unambiguous contextual rules) where necessary.<sup>5</sup>
  - 2.1.3 The general category of all codepoints, as defined by IDNA, must be one of (Ll, Ll, Ll, Mn).
  - 2.1.4 The U-label must be fully compliant with Normalization Form C, as described in *Unicode Standard Annex #15: Unicode Normalization Forms*. See also examples in <http://unicode.org/faq/normalization.html>.
  - 2.1.5 The U-label must consist entirely of characters with the same directional property, or fulfill the requirements of the Bidi rule per RFC 5893.
- 2.2 The label must meet the relevant criteria of the ICANN *Guidelines for the Implementation of Internationalised Domain Names*. See <http://www.icann.org/en/topics/idn/implementation-guidelines.htm>. This includes the following, non-exhaustive, list of limitations:
- 2.2.1 All code points in a single label must be taken from the same script as determined by the Unicode Standard Annex #24: Unicode Script Property.
  - 2.2.2 Exceptions to 2.2.1 are permissible for languages with established orthographies and conventions that require the commingled use of multiple scripts. However, even with this exception, visually confusable characters from different scripts

<sup>5</sup> It is expected that conversion tools for IDNA ~~2008~~ will be available before the Application Submission period begins, and that labels will be checked for validity under IDNA ~~2008~~. In this case, labels valid under the previous version of the protocol (IDNA2003) but not under IDNA ~~2008~~ will not meet this element of the requirements. Labels that are valid under both versions of the protocol will meet this element of the requirements. Labels valid under IDNA ~~2008~~ but not under IDNA2003 may meet the requirements; however, applicants are strongly advised to note that the duration of the transition period between the two protocols cannot presently be estimated nor guaranteed in any specific timeframe. The development of support for IDNA ~~2008~~ in the broader software applications environment will occur gradually. During that time, TLD labels that are valid under IDNA ~~2008~~, but not under IDNA2003, will have limited functionality.

will not be allowed to co-exist in a single set of permissible code points unless a corresponding policy and character table are clearly defined.

**Part III - Policy Requirements for Generic Top-Level**

**Domains** – These requirements apply to all prospective top-level domain strings applied for as gTLDs.

- 3.1 Applied-for gTLD strings in ASCII must be composed of three or more visually distinct characters. Two-character ASCII strings are not permitted, to avoid conflicting with current and future country codes based on the ISO 3166-1 standard.
- 3.2 Applied-for gTLD strings in IDN scripts must be composed of two or more visually distinct characters in the script, as appropriate.<sup>6</sup> Note, however, that a two-character IDN string will not be approved if:
  - 3.2.1 It is visually similar to any one-character label (in any script); or
  - 3.2.2 It is visually similar to any possible two-character ASCII combination.

See the String Similarity review in subsection 2.2.1.1 for additional information on this requirement.

**2.2.1.4 Geographic Names Review**

Applications for gTLD strings must ensure that appropriate consideration is given to the interests of governments or public authorities in geographic names. The requirements and procedure ICANN will follow in the evaluation process are described in the following paragraphs. Applicants should review these requirements even if they do not believe their intended gTLD string is a geographic name. All applied-for gTLD strings will be reviewed according to the requirements in this section, regardless of whether the application indicates it is for a geographic name.

**2.2.1.4.1 Treatment of Country or Territory Names<sup>7</sup>**

<sup>6</sup> Note that the Joint ccNSO-GNSO IDN Working Group (JIG) has made recommendations that this section be revised to allow for single-character IDN gTLD labels. See the JIG Final Report at <http://ccnso.icann.org/node/15245>. Implementation models for these recommendations are being developed for community discussion.

<sup>7</sup> Country and territory names are excluded from the process based on advice from the Governmental Advisory Committee in recent communiqués providing interpretation of Principle 2.2 of the GAC Principles regarding New gTLDs to indicate that strings which

Applications for strings that are country or territory names will not be approved, as they are not available under the New gTLD Program in this application round. A string shall be considered to be a country or territory name if:

- i. it is an alpha-3 code listed in the ISO 3166-1 standard.
- ii. it is a long-form name listed in the ISO 3166-1 standard, or a translation of the long-form name in any language.
- iii. it is a short-form name listed in the ISO 3166-1 standard, or a translation of the short-form name in any language.
- iv. it is the short- or long-form name association with a code that has been designated as “exceptionally reserved” by the ISO 3166 Maintenance Agency.
- v. it is a separable component of a country name designated on the “Separable Country Names List,” or is a translation of a name appearing on the list, in any language. See the Annex at the end of this module.
- vi. it is a permutation or transposition of any of the names included in items (i) through (v). Permutations include removal of spaces, insertion of punctuation, and addition or removal of grammatical articles like “the.” A transposition is considered a change in the sequence of the long or short-form name, for example, “RepublicCzech” or “IslandsCayman.”

vi.vii. it is a name by which a country is commonly known, as demonstrated by evidence that the country is recognized by that name by an intergovernmental or treaty organization.

#### 2.2.1.4.2 *Geographic Names Requiring Government Support*

The following types of applied-for strings are considered geographic names and must be accompanied by

---

are a meaningful representation or abbreviation of a country or territory name should be handled through the forthcoming ccPDP, and other geographic strings could be allowed in the gTLD space if in agreement with the relevant government or public authority.

documentation of support or non-objection from the relevant governments or public authorities:

1. An application for any string that is a representation, in any language, of the capital city name of any country or territory listed in the ISO 3166-1 standard.

~~In this case, it is anticipated that the relevant government or public authority would be at the national level.~~

2. An application for a city name, where the applicant declares that it intends to use the gTLD for purposes associated with the city name.

City names present challenges because city names may also be generic terms or brand names, and in many cases no city name is unique. Unlike other types of geographic names, there are no established lists that can be used as objective references in the evaluation process. Thus, city names are not universally protected. However, the process does provide a means for cities and applicants to work together where desired.

An application for a city name will be subject to the geographic names requirements (i.e., will require documentation of support or non-objection from the relevant governments or public authorities) if:

- (a) It is clear from applicant statements within the application that the applicant will use the TLD primarily for purposes associated with the city name; and
- (b) The applied-for string is a city name as listed on official city documents.<sup>8</sup>

~~In the case of an application that meets conditions (a) and (b), documentation of support will be required only from the relevant government or public authority of the city named in the application.~~

---

<sup>8</sup> City governments with concerns about strings that are duplicates, nicknames or close renderings of a city name should not rely on the evaluation process as the primary means of protecting their interests in a string. Rather, a government may elect to file a formal objection to an application that is opposed by the relevant community, or may submit its own application for the string.

3. An application for any string that is an exact match of a *sub-national place name*, such as a county, province, or state, listed in the ISO 3166-2 standard.

~~In this case, it is anticipated that the relevant government or public authority would be at the sub-national level, such as a state, provincial or local government or authority.~~

4. An application for a string listed as a UNESCO region<sup>9</sup> or appearing on the "Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings" list.<sup>10</sup>

In the case of an application for a string appearing on either of the lists above, documentation of support will be required from at least 60% of the respective national governments in the region, and there may be no more than one written statement of objection to the application from relevant governments in the region and/or public authorities associated with the continent or the region.

Where the 60% rule is applied, and there are common regions on both lists, the regional composition contained in the "Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings" takes precedence.

An applied-for gTLD string that falls into any of 1 through 4 listed above is considered to represent a geographic name. In the event of any doubt, it is in the applicant's interest to consult with relevant governments and public authorities and enlist their support or non-objection prior to submission of the application, in order to preclude possible objections and pre-address any ambiguities concerning the string and applicable requirements.

Strings that include but do not match a geographic name (as defined in this section) will not be considered geographic names as defined by section 2.2.1.4.2, and therefore will not require documentation of government support in the evaluation process.

In the event that there is more than one relevant government or public authority for the applied-for gTLD

<sup>9</sup> See <http://www.unesco.org/new/en/unesco/worldwide/>.

<sup>10</sup> See <http://unstats.un.org/unsd/methods/m49/m49regin.htm>.

string, the applicant must provide documentation of support or non-objection from all the relevant governments or public authorities. It is anticipated that this may apply to the case of a sub-national place name.

It is the applicant's responsibility to:

- identify whether its applied-for gTLD string falls into any of the above categories; and
- determine the relevant governments or public authorities; and
- identify which level of government support is required.

Note: it is a matter of national sovereignty to decide which level of government or which administration is responsible for the filing of letters of support or non-objection. Applicants should consult within the relevant jurisdiction to determine the appropriate level of support.

The requirement to include documentation of support for certain applications does not preclude or exempt applications from being the subject of objections on community grounds (refer to subsection 3.1.1 of Module 3), under which applications may be rejected based on objections showing substantial opposition from the targeted community.

#### **2.2.1.4.3 Documentation Requirements**

The documentation of support or non-objection should include a signed letter from the relevant government or public authority. Understanding that this will differ across the respective jurisdictions, the letter could be signed by the minister with the portfolio responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister or President of the relevant jurisdiction; or a senior representative of the agency or department responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister. To assist the applicant in determining who the relevant government or public authority may be for a potential geographic name, the applicant may wish to consult with the relevant Governmental Advisory Committee (GAC) representative.<sup>11</sup>

The letter must clearly express the government's or public authority's support for or non-objection to the applicant's

---

<sup>11</sup> See <http://gac.icann.org/gac-members>

application and demonstrate the government's or public authority's understanding of the string being requested and its intended use.

The letter should also demonstrate the government's or public authority's understanding that the string is being sought through the gTLD application process and that the applicant is willing to accept the conditions under which the string will be available, i.e., entry into a registry agreement with ICANN requiring compliance with consensus policies and payment of fees. (See Module 5 for a discussion of the obligations of a gTLD registry operator.)

A sample letter of support is available as an attachment to this module.

It is important to note that a government or public authority is under no obligation to provide documentation of support or non-objection in response to a request by an applicant.<sup>12</sup>

It is also possible that a government may withdraw its support for an application at a later time, including after the new gTLD has been delegated, if registry operator has deviated from the conditions of original support or non-objection. Applicants should be aware that ICANN has committed to governments that, in the event of a dispute between a government (or public authority) and a registry operator that submitted documentation of support from that government or public authority, ICANN will comply with a legally binding order from a court in the jurisdiction of the government or public authority that has given support to an application.

#### *2.2.1.4.4 Review Procedure for Geographic Names*

A Geographic Names Panel (GNP) will determine whether each applied-for gTLD string represents a geographic name, and verify the relevance and authenticity of the supporting documentation where necessary.

The GNP will review all applications received, not only those where the applicant has noted its applied-for gTLD string as a geographic name. For any application where the GNP determines that the applied-for gTLD string is a country or territory name (as defined in this module), the

<sup>12</sup> It is also possible that a government may withdraw its support for an application at a later time, including after the new gTLD has been delegated, if registry operator has deviated from the conditions of original support or non-objection.

application will not pass the Geographic Names review and will be denied. No additional reviews will be available.

For any application where the GNP determines that the applied-for gTLD string is not a geographic name requiring government support (as described in this module), the application will pass the Geographic Names review with no additional steps required.

For any application where the GNP determines that the applied-for gTLD string is a geographic name requiring government support, the GNP will confirm that the applicant has provided the required documentation from the relevant governments or public authorities, and that the communication from the government or public authority is legitimate and contains the required content. ICANN may confirm the authenticity of the communication by consulting with the relevant diplomatic authorities or members of ICANN's Governmental Advisory Committee for the government or public authority concerned on the competent authority and appropriate point of contact within their administration for communications.

The GNP may communicate with the signing entity of the letter to confirm their intent and their understanding of the terms on which the support for an application is given.

In cases where an applicant has not provided the required documentation, the applicant will be contacted and notified of the requirement, and given a limited time frame to provide the documentation. If the applicant is able to provide the documentation before the close of the Initial Evaluation period, and the documentation is found to meet the requirements, the applicant will pass the Geographic Names review. If not, the applicant will have additional time to obtain the required documentation; however, if the applicant has not produced the required documentation by the required date (at least 90 days from the date of notice), the application will be considered incomplete and will be ineligible for further review. The applicant may reapply in subsequent application rounds, if desired, subject to the fees and requirements of the specific application rounds.

If there is more than one application for a string representing a certain geographic name as described in this section, and the applications have requisite government approvals, the applications will be suspended pending resolution by the applicants. However, in the event that a contention set is composed of multiple applications with documentation of support from the same

government or public authority, the applications will proceed through the contention resolution procedures described in Module 4 when requested by the government or public authority providing the documentation.

If an application for a string representing a geographic name is in a contention set with applications for similar strings that have not been identified as geographical names, the string contention will be ~~resolved~~settled using the string contention procedures described in Module 4.

## 2.2.2 *Applicant Reviews*

---

Concurrent with the applied-for gTLD string reviews described in subsection 2.2.1, ICANN will review the applicant's technical and operational capability, its financial capability, and its proposed registry services. Those reviews are described in greater detail in the following subsections.

### 2.2.2.1 *Technical/Operational Review*

In its application, the applicant will respond to a set of questions (see questions 24 – 44 in the Application Form) intended to gather information about the applicant's technical capabilities and its plans for operation of the proposed gTLD.

Applicants are not required to have deployed an actual gTLD registry to pass the Technical/Operational review. It will be necessary, however, for an applicant to demonstrate a clear understanding and accomplishment of some groundwork toward the key technical and operational aspects of a gTLD registry operation. Subsequently, each applicant that passes the technical evaluation and all other steps will be required to complete a pre-delegation technical test prior to delegation of the new gTLD. Refer to Module 5, Transition to Delegation, for additional information.

### 2.2.2.2 *Financial Review*

In its application, the applicant will respond to a set of questions (see questions 45-50 in the Application Form) intended to gather information about the applicant's financial capabilities for operation of a gTLD registry and its financial planning in preparation for long-term stability of the new gTLD.

Because different registry types and purposes may justify different responses to individual questions, evaluators will pay particular attention to the consistency of an

application across all criteria. For example, an applicant's scaling plans identifying system hardware to ensure its capacity to operate at a particular volume level should be consistent with its financial plans to secure the necessary equipment. That is, the evaluation criteria scale with the applicant plans to provide flexibility.

### 2.2.2.3 *Evaluation Methodology*

Dedicated technical and financial evaluation panels will conduct the technical/operational and financial reviews, according to the established criteria and scoring methodology included as an attachment to this module. These reviews are conducted on the basis of the information each applicant makes available to ICANN in its response to the questions in the Application Form.

The evaluators may request clarification or additional information during the Initial Evaluation period. For each application, clarifying questions will be consolidated and sent to the applicant from each of the panels. The applicant will thus have an opportunity to clarify or supplement the application in those areas where a request is made by the evaluators. These communications will occur via the online application system ([TAS](#)), rather than by phone, letter, email, or other means. Unless otherwise noted, such communications will include a 3-week deadline for the applicant to respond. Any supplemental information provided by the applicant will become part of the application.

It is the applicant's responsibility to ensure that the questions have been fully answered and the required documentation is attached. Evaluators are entitled, but not obliged, to request further information or evidence from an applicant, and are not obliged to take into account any information or evidence that is not made available in the application and submitted by the due date, unless explicitly requested by the evaluators.

### 2.2.3 *Registry Services Review*

---

Concurrent with the other reviews that occur during the Initial Evaluation period, ICANN will review the applicant's proposed registry services for any possible adverse impact on security or stability. The applicant will be required to provide a list of proposed registry services in its application.

#### 2.2.3.1 *Definitions*

**Registry services** are defined as:

1. operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry zone servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by the registry agreement;
2. other products or services that the registry operator is required to provide because of the establishment of a consensus policy; and
3. any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator.

Proposed registry services will be examined to determine if they might raise significant stability or security issues. Examples of services proposed by existing registries can be found at <http://www.icann.org/en/registries/rsep/>. In most cases, these proposed services successfully pass this inquiry.

Registry services currently provided by gTLD registries can be found in registry agreement appendices. See <http://www.icann.org/en/registries/agreements.htm>.

A full definition of registry services can be found at <http://www.icann.org/en/registries/rsep/rsep.html>.

For purposes of this review, security and stability are defined as follows:

**Security** – an effect on security by the proposed registry service means (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

**Stability** – an effect on stability means that the proposed registry service (1) does not comply with applicable relevant standards that are authoritative and published by a well-established, recognized, and authoritative standards body, such as relevant standards-track or best current practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and

authoritative standards body, such as relevant standards-track or best current practice RFCs and relying on registry operator's delegation information or provisioning services.

### 2.2.3.2 *Customary Services*

The following registry services are customary services offered by a registry operator:

- Receipt of data from registrars concerning registration of domain names and name servers
- Dissemination of TLD zone files
- Dissemination of contact or other information concerning domain name registrations
- DNS Security Extensions

The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.

Any additional registry services that are unique to the proposed gTLD registry should be described in detail. Directions for describing the registry services are provided at [http://www.icann.org/en/registries/rsep/rrs\\_sample.html](http://www.icann.org/en/registries/rsep/rrs_sample.html).

### 2.2.3.3 *TLD Zone Contents*

ICANN receives a number of inquiries about use of various record types in a registry zone, as entities contemplate different business and technical models. Permissible zone contents for a TLD zone are:

- Apex SOA record.
- Apex NS records and in-bailiwick glue for the TLD's DNS servers.
- NS records and in-bailiwick glue for DNS servers of registered names in the TLD.
- DS records for registered names in the TLD.
- Records associated with signing the TLD zone (i.e., RRSIG, DNSKEY, NSEC, and NSEC3).

An applicant wishing to place any other record types into its TLD zone should describe in detail its proposal in the registry services section of the application. This will be evaluated and could result in an extended evaluation to determine whether the service would create a risk of a meaningful adverse impact on security or stability of the DNS. Applicants should be aware that a service based on

use of less-common DNS resource records in the TLD zone, even if approved in the registry services review, might not work as intended for all users due to lack of application support.

#### **2.2.3.4 Methodology**

Review of the applicant's proposed registry services will include a preliminary determination of whether any of the proposed registry services could raise significant security or stability issues and require additional consideration.

If the preliminary determination reveals that there may be significant security or stability issues (as defined in subsection 2.2.3.1) surrounding a proposed service, the application will be flagged for an extended review by the Registry Services Technical Evaluation Panel (RSTEP), see <http://www.icann.org/en/registries/rsep/rstep.html>. This review, if applicable, will occur during the Extended Evaluation period (refer to Section 2.3).

In the event that an application is flagged for extended review of one or more registry services, an additional fee to cover the cost of the extended review will be due from the applicant. Applicants will be advised of any additional fees due, which must be received before the additional review begins.

#### **2.2.4 Applicant's Withdrawal of an Application**

---

An applicant who does not pass the Initial Evaluation may withdraw its application at this stage and request a partial refund (refer to subsection 1.5 of Module 1).

### **2.3 Extended Evaluation**

---

An applicant may request an Extended Evaluation if the application has failed to pass the Initial Evaluation elements concerning:

- Geographic names (refer to subsection 2.2.1.4). – There is no additional fee for an extended evaluation in this instance.
- Demonstration of technical and operational capability (refer to subsection 2.2.2.1). There is no additional fee for an extended evaluation in this instance.
- Demonstration of financial capability (refer to subsection 2.2.2.2). There is no additional fee for an extended evaluation in this instance.

- Registry services (refer to subsection 2.2.3). Note that this investigation incurs an additional fee (the Registry Services Review Fee) if the applicant wishes to proceed. See Section 1.5 of Module 1 for fee and payment information.

An Extended Evaluation does not imply any change of the evaluation criteria. The same criteria used in the Initial Evaluation will be used to review the application in light of clarifications provided by the applicant.

From the time an applicant receives notice of failure to pass the Initial Evaluation, eligible applicants will have 15 calendar days to submit to ICANN the Notice of Request for Extended Evaluation. If the applicant does not explicitly request the Extended Evaluation (and pay an additional fee in the case of a Registry Services inquiry) the application will not proceed.

### *2.3.1 Geographic Names Extended Evaluation*

---

In the case of an application that has been identified as a geographic name requiring government support, but where the applicant has not provided [sufficient](#) evidence of support or non-objection from all relevant governments or public authorities by the end of the Initial Evaluation period, the applicant has additional time in the Extended Evaluation period to obtain and submit this documentation.

If the applicant submits the documentation to the Geographic Names Panel by the required date, the GNP will perform its review of the documentation as detailed in section 2.2.1.4. If the applicant has not provided the documentation by the required date (at least 90 days from the date of the notice), the application will not pass the Extended Evaluation, and no further reviews are available.

### *2.3.2 Technical/Operational or Financial Extended Evaluation*

---

The following applies to an Extended Evaluation of an applicant's technical and operational capability or financial capability, as described in subsection 2.2.2.

An applicant who has requested Extended Evaluation will again access the online application system ([TAS](#)) and clarify its answers to those questions or sections on which it received a non-passing score. The answers should be responsive to the evaluator report that indicates the reasons for failure. Applicants may not use the Extended Evaluation period to substitute portions of new information

for the information submitted in their original applications, i.e., to materially change the application.

An applicant participating in an Extended Evaluation on the Technical / Operational or Financial reviews will have the option to have its application reviewed by the same evaluation panelists who performed the review during the Initial Evaluation period, or to have a different set of panelists perform the review during Extended Evaluation.

The Extended Evaluation allows an additional exchange of information between the evaluators and the applicant to further clarify information contained in the application. This supplemental information will become part of the application record. Such communications will include a deadline for the applicant to respond.

ICANN will notify applicants at the end of the Extended Evaluation period as to whether they have passed. If an application passes Extended Evaluation, it continues to the next stage in the process. If an application does not pass Extended Evaluation, it will proceed no further. No further reviews are available.

### ***2.3.3 Registry Services Extended Evaluation***

---

This section applies to Extended Evaluation of registry services, as described in subsection 2.2.3.

If a proposed registry service has been referred to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review, the RSTEP will form a review team of members with the appropriate qualifications.

The review team will generally consist of three members, depending on the complexity of the registry service proposed. In a 3-member panel, the review could be conducted within 30 to 45 days. In cases where a 5-member panel is needed, this will be identified before the extended evaluation starts. In a 5-member panel, the review could be conducted in 45 days or fewer.

The cost of an RSTEP review will be covered by the applicant through payment of the Registry Services Review Fee. Refer to payment procedures in section 1.5 of Module 1. The RSTEP review will not commence until payment has been received.

If the RSTEP finds that one or more of the applicant's proposed registry services may be introduced without risk of a meaningful adverse effect on security or stability, these services will be included in the applicant's [registry](#).

~~agreement~~~~contract~~ with ICANN. If the RSTEP finds that the proposed service would create a risk of a meaningful adverse effect on security or stability, the applicant may elect to proceed with its application without the proposed service, or withdraw its application for the gTLD. In this instance, an applicant has 15 calendar days to notify ICANN of its intent to proceed with the application. If an applicant does not explicitly provide such notice within this time frame, the application will proceed no further.

## 2.4 *Parties Involved in Evaluation*

---

A number of independent experts and groups play a part in performing the various reviews in the evaluation process. A brief description of the various panels, their evaluation roles, and the circumstances under which they work is included in this section.

### 2.4.1 *Panels and Roles*

---

The **String Similarity Panel** will assess whether a proposed gTLD string creates a probability of user confusion due to similarity with any reserved name, any existing TLD, any requested IDN ccTLD, or any new gTLD string applied for in the current application round. This occurs during the String Similarity review in Initial Evaluation. The panel may also review IDN tables submitted by applicants as part of its work.

The **DNS Stability Panel** will review each applied-for string to determine whether the proposed string might adversely affect the security or stability of the DNS. This occurs during the DNS Stability String review in Initial Evaluation.

The **Geographic Names Panel** will review each application to determine whether the applied-for gTLD represents a geographic name, as defined in this guidebook. In the event that the string ~~is~~~~represents~~ a geographic name ~~and~~ requires government support, the panel will ensure that the required documentation is provided with the application and verify that the documentation is from the relevant governments or public authorities and is authentic.

The **Technical Evaluation Panel** will review the technical components of each application against the criteria in the Applicant Guidebook, along with proposed registry operations, in order to determine whether the applicant is technically and operationally capable of operating a gTLD registry as proposed in the application. This occurs during the Technical/Operational reviews in Initial Evaluation, and

may also occur in Extended Evaluation if elected by the applicant.

The **Financial Evaluation Panel** will review each application against the relevant business, financial and organizational criteria contained in the Applicant Guidebook, to determine whether the applicant is financially capable of maintaining a gTLD registry as proposed in the application. This occurs during the Financial review in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Registry Services Technical Evaluation Panel (RSTEP)** will review the proposed registry services in the application to determine if any registry services pose a risk of a meaningful adverse impact on security or stability. This occurs, if applicable, during the Extended Evaluation period.

Members of all panels are required to abide by the established Code of Conduct and Conflict of Interest guidelines included in this module.

#### **2.4.2 Panel Selection Process**

---

ICANN is in the process of selecting qualified third-party providers to perform the various reviews.<sup>13</sup> In addition to the specific subject matter expertise required for each panel, specified qualifications are required, including:

- The provider must be able to convene – or have the capacity to convene - globally diverse panels and be able to evaluate applications from all regions of the world, including applications for IDN gTLDs.
- The provider should be familiar with the IETF IDNA standards, Unicode standards, relevant RFCs and the terminology associated with IDNs.
- The provider must be able to scale quickly to meet the demands of the evaluation of an unknown number of applications. At present it is not known how many applications will be received, how complex they will be, and whether they will be predominantly for ASCII or non-ASCII gTLDs.

---

<sup>13</sup> See <http://icann.org/en/topics/new-gtlds/open-tenders-eoi-en.htm>.

- The provider must be able to evaluate the applications within the required timeframes of Initial and Extended Evaluation.

The providers will be formally engaged and announced on ICANN's website prior to the opening of the Application Submission period.

### ***2.4.3 Code of Conduct Guidelines for Panelists***

---

The purpose of the New gTLD Program ("Program") Code of Conduct ("Code") is to prevent real and apparent conflicts of interest and unethical behavior by any Evaluation Panelist ("Panelist").

Panelists shall conduct themselves as thoughtful, competent, well prepared, and impartial professionals throughout the application process. Panelists are expected to comply with equity and high ethical standards while assuring the Internet community, its constituents, and the public of objectivity, integrity, confidentiality, and credibility. Unethical actions, or even the appearance of compromise, are not acceptable. Panelists are expected to be guided by the following principles in carrying out their respective responsibilities. This Code is intended to summarize the principles and nothing in this Code should be considered as limiting duties, obligations or legal requirements with which Panelists must comply.

***Bias*** -- Panelists shall:

- not advance personal agendas or non-ICANN approved agendas in the evaluation of applications;
- examine facts as they exist and not be influenced by past reputation, media accounts, or unverified statements about the applications being evaluated;
- exclude themselves from participating in the evaluation of an application if, to their knowledge, there is some predisposing factor that could prejudice them with respect to such evaluation; and
- exclude themselves from evaluation activities if they are philosophically opposed to or are on record as having made generic criticism about a specific type of applicant or application.

**Compensation/Gifts** -- Panelists shall not request or accept any compensation whatsoever or any gifts of substance from the Applicant being reviewed or anyone affiliated with the Applicant. (Gifts of substance would include any gift greater than USD 25 in value).

If the giving of small tokens is important to the Applicant's culture, Panelists may accept these tokens; however, the total of such tokens must not exceed USD 25 in value. If in doubt, the Panelist should err on the side of caution by declining gifts of any kind.

**Conflicts of Interest** -- Panelists shall act in accordance with the "New gTLD Program Conflicts of Interest Guidelines" (see subsection 2.4.3.1).

**Confidentiality** -- Confidentiality is an integral part of the evaluation process. Panelists must have access to sensitive information in order to conduct evaluations. Panelists must maintain confidentiality of information entrusted to them by ICANN and the Applicant and any other confidential information provided to them from whatever source, except when disclosure is legally mandated or has been authorized by ICANN. "Confidential information" includes all elements of the Program and information gathered as part of the process – which includes but is not limited to: documents, interviews, discussions, interpretations, and analyses – related to the review of any new gTLD application.

**Affirmation** -- All Panelists shall read this Code prior to commencing evaluation services and shall certify in writing that they have done so and understand the Code.

#### **2.4.3.1 Conflict of Interest Guidelines for Panelists**

It is recognized that third-party providers may have a large number of employees in several countries serving numerous clients. In fact, it is possible that a number of Panelists may be very well known within the registry / registrar community and have provided professional services to a number of potential applicants.

To safeguard against the potential for inappropriate influence and ensure applications are evaluated in an objective and independent manner, ICANN has established detailed Conflict of Interest guidelines and procedures that will be followed by the Evaluation Panelists. To help ensure that the guidelines are appropriately followed ICANN will:

- Require each Evaluation Panelist (provider and individual) to acknowledge and document understanding of the Conflict of Interest guidelines.
- Require each Evaluation Panelist to disclose all business relationships engaged in at any time during the past six months.
- Where possible, identify and secure primary and backup providers for evaluation panels.
- In conjunction with the Evaluation Panelists, develop and implement a process to identify conflicts and re-assign applications as appropriate to secondary or contingent third party providers to perform the reviews.

**Compliance Period** -- All Evaluation Panelists must comply with the Conflict of Interest guidelines beginning with the opening date of the Application Submission period and ending with the public announcement by ICANN of the final outcomes of all the applications from the Applicant in question.

**Guidelines** -- The following guidelines are the minimum standards with which all Evaluation Panelists must comply. It is recognized that it is impossible to foresee and cover all circumstances in which a potential conflict of interest might arise. In these cases the Evaluation Panelist should evaluate whether the existing facts and circumstances would lead a reasonable person to conclude that there is an actual conflict of interest.

Evaluation Panelists and Immediate Family Members:

- Must not be under contract, have or be included in a current proposal to provide Professional Services for or on behalf of the Applicant during the Compliance Period.
- Must not currently hold or be committed to acquire any interest in a privately-held Applicant.
- Must not currently hold or be committed to acquire more than 1% of any publicly listed Applicant's outstanding equity securities or other ownership interests.

- Must not be involved or have an interest in a joint venture, partnership or other business arrangement with the Applicant.
- Must not have been named in a lawsuit with or against the Applicant.
- Must not be a:
  - Director, officer, or employee, or in any capacity equivalent to that of a member of management of the Applicant;
  - Promoter, underwriter, or voting trustee of the Applicant; or
  - Trustee for any pension or profit-sharing trust of the Applicant.

***Definitions--***

Evaluation Panelist: An Evaluation Panelist is any individual associated with the review of an application. This includes any primary, secondary, and contingent third party Panelists engaged by ICANN to review new gTLD applications.

Immediate Family Member: Immediate Family Member is a spouse, spousal equivalent, or dependent (whether or not related) of an Evaluation Panelist.

Professional Services: include, but are not limited to legal services, financial audit, financial planning / investment, outsourced services, consulting services such as business / management / internal audit, tax, information technology, registry / registrar services.

***2.4.3.2 Code of Conduct Violations***

Evaluation panelist breaches of the Code of Conduct, whether intentional or not, shall be reviewed by ICANN, which may make recommendations for corrective action, if deemed necessary. Serious breaches of the Code may be cause for dismissal of the person, persons or provider committing the infraction.

In a case where ICANN determines that a Panelist has failed to comply with the Code of Conduct, the results of that Panelist's review for all assigned applications will be discarded and the affected applications will undergo a review by new panelists.

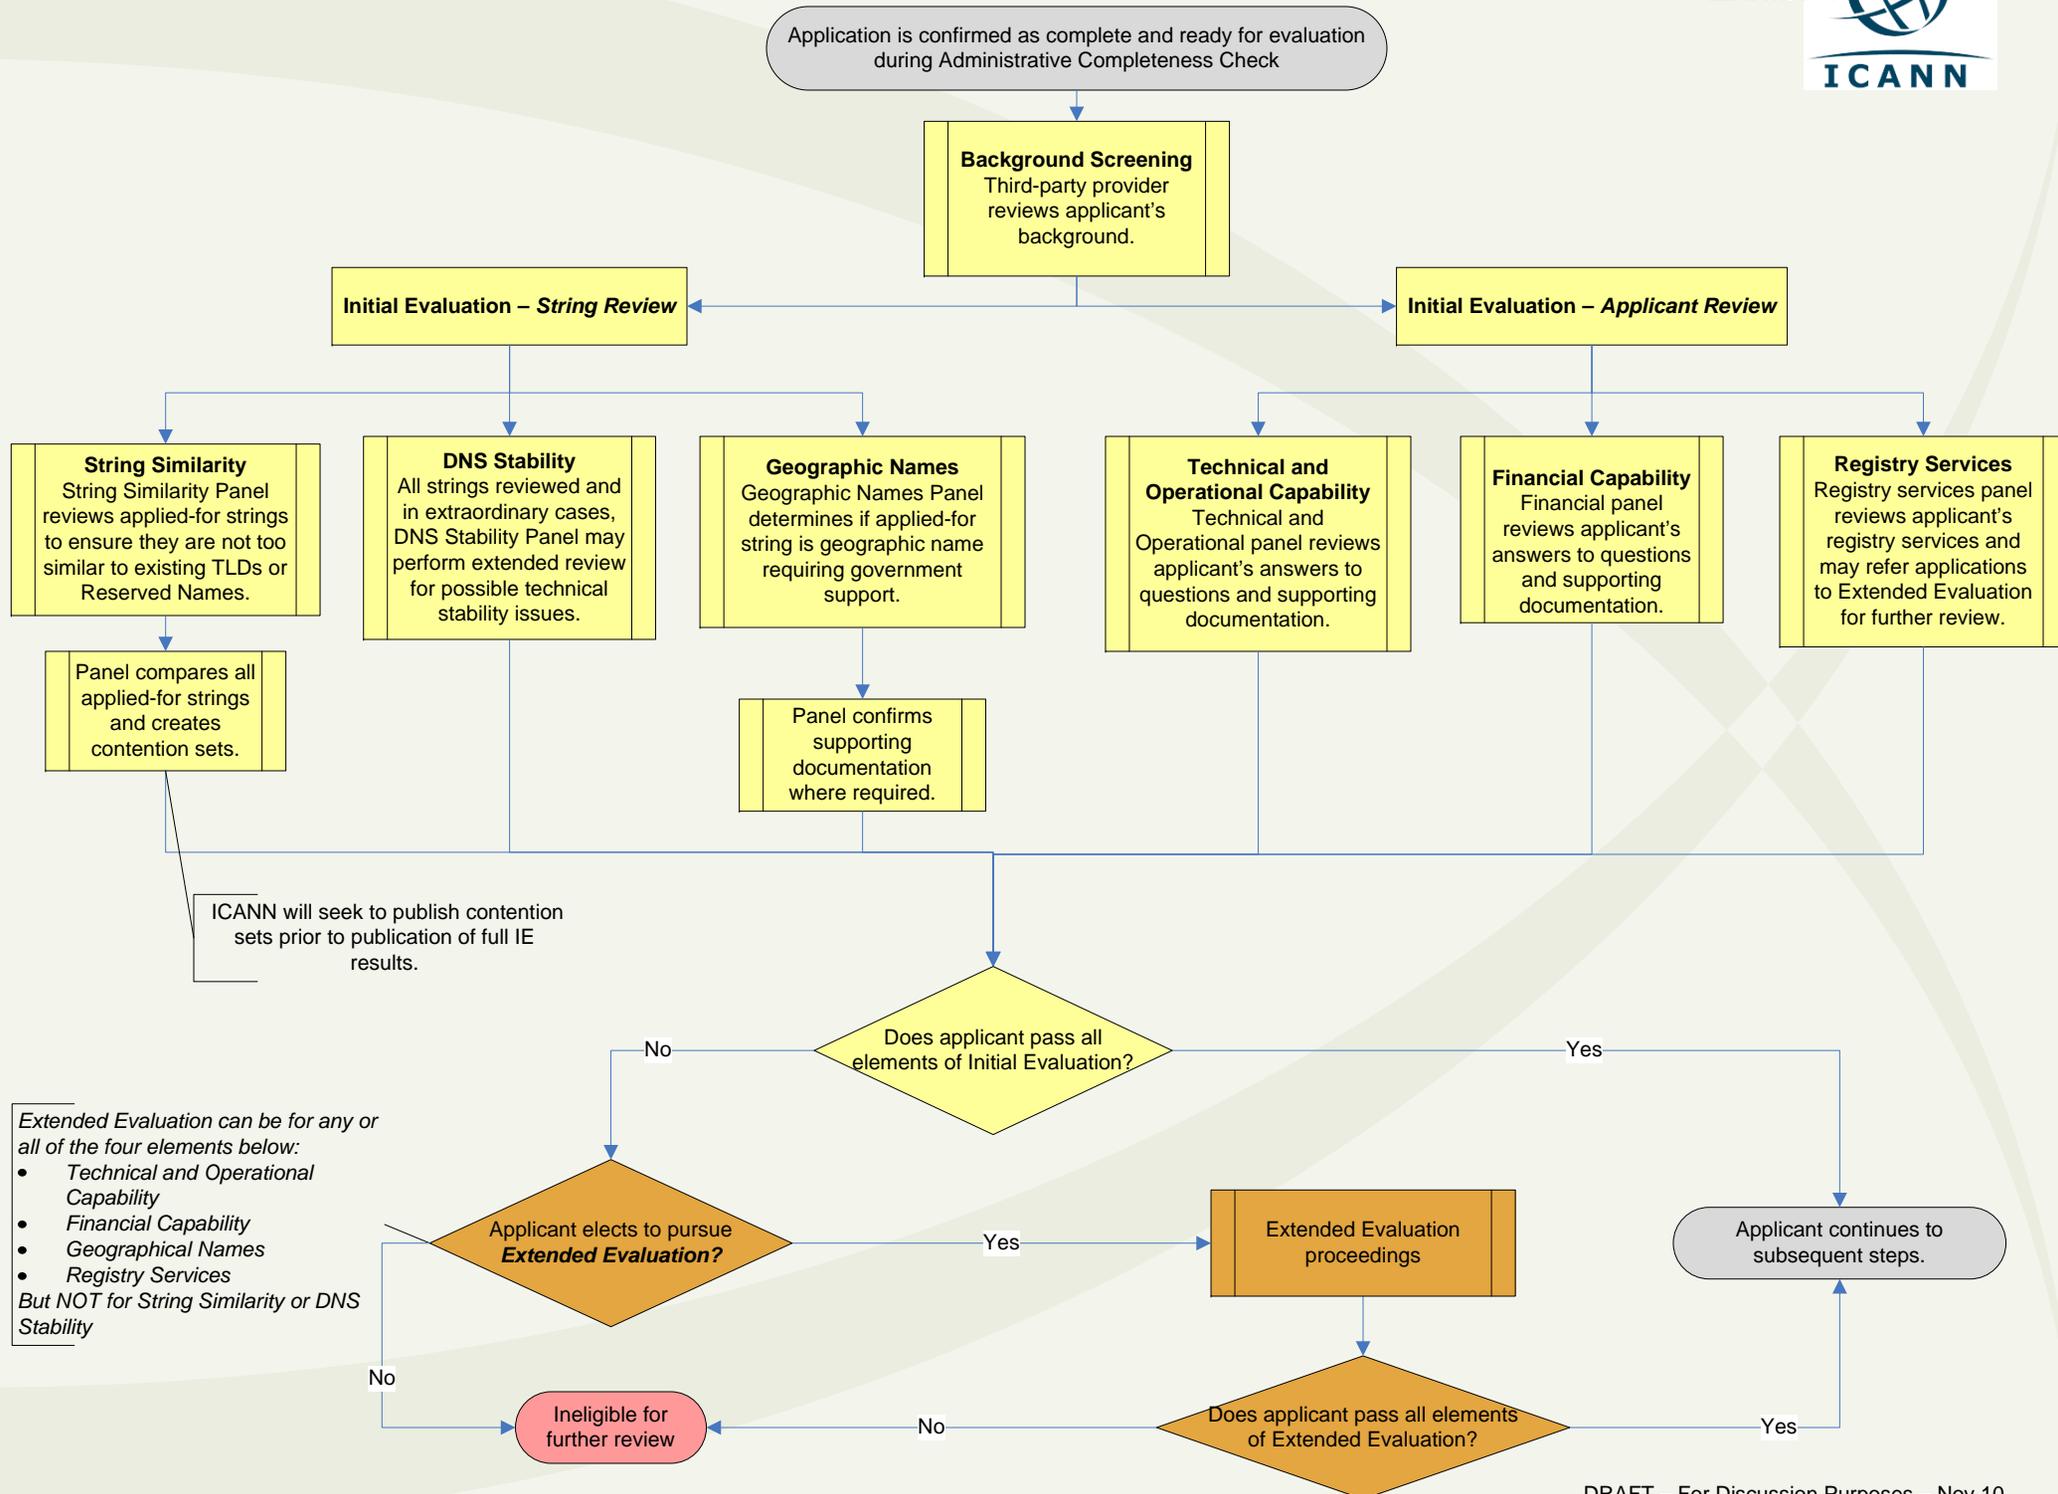

Complaints about violations of the Code of Conduct by a Panelist may be brought to the attention of ICANN via the public comment and applicant support mechanisms, throughout the evaluation period. Concerns of applicants regarding panels should be communicated via the defined support channels (see subsection 1.4.2). Concerns of the general public (i.e., non-applicants) can be raised via the public comment forum, as described in Module 1.

#### ***2.4.4 Communication Channels***

---

Defined channels for technical support or exchanges of information with ICANN and with evaluation panels are available to applicants during the Initial Evaluation and Extended Evaluation periods. Contacting individual ICANN staff members, Board members, or individuals engaged by ICANN to perform an evaluation role in order to lobby for a particular outcome or to obtain confidential information about applications under review is not appropriate. In the interests of fairness and equivalent treatment for all applicants, any such individual contacts will be referred to the appropriate communication channels.

# DRAFT - New gTLD Program – Initial Evaluation and Extended Evaluation

Extended Evaluation can be for any or all of the four elements below:

- Technical and Operational Capability
- Financial Capability
- Geographical Names
- Registry Services

But NOT for String Similarity or DNS Stability

## Annex: Separable Country Names List

Under various proposed ICANN policies, gTLD application restrictions on country or territory names are tied to listing in property fields of the ISO 3166-1 standard. Notionally, the ISO 3166-1 standard has an “English short name” field which is the common name for a country and can be used for such protections; however, in some cases this does not represent the common name. This registry seeks to add additional protected elements which are derived from definitions in the ISO 3166-1 standard. An explanation of the various classes is included below.

Separable Country Names List

Code	English Short Name	Cl.	Separable Name

A Separable Country Names Registry will be maintained and published by ICANN Staff.

Each time the ISO 3166-1 standard is updated with a new entry, this registry will be reappraised to identify if the changes to the standard warrant changes to the entries in this registry. Appraisal will be based on the criteria listing in the "Eligibility" section of this document.

Codes reserved by the ISO 3166 Maintenance Agency do not have any implication on this registry, only entries derived from normally assigned codes appearing in ISO 3166-1 are eligible.

If an ISO code is struck off the ISO 3166-1 standard, any entries in this registry deriving from that code must be struck.

### Eligibility

Each record in this registry is derived from the following possible properties:

- Class A:** The ISO 3166-1 English Short Name is comprised of multiple, separable parts whereby the country is comprised of distinct sub-entities. Each of these separable parts is eligible in its own right for consideration as a country name. For example, "Antigua and Barbuda" is comprised of "Antigua" and "Barbuda."
- Class B:** The ISO 3166-1 English Short Name (1) or the ISO 3166-1 English Full Name (2) contains additional language as to the type of country the entity is, which is often not used in common usage when referencing the country. For example, one such short name is "The Bolivarian Republic of Venezuela" for a country in common usage referred to as "Venezuela."
- \*\* Macedonia is a separable name in the context of this list; however, due to the ongoing dispute listed in UN documents between the Hellenic Republic (Greece) and the Former Yugoslav Republic of Macedonia over the name, no country will be afforded attribution or rights to the name "Macedonia" until the dispute over the name has been resolved. See <http://daccess-dds-ny.un.org/doc/UNDOC/GEN/N93/240/37/IMG/N9324037.pdf>.
- Class C:** The ISO 3166-1 Remarks column containing synonyms of the country name, or sub-national entities, as denoted by "often referred to as," "includes", "comprises", "variant" or "principal islands".

In the first two cases, the registry listing must be directly derivative from the English Short Name by excising words and articles. These registry listings do not include vernacular or other non-official terms used to denote the country.

Eligibility is calculated in class order. For example, if a term can be derived both from Class A and Class C, it is only listed as Class A.

## Sample Letter of Government Support

**[This letter should be provided on official letterhead]**

ICANN  
Suite 330, 4676 Admiralty Way  
Marina del Rey, CA 90292

Attention: New gTLD Evaluation Process

Subject: Letter for support for [TLD requested]

This letter is to confirm that [government entity] fully supports the application for [TLD] submitted to ICANN by [applicant] in the New gTLD Program. As the [Minister/Secretary/position] I confirm that I have the authority of the [x government/public authority] to be writing to you on this matter. [Explanation of government entity, relevant department, division, office, or agency, and what its functions and responsibilities are]

The gTLD will be used to [explain your understanding of how the name will be used by the applicant. This could include policies developed regarding who can register a name, pricing regime and management structures.] [Government/public authority/department] has worked closely with the applicant in the development of this proposal.

The [x government/public authority] supports this application, and in doing so, understands that in the event that the application is successful, [applicant] will be required to enter into a Registry Agreement with ICANN. In doing so, they will be required to pay fees to ICANN and comply with consensus policies developed through the ICANN multi-stakeholder policy processes.

[Government / public authority] further understands ~~that the Registry Agreement provides~~ that, in the event of a dispute between [government/public authority] and the applicant, ICANN ~~will~~may implement the order of any court sitting in such jurisdiction in favor of such governmental entity related to the TLD. comply with a legally binding order from a court in the jurisdiction of [government/public authority].

**[Optional]** This application is being submitted as a community-based application, and as such it is understood that the Registry Agreement will reflect the community restrictions proposed in the application. In the event that we believe the registry is not complying with these restrictions, possible avenues of recourse include the Registry Restrictions Dispute Resolution Procedure.

**[Optional]** I can advise that in the event that this application is successful [xx government/public authority] will enter into a separate agreement with the applicant. This agreement will outline the conditions under which we support them in the operation of the TLD, and circumstances

under which we would withdraw that support. ICANN will not be a party to this agreement, and enforcement of this agreement lies fully with [government/public authority].

[Government / public authority] understands that the Geographic Names Panel engaged by ICANN will, among other things, conduct due diligence on the authenticity of this documentation. I would request that if additional information is required during this process, that [name and contact details] be contacted in the first instance.

Thank you for the opportunity to support this application.

Yours sincerely

Signature from relevant government/public authority

## *Evaluation Questions and Criteria*

---

Since ICANN was founded 10 years ago as a not-for-profit, multi-stakeholder organization, one of its key mandates has been to promote competition in the domain name market. ICANN's mission specifically calls for the corporation to maintain and build on processes that will ensure competition and consumer interests – without compromising Internet security and stability. This includes the consideration and implementation of new gTLDs. It is ICANN's goal to make the criteria and evaluation as objective as possible.

While new gTLDs are viewed by ICANN as important to fostering choice, innovation and competition in domain registration services, the decision to launch these coming new gTLD application rounds followed a detailed and lengthy consultation process with all constituencies of the global Internet community.

Any public or private sector organization can apply to create and operate a new gTLD. However the process is not like simply registering or buying a second-level domain name. Instead, the application process is to evaluate and select candidates capable of running a registry, a business that manages top level domains such as, for example, .COM or .INFO. Any successful applicant will need to meet published operational and technical criteria in order to preserve Internet stability and interoperability.

### *I. Principles of the Technical and Financial New gTLD Evaluation Criteria*

- Principles of conservatism. This is the first round of what is to be an ongoing process for the introduction of new TLDs, including Internationalized Domain Names. Therefore, the criteria in this round require applicants to provide a thorough and thoughtful analysis of the technical requirements to operate a registry and the proposed business model.
- The criteria and evaluation should be as objective as possible.
  - With that goal in mind, an important objective of the new TLD process is to diversify the namespace, with different registry business models and target audiences. In some cases, criteria that are objective, but that ignore the differences in business models and target audiences of new registries, will tend to make the process exclusionary. For example, the business model for a registry targeted to a small community need not possess the same robustness in funding and technical infrastructure as a registry intending to compete with large gTLDs. Therefore purely objective criteria such as a requirement for a certain amount of cash on hand will not provide for the flexibility to consider different business models. The process must provide for an objective evaluation framework, but allow for adaptation according to the differing models applicants will present. Within that framework, applicant responses will be evaluated against the criteria in light of the proposed model.
  - Therefore the criteria should be flexible: able to scale with the overall business approach, providing that the planned approach is consistent and coherent, and can withstand highs and lows.

- Criteria can be objective in areas of registrant protection, for example:
  - Providing for funds to continue operations in the event of a registry failure.
  - Adherence to data escrow, registry failover, and continuity planning requirements.
- The evaluation must strike the correct balance between establishing the business and technical competence of the applicant to operate a registry (to serve the interests of registrants), while not asking for the detailed sort of information or making the judgment that a venture capitalist would. ICANN is not seeking to certify business success but instead seeks to encourage innovation while providing certain safeguards for registrants.
- New registries must be added in a way that maintains DNS stability and security. Therefore, ICANN asks several questions so that the applicant can demonstrate an understanding of the technical requirements to operate a registry. ICANN will ask the applicant to demonstrate actual operational technical compliance prior to delegation. This is in line with current prerequisites for the delegation of a TLD.
- Registrant protection is emphasized in both the criteria and the scoring. Examples of this include asking the applicant to:
  - Plan for the occurrence of contingencies and registry failure by putting in place financial resources to fund the ongoing resolution of names while a replacement operator is found or extended notice can be given to registrants,
  - Demonstrate a capability to understand and plan for business contingencies to afford some protections through the marketplace,
  - Adhere to DNS stability and security requirements as described in the technical section, and
  - Provide access to the widest variety of services.

## *II. Aspects of the Questions Asked in the Application and Evaluation Criteria*

The technical and financial questions are intended to inform and guide the applicant in aspects of registry start-up and operation. The established registry operator should find the questions straightforward while inexperienced applicants should find them a natural part of planning.

Evaluation and scoring (detailed below) will emphasize:

- How thorough are the answers? Are they well thought through and do they provide a sufficient basis for evaluation?
- Demonstration of the ability to operate and fund the registry on an ongoing basis:
  - Funding sources to support technical operations in a manner that ensures stability and security and supports planned expenses,
  - Resilience and sustainability in the face of ups and downs, anticipation of contingencies,
  - Funding to carry on operations in the event of failure.

- Demonstration that the technical plan will likely deliver on best practices for a registry and identification of aspects that might raise DNS stability and security issues.
- Ensures plan integration, consistency and compatibility (responses to questions are not evaluated individually but in comparison to others):
  - Funding adequately covers technical requirements,
  - Funding covers costs,
  - Risks are identified and addressed, in comparison to other aspects of the plan.

### III. Scoring

#### Evaluation

- The questions, criteria, scoring and evaluation methodology are to be conducted in accordance with the principles described earlier in section I. With that in mind, globally diverse evaluation panelists will staff evaluation panels. The diversity of evaluators and access to experts in all regions of the world will ensure application evaluations take into account cultural, technical and business norms in the regions from which applications originate.
- Evaluation teams will consist of two independent panels. One will evaluate the applications against the financial criteria. The other will evaluate the applications against the technical & operational criteria. Given the requirement that technical and financial planning be well integrated, the panels will work together and coordinate information transfer where necessary. Other relevant experts (e.g., technical, audit, legal, insurance, finance) in pertinent regions will provide advice as required.
- Precautions will be taken to ensure that no member of the Evaluation Teams will have any interest or association that may be viewed as a real or potential conflict of interest with an applicant or application. All members must adhere to the Code of Conduct and Conflict of Interest guidelines that are found in Module 2.
- Communications between the evaluation teams and the applicants will be through an online interface. During the evaluation, evaluators may pose a set of clarifying questions to an applicant, to which the applicant may respond through the interface.

Confidentiality: ICANN will post applications after the close of the application [submission](#) period. The application form notes which parts of the application will be posted.

#### Scoring

- Responses will be evaluated against each criterion. A score will be assigned according to the scoring schedule linked to each question or set of questions. In several questions, 1 point is the maximum score that may be awarded. In [several other questions](#) [nearly all cases](#), 2 points are awarded for a response that exceeds requirements, 1 point is awarded for a response that meets requirements and 0 points are awarded for a response that fails to meet requirements. Each question must receive at least a score of "1," making each a "pass/fail" question.
- In the Continuity question in the financial section (see Question #50), up to 3 points are awarded if an applicant provides, at the application stage, a financial instrument that will guarantee ongoing registry operations in the event of a business failure. This extra

point can serve to guarantee passing the financial criteria for applicants who score the minimum passing score for each of the individual criteria. The purpose of this weighting is to reward applicants who make early arrangements for the protection of registrants and to accept relatively riskier business plans where registrants are protected.

- There are 21 Technical & Operational questions. Each question has a criterion and scoring associated with it. The scoring for each is 0, 1, or 2 points as described above. One of the questions (IDN implementation) is optional. Other than the optional questions, all Technical & Operational criteria must be scored a 1 or more or the application will fail the evaluation.
- The total technical score must be equal to or greater than 22 for the application to pass. That means the applicant can pass by:
  - Receiving a 1 on all questions, including the optional question, and a 2 on at least one mandatory question; or
  - Receiving a 1 on all questions, excluding the optional question and a 2 on at least two mandatory questions.

This scoring methodology requires a minimum passing score for each question and a slightly higher average score than the per question minimum to pass.

- There are six Financial questions and six sets of criteria that are scored by rating the answers to one or more of the questions. For example, the question concerning registry operation costs requires consistency between the technical plans (described in the answers to the Technical & Operational questions) and the costs (described in the answers to the costs question).
- The scoring for each of the Financial criteria is 0, 1 or 2 points as described above with the exception of the Continuity question, for which up to 3 points are possible. All questions must receive at least a 1 or the application will fail the evaluation.
- The total financial score on the six criteria must be 8 or greater for the application to pass. That means the applicant can pass by:
  - Scoring a 3 on the continuity criteria, or
  - Scoring a 2 on any two financial criteria.
- Applications that do not pass Initial Evaluation can enter into an extended evaluation process as described in Module 2. The scoring is the same.

Note on April 2011 Discussion Draft: A number of the evaluation questions have been edited to provide more detail for applicants on the elements of a complete answer and to more clearly distinguish the components required for a score of 1 versus 2 (passing versus exceeding requirements). In most cases, the substance of the question and criteria has not changed significantly.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Applicant Information	1	Full legal name of the Applicant (the established entity that would enter into a Registry Agreement with ICANN)	Y	Responses to Questions 1 - 12 are required for a complete application. Responses are not scored.			
	2	Address of the principal place of business of the Applicant. This address will be used for contractual purposes. No Post Office boxes are allowed.	Y				
	3	Phone number for the Applicant's principal place of business.	Y				
	4	Fax number for the Applicant's principal place of business.	Y				
	5	Website or URL, if applicable.	Y				
Primary Contact for this Application	6	Name	Y	The primary contact will receive all communications regarding the application. Either the primary or the secondary contact may respond. In the event of a conflict, the communication received from the primary contact will be taken as authoritative. Both contacts listed should also be prepared to receive inquiries from the public.			
		Title	Y				
		Address	Y				
		Phone number	Y				
		Fax number	Y				
		Email address	Y				
Secondary Contact for this Application	7	Name	Y	The secondary contact will be copied on all communications regarding the application. Either the primary or the secondary contact may respond.			
		Title	Y				
		Address	Y				
		Phone number	Y				
		Fax number	Y				
		Email address	Y				
Proof of Legal Establishment	8	(a) Legal form of the Applicant. (e.g., <del>limited liability</del> partnership, corporation, non-profit institution).	Y				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(b) State the specific national or other jurisdictional law that defines the type of entity identified in 8(a). <del>Identify any relevant section references and provide a URL to the document if available online.</del>	Y	<u>In the event of questions regarding proof of establishment, the applicant may be asked for additional details, such as the specific national or other law applying to this type of entity.</u>			
		(c) Attach evidence of the applicant's establishment as the type of entity identified in Question 8(a) above, in accordance with the applicable laws identified in Question 8(b).	Y	Applications without valid proof of legal establishment will not be evaluated further.			
	9	(a) If the applying entity is publicly traded, provide the exchange and symbol.	Y				
		(b) If the applying entity is a subsidiary, provide the parent company.	Y				
		(c) If the applying entity is a joint venture, list all joint venture partners.	Y				
	10	Business ID, Tax ID, VAT registration number, or equivalent of the Applicant.	N				
Applicant Background	11	(a) Enter the full name, contact information (permanent residence), and position of all directors (i.e., members of the applicant's Board of Directors, if applicable).	<u>Partial</u> <del>N</del>	<p><u>Applicants should be aware that the names and positions of the individuals listed in response to this question will be published as part of the application. The contact information listed for individuals is for identification purposes only and will not be published as part of the application.</u></p> <p>Background checks may be conducted on individuals named in the applicant's response to question 11. Any material misstatement or misrepresentation (or omission of material information) may cause the application to be rejected.</p> <p><u>The applicant certifies that it has obtained permission for the posting of the names and positions of individuals included in this application.</u></p>			
		(b) Enter the full name, contact information (permanent residence), and position of all officers and partners. Officers are high-level management officials of a corporation or business, for example, a CEO, vice president, secretary, chief financial officer. Partners would be listed in the context of a partnership or other such form of legal entity.	<u>Partial</u> <del>N</del>

		<p>(f) Indicate whether the applicant or any of <u>the individuals, its directors, officers, partners, or shareholders</u> named above have been involved in any decisions indicating that the applicant or individual named in the application was engaged in cybersquatting, as defined in the UDRP, ACPA, or other equivalent legislation.</p>	N	<p>ICANN may deny an otherwise qualified application if eligibility criteria are not met. See section 1.2.1 of the guidebook for details.</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(g) Disclose whether the applicant <u>or any of the individuals named above</u> has been involved in any administrative or other legal proceeding in which allegations of intellectual property infringement relating to registration or use of a domain name have been made. Provide an explanation related to each such instance.	N	ICANN may deny an otherwise qualified application if eligibility criteria are not met. See section 1.2.1 of the guidebook for details.			
		(h) Provide an explanation for any additional background information that may be found concerning the applicant or any individual named in the application.	N				
Evaluation Fee	12	(a) Enter the confirmation information for payment of the evaluation fee (e.g., wire transfer confirmation number).	N	The evaluation fee is paid in the form of a deposit at the time of user registration, and submission of the remaining amount at the time the full application is submitted. The information in question 12 is required for each payment.			
		(b) Payer name	N				
		(c) Payer address	N				
		(d) Wiring bank	N				
		(e) Bank address	N				
		(f) Wire date	N				
Applied-for gTLD string	13	Provide the applied-for gTLD string. If applying for an IDN, provide the U-label.	Y	Responses to Questions 13- 17 are not scored, but are used for database and validation purposes.  The U-label is an IDNA-valid string of Unicode characters, including at least one non-ASCII character.			
	14	(a) If applying for an IDN, provide the A-label (beginning with "xn--").	Y				
		(b) If an IDN, provide the meaning, or restatement of the string in English, that is, a description of the literal meaning of the string in the opinion of the applicant.	Y				
		(c) If an IDN, provide the language of the label (both in English and as referenced by ISO-639-1).	Y				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(d) If an IDN, provide the script of the label (both in English and as referenced by ISO 15924).	Y				
		(e) If an IDN, list all code points contained in the U-label according to Unicode form.	Y	For example, the string "HELLO" would be listed as U+0048 U+0065 U+006C U+006C U+006F.			
	15	<p>(a) If an IDN, upload IDN tables for the proposed registry. An IDN table must include:</p> <ol style="list-style-type: none"> <li>1. the applied-for gTLD string relevant to the tables,</li> <li>2. the script or language designator (as defined in BCP 47),</li> <li>3. table version number,</li> <li>4. effective date (DD Month YYYY), and</li> <li>5. contact name, email address, and phone number.</li> </ol> <p>Submission of IDN tables in a standards-based format is encouraged.</p>	Y	In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string. IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second level.			
		(b) Describe the process used for development of the IDN tables submitted, including consultations and sources used.	Y				
		(c) List any variants to the applied-for gTLD string according to the relevant IDN tables.	Y	Variant TLD strings will not be delegated as a result of this application. Variant strings will be checked for consistency and, if the application is approved, will be entered on a Declared IDN Variants List to allow for future allocation once a variant management mechanism is established for the top level. Inclusion of variant TLD strings in this application is for information only and confers no right or claim to these strings upon the applicant.			
	16	<del>If an IDN, d</del> Describe the applicant's efforts to ensure that there are no known operational or rendering problems concerning the applied-for gTLD string. If such issues are known, describe steps that will be taken to mitigate these issues in software and other applications.	Y				
	17	<p><b>OPTIONAL.</b> Provide a representation of the label according to the International Phonetic Alphabet (<a href="http://www.langsci.ucl.ac.uk/ipa/">http://www.langsci.ucl.ac.uk/ipa/</a>).</p>	Y	If provided, this information will be used as a guide to ICANN in communications regarding the application.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Mission/Purpose	18	<u>(a)</u> Describe the mission/purpose of your proposed gTLD.	Y	<p><del>Applicants are encouraged to provide a thorough and detailed description to enable informed consultation and comment. Responses to this question are not scored. The information gathered in response to Question 18 is intended to inform the post-launch review of the New gTLD Program, from the perspective of assessing the relative costs and benefits achieved in the expanded gTLD space.</del></p> <p><del>For the application to be considered complete, answers to this section must be fulsome and sufficiently quantitative and detailed to inform future study on plans vs. results.</del></p> <p><del>The New gTLD Program will be reviewed, as specified in section 9.3 of the Affirmation of Commitments. This will include consideration of the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion.</del></p> <p><del>The information gathered in this section will be one source of input to help inform this review. This information is not used as part of the evaluation or scoring, except to the extent that the information may overlap with questions or evaluation areas that are scored.</del></p> <p>An applicant wishing to designate this application as community-based should ensure that <del>these</del> responses <del>are</del> consistent with its responses for question 20 below.</p>			
		<p><u>(b)</u> How do you expect that your proposed gTLD will benefit registrants, Internet users, and others? Answers should address the following points:</p> <p>i. <u>What is the goal of your proposed gTLD in terms of areas of specialty.</u></p>	<u>Y</u>				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p><u>service levels, or reputation?</u></p> <p>ii. <u>What do you anticipate your proposed gTLD will add to the current space, in terms of competition, differentiation, or innovation?</u></p> <p>iii. <u>What goals does your proposed gTLD have in terms of user experience?</u></p> <p>iv. <u>Provide a complete description of the applicant's intended registration policies in support of the goals listed above.</u></p> <p>v. <u>Will your proposed gTLD impose any measures for protecting the privacy or confidential information of registrants or users? If so, please describe any such measures.</u></p> <p>vi. <u>Describe whether and in what ways outreach and communications will help to achieve your projected benefits.</u></p>					
	18	<p>(c) <u>What operating rules will you adopt to eliminate or minimize social costs (e.g., time or financial resource costs, as well as various types of consumer vulnerabilities)? What other steps will you take to minimize negative consequences/costs imposed upon consumers? Answers should address the following points:</u></p> <p>i. <u>How will multiple applications for a particular domain name be resolved, for example, by auction or on a first-come/first-serve basis?</u></p> <p>ii. <u>Explain any cost benefits for registrants you intend to implement (e.g., advantageous pricing, introductory discounts, bulk</u></p>	Y				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p><u>registration discounts).</u></p> <p>iii. <u>Do you intend to offer registrants the ability to obtain long term (or permanent) contracts for domain names? Do you intend to make contractual commitments to registrants regarding the magnitude of price escalation? If so, please describe your plans.</u></p> <p>iv. <u>Will you impose any constraints on parked sites, or sites that offer only advertising?</u></p>					
Community-based Designation	19	Is the application for a community-based TLD?	Y	<p>There is a presumption that the application is a standard application (as defined in the Applicant Guidebook) if this question is left unanswered.</p> <p>The applicant's designation as standard or community-based cannot be changed once the application is submitted.</p>			
	20	<p>(a) Provide the name and full description of the community that the applicant is committing to serve. In the event that this application is included in a community priority evaluation, it will be scored based on the community identified in response to this question. <u>The name of the community does not have to be formally adopted for the application to be designated as community-based.</u></p>	Y	<p>Descriptions should include:</p> <ul style="list-style-type: none"> <li>• How the community is delineated from Internet users generally. Such descriptions may include, but are not limited to, the following: membership, registration, or licensing processes, operation in a particular industry, use of a language.</li> <li>• How the community is structured and organized. For a community consisting of an alliance of groups, details about the constituent parts are required.</li> <li>• When the community was established, including the date(s) of formal organization, if any, as well as a description of community activities to date.</li> <li>• The current estimated size of the community, both as to membership and geographic extent.</li> </ul>		<p>Responses to Question 20 will be regarded as firm commitments to the specified community and reflected in the Registry Agreement, provided the application is successful.</p> <p>Responses are not scored in the Initial Evaluation. Responses may be scored in a community priority evaluation, if applicable. Criteria and scoring methodology for the community priority evaluation are described in Module 4 of the Applicant Guidebook.</p>	

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(b) Explain the applicant's relationship to the community identified in 20(a).	Y	Explanations should clearly state: <ul style="list-style-type: none"> <li>• Relations to any community organizations.</li> <li>• Relations to the community and its constituent parts/groups.</li> <li>• Accountability mechanisms of the applicant to the community.</li> </ul>			
		(c) Provide a description of the community-based purpose of the applied-for gTLD.	Y	Descriptions should include: <ul style="list-style-type: none"> <li>• Intended registrants in the TLD.</li> <li>• Intended end-users of the TLD.</li> <li>• Related activities the applicant has carried out or intends to carry out in service of this purpose.</li> <li>• Explanation of how the purpose is of a lasting nature.</li> </ul>			
		(d) Explain the relationship between the applied-for gTLD string and the community identified in 20(a).	Y	Explanations should clearly state: <ul style="list-style-type: none"> <li>• relationship to the established name, if any, of the community.</li> <li>• relationship to the identification of community members.</li> <li>• any connotations the string may have beyond the community.</li> </ul>			
		(e) Provide a complete description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD. Policies and enforcement mechanisms are expected to constitute a coherent set.	Y	Descriptions should include proposed policies, if any, on the following: <ul style="list-style-type: none"> <li>• Eligibility: who is eligible to register a second-level name in the gTLD, and how will eligibility be determined.</li> <li>• Name selection: what types of second-level names may be registered in the gTLD.</li> <li>• Content/Use: what restrictions, if any, the registry operator will impose on how a registrant may use its registered name.</li> <li>• Enforcement: what investigation practices and mechanisms exist to enforce the policies above, what resources are allocated for enforcement, and what appeal mechanisms are available to registrants.</li> </ul>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(f) Attach any written endorsements for the application from <u>established</u> institutions/ <del>groups</del> representative of the community identified in 20(a). An applicant may submit <u>written</u> endorsements by multiple institutions/ <del>groups</del> , if relevant to the community.	Y	<p><u>At least one such endorsement is required for a complete application. The form and content of the endorsement are at the discretion of the party providing the endorsement; however, the letter must include an express statement support for the application as submitted and the contact information of the entity providing the endorsement.</u></p> <p>Endorsements from institutions/<del>groups</del> not mentioned in the response to 20(b) should be accompanied by a clear description of each such institution's/<del>group's</del> relationship to the community.</p>			
Geographic_Names	21	(a) Is the application for a geographic name?	Y	<p>An applied-for gTLD string is considered a geographic name requiring government support if it is: (a) the capital city name of a country or territory listed in the ISO 3166-1 standard; (b) a city name, where it is clear from statements in the application that the applicant intends to use the gTLD for purposes associated with the city name; (c) a sub-national place name listed in the ISO 3166-2 standard; or (d) a name listed as a UNESCO region or appearing on the "Composition of macro geographic (continental) or regions, geographic sub-regions, and selected economic and other groupings" list. See Module 2 for complete definitions and criteria.</p> <p>An application for a country or territory name, as defined in the Applicant Guidebook, will not be approved.</p>			
		(b) If a geographic name, attach documentation of support or non-objection from all relevant governments or public authorities.	N	See the documentation requirements in Module 2 of the Applicant Guidebook.			
Protection of Geographic Names	22	Describe proposed measures for protection of geographic names at the second and other levels in the applied-for gTLD. This should include any applicable rules and procedures for reservation and/or release of such names.	Y	<p>Applicants should consider and describe how they will incorporate Governmental Advisory Committee (GAC) advice in their management of second-level domain name registrations. See "Principles regarding New gTLDs" at <a href="http://gac.icann.org/gac-documents">http://gac.icann.org/gac-documents</a><del>http://gac.icann.org/testing-gac.</del></p> <p>For reference, applicants may draw on existing methodology developed for the</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				<p>reservation and release of country names in the .INFO top-level domain. <a href="http://gac.icann.org/system/files/dotinfocircular_0.pdf">See http://gac.icann.org/system/files/dotinfocircular_0.pdf</a>.</p> <p>Proposed measures will be posted for public comment as part of the application.</p>			
Registry Services	23	<p>Provide name and full description of all the Registry Services to be provided. Descriptions should include both technical and business components of each proposed service, and address any potential security or stability concerns.</p> <p>The following registry services are customary services offered by a registry operator:</p> <ul style="list-style-type: none"> <li>A. Receipt of data from registrars concerning registration of domain names and name servers.</li> <li>B. Dissemination of TLD zone files.</li> <li>C. Dissemination of contact or other information concerning domain name registrations (Whois service).</li> <li>D. Internationalized Domain Names, where offered.</li> <li>E. DNS Security Extensions (DNSSEC).</li> </ul> <p>The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.</p> <p>Additional proposed registry services that are unique to the registry must also be described.</p>	Y	<p>Registry Services are defined as the following: (1) operations of the Registry critical to the following tasks: (i) the receipt of data from registrars concerning registrations of domain names and name servers; (ii) provision to registrars of status information relating to the zone servers for the TLD; (iii) dissemination of TLD zone files; (iv) operation of the Registry zone servers; and (v) dissemination of contact and other information concerning domain name server registrations in the TLD as required by the Registry Agreement; and (2) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy; (3) any other products or services that only a Registry Operator is capable of providing, by reason of its designation as the Registry Operator. A full definition of Registry Services can be found at <a href="http://www.icann.org/en/registries/rsep/rsep.html">http://www.icann.org/en/registries/rsep/rsep.html</a>.</p> <p>Security: For purposes of this Applicant Guidebook, an effect on security by the proposed Registry Service means (1) the unauthorized disclosure, alteration, insertion or destruction of Registry Data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with applicable standards.</p> <p>Stability: For purposes of this Applicant Guidebook, an effect on stability shall mean that the proposed Registry Service (1) is not compliant with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant Standards-Track or Best Current</p>		<p>Responses are not scored. A preliminary assessment will be made to determine if there are potential security or stability issues with any of the applicant's proposed Registry Services. If any such issues are identified, the application will be referred for an extended review. See the description of the Registry Services review process in Module 2 of the Applicant Guidebook. Any information contained in the application may be considered as part of the Registry Services review. If its application is approved, applicant may engage in only those registry services defined in the application, unless a new request is submitted to ICANN in accordance with the Registry Agreement.</p>	

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				<p>Practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant Standards-Track or Best Current Practice RFCs and relying on Registry Operator's delegation information or provisioning.</p>			
<p>Demonstration of Technical &amp; Operational Capability (External)</p>	<p>24</p>	<p><u>Shared Registration System (SRS)</u> Performance: describe</p> <ul style="list-style-type: none"> <li>-the plan for operation of a robust and reliable <u>SRS</u> Shared Registration System. SRS is a critical registry function for enabling multiple registrars to provide domain name registration services in the TLD. <u>SRS must include the EPP interface to the registry, as well as any other interfaces intended to be provided, if they are critical to the functioning of the registry</u> Please refer to the requirements in <u>the Registry Interoperability, Continuity, and Performance Specification (Specification 6) (section 1.2) and Specification 10 (SLA Matrix)</u> attached to the Registry Agreement; <u>and</u></li> <li><u>Describe</u> resourcing plans <u>for the initial implementation of, and ongoing maintenance for, this aspect of the criteria</u> (number and description of personnel roles allocated to this area).</li> </ul> <p><u>A complete answer should include, but is not limited to:</u></p>	<p>Y</p>	<p>The questions in this section (24-44) are intended to give applicants an opportunity to demonstrate their technical and operational capabilities to run a registry. In the event that an applicant chooses to outsource one or more parts of its registry operations, the applicant should still provide the full details of the technical arrangements.</p> <p><u>Note that the resource plans provided in this section assist in validating the technical and operational plans as well as informing the cost estimates in the Financial section below.</u></p> <p>Questions <u>24-2930(a)</u> are designed to provide a description of the applicant's intended technical and operational approach for those registry functions that are outward-facing, i.e., interactions with registrars, registrants, and various DNS users. Responses to these questions will be published to allow review by affected parties.</p>	<p>0-1</p>	<p>Complete answer demonstrates:</p> <p>(1) a robust plan for operating a reliable SRS, <u>one of the five critical registry functions</u>;</p> <p>(2) scalability and performance are consistent with the overall business approach, and planned size of the registry;</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and</p> <p>(4) evidence of compliance with Specification 6 <u>(section 1.2)</u> to the Registry Agreement.</p>	<p><b>1 - meets requirements:</b> Response includes</p> <p>(1) <u>An adequate description of SRS that substantially demonstrates the applicant's capabilities and knowledge required to meet this element;</u></p> <p>(2) <u>Details of a well-developed and detailed</u> plan to operate a robust and reliable SRS;</p> <p>(3) SRS plans are sufficient to result in compliance with <u>the Registry Continuity, Interoperability, and Performance Specifications Specification 6 and Specification 10 to the Registry Agreement;</u></p> <p>(4) <u>SRS is commensurate with the technical, operational and financial approach described in the application. 		<p>must be supported even if an applicant's business and/or funding fails are:</p> <p>(1) DNS resolution for registered domain names;  <u>Applicants should consider ranges of volume of daily DNS queries (e.g., 0-100M, 100M-1B, 1B+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</u></p> <p>(2) Operation of the Shared Registration System;  <u>Applicants should consider ranges of volume of daily EPP transactions (e.g., 0-200K, 200K-2M, 2M+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</u></p> <p>(3) Provision of Whois service;  <u>Applicants should consider ranges of volume of daily Whois queries (e.g., 0-100K, 100k-1M, 1M+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics for both web-based and port-43 services.</u></p> <p>(4) Registry data escrow deposits  <u>Applicants should consider administration, retention, and transfer fees as well as daily deposit (e.g., full or incremental) handling. Costs may vary depending on the size of the files in escrow (i.e., the size of the registry database); and</u></p> <p>(5) Maintenance of a properly signed zone in accordance with DNSSEC</p>		<p>failure. Therefore, this section is weighted heavily as a clear, objective measure to protect and serve registrants.</p> <p>The applicant has two tasks associated with adequately making this demonstration of continuity for critical registry functions. First, costs for maintaining critical registrant protection functions are to be estimated (Part a). In evaluating the application, the evaluators will adjudge whether the estimate is reasonable given the systems architecture and overall business approach described elsewhere in the application.</p> <p><u>The Continuing Operations Instrument (COI) is invoked by ICANN if necessary to pay for an Emergency Back End Registry Operator (EBERO) to maintain the five critical registry functions for a period of three to five years. Thus, the cost estimates are tied to the cost for a third party to provide the functions, not to the applicant's actual in-house or subcontracting costs for provision of these functions.</u></p> <p><u>Note that ICANN is building a model for these costs in conjunction with potential EBERO service providers. Thus, guidelines for determining the appropriate amount for the COI will be available to the applicant.</u></p>		<p>failure, default or until a successor operator can be designated. Evidence of financial wherewithal to fund this requirement prior to delegation. This requirement must be met prior to or concurrent with the execution of the Registry Agreement.</p>	<p>in place to provide for on-going operations for at least three years in the event of failure.</p> <p><b>1 - meets requirements:</b></p> <p>(1) Costs are commensurate with technical, <u>operational, and financial plans and overall business approach</u> as described in the application; and</p> <p>(2) Funding is identified and instrument is described to provide for on-going operations of at least three years in the event of failure.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score a 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>requirements.</p> <p><u>Applicants should consider ranges of volume of daily DNS queries (e.g., 0-100M, 100M-1B, 1B+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</u></p> <p>List the estimated annual cost for each of these functions (specify currency used).</p> <p><u>A complete answer is expected to be approximately 2 pages.</u></p>					
		<p>(b) Applicants must provide evidence as to how the funds required for performing these critical registry functions will be available and guaranteed to fund registry operations (for the protection of registrants in the new gTLD) for a minimum of three years following the termination of the Registry Agreement. ICANN has identified two methods to fulfill this requirement:</p> <p><u>(i) Irrevocable standby letter of credit (LOC) issued by a reputable financial institution.</u></p> <ul style="list-style-type: none"> <li>The amount of the LOC must be equal to or greater than the amount required to fund the registry operations specified above for at least three years. In the event of a draw upon the letter of credit, the actual payout would be tied to the cost of running those functions.</li> <li>The LOC must name ICANN or its designee as the beneficiary. Any funds paid out would be provided to the designee who is operating the required registry functions.</li> <li>The LOC must have a term of at least five years from the delegation of the TLD. The LOC may be structured with an annual expiration date if it contains an evergreen provision providing for annual extensions, without amendment, for an indefinite number of periods until the issuing bank informs the beneficiary of its final expiration or until the beneficiary releases the LOC as evidenced in writing. If the expiration date occurs prior to the fifth anniversary of the delegation of the TLD, applicant will be required to obtain a replacement instrument.</li> <li>The LOC must be issued by a reputable financial institution insured at the highest level in</li> </ul>	N	<p>Second (Part b), methods of securing the funds required to perform those functions for at least three years are to be described by the applicant in accordance with the criteria below. Two types of instruments will fulfill this requirement. The applicant must identify which of the two methods is being described. The instrument is required to be in place at the time of the execution of the Registry Agreement.</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>its jurisdiction. This may include a bank or insurance company with a strong international reputation that has a strong credit rating issued by a third party rating agency such as Standard &amp; Poor's (AA or above), Moody's (Aa or above), or A.M. Best (A-X or above). Documentation should indicate by whom the issuing institution is insured.</p> <ul style="list-style-type: none"> <li>• The LOC will provide that ICANN or its designee shall be unconditionally entitled to a release of funds (full or partial) thereunder upon delivery of written notice by ICANN or its designee.</li> <li>• Applicant should attach an original copy of the executed letter of credit or a draft of the letter of credit containing the full terms and conditions. If not yet executed, the Applicant will be required to provide ICANN with an original copy of the executed LOC prior to or concurrent with the execution of the Registry Agreement.</li> <li>• The LOC must contain at least the following required elements: <ul style="list-style-type: none"> <li>○ Issuing bank and date of issue.</li> <li>○ Beneficiary: ICANN / 4676 Admiralty Way, Suite 330 / Marina del Rey, CA 90292 / US, or its designee.</li> <li>○ Applicant's complete name and address.</li> <li>○ LOC identifying number.</li> <li>○ Exact amount in USD.</li> <li>○ Expiry date.</li> <li>○ Address, procedure, and required forms whereby presentation for payment is to be made.</li> <li>○ Conditions: <ul style="list-style-type: none"> <li>▪ Partial drawings from the letter of credit may be made provided that such payment shall reduce the amount under the standby letter of credit.</li> <li>▪ All payments must be marked with the issuing bank name and the bank's standby letter of credit number.</li> <li>▪ LOC may not be modified, amended, or amplified by reference to any other document, agreement, or instrument.</li> </ul> </li> </ul> </li> </ul> <p>The LOC is subject to the International Standby Practices (ISP 98) International Chamber of Commerce (Publication No. 590).</p> <p>(ii) A <u>deposit into an irrevocable cash escrow account</u> held by a reputable financial institution.</p> <ul style="list-style-type: none"> <li>• The amount of the deposit must be equal</li> </ul>

**General Instructions**

The application process requires the applicant to submit two Financial Projections. The first projection (Template 1) should show the revenues and costs associated with the Most Likely scenario expected. This projection should include the number of registrations, the registration fee, and all costs and capital expenditures expected during the start-up period and during the first three years of operations. Template 1 relates to Question 46 (Projections Template) in the application.

We also ask applicants to show as a separate projection (Template 2) the revenues and costs associated with a realistic Worst Case Scenario assuming that the registry does not succeed. Template 2 relates to Question 49 (Contingency Planning) in the application.

For each Projection prepared, please include Comments and Notes on the bottom of the projection (in the area provided) to provide those reviewing these projections with information regarding:  
1) Assumptions Used, Significant Variances in Revenues, Costs, and Capital Expenditures from year-to-year;  
2) How you plan to fund operations;  
3) Contingency Planning

Include Comments that will assist those reviewing this projection in understanding your business approach and any expected trends or variations.

The Start-up Period is for Costs and Capital Expenditures only; there should be no revenue projections input to this column. Please describe the total period of time this is expected to cover.

Marketing Costs represent the amount spent on advertising, promotions, and other marketing activity. This amount should not include Labor Costs which is included in "Marketing Labor" above.

Variable expenses include labor and other costs that are not fixed in nature (expenditures that fluctuate in relationship with increases or decreases in production or level of operations).

Fixed costs are expenditures that do not generally fluctuate in relationship with increases or decreases in production or level of operations. Such costs are generally necessary to be incurred in order to operate the base line operations of the organization or are expected to be incurred based on contractual commitments.

Equals the operational costs for the projected 3 years (columns H, I, and J)

Applicant should list expected useful lives of capital expenditures used and determine annual depreciation.

Please describe "other" capital expenditures and their useful lives for depreciation.

Applicant must prepare projected assets & liabilities for the Start Up and subsequent 3-year period

Cash Flow is driven by Projected Net Operations (Sec. I), Projected Capital

Depreciation should equal total depreciation expense from Sec. I.

Applicant should describe sources of debt and equity funding and provide evidence thereof (e.g., letter of commitment).

General Comments (Notes Regarding Assumptions Used, Significant Variances Between Years, etc.):

Comments regarding how the Applicant plans to fund operations:

General Comments regarding contingencies:

Include explanations for any significant variances between years (or expected in years beyond the timeframe of the template) in any category of costing or funding.

i) On-hand at time of application					
ii) Contingent and/or committed but not yet on-hand					
C) Total Sources of funds		1,000,000			
General Comments (Notes Regarding Assumptions Used, Significant Variances Between Years, etc.):					
We expect the number of registrations to grow at approximately 30% per year with an increase in the registration fee of \$1 per year for the first three years. We anticipate our costs will increase at a controlled pace over the first three years except for marketing costs which will be higher in the start-up and first year as we establish our brand name and work to increase registrations. Our capital expenditures will be greatest in the start-up phase and then our need to invest in computer hardware and software will level off after the start-up period. Our investment in Furniture and Equipment will be greatest in the start-up period as we build our infrastructure and then decrease in the following periods.					
Comments regarding how the Applicant plans to Fund operations:					
We have recently negotiated a line of credit with XYZ Bank (a copy of the fully executed line of credit agreement has been included with our application) and this funding will allow us to purchase necessary equipment and pay for employees and other Operating Costs during our start-up period and the first few years of operations. We expect that our business operation will be self funded (i.e., revenue from operations will cover all anticipated costs and capital expenditures) by the second half of our second year in operation; we also expect to become profitable with positive cash flow in year three.					
General Comments regarding contingencies:					
Although we expect to be cash flow positive by the end of year 2, the recently negotiated line of credit will cover our operating costs for the first 4 years of operation if necessary. We have also entered into an agreement with XYZ Co. to assume our registrants should our business model not have the ability to sustain itself in future years. Agreement with XYZ Co. has been included with our application.					

See below for comments on funding. Revenues are further detailed and explained in response to question 48.

# Applicant Guidebook

## April 2011 Discussion Draft Module 3

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

15 April 2011

---

# Module 3

---

## ~~Dispute Resolution~~Objection Procedures

This module describes two types of mechanisms that may affect an application:

- I. The procedure by which ICANN's Governmental Advisory Committee (GAC) may provide GAC Advice on New gTLDs to the ICANN Board of Directors concerning a specific application. This module describes the purpose of this procedure, and how GAC Advice on New gTLDs is considered by the ICANN Board once received.
- II. The dispute resolution procedure triggered by a formal objection to an application by a third party. This module describes the purpose of the objection and dispute resolution mechanisms, the grounds for lodging a formal objection to a gTLD application, the general procedures for filing or responding to an objection, and the manner in which dispute resolution proceedings are conducted.

This module also discusses the guiding principles, or standards, that each dispute resolution panel will apply in reaching its expert determination.

All applicants should be aware of the possibility that a formal objection may be filed against any application, and of the procedures and options available in the event of such an objection.

### **3.1 GAC Advice on New gTLDs**

---

ICANN's Governmental Advisory Committee was formed to consider and provide advice on the activities of ICANN as they relate to concerns of governments, particularly matters where there may be an interaction between ICANN's policies and various laws and international agreements or where they may affect public policy issues.

The process for GAC Advice on New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.

GAC members can raise concerns about any application to the GAC. The GAC as a whole will consider concerns raised by GAC members, and agree on GAC advice to forward to the ICANN Board of Directors.

The GAC can provide advice on any application. For the Board to be able to consider the GAC advice during the evaluation process, the GAC advice would have to be submitted by the close of the Objection Filing Period (see Module 1).

ICANN's transparency requirements indicate that GAC Advice on New gTLDs should identify objecting countries, the public policy basis for the objection, and the process by which consensus was reached. To be helpful to the Board, the explanation might include, for example, sources of data and the information on which the GAC relied in formulating its advice.

GAC Advice may take several forms, among them:

- I. If the GAC advises ICANN that it is the consensus of the GAC that a particular application should not proceed, that will create a strong presumption for ICANN that the application should not be approved. In the event that the ICANN Board determines to approve an application despite the consensus advice of the GAC, the GAC and the ICANN Board will then try, in good faith and in a timely and efficient manner, to find a mutually acceptable solution. In the event the Board determines not to accept the GAC Advice, the Board will provide a rationale for its decision.
  
- II. If the GAC provides advice that does not indicate the presence of a GAC consensus, or any advice that does not state that the application should not proceed, such advice will be passed on to the applicant but will not create any presumption that the application should be denied, and such advice would not require the Board to undertake the process for attempting to find a mutually acceptable solution with the GAC should the application be approved. Note that in any case, that the Board will take seriously any other advice that GAC might provide.
  
- III. If the GAC advises ICANN that GAC consensus is that an application should not proceed unless remediated, this will raise a strong presumption for the Board that the application should not proceed. If there is a

remediation method available in the Guidebook (such as securing government approval), that action may be taken. However, material amendments to applications are generally prohibited and if there is no remediation method available, the application will not go forward and the applicant can re-apply in the second round.

Where GAC Advice on New gTLDs is received by the Board concerning an application, ICANN will endeavor to notify the relevant applicant(s) promptly and the applicant will have a period of 21 calendar days in which to submit a response to the ICANN Board.

ICANN will consider the GAC Advice on New gTLDs as soon as practicable. The Board may consult with independent experts, such as those designated to hear objections in the New gTLD Dispute Resolution Procedure, in cases where the issues raised in the GAC advice are pertinent to one of the subject matter areas of the objection procedures. The receipt of GAC advice will not toll the processing of any application.

### ***3.2 Public Objection and Purpose and Overview of the Dispute Resolution Process***

---

The independent dispute resolution process is designed to protect certain interests and rights. The process provides a path for formal objections during evaluation of the applications. It allows a party with standing to have its objection considered before a panel of qualified experts.

A formal objection can be filed only on four enumerated grounds, as described in this module. A formal objection initiates a dispute resolution proceeding. In filing an application for a gTLD, the applicant agrees to accept the applicability of this gTLD dispute resolution process. Similarly, an objector accepts the applicability of this gTLD dispute resolution process by filing its objection.

As described in section 3.1 above, ICANN's Governmental Advisory Committee (GAC) has a designated process for providing advice to the ICANN Board of Directors on matters affecting public policy issues, and these objection procedures would not be applicable in such a case.

#### ***3.2.1 Grounds for Objection***

---

An objection may be filed on any one of the following four grounds:

**String Confusion Objection** – The applied-for gTLD string is confusingly similar to an existing TLD or to another applied-for gTLD string in the same round of applications.

**Legal Rights Objection** – The applied-for gTLD string infringes the existing legal rights of the objector.

**[Limited Public Interest Objection]<sup>±</sup>** – The applied-for gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under principles of international law.

**Community Objection** – There is substantial opposition to the gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.

The rationales for these objection grounds are discussed in the final report of the ICANN policy development process for new gTLDs. For more information on this process, see <http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>.

### 3.21.2 Standing to Object

Objectors must satisfy standing requirements to have their objections considered. As part of the dispute proceedings, all objections will be reviewed by a panel of experts designated by the applicable Dispute Resolution Service Provider (DRSP) to determine whether the objector has standing to object. Standing requirements for the four objection grounds are:

Objection ground	Who may object
String confusion	Existing TLD operator or gTLD applicant in current round
Legal rights	Rightholders
[Limited public interest] <sup>±</sup>	No limitations on who may file – however, subject to a “quick look” designed for early conclusion of frivolous and/or abusive objections
Community	Established institution associated with a clearly delineated community

#### 3.21.2.1 String Confusion Objection

Two types of entities have standing to object:

<sup>±</sup> “[Limited Public Interest Objection]” here replaces what was termed a “Morality and Public Order Objection” in previous versions of the Guidebook. This term is subject to community consultation and revision and is used in brackets throughout. The details of this objection are described to provide applicants with an understanding of this objection basis, and may be revised based on further community consultation before the Guidebook is approved by the Board and the New gTLD Program is launched.

- An existing TLD operator may file a string confusion objection to assert string confusion between an applied-for gTLD and the TLD that it currently operates.
- Any gTLD applicant in this application round may file a string confusion objection to assert string confusion between an applied-for gTLD and the gTLD for which it has applied, where string confusion between the two applicants has not already been found in the Initial Evaluation. That is, an applicant does not have standing to object to another application with which it is already in a contention set as a result of the Initial Evaluation.

In the case where an existing TLD operator successfully asserts string confusion with an applicant, the application will be rejected.

In the case where a gTLD applicant successfully asserts string confusion with another applicant, the only possible outcome is for both applicants to be placed in a contention set and to be referred to a contention resolution procedure (refer to Module 4, String Contention Procedures). If an objection by one gTLD applicant to another gTLD application is unsuccessful, the applicants may both move forward in the process without being considered in direct contention with one another.

### 3.21.2.2 *Legal Rights Objection*

A rightsholder has standing to file a legal rights objection. The source and documentation of the existing legal rights the objector is claiming (which may include either registered or unregistered trademarks) are infringed by the applied-for gTLD must be included in the filing.

An intergovernmental organization (IGO) is eligible to file a legal rights objection if it meets the criteria for registration of a .INT domain name<sup>2</sup>:

- a) An international treaty between or among national governments must have established the organization; and
- b) The organization that is established must be widely considered to have independent international legal personality and must be the subject of and governed by international law.

---

<sup>2</sup> See also <http://www.iana.org/domains/int/policy/>.

The specialized agencies of the UN and the organizations having observer status at the UN General Assembly are also recognized as meeting the criteria.

### 3.21.2.3 **Limited Public Interest Objection**

Anyone may file a **Limited Public Interest Objection**. Due to the inclusive standing base, however, objectors are subject to a “quick look” procedure designed to identify and eliminate frivolous and/or abusive objections. An objection found to be manifestly unfounded and/or an abuse of the right to object may be dismissed at any time.

A **Limited Public Interest objection** would be manifestly unfounded if it did not fall within one of the categories that have been defined as the grounds for such an objection (see subsection 3.54.3).

A **Limited Public Interest objection** that is manifestly unfounded may also be an abuse of the right to object. An objection may be framed to fall within one of the accepted categories for **Limited Public Interest objections**, but other facts may clearly show that the objection is abusive. For example, multiple objections filed by the same or related parties against a single applicant may constitute harassment of the applicant, rather than a legitimate defense of legal norms that are recognized under general principles of international law. An objection that attacks the applicant, rather than the applied-for string, could be an abuse of the right to object.<sup>3</sup>

The quick look is the Panel’s first task, after its appointment by the DRSP and is a review on the merits of the objection. The dismissal of an objection that is manifestly unfounded and/or an abuse of the right to object would be an Expert

<sup>3</sup> The jurisprudence of the European Court of Human Rights offers specific examples of how the term “manifestly ill-founded” has been interpreted in disputes relating to human rights. Article 35(3) of the European Convention on Human Rights provides: “The Court shall declare inadmissible any individual application submitted under Article 34 which it considers incompatible with the provisions of the Convention or the protocols thereto, manifestly ill-founded, or an abuse of the right of application.” The ECHR renders reasoned decisions on admissibility, pursuant to Article 35 of the Convention. (Its decisions are published on the Court’s website <http://www.echr.coe.int>.) In some cases, the Court briefly states the facts and the law and then announces its decision, without discussion or analysis. E.g., Decision as to the Admissibility of Application No. 34328/96 by Egbert Peree against the Netherlands (1998). In other cases, the Court reviews the facts and the relevant legal rules in detail, providing an analysis to support its conclusion on the admissibility of an application. Examples of such decisions regarding applications alleging violations of Article 10 of the Convention (freedom of expression) include: *Décision sur la recevabilité de la requête no 65831/01 présentée par Roger Garaudy contre la France* (2003); *Décision sur la recevabilité de la requête no 65297/01 présentée par Eduardo Fernando Alves Costa contre le Portugal* (2004).

The jurisprudence of the European Court of Human Rights also provides examples of the abuse of the right of application being sanctioned, in accordance with ECHR Article 35(3). See, for example, *Décision partielle sur la recevabilité de la requête no 61164/00 présentée par Gérard Duringer et autres contre la France et de la requête no 18589/02 contre la France* (2003).

Determination, rendered in accordance with Article 21 of the New gTLD Dispute Resolution Procedure.

In the case where the quick look review does lead to the dismissal of the objection, the proceedings that normally follow the initial submissions (including payment of the full advance on costs) will not take place, and it is currently contemplated that the filing fee paid by the applicant would be refunded, pursuant to Procedure Article 14(e).

### **3.21.2.4 Community Objection**

Established institutions associated with clearly delineated communities are eligible to file a community objection. The community named by the objector must be a community strongly associated with the applied-for gTLD string in the application that is the subject of the objection. To qualify for standing for a community objection, the objector must prove both of the following:

***It is an established institution*** – Factors that may be considered in making this determination include, but are not limited to:

- Level of global recognition of the institution;
- Length of time the institution has been in existence; and
- Public historical evidence of its existence, such as the presence of [a](#) formal charter or national or international registration, or validation by a government, inter-governmental organization, or treaty. The institution must not have been established solely in conjunction with the gTLD application process.

***It has an ongoing relationship with a clearly delineated community*** – Factors that may be considered in making this determination include, but are not limited to:

- The presence of mechanisms for participation in activities, membership, and leadership;
- Institutional purpose related to the benefit of the associated community;
- Performance of regular activities that benefit the associated community; and
- The level of formal boundaries around the community.

The panel will perform a balancing of the factors listed above, as well as other relevant information, in making its determination. It is not expected that an objector must demonstrate satisfaction of each and every factor considered in order to satisfy the standing requirements.

### **3.21.3** *Dispute Resolution Service Providers*

---

To trigger a dispute resolution proceeding, an objection must be filed by the posted deadline date, directly with the appropriate DRSP for each objection ground.

- The International Centre for Dispute Resolution has agreed in principle to administer disputes brought pursuant to string confusion objections.
- The Arbitration and Mediation Center of the World Intellectual Property Organization has agreed in principle to administer disputes brought pursuant to legal rights objections.
- The International Center of Expertise of the International Chamber of Commerce has agreed in principle to administer disputes brought pursuant to **[Limited Public Interest]** and Community Objections.

ICANN selected DRSPs on the basis of their relevant experience and expertise, as well as their willingness and ability to administer dispute proceedings in the new gTLD Program. The selection process began with a public call for expressions of interest<sup>4</sup> followed by dialogue with those candidates who responded. The call for expressions of interest specified several criteria for providers, including established services, subject matter expertise, global capacity, and operational capabilities. An important aspect of the selection process was the ability to recruit panelists who will engender the respect of the parties to the dispute.

### **3.21.4** *Options in the Event of Objection*

---

Applicants whose applications are the subject of an objection have the following options:

The applicant can work to reach a settlement with the objector, resulting in withdrawal of the objection or the application;

---

<sup>4</sup> See <http://www.icann.org/en/announcements/announcement-21dec07.htm>.

The applicant can file a response to the objection and enter the dispute resolution process (refer to Section 3.2); or

The applicant can withdraw, in which case the objector will prevail by default and the application will not proceed further.

If for any reason the applicant does not file a response to an objection, the objector will prevail by default.

### **3.21.5** *Independent Objector*

---

A formal objection to a gTLD application may also be filed by the Independent Objector (IO). The IO does not act on behalf of any particular persons or entities, but acts solely in the best interests of the public who use the global Internet.

In light of this public interest goal, the Independent Objector is limited to filing objections on the grounds of ~~Limited Public Interest~~ and Community.

Neither ICANN staff nor the ICANN Board of Directors has authority to direct or require the IO to file or not file any particular objection. If the IO determines that an objection should be filed, he or she will initiate and prosecute the objection in the public interest.

**Mandate and Scope** - The IO may file objections against “highly objectionable” gTLD applications to which no objection has been filed. The IO is limited to filing two types of objections: (1) ~~Limited Public Interest objections~~ and (2) Community objections. The IO is granted standing to file objections on these enumerated grounds, notwithstanding the regular standing requirements for such objections (see subsection 3.1.2).

The IO may file a ~~Limited Public Interest objection~~ against an application even if a Community objection has been filed, and vice versa.

The IO may file an objection against an application, notwithstanding the fact that a String Confusion objection or a Legal Rights objection was filed.

Absent extraordinary circumstances, the IO is not permitted to file an objection to an application where an objection has already been filed on the same ground.

The IO may consider public comment when making an independent assessment whether an objection is warranted. The IO will have access to [application comments received during the comment period](#)~~from the appropriate time period, running through the initial~~

~~Evaluation period until the close of the deadline for the IO to submit an objection.~~

~~In light of the public interest goal noted above, the IO shall not object to an application unless at least one comment in opposition to the application is made in the public sphere.~~

**Selection** – The IO will be selected by ICANN, through an open and transparent process, and retained as an independent consultant. The Independent Objector will be an individual with considerable experience and respect in the Internet community, unaffiliated with any gTLD applicant.

Although recommendations for IO candidates from the community are welcomed, the IO must be and remain independent and unaffiliated with any of the gTLD applicants. The various rules of ethics for judges and international arbitrators provide models for the IO to declare and maintain his/her independence.

The IO's (renewable) tenure is limited to the time necessary to carry out his/her duties in connection with a single round of gTLD applications.

**Budget and Funding** – The IO's budget would comprise two principal elements: (a) salaries and operating expenses, and (b) dispute resolution procedure costs – both of which should be funded from the proceeds of new gTLD applications.

As an objector in dispute resolution proceedings, the IO is required to pay filing and administrative fees, as well as advance payment of costs, just as all other objectors are required to do. Those payments will be refunded by the DRSP in cases where the IO is the prevailing party.

In addition, the IO will incur various expenses in presenting objections before DRSP panels that will not be refunded, regardless of the outcome. These expenses include the fees and expenses of outside counsel (if retained) and the costs of legal research or factual investigations.

### **3.32** *Filing Procedures*

---

The information included in this section provides a summary of procedures for filing:

- Objections; and
- Responses to objections.

For a comprehensive statement of filing requirements applicable generally, refer to the New gTLD Dispute Resolution Procedure (“Procedure”) included as an attachment to this module. In the event of any discrepancy between the information presented in this module and the Procedure, the Procedure shall prevail.

Note that the rules and procedures of each DRSP specific to each objection ground must also be followed.

- For a String Confusion Objection, the applicable DRSP Rules are the ICDR Supplementary Procedures for ICANN’s New gTLD Program. These rules are available in draft form and have been posted along with this module.
- For a Legal Rights Objection, the applicable DRSP Rules are the WIPO Rules for New gTLD Dispute Resolution. These rules are available in draft form and have been posted along with this module.
- For a ~~Limited Public Interest Objection~~, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce.<sup>5</sup>
- For a Community Objection, ~~Objection~~, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce.<sup>6</sup>

### 3.32.1 Objection Filing Procedures

The procedures outlined in this subsection must be followed by any party wishing to file a formal objection to an application that has been posted by ICANN. Should an applicant wish to file a formal objection to another gTLD application, it would follow these same procedures.

- All objections must be filed electronically with the appropriate DRSP by the posted deadline date. Objections will not be accepted by the DRSPs after this date.
- All objections must be filed in English.
- Each objection must be filed separately. An objector wishing to object to several applications

<sup>5</sup> See <http://www.iccwbo.org/court/expertise/id4379/index.html>

<sup>6</sup> *Ibid.*

must file a separate objection and pay the accompanying filing fees for each application that is the subject of an objection. If an objector wishes to object to an application on more than one ground, the objector must file separate objections and pay the accompanying filing fees for each objection ground.

Each objection filed by an objector must include:

- The name and contact information of the objector.
- A statement of the objector's basis for standing; that is, why the objector believes it meets the standing requirements to object.
- A description of the basis for the objection, including:
  - A statement giving the specific ground upon which the objection is being filed.
  - A detailed explanation of the validity of the objection and why it should be upheld.
- Copies of any documents that the objector considers to be a basis for the objection.

Objections are limited to 5000 words or 20 pages, whichever is less, excluding attachments.

An objector must provide copies of all submissions to the DRSP associated with the objection proceedings to the applicant.

~~ICANN and/or the DRSPs will publish, and regularly update, a list on its website identifying all objections as they are filed and ICANN is notified. ICANN will post on its website a notice of all objections filed once the objection filing period has closed.~~

### **3.32.2 Objection Filing Fees**

---

At the time an objection is filed, the objector is required to pay a filing fee in the amount set and published by the relevant DRSP. If the filing fee is not paid, the DRSP will dismiss the objection without prejudice. See Section 1.5 of Module 1 regarding fees.

Funding from ICANN for objection filing fees, as well as for advance payment of costs (see subsection 3.4.7 below) is available to the At-Large Advisory Committee (ALAC). Funding for ALAC objection filing and dispute resolution

fees is contingent on publication by ALAC of their approved process for considering and making objections. At a minimum, the process for objecting to a gTLD application will require: bottom-up development of potential objections, discussion and approval of objections at the RALO level, and a process for consideration and approval of the objection by the At-Large Advisory Committee.

Funding from ICANN for objection filing fees, as well as for advance payment of costs, is available to individual national governments in the amount of USD 50,000 with the guarantee that a minimum of one objection per government will be fully funded by ICANN where requested. ICANN will develop a procedure for application and disbursement of funds.

### **3.32.3 Response Filing Procedures**

---

Upon notification that ICANN has published the list of all objections filed (refer to subsection 3.32.1), the DRSPs will notify the parties that responses must be filed within 30 calendar days of receipt of that notice. DRSPs will not accept late responses. Any applicant that fails to respond to an objection within the 30-day response period will be in default, which will result in the objector prevailing.

- All responses must be filed in English.
- Each response must be filed separately. That is, an applicant responding to several objections must file a separate response and pay the accompanying filing fee to respond to each objection.
- Responses must be filed electronically.

Each response filed by an applicant must include:

- The name and contact information of the applicant.
- A point-by-point response to the claims made by the objector.
- Any copies of documents that it considers to be a basis for the response.

Responses are limited to 5000 words or 20 pages, whichever is less, excluding attachments.

Each applicant must provide copies of all submissions to the DRSP associated with the objection proceedings to the objector.

---

### **3.32.4** *Response Filing Fees*

---

At the time an applicant files its response, it is required to pay a filing fee in the amount set and published by the relevant DRSP, which will be the same as the filing fee paid by the objector. If the filing fee is not paid, the response will be disregarded, which will result in the objector prevailing.

---

### **3.43** *Objection Processing Overview*

---

The information below provides an overview of the process by which DRSPs administer dispute proceedings that have been initiated. For comprehensive information, please refer to the New gTLD Dispute Resolution Procedure (included as an attachment to this module).

---

#### **3.43.1** *Administrative Review*

---

Each DRSP will conduct an administrative review of each objection for compliance with all procedural rules within 14 calendar days of receiving the objection. Depending on the number of objections received, the DRSP may ask ICANN for a short extension of this deadline.

If the DRSP finds that the objection complies with procedural rules, the objection will be deemed filed, and the proceedings will continue. If the DRSP finds that the objection does not comply with procedural rules, the DRSP will dismiss the objection and close the proceedings without prejudice to the objector's right to submit a new objection that complies with procedural rules. The DRSP's review or rejection of the objection will not interrupt the time limit for filing an objection.

---

#### **3.43.2** *Consolidation of Objections*

---

Once the DRSP receives and processes all objections, at its discretion the DRSP may elect to consolidate certain objections. The DRSP shall endeavor to decide upon consolidation prior to issuing its notice to applicants that the response should be filed and, where appropriate, shall inform the parties of the consolidation in that notice.

An example of a circumstance in which consolidation might occur is multiple objections to the same application based on the same ground.

In assessing whether to consolidate objections, the DRSP will weigh the efficiencies in time, money, effort, and consistency that may be gained by consolidation against the prejudice or inconvenience consolidation may cause. The DRSPs will endeavor to have all objections resolved on a similar timeline. It is intended that no sequencing of objections will be established.

New gTLD applicants and objectors also will be permitted to propose consolidation of objections, but it will be at the DRSP's discretion whether to agree to the proposal.

ICANN continues to strongly encourage all of the DRSPs to consolidate matters whenever practicable.

### **3.43.3** *Mediation*

---

The parties to a dispute resolution proceeding are encouraged—but not required—to participate in mediation aimed at settling the dispute. Each DRSP has experts who can be retained as mediators to facilitate this process, should the parties elect to do so, and the DRSPs will communicate with the parties concerning this option and any associated fees.

If a mediator is appointed, that person may not serve on the panel constituted to issue an expert determination in the related dispute.

There are no automatic extensions of time associated with the conduct of negotiations or mediation. The parties may submit joint requests for extensions of time to the DRSP according to its procedures, and the DRSP or the panel, if appointed, will decide whether to grant the requests, although extensions will be discouraged. Absent exceptional circumstances, the parties must limit their requests for extension to 30 calendar days.

The parties are free to negotiate without mediation at any time, or to engage a mutually acceptable mediator of their own accord.

### **3.43.4** *Selection of Expert Panels*

---

A panel will consist of appropriately qualified experts appointed to each proceeding by the designated DRSP. Experts must be independent of the parties to a dispute resolution proceeding. Each DRSP will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing an expert for lack of independence.

There will be one expert in proceedings involving a string confusion objection.

There will be one expert, or, if all parties agree, three experts with relevant experience in intellectual property rights disputes in proceedings involving an existing legal rights objection.

There will be three experts recognized as eminent jurists of international reputation, with expertise in relevant fields as appropriate, in proceedings involving a ~~¶~~Limited Public Interest objection~~¶~~.

There will be one expert in proceedings involving a community objection.

Neither the experts, the DRSP, ICANN, nor their respective employees, directors, or consultants will be liable to any party in any action for damages or injunctive relief for any act or omission in connection with any proceeding under the dispute resolution procedures.

### **3.43.5 Adjudication**

---

The panel may decide whether the parties shall submit any written statements in addition to the filed objection and response, and may specify time limits for such submissions.

In order to achieve the goal of resolving disputes rapidly and at reasonable cost, procedures for the production of documents shall be limited. In exceptional cases, the panel may require a party to produce additional evidence.

Disputes will usually be resolved without an in-person hearing. The panel may decide to hold such a hearing only in extraordinary circumstances.

### **3.43.6 Expert Determination**

---

The DRSPs' final expert determinations will be in writing and will include:

- A summary of the dispute and findings;
- An identification of the prevailing party; and
- The reasoning upon which the expert determination is based.

Unless the panel decides otherwise, each DRSP will publish all decisions rendered by its panels in full on its website.

The findings of the panel will be considered an expert determination and advice that ICANN will accept within the dispute resolution process.

### **3.43.7 Dispute Resolution Costs**

---

Before acceptance of objections, each DRSP will publish a schedule of costs or statement of how costs will be calculated for the proceedings that it administers under this procedure. These costs cover the fees and expenses of the members of the panel and the DRSP's administrative costs.

ICANN expects that string confusion and legal rights objection proceedings will involve a fixed amount charged by the panelists while ~~†~~Limited Public Interest~~‡~~ and community objection proceedings will involve hourly rates charged by the panelists.

Within ten (10) business days of constituting the panel, the DRSP will estimate the total costs and request advance payment in full of its costs from both the objector and the applicant. Each party must make its advance payment within ten (10) days of receiving the DRSP's request for payment and submit to the DRSP evidence of such payment. The respective filing fees paid by the parties will be credited against the amounts due for this advance payment of costs.

The DRSP may revise its estimate of the total costs and request additional advance payments from the parties during the resolution proceedings.

Additional fees may be required in specific circumstances; for example, if the DRSP receives supplemental submissions or elects to hold a hearing.

If an objector fails to pay these costs in advance, the DRSP will dismiss its objection and no fees paid by the objector will be refunded.

If an applicant fails to pay these costs in advance, the DSRP will sustain the objection and no fees paid by the applicant will be refunded.

After the hearing has taken place and the panel renders its expert determination, the DRSP will refund the advance payment of costs to the prevailing party.

### **3.54 Dispute Resolution Principles (Standards)**

---

Each panel will use appropriate general principles (standards) to evaluate the merits of each objection. The principles for adjudication on each type of objection are specified in the paragraphs that follow. The panel may also refer to other relevant rules of international law in connection with the standards.

The objector bears the burden of proof in each case.

The principles outlined below are subject to evolution based on ongoing consultation with DRSPs, legal experts, and the public.

### **3.54.1 String Confusion Objection**

---

A DRSP panel hearing a string confusion objection will consider whether the applied-for gTLD string is likely to result in string confusion. String confusion exists where a string so nearly resembles another that it is likely to deceive or cause confusion. For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

### **3.54.2 Legal Rights Objection**

---

In interpreting and giving meaning to GNSO Recommendation 3 (“Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law”), a DRSP panel of experts presiding over a legal rights objection will determine whether the potential use of the applied-for gTLD by the applicant takes unfair advantage of the distinctive character or the reputation of the objector’s registered or unregistered trademark or service mark (“mark”) or IGO name or acronym (as identified in the treaty establishing the organization), or unjustifiably impairs the distinctive character or the reputation of the objector’s mark or IGO name or acronym, or otherwise creates an impermissible likelihood of confusion between the applied-for gTLD and the objector’s mark or IGO name or acronym.

In the case where the objection is based on trademark rights, the panel will consider the following non-exclusive factors:

1. Whether the applied-for gTLD is identical or similar, including in appearance, phonetic sound, or meaning, to the objector’s existing mark.

2. Whether the objector's acquisition and use of rights in the mark has been bona fide.
3. Whether and to what extent there is recognition in the relevant sector of the public of the sign corresponding to the gTLD, as the mark of the objector, of the applicant or of a third party.
4. Applicant's intent in applying for the gTLD, including whether the applicant, at the time of application for the gTLD, had knowledge of the objector's mark, or could not have reasonably been unaware of that mark, and including whether the applicant has engaged in a pattern of conduct whereby it applied for or operates TLDs or registrations in TLDs which are identical or confusingly similar to the marks of others.
5. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the gTLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise by the objector of its mark rights.
6. Whether the applicant has marks or other intellectual property rights in the sign corresponding to the gTLD, and, if so, whether any acquisition of such a right in the sign, and use of the sign, has been bona fide, and whether the purported or likely use of the gTLD by the applicant is consistent with such acquisition or use.
7. Whether and to what extent the applicant has been commonly known by the sign corresponding to the gTLD, and if so, whether any purported or likely use of the gTLD by the applicant is consistent therewith and bona fide.
8. Whether the applicant's intended use of the gTLD would create a likelihood of confusion with the objector's mark as to the source, sponsorship, affiliation, or endorsement of the gTLD.

In the case where a legal rights objection has been filed by an IGO, the panel will consider the following non-exclusive factors:

1. Whether the applied-for gTLD is identical or similar, including in appearance, phonetic sound or meaning, to the name or acronym of the objecting IGO;

2. Historical coexistence of the IGO and the applicant's use of a similar name or acronym. Factors considered may include:
  - a. Level of global recognition of both entities;
  - b. Length of time the entities have been in existence;
  - c. Public historical evidence of their existence, which may include whether the objecting IGO has communicated its name or abbreviation under Article 6*ter* of the Paris Convention for the Protection of Industrial Property.
3. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the TLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise of the objecting IGO's name or acronym;
4. Whether and to what extent the applicant has been commonly known by the sign corresponding to the applied-for gTLD, and if so, whether any purported or likely use of the gTLD by the applicant is consistent therewith and bona fide; and
5. Whether the applicant's intended use of the applied-for gTLD would create a likelihood of confusion with the objecting IGO's name or acronym as to the source, sponsorship, affiliation, or endorsement of the TLD.

### 3.54.3 *{Limited Public Interest Objection}*

An expert panel hearing a *{Limited Public Interest objection}* will consider whether the applied-for gTLD string is contrary to general principles of international law for morality and public order.

Examples of instruments containing such general principles include:

- The Universal Declaration of Human Rights (UDHR)
- The International Covenant on Civil and Political Rights (ICCPR)
- The Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW)

- The International Convention on the Elimination of All Forms of Racial Discrimination
- Declaration on the Elimination of Violence against Women
- The International Covenant on Economic, Social, and Cultural Rights
- The Convention against Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment
- The International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families
- Slavery Convention
- Convention on the Prevention and Punishment of the Crime of Genocide
- Convention on the Rights of the Child

Note that these are included to serve as examples, rather than an exhaustive list. It should be noted that these instruments vary in their ratification status. Additionally, states may limit the scope of certain provisions through reservations and declarations indicating how they will interpret and apply certain provisions. National laws not based on principles of international law are not a valid ground for a [Limited Public Interest objection](#).

Under these principles, everyone has the right to freedom of expression, but the exercise of this right carries with it special duties and responsibilities. Accordingly, certain limited restrictions may apply.

The grounds upon which an applied-for gTLD string may be considered contrary to generally accepted legal norms relating to morality and public order that are recognized under principles of international law are:

- Incitement to or promotion of violent lawless action;
- Incitement to or promotion of discrimination based upon race, color, gender, ethnicity, religion or national origin, [or other similar types of discrimination that violate generally accepted legal norms recognized under principles of international law](#);
- Incitement to or promotion of child pornography or other sexual abuse of children; or

- A determination that an applied-for gTLD string would be contrary to specific principles of international law as reflected in relevant international instruments of law.

The panel will conduct their analysis on the basis of the applied-for gTLD string itself. The panel may, if needed, use as additional context the intended purpose of the TLD as stated in the application.

#### 3.54.4 Community Objection

---

The four tests described here will enable a DRSP panel to determine whether there is substantial opposition from a significant portion of the community to which the string may be targeted. For an objection to be successful, the objector must prove that:

- The community invoked by the objector is a clearly delineated community; and
- Community opposition to the application is substantial; and
- There is a strong association between the community invoked and the applied-for gTLD string; and
- ~~The application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted. There is a likelihood of material detriment to the community named by the objector, and the broader Internet community, if the gTLD application is approved.~~

Each of these tests is described in further detail below.

**Community** – The objector must prove that the community expressing opposition can be regarded as a clearly delineated community. A panel could balance a number of factors to determine this, including but not limited to:

- The level of public recognition of the group as a community at a local and/or global level;
- The level of formal boundaries around the community and what persons or entities are considered to form the community;
- The length of time the community has been in existence;

- The global distribution of the community (this may not apply if the community is territorial); and
- The number of people or entities that make up the community.

If opposition by a number of people/entities is found, but the group represented by the objector is not determined to be a clearly delineated community, the objection will fail.

**Substantial Opposition** – The objector must prove substantial opposition within the community it has identified itself as representing. A panel could balance a number of factors to determine whether there is substantial opposition, including but not limited to:

- Number of expressions of opposition relative to the composition of the community;
- The representative nature of entities expressing opposition;
- Level of recognized stature or weight among sources of opposition;
- Distribution or diversity among sources of expressions of opposition, including:
  - Regional
  - Subsectors of community
  - Leadership of community
  - Membership of community
- Historical defense of the community in other contexts; and
- Costs incurred by objector in expressing opposition, including other channels the objector may have used to convey opposition.

If some opposition within the community is determined, but it does not meet the standard of substantial opposition, the objection will fail.

**Targeting** – The objector must prove a strong association between the applied-for gTLD string and the community represented by the objector. Factors that could be balanced by a panel to determine this include but are not limited to:

- Statements contained in application;

- Other public statements by the applicant;
- Associations by the public.

If opposition by a community is determined, but there is no strong association between the community and the applied-for gTLD string, the objection will fail.

**Detriment** – The objector must prove that the application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted. its associated community and the broader Internet community. An allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a finding of material detriment.

Factors that could be used by a panel in making this determination include but are not limited to:

- Nature and extent of damage to the reputation of the community represented by the objector that would result from the applicant's operation of the applied-for gTLD string;
- Evidence that the applicant is not acting or does not intend to act in accordance with the interests of the community or of users more widely, including evidence that the applicant has not proposed or does not intend to institute effective security protection for user interests;
- Interference with the core activities of the community that would result from the applicant's operation of the applied-for gTLD string;
- Dependence of the community represented by the objector on the DNS for its core activities;
- Nature and extent of concrete or economic damage to the community represented by the objector, ~~and the broader Internet community~~ that would result from the applicant's operation of the applied-for gTLD string; and
- Level of certainty that alleged detrimental outcomes would occur.

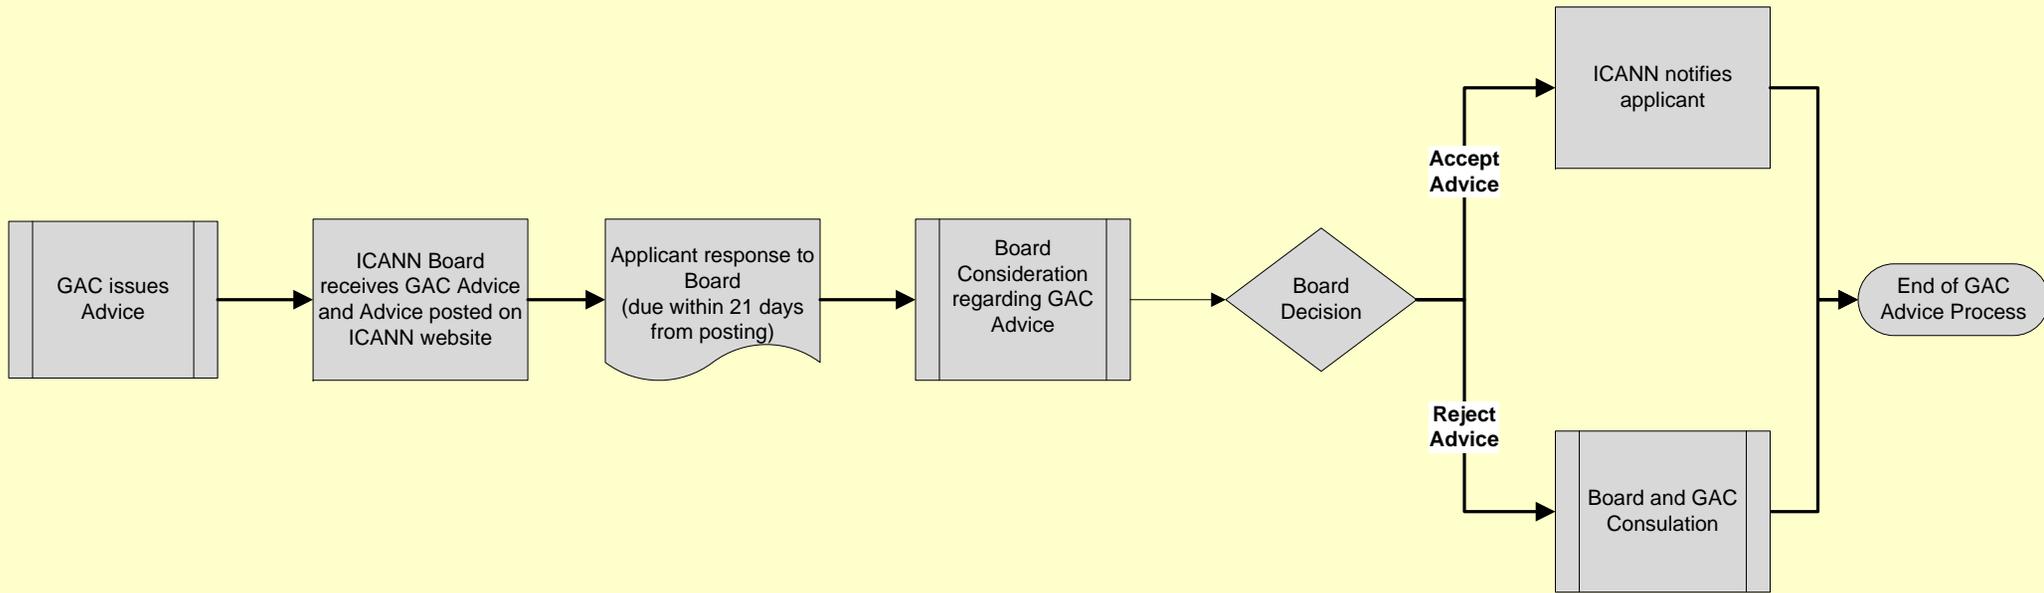

If opposition by a community is determined, but there is no likelihood of material detriment to the targeted community resulting from the applicant's operation of the applied-for gTLD, the objection will fail.

The objector must meet all four tests in the standard for the objection to prevail.<sup>7</sup>

---

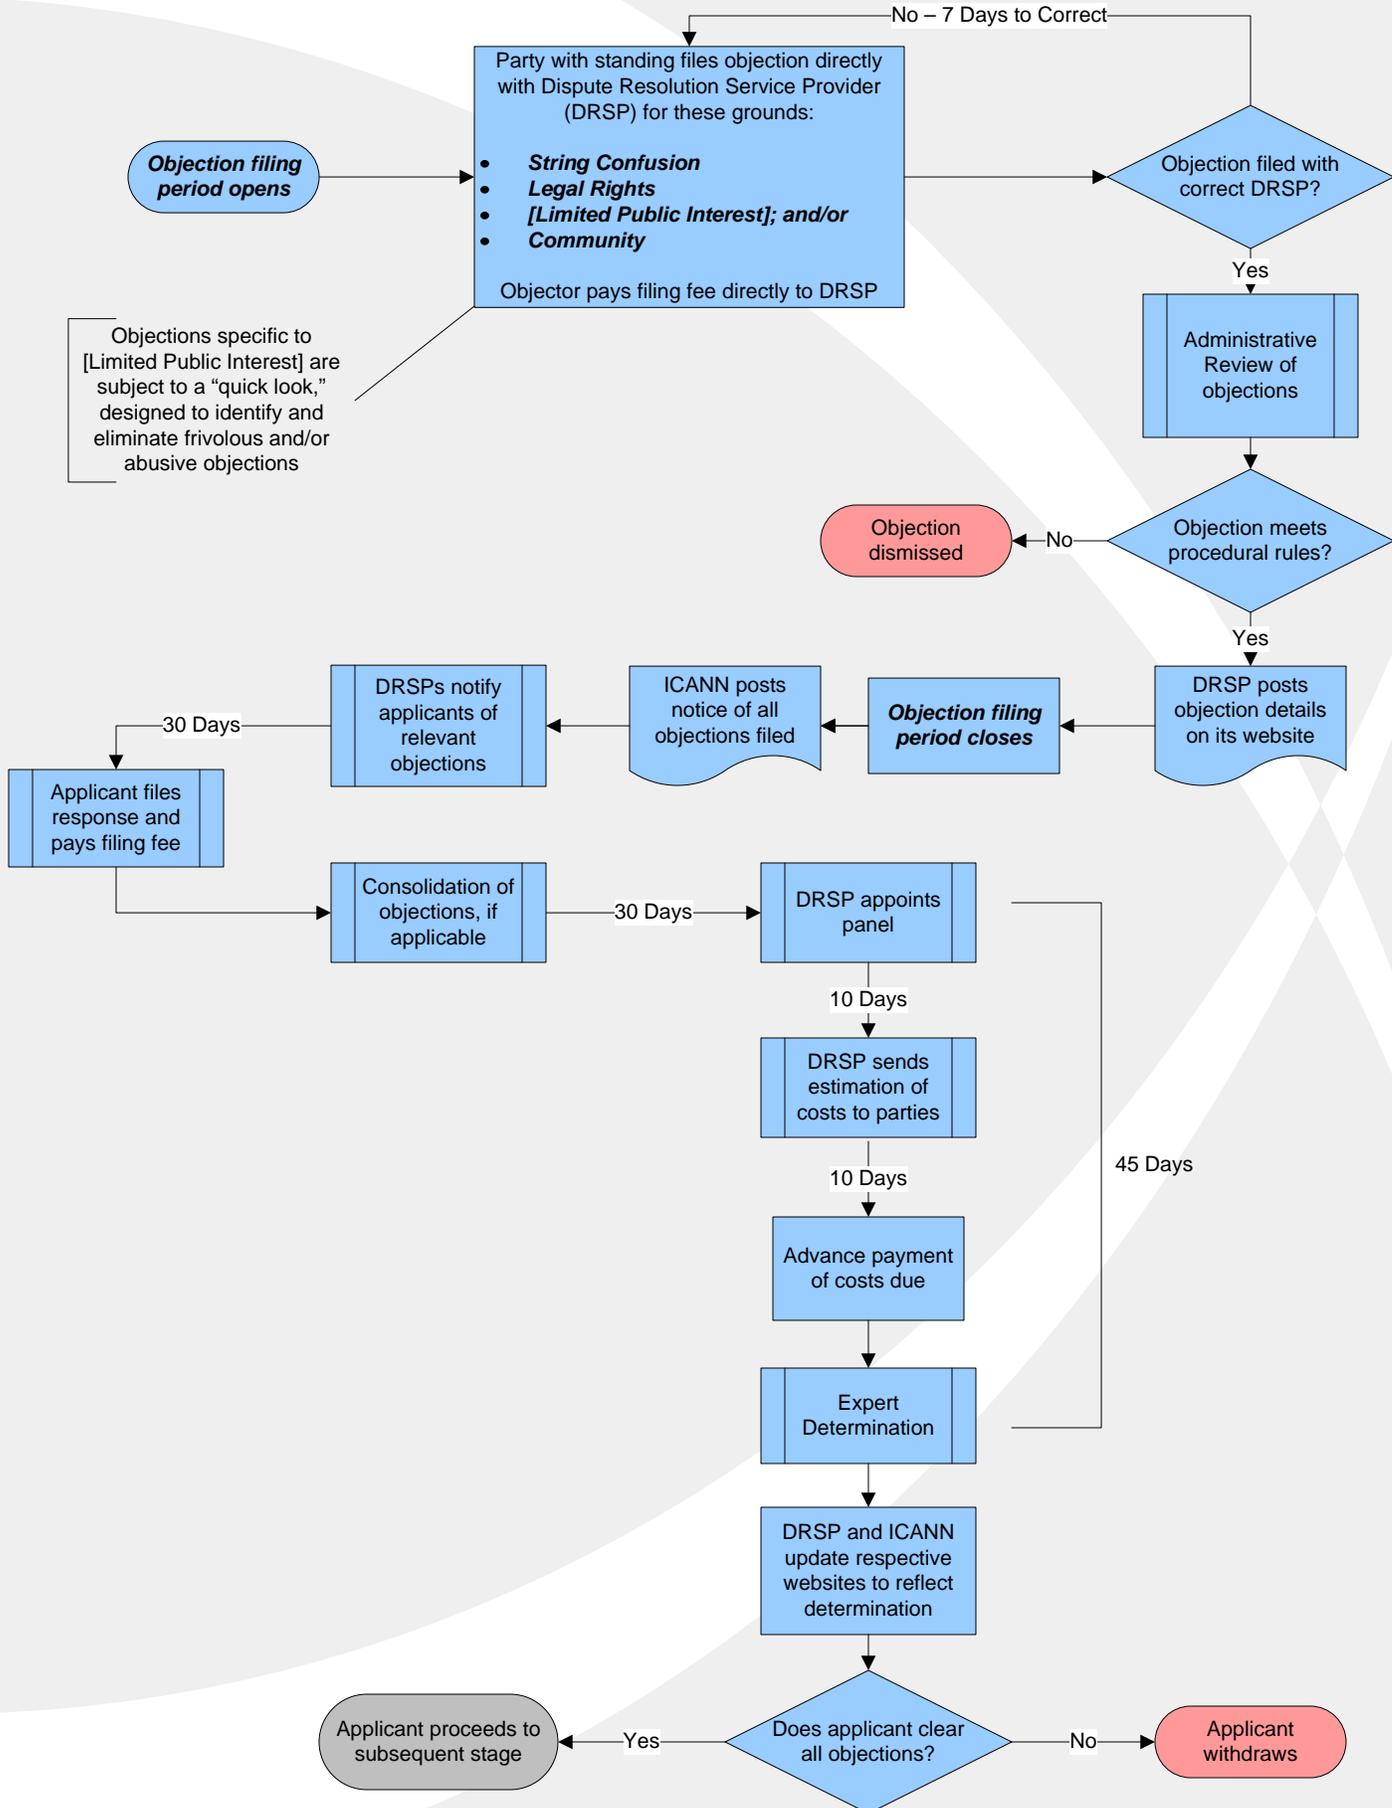

<sup>7</sup> ~~After careful consideration of community feedback on this section, the complete defense has been eliminated. However, in order to prevail in a community objection, the objector must prove an elevated level of likely detriment.~~

# Draft – New gTLD Program - GAC Advice on New gTLDs

Note: Process depicts scenario in which GAC issues consensus advice that an application should not proceed

# DRAFT - New gTLD Program – Objection and Dispute Resolution

---

# *Attachment to Module 3*

---

## *New gTLD Dispute Resolution Procedure*

These Procedures were designed with an eye toward timely and efficient dispute resolution. As part of the New gTLD Program, these Procedures apply to all proceedings administered by each of the dispute resolution service providers (DRSP). Each of the DRSPs has a specific set of rules that will also apply to such proceedings.

## **NEW gTLD DISPUTE RESOLUTION PROCEDURE**

### **Article 1. ICANN's New gTLD Program**

- (a) The Internet Corporation for Assigned Names and Numbers ("ICANN") has implemented a program for the introduction of new generic Top-Level Domain Names ("gTLDs") in the internet. There will be a succession of rounds, during which applicants may apply for new gTLDs, in accordance with terms and conditions set by ICANN.
- (b) The new gTLD program includes a dispute resolution procedure, pursuant to which disputes between a person or entity who applies for a new gTLD and a person or entity who objects to that gTLD are resolved in accordance with this New gTLD Dispute Resolution Procedure (the "Procedure").
- (c) Dispute resolution proceedings shall be administered by a Dispute Resolution Service Provider ("DRSP") in accordance with this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (d) By applying for a new gTLD, an applicant accepts the applicability of this Procedure and the applicable DRSP's Rules that are identified in Article 4(b); by filing an objection to a new gTLD, an objector accepts the applicability of this Procedure and the applicable DRSP's Rules that are identified in Article 4(b). The parties cannot derogate from this Procedure without the express approval of ICANN and from the applicable DRSP Rules without the express approval of the relevant DRSP.

### **Article 2. Definitions**

- (a) The "Applicant" or "Respondent" is an entity that has applied to ICANN for a new gTLD and that will be the party responding to the Objection.
- (b) The "Objector" is one or more persons or entities who have filed an objection against a new gTLD for which an application has been submitted.
- (c) The "Panel" is the panel of Experts, comprising one or three "Experts," that has been constituted by a DRSP in accordance with this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (d) The "Expert Determination" is the decision upon the merits of the Objection that is rendered by a Panel in a proceeding conducted under this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (e) The grounds upon which an objection to a new gTLD may be filed are set out in full in [Module 3 of the Applicant Guidebook](#). Such grounds are identified in this Procedure, and are based upon the Final Report on the Introduction of New Generic Top-Level Domains, dated 7 August 2007, issued by the ICANN Generic Names Supporting Organization (GNSO), as follows:
  - (i) "String Confusion Objection" refers to the objection that the string comprising the potential gTLD is confusingly similar to an existing top-level domain or another string applied for in the same round of applications.
  - (ii) "Existing Legal Rights Objection" refers to the objection that the string comprising the potential new gTLD infringes the existing legal rights of others

that are recognized or enforceable under generally accepted and internationally recognized principles of law.

- (iii) "~~Limited Public Interest Objection~~" refers to the objection that the string comprising the potential new gTLD is contrary to generally accepted legal norms relating to morality and public order that are recognized under ~~international~~ principles of international law.
  - (iv) "Community Objection" refers to the objection that there is substantial opposition to the application from a significant portion of the community to which the string may be explicitly or implicitly targeted.
- (f) "DRSP Rules" are the rules of procedure of a particular DRSP that have been identified as being applicable to objection proceedings under this Procedure.

### **Article 3. Dispute Resolution Service Providers**

The various categories of disputes shall be administered by the following DRSPs:

- (a) String Confusion Objections shall be administered by the International Centre for Dispute Resolution.
- (b) Existing Legal Rights Objections shall be administered by the Arbitration and Mediation Center of the World Intellectual Property Organization.
- (c) ~~Limited Public Interest Objections~~ shall be administered by the International Centre for Expertise of the International Chamber of Commerce.
- (d) Community Objections shall be administered by the International Centre for Expertise of the International Chamber of Commerce.

### **Article 4. Applicable Rules**

- (a) All proceedings before the Panel shall be governed by this Procedure and by the DRSP Rules that apply to a particular category of objection. The outcome of the proceedings shall be deemed an Expert Determination, and the members of the Panel shall act as experts.
- (b) The applicable DRSP Rules are the following:
  - (i) For a String Confusion Objection, the applicable DRSP Rules are the ICDR Supplementary Procedures for ICANN's New gTLD Program.
  - (ii) For an Existing Legal Rights Objection, the applicable DRSP Rules are the WIPO Rules for New gTLD Dispute Resolution.
  - (iii) For a ~~Limited Public Interest Objection~~, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce.
  - (iv) For a Community Objection, Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce.
- (c) In the event of any discrepancy between this Procedure and the applicable DRSP Rules, this Procedure shall prevail.

- (d) The place of the proceedings, if relevant, shall be the location of the DRSP that is administering the proceedings.
- (e) In all cases, the Panel shall ensure that the parties are treated with equality, and that each party is given a reasonable opportunity to present its position.

**Article 5. Language**

- (a) The language of all submissions and proceedings under this Procedure shall be English.
- (b) Parties may submit supporting evidence in its original language, provided and subject to the authority of the Panel to determine otherwise, that such evidence is accompanied by a certified or otherwise official English translation of all relevant text.

**Article 6. Communications and Time Limits**

- (a) All communications by the Parties with the DRSPs and Panels must be submitted electronically. A Party that wishes to make a submission that is not available in electronic form (e.g., evidentiary models) shall request leave from the Panel to do so, and the Panel, in its sole discretion, shall determine whether to accept the non-electronic submission.
- (b) The DRSP, Panel, Applicant, and Objector shall provide copies to one another of all correspondence (apart from confidential correspondence between the Panel and the DRSP and among the Panel) regarding the proceedings.
- (c) For the purpose of determining the date of commencement of a time limit, a notice or other communication shall be deemed to have been received on the day that it is transmitted in accordance with paragraphs (a) and (b) of this Article.
- (d) For the purpose of determining compliance with a time limit, a notice or other communication shall be deemed to have been sent, made or transmitted if it is dispatched in accordance with paragraphs (a) and (b) of this Article prior to or on the day of the expiration of the time limit.
- (e) For the purpose of calculating a period of time under this Procedure, such period shall begin to run on the day following the day when a notice or other communication is received.
- (f) Unless otherwise stated, all time periods provided in the Procedure are calculated on the basis of calendar days

**Article 7. Filing of the Objection**

- (a) A person wishing to object to a new gTLD for which an application has been submitted may file an objection ("Objection"). Any Objection to a proposed new gTLD must be filed before the published closing date for the Objection Filing period.
- (b) The Objection must be filed with the appropriate DRSP, using a model form made available by that DRSP, with copies to ICANN and the Applicant.
- (c) The electronic addresses for filing Objections are the following:
  - (i) A String Confusion Objection must be filed at: [●].
  - (ii) An Existing Legal Rights Objection must be filed at: [●].

- (iii) A  ~~Limited Public Interest Objection~~ must be filed at: [●].
- (iv) A Community Objection must be filed at: [●].
- (d) All Objections must be filed separately:
  - (i) An Objector who wishes to object to an application on more than one ground must file separate objections with the appropriate DRSP(s).
  - (ii) An Objector who wishes to object to more than one gTLD must file separate objections to each gTLD with the appropriate DRSP(s).
- (e) If an Objection is filed with the wrong DRSP, that DRSP shall promptly notify the Objector ~~and the DRSP with whom the Objection was wrongly filed,~~ of the error and that DRSP shall not process the incorrectly filed Objection. The Objector may then cure the error by filing its Objection with the correct DRSP within seven (7) days of its receipt of the error notice, failing which the Objection shall be disregarded. If the Objection is filed with the correct DRSP within seven (7) days of its receipt of the error notice but after the lapse of the time for submitting an Objection stipulation by Article 7(a) of this Procedure, it shall be deemed to be within this time limit.

## **Article 8. Content of the Objection**

- (a) The Objection shall contain, *inter alia*, the following information:
  - (i) The names and contact information (address, telephone number, email address, etc.) of the Objector;
  - (ii) A statement of the Objector's basis for standing; and
  - (iii) A description of the basis for the Objection, including:
    - (aa) A statement of the ground upon which the Objection is being filed, as stated in Article 2(e) of this Procedure;
    - (bb) An explanation of the validity of the Objection and why the objection should be upheld.
- (b) The substantive portion of the Objection shall be limited to 5,000 words or 20 pages, whichever is less, excluding attachments. The Objector shall also describe and provide copies of any supporting or official documents upon which the Objection is based.
- (c) At the same time as the Objection is filed, the Objector shall pay a filing fee in the amount set in accordance with the applicable DRSP Rules and include evidence of such payment in the Objection. In the event that the filing fee is not paid within ten (10) days of the receipt of the Objection by the DRSP, the Objection shall be dismissed without prejudice.

## **Article 9. Administrative Review of the Objection**

- (a) The DRSP shall conduct an administrative review of the Objection for the purpose of verifying compliance with Articles 5-8 of this Procedure and the applicable DRSP Rules, and inform the Objector, the Applicant and ICANN of the result of its review within fourteen (14) days of its receipt of the Objection. The DRSP may extend this time limit for reasons explained in the notification of such extension.

- (b) If the DRSP finds that the Objection complies with Articles 5-8 of this Procedure and the applicable DRSP Rules, the DRSP shall confirm that the Objection shall be registered for processing.
- (c) If the DRSP finds that the Objection does not comply with Articles 5-8 of this Procedure and the applicable DRSP Rules, the DRSP shall have the discretion to request that any administrative deficiencies in the Objection be corrected within five (5) days. If the deficiencies in the Objection are cured within the specified period but after the lapse of the time limit for submitting an Objection stipulated by Article 7(a) of this Procedure, the Objection shall be deemed to be within this time limit.
- (d) If the DRSP finds that the Objection does not comply with Articles 5-8 of this Procedure and the applicable DRSP Rules, and the deficiencies in the Objection are not corrected within the period specified in Article 9(c), the DRSP shall dismiss the Objection and close the proceedings, without prejudice to the Objector's submission of a new Objection that complies with this Procedure, provided that the Objection is filed within the deadline for filing such Objections. The DRSP's review of the Objection shall not interrupt the running of the time limit for submitting an Objection stipulated by Article 7(a) of this Procedure.
- (e) Immediately upon registering an Objection for processing, pursuant to Article 9(b), the DRSP shall post the following information about the Objection on its website: (i) the proposed string to which the Objection is directed; (ii) the names of the Objector and the Applicant; (iii) the grounds for the Objection; and (iv) the dates of the DRSP's receipt of the Objection.

#### **Article 10. ICANN's Dispute Announcement**

- (a) Within thirty (30) days of the deadline for filing Objections in relation to gTLD applications in a given round, ICANN shall publish a document on its website identifying all of the admissible Objections that have been filed (the "Dispute Announcement"). ICANN shall also directly inform each DRSP of the posting of the Dispute Announcement.
- (b) ICANN shall monitor the progress of all proceedings under this Procedure and shall take steps, where appropriate, to coordinate with any DRSP in relation to individual applications for which objections are pending before more than one DRSP.

#### **Article 11. Response to the Objection**

- (a) Upon receipt of the Dispute Announcement, each DRSP shall promptly send a notice to: (i) each Applicant for a new gTLD to which one or more admissible Objections have been filed with that DRSP; and (ii) the respective Objector(s).
- (b) The Applicant shall file a response to each Objection (the "Response"). The Response shall be filed within thirty (30) days of the transmission of the notice by the DRSP pursuant to Article 11(a).
- (c) The Response must be filed with the appropriate DRSP, using a model form made available by that DRSP, with copies to ICANN and the Objector.
- (d) The Response shall contain, inter alia, the following information:
  - (i) The names and contact information (address, telephone number, email address, etc.) of the Applicant; and

- (ii) A point-by-point response to the statements made in the Objection.
- (e) The substantive portion of the Response shall be limited to 5,000 words or 20 pages, whichever is less, excluding attachments. The Applicant shall also describe and provide copies of any supporting or official documents upon which the Response is based.
- (f) At the same time as the Response is filed, the Applicant shall pay a filing fee in the amount set and published by the relevant DRSP (which shall be the same as the filing fee paid by the Objector) and include evidence of such payment in the Response. In the event that the filing fee is not paid within ten (10) days of the receipt of the Response by the DRSP, the Applicant shall be deemed to be in default, any Response disregarded and the Objection shall be deemed successful.
- (g) If the DRSP finds that the Response does not comply with Articles 11(c) and (d)(1) of this Procedure and the applicable DRSP Rules, the DRSP shall have the discretion to request that any administrative deficiencies in the Response be corrected within five (5) days. If the administrative deficiencies in the Response are cured within the specified period but after the lapse of the time limit for submitting a Response pursuant to this Procedure, the Response shall be deemed to be within this time limit.
- (g) If the Applicant fails to file a Response to the Objection within the 30-day time limit, the Applicant shall be deemed to be in default and the Objection shall be deemed successful. No fees paid by the Applicant will be refunded in case of default.

## **Article 12. Consolidation of Objections**

- (a) The DRSP is encouraged, whenever possible and practicable, and as may be further stipulated in the applicable DRSP Rules, to consolidate Objections, for example, when more than one Objector has filed an Objection to the same gTLD on the same grounds. The DRSP shall endeavor to decide upon consolidation prior to issuing its notice pursuant to Article 11(a) and, where appropriate, shall inform the parties of the consolidation in that notice.
- (b) If the DRSP itself has not decided to consolidate two or more Objections, any Applicant or Objector may propose the consolidation of Objections within seven (7) days of the notice given by the DRSP pursuant to Article 11(a). If, following such a proposal, the DRSP decides to consolidate certain Objections, which decision must be made within 14 days of the notice given by the DRSP pursuant to Article 11(a), the deadline for the Applicant's Response in the consolidated proceeding shall be thirty (30) days from the Applicant's receipt of the DRSP's notice of consolidation.
- (c) In deciding whether to consolidate Objections, the DRSP shall weigh the benefits (in terms of time, cost, consistency of decisions, etc.) that may result from the consolidation against the possible prejudice or inconvenience that the consolidation may cause. The DRSP's determination on consolidation shall be final and not subject to appeal.
- (d) Objections based upon different grounds, as summarized in Article 2(e), shall not be consolidated.

## **Article 13. The Panel**

- (a) The DRSP shall select and appoint the Panel of Expert(s) within thirty (30) days after receiving the Response.

- (b) Number and specific qualifications of Expert(s):
  - (i) There shall be one Expert in proceedings involving a String Confusion Objection.
  - (ii) There shall be one Expert or, if all of the Parties so agree, three Experts with relevant experience in intellectual property rights disputes in proceedings involving an Existing Legal Rights Objection.
  - (iii) There shall be three Experts recognized as eminent jurists of international reputation, one of whom shall be designated as the Chair. The Chair shall be of a nationality different from the nationalities of the Applicant and of the Objector, in proceedings involving a ~~Limited Public Interest Objection~~.
  - (iv) There shall be one Expert in proceedings involving a Community Objection.
- (c) All Experts acting under this Procedure shall be impartial and independent of the parties. The applicable DRSP Rules stipulate the manner by which each Expert shall confirm and maintain their impartiality and independence.
- (d) The applicable DRSP Rules stipulate the procedures for challenging an Expert and replacing an Expert.
- (e) Unless required by a court of law or authorized in writing by the parties, an Expert shall not act in any capacity whatsoever, in any pending or future proceedings, whether judicial, arbitral or otherwise, relating to the matter referred to expert determination under this Procedure.

#### **Article 14. Costs**

- (a) Each DRSP shall determine the costs for the proceedings that it administers under this Procedure in accordance with the applicable DRSP Rules. Such costs shall cover the fees and expenses of the members of the Panel, as well as the administrative fees of the DRSP (the "Costs").
- (b) Within ten (10) days of constituting the Panel, the DRSP shall estimate the total Costs and request the Objector and the Applicant/Respondent each to pay in advance the full amount of the Costs to the DRSP. Each party shall make its advance payment of Costs within ten (10) days of receiving the DRSP's request for payment and submit to the DRSP evidence of such payment. The respective filing fees paid by the Parties shall be credited against the amounts due for this advance payment of Costs.
- (c) The DRSP may revise its estimate of the total Costs and request additional advance payments from the parties during the proceedings.
- (d) Failure to make an advance payment of Costs:
  - (i) If the Objector fails to make the advance payment of Costs, its Objection shall be dismissed and no fees that it has paid shall be refunded.
  - (ii) If the Applicant fails to make the advance payment of Costs, the Objection will be deemed to have been sustained and no fees that the Applicant has paid shall be refunded.

- (e) Upon the termination of the proceedings, after the Panel has rendered its Expert Determination, the DRSP shall refund to the prevailing party, as determined by the Panel, its advance payment(s) of Costs.

### **Article 15. Representation and Assistance**

- (a) The parties may be represented or assisted by persons of their choice.
- (b) Each party or party representative shall communicate the name, contact information and function of such persons to ICANN, the DRSP and the other party (or parties in case of consolidation).

### **Article 16. Negotiation and Mediation**

- (a) The parties are encouraged, but not required, to participate in negotiations and/or mediation at any time throughout the dispute resolution process aimed at settling their dispute amicably.
- (b) Each DRSP shall be able to propose, if requested by the parties, a person who could assist the parties as mediator.
- (c) A person who acts as mediator for the parties shall not serve as an Expert in a dispute between the parties under this Procedure or any other proceeding under this Procedure involving the same gTLD.
- (d) The conduct of negotiations or mediation shall not, *ipso facto*, be the basis for a suspension of the dispute resolution proceedings or the extension of any deadline under this Procedure. Upon the joint request of the parties, the DRSP or (after it has been constituted) the Panel may grant the extension of a deadline or the suspension of the proceedings. Absent exceptional circumstances, such extension or suspension shall not exceed thirty (30) days and shall not delay the administration of any other Objection.
- (e) If, during negotiations and/or mediation, the parties agree on a settlement of the matter referred to the DRSP under this Procedure, the parties shall inform the DRSP, which shall terminate the proceedings, subject to the parties' payment obligation under this Procedure having been satisfied, and inform ICANN and the parties accordingly.

### **Article 17. Additional Written Submissions**

- (a) The Panel may decide whether the parties shall submit any written statements in addition to the Objection and the Response, and it shall fix time limits for such submissions.
- (b) The time limits fixed by the Panel for additional written submissions shall not exceed thirty (30) days, unless the Panel, having consulted the DRSP, determines that exceptional circumstances justify a longer time limit.

### **Article 18. Evidence**

In order to achieve the goal of resolving disputes over new gTLDs rapidly and at reasonable cost, procedures for the production of documents shall be limited. In exceptional cases, the Panel may require a party to provide additional evidence.

## **Article 19. Hearings**

- (a) Disputes under this Procedure and the applicable DRSP Rules will usually be resolved without a hearing.
- (b) The Panel may decide, on its own initiative or at the request of a party, to hold a hearing only in extraordinary circumstances.
- (c) In the event that the Panel decides to hold a hearing:
  - (i) The Panel shall decide how and where the hearing shall be conducted.
  - (ii) In order to expedite the proceedings and minimize costs, the hearing shall be conducted by videoconference if possible.
  - (iii) The hearing shall be limited to one day, unless the Panel decides, in exceptional circumstances, that more than one day is required for the hearing.
  - (iv) The Panel shall decide whether the hearing will be open to the public or conducted in private.

## **Article 20. Standards**

- (a) ~~For each category of Objection identified in Article 2(e),~~ The Panel shall apply the standards that have been defined by ICANN. ~~for each category of Objection, and identified in Article 2(e).~~
- (b) In addition, the Panel may refer to and base its findings upon the statements and documents submitted and any rules or principles that it determines to be applicable.
- (c) The Objector bears the burden of proving that its Objection should be sustained in accordance with the applicable standards.

## **Article 21. The Expert Determination**

- (a) The DRSP and the Panel shall make reasonable efforts to ensure that the Expert Determination is rendered within forty-five (45) days of the constitution of the Panel. In specific circumstances such as consolidated cases and in consultation with the DRSP, if significant additional documentation is requested by the Panel, a brief extension may be allowed.
- (b) The Panel shall submit its Expert Determination in draft form to the DRSP's scrutiny as to form before it is signed, unless such scrutiny is specifically excluded by the applicable DRSP Rules. The modifications proposed by the DRSP to the Panel, if any, shall address only the form of the Expert Determination. The signed Expert Determination shall be communicated to the DRSP, which in turn will communicate that Expert Determination to the Parties and ICANN.
- (c) When the Panel comprises three Experts, the Expert Determination shall be made by a majority of the Experts.
- (d) The Expert Determination shall be in writing, shall identify the prevailing party and shall state the reasons upon which it is based. The remedies available to an Applicant or an Objector pursuant to any proceeding before a Panel shall be limited to the success or dismissal of an Objection and to the refund by the DRSP to the prevailing party, as determined by the Panel in its Expert Determination, of its advance payment(s) of

Costs pursuant to Article 14(e) of this Procedure and any relevant provisions of the applicable DRSP Rules.

- (e) The Expert Determination shall state the date when it is made, and it shall be signed by the Expert(s). If any Expert fails to sign the Expert Determination, it shall be accompanied by a statement of the reason for the absence of such signature.
- (f) In addition to providing electronic copies of its Expert Determination, the Panel shall provide a signed hard copy of the Expert Determination to the DRSP, unless the DRSP Rules provide for otherwise.
- (g) Unless the Panel decides otherwise, the Expert Determination shall be published in full on the DRSP's website.

### **Article 22. Exclusion of Liability**

In addition to any exclusion of liability stipulated by the applicable DRSP Rules, neither the Expert(s), nor the DRSP and its employees, nor ICANN and its Board members, employees and consultants shall be liable to any person for any act or omission in connection with any proceeding conducted under this Procedure.

### **Article 23. Modification of the Procedure**

- (a) ICANN may from time to time, in accordance with its Bylaws, modify this Procedure.
- (b) The version of this Procedure that is applicable to a dispute resolution proceeding is the version that was in effect on the day when the relevant application for a new gTLD is submitted.

# Applicant Guidebook

## April 2011 Discussion Draft Module 4

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

15 April 2011

---

# Module 4

---

## *String Contention Procedures*

This module describes situations in which contention over applied-for gTLD strings occurs, and the methods available to applicants for resolving such contention cases.

### *4.1 String Contention*

---

String contention occurs when either:

1. Two or more applicants for an identical gTLD string successfully complete all previous stages of the evaluation and dispute resolution processes; or
2. Two or more applicants for similar gTLD strings successfully complete all previous stages of the evaluation and dispute resolution processes, and the similarity of the strings is identified as creating a probability of user confusion if more than one of the strings is delegated.

ICANN will not approve applications for proposed gTLD strings that are identical or that would result in user confusion, called contending strings. If either situation 1 or 2 above occurs, such applications will proceed to contention resolution through either community priority evaluation, in certain cases, or through an auction. Both processes are described in this module. A group of applications for contending strings is referred to as a contention set.

(In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.)

#### *4.1.1 Identification of Contention Sets*

---

Contention sets are groups of applications containing identical or similar applied-for gTLD strings. Contention sets are identified during Initial Evaluation, following review of all applied-for gTLD strings. ICANN will publish preliminary contention sets once the String Similarity review is completed, and will update the contention sets as necessary during the evaluation and dispute resolution stages.

Applications for identical gTLD strings will be automatically assigned to a contention set. For example, if Applicant A and Applicant B both apply for .TLDSTRING, they will be identified as being in a contention set. Such testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. That is, two or more applicants whose applied-for strings or designated variants are variant strings according to an IDN table submitted to ICANN would be considered in direct contention with one another. For example, if one applicant applies for string A and another applies for string B, and strings A and B are variant TLD strings as defined in Module 1, then the two applications are in direct contention.

The String Similarity Panel will also review the entire pool of applied-for strings to determine whether the strings proposed in any two or more applications are so similar that they would create a probability of user confusion if allowed to coexist in the DNS. The panel will make such a determination for each pair of applied-for gTLD strings. The outcome of the String Similarity review described in Module 2 is the identification of contention sets among applications that have direct or indirect contention relationships with one another.

Two strings are in **direct contention** if they are identical or similar to one another. More than two applicants might be represented in a direct contention situation: if four different applicants applied for the same gTLD string, they would all be in direct contention with one another.

Two strings are in **indirect contention** if they are both in direct contention with a third string, but not with one another. The example that follows explains direct and indirect contention in greater detail.

In Figure 4-1, Strings A and B are an example of direct contention. Strings C and G are an example of indirect contention. C and G both contend with B, but not with one another. The figure as a whole is one contention set. A contention set consists of all applications that are linked by string contention to one another, directly or indirectly.

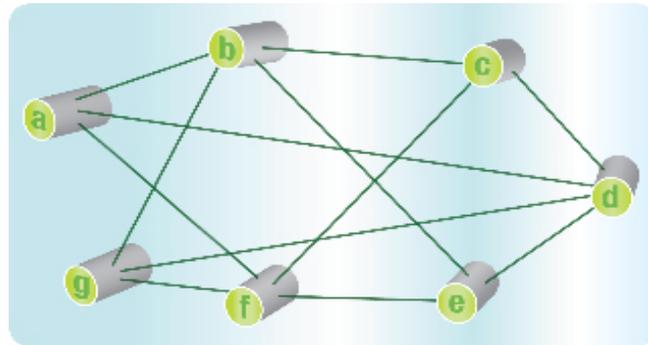

Figure 4-1 – This diagram represents one contention set, featuring both directly and indirectly contending strings.

While preliminary contention sets are determined during Initial Evaluation, the final configuration of the contention sets can only be established once the evaluation and dispute resolution process stages have concluded. This is because any application excluded through those processes might modify a contention set identified earlier.

A contention set may be augmented, split into two sets, or eliminated altogether as a result of an Extended Evaluation or dispute resolution proceeding. The composition of a contention set may also be modified as some applications may be voluntarily withdrawn throughout the process.

Refer to Figure 4-2: In contention set 1, applications D and G are eliminated. Application A is the only remaining application, so there is no contention left to resolve.

In contention set 2, all applications successfully complete Extended Evaluation and Dispute Resolution, so the original contention set remains to be resolved.

In contention set 3, application F is eliminated. Since application F was in direct contention with E and J, but E and J are not in contention with one other, the original contention set splits into two sets: one containing E and K in direct contention, and one containing I and J.

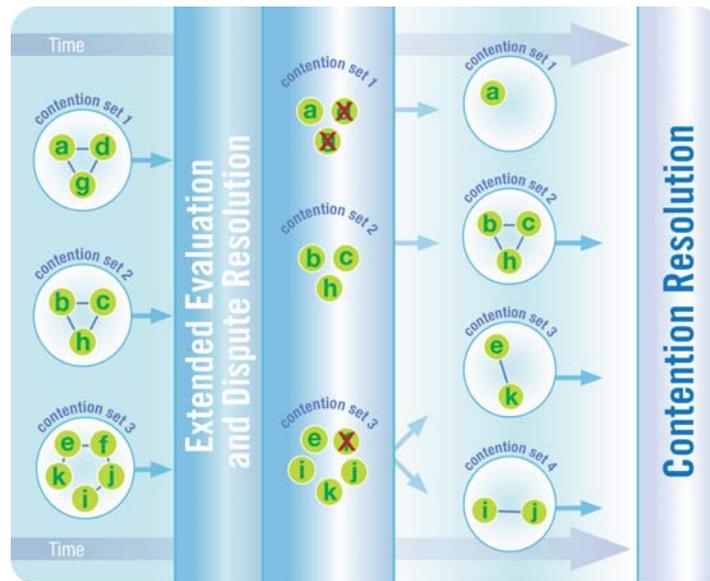

Figure 4-2 – Resolution of string contention cannot begin until all applicants within a contention set have completed all applicable previous stages.

The remaining contention cases must then be resolved through community priority evaluation or by other means, depending on the circumstances. In the string contention resolution stage, ICANN addresses each contention set to achieve an unambiguous resolution.

As described elsewhere in this guidebook, cases of contention might be resolved by community priority evaluation or an agreement among the parties. Absent that, the last-resort contention resolution mechanism will be an auction.

#### 4.1.2 *Impact of String Confusion Dispute Resolution Proceedings on Contention Sets*

If an applicant files a string confusion objection against another application (refer to Module 3), and the panel finds that user confusion is probable (that is, finds in favor of the objector), the two applications will be placed in direct contention with each other. Thus, the outcome of a dispute resolution proceeding based on a string confusion objection would be a new contention set structure for the relevant applications, augmenting the original contention set.

If an applicant files a string confusion objection against another application, and the panel finds that string confusion does not exist (that is, finds in favor of the responding applicant), the two applications will not be considered in direct contention with one another.

A dispute resolution outcome in the case of a string confusion objection filed by another applicant will not result in removal of an application from a previously established contention set.

#### *4.1.3 Self-Resolution of String Contention*

---

Applicants that are identified as being in contention are encouraged to reach a settlement or agreement among themselves that resolves the contention. This may occur at any stage of the process, once ICANN publicly posts the applications received and the preliminary contention sets on its website.

Applicants may resolve string contention in a manner whereby one or more applicants withdraw their applications. An applicant may not resolve string contention by selecting a new string or by replacing itself with a joint venture. It is understood that applicants may seek to establish joint ventures in their efforts to resolve string contention. However, material changes in applications (for example, combinations of applicants to resolve contention) will require re-evaluation. This might require additional fees or evaluation in a subsequent application round. Applicants are encouraged to resolve contention by combining in a way that does not materially affect the remaining application. Accordingly, new joint ventures must take place in a manner that does not materially change the application, to avoid being subject to re-evaluation.

#### *4.1.4 Possible Contention Resolution Outcomes*

---

An application that has successfully completed all previous stages and is no longer part of a contention set due to changes in the composition of the contention set (as described in subsection 4.1.1) or self-resolution by applicants in the contention set (as described in subsection 4.1.3) may proceed to the next stage.

An application that prevails in a contention resolution procedure, either community priority evaluation or auction, may proceed to the next stage.

In some cases, an applicant who is not the outright winner of a string contention resolution process can still proceed. This situation is explained in the following paragraphs.

If the strings within a given contention set are all identical, the applications are in direct contention with each other and there can only be one winner that proceeds to the next step.

However, where there are both direct and indirect contention situations within a set, more than one string may survive the resolution.

For example, consider a case where string A is in contention with B, and B is in contention with C, but C is not in contention with A. If A wins the contention resolution procedure, B is eliminated but C can proceed since C is not in direct contention with the winner and both strings can coexist in the DNS without risk for confusion.

## ***4.2 Community Priority Evaluation***

---

Community priority evaluation will only occur if a community-based applicant selects this option. Community priority evaluation can begin once all applications in the contention set have completed all previous stages of the process.

The community priority evaluation is an independent analysis. Scores received in the applicant reviews are not carried forward to the community priority evaluation. Each application participating in the community priority evaluation begins with a score of zero.

### ***4.2.1 Eligibility for Community Priority Evaluation***

---

As described in subsection 1.2.3 of Module 1, all applicants are required to identify whether their application type is:

- Community-based; or
- Standard.

Applicants designating their applications as community-based are also asked to respond to a set of questions in the application form to provide relevant information if a community priority evaluation occurs.

Only community-based applicants are eligible to participate in a community priority evaluation.

At the start of the contention resolution stage, all community-based applicants within remaining contention sets will be notified of the opportunity to opt for a community priority evaluation via submission of a deposit by a specified date. Only those applications for which a deposit has been received by the deadline will be scored in the community priority evaluation. Following the evaluation, the deposit will be refunded to applicants that score 14 or higher.

Before the community priority evaluation begins, the applicants who have elected to participate may be asked to provide additional information relevant to the community priority evaluation.

#### *4.2.2 Community Priority Evaluation Procedure*

---

Community priority evaluations for each eligible contention set will be performed by a community priority panel appointed by ICANN to review these applications. The panel's role is to determine whether any of the community-based applications fulfills the community priority criteria. Standard applicants within the contention set, if any, will not participate in the community priority evaluation.

If a single community-based application is found to meet the community priority criteria (see subsection 4.2.3 below), that applicant will be declared to prevail in the community priority evaluation and may proceed. If more than one community-based application is found to meet the criteria, the remaining contention between them will be resolved as follows:

- In the case where the applications are in indirect contention with one another (see subsection 4.1.1), they will both be allowed to proceed to the next stage. In this case, applications that are in direct contention with any of these community-based applications will be eliminated.
- In the case where the applications are in direct contention with one another, these applicants will proceed to an auction. If all parties agree and present a joint request, ICANN may postpone the auction for a three-month period while the parties attempt to reach a settlement before proceeding

to auction. This is a one-time option; ICANN will grant no more than one such request for each set of contending applications.

If none of the community-based applications are found to meet the criteria, then all of the parties in the contention set (both standard and community-based applicants) will proceed to an auction.

Results of each community priority evaluation will be posted when completed.

Applicants who are eliminated as a result of a community priority evaluation are eligible for a partial refund of the gTLD evaluation fee (see Module 1).

#### ***4.2.3 Community Priority Evaluation Criteria***

---

The Community Priority Panel will review and score the one or more community-based applications having elected the community priority evaluation against four criteria as listed below.

The scoring process is conceived to identify qualified community-based applications, while preventing both “false positives” (awarding undue priority to an application that refers to a “community” construed merely to get a sought-after generic word as a gTLD string) and “false negatives” (not awarding priority to a qualified community application). This calls for a holistic approach, taking multiple criteria into account, as reflected in the process. The scoring will be performed by a panel and be based on information provided in the application plus other relevant information available (such as public information regarding the community represented). The panel may also perform independent research, if deemed necessary to reach informed scoring decisions.

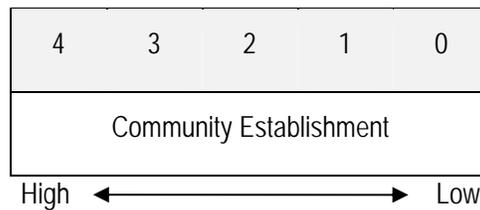

It should be noted that a qualified community application eliminates all directly contending standard applications, regardless of how well qualified the latter may be. This is a fundamental reason for very stringent requirements for qualification of a community-based application, as embodied in the criteria below. Accordingly, a finding by the panel that an application does not meet the scoring threshold to prevail in a community priority evaluation is not necessarily an indication the community itself is in some way inadequate or invalid.

The sequence of the criteria reflects the order in which they will be assessed by the panel. The utmost care has been taken to avoid any "double-counting" - any negative aspect found in assessing an application for one criterion should only be counted there and should not affect the assessment for other criteria.

An application must score at least 14 points to prevail in a community priority evaluation. The outcome will be determined according to the procedure described in subsection 4.2.2.

**Criterion #1: Community Establishment (0-4 points)**

A maximum of 4 points is possible on the Community Establishment criterion:

As measured by:

A. Delineation (2)

2	1	0
Clearly delineated, organized, and pre-existing community.	Clearly delineated and pre-existing community, but not fulfilling the requirements for a score of 2.	Insufficient delineation and pre-existence for a score of 1.

B. Extension (2)

2	1	0
Community of considerable size and longevity.	Community of either considerable size or longevity, but not fulfilling the requirements for a score of 2.	Community of neither considerable size nor longevity.

This section relates to the community as explicitly identified and defined according to statements in the application. (The implicit reach of the applied-for string is not considered here, but taken into account when scoring Criterion #2, "Nexus between Proposed String and Community.")

**Criterion 1 Definitions**

- "Community" - Usage of the expression "community" has evolved considerably from its Latin origin – "communitas" meaning "fellowship" – while still implying more of cohesion than a mere commonality of interest. Notably, as "community" is used throughout the application, there should be: (a) an awareness and recognition of a community among its members; (b) some understanding of the community's existence prior to September 2007 (when the new gTLD policy recommendations were completed); and (c) extended tenure or longevity—non-transience—into the future.
- "Delineation" relates to the membership of a community, where a clear and straight-forward membership definition scores high, while an unclear, dispersed or unbound definition scores low.
- "Pre-existing" means that a community has been active as such since before the new gTLD policy recommendations were completed in September 2007.
- "Organized" implies that there is at least one entity mainly dedicated to the community, with documented evidence of community activities.
- "Extension" relates to the dimensions of the community, regarding its number of members, geographical reach, and foreseeable activity lifetime, as further explained in the following.
- "Size" relates both to the number of members and the geographical reach of the community, and will be scored depending on the context rather than on absolute numbers - a geographic location community may count millions of members in a limited location, a language community may have

a million members with some spread over the globe, a community of service providers may have "only" some hundred members although well spread over the globe, just to mention some examples - all these can be regarded as of "considerable size."

- "Longevity" means that the pursuits of a community are of a lasting, non-transient nature.

**Criterion 1 Guidelines**

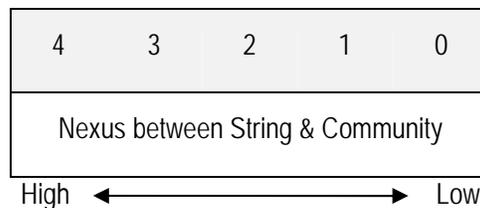

With respect to "Delineation" and "Extension," it should be noted that a community can consist of legal entities (for example, an association of suppliers of a particular service), of individuals (for example, a language community) or of a logical alliance of communities (for example, an international federation of national communities of a similar nature). All are viable as such, provided the requisite awareness and recognition of the community is at hand among the members. Otherwise the application would be seen as not relating to a real community and score 0 on both "Delineation" and "Extension."

With respect to "Delineation," if an application satisfactorily demonstrates all three relevant parameters (delineation, pre-existing and organized), then it scores a 2.

With respect to "Extension," if an application satisfactorily demonstrates both community size and longevity, it scores a 2.

**Criterion #2: Nexus between Proposed String and Community (0-4 points)**

A maximum of 4 points is possible on the Nexus criterion:

As measured by:

- A. Nexus (3)

3	2	0
The string matches the name of the community or is a well known short-form or abbreviation of the community name.	String identifies the community, but does not qualify for a score of 3.	String nexus does not fulfill the requirements for a score of 2.

B. Uniqueness (1)

1	0
String has no other significant meaning beyond identifying the community described in the application.	String does not fulfill the requirement for a score of 1.

This section evaluates the relevance of the string to the specific community that it claims to represent.

**Criterion 2 Definitions**

- "Name" of the community means the established name by which the community is commonly known by others. It may be, but does not need to be, the name of an organization dedicated to the community.
- "Identify" means that the applied for string closely describes the community or the community members, without over-reaching substantially beyond the community.

**Criterion 2 Guidelines**

With respect to "Nexus," for a score of 3, the essential aspect is that the applied-for string is commonly known by others as the identification / name of the community.

With respect to "Nexus," for a score of 2, the applied-for string should closely describe the community or the community members, without over-reaching substantially

beyond the community. As an example, a string could qualify for a score of 2 if it is a noun that the typical community member would naturally be called in the context. If the string appears excessively broad (such as, for example, a globally well-known but local tennis club applying for “.TENNIS”) then it would not qualify for a 2.

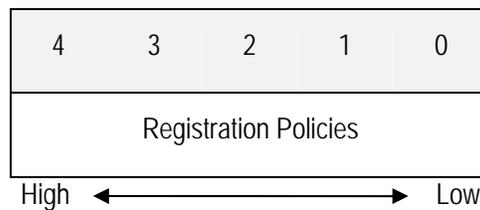

With respect to “Uniqueness,” “significant meaning” relates to the public in general, with consideration of the community language context added.

“Uniqueness” will be scored both with regard to the community context and from a general point of view. For example, a string for a particular geographic location community may seem unique from a general perspective, but would not score a 1 for uniqueness if it carries another significant meaning in the common language used in the relevant community location. The phrasing “...beyond identifying the community” in the score of 1 for “uniqueness” implies a requirement that the string does identify the community, i.e. scores 2 or 3 for “Nexus”, in order to be eligible for a score of 1 for “Uniqueness.”

It should be noted that “Uniqueness” is only about the *meaning* of the string - since the evaluation takes place to resolve contention there will obviously be other applications, community-based and/or standard, with identical or confusingly similar strings in the contention set to resolve, so the string will clearly not be “unique” in the sense of “alone.”

**Criterion #3: Registration Policies (0-4 points)**

A maximum of 4 points is possible on the Registration Policies criterion:

As measured by:

A. Eligibility (1)

1	0
restricted to community members.	unrestricted approach to eligibility.

B. Name selection (1)

1	0
Policies include name selection rules consistent with the articulated community-based purpose of the applied-for gTLD.	Policies do not fulfill the requirements for a score of 1.

C. Content and use (1)

1	0
Policies include rules for content and use consistent with the articulated community-based purpose of the applied-for gTLD.	Policies do not fulfill the requirements for a score of 1.

D. Enforcement (1)

1	0
Policies include specific enforcement measures (e.g. investigation practices, penalties, takedown procedures) constituting a coherent set with appropriate appeal mechanisms.	Policies do not fulfill the requirements for a score of 1.

This section evaluates the applicant's registration policies as indicated in the application. Registration policies are the conditions that the future registry will set for prospective registrants, i.e. those desiring to register second-level domain names under the registry.

**Criterion 3 Definitions**

- "Eligibility" means the qualifications that entities or individuals must have in order to be allowed as registrants by the registry.
- "Name selection" means the conditions that must be fulfilled for any second-level domain name to be deemed acceptable by the registry.
- "Content and use" means the restrictions stipulated by the registry as to the content provided in and the use of any second-level domain name in the registry.
- "Enforcement" means the tools and provisions set out by the registry to prevent and remedy any breaches of the conditions by registrants.

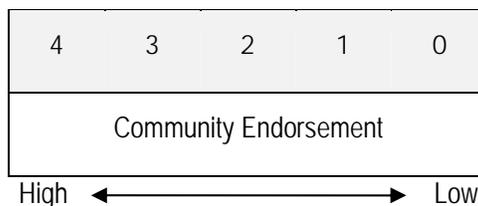

**Criterion 3 Guidelines**

With respect to "Eligibility," the limitation to community "members" can invoke a formal membership but can also be satisfied in other ways, depending on the structure and orientation of the community at hand. For example, for a geographic location community TLD, a limitation to members of the community can be achieved by requiring that the registrant's physical address is within the boundaries of the location.

With respect to "Name selection," "Content and use," and "Enforcement," scoring of applications against these sub-criteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The

restrictions and corresponding enforcement mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.

**Criterion #4: Community Endorsement (0-4 points)**

As measured by:

A. Support (2)

2	1	0
Applicant is, or has documented support from, the recognized community institution(s)/ member organization(s) or has otherwise documented authority to represent the community.	Documented support from at least one group with relevance, but insufficient support for a score of 2.	Insufficient proof of support for a score of 1.

B. Opposition (2)

2	1	0
No opposition of relevance.	Relevant opposition from one group of non-negligible size.	Relevant opposition from two or more groups of non-negligible size.

This section evaluates community support and/or opposition to the application. Support and opposition will be scored in relation to the communities explicitly

addressed as stated in the application, with due regard for the communities implicitly addressed by the string.

**Criterion 4 Definitions**

- "Recognized" means the institution(s)/organization(s) that, through membership or otherwise, are clearly recognized by the community members as representative of the community.
- "Relevance" and "relevant" refer to the communities explicitly and implicitly addressed. This means that opposition from communities not identified in the application but with an association to the applied-for string would be considered relevant.

**Criterion 4 Guidelines**

With respect to "Support," it follows that documented support from, for example, the only national association relevant to a particular community on a national level would score a 2 if the string is clearly oriented to that national level, but only a 1 if the string implicitly addresses similar communities in other nations.

Also with respect to "Support," the plurals in brackets for a score of 2, relate to cases of multiple institutions/organizations. In such cases there must be documented support from institutions/organizations representing a majority of the overall community addressed in order to score 2.

The applicant will score a 1 for "Support" if it does not have support from the majority of the recognized community institutions/member organizations, or does not provide full documentation that it has authority to represent the community with its application. A 0 will be scored on "Support" if the applicant fails to provide documentation showing support from recognized community institutions/community member organizations, or does not provide documentation showing that it has the authority to represent the community. It should be noted, however, that documented support from groups or communities that may be seen as implicitly addressed but have completely different orientations compared to the applicant community will not be required for a score of 2 regarding support.

To be taken into account as relevant support, such documentation must contain a description of the process and rationale used in arriving at the expression of support. Consideration of support is not based merely on the number of comments or expressions of support received.

When scoring “Opposition,” previous objections to the application as well as public comments during the same application round will be taken into account and assessed in this context. There will be no presumption that such objections or comments would prevent a score of 2 or lead to any particular score for “Opposition.” To be taken into account as relevant opposition, such objections or comments must be of a reasoned nature. Sources of opposition that are clearly spurious, unsubstantiated, made for a purpose incompatible with competition objectives, or filed for the purpose of obstruction will not be considered relevant.

### ***4.3 Auction: Mechanism of Last Resort***

---

It is expected that most cases of contention will be resolved by the community priority evaluation, or through voluntary agreement among the involved applicants. Auction is a tie-breaker method for resolving string contention among the applications within a contention set, if the contention has not been resolved by other means.

An auction will not take place to resolve contention in the case where the contending applications are for geographic names (as defined in Module 2). In this case, the applications will be suspended pending resolution by the applicants.

An auction will take place, where contention has not already been resolved, in the case where an application for a geographic name is in a contention set with applications for similar strings that have not been identified as geographic names.

In practice, ICANN expects that most contention cases will be resolved through other means before reaching the

auction stage. There is a possibility that significant funding will accrue to ICANN as a result of one or more auctions.<sup>1</sup>

#### *4.3.1 Auction Procedures*

---

An auction of two or more applications within a contention set is conducted as follows. The auctioneer successively increases the prices associated with applications within the contention set, and the respective applicants indicate their willingness to pay these prices. As the prices rise, applicants will successively choose to exit from the auction. When a sufficient number of applications have been eliminated so that no direct contentions remain (i.e., the remaining applications are no longer in contention with one another and all the relevant strings can be delegated as TLDs), the auction will be deemed to conclude. At the auction's conclusion, the applicants with remaining applications will pay the resulting prices and proceed toward delegation. This procedure is referred to as an "ascending-clock auction."

This section provides applicants an informal introduction to the practicalities of participation in an ascending-clock auction. It is intended only as a general introduction and is only preliminary. The detailed set of Auction Rules will be available prior to the commencement of any auction proceedings. If any conflict arises between this module and the auction rules, the auction rules will prevail.

For simplicity, this section will describe the situation where a contention set consists of two or more applications for identical strings.

---

<sup>1</sup> The purpose of an auction is to resolve contention in a clear, objective manner. Proceeds from auctions will be reserved and earmarked until the uses of the proceeds are determined. It is planned that costs of the new gTLD program will offset by fees, so any funds coming from a last resort contention resolution mechanism such as auctions would result (after paying for the auction process) in additional funding. Therefore, consideration of a last resort contention mechanism should include the uses of funds. Funds must be earmarked separately and used in a manner that supports directly ICANN's Mission and Core Values and also maintains its not for profit status.

Possible uses include formation of a foundation with a clear mission and a transparent way to allocate funds to projects that are of interest to the greater Internet community, such as grants to support new gTLD applications or registry operators from communities in subsequent gTLD rounds, the creation of an ICANN-administered/community-based fund for specific projects for the benefit of the Internet community, the creation of a registry continuity fund for the protection of registrants (ensuring that funds would be in place to support the operation of a gTLD registry until a successor could be found), or establishment of a security fund to expand use of secure protocols, conduct research, and support standards development organizations in accordance with ICANN's security and stability mission.

Further detail on the potential uses of funds will be provided with updated Applicant Guidebook materials.

All auctions will be conducted over the Internet, with participants placing their bids remotely using a web-based software system designed especially for auction. The auction software system will be compatible with current versions of most prevalent browsers, and will not require the local installation of any additional software.

Auction participants (“bidders”) will receive instructions for access to the online auction site. Access to the site will be password-protected and bids will be encrypted through SSL. If a bidder temporarily loses connection to the Internet, that bidder may be permitted to submit its bids in a given auction round by fax, according to procedures described in the auction rules. The auctions will generally be conducted to conclude quickly, ideally in a single day.

The auction will be carried out in a series of auction rounds, as illustrated in Figure 4-3. The sequence of events is as follows:

1. For each auction round, the auctioneer will announce in advance: (1) the start-of-round price, (2) the end-of-round price, and (3) the starting and ending times of the auction round. In the first auction round, the start-of-round price for all bidders in the auction will be USD 0. In later auction rounds, the start-of-round price will be its end-of-round price from the previous auction round.

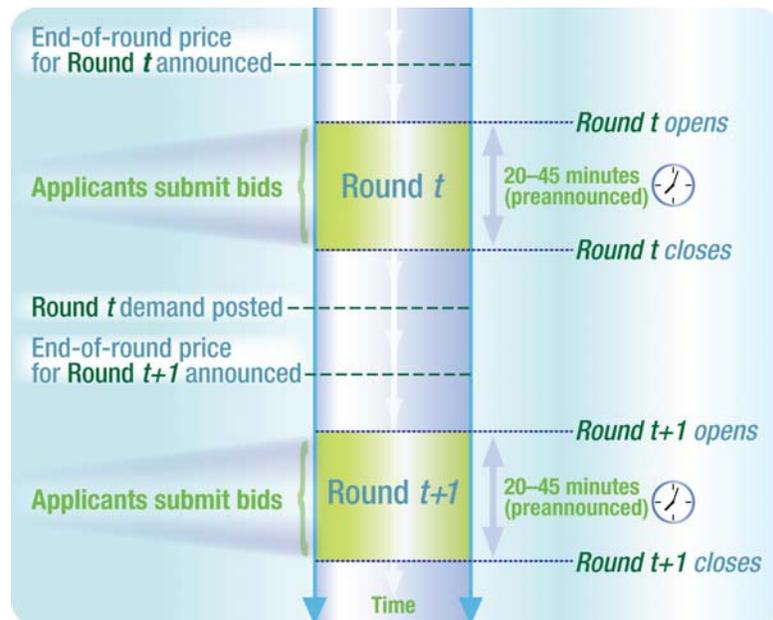

Figure 4-3 – Sequence of events during an ascending-clock auction.

2. During each auction round, bidders will be required to submit a bid or bids representing their willingness to pay within the range of intermediate prices between the start-of-round and end-of-round prices. In this way a bidder indicates its willingness to stay in the auction at all prices through and including the end-of-auction round price, or its wish to exit the auction at a price less than the end-of-auction round price, called the exit bid.
3. Exit is irrevocable. If a bidder exited the auction in a previous auction round, the bidder is not permitted to re-enter in the current auction round.
4. Bidders may submit their bid or bids at any time during the auction round.
5. Only bids that comply with all aspects of the auction rules will be considered valid. If more than one valid bid is submitted by a given bidder within the time limit of the auction round, the auctioneer will treat the last valid submitted bid as the actual bid.
6. At the end of each auction round, bids become the bidders' legally-binding offers to secure the relevant gTLD strings at prices up to the respective bid amounts, subject to closure of the auction in accordance with the auction rules. In later auction rounds, bids may be used to exit from the auction at subsequent higher prices.
7. After each auction round, the auctioneer will disclose the aggregate number of bidders remaining in the auction at the end-of-round prices for the auction round, and will announce the prices and times for the next auction round.
  - Each bid should consist of a single price associated with the application, and such price must be greater than or equal to the start-of-round price.
  - If the bid amount is strictly less than the end-of-round price, then the bid is treated as an exit bid at the specified amount, and it signifies the bidder's binding commitment to pay up to the bid amount if its application is approved.
  - If the bid amount is greater than or equal to the end-of-round price, then the bid signifies that the

bidder wishes to remain in the auction at all prices in the current auction round, and it signifies the bidder's binding commitment to pay up to the end-of-round price if its application is approved. Following such bid, the application cannot be eliminated within the current auction round.

- To the extent that the bid amount exceeds the end-of-round price, then the bid is also treated as a proxy bid to be carried forward to the next auction round. The bidder will be permitted to change the proxy bid amount in the next auction round, and the amount of the proxy bid will not constrain the bidder's ability to submit any valid bid amount in the next auction round.
  - No bidder is permitted to submit a bid for any application for which an exit bid was received in a prior auction round. That is, once an application has exited the auction, it may not return.
  - If no valid bid is submitted within a given auction round for an application that remains in the auction, then the bid amount is taken to be the amount of the proxy bid, if any, carried forward from the previous auction round or, if none, the bid is taken to be an exit bid at the start-of-round price for the current auction round.
8. This process continues, with the auctioneer increasing the price range for each given TLD string in each auction round, until there is one remaining bidder at the end-of-round price. After an auction round in which this condition is satisfied, the auction concludes and the auctioneer determines the clearing price. The last remaining application is deemed the successful application, and the associated bidder is obligated to pay the clearing price.

Figure 4-4 illustrates how an auction for five contending applications might progress.

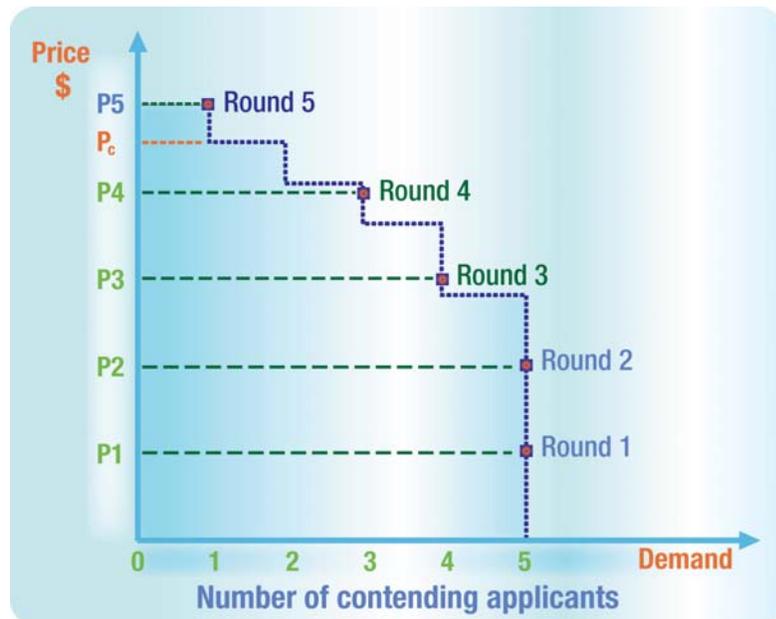

Figure 4-4 – Example of an auction for five mutually-contending applications.

- Before the first auction round, the auctioneer announces the end-of-round price  $P_1$ .
- During Auction round 1, a bid is submitted for each application. In Figure 4-4, all five bidders submit bids of at least  $P_1$ . Since the aggregate demand exceeds one, the auction proceeds to Auction round 2. The auctioneer discloses that five contending applications remained at  $P_1$  and announces the end-of-round price  $P_2$ .
- During Auction round 2, a bid is submitted for each application. In Figure 4-4, all five bidders submit bids of at least  $P_2$ . The auctioneer discloses that five contending applications remained at  $P_2$  and announces the end-of-round price  $P_3$ .
- During Auction round 3, one of the bidders submits an exit bid at slightly below  $P_3$ , while the other four bidders submit bids of at least  $P_3$ . The auctioneer discloses that four contending applications remained at  $P_3$  and announces the end-of-round price  $P_4$ .

- During Auction round 4, one of the bidders submits an exit bid midway between  $P_3$  and  $P_4$ , while the other three remaining bidders submit bids of at least  $P_4$ . The auctioneer discloses that three contending applications remained at  $P_4$  and announces the end-of-auction round price  $P_5$ .
- During Auction round 5, one of the bidders submits an exit bid at slightly above  $P_4$ , and one of the bidders submits an exit bid at  $P_c$  midway between  $P_4$  and  $P_5$ . The final bidder submits a bid greater than  $P_c$ . Since the aggregate demand at  $P_5$  does not exceed one, the auction concludes in Auction round 5. The application associated with the highest bid in Auction round 5 is deemed the successful application. The clearing price is  $P_c$ , as this is the lowest price at which aggregate demand can be met.

To the extent possible, auctions to resolve multiple string contention situations will be conducted simultaneously.

#### 4.3.1.1 Currency

For bids to be comparable, all bids in the auction will be submitted in any integer (whole) number of US dollars.

#### 4.3.1.2 Fees

A bidding deposit will be required of applicants participating in the auction, in an amount to be determined. The bidding deposit must be transmitted by wire transfer to a specified bank account specified by ICANN or its auction provider at a major international bank, to be received in advance of the auction date. The amount of the deposit will determine a bidding limit for each bidder: the bidding deposit will equal 10% of the bidding limit; and the bidder will not be permitted to submit any bid in excess of its bidding limit.

In order to avoid the need for bidders to pre-commit to a particular bidding limit, bidders may be given the option of making a specified deposit that will provide them with unlimited bidding authority for a given application. The amount of the deposit required for unlimited bidding authority will depend on the particular contention set and will be based on an assessment of the possible final prices within the auction.

All deposits from nondefaulting losing bidders will be returned following the close of the auction.

#### *4.3.2 Winning Bid Payments*

---

Any applicant that participates in an auction will be required to sign a bidder agreement that acknowledges its rights and responsibilities in the auction, including that its bids are legally binding commitments to pay the amount bid if it wins (i.e., if its application is approved), and to enter into the prescribed registry agreement with ICANN— together with a specified penalty for defaulting on payment of its winning bid or failing to enter into the required registry agreement.

The winning bidder in any auction will be required to pay the full amount of the final price within 20 business days of the end of the auction. Payment is to be made by wire transfer to the same international bank account as the bidding deposit, and the applicant's bidding deposit will be credited toward the final price.

In the event that a bidder anticipates that it would require a longer payment period than 20 business days due to verifiable government-imposed currency restrictions, the bidder may advise ICANN well in advance of the auction and ICANN will consider applying a longer payment period to all bidders within the same contention set.

Any winning bidder for whom the full amount of the final price is not received within 20 business days of the end of an auction is subject to being declared in default. At their sole discretion, ICANN and its auction provider may delay the declaration of default for a brief period, but only if they are convinced that receipt of full payment is imminent.

Any winning bidder for whom the full amount of the final price is received within 20 business days of the end of an auction retains the obligation to execute the required registry agreement within 90 days of the end of auction. Such winning bidder who does not execute the agreement within 90 days of the end of the auction is subject to being declared in default. At their sole discretion, ICANN and its auction provider may delay the declaration of default for a brief period, but only if they are convinced that execution of the registry agreement is imminent.

#### *4.3.3 Post-Default Procedures*

---

Once declared in default, any winning bidder is subject to immediate forfeiture of its position in the auction and assessment of default penalties. After a winning bidder is declared in default, the remaining bidders will receive an offer to have their applications accepted, one at a time, in descending order of their exit bids. In this way, the next bidder would be declared the winner subject to payment of its last bid price. The same default procedures and penalties are in place for any runner-up bidder receiving such an offer.

Each bidder that is offered the relevant gTLD will be given a specified period—typically, four business days—to respond as to whether it wants the gTLD. A bidder who responds in the affirmative will have 20 business days to submit its full payment. A bidder who declines such an offer cannot revert on that statement, has no further obligations in this context and will not be considered in default.

The penalty for defaulting on a winning bid will equal 10% of the defaulting bid.<sup>2</sup> Default penalties will be charged against any defaulting applicant's bidding deposit before the associated bidding deposit is returned.

#### *4.4 Contention Resolution and Contract Execution*

---

An applicant that has been declared the winner of a contention resolution process will proceed by entering into the contract execution step. (Refer to section 5.1 of Module 5.)

If a winner of the contention resolution procedure has not executed a contract within 90 days of the decision, ICANN has the right to deny that application and extend an offer to the runner-up applicant, if any, to proceed with its application. For example, in an auction, another applicant who would be considered the runner-up applicant might proceed toward delegation. This offer is at ICANN's option only. The runner-up applicant in a contention resolution process has no automatic right to an applied-for gTLD string if the first place winner does not execute a contract within a specified time.

---

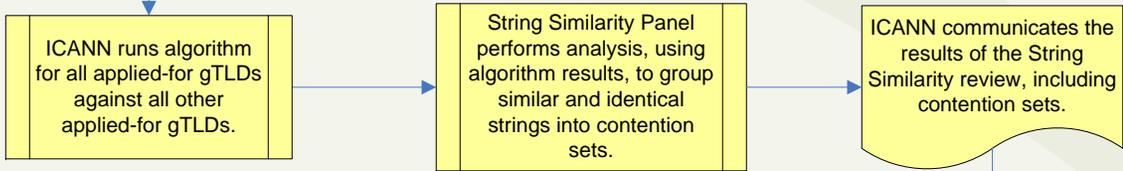

<sup>2</sup> If bidders were given the option of making a specified deposit that provided them with unlimited bidding authority for a given application and if the winning bidder utilized this option, then the penalty for defaulting on a winning bid will be the lesser of the following: (1) 10% of the defaulting bid, or (2) the specified deposit amount that provided the bidder with unlimited bidding authority.

# Applicant Guidebook

## April 2011 Discussion Draft Module 5

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

15 April 2011

---

# Module 5

---

## *Transition to Delegation*

This module describes the final steps required of an applicant for completion of the process, including execution of a registry agreement with ICANN and preparing for delegation of the new gTLD into the root zone.

### *5.1 Registry Agreement*

---

All applicants that have successfully completed the evaluation process—including, if necessary, the dispute resolution and string contention processes—are required to enter into a registry agreement with ICANN before proceeding to delegation.

After the close of each stage in the process, ICANN will send a notification to those successful applicants that are eligible for execution of a registry agreement at that time.

To proceed, applicants will be asked to provide specified information for purposes of executing the registry agreement:

1. Documentation of the applicant's ~~continued operations~~~~financial~~ instrument (see Specification 8 to the agreement).
2. Confirmation of contact information and signatory to the agreement.
3. Notice of any material changes requested to the terms of the agreement.
4. The applicant must report: (i) any ownership interest it holds in any registrar or reseller of registered names, (ii) if known, any ownership interest that a registrar or reseller of registered names holds in the applicant, and (iii) if the applicant controls, is controlled by, or is under common control with any registrar or reseller of registered names. ICANN retains the right to refer an application to a competition authority prior to entry into the registry agreement if it is determined that the registry-registrar cross-ownership

arrangements might raise competition issues. For this purpose "control" (including the terms "controlled by" and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

To ensure that an applicant continues to be a going concern in good legal standing, ICANN reserves the right to ask the applicant to submit additional updated documentation and information before entering into the registry agreement.

ICANN will begin processing registry agreements one month after the date of the notification to successful applicants. Requests will be handled in the order the complete information is received.

Generally, the process will include formal approval of the agreement without requiring additional Board review, so long as: the application passed all evaluation criteria; there are no material changes in circumstances; and there are no material changes to the base agreement. There may be other cases where the Board requests review of an application.

Eligible applicants are expected to have executed the registry agreement within nine (9) months of the notification date. Failure to do so may result in loss of eligibility, at ICANN's discretion. An applicant may request an extension of this time period for up to an additional nine (9) months if it can demonstrate, to ICANN's reasonable satisfaction, that it is working diligently and in good faith toward successfully completing the steps necessary for entry into the registry agreement.

The registry agreement can be reviewed in the attachment to this module. Certain provisions in the agreement are labeled as applicable to governmental and intergovernmental entities only. Private entities, even if supported by a government or IGO, would not ordinarily be eligible for these special provisions.

All successful applicants are expected to enter into the agreement substantially as written. Applicants may request

and negotiate terms by exception; however, this extends the time involved in executing the agreement. In the event that material changes to the agreement are requested, these must first be approved by the ICANN Board of Directors before execution of the agreement.

ICANN's Board of Directors has ultimate responsibility for the New gTLD Program. The Board reserves the right ~~under exceptional circumstances~~ to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community. ~~Under exceptional circumstances, the Board may individually consider a gTLD application. For example, the Board might individually consider an application~~ as a result of GAC advice or of the use of an ICANN accountability mechanism.

## 5.2 Pre-Delegation Testing

---

Each applicant will be required to complete pre-delegation technical testing as a prerequisite to delegation into the root zone. This pre-delegation test must be completed within the time period specified in the registry agreement.

The purpose of the pre-delegation technical test is to verify that the applicant has met its commitment to establish registry operations in accordance with the technical and operational criteria described in Module 2.

The test is also intended to indicate that the applicant can operate the gTLD in a stable and secure manner. All applicants will be tested on a pass/fail basis according to the requirements that follow.

The test elements cover both the DNS server operational infrastructure and registry system operations. In many cases the applicant will perform the test elements as instructed and provide documentation of the results to ICANN to demonstrate satisfactory performance. At ICANN's discretion, aspects of the applicant's self-certification documentation can be audited either on-site at the services delivery point of the registry or elsewhere as determined by ICANN.

### 5.2.1 Testing Procedures

---

The applicant may initiate the pre-delegation test by submitting to ICANN the Pre-Delegation form and

accompanying documents containing all of the following information:

- All name server names and IPv4/IPv6 addresses to be used in serving the new TLD data;
- If using anycast, the list of names and IPv4/IPv6 unicast addresses allowing the identification of each individual server in the anycast sets;
- If IDN is supported, the complete IDN tables used in the registry system;
- A test zone for the new TLD must be signed at test time and the valid key-set to be used at the time of testing must be provided to ICANN in the documentation, as well as the TLD DNSSEC Policy Statement (DPS);
- The executed agreement between the selected escrow agent and the applicant; and
- Self-certification documentation as described below for each test item.

ICANN will review the material submitted and in some cases perform tests in addition to those conducted by the applicant. After testing, ICANN will assemble a report with the outcome of the tests and provide that report to the applicant.

Any clarification request, additional information request, or other request generated in the process will be highlighted and listed in the report sent to the applicant.

ICANN may request the applicant to complete load tests considering an aggregated load where a single entity is performing registry services for multiple TLDs.

Once an applicant has met all of the pre-delegation testing requirements, it is eligible to request delegation of its applied-for gTLD.

If an applicant does not complete the pre-delegation steps within the time period specified in the registry agreement, ICANN reserves the right to terminate the registry agreement.

### 5.2.2 Test Elements: DNS Infrastructure

The first set of test elements concerns the DNS infrastructure of the new gTLD. In all tests of the DNS infrastructure, all requirements are independent of whether IPv4 or IPv6 is used. All tests shall be done both over IPv4 and IPv6, with reports providing results according to both protocols.

**UDP Support** -- The DNS infrastructure to which these tests apply comprises the complete set of servers and network infrastructure to be used by the chosen providers to deliver DNS service for the new gTLD to the Internet. The documentation provided by the applicant must include the results from a system performance test indicating available network and server capacity and an estimate of expected capacity during normal operation to ensure stable service as well as to adequately address Distributed Denial of Service (DDoS) attacks.

Self-certification documentation shall include data on load capacity, latency and network reachability.

Load capacity shall be reported using a table, and a corresponding graph, showing percentage of queries responded against an increasing number of queries per second generated from local (to the servers) traffic generators. The table shall include at least 20 data points and loads of UDP-based queries that will cause up to 10% query loss against a randomly selected subset of servers within the applicant's DNS infrastructure. Responses must either contain zone data or be NXDOMAIN or NODATA responses to be considered valid.

Query latency shall be reported in milliseconds as measured by DNS probes located just outside the border routers of the physical network hosting the name servers, from a network topology point of view.

Reachability will be documented by providing information on the transit and peering arrangements for the DNS server locations, listing the AS numbers of the transit providers or peers at each point of presence and available bandwidth at those points of presence.

**TCP support** -- TCP transport service for DNS queries and responses must be enabled and provisioned for expected load. ICANN will review the capacity self-certification documentation provided by the applicant and will perform

TCP reachability and transaction capability tests across a randomly selected subset of the name servers within the applicant's DNS infrastructure. In case of use of anycast, each individual server in each anycast set will be tested.

Self-certification documentation shall include data on load capacity, latency and external network reachability.

Load capacity shall be reported using a table, and a corresponding graph, showing percentage of queries that generated a valid (zone data, NODATA, or NXDOMAIN) response against an increasing number of queries per second generated from local (to the name servers) traffic generators. The table shall include at least 20 data points and loads that will cause up to 10% query loss (either due to connection timeout or connection reset) against a randomly selected subset of servers within the applicant's DNS infrastructure.

Query latency will be reported in milliseconds as measured by DNS probes located just outside the border routers of the physical network hosting the name servers, from a network topology point of view.

Reachability will be documented by providing records of TCP-based DNS queries from nodes external to the network hosting the servers. These locations may be the same as those used for measuring latency above.

***DNSSEC support*** -- Applicant must demonstrate support for EDNS(0) in its server infrastructure, the ability to return correct DNSSEC-related resource records such as DNSKEY, RRSIG, and NSEC/NSEC3 for the signed zone, and the ability to accept and publish DS resource records from second-level domain administrators. In particular, the applicant must demonstrate its ability to support the full life cycle of KSK and ZSK keys. ICANN will review the self-certification materials as well as test the reachability, response sizes, and DNS transaction capacity for DNS queries using the EDNS(0) protocol extension with the "DNSSEC OK" bit set for a randomly selected subset of all name servers within the applicant's DNS infrastructure. In case of use of anycast, each individual server in each anycast set will be tested.

Load capacity, query latency, and reachability shall be documented as for UDP and TCP above.

### 5.2.3 Test Elements: Registry Systems

---

As documented in the registry agreement, registries must provide support for EPP within their Shared Registration System, and provide Whois service both via port 43 and a web interface, in addition to support for the DNS. This section details the requirements for testing these registry systems.

**System performance** -- The registry system must scale to meet the performance requirements described in Specification [106](#) of the registry agreement and ICANN will require self-certification of compliance. ICANN will review the self-certification documentation provided by the applicant to verify adherence to these minimum requirements.

**Whois support** -- Applicant must provision Whois services for the anticipated load. ICANN will verify that Whois data is accessible over IPv4 and IPv6 via both TCP port 43 and via a web interface and review self-certification documentation regarding Whois transaction capacity. Response format according to Specification 4 of the registry agreement and access to Whois (both port 43 and via web) will be tested by ICANN remotely from various points on the Internet over both IPv4 and IPv6.

Self-certification documents shall describe the maximum number of queries per second successfully handled by both the port 43 servers as well as the web interface, together with an applicant-provided load expectation.

Additionally, a description of deployed control functions to detect and mitigate data mining of the Whois database shall be documented.

**EPP Support** -- As part of a shared registration service, applicant must provision EPP services for the anticipated load. ICANN will verify conformance to appropriate RFCs (including EPP extensions for DNSSEC). ICANN will also review self-certification documentation regarding EPP transaction capacity.

Documentation shall provide a maximum Transaction per Second rate for the EPP interface with 10 data points corresponding to registry database sizes from 0 (empty) to

the expected size after one year of operation, as determined by applicant.

Documentation shall also describe measures taken to handle load during initial registry operations, such as a land-rush period.

**IPv6 support** -- The ability of the registry to support registrars adding, changing, and removing IPv6 DNS records supplied by registrants will be tested by ICANN. If the registry supports EPP access via IPv6, this will be tested by ICANN remotely from various points on the Internet.

**DNSSEC support** -- ICANN will review the ability of the registry to support registrars adding, changing, and removing DNSSEC-related resource records as well as the registry's overall key management procedures. In particular, the applicant must demonstrate its ability to support the full life cycle of key changes for child domains. Inter-operation of the applicant's secure communication channels with the IANA for trust anchor material exchange will be verified.

The practice and policy document (also known as the DNSSEC Policy Statement or DPS), describing key material storage, access and usage for its own keys and the registrants' trust anchor material, is also reviewed as part of this step.

**IDN support** -- ICANN will verify the complete IDN table(s) used in the registry system. The table(s) must comply with the guidelines in <http://iana.org/procedures/idn-repository.html>.

Requirements related to IDN for Whois are being developed. After these requirements are developed, prospective registries will be expected to comply with published IDN-related Whois requirements as part of pre-delegation testing.

**Escrow deposit** -- The applicant-provided samples of data deposit that include both a full and an incremental deposit showing correct type and formatting of content will be reviewed. Special attention will be given to the agreement with the escrow provider to ensure that escrowed data can be released within 24 hours should it be necessary. ICANN may, at its option, ask an independent third party to

demonstrate the reconstitutability of the registry from escrowed data. ICANN may elect to test the data release process with the escrow agent.

### 5.3 Delegation Process

---

Upon notice of successful completion of the ICANN pre-delegation testing, applicants may initiate the process for delegation of the new gTLD into the root zone database.

This will include provision of additional information and completion of additional technical steps required for delegation. Information about the delegation process is available at <http://iana.org/domains/root/>.

### 5.4 Ongoing Operations

---

An applicant that is successfully delegated a gTLD will become a "Registry Operator." In being delegated the role of operating part of the Internet's domain name system, the applicant will be assuming a number of significant responsibilities. ICANN will hold all new gTLD operators accountable for the performance of their obligations under the registry agreement, and it is important that all applicants understand these responsibilities.

#### 5.4.1 What is Expected of a Registry Operator

---

The registry agreement defines the obligations of gTLD registry operators. A breach of the registry operator's obligations may result in ICANN compliance actions up to and including termination of the registry agreement. Prospective applicants are encouraged to review the following brief description of some of these responsibilities.

Note that this is a non-exhaustive list provided to potential applicants as an introduction to the responsibilities of a registry operator. For the complete and authoritative text, please refer to the registry agreement.

A registry operator is obligated to:

***Operate the TLD in a stable and secure manner.*** The registry operator is responsible for the entire technical operation of the TLD. As noted in RFC 1591<sup>1</sup>:

---

<sup>1</sup> See <http://www.rfc-editor.org/rfc/rfc1591.txt>

"The designated manager must do a satisfactory job of operating the DNS service for the domain. That is, the actual management of the assigning of domain names, delegating subdomains and operating nameservers must be done with technical competence. This includes keeping the central IR<sup>2</sup> (in the case of top-level domains) or other higher-level domain manager advised of the status of the domain, responding to requests in a timely manner, and operating the database with accuracy, robustness, and resilience."

The registry operator is required to comply with relevant technical standards in the form of RFCs and other guidelines. Additionally, the registry operator must meet performance specifications in areas such as system downtime and system response times (see Specifications [6](#) and [10](#) of the registry agreement).

***Comply with consensus policies and temporary policies.***

gTLD registry operators are required to comply with consensus policies. Consensus policies may relate to a range of topics such as issues affecting interoperability of the DNS, registry functional and performance specifications, database security and stability, or resolution of disputes over registration of domain names.

To be adopted as a consensus policy, a policy must be developed by the Generic Names Supporting Organization (GNSO)<sup>3</sup> following the process in Annex A of the ICANN Bylaws.<sup>4</sup> The policy development process involves deliberation and collaboration by the various stakeholder groups participating in the process, with multiple opportunities for input and comment by the public, and can take significant time.

Examples of existing consensus policies are the Inter-Registrar Transfer Policy (governing transfers of domain names between registrars), and the Registry Services Evaluation Policy (establishing a review of proposed new registry services for security and stability or competition concerns), although there are several more, as found at <http://www.icann.org/en/general/consensus-policies.htm>.

---

<sup>2</sup> IR is a historical reference to "Internet Registry," a function now performed by ICANN.

<sup>3</sup> <http://gns0.icann.org>

<sup>4</sup> <http://www.icann.org/en/general/bylaws.htm#AnnexA>

gTLD registry operators are obligated to comply with both existing consensus policies and those that are developed in the future. Once a consensus policy has been formally adopted, ICANN will provide gTLD registry operators with notice of the requirement to implement the new policy and the effective date.

In addition, the ICANN Board may, when required by circumstances, establish a temporary policy necessary to maintain the stability or security of registry services or the DNS. In such a case, all gTLD registry operators will be required to comply with the temporary policy for the designated period of time.

For more information, see Specification 1 of the registry agreement.

***Implement start-up rights protection measures.*** The registry operator must implement, at a minimum, ~~either~~ a Sunrise period ~~or~~ and a Trademark Claims service during the start-up phases for registration in the TLD, as provided in the registry agreement. These mechanisms will be supported by the established Trademark Clearinghouse as indicated by ICANN.

The Sunrise period allows eligible rightsholders an early opportunity to register names in the TLD.

The Trademark Claims service provides notice to potential registrants of existing trademark rights, as well as notice to rightsholders of relevant names registered. Registry operators may continue offering the Trademark Claims service after the relevant start-up phases have concluded.

For more information, see Specification 7 of the registry agreement and the Trademark Clearinghouse model accompanying this module.

***Implement post-launch rights protection measures.*** The registry operator is required to implement decisions made under the Uniform Rapid Suspension (URS) procedure, including suspension of specific domain names within the registry. The registry operator is also required to comply with and implement decisions made according to the Trademark Post-Delegation Dispute Resolution Policy (PDDRP).

The required measures are described fully in the URS and PDDRP procedures accompanying this module. Registry

operators may introduce additional rights protection measures relevant to the particular gTLD.

***Implement measures for protection of country and territory names in the new gTLD.*** All new gTLD registry operators are required to provide certain minimum protections for country and territory names, including an initial reservation requirement and establishment of applicable rules and procedures for release of these names. Registry operators are encouraged to implement measures for protection of geographical names in addition to those required by the agreement, according to the needs and interests of each gTLD's particular circumstances. (See Specification 5 of the registry agreement).

***Pay recurring fees to ICANN.*** In addition to supporting expenditures made to accomplish the objectives set out in ICANN's mission statement, these funds enable the support required for new gTLDs, including: contractual compliance, registry liaison, increased registrar accreditations, and other registry support activities. The fees include both a fixed component (USD 25,000 annually) and, once the TLD has passed a threshold size, a variable fee based on transaction volume. See Article 6 of the registry agreement.

***Regularly deposit data into escrow.*** This serves an important role in registrant protection and continuity for certain instances where the registry or one aspect of the registry operations experiences a system failure or loss of data. (See Specification 2 of the registry agreement.)

***Deliver monthly reports in a timely manner.*** A registry operator must submit a report to ICANN on a monthly basis. The report includes registrar transactions for the month and is used by ICANN for calculation of registrar fees. (See Specification 3 of the registry agreement.)

***Provide Whois service.*** A registry operator must provide a publicly available Whois service for registered domain names in the TLD. (See Specification 4 of the registry agreement.)

***Maintain partnerships with ICANN-accredited registrars.*** A registry operator creates a Registry-Registrar Agreement (RRA) to define requirements for its registrars. This must include certain terms that are specified in the Registry Agreement, and may include additional terms specific to

the TLD. A registry operator must provide non-discriminatory access to its registry services to all ICANN-accredited registrars with whom it has entered into an RRA, and who are in compliance with the requirements. This includes providing advance notice of pricing changes to all registrars, in compliance with the time frames specified in the agreement. (See Article 2 of the registry agreement.)

***Maintain an abuse point of contact.*** A registry operator must maintain and publish on its website a single point of contact responsible for addressing matters requiring expedited attention and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. (See Specification 6 of the registry agreement.)

***Cooperate with contractual compliance audits.*** To maintain a level playing field and a consistent operating environment, ICANN staff performs periodic audits to assess contractual compliance and address any resulting problems. A registry operator must provide documents and information requested by ICANN that are necessary to perform such audits. (See Article 2 of the registry agreement.)

***Maintain a Continued Operations Instrument.*** A registry operator must, at the time of the agreement, have in place a continued operations instrument sufficient to fund basic registry operations for a period of three (3) years. This requirement remains in place for five (5) years after delegation of the TLD, after which time the registry operator is no longer required to maintain the continued operations instrument. (See Specification 8 to the registry agreement.)

***Maintain community-based policies and procedures.*** If the registry operator designated its application as community-based at the time of the application, the registry operator has requirements in its registry agreement to maintain the community-based policies and procedures it specified in its application. The registry operator is bound by the Registry Restrictions Dispute Resolution Procedure with respect to disputes regarding execution of its community-based policies and procedures. (See Article 2 to the registry agreement.)

***Have continuity and transition plans in place.*** This includes performing failover testing on a regular basis. In the event that a transition to a new registry operator becomes

necessary, the registry operator is expected to cooperate by consulting with ICANN on the appropriate successor, providing the data required to enable a smooth transition, and complying with the applicable registry transition procedures. (See Articles 2 and 4 of the registry agreement.)

***Make TLD zone files available via a standardized process.***

This includes provision of access to the registry's zone file to credentialed users, according to established access, file, and format standards. The registry operator will enter into a standardized form of agreement with zone file users and will accept credential information for users via a clearinghouse. (See Specification 4 of the registry agreement.)

***Implement DNSSEC.*** The registry operator is required to sign the TLD zone files implementing Domain Name System Security Extensions (DNSSEC) in accordance with the relevant technical standards. The registry must accept public key material from registrars for domain names registered in the TLD, and publish a DNSSEC Policy Statement describing key material storage, access, and usage for the registry's keys and the registrants' trust anchor material. (See Specification 6 of the registry agreement.)

#### ***5.4.2 What is Expected of ICANN***

---

ICANN will continue to provide support for gTLD registry operators as they launch and maintain registry operations. ICANN's gTLD registry liaison function provides a point of contact for gTLD registry operators for assistance on a continuing basis.

ICANN's contractual compliance function will perform audits on a regular basis to ensure that gTLD registry operators remain in compliance with agreement obligations, as well as investigate any complaints from the community regarding the registry operator's adherence to its contractual obligations. See <http://www.icann.org/en/compliance/> for more information on current contractual compliance activities.

ICANN's Bylaws require ICANN to act in an open and transparent manner, and to provide equitable treatment among registry operators. ICANN is responsible for maintaining the security and stability of the global Internet, and looks forward to a constructive and cooperative

relationship with future gTLD registry operators in furtherance of this goal.

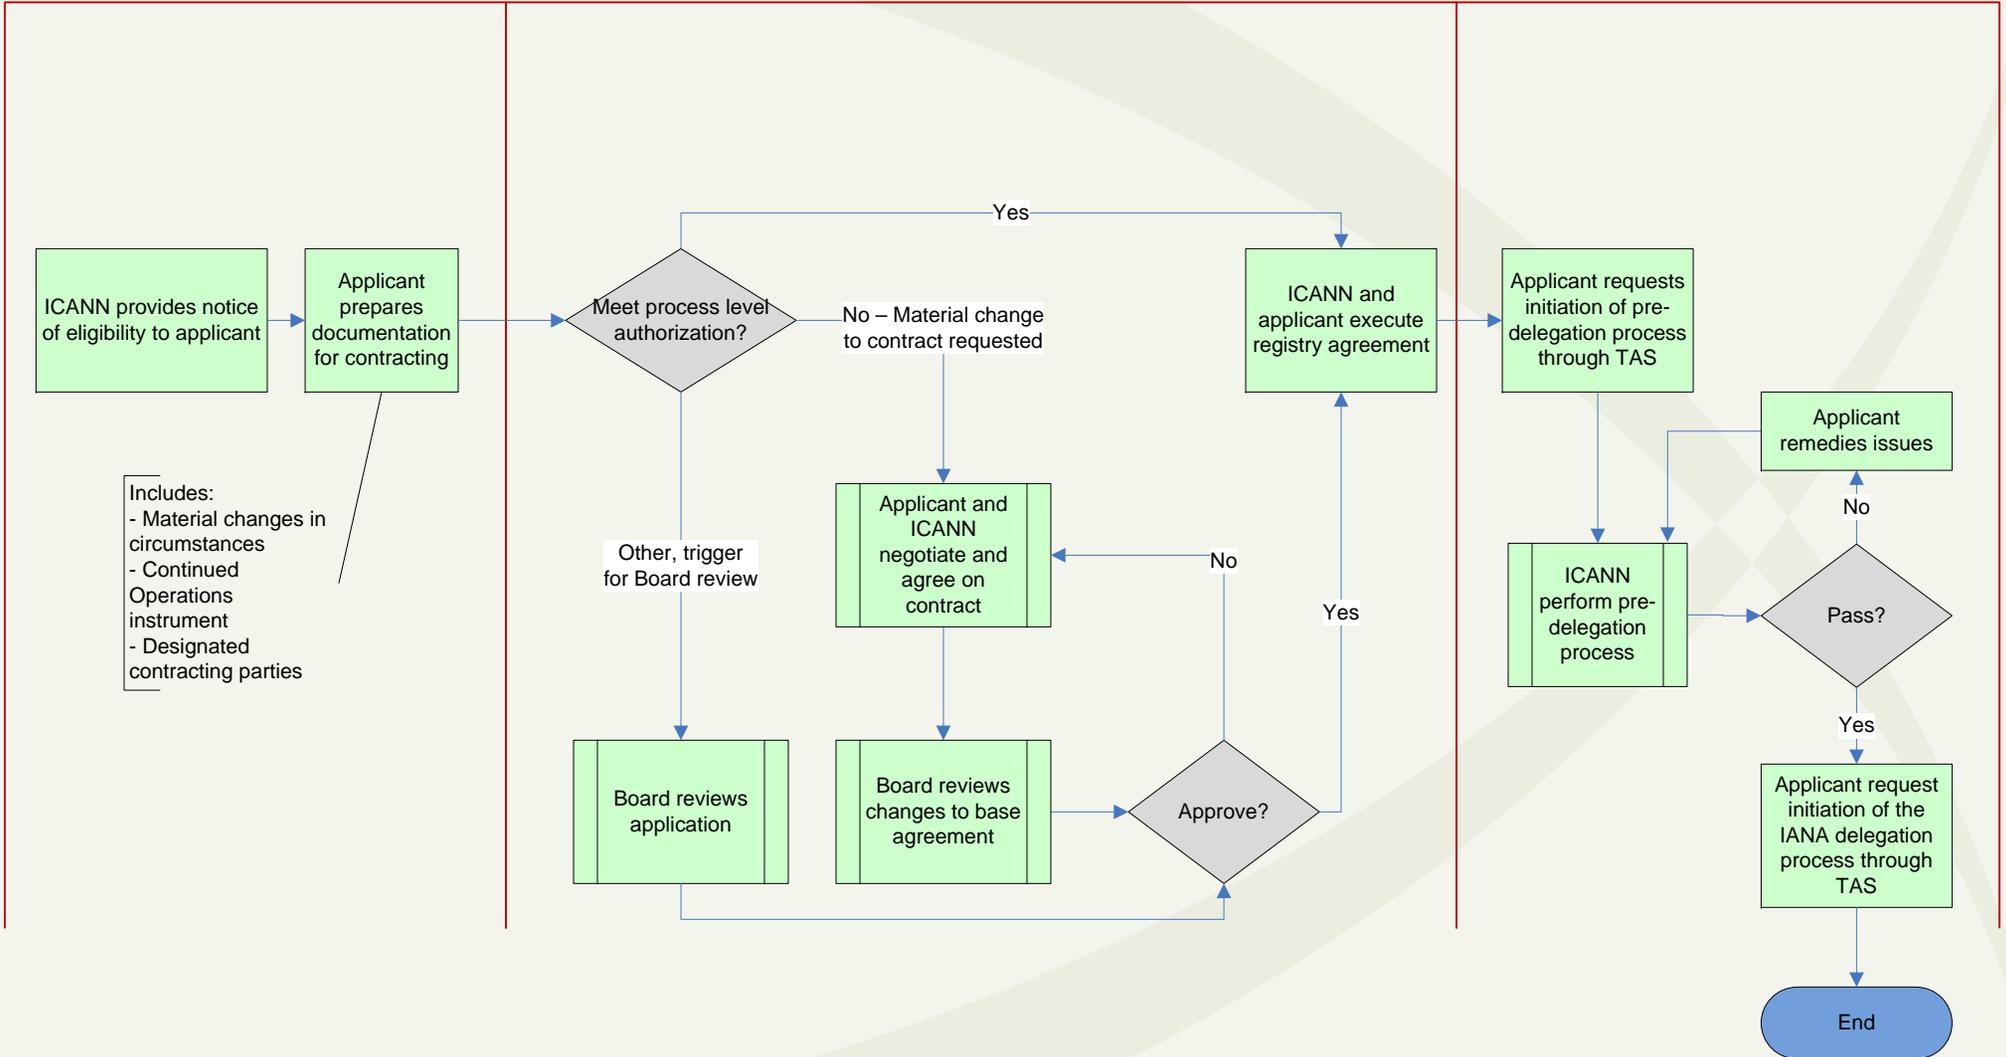

# Draft – New gTLD Program - Transition to Delegation

(Timeframes are estimates only)

## Applicant Doc Prep 1 Month

## Contracting – 1 day to 9 months

## Pre-Delegation Testing – 1 to 12 months

- Includes:
- Material changes in circumstances
  - Continued Operations instrument
  - Designated contracting parties

---

# *New gTLD Agreement*

---

~~*Proposed Final Version*~~  
*April 2011 Discussion Draft*

This document contains the registry agreement associated with the Applicant Guidebook for New gTLDs.

Successful gTLD applicants would enter into this form of registry agreement with ICANN prior to delegation of the new gTLD. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process). Background information on how this version of the draft agreement differs from the previous draft is available in the explanatory memorandum *Summary of Changes to Base Agreement*.

It is important to note that this agreement does not constitute a formal position by ICANN, and has not been approved by ICANN's Board of Directors. The agreement is being set out for review and community discussion purposes, and ICANN encourages comments and suggestions for improvement. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

## REGISTRY AGREEMENT

This REGISTRY AGREEMENT (this “Agreement”) is entered into as of \_\_\_\_\_ (the “Effective Date”) between Internet Corporation for Assigned Names and Numbers, a California nonprofit public benefit corporation (“ICANN”), and \_\_\_\_\_, a \_\_\_\_\_ (“Registry Operator”).

### ARTICLE 1.

#### DELEGATION AND OPERATION OF TOP-LEVEL DOMAIN; REPRESENTATIONS AND WARRANTIES

**1.1 Domain and Designation.** The Top-Level Domain to which this Agreement applies is \_\_\_\_\_ (the “TLD”). Upon the Effective Date and until the end of the Term (as defined in Section 4.1), ICANN designates Registry Operator as the registry operator for the TLD, subject to the requirements and necessary approvals for delegation of the TLD and entry into the root-zone.

**1.2 Technical Feasibility of String.** While ICANN has encouraged and will continue to encourage universal acceptance of all top-level domain strings across the Internet, certain top-level domain strings may encounter difficulty in acceptance by ISPs and webhosters and/or validation by web applications. Registry Operator shall be responsible for ensuring to its satisfaction the technical feasibility of the TLD string prior to entering into this Agreement.

#### **1.3 Representations and Warranties.**

(a) Registry Operator represents and warrants to ICANN as follows:

(i) all material information provided and statements made in the registry TLD application, and statements made in writing during the negotiation of this Agreement, were true and correct in all material respects at the time made, and such information or statements continue to be true and correct in all material respects as of the Effective Date except as otherwise previously disclosed in writing by Registry Operator to ICANN;

(ii) Registry Operator is duly organized, validly existing and in good standing under the laws of the jurisdiction set forth in the preamble hereto, and Registry Operator has all requisite power and authority and obtained all necessary approvals to enter into and duly execute and deliver this Agreement; and

(iii) Registry Operator has delivered to ICANN a duly executed instrument that secures the funds required to perform registry functions for the TLD in the event of the termination or expiration of this Agreement (the “Continued Operations Instrument”), and such instrument is a binding obligation of the parties thereto, enforceable against the parties thereto in accordance with its terms.

(b) ICANN represents and warrants to Registry Operator that ICANN is a nonprofit public benefit corporation duly organized, validly existing and in good standing under the laws of the State of California, United States of America. ICANN has all requisite power and authority and obtained all necessary corporate approvals to enter into and duly execute and deliver this Agreement.

## ARTICLE 2.

### COVENANTS OF REGISTRY OPERATOR

Registry Operator covenants and agrees with ICANN as follows:

**2.1 Approved Services; Additional Services.** Registry Operator shall be entitled to provide the Registry Services described in clauses (a) and (b) of the first paragraph of Section 2.1 in the specification at [*see specification 6*] (“Specification 6”) and such other Registry Services set forth on Exhibit A (collectively, the “Approved Services”). If Registry Operator desires to provide any Registry Service that is not an Approved Service or is a modification to an Approved Service (each, an “Additional Service”), Registry Operator shall submit a request for approval of such Additional Service pursuant to the Registry Services Evaluation Policy at <http://www.icann.org/en/registries/rsep/rsep.html>, as such policy may be amended from time to time in accordance with the bylaws of ICANN (as amended from time to time, the “ICANN Bylaws”) applicable to Consensus Policies (the “RSEP”). Registry Operator may offer Additional Services only with the written approval of ICANN. In its reasonable discretion, ICANN may require an amendment to this Agreement reflecting the provision of any Additional Service which is approved pursuant to the RSEP, which amendment shall be in a form reasonably acceptable to the parties.

**2.2 Compliance with Consensus Policies and Temporary Policies.** Registry Operator shall comply with and implement all Consensus Policies and Temporary Policies found at <http://www.icann.org/general/consensus-policies.htm>, as of the Effective Date and as may in the future be developed and adopted in accordance with the ICANN Bylaws, provided such future Consensus Policies and Temporary Policies are adopted in accordance with the procedure and relate to those topics and subject to those limitations set forth at [*see specification 1*]\* (“Specification 1”).

**2.3 Data Escrow.** Registry Operator shall comply with the registry data escrow procedures posted at [*see specification 2*]\*.

**2.4 Monthly Reporting.** Within twenty (20) calendar days following the end of each calendar month, Registry Operator shall deliver to ICANN reports in the format posted in the specification at [*see specification 3*]\*.

**2.5 Publication of Registration Data.** Registry Operator shall provide public access to registration data in accordance with the specification posted at [*see specification 4*]\* (“Specification 4”).

**2.6 Reserved Names.** Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall comply with the restrictions on registration of character strings set forth at [*see specification 5*]\* (“Specification 5”). Registry Operator may establish policies concerning the reservation or blocking of additional character strings within the TLD at its discretion. If Registry Operator is the registrant for any domain names in the Registry TLD (other than the Second-Level Reservations for Registry Operations from Specification 5), such registrations must be through an ICANN accredited registrar. Any such registrations will be considered Transactions (as defined in Section 6.1) for purposes of calculating the Registry-Level Transaction Fee to be paid to ICANN by Registry Operator pursuant to Section 6.1.

~~**2.7 Functional and Performance Specifications.** Functional and Performance Specifications for operation of the TLD will be as set forth in the specification at [*see specification 6*]\*. Registry Operator shall comply with such Functional and Performance Specifications and, for a period of at least~~

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

~~one year, shall keep technical and operational records sufficient to evidence compliance with such specifications for each calendar year during the Term.~~

**2.7 Registry Interoperability and Continuity.** Registry Operator shall comply with the Registry Interoperability and Continuity Specifications as set forth in Specification 6.

**2.8 Protection of Legal Rights of Third Parties.** Registry Operator must specify, and comply with, a process and procedures for launch of the TLD and initial registration-related and ongoing protection of the legal rights of third parties as set forth in the specification at [*see specification 7*]\* (“Specification 7”). Registry Operator may, at its election, implement additional protections of the legal rights of third parties. Any changes or modifications to the process and procedures required by Specification 7 following the Effective Date must be approved in advance by ICANN in writing. Registry Operator must comply with all ~~determinations and decisions made~~ remedies imposed by ICANN pursuant to Section 2 of Specification 7, subject to Registry Operator’s right to challenge such ~~determinations~~ remedies as set forth in the applicable procedure- described therein. Registry Operator shall take reasonable steps to investigate and respond to any reports (including reports from law enforcement and governmental and quasi-governmental agencies) of illegal conduct in connection with the use of the TLD.

## **2.9 Registrars.**

(a) Registry Operator must use only ICANN accredited registrars in registering domain names. Registry Operator must provide non-discriminatory access to Registry Services to all ICANN accredited registrars that enter into and are in compliance with Registry Operator’s registry-registrar agreement for the TLD- provided, that Registry Operator ~~must use a uniform non-discriminatory agreement with all registrars authorized to register names in the TLD, provided that such agreement may set forth non-~~ may establish non-discriminatory criteria for qualification to register names in the TLD that are reasonably related to the proper functioning of the TLD. Registry Operator must use a uniform non-discriminatory agreement with all registrars authorized to register names in the TLD. Such agreement may be revised by Registry Operator from time to time; provided, however, that any such revisions must be approved in advance by ICANN.

(b) If Registry Operator (i) becomes an Affiliate or reseller of an ICANN accredited registrar, or (ii) subcontracts the provision of any Registry Services to an ICANN accredited registrar, registrar reseller or any of their respective Affiliates, then, in either such case of (i) or (ii) above, Registry Operator will give ICANN prompt notice of the contract, transaction or other arrangement that resulted in such ~~Affiliation~~ affiliation, reseller relationship or subcontract, as applicable. ICANN reserves the right, but not the obligation, to refer any such contract, transaction or other arrangement to relevant competition authorities in the event that ICANN determines that such contract, transaction or other arrangement might raise competition issues.

(c) For the purposes of this Agreement: (i) “Affiliate” means a person or entity that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, the person or entity specified, and (ii) “control” (including the terms “controlled by” and “under common control with”) means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as an employee or a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

## **2.10 Pricing for Registry Services.**

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(a) With respect to initial domain name registrations, Registry Operator shall provide each ICANN accredited registrar that has executed Registry Operator’s registry-registrar agreement advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying or other programs which had the effect of reducing the price charged to registrars, unless such refunds, rebates, discounts, product tying or other programs are of a limited duration that is clearly and conspicuously disclosed to the registrar when offered) of no less than thirty (30) calendar days. Registry Operator shall offer registrars the option to obtain initial domain name registrations for periods of one to ten years at the discretion of the registrar, but no greater than ten years.

(b) With respect to renewal of domain name registrations, Registry Operator shall provide each ICANN accredited registrar that has executed Registry Operator’s registry-registrar agreement advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying or other programs which had the effect of reducing the price charged to registrars) of no less than one hundred eighty (180) calendar days. Notwithstanding the foregoing, with respect to renewal of domain name registrations: (i) Registry Operator need only provide thirty (30) calendar days notice of any price increase if the resulting price is less than or equal to (A) for the period beginning on the Effective Date and ending twelve (12) months following the Effective Date, the initial price charged for registrations in the TLD, or (B) for subsequent periods, a price for which Registry Operator provided a notice required by this Section 2.10(b) within that past twelve (12) months; and (ii) Registry Operator need not provide notice of any price increase for the imposition of the Variable Registry-Level Fee set forth in Section 6.3.

(c) ~~(b)~~ Registry Operator shall offer registrars the option to obtain domain name registration renewals at the current price (i.e. the price in place prior to any noticed increase) for periods of one to ten years at the discretion of the registrar, but no greater than ten years. Registry Operator must have uniform pricing for registration renewals (~~i.e. “Renewal Pricing”~~). For the purposes of determining Renewal Pricing, the price for each domain registration renewal must be identical to the price of all other domain name registration renewals, and such price must take into account universal application of any refunds, rebates, discounts, product tying or other programs); ~~unless, provided, that Registry Operator may offer discounted Renewal Pricing pursuant to a Qualified Marketing Program (as defined below).~~ The foregoing sentence shall not apply for purposes of determining Renewal Pricing if the registrar has provided Registry Operator with documentation that demonstrates that the applicable registrant expressly agreed in its registration agreement with registrar to a higher renewal price at the time of the initial registration of the domain name following clear and conspicuous disclosure of such renewal price to such registrant. The parties acknowledge that the purpose of this Section 2.10(c) is to prohibit abusive and/or discriminatory Renewal Pricing practices and this Section 2.10(c) will be interpreted broadly to prohibit such practices. For purposes of this Section 2.10(c), a “Qualified Marketing Program” is a marketing program pursuant to which Registry Operator offers discounted Renewal Pricing, provided that each of the following criteria is satisfied: (i) the program and related discounts are offered for a period of time not to exceed 90 calendar days, (ii) the programs are made available to all registrars and registrations; and (iii) the intent or effect of the program is not to exclude any particular class(es) of registrations (e.g., registrations held by large corporations) or increase the renewal price of any particular class(es) of registrations.

(d) Registry Operator shall provide public query-based DNS lookup service for the TLD (that is, operate the Registry TLD zone servers) at its sole expense.

## **2.11 Contractual and Operational Compliance Audits.**

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(a) ICANN may from time to time (not to exceed twice per calendar year) conduct, or engage a third party to conduct, contractual compliance audits to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement. Such audits shall be tailored to achieve the purpose of assessing compliance, and ICANN will (a) give reasonable advance notice of any such audit, which notice shall specify in reasonable detail the categories of documents, data and other information requested by ICANN, and (b) use commercially reasonable efforts to conduct such audit in such a manner as to not unreasonably disrupt the operations of Registry Operator. As part of such audit and upon request by ICANN, Registry Operator shall timely provide all responsive documents, data and any other information necessary to demonstrate Registry Operator's compliance with this Agreement. Upon no less than five (5) business days notice (unless otherwise agreed to by Registry Operator), ICANN may, as part of any contractual compliance audit, conduct site visits during regular business hours to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement.

(b) Any ~~such~~ audit conducted pursuant to Section 2.11(a) will be at ICANN's expense, unless (i) Registry Operator (A) controls, is controlled by, is under common control or is otherwise Affiliated with, any ICANN accredited registrar or registrar reseller or any of their respective Affiliates, or (B) has subcontracted the provision of Registry Services to an ICANN accredited registrar or registrar reseller or any of their respective Affiliates, and, in either case of (A) or (B) above, the audit relates to Registry Operator's compliance with Section 2.14, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the portion of the audit related to Registry Operator's compliance with Section 2.14, or (ii) the audit is related to a discrepancy in the fees paid by Registry Operator hereunder in excess of 5% to ICANN's detriment, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the entirety of such audit. In either such case of (i) or (ii) above, ~~Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with such audit, which~~ such reimbursement will be paid together with the next Registry-Level Fee payment due following the date of transmittal of the cost statement for such audit.

(c) Notwithstanding ~~the foregoing~~ Section 2.11(a), if Registry Operator is found not to be in compliance with its representations and warranties contained in Article 1 of this Agreement or its covenants contained in Article 2 of this Agreement in two consecutive audits conducted pursuant to this Section 2.11, ICANN may increase the number of such audits to one per calendar quarter.

(d) Registry Operator will give ICANN immediate notice of the commencement of any of the proceedings referenced in Section 4.3(d) or the occurrence of any of the matters specified in Section 4.3(f).

**2.12 Continued Operations Instrument.** Registry Operator shall comply with the terms and conditions relating to the Continued Operations Instrument set forth in the specification at [*see specification 8*].

**2.13 Emergency Transition.** Registry Operator agrees that in the event that any of the registry functions set forth in Section ~~56~~ of Specification ~~610~~ fails for a period longer than the emergency threshold for such function set forth in Section ~~56~~ of Specification ~~610~~, ICANN may designate an emergency interim registry operator of the registry for the TLD (an "Emergency Operator") in accordance with ICANN's registry transition process (available at \_\_\_\_\_) (as the same may be amended from time to time, the "Registry Transition Process") until such time as Registry Operator has demonstrated to ICANN's reasonable satisfaction that it can resume operation of the registry for the TLD without the

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

reoccurrence of such failure. Following such demonstration, Registry Operator may transition back into operation of the registry for the TLD pursuant to the procedures set out in the Registry Transition Process, provided that Registry Operator pays all reasonable costs incurred (i) by ICANN as a result of the designation of the Emergency Operator and (ii) by the Emergency Operator in connection with the operation of the registry for the TLD, which costs shall be documented in reasonable detail in records that shall be made available to Registry Operator. In the event ICANN designates an Emergency Operator pursuant to this Section 2.13 and the Registry Transition Process, Registry Operator shall provide ICANN or any such Emergency Operator with all data (including the data escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such Emergency Operator. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event that an Emergency Operator is designated pursuant to this Section 2.13. In addition, in the event of such failure, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

**2.14 Registry Code of Conduct.** In connection with the operation of the registry for the TLD, Registry Operator shall comply with the Registry Code of Conduct as set forth in the specification at [*see specification 9*].

**2.15 Cooperation with Economic Studies.** If ICANN initiates or commissions an economic study on the impact or functioning of new generic top-level domains on the Internet, the DNS or related matters, Registry Operator shall cooperate with such study, including by delivering to ICANN or its designee conducting such study all Registry data (including confidential data of Registry Operator) requested by ICANN or its designee, provided that ICANN or its designee shall aggregate and anonymize such data prior to any public disclosure of such data.

**2.16 Registry Performance Specifications.** Registry Performance Specifications for operation of the TLD will be as set forth in the specification at [*see specification 10*]\*. Registry Operator shall comply with such Performance Specifications and, for a period of at least one year, shall keep technical and operational records sufficient to evidence compliance with such specifications for each calendar year during the Term.

**2.17** ~~2.15~~ *[Note: For Community-Based TLDs Only]* **Obligations of Registry Operator to TLD Community.** Registry Operator shall establish registration policies in conformity with the application submitted with respect to the TLD for: (i) naming conventions within the TLD, (ii) requirements for registration by members of the TLD community, and (iii) use of registered domain names in conformity with the stated purpose of the community-based TLD. Registry Operator shall operate the TLD in a manner that allows the TLD community to discuss and participate in the development and modification of policies and practices for the TLD. Registry Operator shall establish procedures for the enforcement of registration policies for the TLD, and resolution of disputes concerning compliance with TLD registration policies, and shall enforce such registration policies. Registry Operator agrees to implement and be bound by the Registry Restrictions Dispute Resolution Procedure as set forth at [*insert applicable URL*] with respect to disputes arising pursuant to this Section ~~2.15~~2.17.]

### ARTICLE 3.

#### COVENANTS OF ICANN

ICANN covenants and agrees with Registry Operator as follows:

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

**3.1 Open and Transparent.** Consistent with ICANN’s expressed mission and core values, ICANN shall operate in an open and transparent manner.

**3.2 Equitable Treatment.** ICANN shall not apply standards, policies, procedures or practices arbitrarily, unjustifiably, or inequitably and shall not single out Registry Operator for disparate treatment unless justified by substantial and reasonable cause.

**3.3 TLD Nameservers.** ICANN will use commercially reasonable efforts to ensure that any changes to the TLD nameserver designations submitted to ICANN by Registry Operator (in a format and with required technical elements specified by ICANN at <http://www.iana.org/domains/root/> will be implemented by ICANN within seven (7) calendar days or as promptly as feasible following technical verifications.

**3.4 Root-zone Information Publication.** ICANN’s publication of root-zone contact information for the TLD will include Registry Operator and its administrative and technical contacts. Any request to modify the contact information for the Registry Operator must be made in the format specified from time to time by ICANN at <http://www.iana.org/domains/root/>.

**3.5 Authoritative Root Database.** To the extent that ICANN is authorized to set policy with regard to an authoritative root server system, ICANN shall use commercially reasonable efforts to (a) ensure that the authoritative root will point to the top-level domain nameservers designated by Registry Operator for the TLD, (b) maintain a stable, secure, and authoritative publicly available database of relevant information about the TLD, in accordance with ICANN publicly available policies and procedures, and (c) coordinate the Authoritative Root Server System so that it is operated and maintained in a stable and secure manner; [provided, that ICANN shall not be in breach of this Agreement and ICANN shall have no liability in the event that any third party \(including any governmental entity or internet service provider\) blocks or restricts access to the TLD in any jurisdiction.](#)

## ARTICLE 4.

### TERM AND TERMINATION

**4.1 Term.** The term of this Agreement will be ten years from the Effective Date (as such term may be extended pursuant to Section 4.2, the “Term”).

**4.2 Renewal.**

(a) This Agreement will be renewed for successive periods of ten years upon the expiration of the initial Term set forth in Section 4.1 and each successive Term, unless:

(i) Following notice by ICANN to Registry Operator of a fundamental and material breach of Registry Operator’s covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement, which notice shall include with specificity the details of the alleged breach, and such breach has not been cured within thirty (30) calendar days of such notice, (A) an arbitrator or court has finally determined that Registry Operator has been in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (B) Registry Operator has failed to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court; or

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(ii) During the then current Term, Registry Operator shall have been found by an arbitrator (pursuant to Section 5.2 of this Agreement) on at least three (3) separate occasions to have been in fundamental and material breach (whether or not cured) of Registry Operator's covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement.

(b) Upon the occurrence of the events set forth in Section 4.2(a) (i) or (ii), the Agreement shall terminate at the expiration of the then current Term.

#### **4.3 Termination by ICANN.**

(a) ICANN may, upon notice to Registry Operator, terminate this Agreement if: (i) Registry Operator fails to cure (A) any fundamental and material breach of Registry Operator's representations and warranties set forth in Article 1 or covenants set forth in Article 2, or (B) any breach of Registry Operator's payment obligations set forth in Article 6 of this Agreement, each within thirty (30) calendar days after ICANN gives Registry Operator notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court has finally determined that Registry Operator is in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (iii) Registry Operator fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(b) ICANN may, upon notice to Registry Operator, terminate this Agreement if Registry Operator fails to complete all testing and procedures (identified by ICANN in writing to Registry Operator prior to the date hereof) for delegation of the TLD into the root zone within ~~twelve (12)~~ months of the Effective Date. Registry Operator may request an extension for up to additional ~~twelve (12)~~ months for delegation if it can demonstrate, to ICANN's reasonable satisfaction, that Registry Operator is working diligently and in good faith toward successfully completing the steps necessary for delegation of the TLD. Any fees paid by Registry Operator to ICANN prior to such termination date shall be retained by ICANN in full.

(c) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator fails to cure a material breach of Registry Operator's obligations set forth in Section 2.12 of this Agreement within thirty (30) calendar days of delivery of notice of such breach by ICANN, or if the Continued Operations Instrument is not in effect for greater than sixty (60) consecutive calendar days at any time following the Effective Date, (ii) an arbitrator or court has finally determined that Registry Operator is in material breach of such covenant, and (iii) Registry Operator fails to cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(d) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator makes an assignment for the benefit of creditors or similar act, (ii) attachment, garnishment or similar proceedings are commenced against Registry Operator, which proceedings are a material threat to Registry Operator's ability to operate the registry for the TLD, and are not dismissed within ~~thirty~~sixty (30/60) days of their commencement, (iii) a trustee, receiver, liquidator or equivalent is appointed in place of Registry Operator or maintains control over any of Registry Operator's property, (iv) execution is levied upon any property of Registry Operator, (v) proceedings are instituted by or against Registry Operator under any bankruptcy, insolvency, reorganization or other laws relating to the relief of debtors and such proceedings are not dismissed within thirty (30) days of their commencement, or (vi) Registry Operator files for protection under the United States Bankruptcy Code, 11 U.S.C. Section

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

101 et seq., or a foreign equivalent or liquidates, dissolves or otherwise discontinues its operations or the operation of the TLD.

(e) ICANN may, upon thirty (30) calendar days' notice to Registry Operator, terminate this Agreement pursuant to Section 2 of Specification 7, subject to Registry Operator's right to challenge such termination as set forth in the applicable procedure described therein.

(f) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator knowingly employs any officer that is convicted of a ~~felony or of a~~ misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such officer is not terminated within thirty (30) calendar days of Registry Operator's knowledge of the foregoing, or (ii) any member of Registry Operator's board of directors or similar governing body is convicted of a ~~felony or of a~~ misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such member is not removed from Registry Operator's board of directors or similar governing body within thirty (30) calendar days of Registry Operator's knowledge of the foregoing.

(g) [*Applicable to intergovernmental organizations or governmental entities only.*] ICANN may terminate this Agreement pursuant to Section 7.14.

#### 4.4 Termination by Registry Operator.

(a) Registry Operator may terminate this Agreement upon notice to ICANN if, (i) ICANN fails to cure any fundamental and material breach of ICANN's covenants set forth in Article 3, within thirty (30) calendar days after Registry Operator gives ICANN notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court has finally determined that ICANN is in fundamental and material breach of such covenants, and (iii) ICANN fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(b) Registry Operator may terminate this Agreement for any reason upon one hundred eighty (180) calendar day advance notice to ICANN.

**4.5 Transition of Registry upon Termination of Agreement.** Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, Registry Operator shall provide ICANN or any successor registry operator that may be designated by ICANN for the TLD in accordance with this Section 4.5 with all data (including the data escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process; provided, however, that if all sub-domains in the registry for the TLD are registered or licensed to and used exclusively by Registry Operator or individuals or entities that are Affiliates of Registry Operator, then ICANN may not transition operation of the TLD to a successor registry operator without the consent of Registry Operator (which shall not be unreasonably withheld, conditioned or delayed). Registry Operator agrees that ICANN may make any changes ~~in~~ it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable, regardless of the reason for termination or expiration of this Agreement.

*[Alternative Section 4.5 Transition of Registry upon Termination of Agreement text for intergovernmental organizations or governmental entities or other special circumstances:*

**“Transition of Registry upon Termination of Agreement.** Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, in connection with ICANN’s designation of a successor registry operator for the TLD, Registry Operator and ICANN agree to consult each other and work cooperatively to facilitate and implement the transition of the TLD in accordance with this Section 4.5. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process. In the event ICANN determines to transition operation of the TLD to a successor registry operator, upon Registry Operator’s consent (which shall not be unreasonably withheld, conditioned or delayed), Registry Operator shall provide ICANN or such successor registry operator for the TLD with any data regarding operations of the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator in addition to data escrowed in accordance with Section 2.3 hereof. In the event that Registry Operator does not consent to provide such data, any registry data related to the TLD shall be returned to Registry Operator, unless otherwise agreed upon by the parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5.”]

**4.6 Effect of Termination.** Upon any expiration of the Term or termination of this Agreement, the obligations and rights of the parties hereto shall cease, provided that such expiration or termination of this Agreement shall not relieve the parties of any obligation or breach of this Agreement accruing prior to such expiration or termination, including, without limitation, all accrued payment obligations arising under Article 6. In addition Article 5 and Article 7, Section 2.12, Section 4.5, and this Section 4.6 shall survive the expiration or termination of this Agreement. For the avoidance of doubt, the rights of Registry Operator to operate the registry for the TLD shall immediately cease upon any expiration of the Term or termination of this Agreement.

## ARTICLE 5.

### DISPUTE RESOLUTION

**5.1 Cooperative Engagement.** Before either party may initiate arbitration pursuant to Section 5.2 below, ICANN and Registry Operator, following initiation of communications by either party, must attempt to resolve the dispute by engaging in good faith discussion over a period of at least fifteen (15) calendar days.

**5.2 Arbitration.** Disputes arising under or in connection with this Agreement, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in Los Angeles County, California. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, or (ii) the parties agree in writing to a greater number of arbitrators. In either case of clauses (i) or (ii) in the preceding sentence, the arbitration will be in front of three

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that in any arbitration in which ICANN is seeking punitive or exemplary damages, or operational sanctions, the hearing may be extended for ~~an~~one (1) additional number of days~~calendar day~~ if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. In ~~any proceeding, ICANN may request the appointed arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations)~~ in the event the arbitrators determine that Registry Operator has been repeatedly and willfully in fundamental and material breach of its obligations set forth in Article 2, Article 6 or Section 5.4 of this Agreement, ICANN may request the arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations). In any litigation involving ICANN concerning this Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in Los Angeles County, California; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction.

[Alternative **Section 5.2 Arbitration** text for intergovernmental organizations or governmental entities or other special circumstances:

**“Arbitration.** Disputes arising under or in connection with this Agreement, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in Geneva, Switzerland, unless another location is mutually agreed upon by Registry Operator and ICANN. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, or (ii) the parties agree in writing to a greater number of arbitrators. In either case of clauses (i) or (ii) in the preceding sentence, the arbitration will be in front of three arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that in any arbitration in which ICANN is seeking punitive or exemplary damages, or operational sanctions, the hearing may be extended for ~~an~~one (1) additional number of days~~calendar day~~ if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. In ~~any proceeding, ICANN may request the appointed arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations)~~ in the event the arbitrators determine that Registry Operator has been repeatedly and willfully in fundamental and material breach of its obligations set forth in Article 2, Article 6 or Section 5.4 of this Agreement, ICANN may request the arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations). In any litigation involving ICANN concerning this Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in Geneva, Switzerland, unless an another location is mutually agreed

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

upon by Registry Operator and ICANN; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction.”]

**5.3 Limitation of Liability.** ICANN’s aggregate monetary liability for violations of this Agreement will not exceed an amount equal to the Registry-Level Fees paid by Registry Operator to ICANN within the preceding twelve-month period pursuant to this Agreement (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any). Registry Operator’s aggregate monetary liability to ICANN for breaches of this Agreement will be limited to an amount equal to the fees paid to ICANN during the preceding twelve-month period (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any), and punitive and exemplary damages, if any, awarded in accordance with Section 5.2. In no event shall either party be liable for special, punitive, exemplary or consequential damages arising out of or in connection with this Agreement or the performance or nonperformance of obligations undertaken in this Agreement, except as provided in Section 5.2. Except as otherwise provided in this Agreement, neither party makes any warranty, express or implied, with respect to the services rendered by itself, its servants or agents, or the results obtained from their work, including, without limitation, any implied warranty of merchantability, non-infringement or fitness for a particular purpose.

**5.4 Specific Performance.** Registry Operator and ICANN agree that irreparable damage could occur if any of the provisions of this Agreement was not performed in accordance with its specific terms. Accordingly, the parties agree that they each shall be entitled to seek from the arbitrator specific performance of the terms of this Agreement (in addition to any other remedy to which each party is entitled).

## ARTICLE 6.

### FEES

**6.1 Registry-Level Fees.** Registry Operator shall pay ICANN a Registry-Level Fee equal to (i) the Registry Fixed Fee of US\$6,250 per calendar quarter and (ii) the Registry-Level Transaction Fee. The Registry-Level Transaction Fee will be equal to the number of annual increments of an initial or renewal domain name registration (at one or more levels, and including renewals associated with transfers from one ICANN-accredited registrar to another, each a “Transaction”), during the applicable calendar quarter multiplied by US\$0.25; provided, however that the Registry-Level Transaction Fee shall not apply until and unless more than 50,000 domain names are registered in the TLD and shall apply thereafter to each Transaction. Registry Operator shall pay the Registry-Level Fees on a quarterly basis comprised of four equal payments by the 20th day following the end of each calendar quarter (i.e., on April 20, July 20, October 20 and January 20 for the calendar quarters ending March 31, June 30, September 30 and December 31) of the year to an account designated by ICANN.

**6.2 Cost Recovery for RSTEP.** Requests by Registry Operator for the approval of Additional Services pursuant to Section 2.1 may be referred by ICANN to the Registry Services Technical Evaluation Panel (“RSTEP”) pursuant to that process at <http://www.icann.org/en/registries/rsep/>. In the event that such requests are referred to RSTEP, Registry Operator shall remit to ICANN the invoiced cost of the RSTEP review within ten (10) business days of receipt of a copy of the RSTEP invoice from ICANN, unless ICANN determines, in its sole and absolute discretion, to pay all or any portion of the invoiced cost of such RSTEP review.

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

### 6.3 Variable Registry-Level Fee.

(a) If the ICANN accredited registrars (as a group) do not approve pursuant to the terms of their registrar accreditation agreements with ICANN the variable accreditation fees established by the ICANN Board of Directors for any ICANN fiscal year, upon delivery of notice from ICANN, Registry Operator shall pay to ICANN a Variable Registry-Level Fee, which shall be paid on a fiscal quarter basis, and shall accrue as of the beginning of the first fiscal quarter of such ICANN fiscal year. The fee will be calculated and invoiced by ICANN on a quarterly basis, and shall be paid by Registry Operator within sixty (60) calendar days with respect to the first quarter of such ICANN fiscal year and within twenty (20) calendar days with respect to each remaining quarter of such ICANN fiscal year, of receipt of the invoiced amount by ICANN. The Registry Operator may invoice and collect the Variable Registry-Level Fees from the registrars who are party to a registry-registrar agreement with Registry Operator (which agreement may specifically provide for the reimbursement of Variable Registry-Level Fees paid by Registry Operator pursuant to this Section 6.3), provided that the fees shall be invoiced to all ICANN accredited registrars if invoiced to any. The Variable Registry-Level Fee, if collectible by ICANN, shall be an obligation of Registry Operator and shall be due and payable as provided in this Section 6.3 irrespective of Registry Operator's ability to seek and obtain reimbursement of such fee from registrars. In the event ICANN later collects variable accreditation fees for which Registry Operator has paid ICANN a Variable Registry-Level Fee, ICANN shall reimburse the Registry Operator an appropriate amount of the Variable Registry-Level Fee, as reasonably determined by ICANN. If the ICANN accredited registrars (as a group) do approve pursuant to the terms of their registrar accreditation agreements with ICANN the variable accreditation fees established by the ICANN Board of Directors for a fiscal year, ICANN shall not be entitled to a Variable-Level Fee hereunder for such fiscal year, irrespective of whether the ICANN accredited registrars comply with their payment obligations to ICANN during such fiscal year.

(b) The amount of the Variable Registry-Level Fee will be specified for each registrar, and may include both a per-registrar component and a transactional component. The per-registrar component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year. The transactional component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year but shall not exceed US\$0.25 per domain name registration (including renewals associated with transfers from one ICANN-accredited registrar to another) per year.

**6.4 Adjustments to Fees.** Notwithstanding any of the fee limitations set forth in this Article 6, commencing upon the expiration of the first year of this Agreement, and upon the expiration of each year thereafter during the Term, the then current fees set forth in Section 6.1 and Section 6.3 may be adjusted, at ICANN's discretion, by a percentage equal to the percentage change, if any, in (i) the Consumer Price Index for All Urban Consumers, U.S. City Average (1982-1984 = 100) published by the United States Department of Labor, Bureau of Labor Statistics, or any successor index (the "CPI") for the month which is one (1) month prior to the commencement of the applicable year, over (ii) the CPI published for the month which is one (1) month prior to the commencement of the immediately prior year. In the event of any such increase, ICANN shall provide notice to Registry Operator specifying the amount of such adjustment. Any fee adjustment under this Section 6.4 shall be effective as of the first day of the year in which the above calculation is made.

**6.5 Additional Fee on Late Payments.** For any payments thirty (30) calendar days or more overdue under this Agreement, Registry Operator shall pay an additional fee on late payments at the rate of 1.5% per month or, if less, the maximum rate permitted by applicable law.

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

## ARTICLE 7.

### MISCELLANEOUS

#### 7.1 Indemnification of ICANN.

(a) Registry Operator shall indemnify and defend ICANN and its directors, officers, employees, and agents (collectively, “Indemnitees”) from and against any and all third-party claims, damages, liabilities, costs, and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator’s operation of the registry for the TLD or Registry Operator’s provision of Registry Services, provided that Registry Operator shall not be obligated to indemnify or defend any Indemnitee to the extent the claim, damage, liability, cost or expense arose: (i) due to the actions or omissions of ICANN, its subcontractors, panelists or evaluators specifically related to and occurring during the registry TLD application process (other than actions or omissions requested by or for the benefit of Registry Operator), or (ii) due to a breach by ICANN of any obligation contained in this Agreement or any willful misconduct by ICANN. This ~~section~~ Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties’ respective obligations hereunder. Further, this Section shall not apply to any request for attorney’s fees in connection with any litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court or arbitrator.

[Alternative **Section 7.1(a)** text for intergovernmental organizations or governmental entities:

“Registry Operator shall use its best efforts to cooperate with ICANN in order to ensure that ICANN does not incur any costs associated with claims, damages, liabilities, costs and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator’s operation of the registry for the TLD or Registry Operator’s provision of Registry Services, provided that Registry Operator shall not be obligated to provide such cooperation to the extent the claim, damage, liability, cost or expense arose due to a breach by ICANN of any of its obligations contained in this Agreement or any willful misconduct by ICANN. This Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties’ respective obligations hereunder. Further, this Section shall not apply to any request for attorney’s fees in connection with any litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court or arbitrator.”]

(b) For any claims by ICANN for indemnification whereby multiple registry operators (including Registry Operator) have engaged in the same actions or omissions that gave rise to the claim, Registry Operator’s aggregate liability to indemnify ICANN with respect to such claim shall be limited to a percentage of ICANN’s total claim, calculated by dividing the number of total domain names under registration with Registry Operator within the TLD (which names under registration shall be calculated consistently with Article 6 hereof for any applicable quarter) by the total number of domain names under registration within all top level domains for which the registry operators thereof are engaging in the same acts or omissions giving rise to such claim. For the purposes of reducing Registry Operator’s liability under Section 7.1(a) pursuant to this Section 7.1(b), Registry Operator shall have the burden of identifying the other registry operators that are engaged in the same actions or omissions that gave rise to the claim, and demonstrating, to ICANN’s reasonable satisfaction, such other registry

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

operators' culpability for such actions or omissions. For the avoidance of doubt, in the event that a registry operator is engaged in the same acts or omissions giving rise to the claims, but such registry operator(s) do not have the same or similar indemnification obligations to ICANN as set forth in Section 7.1(a) above, the number of domains under management by such registry operator(s) shall nonetheless be included in the calculation in the preceding sentence. [*Note: This Section 7.1(b) is inapplicable to intergovernmental organizations or governmental entities.*]

**7.2 Indemnification Procedures.** If any third-party claim is commenced that is indemnified under Section 7.1 above, ICANN shall provide notice thereof to Registry Operator as promptly as practicable. Registry Operator shall be entitled, if it so elects, in a notice promptly delivered to ICANN, to immediately take control of the defense and investigation of such claim and to employ and engage attorneys reasonably acceptable to ICANN to handle and defend the same, at Registry Operator's sole cost and expense, provided that in all events ICANN will be entitled to control at its sole cost and expense the litigation of issues concerning the validity or interpretation of ~~ICANN~~ ICANN's policies, Bylaws or conduct. ICANN shall cooperate, at Registry Operator's cost and expense, in all reasonable respects with Registry Operator and its attorneys in the investigation, trial, and defense of such claim and any appeal arising therefrom, and may, at its own cost and expense, participate, through its attorneys or otherwise, in such investigation, trial and defense of such claim and any appeal arising therefrom. No settlement of a claim that involves a remedy affecting ICANN other than the payment of money in an amount that is fully indemnified by Registry Operator will be entered into without the consent of ICANN. If Registry Operator does not assume full control over the defense of a claim subject to such defense in accordance with this Section 7.2, ICANN will have the right to defend the claim in such manner as it may deem appropriate, at the cost and expense of Registry Operator and Registry Operator shall cooperate in such defense. [*Note: This Section 7.2 is inapplicable to intergovernmental organizations or governmental entities.*]

**7.3 Defined Terms.** For purposes of this Agreement, unless such definitions are amended pursuant to a Consensus Policy at a future date, in which case the following definitions shall be deemed amended and restated in their entirety as set forth in such Consensus Policy, Security and Stability shall be defined as follows:

(a) For the purposes of this Agreement, an effect on "Security" shall mean (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

(b) For purposes of this Agreement, an effect on "Stability" shall refer to (1) lack of compliance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice Requests for Comments ("RFCs") sponsored by the Internet Engineering Task Force; or (2) the creation of a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems operating in accordance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice RFCs, and relying on Registry Operator's delegated information or provisioning of services.

**7.4 No Offset.** All payments due under this Agreement will be made in a timely manner throughout the Term and notwithstanding the pendency of any dispute (monetary or otherwise) between Registry Operator and ICANN.

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

**7.5 Change in Control; Assignment and Subcontracting.** Neither party may assign this Agreement without the prior written approval of the other party, which approval will not be unreasonably withheld. Notwithstanding the foregoing, ICANN may assign this Agreement in conjunction with a reorganization or re-incorporation of ICANN to another nonprofit corporation or similar entity organized in the same legal jurisdiction in which ICANN is currently organized for the same or substantially the same purposes. For purposes of this Section 7.5, a direct or indirect change of control of Registry Operator or any material subcontracting arrangement with respect to the operation of the registry for the TLD shall be deemed an assignment. ICANN shall be deemed to have reasonably withheld its consent to any such a direct or indirect change of control or subcontracting arrangement in the event that ICANN reasonably determines that the person or entity acquiring control of Registry Operator or entering into such subcontracting arrangement (or the ultimate parent entity of such acquiring or subcontracting entity) does not meet the ICANN-adopted registry operator criteria or qualifications then in effect. In addition, without limiting the foregoing, Registry Operator must provide no less than thirty (30) calendar days advance notice to ICANN of any material subcontracting arrangements, and any agreement to subcontract portions of the operations of the TLD must mandate compliance with all covenants, obligations and agreements by Registry Operator hereunder, and Registry Operator shall continue to be bound by such covenants, obligations and agreements. Without limiting the foregoing, Registry Operator must also provide no less than thirty (30) calendar days advance notice to ICANN prior to the consummation of any transaction anticipated to result in a direct or indirect change of control of Registry Operator. Such change of control notification shall include a statement that affirms that the ultimate parent entity of the party acquiring such control meets the ICANN-adopted specification or policy on registry operator criteria then in effect, and affirms that Registry Operator is in compliance with its obligations under this Agreement. Within thirty (30) calendar days of such notification, ICANN may request additional information from Registry Operator establishing compliance with this Agreement, in which case Registry Operator must supply the requested information within fifteen (15) calendar days. If ICANN fails to expressly provide or withhold its consent to any direct or indirect change of control of Registry Operator or any material subcontracting arrangement within thirty (30) (or, if ICANN has requested additional information from Registry Operator as set forth above, sixty (60)) calendar days of the receipt of written notice of such transaction from Registry Operator, ICANN shall be deemed to have consented to such transaction. In connection with any such transaction, Registry Operator shall comply with the Registry Transition Process.

**7.6 Amendments and Waivers.**

(a) If ICANN determines that an amendment to this Agreement (including to the Specifications referred to herein) and all other registry agreements between ICANN and the Applicable Registry Operators (the “Applicable Registry Agreements”) is desirable (each, a “Special Amendment”), ICANN may submit a Special Amendment for approval by the Applicable Registry Operators pursuant to the process set forth in this Section 7.6, provided that a Special Amendment is not a Restricted Amendment (as defined below). Prior to submitting a Special Amendment for such approval, ICANN shall first consult in good faith with the Working Group (as defined below) regarding the form and substance of a Special Amendment. The duration of such consultation shall be reasonably determined by ICANN based on the substance of the Special Amendment. Following such consultation, ICANN may propose the adoption of a Special Amendment by publicly posting such amendment on its website for no less than thirty (30) calendar days (the “Posting Period”) and providing notice of such amendment by ICANN to the Applicable Registry Operators in accordance with Section 7.8. ICANN will consider the public comments submitted on a Special Amendment during the Posting Period (including comments submitted by the Applicable Registry Operators).

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(b) If, within two (2) calendar years of the expiration of the Posting Period (the “Approval Period”), (i) the ICANN Board of Directors approves a Special Amendment (which may be in a form different than submitted for public comment) and (ii) such Special Amendment receives Registry Operator Approval (as defined below), such Special Amendment shall be deemed approved (an “Approved Amendment”) by the Applicable Registry Operators (the last date on which such approvals are obtained is herein referred to as the “Amendment Approval Date”) and shall be effective and deemed an amendment to this Agreement upon sixty (60) calendar days notice from ICANN to Registry Operator (the “Amendment Effective Date”). In the event that a Special Amendment is not approved by the ICANN Board of Directors or does not receive Registry Operator Approval within the Approval Period, the Special Amendment will have no effect. The procedure used by ICANN to obtain Registry Operator Approval shall be designed to document the written approval of the Applicable Registry Operators, which may be in electronic form.

(c) During the thirty (30) calendar day period following the Amendment Approval Date, Registry Operator (so long as it did not vote in favor of the Approved Amendment) may apply in writing to ICANN for an exemption from the Approved Amendment (each such request submitted by Registry Operator hereunder, an “Exemption Request”). Each Exemption Request will set forth the basis for such request and provide detailed support for an exemption from the Approved Amendment. An Exemption Request may also include a detailed description and support for any alternatives to, or a variation of, the Approved Amendment proposed by such Registry Operator. An Exemption Request may only be granted upon a clear and convincing showing by Registry Operator that compliance with the Approved Amendment conflicts with applicable laws or would have a material adverse effect on the long-term financial condition or results of operations of Registry Operator. No Exemption Request will be granted if ICANN determines, in its reasonable discretion, that granting such Exemption Request would be materially harmful to registrants or result in the denial of a direct benefit to registrants. Within ninety (90) calendar days of ICANN’s receipt of an Exemption Request, ICANN shall either approve (which approval may be conditioned or consist of alternatives to or a variation of the Approved Amendment) or deny the Exemption Request in writing, during which time the Approved Amendment will not amend this Agreement. If the Exemption Request is approved by ICANN, the Approved Amendment will not amend this Agreement. If such Exemption Request is denied by ICANN, the Approved Amendment will amend this Agreement as of the Amendment Effective Date (or, if such date has passed, such Approved Amendment shall be deemed effective immediately on the date of such denial), provided that Registry Operator may, within thirty (30) calendar days following receipt of ICANN’s determination, appeal ICANN’s decision to deny the Exemption Request pursuant to the dispute resolution procedures set forth in Article 5. The Approved Amendment will be deemed not to have amended this Agreement during the pendency of the dispute resolution process. For avoidance of doubt, only Exemption Requests submitted by Registry Operator that are approved by ICANN pursuant to this Section 7.6(c) or through an arbitration decision pursuant to Article 5 shall exempt Registry Operator from any Approved Amendment, and no exemption request granted to any other Applicable Registry Operator (whether by ICANN or through arbitration) shall have any effect under this Agreement or exempt Registry Operator from any Approved Amendment.

(d) Except as set forth in this Section 7.6, no amendment, supplement or modification of this Agreement or any provision hereof shall be binding unless executed in writing by both parties, and nothing in this Section 7.6 shall restrict ICANN and Registry Operator from entering into bilateral amendments and modifications to this Agreement negotiated solely between the two parties. No waiver of any provision of this Agreement shall be binding unless evidenced by a writing signed by the party waiving compliance with such provision. No waiver of any of the provisions of this Agreement or failure to enforce any of the provisions hereof shall be deemed or shall constitute a waiver of any other

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

provision hereof, nor shall any such waiver constitute a continuing waiver unless otherwise expressly provided. For the avoidance of doubt, nothing in this Section 7.6(+) shall be deemed to limit Registry Operator's obligation to comply with Section 2.2.

(e) For purposes of this Agreement, the following terms shall have the following meanings:

(i) "Applicable Registry Operators" means, collectively, the registry operators of the top-level domains party to a registry agreement that contains a provision similar to this Section 7.6, including Registry Operator.

(ii) "Registry Operator Approval" means the receipt of each of the following: (A) the affirmative approval of the Applicable Registry Operators whose payments to ICANN accounted for two-thirds of the total amount of fees (converted to U.S. dollars, if applicable) paid to ICANN by all the Applicable Registry Operators during the immediately previous calendar year pursuant to the Applicable Registry Agreements, and (B) the affirmative approval of a majority of the Applicable Registry Operators at the time such approval is obtained. For avoidance of doubt, with respect to clause (B), each Applicable Registry Operator shall have one vote for each top-level domain operated by such Registry Operator pursuant to an Applicable Registry Agreement.

(iii) "Restricted Amendment" means the following: (i) an amendment of Specification 1, (ii) except to the extent addressed in Section 2.10 hereof, an amendment that specifies the price charged by Registry Operator to registrars for domain name registrations, (iii) an amendment to the definition of Registry Services as set forth in the first paragraph of Section ~~2.1~~ of Specification 6, or (iv) an amendment to the length of the Term.

(iv) "Working Group" means representatives of the Applicable Registry Operators and other members of the community that ICANN appoints, from time to time, to serve as a working group to consult on amendments to the Applicable Registry Agreements (excluding bilateral amendments pursuant to Section 7.6(d)).

**7.7 No Third-Party Beneficiaries.** This Agreement will not be construed to create any obligation by either ICANN or Registry Operator to any non-party to this Agreement, including any registrar or registered name holder.

**7.8 General Notices.** Except for notices pursuant to Section 7.6, all notices to be given under or in relation to this Agreement will be given either (i) in writing at the address of the appropriate party as set forth below or (ii) via facsimile or electronic mail as provided below, unless that party has given a notice of change of postal or email address, or facsimile number, as provided in this agreement. All notices under Section 7.6 shall be given by both posting of the applicable information on ICANN's web site and transmission of such information to Registry Operator by electronic mail. Any change in the contact information for notice below will be given by the party within thirty (30) calendar days of such change. Notices, designations, determinations, and specifications made under this Agreement will be in the English language. Other than notices under Section 7.6, any notice required by this Agreement will be deemed to have been properly given (i) if in paper form, when delivered in person or via courier service with confirmation of receipt or (ii) if via facsimile or by electronic mail, upon confirmation of receipt by the recipient's facsimile machine or email server, provided that such notice via facsimile or

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

electronic mail shall be followed by a copy sent by regular postal mail service within two (2) business days. Any notice required by Section 7.6 will be deemed to have been given when electronically posted on ICANN's website and upon confirmation of receipt by the email server. In the event other means of notice become practically achievable, such as notice via a secure website, the parties will work together to implement such notice means under this Agreement.

If to ICANN, addressed to:  
 Internet Corporation for Assigned Names and Numbers  
 4676 Admiralty Way, Suite 330  
 Marina Del Rey, California 90292

[\_\_\_\_\_]

Telephone:  
 Facsimile:  
 Attention:

With a Required Copy to:  
 Email: (As specified from time to time.)

**7.9 Entire Agreement.** This Agreement (including those specifications and documents incorporated by reference to URL locations which form a part of it) constitutes the entire agreement of the parties hereto pertaining to the operation of the TLD and supersedes all prior agreements, understandings, negotiations and discussions, whether oral or written, between the parties on that subject.

**7.10 English Language Controls.** Notwithstanding any translated version of this Agreement and/or specifications that may be provided to Registry Operator, the English language version of this Agreement and all referenced specifications are the official versions that bind the parties hereto. In the event of any conflict or discrepancy between any translated version of this Agreement and the English language version, the English language version controls. Notices, designations, determinations, and specifications made under this Agreement shall be in the English language.

**7.11 Ownership Rights.** Nothing contained in this Agreement shall be construed as establishing or granting to Registry Operator any property ownership rights or interests in the TLD or the letters, words, symbols or other characters making up the TLD string.

**7.12 Severability.** This Agreement shall be deemed severable; the invalidity or unenforceability of any term or provision of this Agreement shall not affect the validity or enforceability of the balance of this Agreement or of any other term hereof, which shall remain in full force and effect. If any of the provisions hereof are determined to be invalid or unenforceable, the parties shall negotiate in good faith to modify this Agreement so as to effect the original intent of the parties as closely as possible.

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

~~**7.13 Government Support.** In the event that the TLD was delegated to Registry Operator pursuant to the consent of a governmental entity to use a geographic name related to the jurisdiction of such governmental entity, the parties agree that, notwithstanding any provision contained in this Agreement, in the event of a dispute between such governmental entity and Registry Operator, ICANN may implement the order of any court sitting in such jurisdiction in favor of such governmental entity related to the TLD.~~

**7.13 Court Orders.** ICANN will respect any order from a court of competent jurisdiction, including any orders from any jurisdiction where the consent or non-objection of the government was a requirement for the delegation of the TLD. Notwithstanding any other provision of this agreement, ICANN's implementation of any such order will not be a breach of this Agreement.

*[Note: The following section is applicable to intergovernmental organizations or governmental entities only.]*

#### **7.14 Special Provision Relating to Intergovernmental Organizations or Governmental Entities.**

(a) ICANN acknowledges that Registry Operator is an entity subject to public international law, including international treaties applicable to Registry Operator (such public international law and treaties, collectively hereinafter the “Applicable Laws”). Nothing in this Agreement and its related specifications shall be construed or interpreted to require Registry Operator to violate Applicable Laws or prevent compliance therewith. The Parties agree that Registry Operator’s compliance with Applicable Laws shall not constitute a breach of this Agreement.

(b) In the event Registry Operator reasonably determines that any provision of this Agreement and its related specifications, or any decisions or policies of ICANN referred to in this Agreement, including but not limited to Temporary Policies and Consensus Policies (such provisions, specifications and policies, collectively hereinafter, “ICANN Requirements”), may conflict with or violate Applicable Law (hereinafter, a “Potential Conflict”), Registry Operator shall provide detailed notice (a “Notice”) of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy. In the event Registry Operator determines that there is Potential Conflict between a proposed Applicable Law and any ICANN Requirement, Registry Operator shall provide detailed Notice of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy.

(c) As soon as practicable following such review, the parties shall attempt to resolve the Potential Conflict by cooperative engagement pursuant to the procedures set forth in Section 5.1. In addition, Registry Operator shall use its best efforts to eliminate or minimize any impact arising from such Potential Conflict between Applicable Laws and any ICANN Requirement. If, following such cooperative engagement, Registry Operator determines that the Potential Conflict constitutes an actual conflict between any ICANN Requirement, on the one hand, and Applicable Laws, on the other hand, then ICANN shall waive compliance with such ICANN Requirement (provided that the parties shall negotiate in good faith on a continuous basis thereafter to mitigate or eliminate the effects of such non-compliance on ICANN), unless ICANN reasonably and objectively determines that the failure of Registry Operator to comply with such ICANN Requirement would constitute a threat to the Security and Stability of Registry Services, the Internet or the DNS (hereinafter, an “ICANN Determination”). Following receipt of notice by Registry Operator of such ICANN Determination, Registry Operator shall be afforded

\* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

a period of ninety (90) calendar days to resolve such conflict with an Applicable Law. If the conflict with an Applicable Law is not resolved to ICANN's complete satisfaction during such period, Registry Operator shall have the option to submit, within ten (10) calendar days thereafter, the matter to binding arbitration as defined in subsection (d) below. If during such period, Registry Operator does not submit the matter to arbitration pursuant to subsection (d) below, ICANN may, upon notice to Registry Operator, terminate this Agreement with immediate effect.

(d) If Registry Operator disagrees with an ICANN Determination, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2, except that the sole issue presented to the arbitrator for determination will be whether or not ICANN reasonably and objectively reached the ICANN Determination. For the purposes of such arbitration, ICANN shall present evidence to the arbitrator supporting the ICANN Determination. If the arbitrator determines that ICANN did not reasonably and objectively reach the ICANN Determination, then ICANN shall waive Registry Operator's compliance with the subject ICANN Requirement. If the arbitrators or pre-arbitral referee, as applicable, determine that ICANN did reasonably and objectively reach the ICANN Determination, then, upon notice to Registry Operator, ICANN may terminate this Agreement with immediate effect.

(e) Registry Operator hereby represents and warrants that, to the best of its knowledge as of the date of execution of this Agreement, no existing ICANN Requirement conflicts with or violates any Applicable Law.

(f) Notwithstanding any other provision of this Section 7.14, following an ICANN Determination and prior to a finding by an arbitrator pursuant to Section 7.14(d) above, ICANN may, subject to prior consultations with Registry Operator, take such reasonable technical measures as it deems necessary to ensure the Security and Stability of Registry Services, the Internet and the DNS. These reasonable technical measures shall be taken by ICANN on an interim basis, until the earlier of the date of conclusion of the arbitration procedure referred to in Section 7.14(d) above or the date of complete resolution of the conflict with an Applicable Law. In case Registry Operator disagrees with such technical measures taken by ICANN, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2 above, during which process ICANN may continue to take such technical measures. In the event that ICANN takes such measures, Registry Operator shall pay all costs incurred by ICANN as a result of taking such measures. In addition, in the event that ICANN takes such measures, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

## SPECIFICATION 1

### CONSENSUS POLICIES AND TEMPORARY POLICIES SPECIFICATION

#### 1. Consensus Policies.

- 1.1. “*Consensus Policies*” are those policies established (1) pursuant to the procedure set forth in ICANN's Bylaws and due process, and (2) covering those topics listed in Section 1.2 of this document. The Consensus Policy development process and procedure set forth in ICANN's Bylaws may be revised from time to time in accordance with the process set forth therein.
- 1.2. Consensus Policies and the procedures by which they are developed shall be designed to produce, to the extent possible, a consensus of Internet stakeholders, including the operators of gTLDs. Consensus Policies shall relate to one or more of the following:
  - 1.2.1. issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, security and/or stability of the Internet or Domain Name System (“DNS”);
  - 1.2.2. functional and performance specifications for the provision of Registry Services;
  - 1.2.3. Security and Stability of the registry database for the TLD;
  - 1.2.4. registry policies reasonably necessary to implement Consensus Policies relating to registry operations or registrars;
  - 1.2.5. resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names); or
  - 1.2.6. restrictions on cross-ownership of registry operators and registrars or registrar resellers and regulations and restrictions with respect to registry operations and the use of registry and registrar data in the event that a registry operator and a registrar or registrar reseller are affiliated.
- 1.3. Such categories of issues referred to in Section 1.2 shall include, without limitation:
  - 1.3.1. principles for allocation of registered names in the TLD (e.g., first-come/first-served, timely renewal, holding period after expiration);
  - 1.3.2. prohibitions on warehousing of or speculation in domain names by registries or registrars;
  - 1.3.3. reservation of registered names in the TLD that may not be registered initially or that may not be renewed due to reasons reasonably related to (i) avoidance of confusion among or misleading of users, (ii) intellectual property, or (iii) the technical management of the DNS or the Internet (e.g., establishment of reservations of names from registration); and
  - 1.3.4. maintenance of and access to accurate and up-to-date information concerning domain name registrations; and procedures to avoid disruptions of domain name registrations due to suspension or termination of operations by a registry operator or a registrar, including procedures for allocation of responsibility for serving registered domain names in a TLD affected by such a suspension or termination.
- 1.4. In addition to the other limitations on Consensus Policies, they shall not:

- 1.4.1. prescribe or limit the price of Registry Services;
  - 1.4.2. modify the terms or conditions for the renewal or termination of the Registry Agreement;
  - 1.4.3. modify the limitations on Temporary Policies (defined below) or Consensus Policies;
  - 1.4.4. modify the provisions in the registry agreement regarding fees paid by Registry Operator to ICANN; or
  - 1.4.5. modify ICANN's obligations to ensure equitable treatment of registry operators and act in an open and transparent manner.
2. **Temporary Policies.** Registry Operator shall comply with and implement all specifications or policies established by the Board on a temporary basis, if adopted by the Board by a vote of at least two-thirds of its members, so long as the Board reasonably determines that such modifications or amendments are justified and that immediate temporary establishment of a specification or policy on the subject is necessary to maintain the stability or security of Registry Services or the DNS ("*Temporary Policies*").
- 2.1. Such proposed specification or policy shall be as narrowly tailored as feasible to achieve those objectives. In establishing any Temporary Policy, the Board shall state the period of time for which the Temporary Policy is adopted and shall immediately implement the Consensus Policy development process set forth in ICANN's Bylaws.
    - 2.1.1. ICANN shall also issue an advisory statement containing a detailed explanation of its reasons for adopting the Temporary Policy and why the Board believes such Temporary Policy should receive the consensus support of Internet stakeholders.
    - 2.1.2. If the period of time for which the Temporary Policy is adopted exceeds 90 days, the Board shall reaffirm its temporary adoption every 90 days for a total period not to exceed one year, in order to maintain such Temporary Policy in effect until such time as it becomes a Consensus Policy. If the one year period expires or, if during such one year period, the Temporary Policy does not become a Consensus Policy and is not reaffirmed by the Board, Registry Operator shall no longer be required to comply with or implement such Temporary Policy.
3. **Notice and Conflicts.** Registry Operator shall be afforded a reasonable period of time following notice of the establishment of a Consensus Policy or Temporary Policy in which to comply with such policy or specification, taking into account any urgency involved. In the event of a conflict between Registry Services and Consensus Policies or any Temporary Policy, the Consensus Policies or Temporary Policy shall control, but only with respect to subject matter in conflict.

## SPECIFICATION 2 DATA ESCROW REQUIREMENTS

Registry Operator will engage an independent entity to act as data escrow agent (“*Escrow Agent*”) for the provision of data escrow services related to the Registry Agreement. The following Technical Specifications set forth in Part A, and Legal Requirements set forth in Part B, will be included in any data escrow agreement between Registry Operator and the Escrow Agent, under which ICANN must be named a third-party beneficiary. In addition to the following requirements, the data escrow agreement may contain other provisions that are not contradictory or intended to subvert the required terms provided below.

### PART A – TECHNICAL SPECIFICATIONS

1. **Deposits.** There will be two types of Deposits: Full and Differential. For both types, the universe of Registry objects to be considered for data escrow are those objects necessary in order to offer all of the approved Registry Services.
  - 1.1 “**Full Deposit**” will consist of data that reflects the state of the registry as of 00:00:00 UTC on each Sunday. Pending transactions at that time (i.e., transactions that have not been committed) will not be reflected in the Full Deposit.
  - 1.2 “**Differential Deposit**” means data that reflects all transactions that were not reflected in the last previous Full or Differential Deposit, as the case may be. Each Differential Deposit will contain all database transactions since the previous Deposit was completed as of 00:00:00 UTC of each day, but Sunday. Differential Deposits must include complete Escrow Records as specified below that were not included or changed since the most recent full or Differential Deposit (i.e., newly added or modified domain names). ~~Although we expect this to be an exception, it is permissible to have some minimum overlap between Differential Deposits.~~
2. **Schedule for Deposits.** Registry Operator will submit a set of escrow files on a daily basis as follows:
  - 2.1 Each Sunday, a Full Deposit must be submitted to the Escrow Agent by 23:59 UTC.
  - 2.2 The other six days of the week, the corresponding Differential Deposit must be submitted to Escrow Agent by 23:59 UTC.
3. **Escrow Format Specification.**
  - 3.1 **Deposit’s Format.** Registry objects, such as domains, contacts, name servers, registrars, etc. will be compiled into a file constructed as described in draft-arias-noguchi-registry-data-escrow, see [1]. The aforementioned document describes some elements as optional; Registry Operator will include those elements in the Deposits if they are available. Registry Operator will use the draft version available at the time of signing the Agreement, if not already an RFC. Once the specification is published as an RFC, Registry Operator will implement that specification, no later than 180 days after. UTF-8 character encoding will be used.
  - 3.2 **Extensions.** If a Registry Operator offers additional Registry Services that require submission of additional data, not included above, additional “extension schemas” shall be defined in a case by case base to represent that data. These “extension schemas” will be specified as described in [1]. Data related to the “extensions schemas” will be included in the deposit file described in section

3.1. ICANN and the respective Registry shall work together to agree on such new objects' data escrow specifications.

4. **Processing of Deposit files.** The use of compression is recommended in order to reduce electronic data transfer times, and storage capacity requirements. Data encryption will be used to ensure the privacy of registry escrow data. Files processed for compression and encryption will be in the binary OpenPGP format as per OpenPGP Message Format - RFC 4880, see [2]. Acceptable algorithms for Public-key cryptography, Symmetric-key cryptography, Hash and Compression are those enumerated in RFC 4880, not marked as deprecated in OpenPGP IANA Registry, see [3], that are also royalty-free. The process to follow for a data file in original text format is:
- (1) The file should be compressed. The suggested algorithm for compression is ZIP as per RFC 4880.
  - (2) The compressed data will be encrypted using the escrow agent's public key. The suggested algorithms for Public-key encryption are Elgamal and RSA as per RFC 4880. The suggested algorithms for Symmetric-key encryption are TripleDES, AES128 and CAST5 as per RFC 4880.
  - (3) The file may be split as necessary if, once compressed and encrypted is larger than the file size limit agreed with the escrow agent. Every part of a split file, or the whole file if split is not used, will be called a processed file in this section.
  - (4) A digital signature file will be generated for every processed file using the Registry's private key. The digital signature file will be in binary OpenPGP format as per RFC 4880 [2], and will not be compressed or encrypted. The suggested algorithms for Digital signatures are DSA and RSA as per RFC 4880. The suggested algorithm for Hashes in Digital signatures is SHA256.
  - (5) The processed files and digital signature files will then be transferred to the Escrow Agent through secure electronic mechanisms, such as, SFTP, SCP, HTTPS file upload, etc. as agreed between the Escrow Agent and the Registry Operator. Non-electronic delivery through a physical medium such as CD-ROMs, DVD-ROMs, or USB storage devices may be used if authorized by ICANN.
  - (6) The Escrow Agent will then validate every (processed) transferred data file using the procedure described in section 8.
5. **File Naming Conventions.** Files will be named according to the following convention: {gTLD}\_{YYYY-MM-DD}\_{type}\_S{#}\_R{rev}.{ext} where:
- 5.1 {gTLD} is replaced with the gTLD name; in case of an IDN-TLD, the ASCII-compatible form (A-Label) must be used;
  - 5.2 {YYYY-MM-DD} is replaced by the date corresponding to the time used as a timeline watermark for the transactions; i.e. for the Full Deposit corresponding to 2009-08-02T00:00Z, the string to be used would be "2009-08-02";
  - 5.3 {type} is replaced by:
    - (1) "full", if the data represents a Full Deposit;
    - (2) "diff", if the data represents a Differential Deposit;
  - 5.4 {#} is replaced by the position of the file in a series of files, beginning with "1"; in case of a lone file, this must be replaced by "1".
  - 5.5 {rev} is replaced by the number of revision (or resend) of the file beginning with "0".
  - 5.6 {ext} is replaced by "sig" if it is a digital signature file of the quasi-homonymous file. Otherwise it is replaced by "ryde".

6. **Distribution of Public Keys.** Each of Registry Operator and Escrow Agent will distribute its public key to the other party (Registry Operator or Escrow Agent, as the case may be) via email to an email address to be specified. Each party will confirm receipt of the other party's public key with a reply email, and the distributing party will subsequently reconfirm the authenticity of the key transmitted via offline methods, like in person meeting, telephone, etc. In this way, public key transmission is authenticated to a user able to send and receive mail via a mail server operated by the distributing party. Escrow Agent, Registry and ICANN will exchange keys by the same procedure.
7. **Notification of Deposits.** Along with the delivery of each Deposit, Registry Operator will deliver to Escrow Agent and to ICANN a written statement (which may be by authenticated e-mail) that includes a copy of the report generated upon creation of the Deposit and states that the Deposit has been inspected by Registry Operator and is complete and accurate. Registry Operator will include the Deposit's "id" and "resend" attributes in its statement. The attributes are explained in [1].
8. **Verification Procedure.**
  - (1) The signature file of each processed file is validated.
  - (2) If processed files are pieces of a bigger file, ~~it~~[the latter](#) is put together.
  - (3) Each file obtained in the previous step is then decrypted and uncompressed.
  - (4) Each data file contained in the previous step is then validated against the format defined in [1].
  - (5) If [1] includes a verification process, that will be applied at this step.  
If any discrepancy is found in any of the steps, the Deposit will be considered incomplete.
9. **References.**
  - [1] Domain Name Data Escrow Specification (work in progress), <http://tools.ietf.org/html/draft-arias-noguchi-registry-data-escrow>

  - [3] OpenPGP parameters, <http://www.iana.org/assignments/pgp-parameters/pgp-parameters.xhtml>

**PART B – LEGAL REQUIREMENTS**

1. **Escrow Agent.** Prior to entering into an escrow agreement, the Registry Operator must provide notice to ICANN as to the identity of the Escrow Agent, and provide ICANN with contact information and a copy of the relevant escrow agreement, and all amendment thereto. In addition, prior to entering into an escrow agreement, Registry Operator must obtain the consent of ICANN to (a) use the specified Escrow Agent, and (b) enter into the form of escrow agreement provided. ICANN must be expressly designated a third-party beneficiary of the escrow agreement. ICANN reserves the right to withhold its consent to any Escrow Agent, escrow agreement, or any amendment thereto, all in its sole discretion.
2. **Fees.** Registry Operator must pay, or have paid on its behalf, fees to the Escrow Agent directly. If Registry Operator fails to pay any fee by the due date(s), the Escrow Agent will give ICANN written notice of such non-payment and ICANN may pay the past-due fee(s) within ten business days after receipt of the written notice from Escrow Agent. Upon payment of the past-due fees by ICANN, ICANN shall have a claim for such amount against Registry Operator, which Registry Operator shall be required to submit to ICANN together with the next fee payment due under the Registry Agreement.
3. **Ownership.** Ownership of the Deposits during the effective term of the Registry Agreement shall remain with Registry Operator at all times. Thereafter, Registry Operator shall assign any such ownership rights (including intellectual property rights, as the case may be) in such Deposits to ICANN. In the event that during the term of the Registry Agreement any Deposit is released from escrow to ICANN, any intellectual property rights held by Registry Operator in the Deposits will automatically be licensed on a non-exclusive, perpetual, irrevocable, royalty-free, paid-up basis to ICANN or to a party designated in writing by ICANN.
4. **Integrity and Confidentiality.** Escrow Agent will be required to (i) hold and maintain the Deposits in a secure, locked, and environmentally safe facility, which is accessible only to authorized representatives of Escrow Agent, (ii) protect the integrity and confidentiality of the Deposits using commercially reasonable measures and (iii) keep and safeguard each Deposit for one year. ICANN and Registry Operator will be provided the right to inspect Escrow Agent's applicable records upon reasonable prior notice and during normal business hours. Registry Operator and ICANN will be provided with the right to designate a third-party auditor to audit Escrow Agent's compliance with the technical specifications and maintenance requirements of this Specification 2 from time to time.

If Escrow Agent receives a subpoena or any other order from a court or other judicial tribunal pertaining to the disclosure or release of the Deposits, Escrow Agent will promptly notify the Registry Operator and ICANN unless prohibited by law. After notifying the Registry Operator and ICANN, Escrow Agent shall allow sufficient time for Registry Operator or ICANN to challenge any such order, which shall be the responsibility of Registry Operator or ICANN; provided, however, that Escrow Agent does not waive its rights to present its position with respect to any such order. Escrow Agent will cooperate with the Registry Operator or ICANN to support efforts to quash or limit any subpoena, at such party's expense. Any party requesting additional assistance shall pay Escrow Agent's standard charges or as quoted upon submission of a detailed request.

5. **Copies.** Escrow Agent may be permitted to duplicate any Deposit, in order to comply with the terms and provisions of the escrow agreement.

6. **Release of Deposits.** Escrow Agent will make available for electronic download (unless otherwise requested) to ICANN or its designee, within twenty-four hours, at the Registry Operator's expense, all Deposits in Escrow Agent's possession in the event that the Escrow Agent receives a request from Registry Operator to effect such delivery to ICANN, or receives one of the following written notices by ICANN stating that:
- 6.1 the Registry Agreement has expired without renewal, or been terminated; or
  - 6.2 ICANN failed, with respect to (a) any Full Deposit or (b) five Differential Deposits within any calendar month, to receive, within five calendar days after the Deposit's scheduled delivery date, notification of receipt from Escrow Agent; (x) ICANN gave notice to Escrow Agent and Registry Operator of that failure; and (y) ICANN has not, within seven calendar days after such notice, received notice from Escrow Agent that the Deposit has been received; or
  - 6.3 ICANN has received notification from Escrow Agent of failed verification of a Full Deposit or of failed verification of five Differential Deposits within any calendar month and (a) ICANN gave notice to Registry Operator of that receipt; and (b) ICANN has not, within seven calendar days after such notice, received notice from Escrow Agent of verification of a remediated version of such Full Deposit or Differential Deposit; or
  - 6.4 Registry Operator has: (i) ceased to conduct its business in the ordinary course; or (ii) filed for bankruptcy, become insolvent or anything analogous to any of the foregoing under the laws of any jurisdiction anywhere in the world; or
  - 6.5 Registry Operator has experienced a failure of critical registry functions and ICANN has asserted its rights pursuant to Section 2.13 of the Registry Agreement; or
  - 6.6 a competent court, arbitral, legislative, or government agency mandates the release of the Deposits to ICANN.

Unless Escrow Agent has previously released the Registry Operator's Deposits to ICANN or its designee, Escrow Agent will deliver all Deposits to ICANN upon termination of the Registry Agreement or the Escrow Agreement.

7. **Verification of Deposits.**
- 7.1 Within twenty-four hours after receiving each Deposit or corrected Deposit, Escrow Agent must verify the format and completeness of each Deposit and deliver to ICANN a copy of the verification report generated for each Deposit. Reports will be delivered electronically, as specified from time to time by ICANN.
  - 7.2 If Escrow Agent discovers that any Deposit fails the verification procedures, Escrow Agent must notify, either by email, fax or phone, Registry Operator and ICANN of such nonconformity within twenty-four hours after receiving the non-conformant Deposit. Upon notification of such verification failure, Registry Operator must begin developing modifications, updates, corrections, and other fixes of the Deposit necessary for the Deposit to pass the verification procedures and deliver such fixes to Escrow Agent as promptly as possible.
8. **Amendments.** Escrow Agent and Registry Operator shall amend the terms of the Escrow Agreement to conform to this Specification 2 within ten (10) calendar days of any amendment or modification to this Specification 2. In the event of a conflict between this Specification 2 and the Escrow Agreement, this Specification 2 shall control.
9. **Indemnity.** Registry Operator shall indemnify and hold harmless Escrow Agent and each of its directors, officers, agents, employees, members, and stockholders ("Escrow Agent Indemnitees") absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys' fees and costs, that may be asserted by a third party against any Escrow Agent

Indemnitees in connection with the Escrow Agreement or the performance of Escrow Agent or any Escrow Agent Indemnitees thereunder (with the exception of any claims based on the misrepresentation, negligence, or misconduct of Escrow Agent, its directors, officers, agents, employees, contractors, members, and stockholders). Escrow Agent shall indemnify and hold harmless Registry Operator and ICANN, and each of their respective directors, officers, agents, employees, members, and stockholders ("Indemnitees") absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys' fees and costs, that may be asserted by a third party against any Indemnitee in connection with the misrepresentation, negligence or misconduct of Escrow Agent, its directors, officers, agents, employees and contractors.

## SPECIFICATION 3

### FORMAT AND CONTENT FOR REGISTRY OPERATOR MONTHLY REPORTING

Registry Operator shall provide one set of monthly ~~report~~reports per gTLD to \_\_\_\_\_ with the following content. ICANN may request in the future that the reports be delivered by other means and using other formats. ICANN will use reasonable commercial efforts to preserve the confidentiality of the information reported until three months after the end of the month to which the reports relate.

**1. Per-Registrar Transactions Report.** This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-transactions-yyyymm.csv”, where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields per registrar:

Field #	Field Name	<del>Notes</del> <u>Description</u>
01	registrar-name	registrar's full corporate name as registered with IANA
02	iana-id	<a href="http://www.iana.org/assignments/registrar-ids">http://www.iana.org/assignments/registrar-ids</a>
03	total-domains	total domains under sponsorship
04	total-nameservers	total name servers registered for TLD
05	net-adds-1-yr	number of domains successfully registered with an initial term of one year (and not deleted within the add grace period)
06	net-adds-2-yr	number of domains successfully registered with an initial term of two years (and not deleted within the add grace period)
07	net-adds-3-yr	number of domains successfully registered with an initial term of three years (and not deleted within the add grace period)
08	net-adds-4-yr	<del>ete-</del> <u>number of domains successfully registered with an initial term of four years (and not deleted within the add grace period)</u>
09	net-adds-5-yr	<del>-"</del> <u>number of domains successfully registered with an initial term of five years (and not deleted within the add grace period)</u>
10	net-adds-6-yr	<del>-"</del> <u>number of domains successfully registered with an initial term of six years (and not deleted within the add grace period)</u>
11	net-adds-7-yr	<del>-"</del> <u>number of domains successfully registered with an initial term of seven years (and not deleted within the add grace period)</u>
12	net-adds-8-yr	<del>-"</del> <u>number of domains successfully registered with an initial term of eight years (and not deleted within the</u>

		<a href="#"><u>add grace period)</u></a>
13	net-adds-9-yr	<a href="#"><u>" "number of domains successfully registered with an initial term of nine years (and not deleted within the add grace period)</u></a>
14	net-adds-10-yr	<a href="#"><u>" "number of domains successfully registered with an initial term of ten years (and not deleted within the add grace period)</u></a>
15	net-renews-1-yr	number of domains successfully renewed either automatically or by command with a new renewal period of one year (and not deleted within the renew grace period)
16	net-renews-2-yr	number of domains successfully renewed either automatically or by command with a new renewal period of two years (and not deleted within the renew grace period)
17	net-renews-3-yr	number of domains successfully renewed either automatically or by command with a new renewal period of three years (and not deleted within the renew grace period)
18	net-renews-4-yr	<a href="#"><u>etc.number of domains successfully renewed either automatically or by command with a new renewal period of four years (and not deleted within the renew grace period)</u></a>
19	net-renews-5-yr	<a href="#"><u>" "number of domains successfully renewed either automatically or by command with a new renewal period of five years (and not deleted within the renew grace period)</u></a>
20	net-renews-6-yr	<a href="#"><u>" "number of domains successfully renewed either automatically or by command with a new renewal period of six years (and not deleted within the renew grace period)</u></a>
21	net-renews-7-yr	<a href="#"><u>" "number of domains successfully renewed either automatically or by command with a new renewal period of seven years (and not deleted within the renew grace period)</u></a>
22	net-renews-8-yr	<a href="#"><u>" "number of domains successfully renewed either automatically or by command with a new renewal period of eight years (and not deleted within the renew grace period)</u></a>
23	net-renews-9-yr	<a href="#"><u>" "number of domains successfully renewed either automatically or by command with a new renewal period of nine years (and not deleted within the renew grace period)</u></a>

24	net-renews-10-yr	<u>"number of domains successfully renewed either automatically or by command with a new renewal period of ten years (and not deleted within the renew grace period)"</u>
25	transfer-gaining-successful	transfers initiated by this registrar that were ack'd by the other registrar – either by command or automatically
26	transfer-gaining-nacked	transfers initiated by this registrar that were n'acked by the other registrar
27	transfer-losing-successful	transfers initiated by another registrar that this registrar ack'd – either by command or automatically
28	transfer-losing-nacked	transfers initiated by another registrar that this registrar n'acked
29	transfer-disputed-won	number of transfer disputes in which this registrar prevailed
30	transfer-disputed-lost	number of transfer disputes this registrar lost
31	transfer-disputed-nodecision	number of transfer disputes involving this registrar with a split or no decision
32	deleted-domains-grace	domains deleted within the add grace period
33	deleted-domains-nograce	domains deleted outside the add grace period
34	restored-domains	domain names restored from redemption period
35	restored-noreport	total number of restored names for which the registrar failed to submit a restore report
36	agp-exemption-requests	total number of AGP (add grace period) exemption requests
37	agp-exemptions-granted	total number of AGP (add grace period) exemption requests granted
38	agp-exempted-domains	total number of names affected by granted AGP (add grace period) exemption requests
<u>39</u>	<u>attempted-adds</u>	<u>number of attempted (successful and failed) domain name create commands</u>

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. The last line of each report ~~should~~shall include totals for each column across all registrars; the first field of this line shall read “Totals” while the second field shall be left empty in that line. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

~~[Drafting note to community on change from v4: The requirement for an SLA report was removed given ICANN’s plan to build an SLA monitoring system, as described in Specification 6, that would produce those results directly. ICANN plans to periodically publish results from the SLA monitoring system in order to allow the registrants and other interested parties access to this information.]~~

**2. Registry Functions Activity Report.** This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-activity-yyyymm.csv”, where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields:

<u>Field #</u>	<u>Field Name</u>	<u>Description</u>
<u>01</u>	<u>operational-registrars</u>	<u>number of operational registrars at the end of the reporting period</u>
<u>02</u>	<u>ramp-up-registrars</u>	<u>number of registrars that have received a password for access to OT&amp;E at the end of the reporting period</u>
<u>03</u>	<u>pre-ramp-up-registrars</u>	<u>number of registrars that have requested access, but have not yet entered the ramp-up period at the end of the reporting period</u>
<u>04</u>	<u>zfa-passwords</u>	<u>number of active zone file access passwords at the end of the reporting period</u>
<u>05</u>	<u>whois-43-queries</u>	<u>number of WHOIS (port-43) queries responded during the reporting period</u>
<u>06</u>	<u>web-whois-queries</u>	<u>number of Web-based Whois queries responded during the reporting period, not including searchable Whois</u>
<u>07</u>	<u>searchable-whois-queries</u>	<u>number of searchable Whois queries responded during the reporting period, if offered</u>
<u>08</u>	<u>dns-udp-queries-received</u>	<u>number of DNS queries received over UDP transport during the reporting period</u>
<u>09</u>	<u>dns-udp-queries-responded</u>	<u>number of DNS queries received over UDP transport that were responded during the reporting period</u>
<u>10</u>	<u>dns-tcp-queries-received</u>	<u>number of DNS queries received over TCP transport during the reporting period</u>
<u>11</u>	<u>dns-tcp-queries-responded</u>	<u>number of DNS queries received over TCP transport that were responded during the reporting period</u>
<u>12</u>	<u>srs-dom-check</u>	<u>number of SRS (EPP and any other interface) domain name “check” requests responded during the reporting period</u>
<u>13</u>	<u>srs-dom-create</u>	<u>number of SRS (EPP and any other interface) domain name “create” requests responded during the reporting period</u>
<u>14</u>	<u>srs-dom-delete</u>	<u>number of SRS (EPP and any other interface) domain name “delete” requests responded during the reporting period</u>
<u>15</u>	<u>srs-dom-info</u>	<u>number of SRS (EPP and any other interface) domain name “info” requests responded during the reporting period</u>
<u>16</u>	<u>srs-dom-renew</u>	<u>number of SRS (EPP and any other interface) domain name “renew” requests responded during the reporting period</u>

<u>17</u>	<u>srs-dom-rgp-restore-report</u>	<u>number of SRS (EPP and any other interface) domain name RGP “restore” requests responded during the reporting period</u>
<u>18</u>	<u>srs-dom-rgp-restore-request</u>	<u>number of SRS (EPP and any other interface) domain name RGP “restore” requests delivering a restore report responded during the reporting period</u>
<u>19</u>	<u>srs-dom-transfer-approve</u>	<u>number of SRS (EPP and any other interface) domain name “transfer” requests to approve transfers responded during the reporting period</u>
<u>20</u>	<u>srs-dom-transfer-cancel</u>	<u>number of SRS (EPP and any other interface) domain name “transfer” requests to cancel transfers responded during the reporting period</u>
<u>21</u>	<u>srs-dom-transfer-query</u>	<u>number of SRS (EPP and any other interface) domain name “transfer” requests to query about a transfer responded during the reporting period</u>
<u>22</u>	<u>srs-dom-transfer-reject</u>	<u>number of SRS (EPP and any other interface) domain name “transfer” requests to reject transfers responded during the reporting period</u>
<u>23</u>	<u>srs-dom-transfer-request</u>	<u>number of SRS (EPP and any other interface) domain name “transfer” requests to request transfers responded during the reporting period</u>
<u>24</u>	<u>srs-dom-update</u>	<u>number of SRS (EPP and any other interface) domain name “update” requests (not including RGP restore requests) responded during the reporting period</u>
<u>25</u>	<u>srs-host-check</u>	<u>number of SRS (EPP and any other interface) host “check” requests responded during the reporting period</u>
<u>26</u>	<u>srs-host-create</u>	<u>number of SRS (EPP and any other interface) host “create” requests responded during the reporting period</u>
<u>27</u>	<u>srs-host-delete</u>	<u>number of SRS (EPP and any other interface) host “delete” requests responded during the reporting period</u>
<u>28</u>	<u>srs-host-info</u>	<u>number of SRS (EPP and any other interface) host “info” requests responded during the reporting period</u>
<u>29</u>	<u>srs-host-update</u>	<u>number of SRS (EPP and any other interface) host “update” requests responded during the reporting period</u>
<u>30</u>	<u>srs-cont-check</u>	<u>number of SRS (EPP and any other interface) contact “check” requests responded during the reporting period</u>
<u>31</u>	<u>srs-cont-create</u>	<u>number of SRS (EPP and any other interface) contact “create” requests responded during the reporting period</u>
<u>32</u>	<u>srs-cont-delete</u>	<u>number of SRS (EPP and any other interface) contact “delete” requests responded during the reporting period</u>

<u>33</u>	<u>srs-cont-info</u>	<u>number of SRS (EPP and any other interface) contact “info” requests responded during the reporting period</u>
<u>34</u>	<u>srs-cont-transfer-approve</u>	<u>number of SRS (EPP and any other interface) contact “transfer” requests to approve transfers responded during the reporting period</u>
<u>35</u>	<u>srs-cont-transfer-cancel</u>	<u>number of SRS (EPP and any other interface) contact “transfer” requests to cancel transfers responded during the reporting period</u>
<u>36</u>	<u>srs-cont-transfer-query</u>	<u>number of SRS (EPP and any other interface) contact “transfer” requests to query about a transfer responded during the reporting period</u>
<u>37</u>	<u>srs-cont-transfer-reject</u>	<u>number of SRS (EPP and any other interface) contact “transfer” requests to reject transfers responded during the reporting period</u>
<u>38</u>	<u>srs-cont-transfer-request</u>	<u>number of SRS (EPP and any other interface) contact “transfer” requests to request transfers responded during the reporting period</u>
<u>39</u>	<u>srs-cont-update</u>	<u>number of SRS (EPP and any other interface) contact “update” requests responded during the reporting period</u>

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. The last line of each report shall include totals for each column across all registrars; the first field of this line shall read “Totals” while the second field shall be left empty in that line. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

## SPECIFICATION 4

### SPECIFICATION FOR REGISTRATION DATA ~~PUBLICATION~~DIRECTORY SERVICES

1. ~~WHOIS Service~~Registration Data Directory Services. Until ICANN ~~specifies~~requires a different ~~format and~~ protocol, Registry Operator will operate a ~~registration data publication~~WHOIS service available via ~~both~~ port 43 in accordance with RFC 3912, and a ~~website~~web-based Directory Service at <whois.nic.TLD> in accordance with RFC 3912 providing free public query-based access to at least the following elements in the following format. ICANN reserves the right to specify alternative formats and protocols, and upon such specification, the Registry Operator will implement such alternative specification as soon as reasonably practicable.

1.1. The format of responses shall follow a semi-free text format outline below, followed by a blank line and a legal disclaimer specifying the rights of Registry Operator, and of the user querying the database.

1.2. Each data object shall be represented as a set of key/value pairs, with lines beginning with keys, followed by a colon and a space as delimiters, followed by the value.

1.3. For fields where more than one value exists, multiple key/value pairs with the same key shall be allowed (for example to list multiple name servers). The first key/value pair after a blank line should be considered the start of a new record, and should be considered as identifying that record, and is used to group data, such as hostnames and IP addresses, or a domain name and registrant information, together.

#### 1.4. Domain Name Data:

1.4.1. **Query format:** whois EXAMPLE.TLD

1.4.2. **Response format:**

Domain Name: EXAMPLE.TLD  
Domain ID: D1234567-TLD  
WHOIS Server: whois.example.tld  
Referral URL: http://www.example.tld  
Updated Date: 2009-05-29T20:13:00Z  
Creation Date: 2000-10-08T00:45:00Z  
Expiration Date: 2010-10-08T00:44:59Z

 >>> Last update of WHOIS database: 2009-05-29T20:15:00Z <<<

## 1.6. Nameserver Data:

1.6.1. **Query format:** whois "NS1.EXAMPLE.TLD" or whois "nameserver (IP Address)"

1.6.2. **Response format:**

Server Name: NS1.EXAMPLE.TLD  
 IP Address: 192.0.2.123  
 IP Address: 2001:0DB8::1  
 Registrar: Example Registrar, Inc.  
 WHOIS Server: whois.example-registrar.tld  
 Referral URL: http://www.example-registrar.tld  
 >>> Last update of WHOIS database: 2009-05-29T20:15:00Z <<<

1.7. The format of the following data fields: domain status, individual and organizational names, address, street, city, state/province, postal code, country, telephone and fax numbers, email addresses, date and times should conform to the mappings specified in EPP RFCs 5730-5734 so that the display of this information (or values return in WHOIS responses) can be uniformly processed and understood.

~~[Drafting note to community on change from v4 to v5: The ICANN board of directors has referred the potential requirement to provide searchable Whois (Section 1.8 of Specification 4 in the previous version of the draft Registry Agreement) to its working group on data/consumer protection, which has not completed its review. — For the purposes of this draft Specification 4, the requirement has been removed but it may be modified and reintroduced upon direction from the working group, and the ICANN board of directors.]~~

[1.8. Searchability.](#) Offering searchability capabilities on the Directory Services is optional but if offered by the Registry Operator it shall comply with the specification described in this section.

[1.8.1. Registry Operator will offer searchability on the web-based Directory Service.](#)

1.8.2. Registry Operator will offer partial match capabilities, at least, on the following fields: domain name, contacts and registrant's name, and contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.).

1.8.3. Registry Operator will offer exact-match capabilities, at least, on the following fields: registrar id, name server name, and name server's IP address (only applies to IP addresses stored by the registry, i.e., glue records).

1.8.4. Registry Operator will offer Boolean search capabilities supporting, at least, the following logical operators to join a set of search criteria: AND, OR, NOT.

1.8.5. Search results will include domain names matching the search criteria.

1.8.6. Registry Operator will: 1) implement appropriate measures to avoid abuse of this feature (e.g., permitting access only to legitimate authorized users); and 2) ensure the feature is in compliance with any applicable privacy laws or policies.

## 2. Zone File Access

### 2.1. Third-Party Access

2.1.1. **Zone File Access Agreement.** Registry Operator will enter into an agreement with any Internet user that will allow such user to access an Internet host server or servers designated by Registry Operator and download zone file data. The agreement will be standardized, facilitated and administered by a Centralized Zone FileData Access Service Provider (the "ZFA/CZDA Provider")-~~pursuant to the Zone File Access Implementation Plan (the "ZFA Plan") dated [ ] available at <LINK>.~~ Registry Operator will ~~cooperate with the ZFA Provider in establishing uniform~~ provide access to zone file data per Section 2.1.3 and do so using the file format described in Section 2.1.4. Notwithstanding the foregoing, (a) ~~Registry Operator may reject the request for access of any user that Registry Operator reasonably believes will violate the terms of Section 2.1.5 below, and (b) the ZFA/the CZDA Provider may reject the request for access of any user that does not pass all~~ satisfy the credentialing requirements ~~established pursuant to the ZFA Plan in Section 2.1.2 below;~~ (b) Registry Operator may reject the request for access of any user that does not provide correct or legitimate credentials under Section 2.1.2 or where Registry Operator reasonably believes will violate the terms of Section 2.1.5. below; and, (c) Registry Operator may revoke access of any user if Registry Operator has evidence to support that the user has violated the terms of Section 2.1.5.

2.1.2. **User Information Credentialing Requirements.** Registry Operator, through the facilitation of the ZFA/CZDA Provider, will request each user to provide it with information sufficient to correctly identify and locate the user ~~and its designated server~~. Such user information will include, without limitation, company name, contact name, address, telephone number, facsimile number, and email address ~~and the Internet host machine name and IP address~~.

2.1.3. **Grant of Access.** Each Registry Operator will provide the Zone File FTP (or other Registry supported) service for an ICANN-specified and managed URL (specifically, <TLD>.zda.icann.org where <TLD> is the TLD for which the registry is responsible) for the user to access the Registry's zone data archives. Registry Operator will grant the ~~User~~ user a ~~nonexclusive~~ non-exclusive, non-transferable, limited right to access Registry Operator's Server Zone File FTP server, and to transfer a copy of the top-level domain zone files, and any associated cryptographic

checksum files ~~to its Server~~ no more than once per 24 hour period using FTP, ~~HTTP~~, or other data transport and access protocols that may be prescribed by ICANN. For every zone file access server, the zone files are in the top-level directory called <zone>.zone.gz, with <zone>.zone.gz.md5 and <zone>.zone.gz.sig to verify downloads. If the Registry Operator also provides historical data, it will use the naming pattern <zone>-yyyymmdd.zone.gz, etc.

2.1.4. **File Format ~~Standards~~Standard**. Registry Operator will provide zone files ~~in~~ using a sub-format of the standard Master File format as originally defined in RFC 1035, Section 5, including all the records present in the actual zone used in the public DNS ~~using one of the sub-formats defined in the ZFA Plan.~~ Sub-format is as follows:

1. Each record must include all fields in one line as: <domain-name> <TTL> <class> <type> <RDATA>.
2. Class and Type must use the standard mnemonics and must be in upper case.
3. TTL must be present as a decimal integer.
4. Use of /X and /DDD inside domain names is allowed.
5. All domain names must be in upper case.
6. Must use exactly one tab as separator of fields inside a record.
7. All domain names must be fully qualified.
8. No \$ORIGIN directives.
9. No use of "@" to denote current origin.
10. No use of "blank domain names" at the beginning of a record to continue the use of the domain name in the previous record.
11. No \$INCLUDE directives.
12. No \$TTL directives.
13. No use of parentheses, e.g., to continue the list of fields in a record across a line boundary.
14. No use of comments.
15. No blank lines.
16. The SOA record should be present at the top and (duplicated at) the end of the zone file.
17. With the exception of the SOA record, all the records in a file must be in alphabetical order.
18. One zone per file. If a TLD divides its DNS data into multiple zones, each goes into a separate file named as above, with all the files combined using tar into a file called <tld>.zone.tar.

2.1.5. **Use of Data by User**. Registry Operator will permit user to use the zone file for lawful purposes; provided that, (a) user takes all reasonable steps to protect against unauthorized access to

and use and disclosure of the data, and (b) under no circumstances will Registry Operator be required or permitted to allow user to use the data to, (i) allow, enable, or otherwise support the transmission by e-mail, telephone, or facsimile of mass unsolicited, commercial advertising or solicitations to entities other than user's own existing customers, or (ii) enable high volume, automated, electronic processes that send queries or data to the systems of Registry Operator or any ICANN-accredited registrar.

2.1.6. **Term of Use.** Registry Operator, through ZFACZDA Provider, will provide each user with access to the zone file for a period of not less than three (3) months. Registry Operator will allow users to renew their Grant of Access.

2.1.7. **No Fee for Access.** Registry Operator will provide, and ZFACZDA Provider will facilitate, access to the zone file to user at no cost.

*[Note: This Section 2.1 has been modified following ~~conclusion~~ICANN's acceptance of the Zone File Access Advisory Group's ~~work and its recommendation to ICANN~~ that a service provider be established to enhance access to zone file information in new TLDs. ~~The implementation of the recommendation is under development and~~ICANN has commenced development of the Centralized Zone Data Access Pilot Program that is subject to community input before inclusion in the final gTLD Registry Agreement it is finalized. Once the Pilot Program is complete and ICANN has identified the CZDA Provider, the implementation notes will be posted to the ICANN website.]*

## 2.2 ~~ICANN Access.~~Co-operation

2.2.1. Assistance. Registry Operator will co-operate and provide reasonable assistance to ICANN and the CZDA Provider to facilitate and maintain the efficient access of zone file data by permitted users as contemplated under this Schedule.

## 3. Bulk Registration Data Access to ICANN

3.1. Periodic Access to Thin Registration Data. In order to verify and ensure the operational stability of Registry Services as well as to facilitate compliance checks on accredited registrars, Registry Operator will provide ICANN on a weekly basis (the day to be designated by ICANN) with up-to-date Registration Data as specified below. Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for retrieval by ICANN.

3.1.1. Contents. Registry Operator will provide the following data for all registered domain names: domain name, registrar id (IANA ID), statuses, last updated date, creation date, expiration date, and name server names. For sponsoring registrars, it will provide: registrar name, hostname of registrar Whois server, and URL of registrar.

3.1.2. Format. The data will be provided in the format specified in Specification 2 for Data Escrow (including encryption, signing, etc.) but including only the fields mentioned in the previous section, i.e., the file will only contain Domain and Registrar objects with the fields mentioned above.

~~2.2.1. General~~3.1.3. Access. Registry Operator ~~shall provide bulk access to the zone files for the registry for the TLD to ICANN or its designee on a continuous basis in the manner ICANN may reasonably specify from time to time.~~will have the file(s) ready for download as of 00:00:00 UTC on the

day designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, though ICANN may request other means in the future.

**3.2. Exceptional Access to Thick Registration Data.** In case of a registrar failure, de-accreditation, court order, etc. that prompts the temporary or definitive transfer of its domain names to another registrar, at the request of ICANN, Registry Operator will provide ICANN with up-to-date data for the domain names of the losing registrar. The data will be provided in the format specified in Specification 2 for Data Escrow. The file will only contain data related to the domain names of the losing registrar. Registry Operator will provide the data within 2 business days. Unless otherwise agreed by Registry Operator and ICANN, the file will be made available for download by ICANN in the same manner as the data specified in Section 3.1. of this Specification.

## SPECIFICATION 5

### SCHEDULE OF RESERVED NAMES AT THE SECOND LEVEL IN GTLD REGISTRIES

Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall reserve (i.e., Registry Operator shall not register, delegate, use or otherwise make available such labels to any third party, but may register such labels in its own name in order to withhold them from delegation or use) names formed with the following labels from initial (i.e. other than renewal) registration within the TLD:

1. **Example. The label “EXAMPLE”** shall be reserved at the second level and at all other levels within the TLD at which Registry Operator makes registrations.
2. **Two-character labels.** All two-character labels shall be initially reserved. The reservation of a two-character label string shall be released to the extent that Registry Operator reaches agreement with the government and country-code manager. The Registry Operator may also propose release of these reservations based on its implementation of measures to avoid confusion with the corresponding country codes.
3. **Tagged Domain Names.** Labels may only include hyphens in the third and fourth position if they represent valid internationalized domain names in their ASCII encoding (for example "xn--ndk061n").
4. **Second-Level Reservations for Registry Operations.** The following names are reserved for use in connection with the operation of the registry for the TLD. Registry Operator may use them, but upon conclusion of Registry Operator's designation as [operator](#) of the registry for the TLD they shall be transferred as specified by ICANN: NIC, WWW, IRIS and WHOIS.
5. **Country and Territory Names.** The country and territory names contained in the following internationally recognized lists shall be initially reserved at the second level and at all other levels within the TLD at which the Registry Operator provides for registrations:
  - 5.1. the short form (in English) of all country and territory names contained on the ISO 3166-1 list, as updated from time to time;
  - 5.2. the United Nations Group of Experts on Geographical Names, Technical Reference Manual for the Standardization of Geographical Names, Part III Names of Countries of the World; and
  - 5.3. the list of United Nations member states in 6 official United Nations languages prepared by the Working Group on Country Names of the United Nations Conference on the Standardization of Geographical Names.

## SPECIFICATION 6

### REGISTRY INTEROPERABILITY, ~~CONTINUITY~~, AND ~~PERFORMANCE~~ CONTINUITY SPECIFICATIONS

#### 1. Standards Compliance

1.1. DNS. Registry Operator shall ~~implement and~~ comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to ~~(i)~~ the DNS and name server operations including without limitation RFCs 1034, 1035, 1982, 2181, 2182, 2671, 3226, 3596, 3597, ~~3901, 4343, 4472~~, and 5966.

~~and (ii)~~ 1.2. EPP. Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to the provisioning and management of domain names using the Extensible Provisioning Protocol (EPP) in conformance with RFCs ~~3735~~, 5910, 5730, 5731, 5732, 5733 and 5734. If Registry Operator implements Registry Grace Period (RGP), it will comply with RFC 3915 and its successors. If Registry Operator requires the use of functionality outside the base EPP RFCs, Registry Operator must document EPP extensions in Internet-Draft format following the guidelines described in RFC 3735. Registry Operator will provide and update the relevant documentation of all the EPP Objects and Extensions supported to ICANN prior to deployment.

1.3. DNSSEC. Registry Operator shall sign its TLD zone files implementing Domain Name System Security Extensions (“DNSSEC”). During the Term, Registry Operator shall comply with RFCs 4033, 4034, 4035, 4509 and their successors, and follow the best practices described in RFC 4641 and its successors. If Registry Operator implements Hashed Authenticated Denial of Existence for DNS Security Extensions, it shall comply with RFC 5155 and its successors. Registry Operator shall accept public-key material from child domain names in a secure manner according to industry best practices. Registry shall also publish in its website the DNSSEC Practice Statements (DPS) describing critical security controls and procedures for key material storage, access and usage for its own keys and secure acceptance of registrants’ public-key material. Registry Operator shall publish its DPS following the format described in “DPS-framework” (currently in draft format, see <http://tools.ietf.org/html/draft-ietf-dnsop-dnssec-dps-framework>) within 180 days after the “DPS-framework” becomes an RFC.

1.4. IDN. If the Registry Operator offers Internationalized Domain Names (“IDNs”), it shall comply with RFCs 5890, 5891, 5892, 5893 and their successors. Registry Operator shall comply with the ICANN IDN Guidelines at <<http://www.icann.org/en/topics/idn/implementation-guidelines.htm>>, as they may be amended, modified, or superseded from time to time. Registry Operator shall publish and keep updated its IDN Tables and IDN Registration Rules in the IANA Repository of IDN Practices as specified in the ICANN IDN Guidelines.

1.5. IPv6. Registry Operator shall be able to accept IPv6 addresses as glue records in its Registry System and publish them in the DNS. Registry Operator shall offer public IPv6 transport for, at least, two of the Registry’s name servers listed in the root zone with the corresponding IPv6 addresses registered with IANA. Registry Operator should follow “DNS IPv6 Transport Operational Guidelines” as described in BCP 91 and the recommendations and considerations described in RFC 4472. Registry Operator shall offer public IPv6 transport for its Registration Data Publication Services as defined in Specification 4 of this Agreement; e.g. Whois (RFC 3912), Web based Whois. Registry Operator shall offer public IPv6 transport for its Shared Registration System (SRS) to any Registrar, no later than six months after

receiving the first request in writing from a gTLD accredited Registrar willing to operate the SRS over IPv6.

## 2. Registry Services ~~and Continuity~~

2.1. Registry Services. “Registry Services” are, for purposes of the Registry Agreement, defined as the following: (a) those services that are operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry DNS servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by this Agreement; (b) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy as defined in Specification 1; (c) any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator; and (d) material changes to any Registry Service within the scope of (a), (b) or (c) above.

2.2. Wildcard Prohibition. For domain names which are either not registered, or the registrant has not supplied valid records such as NS records for listing in the DNS zone file, or their status does not allow them to be published in the DNS, the use of DNS wildcard Resource Records as described in RFCs 1034 and 4592 or any other method or technology for synthesizing DNS Resources Records or using redirection within the DNS by the Registry is prohibited. When queried for such domain names the authoritative name servers must return a “Name Error” response (also known as NXDOMAIN), RCODE 3 as described in RFC 1035 and related RFCs. This provision applies for all DNS zone files at all levels in the DNS tree for which the Registry Operator (or an affiliate engaged in providing Registration Services) maintains data, arranges for such maintenance, or derives revenue from such maintenance.

## 3. Registry Continuity

3.1. High Availability. Registry Operator will conduct its operations using network and geographically diverse, redundant servers (including network-level redundancy, end-node level redundancy and the implementation of a load balancing scheme where applicable) to ensure continued operation in the case of technical failure (widespread or local), ~~business insolvency~~ or an extraordinary occurrence or circumstance beyond the control of the Registry Operator.

3.2. Extraordinary Event. Registry Operator will use commercially reasonable efforts to restore the critical functions of the registry within 24 hours after the termination of an extraordinary event beyond the control of the Registry Operator and restore full system functionality within a maximum of 48 hours following such event, depending on the type of critical function involved. Outages due to such an event will not be considered a lack of service availability.

3.3. Business Continuity. Registry Operator shall maintain a business continuity plan, which will provide for the maintenance of Registry Services in the event of an extraordinary event beyond the control of the Registry Operator or business failure of Registry Operator, and may include the designation of a Registry Services continuity provider. If such plan includes the designation of a Registry Services continuity provider, Registry Operator shall provide the name and contact information for such Registry Services continuity provider to ICANN.

In the case of an extraordinary event beyond the control of the Registry Operator where the Registry Operator cannot be contacted, Registry Operator consents that ICANN may contact the designated Registry Services continuity provider, if one exists.

Registry Operator shall conduct Registry Services ~~continuity~~Continuity testing at least once per year.

~~For domain names which are either not registered, or the registrant has not supplied valid records such as NS records for listing in the DNS zone file, or their status does not allow them to be published in the DNS, the use of DNS wildcard Resource Records as described in RFCs 1034 and 4592 or any other method or technology for synthesizing DNS Resources Records or using redirection within the DNS by the Registry is prohibited. When queried for such domain names the authoritative name servers must return a “Name Error” response (also known as NXDOMAIN), RCODE 3 as described in RFC 1035 and related RFCs. This provision applies for all DNS zone files at all levels in the DNS tree for which the Registry Operator (or an affiliate engaged in providing Registration Services) maintains data, arranges for such maintenance, or derives revenue from such maintenance.~~

3.4. Abuse Contact. Registry Operator shall provide to ICANN and publish on its website its accurate contact details including a valid email and mailing address as well as a primary contact for handling inquires related to malicious conduct in the TLD, and will provide ICANN with prompt notice of any changes to such contact details.

4. ~~3.~~ Supported Initial and Renewal Registration Periods

4.1. Initial Registration Periods. Initial registrations of registered names may be made in the registry in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, initial registrations of registered names may not exceed ten (10) years.

4.2. Renewal ~~registrations~~Periods. Renewal of registered names may be made in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, renewal ~~registrations~~ of registered names may not ~~exceed~~extend their registration period beyond ten (10) years from the time of the renewal.

4. ~~Performance Specifications~~

	<b>Parameter</b>	<b>SLR (monthly basis)</b>
<b>DNS</b>	<del>DNS service availability</del>	<del>0 min downtime = 100% availability</del>
	<del>DNS name server availability</del>	<del>≤ 432 min of downtime (≈ 99%)</del>
	<del>TCP DNS resolution RTT</del>	<del>≤ 1500 ms, for at least 95% of the queries</del>
	<del>UDP DNS resolution RTT</del>	<del>≤ 400 ms, for at least 95% of the queries</del>
	<del>DNS update time</del>	<del>≤ 60 min, for at least 95% of the updates</del>
<b>RDPS</b>	<del>RDPS availability</del>	<del>≤ 432 min of downtime (≈ 99%)</del>
	<del>RDPS query RTT</del>	<del>≤ 1500 ms, for at least 95% of the queries</del>
	<del>RDPS update time</del>	<del>≤ 60 min, for at least 95% of the updates</del>
<b>EPP</b>	<del>EPP service availability</del>	<del>≤ 864 min of downtime (≈ 98%)</del>
	<del>EPP session command RTT</del>	<del>≤ 3000 ms, for at least 90% of the commands</del>
	<del>EPP query command RTT</del>	<del>≤ 1500 ms, for at least 90% of the commands</del>
	<del>EPP transform command RTT</del>	<del>≤ 3000 ms, for at least 90% of the commands</del>

~~SLR. Service Level Requirement is the level of service expected for certain parameter being measured in a Server Level Agreement (SLA).~~

**RTT.** Round Trip Time or **RTT** refers to the time measured from the sending of the first bit of the first packet of the sequence of packets needed to make a request until the reception of the last bit of the last packet of the sequence needed to receive the response. If the client does not receive the whole sequence of packets needed to consider the response as received, the time will be considered undefined.

**IP address.** Refers to IPv4 or IPv6 address without making any distinction between the two. When there is need to make a distinction, IPv4 or IPv6 is mentioned.

**DNS.** Refers to the Domain Name System as specified in RFCs 1034, 1035 and related RFCs.

**DNS service availability.** Refers to the ability of the group of listed as authoritative name servers of a particular domain name (e.g. a TLD), to answer DNS queries from an Internet user. For the service to be considered available at some point in time, at least, two of the name servers registered in the DNS must have defined results from “**DNS tests**” to each of their public DNS registered “**IP addresses**” over both (UDP and TCP) transports. If 51% or more of the DNS testing probes see the service as unavailable over any of the transports (UDP or TCP) during a given time, the DNS service will be considered unavailable.

**DNS name server availability.** Refers to the ability of a public DNS registered “**IP address**” of a particular name server listed as authoritative for a domain name, to answer DNS queries from an Internet user. All the public DNS registered “**IP address**” of all name servers of the domain name being monitored shall be tested individually. If 51% or more of the DNS testing probes get undefined results from “**DNS tests**” to a name server “**IP address**” over any of the transports (UDP or TCP) during a given time, the name server “**IP address**” will be considered unavailable.

**UDP DNS resolution RTT.** Refers to the **RTT** of the sequence of two packets, the UDP DNS query and the corresponding UDP DNS response. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

**TCP DNS resolution RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the DNS response for only one DNS query. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

**DNS resolution RTT.** Refers to either “**UDP DNS resolution RTT**” or “**TCP DNS resolution RTT**”.

**DNS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, up until all the name servers of the parent domain name answer “**DNS queries**” with data consistent with the change made. This only applies for changes to DNS information.

**DNS test.** Means one non-recursive DNS query sent to a particular “**IP address**” (via UDP or TCP). If DNSSEC is offered in the queried DNS zone, for a query to be considered answered, the signatures must be positively verified against a corresponding DS record published in the parent zone or, if the parent is not signed, against a statically configured Trust Anchor. The query shall be about existing domain names. The answer to the query must contain the corresponding information from the Registry System, otherwise the query will be considered unanswered. If the answer to a query has the TC bit set, the query will be considered unanswered. A query with a “**DNS resolution RTT**” 5 times higher than the corresponding SLR, will be considered unanswered. The possible results to a DNS test are: a number in milliseconds corresponding to the “**DNS resolution RTT**” or, undefined/unanswered.

**Measuring DNS parameters.** Every minute, every DNS probe shall make an UDP and a TCP “**DNS test**” to each of the public DNS registered “**IP addresses**” of the name servers of the domain named being monitored. If a “**DNS test**” gets unanswered, the tested IP will be considered as unavailable for the

corresponding transport (UDP or TCP) from that probe until it is time to make a new test. The minimum number of active testing probes to consider a measurement valid is 20 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

**Placement of DNS probes.** Probes for measuring DNS parameters shall be placed as near as possible to the DNS resolvers on the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation delay links, such as satellite links.

**RDPS.** Registration Data Publication Services refers to the collective of WHOIS and Web based WHOIS services as defined in “SPECIFICATION 4” of this Agreement.

**RDPS availability.** Refers to the ability of all the RDPS services for the TLD, to respond to queries from an Internet user with appropriate data from the Registry System. For the RDPS to be considered available at some point in time, one IPv4 and one IPv6 address for each of the RDPS services must have defined results from “RDPS tests”. If 51% or more of the RDPS testing probes see any of the RDPS services as unavailable during a given time, the RDPS will be considered unavailable.

**WHOIS query RTT.** Refers to the RTT of the sequence of packets from the start of the TCP connection to its end, including the reception of the WHOIS response. If the RTT is 5 times or more the corresponding SLR, the RTT will be considered undefined.

**Web-based WHOIS query RTT.** Refers to the RTT of the sequence of packets from the start of the TCP connection to its end, including the reception of the HTTP response for only one HTTP request. If Registry Operator implements a multiple step process to get to the information, only the last step shall be measured. If the RTT is 5 times or more the corresponding SLR, the RTT will be considered undefined.

**RDPS query RTT.** Refers to the collective of “WHOIS query RTT” and “Web-based WHOIS query RTT”.

**RDPS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, up until all the “IP addresses” of all the servers of all the RDPS services reflect the changes made.

**RDPS test.** Means one query sent to a particular “IP address” for one of the servers of one of the RDPS services. Queries shall be about existing objects in the Registry System and the responses must contain the corresponding information otherwise the query will be considered unanswered. Queries with an RTT 5 times higher than the corresponding SLR will be considered as unanswered. The possible results to an RDPS test are: a number in milliseconds corresponding to the RTT or undefined/unanswered.

**Measuring RDPS parameters.** Every minute, every RDPS probe shall randomly select one IPv4 and one IPv6 addresses from all the public DNS registered “IP addresses” of the servers for each RDPS service of the TLD being monitored and make an “RDPS test” to each one. If an “RDPS test” gets unanswered, the corresponding RDPS service over IPv4 or IPv6, as the case may be, will be considered as unavailable from that probe until it is time to make a new test. The minimum number of active testing probes to consider a measurement valid is 10 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

**Placement of RDPS probes.** Probes for measuring RDPS parameters shall be placed inside the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation delay links, such as satellite links.

**EPP.** Refers to the Extensible Provisioning Protocol as specified in RFC 5730 and related RFCs.

**EPP service availability.** Refers to the ability of the TLD EPP servers as a group, to respond to commands from the Registry accredited Registrars, who already have credentials to the servers. The response shall include appropriate data from the Registry System. An EPP command with “**EPP command RTT**” 5 times higher than the corresponding SLR will be considered as unanswered. For the EPP service to be considered available at during a measurement period, at least, one IPv4 and one IPv6 (if EPP is offered over IPv6) address of the set of EPP servers must have defined results from “**EPP tests**”. If 51% or more of the EPP testing probes see the EPP service as unavailable during a given time, the EPP service will be considered unavailable.

**EPP session command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a session command plus the reception of the EPP response for only one EPP session command. For the login command it will include packets needed for starting the TCP session. For the logout command it will include packets needed for closing the TCP session. EPP session commands are those described in section 2.9.1 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

**EPP query command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a query command plus the reception of the EPP response for only one EPP query command. It does not include packets needed for the start nor close of neither the EPP nor the TCP session. EPP query commands are those described in section 2.9.2 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

**EPP transform command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a transform command plus the reception of the EPP response for only one EPP transform command. It does not include packets needed for the start nor close of neither the EPP nor the TCP session. EPP transform commands are those described in section 2.9.3 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

**EPP command RTT.** Refers to “**EPP session command RTT**”, “**EPP query command RTT**” or “**EPP transform command RTT**”.

**EPP test.** Means one EPP command sent to a particular “**IP address**” for one of the EPP servers. Query and transform commands, with the exception of “create”, shall be about existing objects in the Registry System. The response shall include appropriate data from the Registry System. The possible results to an EPP test are: a number in milliseconds corresponding to the “**EPP command RTT**” or undefined/unanswered.

**Measuring EPP parameters.** Every 5 minutes, every EPP probe shall randomly select one “**IP address**” of the EPP servers of the TLD being monitored and make an “**EPP tests**”; every time it should randomly alternate between the 3 different types of commands and between the commands inside each type for testing. If an “**EPP test**” gets unanswered, the EPP service will be considered as unavailable from that probe until it is time to make a new test. The minimum number of active testing probes to consider a measurement valid is 10 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

**Placement of EPP probes.** Probes for measuring EPP parameters shall be placed inside or close to Registrars points of access to the Internet across the different geographic regions; care shall be taken not to deploy probes behind high propagation delay links, such as satellite links.

**Listing of probes.** The current list of probes for DNS, RDPS and EPP can be consulted in ~~< [REDACTED] >~~. Registry Operator is responsible to take the necessary steps to ensure that the listed probes do not get their tests blocked by its network equipment. The list can be updated from time to time by ICANN provided it gives, at least, a 90-day notice to the Registry Operator before making the change. During that period the Registry Operator will have access to the readings for new probes and ICANN will not consider those measurements for SLA purposes.

**Maintenance windows.** Registry Operators is encouraged to do its maintenance windows for the different services at the times and dates of statistically lower traffic for each service. However, note that there is no provision for planned outages or similar; any downtime, be it for maintenance or due to system failures will be noted simply as downtime and counted for SLA purposes.

## 5. Emergency Thresholds

Critical Function	Emergency Thresholds	
DNS service (all servers)	4-hour continuous downtime	4-hour downtime / week
DNSSEC proper resolution	4-hour continuous downtime	4-hour downtime / week
SRS (EPP)	5-day continuous downtime	5-day downtime / month
WHOIS/Web-based- WHOIS	7-day continuous downtime	7-day downtime / month
Data Escrow	Breach of the Registry Agreement caused by missing escrow deposits as described in Specification 2, Part B, Section 6.	

## SPECIFICATION 7

### MINIMUM REQUIREMENTS FOR RIGHTS PROTECTION MECHANISMS

1. **Rights Protection Mechanisms.** Registry Operator shall implement and adhere to any rights protection mechanisms (“RPMs”) that may be mandated from time to time by ICANN. In addition to such RPMs, Registry Operator may develop and implement additional RPMs that discourage or prevent registration of domain names that violate or abuse another party’s legal rights. Registry Operator will include all ICANN mandated and independently developed RPMs in the registry-registrar agreement entered into by ICANN-accredited registrars authorized to register names in the TLD. Registry Operator shall implement ~~at least one of the following RPMs~~ in accordance with requirements established by ICANN ~~for each of the mandatory RPMs set forth in~~ the Trademark Clearinghouse (~~posted at [url to be inserted when final Trademark Clearinghouse is adopted]~~), which may be revised ~~by ICANN~~ from time to time):

- ~~a. A pre-launch claims service provided in association with the Trademark Clearinghouse established by ICANN with respect to registrations in the TLD pursuant to which notices concerning the registration of domain names will be sent to both: (a) potential registrants of domain names that identically match trademarks contained within the Trademark Clearinghouse; and (b) owners of trademarks contained within the Trademark Clearinghouse; or~~
- ~~b. A sunrise registration procedure pursuant to which, during an exclusive period of time prior to the general registration of domain names in the TLD, the owners of trademarks and service marks that have registered with the Trademark Clearinghouse shall have an opportunity to register domain names in the TLD.~~

2. Registry Operator shall not mandate that any owner of applicable intellectual property rights use any other trademark information aggregation, notification, or validation service in addition to or instead of the ICANN-designated Trademark Clearinghouse.

3. ~~2.~~ **Dispute Resolution Mechanisms.** Registry Operator will comply with the following dispute resolution mechanisms as they may be revised from time to time:

- a. the Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) and the Registration Restriction Dispute Resolution Procedure (RRDRP) adopted by ICANN (posted at [urls to be inserted when final procedure is adopted]):
  - ~~i. Registry Operator agrees to reimburse the PDDRP complainant for any fees that the complainant had to pay to the provider in cases where the panel deems the complainant to be the prevailing party.—~~
  - ~~ii. Also, Registry Operator agrees to~~ implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Registry Agreement) following a

determination by any PDDRP or RRDRP panel: and to be bound by any such determination; and

- b. the Uniform Rapid Suspension system (“URS”) adopted by ICANN, (posted at [url to be inserted]), including the implementation of determinations issued by URS examiners.

## SPECIFICATION 8

### CONTINUED OPERATIONS INSTRUMENT

1. The Continued Operations Instrument shall (a) provide for sufficient financial resources to ensure the continued operation of the basic registry functions related to the TLD set forth in Section [\_\_\_] of the Applicant Guidebook posted at [url to be inserted upon finalization of Applicant Guidebook] (which is hereby incorporated by reference into this Specification 8) for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date, and (b) ~~shall~~ be in the form of either (i) an irrevocable standby letter of credit, or (ii) an irrevocable cash escrow deposit, each meeting the requirements set forth in Section [\_\_\_] of the Applicant Guidebook posted at [url to be inserted upon finalization of Applicant Guidebook] (which is hereby incorporated by reference into this Specification 8). Registry Operator shall use its best efforts to take all actions necessary or advisable to maintain in effect the Continued Operations Instrument for a period of six (6) years from the Effective Date, and to maintain ICANN as a third party beneficiary thereof. Registry Operator shall provide to ICANN copies of all final documents relating to the Continued Operations Instrument and shall keep ICANN reasonably informed of material developments relating to the Continued Operations Instrument. Registry Operator shall not agree to, or permit, any amendment of, or waiver under, the Continued Operations Instrument or other documentation relating thereto without the prior written consent of ICANN (such consent not to be unreasonably withheld). The Continued Operations Instrument shall expressly state that ICANN may access the financial resources of the Continued Operations Instrument pursuant to Section 2.13 or Section 4.5 [*insert for government entity*: or Section 7.14] of the Registry Agreement.
2. If, notwithstanding the use of best efforts by Registry Operator to satisfy its obligations under the preceding paragraph, the Continued Operations Instrument expires or is terminated by another party thereto, in whole or in part, for any reason, prior to the sixth anniversary of the Effective Date, Registry Operator shall promptly (i) notify ICANN of such expiration or termination and the reasons therefor and (ii) arrange for an alternative instrument that provides for sufficient financial resources to ensure the continued operation of the Registry Services related to the TLD for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date (an “Alternative Instrument”). Any such Alternative Instrument shall be on terms no less favorable to ICANN than the Continued Operations Instrument and shall otherwise be in form and substance reasonably acceptable to ICANN.
3. Notwithstanding anything to the contrary contained in this Specification 8, at any time, Registry Operator may replace the Continued Operations Instrument with an alternative

instrument that (i) provides for sufficient financial resources to ensure the continued operation of the Registry Services related to the TLD for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date, and (ii) contains terms no less favorable to ICANN than the Continued Operations Instrument and is otherwise in form and substance reasonably acceptable to ICANN. In the event Registry Operation replaces the Continued Operations Instrument either pursuant to paragraph 2 or this paragraph 3, the terms of this Specification 8 shall no longer apply with respect to the [original](#) Continuing Operations Instrument, but shall thereafter apply with respect to such replacement instrument(s).

## SPECIFICATION 9\*

### Registry Operator Code of Conduct

*[\*Note: This draft Registry Operator Code of Conduct has been ~~added to the form New gTLD Agreement pursuant to the ICANN Board resolution of 5 November 2010 regarding the question of cross-ownership of gTLD registries and ICANN-accredited registrars. ICANN encourages~~ revised in response to comments received from the community to the draft Specification 9 set forth in the Proposed Final Applicant Guidebook. ICANN continues to encourage community input on the types of conduct that should be prohibited and/or mandated given the potential for cross-ownership of domain-name distribution channels.]*

1. ~~1.-~~ In connection with the operation of the registry for the TLD, Registry Operator will not, and will not allow any parent, subsidiary, Affiliate, subcontractor or other related entity, to the extent such party is engaged in the provision of Registry Services with respect to the TLD (each, a “Registry Related Party”)<sub>1</sub> to:
  - ~~a.~~ a.- directly or indirectly show any preference or provide any special consideration to any registrar; or reseller with respect to the TLD, unless comparable opportunities to qualify for such preferences or considerations are made available to all registrars and resellers on substantially similar terms and subject to substantially similar conditions;
  - ~~b.~~ b.- register domain names in its own right, except for names registered through an ICANN accredited registrar that are reasonably necessary for the management, operations and purpose of the TLD;
  - ~~c.-~~ have access to user data or proprietary information of a registrar utilized by or Affiliated with Registry Operator, except as necessary for management and operations of the TLD; or
  - ~~d.~~ d.- register names in the TLD or sub-domains of the TLD based upon a search of available names by any consumer (i.e. proprietary access to information about searches or resolution requests by consumers for domain names not yet registered (commonly known as, "front-running"))<sub>2</sub>;
  - ~~e.~~ allow any Affiliated registrar to disclose user data to Registry Operator or any Registry Related Party, except as necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such user data on substantially similar terms and subject to substantially similar conditions; or
  - ~~f.~~ disclose confidential registry data or confidential information about its Registry Services or operations to any employee of any DNS services provider, except as necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such

- confidential registry data or confidential information on substantially similar terms and subject to substantially similar conditions.
2. ~~2.~~ If Registry Operator or a Registry Related Party also operates as a provider of registrar or registrar-reseller services, Registry Operator will, or will cause such Registry Related Party to, maintain separate books of accounts with respect to its registrar or registrar-reseller operations.
- ~~3.~~ ~~Registry Operator will, and will cause each Registry Related Party to, ensure that no user data or proprietary information from any registrar is disclosed to Registry Operator or any Registry Related Party, except as necessary for the management and operations of the TLD.~~
- ~~4.~~ ~~Registry Operator will not disclose confidential registry data or confidential information about its registry services or operations to any employee of any DNS services provider, except as necessary for the management and operations of the TLD.~~
3. ~~5.~~ Registry Operator will conduct internal reviews at least once per calendar year to ensure compliance with this Code of Conduct. Within twenty (20) calendar days following the end of each calendar year, Registry Operator will provide the results of the internal review, along with a certification executed by an executive officer of Registry Operator certifying as to Registry Operator's compliance with this Code of Conduct, via email to ~~an~~ address to be provided by ICANN. (ICANN may specify in the future that the reports be delivered by other reasonable means.) Registry Operator agrees that ICANN may publicly post such results and certification.
4. ~~6.~~ Nothing set forth herein shall: (i) limit ICANN from conducting investigations of claims of Registry Operator's non-compliance with this Code of Conduct; or (ii) provide grounds for Registry Operator to refuse to cooperate with ICANN investigations of claims of Registry Operator's non-compliance with this Code of Conduct.
5. Nothing set forth herein shall limit the ability of Registry Operator or any Registry Related Party, to enter into arms-length transactions in the ordinary course of business with a registrar or reseller with respect to products and services unrelated in all respects to the TLD.
6. Notwithstanding anything set forth in the foregoing, this Code of Conduct shall not apply to Registry Operator if (i) Registry Operator maintains all registrations in the TLD for its own use and (ii) Registry Operator does not sell, distribute or otherwise make available to any unaffiliated third party any registrations in the TLD. [\*Note: This draft Section 6 of the Registry Operator Code of Conduct has been added in response to comments received that suggested that the Code was not necessary for registries in which a single registrant uses the TLD solely for its own operations and does not sell registrations to third parties (e.g. a dot-BRAND)]

## SPECIFICATION 10

### REGISTRY PERFORMANCE SPECIFICATIONS

(Note: This Specification 10 is new, but the text originated in Specification 6. This redline shows the changes to these provisions since the last draft of Specification 6 was posted.)

#### 1. Definitions

1.1. **DNS.** Refers to the Domain Name System as specified in RFCs 1034, 1035, and related RFCs.

1.2. **DNSSEC proper resolution.** There is a valid DNSSEC chain of trust from the root trust anchor to a particular domain name, e.g., a TLD, a domain name registered under a TLD, etc.

~~1.2.1.3.~~ **EPP.** Refers to the Extensible Provisioning Protocol as specified in RFC 5730 and related RFCs.

~~1.3.1.4.~~ **IP address.** Refers to IPv4 or IPv6 addresses without making any distinction between the two. When there is need to make a distinction, IPv4 or IPv6 is ~~mentioned~~used.

1.5. **Probes.** Network hosts used to perform (DNS, EPP, etc.) tests (see below) that are located at various global locations.

~~1.4.1.6.~~ **RDPSRDDDS.** Registration Data ~~Publication-Directory~~ Services refers to the collective of WHOIS and Web-based WHOIS services as defined in Specification 4 of this Agreement.

~~1.5.1.7.~~ **RTT.** Round-Trip Time or **RTT** refers to the time measured from the sending of the first bit of the first packet of the sequence of packets needed to make a request until the reception of the last bit of the last packet of the sequence needed to receive the response. If the client does not receive the whole sequence of packets needed to consider the response as received, the ~~time~~ request will be considered ~~undefined~~unanswered.

~~1.6.1.8.~~ **SLR.** Service Level Requirement is the level of service expected for a certain parameter being measured in a ~~Server-Service~~ Level Agreement (SLA).

#### 2. Service Level Agreement Matrix

	Parameter	SLR (monthly basis)
<b>DNS</b>	DNS service availability	0 min downtime = 100% availability
	DNS name server availability	≤ 432 min of downtime (≈ 99%)
	TCP DNS resolution RTT	≤ <del>10</del> 500 ms, for at least 95% of the queries
	UDP DNS resolution RTT	≤ 400 ms, for at least 95% of the queries
	DNS update time	≤ 60 min, for at least 95% of the <u>updates</u> <del>probes</del>
<b>RDPSRDDDS</b>	<del>RDPS-RDDDS</del> availability	≤ <del>432</del> - <del>864</del> min of downtime (≈ <del>9998</del> %)
	<del>RDPS-RDDDS</del> query RTT	≤ <del>1500</del> - <del>2000</del> ms, for at least 95% of the queries
	<del>RDPS-RDDDS</del> update time	≤ 60 min, for at least 95% of the <u>updates</u> <del>probes</del>
<b>EPP</b>	EPP service availability	≤ 864 min of downtime (≈ 98%)

EPP session-command RTT	≤ <del>3000-4000</del> ms, for at least 90% of the commands
EPP query-command RTT	≤ <del>1500-2000</del> ms, for at least 90% of the commands
EPP transform-command RTT	≤ <del>3000-4000</del> ms, for at least 90% of the commands

~~**Listing of probes.** The current list of probes for DNS, RDPS and EPP can be consulted in . Registry Operator is responsible to take the necessary steps to ensure that the listed probes do not get their tests blocked by its network equipment. The list can be updated from time to time by ICANN provided it gives, at least, a 90-day notice to the Registry Operator before making the change. During that period the Registry Operator will have access to the readings for new probes and ICANN will not consider those measurements for SLA purposes.~~

~~**Maintenance windows.** Registry Operator is encouraged to do its maintenance windows for the different services at the times and dates of statistically lower traffic for each service. However, note that there is no provision for planned outages or similar; any downtime, be it for maintenance or due to system failures, will be noted simply as downtime and counted for SLA purposes.~~

### 2.1.3. DNS

3.1. DNS service availability. Refers to the ability of the group of listed-as-authoritative name servers of a particular domain name (e.g., a TLD), to answer DNS queries from ~~an Internet user~~ DNS probes. For the service to be considered available at ~~some point in time~~ a particular moment, at least, two of the delegated name servers registered in the DNS must have defined successful results from “DNS tests” to each of their public-DNS registered “IP addresses” ~~to which the name server resolves over both (UDP and TCP) transports~~. If 51% or more of the DNS testing probes see the service as unavailable ~~over any of the transports (UDP or TCP)~~ during a given time, the DNS service will be considered unavailable.

3.2. DNS name server availability. Refers to the ability of a public-DNS registered “IP address” of a particular name server listed as authoritative for a domain name, to answer DNS queries from an Internet user. All the public DNS-registered “IP address” of all name servers of the domain name being monitored shall be tested individually. If 51% or more of the DNS testing probes get undefined/unanswered results from “DNS tests” to a name server “IP address” ~~over any of the transports (UDP or TCP)~~ during a given time, the name server “IP address” will be considered unavailable.

3.3. UDP DNS resolution RTT. Refers to the RTT of the sequence of two packets, the UDP DNS query and the corresponding UDP DNS response. If the RTT is 5\_-times ~~or more greater than the time specified in the relevant~~ the corresponding SLR, the RTT will be considered undefined.

3.4. TCP DNS resolution RTT. Refers to the RTT of the sequence of packets from the start of the TCP connection to its end, including the reception of the DNS response for only one DNS query. If the RTT is 5\_-times greater than the time specified in the relevant ~~or more the corresponding~~ SLR, the RTT will be considered undefined.

3.5. DNS resolution RTT. Refers to either “UDP DNS resolution RTT” or “TCP DNS resolution RTT”.

**3.6. DNS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, ~~up-~~until ~~all-~~the name servers of the parent domain name answer “DNS queries” with data consistent with the change made. This only applies for changes to DNS information.

**3.7. DNS test.** Means one non-recursive DNS query sent to a particular “IP address” (via UDP or TCP). If DNSSEC is offered in the queried DNS zone, for a query to be considered answered, the signatures must be positively verified against a corresponding DS record published in the parent zone or, if the parent is not signed, against a statically configured Trust Anchor. ~~The query shall be about existing domain names.~~ The answer to the query must contain the corresponding information from the Registry System, otherwise the query will be considered unanswered. ~~If the answer to a query has the TC bit set, the query will be considered unanswered.~~ A query with a “DNS resolution RTT” 5-times higher than the corresponding SLR, will be considered unanswered. The possible results to a DNS test are: a number in milliseconds corresponding to the “DNS resolution RTT” or, undefined/unanswered.

**3.8. Measuring DNS parameters.** Every minute, every DNS probe ~~shall will~~ make an UDP ~~and-or~~ TCP “DNS test” to each of the public-DNS registered “IP addresses~~”~~ of the name servers of the domain named ~~d~~ being monitored. If a “DNS test” ~~gets result iss undefined/~~unanswered, the tested IP will be considered ~~as-unavailable for the corresponding transport (UDP or TCP)~~ from that probe until it is time to make a new test.

**3.9. Collating the results from DNS probes.** The minimum number of active testing probes to consider a measurement valid is 20 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

**3.10. Distribution of UDP and TCP queries.** DNS probes will send UDP or TCP “DNS test” approximating the distribution of these queries.

**3.11. Placement of DNS probes.** Probes for measuring DNS parameters shall be placed as near as possible to the DNS resolvers on the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

#### **4. RDDS**

**4.1. RDPS-RDDS availability.** Refers to the ability of all the RDPS-RDDS services for the TLD, to respond to queries from an Internet user with appropriate data from the relevant Registry System. ~~For the RDPS to be considered available at some point in time, one IPv4 and one IPv6 address for each of the RDPS services must have defined results from “RDPS tests”.~~ If 51% or more of the RDPS-RDDS testing probes see any of the RDPS-RDDS services as unavailable during a given time, the RDPS-RDDS will be considered unavailable.

**4.2. WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the WHOIS response. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

**4.3. Web-based-WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the HTTP response for only one HTTP request. If Registry Operator implements a multiple-step process to get to the information, only

the last step shall be measured. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

**4.4. RDPS-RDDS query RTT.** Refers to the collective of “WHOIS query RTT” and “Web-based-WHOIS query RTT”.

**4.5. RDPS-RDDS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, host or contact, up until ~~all the “IP addresses”~~ of all the servers of all the **RDPS-RDDS** services reflect the changes made.

**4.6. RDPS-RDDS test.** Means one query sent to a particular “IP address” ~~for of~~ one of the servers of one of the **RDPS-RDDS** services. Queries shall be about existing objects in the Registry System and the responses must contain the corresponding information otherwise the query will be considered unanswered. Queries with an **RTT** 5-times higher than the corresponding SLR will be considered as unanswered. The possible results to an **RDPS-RDDS** test are: a number in milliseconds corresponding to the **RTT** or undefined/unanswered.

**4.7. Measuring RDPS-RDDS parameters.** Every 5 minutes, ~~every RDPS-RDDS probes shall randomly will~~ select one ~~IPv4 and one IPv6~~ IP addresses from all the public-DNS registered “IP addresses” of the servers for each **RDPS-RDDS** service of the TLD being monitored and make an “**RDPS-RDDS test**” to each one. If an “**RDPS-RDDS test**” ~~result is undefined/gets~~ unanswered, the corresponding **RDPS-RDDS** service ~~over IPv4 or IPv6, as the case may be,~~ will be considered as unavailable from that probe until it is time to make a new test.

**4.8. Collating the results from RDDS probes.** The minimum number of active testing probes to consider a measurement valid is 10 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

**4.9. Placement of RDPS-RDDS probes.** Probes for measuring **RDPS-RDDS** parameters shall be placed inside the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

## **5. EPP**

**5.1. EPP service availability.** Refers to the ability of the TLD EPP servers as a group, to respond to commands from the Registry accredited Registrars, who already have credentials to the servers. The response shall include appropriate data from the Registry System. An EPP command with “**EPP command RTT**” 5-times higher than the corresponding SLR will be considered as unanswered. ~~For the EPP service to be considered available at during a measurement period, at least, one IPv4 and one IPv6 (if EPP is offered over IPv6) address of the set of EPP servers must have defined results from “EPP tests”.~~ If 51% or more of the EPP testing probes see the EPP service as unavailable during a given time, the EPP service will be considered unavailable.

**5.2. EPP session-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a session command plus the reception of the EPP response for only one EPP session command. For the login command it will include packets needed for starting the TCP session. For the logout command it will include packets needed for closing the TCP session. EPP session commands are those described in section 2.9.1 of EPP RFC 5730. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

**5.3. EPP query-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a query command plus the reception of the EPP response for only one EPP query command. It does not include packets needed for the start ~~nor~~ or close of ~~neither~~ the EPP ~~nor~~ the TCP session. EPP query commands are those described in section 2.9.2 of EPP RFC 5730. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

**5.4. EPP transform-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a transform command plus the reception of the EPP response for only one EPP transform command. It does not include packets needed for the start ~~nor~~ or close of ~~neither~~ the EPP ~~nor~~ the TCP session. EPP transform commands are those described in section 2.9.3 of EPP RFC 5730. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

**5.5. EPP command RTT.** Refers to “**EPP session-command RTT**”, “**EPP query-command RTT**” or “**EPP transform-command RTT**”.

**5.6. EPP test.** Means one EPP command sent to a particular “**IP address**” for one of the EPP servers. Query and transform commands, with the exception of “create”, shall be about existing objects in the Registry System. The response shall include appropriate data from the Registry System. The possible results to an EPP test are: a number in milliseconds corresponding to the “**EPP command RTT**” or undefined/unanswered.

**5.7. Measuring EPP parameters.** Every 5 minutes, ~~every~~-EPP probes ~~shall randomly~~will select one “**IP address**” of the EPP servers of the TLD being monitored and make an “**EPP tests**”; every time ~~they~~it should ~~randomly~~ alternate between the 3 different types of commands and between the commands inside each ~~type for testing~~category. If an “**EPP test**” ~~result is undefined/gets~~ unanswered, the EPP service will be considered as unavailable from that probe until it is time to make a new test.

**5.8. Collating the results from EPP probes.** The minimum number of active testing probes to consider a measurement valid is ~~10~~5 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

**5.9. Placement of EPP probes.** Probes for measuring EPP parameters shall be placed inside or close to Registrars points of access to the Internet across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

### 3.6. Emergency Thresholds

<b>Critical Function</b>	<b>Emergency Thresholds</b>	
<del>DNS service (all servers)</del>	<del>4 hour continuous downtime</del>	<del>4 hour downtime / week</del>
<del>DNSSEC proper resolution</del>	<del>4 hour continuous downtime</del>	<del>4 hour downtime / week</del>
<del>SRS (EPP)</del>	<del>5 day continuous downtime</del>	<del>5 day downtime / month</del>
<del>WHOIS/Web based WHOIS</del>	<del>7 day continuous downtime</del>	<del>7 day downtime / month</del>
<del>Data Escrow</del>	<del>Breach of the Registry Agreement caused by missing escrow</del>	

~~deposits as described in Specification 2, Part B, Section 6.~~

The following matrix presents the Emergency Thresholds that, if reached by any of the services mentioned above for a TLD, would cause the Emergency Transition of the Critical Functions as specified in Section 2.13. of this Agreement.

Critical Function	Emergency Threshold
DNS service (all servers)	4-hour downtime / week
DNSSEC proper resolution	4-hour downtime / week
<del>SRS (EPP)</del>	<del>5-day</del> <u>24-hour</u> downtime / <del>month</del> <u>week</u>
<del>RDDS (WHOIS/Web-based WHOIS)</del>	<del>7-day</del> <u>24-hour</u> downtime / <del>month</del> <u>week</u>
Data Escrow	Breach of the Registry Agreement caused by missing escrow deposits as described in Specification 2, Part B, Section 6.

## 7. Emergency Escalation

Escalation is strictly for purposes of notifying and investigating possible or potential issues in relation to monitored services. The initiation of any escalation and the subsequent cooperative investigations do not in themselves imply that a monitored service has failed its performance requirements.

Escalations shall be carried out between ICANN and Registry Operators, Registrars and Registry Operator, and Registrars and ICANN. Registry Operators and ICANN must provide said emergency operations departments. Current contacts must be maintained between ICANN and Registry Operators and published to Registrars, where relevant to their role in escalations, prior to any processing of an Emergency Escalation by all related parties, and kept current at all times.

### 7.1. Emergency Escalation initiated by ICANN

Upon reaching 10% of the Emergency thresholds as described in Section 6, ICANN's emergency operations will initiate an Emergency Escalation with the relevant Registry Operator. An Emergency Escalation consists of the following minimum elements: electronic (i.e., email or SMS) and/or voice contact notification to the Registry Operator's emergency operations department with detailed information concerning the issue being escalated, including evidence of monitoring failures, cooperative trouble-shooting of the monitoring failure between ICANN staff and the Registry Operator, and the commitment to begin the process of rectifying issues with either the monitoring service or the service being monitoring.

### 7.2. Emergency Escalation initiated by Registrars

Registry Operator will maintain an emergency operations departments prepared to handle emergency requests from registrars. In the event that a registrar is unable to conduct EPP transactions with the Registry because of a fault with the Registry Service and is unable to either contact (through ICANN mandated methods of communication) the Registry Operator, or the Registry Operator is unable or unwilling to address the fault, the registrar may initiate an Emergency Escalation to the emergency operations department of ICANN. ICANN then may initiate an Emergency Escalation with the Registry Operator as explained above.

### 7.3. Notifications of Outages and Maintenance

In the event that a Registry Operator plans maintenance, they will provide related notice to the ICANN emergency operations department, at least, 24 hours ahead of that maintenance. ICANN's emergency operations department will note planned maintenance times, and suspend Emergency Escalation services for the monitored services during the expected maintenance outage period.

If Registry Operator declares an outage, as per their contractual obligations with ICANN, on services under SLA and performance requirements, it will notify the ICANN emergency operations department. During that declared outage, ICANN's emergency operations department will note and suspend Emergency Escalation services for the monitored services involved.

## 8. Covenants of Performance Measurement

8.1. **No interference.** Registry Operator shall not interfere with measurement **Probes**, including any form of preferential treatment of the requests for the monitored services. Registry Operator shall respond to the measurement tests described in this Specification as it would do with any other request from Internet users (for DNS and RDDS) or registrars (for EPP).

8.2. **ICANN testing registrar.** Registry Operator agrees that ICANN will have a testing registrar used for purposes of measuring the **SLRs** described above. Registry Operator agrees to not provide any differentiated treatment for the testing registrar other than no billing of the transactions. ICANN shall not use the registrar for registering domain names (or other registry objects) for itself or others, except for the purposes of verifying contractual compliance with the conditions described in this Agreement.

**TRADEMARK CLEARINGHOUSE**  
**~~NOVEMBER 2010~~ 15 APRIL 2011**

**1. PURPOSE OF CLEARINGHOUSE**

- 1.1 The Trademark Clearinghouse is a central repository for information to be authenticated, stored, and disseminated pertaining to the rights of trademark holders. ~~As such, ICANN will enter into an arms-length~~ contract with service provider or providers, awarding the right to serve as a Trademark Clearinghouse Service Provider, i.e., to accept, authenticate, validate and facilitate the transmission of information related to certain trademarks. ~~This entity or these entities will have an “arms-length” relationship with ICANN. ICANN will not perform these tasks.~~
- 1.2 The Clearinghouse will be required to separate its two primary functions: (i) authentication and validation of the trademarks in the Clearinghouse; and (ii) serving as a database to provide information to the new gTLD registries to support pre-launch Sunrise or Trademark Claims Services. Whether the same provider could serve both functions or whether two providers will be determined in the tender process.
- 1.3 The Trademark Clearinghouse Service Provider will be required to maintain a separate Trademark Clearinghouse database, and may not store any data in the Clearinghouse database related to its provision of ancillary services, if any.
- 1.4 The Registry shall only need to connect with one centralized database to obtain the information it needs to conduct its Sunrise or Trademark Claims Services regardless of the details of the Trademark Clearinghouse Service Provider’s contract(s) with ICANN.
- 1.5 Trademark Clearinghouse Service Provider may provide ancillary services, as long as those services and any data used for those services are kept separate from the Clearinghouse database.
- 1.6 The Clearinghouse database will be a repository of authenticated information and disseminator of the information to a limited number of recipients. Its functions will be performed in accordance with a limited charter, and will not have any discretionary powers other than what will be set out in the charter with respect to authentication and validation. The Clearinghouse administrator(s) cannot create policy. Before material changes are made to the Clearinghouse functions, they will be reviewed through the ICANN public participation model.
- 1.7. Inclusion in the Clearinghouse is not proof of any right, nor does it create any legal rights. Failure to submit trademarks into the Clearinghouse should not be perceived to be lack of vigilance by trademark holders or a waiver of any rights, nor can any negative influence be drawn from such failure.

## 2. SERVICE PROVIDERS

- 2.1 The selection of Trademark Clearinghouse Service Provider(s) will be subject to predetermined criteria, but the foremost considerations ~~should~~will be the ability to store, authenticate, validate and disseminate the data at the highest level of technical stability and security without interference with the integrity or timeliness of the registration process or registry operations.
- 2.2 Functions – Authentication/Validation; Database Administration. Public commentary has suggested that the best way to protect the integrity of the data and to avoid concerns that arise through sole-source providers would be to separate the functions of database administration and data authentication/validation.
- 2.2.1 One entity will authenticate registrations ensuring the word marks qualify as registered or are court-validated word marks or word marks that are protected by statute or treaty. This entity would also be asked to ~~validate~~ensure that proof of use of marks ~~that are from jurisdictions that do not conduct substantive review before registration is provided, which can be demonstrated by furnishing a signed declaration and one specimen of current use.~~
- 2.2.2 The second entity will maintain the database and provide Sunrise and Trademark Claims Services (described below).
- 2.3 Discretion will be used, balancing effectiveness, security and other important factors, to determine whether ICANN will contract with one or two entities - one to authenticate and validate, and the other to, administer in order to preserve integrity of the data.
- 2.4 Contractual Relationship.
- 2.4.1 The Clearinghouse shall be separate and independent from ICANN. It will operate based on market needs and collect fees from those who use its services. ICANN may coordinate or specify interfaces used by registries and registrars, and provide some oversight or quality assurance function to ensure rights protection goals are appropriately met.
- 2.4.2 The Trademark Clearinghouse Service Provider(s) (authenticator/validator and administrator) will be selected through an open and transparent process to ensure low costs and reliable, consistent service for all those utilizing the Clearinghouse services.
- 2.4.3 The Service Provider(s) providing the authentication of the trademarks submitted into the Clearinghouse shall adhere to rigorous standards and requirements that would be specified in an ICANN contractual agreement.

- 2.4.4 The contract shall include service level requirements, customer service availability (with the goal of seven days per week, 24 hours per day, 365 days per year), data escrow requirements, and equal access requirements for all persons and entities required to access the Trademark Clearinghouse database.
- 2.4.5 To the extent practicable, the contract should also include indemnification by Service Provider for errors such as false positives for participants such as Registries, ICANN, Registrants and Registrars.
- 2.5. Service Provider Requirements. The Clearinghouse Service Provider(s) should utilize regional marks authentication service providers (whether directly or through sub-contractors) to take advantage of local experts who understand the nuances of the trademark in question. Examples of specific performance criteria details in the contract award criteria and service-level-agreements are:
  - 2.5.1 provide 24 hour accessibility seven days a week (database administrator);
  - 2.5.2 employ systems that are technically reliable and secure (database administrator);
  - 2.5.3 use globally accessible and scalable systems so that multiple marks from multiple sources in multiple languages can be accommodated and sufficiently cataloged (database administrator and validator);
  - 2.5.4 accept submissions from all over the world - the entry point for trademark holders to submit their data into the Clearinghouse database could be regional entities or one entity;
  - 2.5.5 allow for multiple languages, with exact implementation details to be determined;
  - 2.5.6 provide access to the Registrants to verify and research Trademark Claims Notices;
  - 2.5.7 have the relevant experience in database administration, validation or authentication, as well as accessibility to and knowledge of the various relevant trademark laws (database administrator and authenticator); and
  - 2.5.8 ensure through performance requirements, including those involving interface with registries and registrars, that neither domain name registration timeliness, nor registry or registrar operations will be hindered (database administrator).

### **3. CRITERIA FOR TRADEMARK INCLUSION IN CLEARINGHOUSE**

- 3.1 The trademark holder will submit to one entity – a single entity for entry will facilitate access to the entire Clearinghouse database. If regional entry points are used, ICANN will publish an information page describing how to locate regional submission points.

Regardless of the entry point into the Clearinghouse, the authentication procedures established will be uniform.

- 3.2 The proposed standards for inclusion in the Clearinghouse are:
- 3.2.1 Nationally or multi-nationally registered word marks from all jurisdictions ~~(including from countries where there is no substantive review).~~
  - 3.2.2 Any word mark that has been validated through a court of law or other judicial proceeding.
  - 3.2.3 Any word mark protected by a statute or treaty ~~currently in effect and that was in effect on or before 26 June 2008.~~  
in effect at the time the mark is submitted to the Clearinghouse for inclusion.
- ~~3.3 No common law marks should be included in the Trademark Clearinghouse Database, except for court-validated common law marks or those protected by statute or treaty as set forth herein. This shall not preclude any gTLD registry from entering into a separate agreement, with no ICANN involvement, with the Clearinghouse Service Provider to collect and verify other information for ancillary services, provided that any such information is held separate from the Trademark Clearinghouse Database.~~
- 3.2.4 Other marks that constitute intellectual property.
  - 3.2.5 Protections afforded to trademark registrations do not extend to applications for registrations, marks within any opposition period or registered marks that were the subject of successful invalidation, cancellation or rectification proceedings.
- 3.43 The type of data supporting ~~an application for~~entry of a registered word mark ~~might~~into the Clearinghouse must include a copy of the registration or the relevant ownership information, including the requisite registration number(s), the jurisdictions where the registrations have issued, and the name of the owner of record.
- 3.54 Data supporting entry of a judicially validated word mark into the Clearinghouse must include the court documents, properly entered by the court, evidencing the validation of a given word mark.
- 3.65 Data supporting entry into the Clearinghouse of word marks protected by a statute or treaty ~~currently in effect and that was in effect on or before 26 June 2008~~at the time the mark is submitted to the Clearinghouse for inclusion, must include a copy of the relevant portion of the statute or treaty and evidence of its effective date.
- ~~3.63.6~~ Data supporting entry into the Clearinghouse of marks that constitute intellectual property of types other than those set forth in sections 3.2.1-3.2.3 above shall be determined by the registry operator and the Clearinghouse based on the services any given registry operator chooses to provide.

- 3.7 Registrations that include top level extensions such as “icann.org” or “.icann” as the word mark will not be permitted in the Clearinghouse regardless of whether that mark has been registered or it has been otherwise validated or protected (e.g., if a mark existed for icann.org or .icann, neither will not be permitted in the Clearinghouse).
- 3.68 All mark holders seeking to have their marks included in the Clearinghouse will be required to submit a declaration, affidavit, or other sworn statement that the information provided is true and current and has not been supplied for an improper purpose. The mark holder will also be required to attest that it will keep the information supplied to the Clearinghouse current so that if, during the time the mark is included in the Clearinghouse, a registration gets cancelled or is transferred to another entity, or in the case of a court- or Clearinghouse-validated mark the holder abandons use of the mark, the mark holder has an affirmative obligation to notify the Clearinghouse. There will be penalties for failing to keep information current. Moreover, it is anticipated that there will be a process whereby registrations can be removed from the Clearinghouse if it is discovered that the marks are procured by fraud or if the data is inaccurate.
- 3.79 As an additional safeguard, the data will have to be renewed periodically by any mark holder wishing to remain in the Clearinghouse. Electronic submission should facilitate this process and minimize the cost associated with it. The reason for periodic authentication is to streamline the efficiencies of the Clearinghouse and the information the registry operators will need to process and limit the marks at issue to the ones that are in use.

#### 4. USE OF CLEARINGHOUSE DATA

- 4.1 All mark holders seeking to have their marks included in the Clearinghouse will have to consent to the use of their information by the Clearinghouse. However, such consent would extend only to use in connection with the stated purpose of the Trademark Clearinghouse Database: for Sunrise or Trademark Claims services. The reason for such a provision would be to presently prevent the Clearinghouse from using the data in other ways: without permission. There shall be no bar on the Trademark Clearinghouse Service Provider or other third party service providers providing ancillary services on a non-exclusive basis.
- 4.2 In order not to create a competitive advantage, the Trademark Clearinghouse Database (as well as other relevant data obtained by/in the Trademark Clearinghouse to perform ancillary services) should be licensed to competitors interested in providing ancillary services on equal and non-discriminatory terms and on commercially reasonable terms: if the mark holders agree. Accordingly, two licensing options will be offered to the mark holder: (a) a license to use its data for all required features of the Trademark Clearinghouse, with no permitted use of such data for ancillary services either by the

Trademark Clearinghouse Service Provider or any other entity; or (b) license to use its data for the mandatory features of the Trademark Clearinghouse and for any ancillary uses reasonably related to the protection of marks in new gTLDs, which would include a license to allow the Clearinghouse to license the use and data in the Trademark Clearinghouse to competitors that also provide those ancillary services. The specific implementation details will be determined, and all terms and conditions related to the provision of such services shall be included in the Trademark Clearinghouse Service Provider's contract with ICANN and subject to ICANN review.

~~4.3 If the Trademark Clearinghouse Service Provider does provide ancillary services, any information should be stored in a separate database.~~

4.3 Access by the Registrant to verify and research Trademark Claims Notices shall not be considered an ancillary service, and shall be provided at no cost to the Registrant. Misuse of the data by the service providers would be grounds for immediate termination.

## 5. DATA AUTHENTICATION AND VALIDATION GUIDELINES

5.1 One core function for inclusion in the Clearinghouse would be to authenticate that the data meets certain minimum criteria. As such, the following minimum criteria are suggested:

5.1.1 An acceptable list of data authentication sources, i.e. the web sites of patent and trademark offices throughout the world, third party providers who can obtain information from various trademark offices;

5.1.2 Name, address and contact information of the applicant is accurate, current and matches that of the registered owner of the trademarks listed;

5.1.3 Electronic contact information is provided and accurate;

5.1.4 The registration numbers and countries match the information in the respective trademark office database for that registration number.

5.2 For validation of marks by the Clearinghouse that were not ~~previously validated at registration or~~ protected via a court, statute or treaty, the mark holder shall be required to provide evidence of ~~continuous~~ use of the mark in connection with the bona fide offering for sale of goods or services prior to application for inclusion in the Clearinghouse. Acceptable evidence of use will be a signed declaration and a single specimen of current use, which might be consist of labels, tags, containers, advertising, brochures, screen shots, ~~and/or~~ something else that evidences continued current use.

## 6. MANDATORY ~~PRE-LAUNCH SERVICES~~ RIGHTS PROTECTION MECHANISMS

~~6.1~~—All new gTLD registries will be required to use the Trademark Clearinghouse to support its pre-launch or initial launch period rights protection mechanisms (RPMs) ~~that must~~. These RPMs, at a minimum, must consist of ~~either a Sunrise or a~~ Trademark Claims ~~Service~~. ~~Such services shall meet the minimum standards specified in the IRT Report, which shall be incorporated by reference herein (see <http://www.icann.org/en/topics/new-gtlds/irt-final-report-trademark-protection-29may09-en.pdf>.) There is no requirement that a registry adopt ~~both of these RPMs~~ service and a Sunrise process.~~

~~6.2~~—~~The~~ 1 Trademark Claims ~~Notices~~ service

6.1.1 New gTLD Registry Operators must provide Trademark Claims services during an initial launch period for marks in the Trademark Clearinghouse. This launch period must occur for at least the first 60 days that registration is open for general registration.

6.1.2 A Trademark Claims service is intended to provide clear notice to the Registrant of the scope of the mark holder's rights in order to minimize the chilling effect on registrants- (Trademark Claims Notice). A form that describes the required elements is attached. The specific statement by Registrant warrants that: (i) the Registrant has received notification that the mark(s) is included in the Clearinghouse; (ii) the Registrant has received and understood the notice; and (iii) to the best of the Registrant's knowledge, the registration and use of the requested domain name will not infringe on the rights that are the subject of the notice.

6.1.3 The Trademark Claims Notice should provide Registrant access to the Trademark Clearinghouse Database information referenced in the Trademark Claims Notice to enhance understanding of the Trademark rights being claimed by the trademark holder. These links (or other sources) shall be provided in real time without cost to the Registrant. Preferably, the Trademark Claims Notice should be provided in the language used for the rest of the interaction with the registrar or registry, but it is anticipated that at the very least in the most appropriate UN-sponsored language (as specified by the prospective registrant or registrar/registry). ~~Then, if~~

6.1.4 If the domain name is registered in the Clearinghouse, the registrar (again through an interface with the Clearinghouse) will notify the mark holders(s) of the registration. This notification should not be before the registration is effectuated so as not to provide an opportunity for a mark holder to

inappropriately attempt to block a legitimate registrant from registering a name in which the registrant has legitimate rights.

6.4.1.5 The Trademark Clearinghouse Database will be structured to report to registries ~~domain names~~when registrants are attempting to register a domain name that ~~are~~is considered an “Identical Match” with the ~~validated marks~~mark in the Clearinghouse. “Identical Match” means that the domain name consists of the complete and identical textual elements of the mark. In this regard: (a) spaces contained within a mark that are either replaced by hyphens (and vice versa) or omitted; (b) only certain special characters contained within a trademark are spelled out with appropriate words describing it (@ and &); (c) punctuation or special characters contained within a mark that are unable to be used in a second-level domain name may either be (i) omitted or (ii) replaced by spaces, hyphens or underscores and still be considered identical matches; and (d) no plural and no “marks contained” would qualify for inclusion.

~~6.5 — Notification should be limited to identical marks so as to ensure operational integrity, limitation of overly broad notifications and an unmanageable volume of processing by the Clearinghouse.~~

## ~~7. — PROTECTION FOR MARKS IN CLEARINGHOUSE~~

~~7.1 — New gTLD registries must provide Sunrise or Trademark Claims services for marks in the Trademark Clearinghouse. As described below, the scope of registered marks used by the Claims Service is broader than those used for Sunrise periods.~~

~~7.1.2 — For Trademark Claims services — Registries must recognize all word marks that have been or are: (i) nationally or multi-nationally registered (regardless of whether the country of registration conducts a substantive review); (ii) court-validated; or (iii) specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008.~~

~~7.1.3 — For Sunrise services — Registries must recognize all word marks: (i) nationally or multi-nationally registered in a jurisdiction that conducts a substantive evaluation of trademark applications prior to registration; or (ii) that have been court- or Trademark Clearinghouse-validated; or (iii) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008.~~

~~7.2 — In certain cases, registries shall have discretion whether to include protections for additional marks that do not satisfy these eligibility requirements.~~

~~7.3 Definition: Substantive evaluation upon registration has essentially three requirements: (i) evaluation on absolute grounds—to ensure that the applied for mark can in fact serve as a trademark; (ii) evaluation on relative grounds—to determine if previously filed marks preclude the registration; and (iii) evaluation of use—to ensure that the applied for mark is in current use.~~

~~The Trademark Clearinghouse or its agent shall develop and publish a list of the countries that conduct substantive review upon trademark registration.~~

~~7.4 Substantive evaluation by Trademark Clearinghouse validation service provider shall require: (i) evaluation on absolute grounds; and (ii) evaluation of use.~~

#### 7.56.2 Sunrise service

6.2.1 Sunrise registration services must be offered for a minimum of 30 days during the pre-launch phase and notice must be provided to all trademark holders in the Clearinghouse if someone is seeking a sunrise registration. This notice will be provided to holders of marks in the Clearinghouse that are an Identical Match to the name to be registered during Sunrise.

6.2.2 Sunrise Registration Process. ~~In cases where the registry opts to provide For~~ a Sunrise ~~registration~~ service, sunrise eligibility requirements (SERs) will be met as a minimum requirement, verified by Clearinghouse data, and incorporates a Sunrise Dispute Resolution Policy (SDRP).

~~7.5.16.2.3~~ The proposed SERs include: (i) ownership of a mark (that satisfies the criteria in section ~~7.1 above~~) ~~on or before the effective date of the registry agreement and was applied for on or before ICANN publishes new gTLD application list that is an identical match (as defined in section 6 above) to the applied for domain name;~~ 2 below), (ii) optional registry elected requirements re: international class of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.

7.56.2.4 The proposed SRDP must allow challenges based on at least the following four grounds: (i) at time the challenged domain name was registered, the registrant did not own a registration of national effect; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the registration on which the registrant based its Sunrise registration is not of national effect; and (iv) the registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received.

~~76.2.5.3~~ The Clearinghouse will maintain the SERs, validate and authenticate marks, as applicable, and hear challenges.

## 7. PROTECTION FOR MARKS IN CLEARINGHOUSE

The scope of registered marks that must be honored by registries in providing Trademarks Claims services is broader than those that must be honored by registries in Sunrise services.

7.1 For Trademark Claims services - Registries must recognize and honor all word marks that have been or are: (i) nationally or multi-nationally registered; (ii) court-validated; or (iii) specifically protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion. No demonstration of use is required.

7.2 For Sunrise services - Registries must recognize and honor all word marks: (i) nationally or multi-nationally registered and for which proof of use – which can be a declaration and a single specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse; or (ii) that have been court-validated; or (iii) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008.

## **8. COSTS OF CLEARINGHOUSE**

Costs should be completely borne by the parties utilizing the services. ~~The Clearinghouse should not be expected to pay fees to ICANN~~Trademark holders will pay to register the Clearinghouse, and registries will pay for Trademark Claims and Sunrise services. Registrars and others who avail themselves of Clearinghouse services will pay the Clearinghouse directly.

**TRADEMARK NOTICE**

[In English and the language of the registration agreement]

You have received this Trademark Notice because you have applied for a domain name which matches at least one trademark record submitted to the Trademark Clearinghouse.

You may or may not be entitled to register the domain name depending on your intended use and whether it is the same or significantly overlaps with the trademarks listed below.

***Your rights to register this domain name may or may not be protected as noncommercial use or "fair use" by the laws of your country. [in bold italics or all caps]***

Please read the trademark information below carefully, including the trademarks, jurisdictions, and goods and service for which the trademarks are registered. Please be aware that not all jurisdictions review trademark applications closely, so some of the trademark information below may exist in a national or regional registry which does not conduct a thorough or substantive review of trademark rights prior to registration.

***If you have questions, you may want to consult an attorney or legal expert on trademarks and intellectual property for guidance.***

If you continue with this registration, you represent that, you have received and you understand this notice and to the best of your knowledge, your registration and use of the requested domain name will not infringe on the trademark rights listed below. The following [number] Trademarks are listed in the Trademark Clearinghouse:

1. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant: Trademark Registrant Contact:

[with links to the TM registrations as listed in the TM Clearinghouse]

2. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant:

Trademark Registrant Contact:

\*\*\*\*\* [with links to the TM registrations as listed in the TM Clearinghouse]

X. 1. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant: Trademark Registrant Contact:

**UNIFORM RAPID SUSPENSION SYSTEM (“URS”)**

~~Draft – November 2010~~ 15 April 2011

**DRAFT PROCEDURE****1. Complaint**

## 1.1 Filing the Complaint

- a) Proceedings are initiated by electronically filing with a URS Provider a Complaint outlining the trademark rights and the actions complained of entitling the trademark holder to relief.
- b) Each Complaint must be accompanied by the appropriate fee, which is under consideration. The fees will be non-refundable.
- c) One Complaint is acceptable for multiple related companies against one Registrant, but only if the companies complaining are related. Multiple Registrants can be named in one Complaint only if it can be shown that they are in some way related. There will not be a minimum number of domain names imposed as a prerequisite to filing.

## 1.2 Contents of the Complaint

The form of the Complaint will be simple and as formulaic as possible. There will be a ~~5,000 word limit, excluding attachments, for the Form~~ Complaint. The Form Complaint ~~must~~shall include space for the following:

- 1.2.1 Name, email address and other contact information for the Complaining Party (Parties).
- 1.2.2 Name, email address and contact information for any person authorized to act on behalf of Complaining Parties.
- 1.2.3 Name of Registrant (i.e. relevant information available from Whois) and Whois listed available contact information for the relevant domain name(s).
- 1.2.4 The specific domain name(s) that are the subject of the Complaint. For each domain name, the Complainant ~~should~~shall include a copy of the currently available Whois information and a description and copy, if available, of the offending portion of the website content associated with each domain name that is the subject of the Complaint.
- 1.2.5 The specific trademark/service marks upon which the Complaint is based and pursuant to which the Complaining Parties are asserting their rights to them, for which goods and in connection with what services.

1.2.6 A ~~description~~ statement of the grounds upon which the Complaint is based setting forth facts showing that the Complaining Party is entitled to relief, namely:

1.2.6.1. that the registered domain name is identical or confusingly similar to a word mark: (i) ~~in for~~ which the Complainant holds a valid registration ~~issued by a jurisdiction that conducts a substantive examination<sup>†</sup> of trademark applications prior to registration and that is in current use~~; or (ii) that has been validated through court proceedings ~~or the Trademark Clearinghouse~~; or (iii) that is specifically protected by a statute or treaty ~~currently~~ in effect ~~and that at the time the URS complaint is filed.~~

- a. Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use in commerce – was in effect on or before 26 June 2008; and submitted to, and validated by, the Trademark Clearinghouse)
- b. Proof of use may also be submitted directly with the URS Complaint.

and

1.2.6.2. that the Registrant has no legitimate right or interest to the domain name; and

1.2.6.3. that the domain was registered and is being used in bad faith.

g) — A non-exclusive list of circumstances that demonstrate bad faith registration and use by the Registrant include:

- a. \_\_\_\_\_ Registrant has registered or acquired the domain name primarily for the purpose of selling, renting or otherwise transferring the domain name registration to the complainant who is the owner of the trademark or service mark or to a competitor of that complainant, for valuable consideration in excess of documented out-of pocket costs directly related to the domain name; or
- b. \_\_\_\_\_ Registrant has registered the domain name in order to prevent the trademark holder or service mark from reflecting the mark in a corresponding domain name, provided that Registrant has engaged in a pattern of such conduct; or

---

<sup>†</sup> ~~Definition: Substantive evaluation upon registration has essentially three requirements: (i) evaluation on absolute grounds – to ensure that the applied for mark can in fact serve as a trademark; (ii) evaluation on relative grounds – to determine if previously filed marks preclude the registration; and (iii) evaluation of use – to ensure that the applied for mark is in current use.~~

c. Registrant registered the domain name primarily for the purpose of disrupting the business of a competitor; or

d. By using the domain name Registrant has intentionally attempted to attract for commercial gain, Internet users to Registrant's web site or other on-line location, by creating a likelihood of confusion with the complainant's mark as to the source, sponsorship, affiliation, or endorsement of Registrant's web site or location or of a product or service on that web site or location.

~~h) Finally, 1.2.7 A box in which the Complainant will attest may submit up to 500 words of explanatory free form text.~~

1.2.8. An attestation that the Complaint is not being filed for any improper basis and that there is a sufficient good faith basis for filing the Complaint.

## 2. Fees

~~Fees will be charged by the 2.1 URS Provider. will charge fees to the Complainant.~~ Fees are thought to be in the range of USD 300 per proceeding, but will ultimately be set by the Provider. ~~(The tender offer for potential service providers will indicate that price will be a factor in the award decision.)~~

2.2 A limited "loser pays" model has ~~not~~ been adopted for the URS. Complaints listing twenty-six (26) or more disputed domain names will be subject to an Response Fee which will be refundable to the prevailing party. Under no circumstances shall the Response Fee exceed the fee charged to the Complainant.

## 3. Administrative Review

- 3.1 Complaints will be subjected to an initial administrative review by the URS Provider for compliance with the filing requirements. This is a review to determine that the Complaint contains all of the necessary information, and is not a determination as to whether a *prima facie* case has been established.
- 3.2 The Administrative Review shall be conducted within ~~three (3)~~ two (2) business days of submission of the Complaint to the URS Provider.
- 3.3 Given the rapid nature of this Procedure, and the intended low level of required fees, there will be no opportunity to correct inadequacies in the filing requirements.
- 3.4 If a Complaint is deemed non-compliant with filing requirements, the Complaint will be dismissed without prejudice to the Complainant filing a new complaint. The initial filing fee shall not be refunded in these circumstances.

## 4. Notice and Locking of Domain

- 4.1 Upon completion of the Administrative Review, the URS Provider must ~~first~~immediately notify the registry operator (via email) (“Notice of Complaint”) ~~within 24 hours~~ after the Complaint has been deemed compliant with the filing requirements. Within 24 hours of receipt of the Notice of Complaint from the URS Provider, the registry operator shall “lock” the domain, meaning the registry shall restrict all changes to the registration data, including transfer and deletion of the domain names, but the name will continue to resolve. The registry operator will notify the URS Provider immediately upon locking the domain name (“Notice of Lock”).
- 4.2 Within 24 hours after receiving Notice of Lock from the registry operator, the URS Provider shall notify the Registrant of the Complaint, sending a hard copy of the Notice of Complaint to the addresses listed in the Whois contact information, and providing an electronic copy of the Complaint, advising of the locked status, as well as the effects if the registrant fails to respond and defend against the Complaint. Notices must be clear and understandable to Registrants located globally. The Notice of Complaint shall be in English and translated by the Provider into the predominant language used in the registrant’s country or territory.
- 4.3 All Notices to the Registrant shall be sent through email, fax (where available) and postal mail. The Complaint and accompanying exhibits, if any, shall be served electronically.
- 4.4 The URS Provider shall also electronically notify the registrar of record for the domain name at issue via the addresses the registrar has on file with ICANN.

## 5. The Response

- 5.1 A Registrant will have 14 calendar days from the date the URS Provider sent its Notice of Complaint to the Registrant to electronically file a Response with the URS Provider. Upon receipt, the Provider will electronically send a copy of the Response, and accompanying exhibits, if any, to the Complainant.
- 5.2 No filing fee will be charged if the Registrant files its Response prior to being declared in default or not more than thirty (30) days following a Determination. For Responses filed more than thirty (30) days after a Determination, the Registrant should pay a reasonable ~~fee for re-examination.~~ non-refundable fee for re-examination, plus a Response Fee as set forth in section 2.2 above if the Complaint lists twenty-six (26) or more disputed domain names. The Response Fee will be refundable to the prevailing party.
- 5.3 Upon request by the Registrant, a limited extension of time to respond may be granted by the URS Provider if there is a good faith basis for doing so. In no event shall the extension be for more than seven (7) calendar days.
- 5.4 The Response shall be no longer than ~~5,000~~2,500 words, excluding attachments, and the content of the Response should include the following:

a)5.4.1 Confirmation of Registrant data.

~~b)5.4.2~~ Specific admission or denial of each of the grounds upon which the Complaint is based.

~~c)5.4.3~~ Any defense which contradicts the Complainant's claims.

~~d)5.4.4~~ A statement that the contents are true and accurate.

5.5 In keeping with the intended expedited nature of the URS and the remedy afforded to a successful Complainant, affirmative claims for relief by the Registrant will not be permitted except for an allegation that the Complainant has filed an abusive Complaint.

5.6 Once the Response is filed, and the URS Provider determines that the Response is compliant with the filing requirements of a Response, (which shall be on the same day), the Complaint, Response and supporting materials will immediately be sent to a qualified Examiner, selected by the URS Provider, for review and Determination. All materials submitted are considered by the Examiner.

5.7 The Response can contain any facts refuting the claim of bad faith registration by setting out any of the following circumstances:

~~a)5.7.1~~ Before any notice to Registrant of the dispute, Registrant's use of, or demonstrable preparations to use, the domain name or a name corresponding to the domain name in connection with a bona fide offering of goods or services; or

~~b)5.7.2~~ Registrant (as an individual, business or other organization) has been commonly known by the domain name, even if Registrant has acquired no trademark or service mark rights; or

~~c)5.7.3~~ Registrant is making a legitimate or fair use of the domain name, without intent for commercial gain to misleadingly divert consumers or to tarnish the trademark or service mark at issue.

Such claims, if found by the Examiner to be proved based on its evaluation of all evidence, shall result in a finding in favor of the Registrant.

5.8 The Registrant may also assert Defenses to the Complaint to demonstrate that the Registrant's use of the domain name is not in bad faith by showing, for example, one of the following:

~~a)5.8.1~~ The domain name is generic or descriptive and the Registrant is making fair use of it.

~~b)5.8.2~~ The domain name sites are operated solely in tribute to or in criticism of a person or business that is found by the Examiner to be fair use.

~~c)5.8.3~~ Registrant's holding of the domain name is consistent with an express term of a written agreement entered into by the disputing Parties and that is still in effect.

~~(d)~~5.8.4 The domain name is not part of a wider pattern or series of abusive registrations because the Domain Name is of a significantly different type or character to other domain names registered by the Registrant.

5.9 Other factors for the Examiner to consider:

~~a)~~5.9.1 Trading in domain names for profit, and holding a large portfolio of domain names, are of themselves not indicia of bad faith under the URS. Such conduct, however, may be abusive in a given case depending on the circumstances of the dispute. The Examiner will review each case on its merits.

~~b)~~5.9.2 Sale of traffic (i.e. connecting domain names to parking pages and earning click-per-view revenue) does not in and of itself constitute bad faith under the URS. Such conduct, however, may be abusive in a given case depending on the circumstances of the dispute. The Examiner will take into account:

~~i)~~5.9.2.1.the nature of the domain name;

~~ii)~~5.9.2.2. the nature of the advertising links on any parking page associated with the domain name; and

~~iii)~~5.9.2.3. that the use of the domain name is ultimately the Registrant's responsibility

## 6. Default

6.1 If at the expiration of the 14-day answer period (or extended period if granted), the Registrant does not submit an answer, the Complaint proceeds to Default.

6.2 In either case, the Provider shall provide Notice of Default via email to the Complainant and Registrant, and via mail and fax to Registrant. During the Default period, the Registrant will be prohibited from changing content found on the site to argue that it is now a legitimate use and will also be prohibited from changing the Whois information.

6.3 All Default cases proceed to Examination for review on the merits of the claim.

6.4 If after Examination in Default cases, the Examiner rules in favor of Complainant, Registrant shall have the right to seek relief from Default via de novo review by filing a Response at any time up to ~~two years~~six months after the date of the Notice of Default. The Registrant will also be entitled to request an extension of an additional six months if the extension is requested before the expiration of the initial six-month period.

6.5 If ~~such~~ a Response is filed, after: (i) the Respondent was in Default (so long as the Response is filed in accordance with 6.4 above); and (ii) proper notice is provided in accordance with the notice requirements set forth above, the domain name shall again resolve to the original IP address as soon as practical, but shall remain locked as if the Response had been filed in a timely manner before Default. The filing of a Response after Default is not an appeal; the case is considered as if responded to in a timely manner.

- 6.5 If after Examination in Default case, the Examiner rules in favor of Registrant, the Provider shall notify the Registry Operator to unlock the name and return full control of the domain name registration to the Registrant.

## 7. Examiners

- 7.1 One Examiner selected by the Provider will preside over a URS proceeding.
- 7.2 Examiners should have demonstrable relevant legal background, such as in trademark law, and shall be trained and certified in URS proceedings. Specifically, Examiners shall be provided with instructions on the URS elements and defenses and how to conduct the examination of a URS proceeding.
- 7.3 Examiners used by any given URS Provider shall be rotated to the extent feasible to avoid “forum or examiner shopping.” URS Providers are strongly encouraged to work equally with all certified Examiners, with reasonable exceptions (such as language needs, non-performance, or malfeasance) to be determined on a case by case analysis.

## 8. Examination Standards and Burden of Proof

- 8.1 The standards that the qualified Examiner shall apply when rendering its Determination are whether:
- a)8.1.2 The registered domain name is identical or confusingly similar to a word mark: (i) infor which the Complainant holds a valid registration issued by a jurisdiction that conducts a substantive examination of trademark applications prior to registration and that is in current use; or (ii) that has been validated through court proceedings or the Trademark Clearinghouse; or (iii) that is specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008 at the time the URS Complaint is filed; and
- b)8.1.2.1 Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse.
- 8.1.2.2 Proof of use may also be submitted directly with the URS Complaint.
- 8.1.2 The Registrant has no legitimate right or interest to the domain name; and
- c)8.1.3 The domain was registered and is being used in a bad faith.
- 8.2 The burden of proof shall be clear and convincing evidence.
- 8.3 For a URS matter to conclude in favor of the Complainant, the Examiner shall render a Determination that there is no genuine issue of material fact. Such Determination may include that: (i) the Complainant has rights to the name; and (ii) the Registrant has no rights or legitimate interest in the name. This means that the Complainant must present

adequate evidence to substantiate its trademark rights in the domain name (e.g., evidence of a trademark registration and evidence that the domain name was registered and is being used in bad faith in violation of the URS).

- 8.4 If the Examiner finds that the Complainant has not met its burden, or that genuine issues of material fact remain in regards to any of the elements, the Examiner will reject the Complaint under the relief available under the URS. That is, the Complaint shall be dismissed if the Examiner finds that: (1) evidence was presented to indicate that the use of the domain name in question is a non-infringing use or fair use of the trademark; or (2) under the circumstances, ~~and no Response was submitted, a defense would have been possible to show~~ the evidence available to the Examiner shows that the use of the domain name in question is a non-infringing use or fair use of the trademark.
- 8.5 Where there is any genuine contestable issue as to whether a domain name registration and use of a trademark are in bad faith, the Complaint will be denied, the URS proceeding will be terminated without prejudice, e.g., a UDRP, court proceeding or another URS may be filed. The URS is not intended for use in any proceedings with open questions of fact, but only clear cases of trademark abuse.
- 8.6 To restate in another way, if the Examiner finds that all three standards are satisfied by clear and convincing evidence and that there is no genuine contestable issue, then the Examiner shall issue a Determination in favor of the Complainant. If the Examiner finds that any of the standards have not been satisfied, then the Examiner shall deny the relief requested, thereby terminating the URS proceeding without prejudice to the Complainant to proceed with an action in court of competent jurisdiction or under the UDRP.

## 9. Determination

- 9.1 There will be no discovery or hearing; the evidence will be the materials submitted with the Complaint and the Response, and those materials will serve as the entire record used by the Examiner to make a Determination.
- 9.2 If the Complainant satisfies the burden of proof, the Examiner will issue a Determination in favor of the Complainant. The Determination will be published on the URS Provider's website. However, there should be no other preclusive effect of the Determination other than the URS proceeding to which it is rendered.
- 9.3 If the Complainant does not satisfy the burden of proof, the URS proceeding is terminated and full control of the domain name registration shall be returned to the Registrant.
- 9.4 Determinations resulting from URS proceedings will be published by the service provider in a format specified by ICANN, in order to provide notice to the next potential Registrant that the domain was the subject of a URS proceeding.

- 9.5 Determinations shall also be emailed by the URS Provider to the Registrant, the Complainant, the Registrar, and the Registry Operator, and shall specify the remedy and required actions of the registry operator to comply with the Determination.
- 9.6 To conduct URS proceedings on an expedited basis, examination should begin immediately upon the earlier of the expiration of a ~~twenty (20)~~fourteen (14) day Response period, (or extended period if granted), or upon the submission of the Response. A Determination shall be rendered on an expedited basis, with the stated goal that it be rendered within three (3) business days from when Examination began. Absent extraordinary circumstances, however, Determinations must be issued no later than ~~14~~five (5) days after the Response is filed. Implementation details will be developed to accommodate the needs of service providers once they are selected. (The tender offer for potential service providers will indicate that timeliness will be a factor in the award decision.)

## 10. Remedy

- 10.1 If the Determination is in favor of the Complainant, the ~~domain name shall be decision~~ shall be immediately transmitted to the registry operator.
- 10.2 Immediately upon receipt of the Determination, the registry operator shall suspend the domain name, which shall remain suspended for the balance of the registration period and would not resolve to the original web site. The nameservers shall be redirected to an informational web page provided by the URS Provider about the URS. The URS Provider shall not be allowed to offer any other services on such page, nor shall it directly or indirectly use the web page for advertising purposes (either for itself or any other third party). The Whois for the domain name shall continue to display all of the information of the original Registrant except for the redirection of the nameservers. In addition, the Whois shall reflect that the domain name will not be able to be transferred, deleted or modified for the life of the registration.
- 10.2 There shall be an option for a successful Complainant to extend the registration period for one additional year at commercial rates.
- 10.3 No other remedies should be available in the event of a Determination in favor of the Complainant.

## 11. Abusive Complaints

- 11.1 The URS shall incorporate penalties for abuse of the process by trademark holders.
- 11.2 In the event a party is deemed to have filed two (2) abusive Complaints, or one (1) "deliberate material falsehood," that party shall be barred from utilizing the URS for one-year following the date of issuance of a Determination finding a complainant to have: (i) filed its second abusive complaint; or (ii) filed a deliberate material falsehood.
- 11.3 A Complaint may be deemed abusive if the Examiner determines:

- a) 11.3.1 it was presented solely for improper purpose such as to harass, cause unnecessary delay, or needlessly increase the cost of doing business; and
- b) 11.3.2 (i) the claims or other assertions were not warranted by any existing law or the URS standards; or (ii) the factual contentions lacked any evidentiary support
- 11.4 An Examiner may find that Complaint contained a deliberate material falsehood if it contained an assertion of fact, which at the time it was made, was made with the knowledge that it was false and which, if true, would have an impact on the outcome on the URS proceeding.
- 11.5 Two findings of “deliberate material falsehood” shall permanently bar the party from utilizing the URS.
- 11.6 URS Providers shall be required to develop a process for identifying and tracking barred parties, and parties whom Examiners have determined submitted abusive complaints or deliberate material falsehoods.
- 11.7 The dismissal of a complaint for administrative reasons or a ruling on the merits, in itself, shall not be evidence of filing an abusive complaint.
- 11.8 A finding that filing of a complaint was abusive or contained a deliberate materially falsehood can be appealed solely on the grounds that an Examiner abused his/her discretion, or acted in an arbitrary or capricious manner.

## 12. Appeal

- 12.1 Either party shall have a right to seek a de novo appeal of the Determination based on the existing record within the URS proceeding for a reasonable fee to cover the costs of the appeal. An appellant must identify the specific grounds on which the party is appealing, including why the appellant claims the Examiner’s Determination was incorrect.
- 12.2 The fees for an appeal shall be borne by the appellant. A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint. The Appeal Panel, to be selected by the Provider, may request, in its sole discretion, further statements or documents from either of the Parties.
- 12.3 Filing an appeal shall not change the domain name’s resolution. For example, if the domain name no longer resolves to the original nameservers because of a Determination in favor of the Complainant, the domain name shall continue to point to the informational page provided by the URS Provider. If the domain name resolves to the original nameservers because of a Determination in favor of the registrant, it shall continue to resolve during the appeal process.
- 12.4 An appeal must be filed within 14 days after a Determination is issued and any Response must be filed 14 days after an appeal is filed.

- 12.5 If a respondent has sought relief from Default by filing a Response within ~~two years~~six months (or the extended period if applicable) of issuance of initial Determination, an appeal must be filed within 14 days from date the second Determination is issued and any Response must be filed 14 days after the appeal is filed.
- 12.6 Notice of appeal and findings by the appeal panel shall be sent by the URS Provider via e-mail to the Registrant, the Complainant, the Registrar, and the Registry Operator.
- 12.7 The Providers' rules and procedures for appeals, other than those stated above, shall apply.

**13. Other Available Remedies**

The URS Determination shall not preclude any other remedies available to the appellant, such as UDRP (if appellant is the Complainant), or other remedies as may be available in a court of competition jurisdiction. A URS Determination for or against a party shall not prejudice the party in UDRP or any other proceedings.

**14. Review of URS**

A review of the URS procedure will be initiated one year after the first Examiner Determination is issued. Upon completion of the review, a report shall be published regarding the usage of the procedure, including statistical information, and posted for public comment on the usefulness and effectiveness of the procedure.

**TRADEMARK POST-DELEGATION DISPUTE RESOLUTION PROCEDURE (TRADEMARK PDDRP)**  
**REVISED — NOVEMBER 2010 15 April 2011**

**1. Parties to the Dispute**

The parties to the dispute will be the trademark holder and the gTLD registry operator. ICANN shall not be a party.

**2. Applicable Rules**

2.1 This procedure is intended to cover Trademark post-delegation dispute resolution proceedings generally. To the extent more than one Trademark PDDRP provider (“Provider”) is selected to implement the Trademark PDDRP, each Provider may have additional rules that must be followed when filing a Complaint. The following are general procedures to be followed by all Providers.

2.2 In the Registry Agreement, the registry operator agrees to participate in all post-delegation procedures and be bound by the resulting Determinations.

**3. Language**

3.1 The language of all submissions and proceedings under the procedure will be English.

3.2 Parties may submit supporting evidence in their original language, provided and subject to the authority of the Expert Panel to determine otherwise, that such evidence is accompanied by an English translation of all relevant text.

**4. Communications and Time Limits**

4.1 All communications with the Provider must be submitted electronically.

4.2 For the purpose of determining the date of commencement of a time limit, a notice or other communication will be deemed to have been received on the day that it is transmitted to the appropriate contact person designated by the parties.

4.3 For the purpose of determining compliance with a time limit, a notice or other communication will be deemed to have been sent, made or transmitted on the day that it is dispatched.

4.4 For the purpose of calculating a period of time under this procedure, such period will begin to run on the day following the date of receipt of a notice or other communication.

4.5 All references to day limits shall be considered as calendar days unless otherwise specified.

## 5. Standing

- 5.1 The mandatory administrative proceeding will commence when a third-party complainant (“Complainant”) has filed a Complaint with a Provider asserting that the Complainant is a trademark holder (which may include either registered or unregistered marks as defined below) claiming that one or more of its marks have been infringed, and thereby the Complainant has been harmed, by the registry operator’s manner of operation or use of the gTLD.
- 5.2 Before proceeding to the merits of a dispute, and before the Respondent is required to submit a substantive Response, or pay any fees, the Provider shall appoint a special one-person Panel to perform an initial “threshold” review (“Threshold Review Panel”).

## 6. Standards

For purposes of these standards, “registry operator” shall include entities directly or indirectly controlling, controlled by or under common control with a registry operator, whether by ownership or control of voting securities, by contract or otherwise where ‘control’ means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of an entity, whether by ownership or control of voting securities, by contract or otherwise.

### 6.1 Top Level:

A complainant must assert and prove, by clear and convincing evidence, that the registry operator’s affirmative conduct in its operation or use of its gTLD string that is identical or confusingly similar to the complainant’s mark, causes or materially contributes to the gTLD doing one of the following:

*(a) taking unfair advantage of the distinctive character or the reputation of the complainant's mark; or*

*(b) ~~unjustifiably~~ impairing the distinctive character or the reputation of the complainant's mark; or*

*(c) creating ~~an impermissible~~ likelihood of confusion with the complainant's mark.*

An example of infringement at the top-level is where a TLD string is identical to a trademark and then the registry operator holds itself out as the beneficiary of the mark.

### 6.2 Second Level

Complainants are required to prove, by clear and convincing evidence that, through the registry operator’s affirmative conduct:

*(a) there is a substantial pattern or practice of specific bad faith intent by the registry operator to profit from the sale of trademark infringing domain names; and*

*(b) the registry operator's bad faith intent to profit from the systematic registration of domain names within the gTLD that are identical or confusingly similar to the complainant's mark, which:*

*(i) takes unfair advantage of the distinctive character or the reputation of the complainant's mark; or*

*(ii) ~~unjustifiably~~ impairs the distinctive character or the reputation of the complainant's mark, or*

*(iii) creates ~~an impermissible~~ likelihood of confusion with the complainant's mark.*

In other words, it is not sufficient to show that the registry operator is on notice of possible trademark infringement through registrations in the gTLD. The registry operator is not liable under the PDDRP solely because: (i) infringing names are in its registry; or (ii) the registry operator knows that infringing names are in its registry; or (iii) the registry operator did not monitor the registrations within its registry.

A registry operator is not liable under the PDDRP for any domain name registration that: (i) is registered by a person or entity that is unaffiliated with the registry operator; (ii) is registered without the direct or indirect encouragement, inducement, initiation or direction of any person or entity affiliated with the registry operator; and (iii) provides no direct or indirect benefit to the registry operator other than the typical registration fee (which may include other fees collected incidental to the registration process for value added services such enhanced registration security).

An example of infringement at the second level is where a registry operator has a pattern or practice of actively and systematically encouraging registrants to register second level domain names and to take unfair advantage of the trademark to the extent and degree that bad faith is apparent. Another example of infringement at the second level is where a registry operator has a pattern or practice of acting as the registrant or beneficial user of infringing registrations, to monetize and profit in bad faith.

## 7. Complaint

### 7.1 Filing:

The Complaint will be filed electronically. Once the Administrative Review has been completed and the Provider deems the Complaint be in compliance, the Provider will electronically serve the Complaint and serve a paper notice on the registry operator that is the subject of the Complaint ("Notice of Complaint") consistent with the contact information listed in the Registry Agreement.

## 7.2 Content:

- 7.2.1 The name and contact information, including address, phone, and email address, of the Complainant, and, to the best of Complainant's knowledge, the name and address of the current owner of the registration.
- 7.2.2 The name and contact information, including address, phone, and email address of any person authorized to act on behalf of Complainant.
- 7.2.3 A statement of the nature of the dispute, and any relevant evidence, which ~~should~~shall include:
- (a) The particular legal rights claim being asserted, the marks that form the basis for the dispute and a short and plain statement of the basis upon which the Complaint is being filed.
  - (b) A detailed explanation of how the Complainant's claim meets the requirements for filing a claim pursuant to that particular ground or standard.
  - (c) A detailed explanation of the validity of the Complaint and why the Complainant is entitled to relief.
  - (d) A statement that the Complainant has at least 30 days prior to filing the Complaint notified the registry operator in writing of: (i) its specific concerns and specific conduct it believes is resulting in infringement of Complainant's trademarks and (ii) its willingness to meet to resolve the issue.
  - (e) An explanation of how the mark is used by the Complainant (including the type of goods/services, period and territory of use – including all on-line usage) or otherwise protected by statute, treaty or has been validated by a court or the Clearinghouse.
  - (f) Copies of any documents that the Complainant considers to evidence its basis for relief, including web-site evidence of current use of the Trademark at issue in the Complaint and domain name registrations.
  - (g) A statement that the proceedings are not being brought for any improper purpose.
  - (h) A statement describing how the registration at issue has harmed the trademark owner.

- 7.3 Complaints will be limited 5,000 words and 20 pages, excluding attachments, unless the Provider determines that additional material is necessary.

- 7.4 At the same time the Complaint is filed, the Complainant will pay a non-refundable filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within 10 days of the receipt of the Complaint by the Provider, the Complaint will be dismissed without prejudice.

## 8. Administrative Review of the Complaint

- 8.1 All Complaints will be reviewed by the Provider within five (5) business days of submission to the Provider to determine whether the Complaint contains all necessary information and complies with the procedural rules.
- 8.2 If the Provider finds that the Complaint complies with procedural rules, the Complaint will be deemed filed, and the proceedings will continue to the Threshold Review. If the Provider finds that the Complaint does not comply with procedural rules, it will electronically notify the Complainant of such non-compliance and provide the Complainant five (5) business days to submit an amended Complaint. If the Provider does not receive an amended Complaint within the five (5) business days provided, it will dismiss the Complaint and close the proceedings without prejudice to the Complainant's submission of a new Complaint that complies with procedural rules. Filing fees will not be refunded.
- 8.3 If deemed compliant, the Provider will electronically serve the Complaint on the registry operator and serve the Notice of Complaint consistent with the contact information listed in the Registry Agreement.

## 9. Threshold Review

- 9.1 Provider shall establish a Threshold Review Panel, consisting of one panelist selected by the Provider, for each proceeding within five (5) business days after completion of Administrative Review and the Complaint has been deemed compliant with procedural rules.
- 9.2 The Threshold Review Panel shall be tasked with determining whether the Complainant satisfies the following criteria:

- 9.2.1 The Complainant is a holder of a word mark that: (i) ~~issued by a jurisdiction that conducts a substantive examination of trademark applications prior to registration~~ is nationally or multi-nationally registered and that is in current use; or (ii) ~~that has been court- or Trademark Clearinghouse-validated through court proceedings~~; or (iii) that is specifically protected by a statute or treaty ~~currently in effect and that at the time the PDDRP complaint is filed~~;

9.2.1.1 Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use – was in effect on or before 26 June 2008; submitted to, and validated by, the Trademark Clearinghouse

9.2.1.2 Proof of use may also be submitted directly with the Complaint.

9.2.2 The Complainant has asserted that it has been materially harmed as a result of trademark infringement;

9.2.3 The Complainant has asserted facts with sufficient specificity that, if everything the Complainant asserted is true, states a claim under the Top Level Standards herein

OR

The Complainant has asserted facts with sufficient specificity that, if everything the Complainant asserted is true, states a claim under the Second Level Standards herein;

9.2.4 The Complainant has asserted that: (i) at least 30 days prior to filing the Complaint the Complainant notified the registry operator in writing of its specific concerns and specific conduct it believes is resulting in infringement of Complainant's trademarks, and its willingness to meet to resolve the issue; (ii) whether the registry operator responded to the Complainant's notice of specific concerns; and (iii) if the registry operator did respond, that the Complainant attempted to engage in good faith discussions to resolve the issue prior to initiating the PDDRP.

9.3 Within ten (10) business days of date Provider served Notice of Complaint, the registry operator shall have the opportunity, but is not required, to submit papers to support its position as to the Complainant's standing at the Threshold Review stage. If the registry operator chooses to file such papers, it must pay a filing fee.

9.4 If the registry operator submits papers, the Complainant shall have ten (10) business days to submit an opposition.

9.5 The Threshold Review Panel shall have ten (10) business days from due date of Complainant's opposition or the due date of the registry operator's papers if none were filed, to issue Threshold Determination.

9.6 Provider shall electronically serve the Threshold Determination on all parties.

9.7 If the Complainant has not satisfied the Threshold Review criteria, the Provider will dismiss the proceedings on the grounds that the Complainant lacks standing and declare that the registry operator is the prevailing party.

9.8 If the Threshold Review Panel determines that the Complainant has standing and satisfied the criteria then the Provider will commence the proceedings on the merits.

## **10. Response to the Complaint**

10.1 The registry operator must file a Response to each Complaint within forty-five (45) days after the date of the Threshold Review Panel Declaration.

- 10.2 The Response will comply with the rules for filing of a Complaint and will contain the name and contact information for the registry operator, as well as a point-by-point response to the statements made in the Complaint.
- 10.3 The Response must be filed with the Provider and the Provider must serve it upon the Complainant in electronic form with a hard-copy notice that it has been served.
- 10.4 Service of the Response will be deemed effective, and the time will start to run for a Reply, upon confirmation that the electronic Response and hard-copy notice of the Response was sent by the Provider to the addresses provided by the Complainant.
- 10.5 If the registry operator believes the Complaint is without merit, it will affirmatively plead in its Response the specific grounds for the claim.

**11. Reply**

- 11.1 The Complainant is permitted ten (10) days from Service of the Response to submit a Reply addressing the statements made in the Response showing why the Complaint is not “without merit.” A Reply may not introduce new facts or evidence into the record, but shall only be used to address statements made in the Response. Any new facts or evidence introduced in a Response shall be disregarded by the Expert Panel.
- 11.2 Once the Complaint, Response and Reply (as necessary) are filed and served, a Panel will be appointed and provided with all submissions.

**12. Default**

- 12.1 If the registry operator fails to respond to the Complaint, it will be deemed to be in default.
- 12.2 Limited rights to set aside the finding of default will be established by the Provider, but in no event will they be permitted absent a showing of good cause to set aside the finding of default.
- 12.3 The Provider shall provide notice of Default via email to the Complainant and registry operator.
- 12.4 All Default cases shall proceed to Expert Determination on the merits.

**13. Expert Panel**

- 13.1 The Provider shall establish an Expert Panel within 21 days after receiving the Reply, or if no Reply is filed, within 21 days after the Reply was due to be filed.
- 13.2 The Provider appoint a one-person Expert Panel, unless any party requests a three-member Expert Panel. No Threshold Panel member shall serve as an Expert Panel member in the same Trademark PDDRP proceeding.

- 13.3 In the case where either party requests a three-member Expert Panel, each party (or each side of the dispute if a matter has been consolidated) shall select an Expert and the two selected Experts shall select the third Expert Panel member. Such selection shall be made pursuant to the Provider's rules or procedures. Trademark PDDRP panelists within a Provider shall be rotated to the extent feasible.
- 13.4 Expert Panel member must be independent of the parties to the post-delegation challenge. Each Provider will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing a panelist for lack of independence.

#### **14. Costs**

- 14.1 The Provider will estimate the costs for the proceedings that it administers under this procedure in accordance with the applicable Provider rules. Such costs will be estimated to cover the administrative fees of the Provider, the Threshold Review Panel and the Expert Panel, and are intended to be reasonable.
- 14.2 The Complainant shall be required to pay the filing fee as set forth above in the "Complaint" section, and shall be required to submit the full amount of the Provider estimated administrative fees, the Threshold Review Panel fees and the Expert Panel fees at the outset of the proceedings. Fifty percent of that full amount shall be in cash (or cash equivalent) to cover the Complainant's share of the proceedings and the other 50% shall be in either cash (or cash equivalent), or in bond, to cover the registry operator's share if the registry operator prevails.
- 14.3 If the Panel declares the Complainant to be the prevailing party, the registry operator is required to reimburse Complainant for all Panel and Provider fees incurred. Failure to do so shall be deemed a violation of the Trademark PDDRP and a breach of the Registry Agreement, subject to remedies available under the Agreement up to and including termination.

#### **15. Discovery**

- 15.1 Whether and to what extent discovery is allowed is at the discretion of the Panel, whether made on the Panel's own accord, or upon request from the Parties.
- 15.2 If permitted, discovery will be limited to that for which each Party has a substantial need.
- 15.3 In extraordinary circumstances, the Provider may appoint experts to be paid for by the Parties, request live or written witness testimony, or request limited exchange of documents.
- 15.4 At the close of discovery, if permitted by the Expert Panel, the Parties will make a final evidentiary submission, the timing and sequence to be determined by the Provider in consultation with the Expert Panel.

**16. Hearings**

- 16.1 Disputes under this Procedure will be resolved without a hearing unless either party requests a hearing or the Expert Panel determines on its own initiative that one is necessary.
- 16.2 If a hearing is held, videoconferences or teleconferences should be used if at all possible. If not possible, then the Expert Panel will select a place for hearing if the Parties cannot agree.
- 16.3 Hearings should last no more than one day, except in the most extraordinary circumstances.
- 16.4 All dispute resolution proceedings will be conducted in English.

**17. Burden of Proof**

The Complainant bears the burden of proving the allegations in the Complaint; the burden must be by clear and convincing evidence.

**18. Remedies**

- 18.1 Since registrants are not a party to the action, a recommended remedy cannot take the form of deleting, transferring or suspending registrations (except to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator).
- 18.2 Recommended remedies will not include monetary damages or sanctions to be paid to any party other than fees awarded pursuant to section 14.
- 18.3 The Expert Panel may recommend a variety of graduated enforcement tools against the registry operator if it the Expert Panel determines that the registry operator is liable under this Trademark PDDRP, including:
  - 18.3.1 Remedial measures for the registry to employ to ensure against allowing future infringing registrations, which may be in addition to what is required under the registry agreement, except that the remedial measures shall not:
    - (a) Require the Registry Operator to monitor registrations not related to the names at issue in the PDDRP proceeding; or
    - (b) Direct actions by the registry operator that are contrary to those required under the Registry Agreement;
  - 18.3.2 Suspension of accepting new domain name registrations in the gTLD until such time as the violation(s) identified in the Determination is(are) cured or a set period of time;

OR,

18.3.3 In extraordinary circumstances where the registry operator acted with malice, providing for the termination of a Registry Agreement.

18.4 In making its recommendation of the appropriate remedy, the Expert Panel will consider the ongoing harm to the Complainant, as well as the harm the remedies will create for other, unrelated, good faith domain name registrants operating within the gTLD.

18.5 The Expert Panel may also determine whether the Complaint was filed “without merit,” and, if so, award the appropriate sanctions on a graduated scale, including:

18.5.1 Temporary bans from filing Complaints;

18.5.2 Imposition of costs of registry operator, including reasonable attorney fees; and

18.5.3 Permanent bans from filing Complaints after being banned temporarily.

18.6 Imposition of remedies shall be at the discretion of ICANN, but absent extraordinary circumstances, those remedies will be in line with the remedies recommended by the Expert Panel.

**19. The Expert Panel Determination**

19.1 The Provider and the Expert Panel will make reasonable efforts to ensure that the Expert Determination is issued within 45 days of the appointment of the Expert Panel and absent good cause, in no event later than 60 days after the appointment of the Expert Panel.

19.2 The Expert Panel will render a written Determination. The Expert Determination will state whether or not the Complaint is factually founded and provide the reasons for that Determination. The Expert Determination should be publicly available and searchable on the Provider’s web site.

19.3 The Expert Determination may further include a recommendation of specific remedies. Costs and fees to the Provider, to the extent not already paid, will be paid within thirty (30) days of the Expert Panel’s Determination.

19.4 The Expert Determination shall state which party is the prevailing party.

19.5 While the Expert Determination that a registry operator is liable under the standards of the Trademark PDDRP shall be taken into consideration, ICANN will have the authority to impose the remedies, if any, that ICANN deems appropriate given the circumstances of each matter.

**20. Appeal of Expert Determination**

- 20.1 Either party shall have a right to seek a de novo appeal of the Expert Determination of liability or recommended remedy based on the existing record within the Trademark PDDRP proceeding for a reasonable fee to cover the costs of the appeal.
- 20.2 An appeal must be filed with the Provider and served on all parties within 20 days after an Expert Determination is issued and a response to the appeal must be filed within 20 days after the appeal. Manner and calculation of service deadlines shall in consistent with those set forth in Section 4 above, "Communication and Time Limits."
- 20.3 A three-member Appeal Panel is to be selected by the Provider, but no member of the Appeal Panel shall also have been an Expert Panel member.
- 20.4 The fees for an appeal in the first instance shall be borne by the appellant.
- 20.5 A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint.
- 20.6 The Appeal Panel may request at its sole discretion, further statements or evidence from any party regardless of whether the evidence pre-dates the filing of the Complaint if the Appeal Panel determines such evidence is relevant.
- 20.7 The prevailing party shall be entitled to an award of costs of appeal.
- 20.8 The Providers rules and procedures for appeals, other than those stated above, shall apply.

**21. Challenge of a Remedy**

- 21.1 ICANN shall not implement a remedy for violation of the Trademark PDDRP for at least 20 days after the issuance of an Expert Determination, providing time for an appeal to be filed.
- 21.2 If an appeal is filed, ICANN shall stay its implementation of a remedy pending resolution of the appeal.
- 21.3 If ICANN decides to implement a remedy for violation of the Trademark PDDRP, ICANN will wait ten (10) business days (as observed in the location of its principal office) after notifying the registry operator of its decision. ICANN will then implement the decision unless it has received from the registry operator during that ten (10) business-day period official documentation that the registry operator has either: (a) commenced a lawsuit against the Complainant in a court of competent jurisdiction challenging the Expert Determination of liability against the registry operator, or (b) challenged the intended remedy by initiating dispute resolution under the provisions of its Registry Agreement. If ICANN receives such documentation within the ten (10) business day period, it will not seek to implement its decision under the Trademark PDDRP until it

receives: (i) evidence of a resolution between the Complainant and the registry operator; (ii) evidence that registry operator's lawsuit against Complainant has been dismissed or withdrawn; or (iii) a copy of an order from the dispute resolution provider selected pursuant to the Registry Agreement dismissing the dispute against ICANN whether by reason of agreement of the parties or upon determination of the merits.

- 21.4 The registry operator may challenge ICANN's imposition of a remedy imposed in furtherance of an Expert Determination that the registry operator is liable under the PDDRP, to the extent a challenge is warranted, by initiating dispute resolution under the provisions of its Registry Agreement. Any arbitration shall be determined in accordance with the parties' respective rights and duties under the Registry Agreement. Neither the Expert Determination nor the decision of ICANN to implement a remedy is intended to prejudice the registry operator in any way in the determination of the arbitration dispute. Any remedy involving a termination of the Registry Agreement must be according to the terms and conditions of the termination provision of the Registry Agreement.
- 21.5 Nothing herein shall be deemed to prohibit ICANN from imposing remedies at any time and of any nature it is otherwise entitled to impose for a registry operator's non-compliance with its Registry Agreement.

## **22. Availability of Court or Other Administrative Proceedings**

- 22.1 The Trademark PDDRP is not intended as an exclusive procedure and does not preclude individuals from seeking remedies in courts of law, including, as applicable, review of an Expert Determination as to liability.
- 22.2 In those cases where a Party submits documented proof to the Provider that a Court action involving the same Parties, facts and circumstances as the Trademark PDDRP was instituted prior to the filing date of the Complaint in the Trademark PDDRP, the Provider shall suspend or terminate the Trademark PDDRP.

## REGISTRY RESTRICTIONS DISPUTE RESOLUTION PROCEDURE (RRDRP)<sup>1</sup>

~~REVISED – NOVEMBER 2010~~

15 APRIL 2011

### 1. Parties to the Dispute

The parties to the dispute will be the harmed organization or individual and the gTLD registry operator. ICANN shall not be a party.

### 2. Applicable Rules

2.1 This procedure is intended to cover these dispute resolution proceedings generally. To the extent more than one RRDRP provider (“Provider”) is selected to implement the RRDRP, each Provider may have additional rules and procedures that must be followed when filing a Complaint. The following are the general procedure to be followed by all Providers.

2.2 In any new community-based gTLD registry agreement, the registry operator shall be required to agree to participate in the RRDRP and be bound by the resulting Determinations.

### 3. Language

3.1 The language of all submissions and proceedings under the procedure will be English.

3.2 Parties may submit supporting evidence in their original language, provided and subject to the authority of the RRDRP Expert Panel to determine otherwise, that such evidence is accompanied by an English translation of all relevant text.

### 4. Communications and Time Limits

4.1 All communications with the Provider must be filed electronically.

4.2 For the purpose of determining the date of commencement of a time limit, a notice or other communication will be deemed to have been received on the day that it is transmitted to the appropriate contact person designated by the parties.

<sup>1</sup> Initial complaints ~~by those claiming that a Registry has failed to be harmed by the non-compliance of community restricted TLDs might comply with registration restrictions shall~~ be processed through a Registry Restriction Problem Report System (RRPRS) using an online form similar to the Whois Data Problem Report System (WDPRS) at InterNIC.net. A nominal processing fee could serve to decrease frivolous complaints. The registry operator ~~would~~shall receive a copy of the complaint and ~~would~~will be required to take reasonable steps to investigate (and remedy if warranted) the reported non-compliance. The Complainant ~~would~~will have the option to escalate the complaint in accordance with this RRDRP, if the alleged non-compliance continues. ~~Implementation of such an online complaint process is under investigation and consideration. Failure by the Registry to address the complaint to complainant’s satisfaction does not itself give the complainant standing to file an RRDRP complaint.~~

- 4.3 For the purpose of determining compliance with a time limit, a notice or other communication will be deemed to have been sent, made or transmitted on the day that it is dispatched.
- 4.4 For the purpose of calculating a period of time under this procedure, such period will begin to run on the day following the date of receipt of a notice or other communication.
- 4.5 All references to day limits shall be considered as calendar days unless otherwise specified.

## 5. Standing

- 5.1 The mandatory administrative proceeding will commence when a third-party complainant (“Complainant”) has filed a Complaint with a Provider asserting that the Complainant is a harmed ~~organization or individual~~ established institution as a result of the community-based gTLD registry operator not complying with the registration restrictions set out in the Registry Agreement.
- 5.2 Established institutions, ~~and individuals~~ associated with defined communities, are eligible to file a community objection. The “defined community” must be a community related to the gTLD string in the application that is the subject of the dispute. To qualify for standing for a community claim, the Complainant must prove both: it is an established institution ~~or an individual~~, and has an ongoing relationship with a defined community that consists of a restricted population that the gTLD supports.

5.3 Complainants must have filed a claim through the Registry Restriction Problem Report System (RRPRS) to have standing to file an RRDRP.

~~5.35.4~~ The Panel will determine standing and the Expert Determination will include a statement of the Complainant’s standing.

## 6. Standards

- 6.1 For an claim to be successful, the claims must prove that:
- 6.1.1 The community invoked by the objector is a defined community;
- 6.1.2 There is a strong association between the community invoked and the gTLD label or string;
- 6.1.3 The TLD operator violated the terms of the community-based restrictions in its agreement;
- 6.1.3 There is a measureable harm to the Complainant and the community named by the objector.

## 7. Complaint

7.1 Filing:

The Complaint will be filed electronically. Once the Administrative Review has been completed and the Provider deems the Complaint to be in compliance, the Provider will electronically serve the Complaint and serve a hard copy and fax notice on the registry operator consistent with the contact information listed in the Registry Agreement.

7.2 Content:

7.2.1 The name and contact information, including address, phone, and email address, of the Complainant, the registry operator and, to the best of Complainant's knowledge, the name and address of the current owner of the registration.

7.2.2 The name and contact information, including address, phone, and email address of any person authorized to act on behalf of Complainant.

7.2.3 A statement of the nature of the dispute, which must include:

7.2.3.1 The particular registration restrictions in the Registry Agreement with which the registry operator is failing to comply; and

7.2.3.2 A detailed explanation of how the registry operator's failure to comply with the identified registration restrictions has caused harm to the complainant.

7.2.4 A statement that the proceedings are not being brought for any improper purpose.

7.2.5 A statement that the Complainant has filed a claim through the RRPRS and that the RRPRS process has concluded.

7.2.6 A statement that Complainant has not filed a Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) complaint relating to the same or similar facts or circumstances.

7.3 Complaints will be limited to 5,000 words and 20 pages, excluding attachments, unless the Provider determines that additional material is necessary.

7.4 Any supporting documents should be filed with the Complaint.

7.5 At the same time the Complaint is filed, the Complainant will pay a filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within 10 days of the receipt of the Complaint by the Provider, the Complaint will be dismissed without prejudice to the Complainant to file another complaint.

**8. Administrative Review of the Complaint**

- 8.1 All Complaints will be reviewed within five (5) business days of submission by panelists designated by the applicable Provider to determine whether the Complainant has complied with the procedural rules.
- 8.2 If the Provider finds that the Complaint complies with procedural rules, the Complaint will be deemed filed, and the proceedings will continue. If the Provider finds that the Complaint does not comply with procedural rules, it will electronically notify the Complainant of such non-compliant compliance and provide the Complainant five (5) business days to submit an amended Complaint. If the Provider does not receive an amended Complaint within the five (5) business days provided, it will dismiss the Complaint and close the proceedings without prejudice to the Complainant's submission of a new Complaint that complies with procedural rules. Filing fees will not be refunded if the Complaint is deemed not in compliance.
- 8.3 If deemed compliant, the Provider will electronically serve the Complaint on the registry operator and serve a paper notice on the registry operator that is the subject of the Complaint consistent with the contact information listed in the Registry Agreement.

**9. Response to the Complaint**

- 9.1 The registry operator must file a response to each Complaint within thirty (30) days of service the Complaint.
- 9.2 The Response will comply with the rules for filing of a Complaint and will contain the names and contact information for the registry operator, as well as a point by point response to the statements made in the Complaint.
- 9.3 The Response must be electronically filed with the Provider and the Provider must serve it upon the Complainant in electronic form with a hard-copy notice that it has been served.
- 9.4 Service of the Response will be deemed effective, and the time will start to run for a Reply, upon electronic transmission of the Response.
- 9.5 If the registry operator believes the Complaint is without merit, it will affirmatively plead in its Response the specific grounds for the claim.
- 9.6 At the same time the Response is filed, the registry operator will pay a filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within ten (10) days of the receipt of the Response by the Provider, the Response will be deemed improper and not considered in the proceedings, but the matter will proceed to Determination.

**10 Reply**

- 10.1 The Complainant is permitted ten (10) days from Service of the Response to submit a Reply addressing the statements made in the Response showing why the Complaint is not “without merit.” A Reply may not introduce new facts or evidence into the record, but shall only be used to address statements made in the Response. Any new facts or evidence introduced in a Response shall be disregarded by the Expert Panel.
- 10.2 Once the Complaint, Response and Reply (as necessary) are filed and served, a Panel will be appointed and provided with all submissions.

**11. Default**

- 11.1 If the registry operator fails to respond to the Complaint, it will be deemed to be in default.
- 11.2 Limited rights to set aside the finding of default will be established by the Provider, but in no event will it be permitted absent a showing of good cause to set aside the finding of Default.
- 11.3 The Provider shall provide Notice of Default via email to the Complainant and registry operator.
- 11.4 All Default cases shall proceed to Expert Determination on the merits.

**12. Expert Panel**

- 12.1 The Provider shall select and appoint a single-member Expert Panel within (21) days after receiving the Reply, or if no Reply is filed, within 21 days after the Reply was due to be filed .
- 12.2 The Provider will appoint a one-person Expert Panel unless any party requests a three-member Expert Panel.
- 12.3 In the case where either party requests a three-member Expert Panel, each party (or each side of the dispute if a matter has been consolidated) shall select an Expert and the two selected Experts shall select the third Expert Panel member. Such selection shall be made pursuant to the Provider’s rules or procedures. RRDRP panelists within a Provider shall be rotated to the extent feasible.
- 12.4 Expert Panel members must be independent of the parties to the post-delegation challenge. Each Provider will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing an Expert for lack of independence.

**13. Costs**

- 13.1 The Provider will estimate the costs for the proceedings that it administers under this procedure in accordance with the applicable Provider Rules. Such costs will cover the

administrative fees, including the Filing and Response fee of the Provider, and ~~for~~ the Expert Panel fees, and are intended to be reasonable.

13.2 The Complainant shall be required to pay the ~~filing~~Filing fee as set forth above in the "Complaint" section, and shall be required to submit the full amount of the other Provider-~~estimated~~ administrative fees, including the Response Fee, and the Expert Panel fees at the outset of the proceedings. Fifty percent of that full amount shall be in cash (or cash equivalent) to cover the Complainant's share of the proceedings and the other 50% shall be in either cash (or cash equivalent), or in bond, to cover the registry operator's share if the registry operator prevails.

13.3 If the Panel declares the Complainant to be the prevailing party, the registry operator is required to reimburse Complainant for all Panel and Provider fees incurred, including the filing fee. Failure to do shall be deemed a violation of the RRDRP and a breach of the Registry Agreement, subject to remedies available under the Agreement up to and including termination.

13.4 If the Panel declares the registry operator to be the prevailing party, the Provider shall reimburse the registry operator for its Response fee.

#### 14. Discovery/Evidence

14.1 In order to achieve the goal of resolving disputes rapidly and at a reasonable cost, discovery will generally not be permitted. In exceptional cases, the Expert Panel may require a party to provide additional evidence.

14.2 If permitted, discovery will be limited to that for which each Party has a substantial need.

14.3 Without a specific request from the Parties, but only in extraordinary circumstances, the Expert Panel may request that the Provider appoint experts to be paid for by the Parties, request live or written witness testimony, or request limited exchange of documents.

#### 15. Hearings

15.1 Disputes under this RRDRP will usually be resolved without a hearing.

15.2 The Expert Panel may decide on its own initiative, or at the request of a party, to hold a hearing. However, the presumption is that the Expert Panel will render Determinations based on written submissions and without a hearing.

15.3 If a request for a hearing is granted, videoconferences or teleconferences should be used if at all possible. If not possible, then the Expert Panel will select a place for hearing if the parties cannot agree.

15.4 Hearings should last no more than one day, except in the most exceptional circumstances.

15.5 If the Expert Panel grants one party's request for a hearing, notwithstanding the other party's opposition, the Expert Panel is encouraged to apportion the hearing costs to the requesting party as the Expert Panel deems appropriate.

15.6 All dispute resolution proceedings will be conducted in English.

## 16. Burden of Proof

The Complainant bears the burden of proving its claim; the burden should be by a preponderance of the evidence.

## 17. Recommended Remedies

17.1 Since registrants of domain names registered in violation of the agreement restriction are not a party to the action, a recommended remedy cannot take the form of deleting, transferring or suspending registrations that were made in violation of the agreement restrictions (except to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator).

17.2 Recommended remedies will not include monetary damages or sanctions to be paid to any party other than fees awarded pursuant to section 13.

17.3 The Expert Panel may recommend a variety of graduated enforcement tools against the registry operator if the Expert Panel determines that the registry operator allowed registrations outside the scope of its promised limitations, including:

17.3.1 Remedial measures, which may be in addition to requirements under the registry agreement, for the registry to employ to ensure against allowing future registrations that do not comply with community-based limitations; except that the remedial measures shall not:

- (a) Require the registry operator to monitor registrations not related to the names at issue in the RRDRP proceeding, or
- (b) direct actions by the registry operator that are contrary to those required under the registry agreement

17.3.2 Suspension of accepting new domain name registrations in the gTLD until such time as the violation(s) identified in the Determination is(are) cured or a set period of time;

OR,

17.3.3 In extraordinary circumstances where the registry operator acted with malice providing for the termination of a registry agreement.

- 17.3 In making its recommendation of the appropriate remedy, the Expert Panel will consider the ongoing harm to the Complainant, as well as the harm the remedies will create for other, unrelated, good faith domain name registrants operating within the gTLD.

## 18. The Expert Determination

- 18.1 The Provider and the Expert Panel will make reasonable efforts to ensure that the Expert Determination is rendered within 45 days of the appointment of the Expert Panel and absent good cause, in no event later than 60 days after the appointment of the Expert Panel.
- 18.2 The Expert Panel will render a written Determination. The Expert Determination will state whether or not the Complaint is factually founded and provide the reasons for its Determination. The Expert Determination should be publicly available and searchable on the Provider's web site.
- 18.3 The Expert Determination may further include a recommendation of specific remedies. Costs and fees to the Provider, to the extent not already paid, will be paid within thirty (30) days of the Expert Determination.
- 18.4 The Expert Determination shall state which party is the prevailing party.
- 18.5 While the Expert Determination that a community-based restricted gTLD registry operator was not meeting its obligations to police the registration and use of domains within the applicable restrictions shall be considered, ICANN shall have the authority to impose the remedies ICANN deems appropriate, given the circumstances of each matter.

## 19. Appeal of Expert Determination

- 19.1 Either party shall have a right to seek a de novo appeal of the Expert Determination ~~of liability or recommended remedy~~ based on the existing record within the RRDRP proceeding for a reasonable fee to cover the costs of the appeal.
- 19.2 An appeal must be filed with the Provider and served on all parties within 20 days after an Expert Determination is issued and a response to the appeal must be filed within 20 days after the appeal. Manner and calculation of service deadlines shall in consistent with those set forth in Section 4 above, "Communication and Time Limits."
- 19.3 A three-member Appeal Panel is to be selected by the Provider, but no member of the Appeal Panel shall also have been an Expert Panel member.
- 19.4 The fees for an appeal in the first instance shall be borne by the appellant.
- 19.5 A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint.

- 19.6 The Appeal Panel may request at its sole discretion, further statements or evidence from any party regardless of whether the evidence pre-dates the filing of the Complaint if the Appeal Panel determines such evidence is relevant.
- 19.7 The prevailing party shall be entitled to an award of costs of appeal.
- 19.8 The Providers rules and procedures for appeals, other than those stated above, shall apply.

20. **Challenge of a Remedy Breach**

~~20.1—ICANN shall not implement a remedy for violation of RRDRP for at least 20 days after the issuance of an Determination, providing time for an appeal to be filed.~~

~~20.2 If an appeal is filed, ICANN shall stay its implementation of a remedy pending resolution of the appeal.~~

~~20.3 If ICANN decides to implement a remedy for violation of the RRDRP, ICANN will wait ten (10) business days (as observed in the location of its principal office) after notifying of its decision, implement the decision unless it has received during that ten (10) business-day period official documentation the registry operator has either: (a) commenced a lawsuit against the a court of competent jurisdiction challenging the Expert Determination of liability against the registry operator, or (b) challenged the intended remedy by initiating dispute resolution under the provisions of its Registry Agreement. If ICANN receives such documentation within the ten (10) business-day period, it will not seek to implement its decision under the RRDRP until it receives: (i) evidence of a resolution between the Complainant and the registry operator; (ii) evidence that registry operator's lawsuit against Complainant has been dismissed or withdrawn; or (iii) a copy of an order from the dispute resolution provider selected pursuant to the Registry Agreement dismissing the dispute against ICANN whether by reason of agreement of the parties or upon determination of the merits.~~

~~20.4 20.1 \_\_\_\_\_ If the Expert determines that the registry operator is in breach, ICANN will then proceed to notify the registry operator that it is in breach. The registry operator may challenge ICANN's imposition of a remedy imposed will be given the opportunity to cure the breach as called for in the Registry Agreement. furtherance of an Expert Determination that the registry operator is liable under the RRDRP, to the extent a challenge is warranted, by initiating dispute resolution under the provisions of its Registry Agreement. Any arbitration shall be determined in accordance with the parties' respective rights and duties under the Registry Agreement. Neither the Expert Determination nor the decision of ICANN to implement a remedy is intended to prejudice the registry operator in any way in the determination of the arbitration dispute. Any remedy involving a termination of the Registry Agreement must be according to the terms and conditions of the termination provision of the Registry Agreement.~~

20.2 If registry operator fails to cure the breach then both parties are entitled to utilize the options available to them under the registry agreement, and ICANN may consider the recommended remedies set forth in the Expert Determination when taking action.

~~20.5~~ 20.3 Nothing herein shall be deemed to prohibit ICANN from imposing remedies at any time and of any nature it is otherwise entitled to impose for a registry operator's non-compliance with its Registry Agreement.

**21. Availability of Court or Other Administrative Proceedings**

21.1 The RRDRP is not intended as an exclusive procedure and does not preclude individuals from seeking remedies in courts of law, including, as applicable, review of an Expert Determination as to liability.

21.2 The parties are encouraged, but not required to participate in informal negotiations and/or mediation at any time throughout the dispute resolution process but the conduct of any such settlement negotiation is not, standing alone, a reason to suspend any deadline under the proceedings.

# Applicant Guidebook

## April 2011 Discussion Draft Module 6

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

15 April 2011

---

# Module 6

---

## *Top-Level Domain Application - Terms and Conditions*

By submitting this application through ICANN's online interface for a generic Top Level Domain (gTLD) (this application), applicant (including all parent companies, subsidiaries, affiliates, agents, contractors, employees and any and all others acting on its behalf) agrees to the following terms and conditions (these terms and conditions) without modification. Applicant understands and agrees that these terms and conditions are binding on applicant and are a material part of this application.

1. Applicant warrants that the statements and representations contained in the application (including any documents submitted and oral statements made and confirmed in writing in connection with the application) are true and accurate and complete in all material respects, and that ICANN may rely on those statements and representations fully in evaluating this application. Applicant acknowledges that any material misstatement or misrepresentation (or omission of material information) may cause ICANN and the evaluators to reject the application without a refund of any fees paid by Applicant. Applicant agrees to notify ICANN in writing of any change in circumstances that would render any information provided in the application false or misleading.
2. Applicant warrants that it has the requisite organizational power and authority to make this application on behalf of applicant, and is able to make all agreements, representations, waivers, and understandings stated in these terms and conditions and to enter into the form of registry agreement as posted with these terms and conditions.
3. Applicant acknowledges and agrees that ICANN has the right to determine not to proceed with any and all applications for new gTLDs, and that there is no assurance that any additional gTLDs will be created. The decision to review and consider an application to establish one or more gTLDs is entirely at ICANN's discretion. ICANN reserves the right to

reject any application that ICANN is prohibited from considering under applicable law or policy, in which case any fees submitted in connection with such application will be returned to the applicant.

4. Applicant agrees to pay all fees that are associated with this application. These fees include the evaluation fee (which is to be paid in conjunction with the submission of this application), and any fees associated with the progress of the application to the extended evaluation stages of the review and consideration process with respect to the application, including any and all fees as may be required in conjunction with the dispute resolution process as set forth in the application. Applicant acknowledges that the initial fee due upon submission of the application is only to obtain consideration of an application. ICANN makes no assurances that an application will be approved or will result in the delegation of a gTLD proposed in an application. Applicant acknowledges that if it fails to pay fees within the designated time period at any stage of the application review and consideration process, applicant will forfeit any fees paid up to that point and the application will be cancelled. Except as expressly provided in this Application Guidebook, ICANN is not obligated to reimburse an applicant for or to return any fees paid to ICANN in connection with the application process.
5. Applicant shall indemnify, defend, and hold harmless ICANN (including its affiliates, subsidiaries, directors, officers, employees, consultants, evaluators, and agents, collectively the ICANN Affiliated Parties) from and against any and all third-party claims, damages, liabilities, costs, and expenses, including legal fees and expenses, arising out of or relating to: (a) ICANN's [or an ICANN Affiliated Party's](#) consideration of the application, and any approval or rejection of the application; and/or (b) ICANN's [or an ICANN Affiliated Party's](#) reliance on information provided by applicant in the application.
6. Applicant hereby releases ICANN and the ICANN Affiliated Parties from any and all claims by applicant that arise out of, are based upon, or are

in any way related to, any action, or failure to act, by ICANN or any ICANN Affiliated Party in connection with ICANN's [or an ICANN Affiliated Party's](#) review of this application, investigation or verification, any characterization or description of applicant or the information in this application, or the decision by ICANN to recommend, or not to recommend, the approval of applicant's gTLD application. APPLICANT AGREES NOT TO CHALLENGE, IN COURT OR IN ANY OTHER JUDICIAL FORA, ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION, AND IRREVOCABLY WAIVES ANY RIGHT TO SUE OR PROCEED IN COURT OR ANY OTHER JUDICIAL FORA ON THE BASIS OF ANY OTHER LEGAL CLAIM AGAINST ICANN AND ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES AND ACCEPTS THAT APPLICANT'S NONENTITLEMENT TO PURSUE ANY RIGHTS, REMEDIES, OR LEGAL CLAIMS AGAINST ICANN OR THE ICANN AFFILIATED PARTIES IN COURT OR ANY OTHER JUDICIAL FORA WITH RESPECT TO THE APPLICATION SHALL MEAN THAT APPLICANT WILL FOREGO ANY RECOVERY OF ANY APPLICATION FEES, MONIES INVESTED IN BUSINESS INFRASTRUCTURE OR OTHER STARTUP COSTS AND ANY AND ALL PROFITS THAT APPLICANT MAY EXPECT TO REALIZE FROM THE OPERATION OF A REGISTRY FOR THE TLD-: [PROVIDED, THAT APPLICANT MAY UTILIZE ANY ACCOUNTABILITY MECHANISM SET FORTH IN ICANN'S BYLAWS FOR PURPOSES OF CHALLENGING ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES THAT ANY ICANN AFFILIATED PARTY IS AN EXPRESS THIRD PARTY BENEFICIARY OF THIS SECTION 6 AND MAY ENFORCE EACH PROVISION OF THIS SECTION 6 AGAINST APPLICANT.](#)

7. Applicant hereby authorizes ICANN to publish on ICANN's website, and to disclose or publicize in any other manner, any materials submitted to, or obtained or generated by, ICANN and the ICANN Affiliated Parties in connection with the application, including evaluations, analyses and any other materials prepared in connection with the evaluation of the application; provided, however, that information will not be disclosed or published to the extent that this Applicant Guidebook expressly

states that such information will be kept confidential, except as required by law or judicial process. Except for information afforded confidential treatment, applicant understands and acknowledges that ICANN does not and will not keep the remaining portion of the application or materials submitted with the application confidential.

8. Applicant certifies that it has obtained permission for the posting of any personally identifying information included in this application or materials submitted with this application. Applicant acknowledges that the information that ICANN posts may remain in the public domain in perpetuity, at ICANN's discretion.
9. Applicant gives ICANN permission to use applicant's name in ICANN's public announcements (including informational web pages) relating to Applicant's application and any action taken by ICANN related thereto.
10. Applicant understands and agrees that it will acquire rights in connection with a gTLD only in the event that it enters into a registry agreement with ICANN, and that applicant's rights in connection with such gTLD will be limited to those expressly stated in the registry agreement. In the event ICANN agrees to recommend the approval of the application for applicant's proposed gTLD, applicant agrees to enter into the registry agreement with ICANN in the form published in connection with the application materials. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed draft agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process). Applicant may not resell, assign, or transfer any of applicant's rights or obligations in connection with the application.
11. Applicant authorizes ICANN to:
  - a. Contact any person, group, or entity to request, obtain, and discuss any documentation or other information that,

- in ICANN's sole judgment, may be pertinent to the application;
- b. Consult with persons of ICANN's choosing regarding the information in the application or otherwise coming into ICANN's possession, provided, however, that ICANN will use reasonable efforts to ensure that such persons maintain the confidentiality of information in the application that this Applicant Guidebook expressly states will be kept confidential.
12. For the convenience of applicants around the world, the application materials published by ICANN in the English language have been translated into certain other languages frequently used around the world. Applicant recognizes that the English language version of the application materials (of which these terms and conditions is a part) is the version that binds the parties, that such translations are non-official interpretations and may not be relied upon as accurate in all respects, and that in the event of any conflict between the translated versions of the application materials and the English language version, the English language version controls.

**RESPONDENT'S EXHIBIT**

## Governmental Advisory Committee

26 May 2011

### **GAC comments on the Applicant Guidebook (April 15th, 2011 version)**

#### **Objections Procedures**

ICANN has accepted the GAC's advice that governments should not be compelled to use the "Limited Public Interest Objections" procedures in the previous version of the Guidebook. Although the ICANN Notes document indicates that ICANN has accepted the GAC's recommendation that the procedures be re-named as "Objections Procedures", the title in the revised Applicant Guidebook remains unchanged.

#### **GAC comments:**

The GAC acknowledges the Board's acceptance of the GAC's proposal, while noting the need to amend the title of the Objections Procedure in Module 3.

#### **Procedures for the review of sensitive strings**

##### ***String Evaluations and Objections Procedure:***

ICANN has accepted that governments can raise objections to proposed new gTLD strings through the GAC, as an alternative to its original proposal that its "Limited Public Interest Objections" procedures should apply to governments. GAC members can raise concerns about any applications and the GAC can provide advice to the Board on any application, with no obligation to pay fees to register an objection to a proposed string. ICANN is proposing that such GAC advice be provided by the close of the Objection Filing Period, or within a five month period after applications are posted. ICANN also expects that GAC advice will identify objecting countries, the public policy basis for the objection, and the process by which consensus was reached.

If the GAC provides consensus GAC advice that a particular application should not proceed, that will create a strong presumption for ICANN that the application should not be approved. If the GAC provides advice that does not indicate consensus, or that does not state that the application should not proceed,

such advice will be provided to the applicant but would not create the presumption that the application should be denied. If the consensus GAC advice indicates that the application should not process unless remediated, it will raise a strong presumption that the application should not proceed, unless there is a remediation method available within the Guidebook (e.g. requiring government approval). The Board may consult with independent experts, such as those designated to hear objections through the Dispute Resolution Procedure, in cases where issues raised in the GAC advice are pertinent to one of the subject matter areas of the objection procedures.

**GAC advice and comments:**

- The GAC acknowledges the Board’s efforts to date to work with the GAC to find a mutually acceptable way forward.
- The GAC advises the Board that the current text in Module 3 that seemingly dictates to the GAC how to develop consensus advice is problematic and should be deleted, as it is inconsistent with the ICANN Bylaws and the GAC’s Operating Principles.
- Nevertheless, the GAC will clarify the basis on which consensus advice is developed (e.g. the UN definition of consensus) and consider amendments to Principle 47 of its Operating Principles consistent with the ATRT recommendations.
- The GAC strongly believes that further discussions are needed between the GAC and the ICANN Board to find a mutually agreed and understandable formulation for the communication of actionable GAC consensus advice regarding proposed new gTLD strings.
- The GAC also advises the Board that it should notify the GAC when and if it determines to seek the views of independent experts on GAC advice, after which consultations between the Board and the GAC (to include any such independent experts) may be warranted.

***Expand Categories of Community-based strings, Early Warning, and Objections Fees:***

ICANN has rejected the GAC’s advice that the definition of “Community-based” strings be expanded to include strings that purport to represent a particular group of people or interests based on historical, cultural, or social components of identity, such as nationality, race or ethnicity, religion, culture, etc., or particular sectors, on the grounds that doing so would be extremely difficult to implement.

ICANN believes its acceptance that GAC objections to proposed new gTLD strings may be raised for any reason obviates the need to create new categories and expects that any GAC concerns about strings falling into these categories can be addressed through the new GAC objections procedures.

ICANN has partially accepted the GAC’s request for an “Early Warning” procedure; rather than adding a 60 day period prior to the Initial Evaluation period, ICANN is proposing to extend the Initial Evaluation period from 45 to 60 days after the new gTLD applications have been posted. “Early Warning” notices will not require GAC consensus, will be forwarded by ICANN to the applicants, and will be understood by ICANN and the applicants that the proposed string will be considered controversial or to raise national

sensitivities. Those applicants who withdraw within 21 days of receiving the notice will receive a refund of 80% of the application fee.

ICANN is proposing several models that could potentially address the GAC's advice that individual governments that choose to file objections to any "Community-based" string should not be required to pay fees, with a stated preference for the allocation of a fixed amount of funding for each individual government. ICANN will also commit that at least one objection will be fully funded for each individual government. The Explanatory Memorandum on the GAC Objection Procedures clearly states ICANN's view that governments must budget for dispute resolution fees if they anticipate the need to object to applications using the "Community-based" strings objection procedures.

ICANN has accepted the GAC's advice that the requirement that objectors must demonstrate "material detriment to the broader Internet community" be amended to reflect material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted.

**GAC advice and comments:**

- The GAC appreciates the Board's acceptance of the GAC's advice that the requirement to demonstrate "material detriment to the broader Internet community" was impractical and has now been revised accordingly.
- The GAC will consider whether the addition of 15, vice 60, days to the 45 day Initial Evaluation period for the GAC's Early Warning Procedure provides sufficient time for governments to review the list of proposed new gTLD strings, undertake appropriate consultations in national capitals, and then subsequently notify the GAC of an intention to submit an Early Warning notice to the GAC. The GAC advises the Board that it will need to develop a methodology or mechanism for this new GAC Early Warning Procedure (e.g. members to notify the GAC and the GAC, in turn, to notify ICANN).
- While the GAC appreciates the Board's acceptance that Early Warning notices may cite national, geographic, cultural, linguistic, religious, ethnic and/or other reasons (e.g. the string represents a regulated sector) as the basis for the Early Warning notice, the GAC notes that such notices are apparently only relevant in the event there is a remedy available in the Guidebook itself (which appear to be restricted to geographic names).
- The GAC cannot determine whether the Board's commitment to fund at least one objection per individual national government will be sufficient, in view of the as-yet- unknown number of new gTLD strings that may be considered controversial, objectionable, or to raise national sensitivities. The GAC therefore advises the Board that its Communication Outreach program should specifically identify the options available to governments to raise objections to any proposed string.

## **Root Zone Scaling**

ICANN has accepted GAC's advice on this topic and plans to implement the advice in the following manner:

- ICANN will establish a process for reporting root zone metrics.
- ICANN will implement a process with a clearly established chain of command that enables the delegation of TLDs to be slowed or stopped in the event that there is a strain on the root zone system.
- ICANN commits to review the effects of the new gTLD program on the operations of the root zone system, and to postpone delegations in a second round until it is determined that the delegations in the first round have not jeopardized the root zone system's security or stability (as stated in the AG).
- ICANN has drafted a preliminary paper describing monitoring root zone stability, including a hold on new delegations after the first round until stability is tested and assured. The proposed annex with the plan to monitor root zone performance is not yet available.
- ICANN commits to ensuring that the operation of the IANA functions and ICANN's coordination of the root zone system will not be negatively affected. The paper on Root Zone Scaling (see above) describes staffing plans to ensure ongoing day-to-day operations at ICANN. These operations include delegation, re-delegation, root zone changes, contractual compliance and registry liaison. The GAC notes, however, that these calculations of manpower resource requirements are not yet part of the ICANN operational plan. ICANN will continue to test these assumptions in order to create and execute an operating plan that addresses these requirements.
- ICANN's planning routinely takes into account non-English speaking and different legal environments. It will ensure that planning is included for handling new gTLDs.

The GAC looks forward to the final implementation of GAC advice and to the publication by ICANN of a single authoritative document describing the monitoring system and reporting mechanisms. This document should be ready before the launch of the new gTLD program.

## **Market and Economic Impacts**

ICANN has accepted the GAC's revised advice that criteria should be identified to facilitate the weighing of the potential costs and benefits to the public in the evaluation and award of new gTLDs, as part of the new gTLD program review specified in the Affirmation of Commitments.

ICANN has also accepted the GAC's advice that applicants be required to provide information on the expected benefits of the proposed gTLD, as well as information and proposed operating terms to eliminate or minimize costs to registrants and consumers. In this regard, ICANN consulted with economists who have developed proposed questions for inclusion in the Applicant Guidebook.

With regard to the GAC's advice that due diligence or other operating restrictions be developed to ensure that Community-based gTLDs will in fact serve their targeted community, ICANN has provided a briefing paper to the Generic Names Supporting Organization (GNSO), with a request that the GNSO consider a proposed procedure for determining under which circumstances a community TLD registry may amend the registration restriction in the registry agreement.

**GAC advice and comments:**

- The GAC recognizes the Board's responsiveness to the GAC's advice in including specific questions for applicants, as well as requiring applicants to provide information on the expected benefits of the new gTLD.
- The GAC requests information from the Board regarding how the GAC's concerns can be effectively taken into account in the course of the GNSO's deliberations of a new procedure for determining the circumstances under which a Community TLD registry may (or may be required to) amend its registration policies.

**Registry-Registrar separation**

Since the recent exchanges in San Francisco on the GAC's request that the Board provide additional background on its decision to relax registry-registrar cross-ownership rules in relation to new gTLDs, ICANN has also re-confirmed that it also intends to relax existing provisions in relation to existing gTLDs. This raises additional and related considerations for GAC members to discuss with their competition authorities. These discussions are ongoing and ICANN will be informed in due course if there are concerns that competition authorities wish to discuss with ICANN.

It is hoped that at least an initial reaction will be available before or during the next GAC-Board interaction in Singapore.

**Rights Protection Mechanisms**

The rights protection mechanisms in the Applicant Guidebook constitute an important set of initiatives aimed in particular at mitigating the negative impact on the business community arising from the potential substantial and rapid escalation in the incidence of cybersquatting due to the scaling up of the number of gTLDs. The GAC appreciates the Board's commitment to achieving the shared overarching objective of examining a) how these mechanisms can be enhanced in order to maximize the level of rights protection afforded to businesses big and small; and b) ensuring the burden for business stakeholders when using these mechanisms is minimized.

As a result of the several constructive Board/GAC consultations, a number of the GAC's specific proposals which were formulated with the assistance of national policy experts and were drawn on national consultations with stakeholders, have been accepted. The GAC welcomes the substantial progress in this important area.

There remain, however, five significant GAC proposals in the GAC's advice where the Board and the GAC to date have been unable to reach agreement, namely:

- i. The IP claims and sunrise services should include exact matches plus key terms associated with the goods or services identified by the mark, and typographical variations identified by the rights holder.
- ii. The notification function of the Trademark Clearinghouse should continue beyond the currently proposed 60 day period after the initial launch of each gTLD.
- iii. There should be no requirement to provide evidence of use for eligibility to be included in the Clearinghouse which would conflict with many national IP legal frameworks.
- iv. The standard of proof required for the URS and the PDDRP should be reduced from "clear and convincing evidence" to the less burdensome "preponderance of evidence".
- v. The loser pays threshold should be substantially reduced to less than 26 domain names.

**How can the Board and the GAC move forward together on the remaining substantial operational proposals submitted by the GAC for improving the rights protection mechanisms?**

Throughout the discussions between the Board and the GAC, there was ready acceptance of the fact that the Clearinghouse is an innovative and untested initiative, the resourcing and commissioning of which has yet to be determined with any certainty. There is an element of experiment in its eventual operation which doubtless will create further questions and issues related to its scope and efficient operation.

In considering how to progress the GAC proposals (i), (ii) and (iii) above, the GAC now proposes that a comprehensive post-launch independent review of the Clearinghouse be conducted one year after the launch of the 75th new gTLD in the round. The GAC advises that this review should examine whether the aims, functionality and operation of the Clearinghouse would benefit from incorporating the current GAC proposals as well as any unforeseen questions and issues that may arise following the launch of the round. The GAC advises that the following specific questions should be included in the review's terms of reference.

1. With regard to the issue of non-exact matches (i), the GAC notes that the Board's principal argument against acceptance of the GAC's advice is that the automation of the TM Claims and sunrise services would not allow the inclusion of non-exact matches. The GAC therefore recommends that the request for proposal (RFP) that ICANN will issue to potential Clearinghouse providers includes a requirement that the candidate assess whether domain names that include a mark at the beginning or the end of an applied for second level domain could be included in the services. Secondly, the GAC advises the Board to direct the post-launch review to establish whether the automated system should be enhanced to include key terms associated with the goods or services identified by the mark, and typographical variations identified by the rights holder.
2. In the light of the experience gained from the initial period of the operation of the Clearinghouse, in relation to the GAC's advice on extending the operation of the Clearinghouse beyond 60 days after each gTLD launch (ii), the GAC advises that the review should include:

- a) a consultation with registry providers, registrants and rights holders on the benefits or otherwise of extending the period of the Clearinghouse notifications beyond 60 days;
- b) an analysis of the impact of the operation of the Clearinghouse notifications on the commercial watch services market;
- c) an assessment of the likely resource requirements for extending the operation of the Clearinghouse notifications to potential registrants for the life of each new registry.

The GAC maintains its advice to the Board that the requirement to provide evidence of use (iii) should be removed because it is inconsistent with trade mark law in many jurisdictions, burdensome for business, disproportionate and discriminatory. The GAC notes that the principal reason the Board disagrees with the GAC's advice is that this requirement would in its view deter gaming. In view of the Board's concern about this as an overriding risk that outweighs the concerns raised by the GAC if this requirement were to be imposed, the GAC asks the Board to provide a written document for the GAC's consideration by 8 June 2011, so that there is opportunity for GAC review before meeting in Singapore, which:

- a) provides a detailed, evidence-supported analysis of the gaming threat at the second level;
- b) explains why the Board believes that this requirement is the only practicable solution for addressing this threat and would successfully deter the practice of gaming;
- c) provides an analysis of the likely impact of this requirement on legitimate mark holders who would be rendered ineligible for inclusion in the Clearinghouse if this requirement is imposed;
- d) assesses the costs to business of having to furnish evidence of proof;
- e) explains the resources which ICANN will expect to be deployed by the Clearinghouse for the rigorous examination of evidence of use.

The GAC requests a discussion of this paper with the Board at the meeting in Singapore before finalising its advice to the Board on the proposal to require evidence of proof.

The GAC's advice to the Board that it reduce the burden of proof to the standard usual applicable to civil law (iv) is unchanged on the grounds that the GAC believes that this would constitute a significant reduction in the burden on business without compromising the effectiveness of the URS and the PDDRP.

The GAC maintains its advice that the threshold for the loser pays mechanism should be lowered (v), a position which the GAC notes is shared by the IP, Business and Not-for Profit Operation Concerns Constituencies, as well as the US Council for International Business, the International Trademark Association, the European Brands Association and a number of other leading business respondents to the recent public consultations.

Furthermore, the Board indicated in its most recent consultation with the GAC that the current threshold proposal of 26 derives from a very formative proposal and has not been rigorously assessed recently as to its suitability for purpose. The GAC hereby amends its position to advise a) that the threshold should be re-set at 15 domain names and b) that the effectiveness of this threshold be reviewed at the same time as the post-launch review of the Clearinghouse.

The GAC also has a number of outstanding specific text proposals for amending the Applicant Guidebook which are listed at Annex A for the Board's present consideration.

Following the clarification provided by the Board during the Board-GAC consultation on 20 May regarding URS Default cases, the GAC accepts the Board's response that "de novo" reviews should be retained in para. 6.4 of the Applicant Guidebook. The GAC welcomes the Board's proposal for reducing the period for filing a response to 6 months with a possible extension of 6 months, primarily in order to ensure that small businesses with limited resources are allowed sufficient to be alerted to the opportunity to submit an appeal.

(See Annex A: Rights Protection – GAC clarification requests and proposed text amendments. Page 13)

### **The Reserved Names List**

Following the GAC's exchange with the Board on 20 May regarding the requests from the International Olympic Committee (IOC) and the International Red Cross and Red Crescent Movement for the key words most directly associated with their respective Charters and unique humanitarian missions to be added to the Reserved Names list, the GAC emphasizes that it would not support the extension of the reserved list into a de facto "Globally Protected Marks List" (GPML). In fully supporting these two specific requests, the GAC recognizes that they are made by two global, non-profit, humanitarian organizations whose property is protected by special legislation in many countries, in the IOC's case over thirty nations representing over 4.5 billion people which is approximately sixty-five percent of the world's population. The GAC supports ICANN's continued application of very tightly drawn criteria for inclusion on the reserved names list and the GAC is unaware of any other international non-profit organization that enjoys the level of special legislative protection across the world afforded to the IOC and the Red Cross and Red Crescent movement that justifies inclusion on the Reserved Names List.

### **Consumer Protection and Law Enforcement proposals**

ICANN has accepted the intent behind the GAC's advice that the provision in the Registry Agreement requiring an Abuse Point of Contact should explicitly refer to government agencies that are conducting lawful investigations or official proceedings, while rejecting the GAC's proposed language. The ICANN Notes indicate that ICANN has amended the provision in the Registry Agreement in more general lines; however, the text in the Applicant Guidebook itself does not appear to have been amended.

The GAC's amended advice that ICANN conduct more stringent vetting of all new gTLD applicants has been largely accepted by ICANN, which has committed to expanding the scope of background screening and to publishing the names and titles of key officers, directors, partners and controlling shareholders of each applicant.

ICANN has accepted the GAC's advice that it enhance its Contract Compliance resources prior to the launch of the new gTLD program, and expects to issue an Explanatory Memorandum on the subject pending the results of internal analyses.

#### **GAC advice and comments:**

- The GAC appreciates the Board's acceptance of its proposal that the Registry Abuse Point of Contact must be responsive to requests from law enforcement and government consumer protection

agencies that are conducting lawful investigations and requests that ICANN confirm that the text has been amended accordingly.

- The GAC also appreciates the Board's agreement that the scope of background screening should be broadened, and commits to providing support from its respective law enforcement agencies to assist ICANN in selecting a background screening service provider.
- The GAC also notes that the categories of crimes that will be included in the screening process (as per 11.1 in the Scorecard) must be broadened to include consumer protection violations.
- The GAC welcomes ICANN's intention to enhance its Contract Compliance efforts and urges the Board to ensure that this effort coincides with the implementation of the new gTLD program.

### **Law Enforcement proposals**

ICANN has largely accepted all of the GAC's advice pertaining to law enforcement concerns regarding increased due diligence, and has noted that it will respond separately to the GAC's request for information on how the Board intends to implement the LEA Recommendations for further amendments to the Registrar Accreditation Agreement that were endorsed by the GAC in June 2010 (as an issue unrelated to new gTLDs). While ICANN has not accepted the GAC's advice that applicants offering the highest levels of security should be assigned higher weights in the evaluation process, ICANN has agreed to include specific questions in the applicant questionnaire that are intended to identify the security measures, including abuse mitigation, the applicant intends to implement.

### **GAC advice and comments:**

- The GAC appreciates the Board's responsiveness to the majority of the points included in the GAC's advice regarding law enforcement concerns.
- The GAC believes that the categories of law violations that will be considered in the background screening process must be broadened to include court or administrative orders for consumer protection law violations. If an applicant has been subject to a civil court or administrative order for defrauding consumers, it should not be permitted to operate a new gTLD. While the GAC understands that there is no agreed international standard related to deceptive commercial practices, the OECD Guidelines for Protecting Consumers from Fraudulent and Deceptive Commercial Practices Across Borders contains a definition of fraudulent and deceptive commercial practices that is based on global consensus that can be incorporated into the background screening process.

(Link to the OECD Guidelines for Protecting Consumers from Fraudulent and Deceptive Commercial Practices Across Borders:

[http://www.oecd.org/document/56/0,3746,en\\_2649\\_34267\\_2515000\\_1\\_1\\_1\\_1,00.html](http://www.oecd.org/document/56/0,3746,en_2649_34267_2515000_1_1_1_1,00.html) )

- The GAC also urges the Board to reconsider the deletion (in Section 1.2.1) of the phrase “include, but not limited to” with regard to a list of offenses that would automatically disqualify an applicant. The new text has the unintended consequence that applicants would be disqualified only on enumerated offenses, and removes the flexibility and discretion the previous text provided the Board to inquire into additional law violations other than those enumerated in the Applicant Guidebook.

### **Post Delegation Disputes**

ICANN has accepted the GAC’s main principle, that Governments will be able to withdraw government support for an application in case of a dispute with the registry. Support will in most cases be given with a set of conditions: ICANN has now written in the Applicant guidebook that they will comply with a legally binding order from a court in the jurisdiction of the government or public authority that has given support to an application. This obligation is also included in the draft registry agreement in article 7.13.

#### **GAC advice and comments:**

The GAC is therefore pleased that ICANN has reinstated this principle in the Applicant Guidebook.

According to the GACs previous input, the GAC also want ICANN to respect a legally binding administrative decision. The reason for this is that in some jurisdictions it is not possible for the Government or Public Authority to have their administrative decision confirmed by a court. Only the other party (i.e. the applicant) can take the decision of the Government or Public Authority to court.

If ICANN will not include the obligation to comply with a legally binding administrative decision in the Applicant Guidebook, you will have a situation where some Governments or Public Authorities will not have the possibility to give a letter of support or non-objection. In those cases, ICANN must be willing to comply with a legally binding administrative decision made by the Government or Public Authority which provided the initial letter of support or non-objection. This commitment from ICANN should be included in the final version of the Applicant Guidebook, or at least ICANN should signal that they are willing to accept this as an amendment in the registry agreement on a case-by-case basis.

### **Geographic names**

#### **GAC advice and comments:**

ICANN has partially accepted the GAC request for implementation of a free of charge objection mechanism, providing limited financial support for objections. The GAC cannot determine whether the Board’s commitment to fund at least one objection per individual national government will be sufficient, in view of the as-yet-unknown number of new gTLD strings that may be considered controversial, objectionable, or raising national sensitivities. The GAC therefore advises the Board that its

Communications Outreach program should specifically identify the options available to governments to raise objections to any proposed string.

Given ICANN's clarifications on "Early Warning" and "GAC Advice" that allow the GAC to require governmental support/non-objection for strings it considers to be geographical names, the GAC accepts ICANN's interpretation with regard to the definition of geographic names.

The GAC appreciates the language that has been added to the Applicant Guidebook augmenting the definition of geographic names such that: "A string shall be considered to be a country or territory name if: ... it is a name by which a country is commonly known, as demonstrated by evidence that the country is recognized by that name by an intergovernmental or treaty organization."

The GAC believes that the potential risk of applicants avoiding the government support requirement is resolved with the Early Warning Process and GAC Advice procedures.

The GAC appreciates the Board's observation that requiring applicants to describe the purpose of their TLD applications will provide useful information for evaluation and objections; and, importantly, for the GAC as it considers the public policy implications of the application and string. The GAC observes that GAC's advice allows for requests for such statements if public policy issues are raised.

The GAC appreciates the Board's clarifications that a) the level of government and which administrative agency is responsible for the provision of letters of support or non-objection is a matter for each national administration to determine; and b) ICANN intends to allow multiple applicants all endorsed by the same authority to go forward, when requested by the government.

### **Legal recourse for Applications**

ICANN has examined these legal questions carefully and, considering the results of these examinations, still adheres to this provision.

ICANN clarified in the Applicant Guidebook that if ICANN deviates from its agreed processes in coming to a decision, ICANN's internal accountability mechanisms will allow complaints to be heard.

### **GAC comments:**

The GAC appreciates and accepts the Board clarifications.

**Support for developing countries and needy applicants**

The GAC commends the JAS working group on the second milestone report, which contains very innovative proposals and the efforts to accommodate GAC's concerns and proposals.

**GAC advice and comments**

- The GAC urges the Board to coordinate and implement as a matter of urgency the decisions relating to the process and timeline issues on the support programme in order to provide equal opportunities to all applicants, particularly from developing countries.
- For support to developing countries, the GAC is asking for a fee waiver, which corresponds to 76 percent of the US\$ 185,000 application fee requirement. Further, there will be instances where additional costs will be required: for example, for auction, objections, and extended evaluation. In such events, the GAC proposes fee reduction and waivers in these processes/instances where additional costs are required. The GAC would further like to propose an additional waiver of the annual US\$ 25,000 fee during the first 3 years of operation.
- There is also a need for consideration of a sustainable process for implementing the waiver programme. The GAC welcomes the proposal for further discussions on this during the meeting in Singapore to help develop a number of the very innovative approaches proposed to enable fair access to all applicants who meet the conditions set by the JAS WG.
- On gaming, the GAC welcomes the JAS WG's recommendation to set up a parallel process to determine eligibility based on the guidelines they have provided. The GAC proposes that a review team be established consisting of ICANN stakeholders experienced and knowledgeable in gTLD processes, developing country needs and gaming patterns. Furthermore, consideration should be given to the imposition of penalties on entities found to be attempting to game processes put in place to support developing country applicants.

**Rights Protection – GAC clarification requests and proposed text amendments**Trademark Clearinghouse

## i) Para 6.1.1

The GAC seeks clarification that the date of 26.6.08 refers only to the date of the protective treaty/statute being in force, and does not refer to date of validation by the court as suggested in ICANN's revised notes (see para 6.1.1, (a)(ii))

The GAC seeks clarification of the differences in approach regarding the date of statutes/treaty. Whereas the date of 26.6.08 is included in requirements for sunrise (see para 7.2) but not for inclusion in the Clearinghouse (see para 3.2.3). The practical implications for this are unclear.

## ii) Para 6.1.4

The GAC advises that the word "promptly" be added as follows:  
"....the Clearinghouse will promptly notify the mark holder(s)...."

## iii) Paras 7.1 and 7.2

The GAC advises that the text be amended to read 'nationally or regionally' in place of 'nationally or multi-nationally.'

Uniform Rapid Suspension

## iv) Para 8.4 (2)

The GAC seeks clarification as to why this text has not been deleted. The substantive or practical difference between para. 8.4 (1) and para 8.4 (2) is unclear as the latter appears to fall within 8.4(1).

Post Delegation Dispute Resolution Procedure

## v) Para 6.1

The GAC advises that the word "affirmative" be deleted.

# gTLD Applicant Guidebook

(30 May 2011)

Potential applicants should be aware that this version of the Guidebook is for consideration and not yet approved. The proposed details of the New gTLD Program remain subject to further consultation and revision.

30 May 2011

## The Internet Corporation for Assigned Names and Numbers

30 May 2011

Dear Prospective Applicant,

Thank you for your interest in the New Generic Top-Level Domain Program. This landmark program has the potential to create more choice for Internet users, empower innovation, stimulate economic activity and generate new business opportunities around the world. The program seeks to introduce new gTLDs while providing new protections for rights holders and Internet users, creating a safer online environment.

Since ICANN's creation in 1998, the domain name space has only expanded to 22 generic top-level domains. Today we are preparing to launch a program that will mark a new phase of diversity in languages, participants, and business models on the Internet.

Throughout this process, I have been struck by the amount of time and effort our stakeholders have devoted to improving the New gTLD Program. Your insightful, thoughtful and provocative comments have shaped every aspect of this program, which in turn will shape the future of the Internet.

In keeping with our established timeline, the *Applicant Guidebook* has been updated in advance of the special Board of Directors meeting to be held on Monday, 20 June 2011. This draft is based on public comments received in the last four weeks from a wide range of stakeholders. It also reflects the productive and ongoing dialogue between the Governmental Advisory Committee (GAC) and the Board, which has resulted in refinements to trademark and consumer protections. In parallel, the GAC and Board have engaged in important discussions on a process for providing assistance to potential applicants from developing countries.

ICANN works toward the common good of providing a stable, secure and unified global Internet. In performing its core function of overseeing the Internet's unique identifier systems, it also promotes competition and consumer choice. New gTLDs are in line with those goals, and I thank you for your support.

Respectfully,

Rod Beckstrom  
President and CEO

# Preamble

---

## *New gTLD Program Background*

New gTLDs have been in the forefront of ICANN's agenda since its creation. The new gTLD program will open up the top level of the Internet's namespace to foster diversity, encourage competition, and enhance the utility of the DNS.

Currently the namespace consists of 22 gTLDs and over 250 ccTLDs operating on various models. Each of the gTLDs has a designated "registry operator" and, in most cases, a Registry Agreement between the operator (or sponsor) and ICANN. The registry operator is responsible for the technical operation of the TLD, including all of the names registered in that TLD. The gTLDs are served by over 900 registrars, who interact with registrants to perform domain name registration and other related services. The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market. When the program launches its first application round, ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

The program has its origins in carefully deliberated policy development work by the ICANN community. In October 2007, the Generic Names Supporting Organization (GNSO)—one of the groups that coordinate global Internet policy at ICANN—formally completed its policy development work on new gTLDs and approved a set of 19 policy recommendations. Representatives from a wide variety of stakeholder groups—governments, individuals, civil society, business and intellectual property constituencies, and the technology community—were engaged in discussions for more than 18 months on such questions as the demand, benefits and risks of new gTLDs, the selection criteria that should be applied, how gTLDs should be allocated, and the contractual conditions that should be required for new gTLD registries going forward. The culmination of this policy development process was a decision by the ICANN Board of Directors to adopt the community-developed policy in June 2008. A thorough brief to the policy process and outcomes can be found at <http://gnso.icann.org/issues/new-gtlds>.

ICANN's work is now focused on implementation: creating an application and evaluation process for new gTLDs that is aligned with the policy recommendations and provides a clear roadmap for applicants to reach delegation, including Board approval. This implementation work is reflected in the drafts of the applicant guidebook that have been released for public comment, and in the explanatory papers giving insight into rationale behind some of the conclusions reached on specific topics. Meaningful community input has led to revisions of the draft applicant guidebook. In parallel, ICANN is establishing the resources needed to successfully launch and operate the program.

For current information, timelines and activities related to the New gTLD Program, please go to <http://www.icann.org/en/topics/new-gtld-program.htm>.

# Applicant Guidebook

(30 May 2011)

Module 1

Potential applicants should be aware that this version of the Guidebook is for consideration and not yet approved. The proposed details of the New gTLD Program remain subject to further consultation and revision.

30 May 2011

---

# Module 1

---

## *Introduction to the gTLD Application Process*

This module gives applicants an overview of the process for applying for a new generic top-level domain, and includes instructions on how to complete and submit an application, the supporting documentation an applicant must submit with an application, the fees required, and when and how to submit them.

This module also describes the conditions associated with particular types of applications, and the stages of the application life cycle.

A glossary of relevant terms is included at the end of this Applicant Guidebook.

Prospective applicants are encouraged to read and become familiar with the contents of this entire module, as well as the others, before starting the application process to make sure they understand what is required of them and what they can expect at each stage of the application evaluation process.

For the complete set of the supporting documentation and more about the origins, history and details of the policy development background to the New gTLD Program, please see <http://gnso.icann.org/issues/new-gtlds/>.

This Applicant Guidebook is the implementation of Board-approved consensus policy concerning the introduction of new gTLDs, and has been revised extensively via public comment and consultation over a two-year period.

### *1.1 Application Life Cycle and Timelines*

---

This section provides a description of the stages that an application passes through once it is submitted. Some stages will occur for all applications submitted; others will only occur in specific circumstances. Applicants should be aware of the stages and steps involved in processing applications received.

### *1.1.1 Application Submission Dates*

---

The user registration and application submission periods open at [time] UTC [date].<sup>1</sup>

The user registration period closes at ([time] UTC [date]).

The application submission period closes at [time] UTC [date].

To receive consideration, all applications must be submitted electronically through the online application system by the close of the application submission period.

An application will not be considered, in the absence of exceptional circumstances, if:

- It is received after the close of the application submission period.
- The application form is incomplete (either the questions have not been fully answered or required supporting documents are missing). Applicants will not ordinarily be permitted to supplement their applications after submission.
- The evaluation fee has not been paid by the deadline. Refer to Section 1.5 for fee information.

Applicants should be aware that, due to required processing steps (i.e., online user registration, application submission, fee submission, and fee reconciliation) and security measures built into the online application system, it might take substantial time to perform all of the necessary steps to submit a complete application. Accordingly, applicants are encouraged to submit their completed applications and fees as soon as practicable after the Application Submission Period opens. Waiting until the end of this period to begin the process may not provide sufficient time to submit a complete application before the period closes. Accordingly, new user registrations will not be accepted after the date indicated above.

ICANN has gone to significant lengths to ensure that the online application system will be available for the duration of the application submission period. In the event that the system is not available, ICANN will provide alternative instructions for submitting applications on its website.

---

<sup>1</sup> Information for all time and date references will be inserted following approval of this Applicant Guidebook by the ICANN Board of Directors.

### 1.1.2 Application Processing Stages

This subsection provides an overview of the stages involved in processing an application submitted to ICANN. Figure 1-1 provides a simplified depiction of the process. The shortest and most straightforward path is marked with bold lines, while certain stages that may or may not be applicable in any given case are also shown. A brief description of each stage follows.

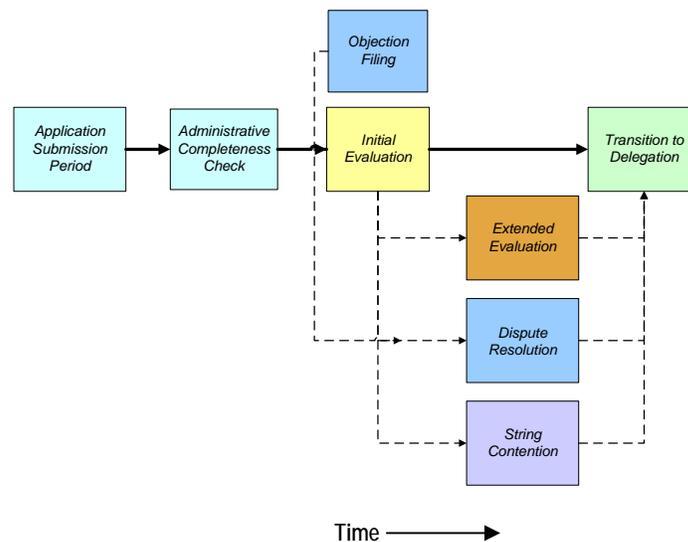

Figure 1-1 – Once submitted to ICANN, applications will pass through multiple stages of processing.

#### 1.1.2.1 Application Submission Period

At the time the application submission period opens, those wishing to submit new gTLD applications can become registered users of the TLD Application System (TAS).

After completing the user registration, applicants will supply a deposit for each requested application slot (see section 1.4), after which they will receive access to the full application form. To complete the application, users will answer a series of questions to provide general information, demonstrate financial capability, and demonstrate technical and operational capability. The supporting documents listed in subsection 1.2.2 of this module must also be submitted through the online application system as instructed in the relevant questions.

Applicants must also submit their evaluation fees during this period. Refer to Section 1.5 of this module for additional information about fees and payments.

Each application slot is for one gTLD. An applicant may submit as many applications as desired; however, there is no means to apply for more than one gTLD in a single application.

The application submission period is expected to last for 60 days. Following the close of the application submission period, ICANN will provide applicants with periodic status updates on the progress of their applications.

#### *1.1.2.2 Administrative Completeness Check*

Immediately following the close of the application submission period, ICANN will begin checking all applications for completeness. This check ensures that:

- All mandatory questions are answered;
- Required supporting documents are provided in the proper format(s); and
- The evaluation fees have been received.

ICANN will post the public portions of all applications considered complete and ready for evaluation within two weeks of the close of the application submission period. Certain questions relate to internal processes or information: applicant responses to these questions will not be posted. Each question is labeled in the application form as to whether the information will be posted. See posting designations for the full set of questions in the attachment to Module 2.

The administrative completeness check is expected to be completed for all applications in a period of approximately 8 weeks, subject to extension depending on volume. In the event that all applications cannot be processed within this period, ICANN will post updated process information and an estimated timeline.

#### *1.1.2.3 Comment Period*

Public comment mechanisms are part of ICANN's policy development, implementation, and operational processes. As a private-public partnership, ICANN is dedicated to: preserving the operational security and stability of the Internet, promoting competition, achieving broad

representation of global Internet communities, and developing policy appropriate to its mission through bottom-up, consensus-based processes. This necessarily involves the participation of many stakeholder groups in a public discussion.

ICANN will open a comment period at the time applications are publicly posted on ICANN's website (refer to subsection 1.1.2.2). This period will allow time for the community to review and submit comments on posted application materials (referred to as "application comments.") The comment forum will require commenters to associate comments with specific applications and the relevant panel. Comments received within a 60-day period from the posting of the application materials will be available to the evaluation panels performing the Initial Evaluation reviews. This period is subject to extension, should the volume of applications or other circumstances require. **To be considered by evaluators, comments must be received in the designated comment forum within the stated time period.**

Evaluators will perform due diligence on the application comments (i.e., determine their relevance to the evaluation, verify the accuracy of claims, analyze meaningfulness of references cited) and take the information provided in these comments into consideration. In cases where consideration of the comments has impacted the scoring of the application, the evaluators will seek clarification from the applicant. Statements concerning consideration of application comments that have impacted the evaluation decision will be reflected in the evaluators' summary reports, which will be published at the end of Extended Evaluation.

Comments received after the 60-day period will be stored and available (along with comments received during the comment period) for other considerations, such as the dispute resolution process, as described below.

In the new gTLD application process, all applicants should be aware that comment fora are a mechanism for the public to bring relevant information and issues to the attention of those charged with handling new gTLD applications. Anyone may submit a comment in a public comment forum.

***Comments and the Formal Objection Process:*** A distinction should be made between application comments, which may be relevant to ICANN's task of determining whether applications meet the established criteria, and formal

objections that concern matters outside those evaluation criteria. The formal objection process was created to allow a full and fair consideration of objections based on certain limited grounds outside ICANN's evaluation of applications on their merits (see subsection 3.2).

Public comments will not be considered as formal objections. Comments on matters associated with formal objections will not be considered by panels during Initial Evaluation. These comments will be available to and may be subsequently considered by an expert panel during a dispute resolution proceeding (see subsection 1.1.2.9). However, in general, application comments have a very limited role in the dispute resolution process.

***String Contention:*** Comments designated for the Community Priority Panel, as relevant to the criteria in Module 4, may be taken into account during a Community Priority Evaluation.

***Government Notifications:*** Governments may provide a notification using the application comment forum to communicate concerns relating to national laws. However, a government's notification of concern will not in itself be deemed to be a formal objection. A notification by a government does not constitute grounds for rejection of a gTLD application. A government may elect to use this comment mechanism to provide such a notification, in addition to or as an alternative to the GAC Early Warning procedure described in subsection 1.1.2.4 below.

Governments may also communicate directly to applicants using the contact information posted in the application, e.g., to send a notification that an applied-for gTLD string might be contrary to a national law, and to try to address any concerns with the applicant.

***General Comments:*** A general public comment forum will remain open through all stages of the evaluation process, to provide a means for the public to bring forward any other relevant information or issues.

#### ***1.1.2.4 GAC Early Warning***

Concurrent with the 60-day comment period, ICANN's Governmental Advisory Committee (GAC) may issue a GAC Early Warning notice concerning an application. This provides the applicant with an indication that the application is seen as potentially sensitive or problematic by one or more governments.

The GAC Early Warning is a notice only. It is not a formal objection, nor does it directly lead to a process that can result in rejection of the application. However, a GAC Early Warning should be taken seriously as it raises the likelihood that the application could be the subject of GAC Advice on New gTLDs (see subsection 1.1.2.7) or of a formal objection (see subsection 1.1.2.6) at a later stage in the process.

A GAC Early Warning typically results from a notice to the GAC by one or more governments that an application might be problematic, e.g., potentially violate national law or raise sensitivities. A GAC Early Warning may be issued for any reason.<sup>2</sup> The GAC may then send that notice to the Board – constituting the GAC Early Warning. ICANN will notify applicants of GAC Early Warnings as soon as practicable after receipt from the GAC

GAC consensus is not required for a GAC Early Warning to be issued. Minimally, the GAC Early Warning must be provided in writing to the ICANN Board, and be clearly labeled as a GAC Early Warning. This may take the form of an email from the GAC Chair to the ICANN Board. For GAC Early Warnings to be most effective, they should include the reason for the warning and identify the objecting countries.

Upon receipt of a GAC Early Warning, the applicant may elect to withdraw the application for a partial refund (see subsection 1.5.1), or may elect to continue with the application (this may include meeting with representatives from the relevant government(s) to try to address the concern). To qualify for the refund described in subsection 1.5.1, the applicant must provide notification to ICANN of its election to withdraw the application within 21 calendar days of the GAC Early Warning delivery.

To reduce the possibility of a GAC Early Warning, all applicants are encouraged to identify potential sensitivities in advance of application submission, and to work with the relevant parties (including governments) beforehand to mitigate concerns related to the application.

---

<sup>2</sup> While definitive guidance has not been issued, the GAC has indicated that strings that could raise sensitivities include those that "purport to represent or that embody a particular group of people or interests based on historical, cultural, or social components of identity, such as nationality, race or ethnicity, religion, belief, culture or particular social origin or group, political opinion, membership of a national minority, disability, age, and/or a language or linguistic group (non-exhaustive)" and "those strings that refer to particular sectors, such as those subject to national regulation (such as .bank, .pharmacy) or those that describe or are targeted to a population or industry that is vulnerable to online fraud or abuse."

### 1.1.2.5 Initial Evaluation

Initial Evaluation will begin immediately after the administrative completeness check concludes. All complete applications will be reviewed during Initial Evaluation. At the beginning of this period, background screening on the applying entity and the individuals named in the application will be conducted. Applications must pass this step in conjunction with the Initial Evaluation reviews.

There are two main elements of the Initial Evaluation:

1. String reviews (concerning the applied-for gTLD string). String reviews include a determination that the applied-for gTLD string is not likely to cause security or stability problems in the DNS, including problems caused by similarity to existing TLDs or reserved names.
2. Applicant reviews (concerning the entity applying for the gTLD and its proposed registry services). Applicant reviews include a determination of whether the applicant has the requisite technical, operational, and financial capabilities to operate a registry.

By the conclusion of the Initial Evaluation period, ICANN will post notice of all Initial Evaluation results. Depending on the volume of applications received, such notices may be posted in batches over the course of the Initial Evaluation period.

The Initial Evaluation is expected to be completed for all applications in a period of approximately 5 months. If the volume of applications received significantly exceeds 500, applications will be processed in batches and the 5-month timeline will not be met. The first batch will be limited to 500 applications and subsequent batches will be limited to 400 to account for capacity limitations due to managing extended evaluation, string contention, and other processes associated with each previous batch.

A process external to the application submission process will be employed to establish evaluation priority. This process will be based on an online ticketing system or other objective criteria.

If batching is required, the String Similarity review will be completed on all applications prior to the establishment of evaluation priority batches. For applications identified as

part of a contention set, the entire contention set will be kept together in the same batch.

If batches are established, ICANN will post updated process information and an estimated timeline.

Note that the processing constraints will limit delegation rates to a steady state even in the event of an extremely high volume of applications. The annual delegation rate will not exceed 1,000 per year in any case, no matter how many applications are received.<sup>3</sup>

#### *1.1.2.6 Objection Filing*

Formal objections to applications can be filed on any of four enumerated grounds, by parties with standing to object. The objection filing period will open after ICANN posts the list of complete applications as described in subsection 1.1.2.2, and will last for approximately 7 months.

Objectors must file such formal objections directly with dispute resolution service providers (DRSPs), not with ICANN. The objection filing period will close following the end of the Initial Evaluation period (refer to subsection 1.1.2.5), with a two-week window of time between the posting of the Initial Evaluation results and the close of the objection filing period. Objections that have been filed during the objection filing period will be addressed in the dispute resolution stage, which is outlined in subsection 1.1.2.9 and discussed in detail in Module 3.

All applicants should be aware that third parties have the opportunity to file objections to any application during the objection filing period. Applicants whose applications are the subject of a formal objection will have an opportunity to file a response according to the dispute resolution service provider's rules and procedures. An applicant wishing to file a formal objection to another application that has been submitted would do so within the objection filing period, following the objection filing procedures in Module 3.

Applicants are encouraged to identify possible regional, cultural, property interests, or other sensitivities regarding TLD strings and their uses before applying and, where possible, consult with interested parties to mitigate any concerns in advance.

#### *1.1.2.7 Receipt of GAC Advice on New gTLDs*

---

<sup>3</sup> See "Delegation Rate Scenarios for New gTLDs" at <http://icann.org/en/topics/new-gtlds/delegation-rate-scenarios-new-gtlds-06oct10-en.pdf> for additional discussion.

The GAC may provide public policy advice directly to the ICANN Board on any application. The procedure for GAC Advice on New gTLDs described in Module 3 indicates that, to be considered by the Board during the evaluation process, the GAC Advice on New gTLDs must be submitted by the close of the objection filing period. A GAC Early Warning is not a prerequisite to use of the GAC Advice process.

GAC Advice on New gTLDs that includes a consensus statement<sup>4</sup> from the GAC that an application should not proceed as submitted (or other terms created by the GAC to express that intent), and that includes a thorough explanation of the public policy basis for such advice, will create a strong presumption for the Board that the application should not be approved. If the Board does not act in accordance with this type of advice, it must provide rationale for doing so.

See Module 3 for additional detail on the procedures concerning GAC Advice on New gTLDs.

#### ***1.1.2.8 Extended Evaluation***

*Extended Evaluation is available only to certain applicants that do not pass Initial Evaluation.*

Applicants failing certain elements of the Initial Evaluation can request an Extended Evaluation. If the applicant does not pass Initial Evaluation and does not expressly request an Extended Evaluation, the application will proceed no further. The Extended Evaluation period allows for an additional exchange of information between the applicant and evaluators to clarify information contained in the application. The reviews performed in Extended Evaluation do not introduce additional evaluation criteria.

An application may be required to enter an Extended Evaluation if one or more proposed registry services raise technical issues that might adversely affect the security or stability of the DNS. The Extended Evaluation period provides a time frame for these issues to be investigated. Applicants will be informed if such a review is required by the end of the Initial Evaluation period.

Evaluators and any applicable experts consulted will communicate the conclusions resulting from the additional review by the end of the Extended Evaluation period.

---

<sup>4</sup> The GAC will clarify the basis on which consensus advice is developed.

At the conclusion of the Extended Evaluation period, ICANN will post summary reports, by panel, from the Initial and Extended Evaluation periods.

If an application passes the Extended Evaluation, it can then proceed to the next relevant stage. If the application does not pass the Extended Evaluation, it will proceed no further.

The Extended Evaluation is expected to be completed for all applications in a period of approximately 5 months, though this timeframe could be increased based on volume. In this event, ICANN will post updated process information and an estimated timeline.

### **1.1.2.9 Dispute Resolution**

*Dispute resolution applies only to applicants whose applications are the subject of a formal objection.*

Where formal objections are filed and filing fees paid during the objection filing period, independent dispute resolution service providers (DRSPs) will initiate and conclude proceedings based on the objections received. The formal objection procedure exists to provide a path for those who wish to object to an application that has been submitted to ICANN. Dispute resolution service providers serve as the fora to adjudicate the proceedings based on the subject matter and the needed expertise. Consolidation of objections filed will occur where appropriate, at the discretion of the DRSP.

As a result of a dispute resolution proceeding, either the applicant will prevail (in which case the application can proceed to the next relevant stage), or the objector will prevail (in which case either the application will proceed no further or the application will be bound to a contention resolution procedure). In the event of multiple objections, an applicant must prevail in all dispute resolution proceedings concerning the application to proceed to the next relevant stage. Applicants will be notified by the DRSP(s) of the results of dispute resolution proceedings.

Dispute resolution proceedings, where applicable, are expected to be completed for all applications within approximately a 5-month time frame. In the event that volume is such that this timeframe cannot be accommodated, ICANN will work with the dispute resolution service providers to create processing procedures and post updated timeline information.

### 1.1.2.10 String Contention

*String contention applies only when there is more than one qualified application for the same or similar gTLD strings.*

String contention refers to the scenario in which there is more than one qualified application for the identical gTLD string or for similar gTLD strings. In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.

Applicants are encouraged to resolve string contention cases among themselves prior to the string contention resolution stage. In the absence of resolution by the contending applicants, string contention cases are resolved either through a community priority evaluation (if a community-based applicant elects it) or through an auction.

In the event of contention between applied-for gTLD strings that represent geographic names, the parties may be required to follow a different process to resolve the contention. See subsection 2.2.1.4 of Module 2 for more information.

Groups of applied-for strings that are either identical or similar are called contention sets. All applicants should be aware that if an application is identified as being part of a contention set, string contention resolution procedures will not begin until all applications in the contention set have completed all aspects of evaluation, including dispute resolution, if applicable.

To illustrate, as shown in Figure 1-2, Applicants A, B, and C all apply for .EXAMPLE and are identified as a contention set. Applicants A and C pass Initial Evaluation, but Applicant B does not. Applicant B requests Extended Evaluation. A third party files an objection to Applicant C’s application, and Applicant C enters the dispute resolution process. Applicant A must wait to see whether Applicants B and C successfully complete the Extended Evaluation and dispute resolution phases, respectively, before it can proceed to the string contention resolution stage. In this example, Applicant B passes the Extended Evaluation, but Applicant C does not prevail in the dispute resolution proceeding. String contention resolution then proceeds between Applicants A and B.

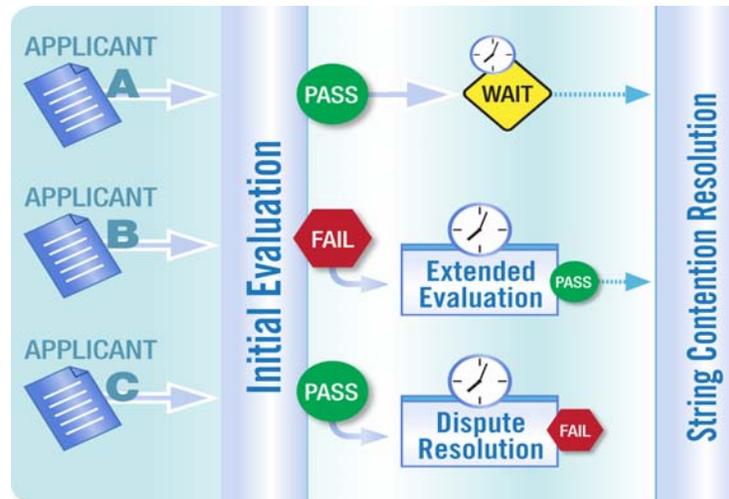

Figure 1-2 – All applications in a contention set must complete all previous evaluation and dispute resolution stages before string contention resolution can begin.

Applicants prevailing in a string contention resolution procedure will proceed toward delegation of the applied-for gTLDs.

String contention resolution for a contention set is estimated to take from 2.5 to 6 months to complete. The time required will vary per case because some contention cases may be resolved in either a community priority evaluation or an auction, while others may require both processes.

#### 1.1.2.11 Transition to Delegation

Applicants successfully completing all the relevant stages outlined in this subsection 1.1.2 are required to carry out a series of concluding steps before delegation of the applied-for gTLD into the root zone. These steps include execution of a registry agreement with ICANN and completion of a pre-delegation technical test to validate information provided in the application.

Following execution of a registry agreement, the prospective registry operator must complete technical set-up and show satisfactory performance on a set of technical tests before delegation of the gTLD into the root zone may be initiated. If the pre-delegation testing requirements are not satisfied so that the gTLD can be delegated into the root zone within the time frame specified in the registry agreement, ICANN may in its sole and absolute discretion elect to terminate the registry agreement.

Once all of these steps have been successfully completed, the applicant is eligible for delegation of its applied-for gTLD into the DNS root zone.

It is expected that the transition to delegation steps can be completed in approximately 2 months, though this could take more time depending on the applicant’s level of preparedness for the pre-delegation testing and the volume of applications undergoing these steps concurrently.

**1.1.3 Lifecycle Timelines**

---

Based on the estimates for each stage described in this section, the lifecycle for a straightforward application could be approximately 9 months, as follows:

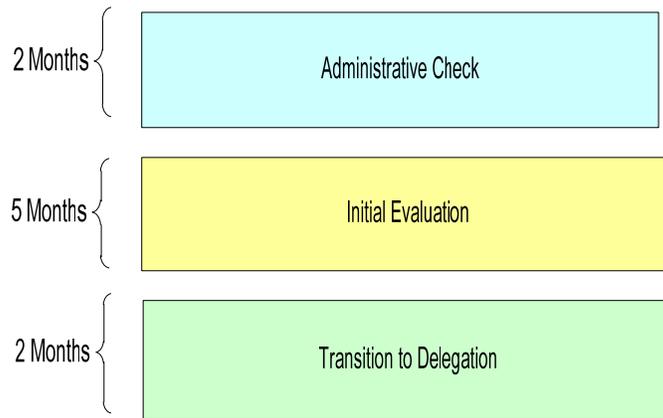

Figure 1-3 – A straightforward application could have an approximate 9-month lifecycle.

The lifecycle for a highly complex application could be much longer, such as 20 months in the example below:

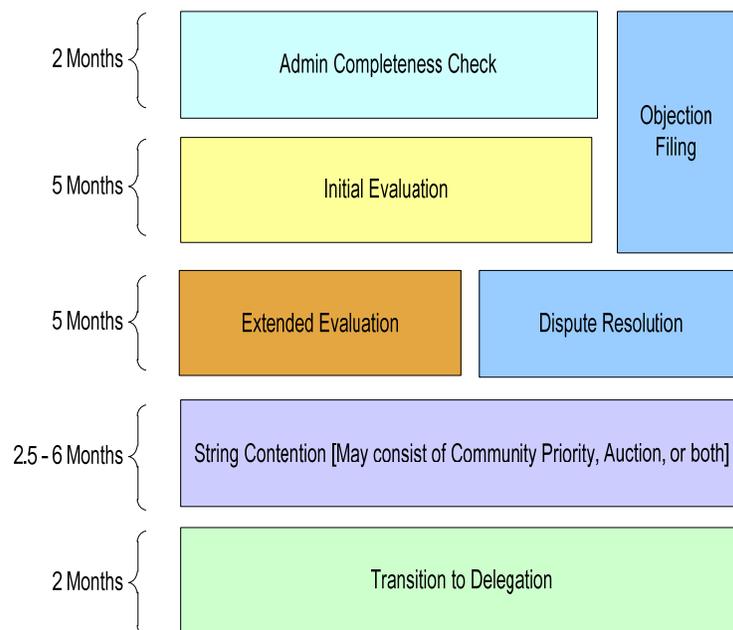

Figure 1-4 – A complex application could have an approximate 20-month lifecycle.

### 1.1.4 Posting Periods

The results of application reviews will be made available to the public at various stages in the process, as shown below.

Period	Posting Content
During Administrative Completeness Check	Public portions of all applications (posted within 2 weeks of the start of the Administrative Completeness Check).
End of Administrative Completeness Check	Results of Administrative Completeness Check.
GAC Early Warning Period	GAC Early Warnings received.
During Initial Evaluation	Status updates for applications withdrawn or ineligible for further review. Contention sets resulting from String Similarity review.
End of Initial Evaluation	Application status updates with all Initial Evaluation results.
GAC Advice on New gTLDs	GAC Advice received.
End of Extended Evaluation	Application status updates with all Extended Evaluation results. Evaluation summary reports from the Initial and Extended Evaluation periods.
During Objection	Information on filed objections and status

Period	Posting Content
Filing/Dispute Resolution	updates available via Dispute Resolution Service Provider websites. Notice of all objections posted by ICANN after close of objection filing period.
During Contention Resolution (Community Priority Evaluation)	Results of each Community Priority Evaluation posted as completed.
During Contention Resolution (Auction)	Results from each auction posted as completed.
Transition to Delegation	Registry Agreements posted when executed. Pre-delegation testing status updated.

### 1.1.5 Sample Application Scenarios

The following scenarios briefly show a variety of ways in which an application may proceed through the evaluation process. The table that follows exemplifies various processes and outcomes. This is not intended to be an exhaustive list of possibilities. There are other possible combinations of paths an application could follow.

Estimated time frames for each scenario are also included, based on current knowledge. Actual time frames may vary depending on several factors, including the total number of applications received by ICANN during the application submission period. It should be emphasized that most applications are expected to pass through the process in the shortest period of time, i.e., they will not go through extended evaluation, dispute resolution, or string contention resolution processes. Although most of the scenarios below are for processes extending beyond nine months, it is expected that most applications will complete the process within the nine-month timeframe.

Scenario Number	Initial Evaluation	Extended Evaluation	Objection(s) Filed	String Contention	Approved for Delegation Steps	Estimated Elapsed Time
1	Pass	N/A	None	No	Yes	9 months
2	Fail	Pass	None	No	Yes	14 months
3	Pass	N/A	None	Yes	Yes	11.5 – 15 months
4	Pass	N/A	Applicant prevails	No	Yes	14 months
5	Pass	N/A	Objector prevails	N/A	No	12 months
6	Fail	Quit	N/A	N/A	No	7 months

Scenario Number	Initial Evaluation	Extended Evaluation	Objection(s) Filed	String Contention	Approved for Delegation Steps	Estimated Elapsed Time
7	Fail	Fail	N/A	N/A	No	12 months
8	Fail	Pass	Applicant prevails	Yes	Yes	16.5 – 20 months
9	Fail	Pass	Applicant prevails	Yes	No	14.5 – 18 months

**Scenario 1 – Pass Initial Evaluation, No Objection, No Contention** – In the most straightforward case, the application passes Initial Evaluation and there is no need for an Extended Evaluation. No objections are filed during the objection period, so there is no dispute to resolve. As there is no contention for the applied-for gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD. Most applications are expected to complete the process within this timeframe.

**Scenario 2 – Extended Evaluation, No Objection, No Contention** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. As with Scenario 1, no objections are filed during the objection period, so there is no dispute to resolve. As there is no contention for the gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

**Scenario 3 – Pass Initial Evaluation, No Objection, Contention** – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. No objections are filed during the objection period, so there is no dispute to resolve. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the application prevails in the contention resolution, so the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

**Scenario 4 – Pass Initial Evaluation, Win Objection, No Contention** – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with

standing (refer to Module 3, Objection Procedures). The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. The applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

**Scenario 5 – Pass Initial Evaluation, Lose Objection** – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection period, multiple objections are filed by one or more objectors with standing for one or more of the four enumerated objection grounds. Each objection is heard by a dispute resolution service provider panel. In this case, the panels find in favor of the applicant for most of the objections, but one finds in favor of the objector. As one of the objections has been upheld, the application does not proceed.

**Scenario 6 – Fail Initial Evaluation, Applicant Withdraws** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant decides to withdraw the application rather than continuing with Extended Evaluation. The application does not proceed.

**Scenario 7 – Fail Initial Evaluation, Fail Extended Evaluation** -- In this case, the application fails one or more aspects of the Initial Evaluation. The applicant requests Extended Evaluation for the appropriate elements. However, the application fails Extended Evaluation also. The application does not proceed.

**Scenario 8 – Extended Evaluation, Win Objection, Pass Contention** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing. The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the applicant prevails over other applications in the contention resolution procedure, the applicant can enter into a registry agreement, and the application can proceed toward delegation of the applied-for gTLD.

**Scenario 9 – Extended Evaluation, Objection, Fail Contention** – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate

elements. Here, the application passes the Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing. The objection is heard by a dispute resolution service provider that finds in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, another applicant prevails in the contention resolution procedure, and the application does not proceed.

***Transition to Delegation*** – After an application has successfully completed Initial Evaluation, and other stages as applicable, the applicant is required to complete a set of steps leading to delegation of the gTLD, including execution of a registry agreement with ICANN, and completion of pre-delegation testing. Refer to Module 5 for a description of the steps required in this stage.

### ***1.1.6 Subsequent Application Rounds***

---

ICANN's goal is to launch subsequent gTLD application rounds as quickly as possible. The exact timing will be based on experiences gained and changes required after this round is completed. The goal is for the next application round to begin within one year of the close of the application submission period for the initial round.

ICANN has committed to reviewing the effects of the New gTLD Program on the operations of the root zone system after the first application round, and will defer the delegations in a second application round until it is determined that the delegations resulting from the first round did not jeopardize root zone system security or stability.

## ***1.2 Information for All Applicants***

---

### ***1.2.1 Eligibility***

---

Established corporations, organizations, or institutions in good standing may apply for a new gTLD. Applications from individuals or sole proprietorships will not be considered. Applications from or on behalf of yet-to-be-formed legal entities, or applications presupposing the future formation of a legal entity (for example, a pending Joint Venture) will not be considered.

ICANN has designed the New gTLD Program with multiple stakeholder protection mechanisms. Background screening, features of the gTLD Registry Agreement, data and financial escrow mechanisms are all intended to provide registrant and user protections.

The application form requires applicants to provide information on the legal establishment of the applying entity, as well as the identification of directors, officers, partners, and major shareholders of that entity. The names and positions of individuals included in the application will be published as part of the application; other information collected about the individuals will not be published.

Background screening at both the entity level and the individual level will be conducted for all applications to confirm eligibility. This inquiry is conducted on the basis of the information provided in questions 1-11 of the application form. ICANN may take into account information received from any source if it is relevant to the criteria in this section.

ICANN will perform background screening in only two areas: (1) General business diligence and criminal history; and (2) History of cybersquatting behavior. The criteria used for criminal history are aligned with the "crimes of trust" standard sometimes used in the banking and finance industry.

**In the absence of exceptional circumstances, applications from any entity with or including any individual with convictions or decisions of the types listed in (a) – (m) below will be automatically disqualified from the program.**

- a. within the past ten years, has been convicted of any crime related to financial or corporate governance activities, or has been judged by a court to have committed fraud or breach of fiduciary duty, or has been the subject of a judicial determination that ICANN deems as the substantive equivalent of any of these;
- b. within the past ten years, has been disciplined by any government or industry regulatory body for conduct involving dishonesty or misuse of the funds of others;

- c. within the past ten years has been convicted of any willful tax-related fraud or willful evasion of tax liabilities;
- d. within the past ten years has been convicted of perjury, forswearing, failing to cooperate with a law enforcement investigation, or making false statements to a law enforcement agency or representative;
- e. has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications or the Internet to facilitate the commission of crimes;
- f. has ever been convicted of any crime involving the use of a weapon, force, or the threat of force;
- g. has ever been convicted of any violent or sexual offense victimizing children, the elderly, or individuals with disabilities;
- h. has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988<sup>5</sup>;
- i. has ever been convicted or successfully extradited for any offense described in the United Nations Convention against Transnational Organized Crime (all Protocols)<sup>6,7</sup>;
- j. has been convicted of aiding, abetting, facilitating, enabling, conspiring to commit, or failing to report any of the listed crimes within the respective timeframes specified above;

---

<sup>5</sup> <http://www.unodc.org/unodc/en/treaties/illicit-traffic.html>

<sup>6</sup> <http://www.unodc.org/unodc/en/treaties/CTOC/index.html>

<sup>7</sup> It is recognized that not all countries have signed on to the UN conventions referenced above. These conventions are being used solely for identification of a list of crimes for which background screening will be performed. It is not necessarily required that an applicant would have been convicted pursuant to the UN convention but merely convicted of a crime listed under these conventions, to trigger these criteria.

- k. has entered a guilty plea as part of a plea agreement or has a court case in any jurisdiction with a disposition of Adjudicated Guilty or Adjudication Withheld (or regional equivalents) for any of the listed crimes within the respective timeframes listed above;
- l. is the subject of a disqualification imposed by ICANN and in effect at the time the application is considered;
- m. has been involved in a pattern of adverse, final decisions indicating that the applicant or individual named in the application was engaged in cybersquatting as defined in the Uniform Domain Name Dispute Resolution Policy (UDRP), the Anti-Cybersquatting Consumer Protection Act (ACPA), or other equivalent legislation, or was engaged in reverse domain name hijacking under the UDRP or bad faith or reckless disregard under the ACPA or other equivalent legislation. Three or more such decisions with one occurring in the last four years will generally be considered to constitute a pattern.
- n. fails to provide ICANN with the identifying information necessary to confirm identity at the time of application or to resolve questions of identity during the background screening process;
- o. fails to provide a good faith effort to disclose all relevant information relating to items (a) – (m).

Background screening is in place to protect the public interest in the allocation of critical Internet resources, and ICANN reserves the right to deny an otherwise qualified application based on any information identified during the background screening process. For example, a final and legally binding decision obtained by a national law enforcement or consumer protection authority finding that the applicant was engaged in fraudulent and deceptive commercial practices as defined in the Organization for Economic Co-operation and Development (OECD) Guidelines for Protecting Consumers from Fraudulent and

Deceptive Commercial Practices Across Borders<sup>8</sup> may cause an application to be rejected. ICANN may also contact the applicant with additional questions based on information obtained in the background screening process.

All applicants are required to provide complete and detailed explanations regarding any of the above events as part of the application. Background screening information will not be made publicly available by ICANN.

**Registrar Cross-Ownership** -- ICANN-accredited registrars are eligible to apply for a gTLD. However, all gTLD registries are required to abide by a Code of Conduct addressing, *inter alia*, non-discriminatory access for all authorized registrars. ICANN reserves the right to refer any application to the appropriate competition authority relative to any cross-ownership issues.

**Legal Compliance** -- ICANN must comply with all U.S. laws, rules, and regulations. One such set of regulations is the economic and trade sanctions program administered by the Office of Foreign Assets Control (OFAC) of the U.S. Department of the Treasury. These sanctions have been imposed on certain countries, as well as individuals and entities that appear on OFAC's List of Specially Designated Nationals and Blocked Persons (the SDN List). ICANN is prohibited from providing most goods or services to residents of sanctioned countries or their governmental entities or to SDNs without an applicable U.S. government authorization or exemption. ICANN generally will not seek a license to provide goods or services to an individual or entity on the SDN List. In the past, when ICANN has been requested to provide services to individuals or entities that are not SDNs, but are residents of sanctioned countries, ICANN has sought and been granted licenses as required. In any given case, however, OFAC could decide not to issue a requested license.

### 1.2.2 Required Documents

---

All applicants should be prepared to submit the following documents, which are required to accompany each application:

1. **Proof of legal establishment** – Documentation of the applicant's establishment as a specific type of entity in accordance with the applicable laws of its jurisdiction.

---

<sup>8</sup> [http://www.oecd.org/document/56/0,3746,en\\_2649\\_34267\\_2515000\\_1\\_1\\_1\\_1,00.html](http://www.oecd.org/document/56/0,3746,en_2649_34267_2515000_1_1_1_1,00.html)

2. **Financial statements.** Applicants must provide audited or independently certified financial statements for the most recently completed fiscal year for the applicant. In some cases, unaudited financial statements may be provided.

Supporting documentation should be submitted in the original language. English translations are not required.

All documents must be valid at the time of submission. Refer to the Evaluation Criteria, attached to Module 2, for additional details on the requirements for these documents.

Some types of supporting documentation are required only in certain cases:

1. **Community endorsement** – If an applicant has designated its application as community-based (see section 1.2.3), it will be asked to submit a written endorsement of its application by one or more established institutions representing the community it has named. An applicant may submit written endorsements from multiple institutions. If applicable, this will be submitted in the section of the application concerning the community-based designation.

At least one such endorsement is required for a complete application. The form and content of the endorsement are at the discretion of the party providing the endorsement; however, the letter must identify the applied-for gTLD string and the applying entity, include an express statement of support for the application, and supply the contact information of the entity providing the endorsement.

Written endorsements from individuals need not be submitted with the application, but may be submitted in the application comment forum.

2. **Government support or non-objection** – If an applicant has applied for a gTLD string that is a geographic name (as defined in this Guidebook), the applicant is required to submit documentation of support for or non-objection to its application from the relevant governments or public authorities. Refer to subsection 2.2.1.4 for more information on the requirements for geographic names. If applicable, this will be submitted in the geographic names section of the application.
3. **Documentation of third-party funding commitments** – If an applicant lists funding from third parties in its

application, it must provide evidence of commitment by the party committing the funds. If applicable, this will be submitted in the financial section of the application.

### 1.2.3 *Community-Based Designation*

---

All applicants are required to designate whether their application is **community-based**.

#### 1.2.3.1 *Definitions*

For purposes of this Applicant Guidebook, a **community-based gTLD** is a gTLD that is operated for the benefit of a clearly delineated community. Designation or non-designation of an application as community-based is entirely at the discretion of the applicant. Any applicant may designate its application as community-based; however, each applicant making this designation is asked to substantiate its status as representative of the community it names in the application by submission of written endorsements in support of the application. Additional information may be requested in the event of a community priority evaluation (refer to section 4.2 of Module 4). An applicant for a community-based gTLD is expected to:

1. Demonstrate an ongoing relationship with a clearly delineated community.
2. Have applied for a gTLD string strongly and specifically related to the community named in the application.
3. Have proposed dedicated registration and use policies for registrants in its proposed gTLD, including appropriate security verification procedures, commensurate with the community-based purpose it has named.
4. Have its application endorsed in writing by one or more established institutions representing the community it has named.

For purposes of differentiation, an application that has not been designated as community-based will be referred to hereinafter in this document as a **standard application**. A standard gTLD can be used for any purpose consistent with the requirements of the application and evaluation criteria, and with the registry agreement. A standard applicant may or may not have a formal relationship with an exclusive registrant or user population. It may or may not employ eligibility or use restrictions. Standard simply

means here that the applicant has not designated the application as community-based.

### 1.2.3.2 *Implications of Application Designation*

Applicants should understand how their designation as community-based or standard will affect application processing at particular stages, and, if the application is successful, execution of the registry agreement and subsequent obligations as a gTLD registry operator, as described in the following paragraphs.

**Objection / Dispute Resolution** – All applicants should understand that a formal objection may be filed against any application on community grounds, even if the applicant has not designated itself as community-based or declared the gTLD to be aimed at a particular community. Refer to Module 3, Objection Procedures.

**String Contention** – Resolution of string contention may include one or more components, depending on the composition of the contention set and the elections made by community-based applicants.

- A **settlement between the parties** can occur at any time after contention is identified. The parties will be encouraged to meet with an objective to settle the contention. Applicants in contention always have the opportunity to resolve the contention voluntarily, resulting in the withdrawal of one or more applications, before reaching the contention resolution stage.
- A **community priority evaluation** will take place only if a community-based applicant in a contention set elects this option. All community-based applicants in a contention set will be offered this option in the event that there is contention remaining after the applications have successfully completed all previous evaluation stages.
- An **auction** will result for cases of contention not resolved by community priority evaluation or agreement between the parties. Auction occurs as a contention resolution means of last resort. If a community priority evaluation occurs but does not produce a clear winner, an auction will take place to resolve the contention.

Refer to Module 4, String Contention Procedures, for detailed discussions of contention resolution procedures.

***Contract Execution and Post-Delegation*** – A community-based applicant will be subject to certain post-delegation contractual obligations to operate the gTLD in a manner consistent with the restrictions associated with its community-based designation. Material changes to the contract, including changes to the community-based nature of the gTLD and any associated provisions, may only be made with ICANN's approval. The determination of whether to approve changes requested by the applicant will be at ICANN's discretion. Proposed criteria for approving such changes are the subject of policy discussions.

Community-based applications are intended to be a narrow category, for applications where there are unambiguous associations among the applicant, the community served, and the applied-for gTLD string. Evaluation of an applicant's designation as community-based will occur only in the event of a contention situation that results in a community priority evaluation. However, any applicant designating its application as community-based will, if the application is approved, be bound by the registry agreement to implement the community-based restrictions it has specified in the application. This is true even if there are no contending applicants.

### ***1.2.3.3 Changes to Application Designation***

An applicant may not change its designation as standard or community-based once it has submitted a gTLD application for processing.

### ***1.2.4 Notice concerning Technical Acceptance Issues with New gTLDs***

---

All applicants should be aware that approval of an application and entry into a registry agreement with ICANN do not guarantee that a new gTLD will immediately function throughout the Internet. Past experience indicates that network operators may not immediately fully support new top-level domains, even when these domains have been delegated in the DNS root zone, since third-party software modification may be required and may not happen immediately.

Similarly, software applications sometimes attempt to validate domain names and may not recognize new or unknown top-level domains. ICANN has no authority or ability to require that software accept new top-level domains, although it does prominently publicize which top-level domains are valid and has developed a basic tool to

assist application providers in the use of current root-zone data.

ICANN encourages applicants to familiarize themselves with these issues and account for them in their startup and launch plans. Successful applicants may find themselves expending considerable efforts working with providers to achieve acceptance of their new top-level domain.

Applicants should review <http://www.icann.org/en/topics/TLD-acceptance/> for background. IDN applicants should also review the material concerning experiences with IDN test strings in the root zone (see <http://idn.icann.org/>).

### *1.2.5 Notice concerning TLD Delegations*

---

ICANN is only able to create TLDs as delegations in the DNS root zone, expressed using NS records with any corresponding DS records and glue records. There is no policy enabling ICANN to place TLDs as other DNS record types (such as A, MX, or DNAME records) in the root zone.

### *1.2.6 Terms and Conditions*

---

All applicants must agree to a standard set of Terms and Conditions for the application process. The Terms and Conditions are available in Module 6 of this guidebook.

### *1.2.7 Notice of Changes to Information*

---

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.

Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

### *1.2.8 Voluntary Designation for High Security Zones*

---

An ICANN stakeholder group has considered development of a possible special designation for "High Security Zone Top Level Domains" ("HSTLDs"). The group's Final Report can be found at <http://www.icann.org/en/topics/new-gtlds/hstld-final-report-11mar11-en.pdf>.

The Final Report may be used to inform further work. ICANN will support independent efforts toward developing voluntary high-security TLD designations, which may be available to gTLD applicants wishing to pursue such designations.

### ***1.2.9 Security and Stability***

---

*Root Zone Stability:* There has been significant study, analysis, and consultation in preparation for launch of the New gTLD Program, indicating that the addition of gTLDs to the root zone will not negatively impact the security or stability of the DNS.

It is estimated that 200-300 TLDs will be delegated annually, and determined that in no case will more than 1000 new gTLDs be added to the root zone in a year. The delegation rate analysis, consultations with the technical community, and anticipated normal operational upgrade cycles all lead to the conclusion that the new gTLD delegations will have no significant impact on the stability of the root system. Modeling and reporting will continue during, and after, the first application round so that root-scaling discussions can continue and the delegation rates can be managed as the program goes forward.

All applicants should be aware that delegation of any new gTLDs is conditional on the continued absence of significant negative impact on the security or stability of the DNS and the root zone system (including the process for delegating TLDs in the root zone). In the event that there is a reported impact in this regard and processing of applications is delayed, the applicants will be notified in an orderly and timely manner.

### ***1.2.10 Resources for Applicant Assistance***

---

A variety of support resources are available to gTLD applicants. For example, ICANN may establish a means for providing financial assistance to eligible applicants, as well as providing a webpage as an informational resource for applicants seeking assistance, and organizations offering support. More information will be available on ICANN's

website at <http://www.icann.org/en/topics/new-gtld-program.htm>.<sup>9</sup>

### *1.2.11 Updates to the Applicant Guidebook*

---

As approved by the ICANN Board of Directors, this Guidebook forms the basis of the New gTLD Program. ICANN reserves the right to make reasonable updates and changes to the Applicant Guidebook at any time, including as the possible result of new technical standards, reference documents, or policies that might be adopted during the course of the application process. Any such updates or revisions will be posted on ICANN's website.

## *1.3 Information for Internationalized Domain Name Applicants*

---

Some applied-for gTLD strings are expected to be Internationalized Domain Names (IDNs). IDNs are domain names including characters used in the local representation of languages not written with the basic Latin alphabet (a - z), European-Arabic digits (0 - 9), and the hyphen (-). As described below, IDNs require the insertion of A-labels into the DNS root zone.

### *1.3.1 IDN-Specific Requirements*

---

An applicant for an IDN string must provide information indicating compliance with the IDNA protocol and other technical requirements. The IDNA protocol and its documentation can be found at <http://icann.org/en/topics/idn/rfc.htm>.

Applicants must provide applied-for gTLD strings in the form of both a **U-label** (the IDN TLD in local characters) and an **A-label**.

An A-label is the ASCII form of an IDN label. Every IDN A-label begins with the IDNA ACE prefix, "xn--", followed by a string that is a valid output of the Punycode algorithm, making a maximum of 63 total ASCII characters in length. The prefix and string together must conform to all requirements for a label that can be stored in the DNS including conformance to the LDH (host name) rule described in RFC 1034, RFC 1123, and elsewhere.

---

<sup>9</sup> The Joint SO/AC New gTLD Applicant Support Working Group is currently developing recommendations for support resources that may be available to gTLD applicants. Information on these resources will be published on the ICANN website once identified.

A U-label is the Unicode form of an IDN label, which a user expects to see displayed in applications.

For example, using the current IDN test string in Cyrillic script, the U-label is <испытание> and the A-label is <xn--80akhbyknj4f>. An A-label must be capable of being produced by conversion from a U-label and a U-label must be capable of being produced by conversion from an A-label.

Applicants for IDN gTLDs will also be required to provide the following at the time of the application:

1. Meaning or restatement of string in English. The applicant will provide a short description of what the string would mean or represent in English.
2. Language of label (ISO 639-1). The applicant will specify the language of the applied-for TLD string, both according to the ISO codes for the representation of names of languages and in English.
3. Script of label (ISO 15924). The applicant will specify the script of the applied-for gTLD string, both according to the ISO codes for the representation of names of scripts, and in English.
4. Unicode code points. The applicant will list all the code points contained in the U-label according to its Unicode form.
5. Applicants must further demonstrate that they have made reasonable efforts to ensure that the encoded IDN string does not cause any rendering or operational problems. For example, problems have been identified in strings with characters of mixed right-to-left and left-to-right directionality when numerals are adjacent to the path separator (i.e., the dot).<sup>10</sup>

If an applicant is applying for a string with known issues, it should document steps that will be taken to mitigate these issues in applications. While it is not possible to ensure that all rendering problems are avoided, it is important that as many as possible are identified early and that the potential registry operator is aware of these issues. Applicants can become familiar with these issues by understanding the IDNA protocol (see <http://www.icann.org/en/topics/idn/rfcs.htm>), and by active participation in the IDN wiki (see <http://idn.icann.org/>) where some rendering problems are demonstrated.

---

<sup>10</sup> See examples at <http://stupid.domain.name/node/683>

6. **[Optional]** - Representation of label in phonetic alphabet. The applicant may choose to provide its applied-for gTLD string notated according to the International Phonetic Alphabet (<http://www.langsci.ucl.ac.uk/ipa/>). Note that this information will not be evaluated or scored. The information, if provided, will be used as a guide to ICANN in responding to inquiries or speaking of the application in public presentations.

### 1.3.2 IDN Tables

---

An IDN table provides the list of characters eligible for registration in domain names according to the registry's policy. It identifies any multiple characters that are considered equivalent for domain name registration purposes ("variant characters"). Variant characters occur where two or more characters can be used interchangeably.

Examples of IDN tables can be found in the Internet Assigned Numbers Authority (IANA) IDN Repository at <http://www.iana.org/procedures/idn-repository.html>.

In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string (the "top level tables"). IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second or lower levels.

Each applicant is responsible for developing its IDN Tables, including specification of any variant characters. Tables must comply with ICANN's IDN Guidelines<sup>11</sup> and any updates thereto, including:

- Complying with IDN technical standards.
- Employing an inclusion-based approach (i.e., code points not explicitly permitted by the registry are prohibited).
- Defining variant characters.
- Excluding code points not permissible under the guidelines, e.g., line-drawing symbols, pictographic dingbats, structural punctuation marks.
- Developing tables and registration policies in collaboration with relevant stakeholders to address common issues.

---

<sup>11</sup> See <http://www.icann.org/en/topics/idn/idn-guidelines-26apr07.pdf>

- Depositing IDN tables with the IANA Repository for IDN Practices (once the TLD is delegated).

An applicant's IDN tables should help guard against user confusion in the deployment of IDN gTLDs. Applicants are strongly urged to consider specific linguistic and writing system issues that may cause problems when characters are used in domain names, as part of their work of defining variant characters.

To avoid user confusion due to differing practices across TLD registries, it is recommended that applicants cooperate with TLD operators that offer domain name registration with the same or visually similar characters.

As an example, languages or scripts are often shared across geographic boundaries. In some cases, this can cause confusion among the users of the corresponding language or script communities. Visual confusion can also exist in some instances between different scripts (for example, Greek, Cyrillic and Latin).

Applicants will be asked to describe the process used in developing the IDN tables submitted. ICANN may compare an applicant's IDN table with IDN tables for the same languages or scripts that already exist in the IANA repository or have been otherwise submitted to ICANN. If there are inconsistencies that have not been explained in the application, ICANN may ask the applicant to detail the rationale for differences. For applicants that wish to conduct and review such comparisons prior to submitting a table to ICANN, a table comparison tool will be available.

ICANN will accept the applicant's IDN tables based on the factors above.

Once the applied-for string has been delegated as a TLD in the root zone, the applicant is required to submit IDN tables for lodging in the IANA Repository of IDN Practices. For additional information, see existing tables at <http://iana.org/domains/idn-tables/>, and submission guidelines at <http://iana.org/procedures/idn-repository.html>.

### ***1.3.3 IDN Variant TLDs***

---

A variant TLD string results from the substitution of one or more characters in the applied-for gTLD string with variant characters based on the applicant's top level tables.

Each application contains one applied-for gTLD string. The applicant may also declare any variant strings for the TLD

in its application. However, no variant gTLD strings will be delegated through the New gTLD Program until variant management solutions are developed and implemented.<sup>12</sup> Declaring variant strings is informative only and will not imply any right or claim to the declared variant strings.

When a variant delegation process is established, applicants may be required to submit additional information such as implementation details for the variant TLD management mechanism, and may need to participate in a subsequent evaluation process, which could contain additional fees and review steps.

The following scenarios are possible during the gTLD evaluation process:

- a. Applicant declares variant strings to the applied-for gTLD string in its application. If the application is successful, the applied-for gTLD string will be delegated to the applicant. The declared variant strings are noted for future reference. These declared variant strings will not be delegated to the applicant along with the applied-for gTLD string, nor will the applicant have any right or claim to the declared variant strings.

Variant strings listed in successful gTLD applications will be tagged to the specific application and added to a "Declared Variants List" that will be available on ICANN's website. A list of pending (i.e., declared) variant strings from the IDN ccTLD Fast Track is available at <http://icann.org/en/topics/idn/fast-track/string-evaluation-completion-en.htm>.

ICANN may perform independent analysis on the declared variant strings, and will not necessarily include all strings listed by the applicant on the Declared Variants List.

- b. Multiple applicants apply for strings that are identified by ICANN as variants of one another. These applications will be placed in a contention set and will follow the contention resolution procedures in Module 4.

---

<sup>12</sup> The ICANN Board directed that work be pursued on variant management in its resolution on 25 Sep 2010, <http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2.5>.

- c. Applicant submits an application for a gTLD string and does not indicate variants to the applied-for gTLD string. ICANN will not identify variant strings unless scenario (b) above occurs.

Each variant string declared in the application must also conform to the string requirements in section 2.2.1.3.2.

Variant strings declared in the application will be reviewed for consistency with the top-level tables submitted in the application. Should any declared variant strings not be based on use of variant characters according to the submitted top-level tables, the applicant will be notified and the declared string will no longer be considered part of the application.

Declaration of variant strings in an application does not provide the applicant any right or reservation to a particular string. Variant strings on the Declared Variants List may be subject to subsequent additional review per a process and criteria to be defined.

It should be noted that while variants for second and lower-level registrations are defined freely by the local communities without any ICANN validation, there may be specific rules and validation criteria specified for variant strings to be allowed at the top level. It is expected that the variant information provided by applicants in the first application round will contribute to a better understanding of the issues and assist in determining appropriate review steps and fee levels going forward.

## *1.4 Submitting an Application*

---

Applicants may complete the application form and submit supporting documents using ICANN's TLD Application System (TAS). To access the system, each applicant must first register as a TAS user.

As TAS users, applicants will be able to provide responses in open text boxes and submit required supporting documents as attachments. Restrictions on the size of attachments as well as the file formats are included in the instructions on the TAS site.

ICANN will not accept application forms or supporting materials submitted through other means than TAS (that is, hard copy, fax, email), unless such submission is in

accordance with specific instructions from ICANN to applicants.

### ***1.4.1 Accessing the TLD Application System***

The TAS site will be accessible from the New gTLD webpage (<http://www.icann.org/en/topics/new-gtld-program.htm>), and will be highlighted in communications regarding the opening of the application submission period. Users of TAS will be expected to agree to a standard set of terms of use including user rights, obligations, and restrictions in relation to the use of the system.

#### ***1.4.1.1 User Registration***

TAS user registration (creating a TAS user profile) requires submission of preliminary information, which will be used to validate the identity of the parties involved in the application. An overview of the information collected in the user registration process is below:

No.	Questions
1	Full legal name of Applicant
2	Principal business address
3	Phone number of Applicant
4	Fax number of Applicant
5	Website or URL, if applicable
6	Primary Contact: Name, Title, Address, Phone, Fax, Email
7	Secondary Contact: Name, Title, Address, Phone, Fax, Email
8	Proof of legal establishment
9	Trading, subsidiary, or joint venture information
10	Business ID, Tax ID, VAT registration number, or equivalent of Applicant
11	Applicant background: previous convictions, cybersquatting activities
12(a)	Deposit payment confirmation

A subset of identifying information will be collected from the entity performing the user registration, in addition to the applicant information listed above. The registered user could be, for example, an agent, representative, or employee who would be completing the application on behalf of the applicant.

The registration process will require the user to request the desired number of application slots. For example, a user intending to submit five gTLD applications would request five application slots, and the system would assign the user a unique ID number for each of the five applications.

Users will also be required to submit a deposit of USD 5,000 per application slot. This deposit amount will be credited against the evaluation fee for each application. The deposit requirement is in place to help reduce the risk of frivolous access to the online application system.

After completing the registration, TAS users will receive access enabling them to enter the rest of the application information into the system. Application slots will be populated with the registration information provided by the applicant, which may not ordinarily be changed once slots have been assigned.

No new user registrations will be accepted after [date to be inserted in final version of Applicant Guidebook].

ICANN will take commercially reasonable steps to protect all applicant data submitted from unauthorized access, but cannot warrant against the malicious acts of third parties who may, through system corruption or other means, gain unauthorized access to such data.

#### *1.4.1.2 Application Form*

Having obtained the requested application slots, the applicant will complete the remaining application questions. An overview of the areas and questions contained in the form is shown here:

No.	Application and String Information
12(b)	Payment confirmation for remaining evaluation fee amount
13	Applied-for gTLD string
14	IDN string information, if applicable

15	IDN tables, if applicable
16	Mitigation of IDN operational or rendering problems, if applicable
17	Representation of string in International Phonetic Alphabet (Optional)
18	Mission/purpose of the TLD
19	Is the application for a community-based TLD?
20	If community based, describe elements of community and proposed policies
21	Is the application for a geographic name? If geographic, documents of support required
22	Measures for protection of geographic names at second level
23	Registry Services: name and full description of all registry services to be provided
	<b>Technical and Operational Questions (External)</b>
24	Shared registration system (SRS) performance
25	EPP
26	Whois
27	Registration life cycle
28	Abuse prevention & mitigation
29	Rights protection mechanisms
30(a)	Security
	<b>Technical and Operational Questions (Internal)</b>
30(b)	Security
31	Technical overview of proposed registry
32	Architecture
33	Database capabilities
34	Geographic diversity

35	DNS service compliance
36	IPv6 reachability
37	Data backup policies and procedures
38	Escrow
39	Registry continuity
40	Registry transition
41	Failover testing
42	Monitoring and fault escalation processes
43	DNSSEC
44	IDNs (Optional)
	<b>Financial Questions</b>
45	Financial statements
46	Projections template: costs and funding
47	Costs: setup and operating
48	Funding and revenue
49	Contingency planning: barriers, funds, volumes
50	Continuity: financial instrument

### **1.4.2 Customer Service during the Application Process**

---

Assistance will be available to applicants throughout the application process via the Applicant Service Center (ASC). The ASC will be staffed with customer service agents to answer questions relating to the New gTLD Program, the application process, and TAS.

### **1.4.3 Backup Application Process**

---

If the online application system is not available, ICANN will provide alternative instructions for submitting applications.

## 1.5 Fees and Payments

---

This section describes the fees to be paid by the applicant. Payment instructions are also included here.

### 1.5.1 gTLD Evaluation Fee

---

The gTLD evaluation fee is required from all applicants. This fee is in the amount of USD 185,000. The evaluation fee is payable in the form of a 5,000 deposit submitted at the time the user requests an application slot within TAS, and a payment of the remaining 180,000 submitted with the full application. ICANN will not begin its evaluation of an application unless it has received the full gTLD evaluation fee by [time] UTC [date].

The gTLD evaluation fee is set to recover costs associated with the new gTLD program. The fee is set to ensure that the program is fully funded and revenue neutral and is not subsidized by existing contributions from ICANN funding sources, including generic TLD registries and registrars, ccTLD contributions and RIR contributions.

The gTLD evaluation fee covers all required reviews in Initial Evaluation and, in most cases, any required reviews in Extended Evaluation. If an extended Registry Services review takes place, an additional fee will be incurred for this review (see section 1.5.2). There is no additional fee to the applicant for Extended Evaluation for geographic names, technical and operational, or financial reviews. The evaluation fee also covers community priority evaluation fees in cases where the applicant achieves a passing score.

**Refunds** -- In certain cases, refunds of a portion of the evaluation fee may be available for applications that are withdrawn before the evaluation process is complete. An applicant may request a refund at any time until it has executed a registry agreement with ICANN. The amount of the refund will depend on the point in the process at which the withdrawal is requested, as follows:

Refund Available to Applicant	Percentage of Evaluation Fee	Amount of Refund
Within 21 calendar days of a GAC Early Warning	80%	USD 148,000
After posting of applications until posting of Initial Evaluation results	70%	USD 130,000
After posting Initial	35%	USD 65,000

Refund Available to Applicant	Percentage of Evaluation Fee	Amount of Refund
Evaluation results		
After the applicant has completed Dispute Resolution, Extended Evaluation, or String Contention Resolution(s)	20%	USD 37,000
After the applicant has entered into a registry agreement with ICANN		None

Thus, any applicant that has not been successful is eligible for at least a 20% refund of the evaluation fee if it withdraws its application.

An applicant that wishes to withdraw an application must initiate the process through TAS and submit the required form to request a refund, including agreement to the terms and conditions for withdrawal. Refunds will only be issued to the organization that submitted the original payment. All refunds are paid by wire transfer. Any bank transfer or transaction fees incurred by ICANN will be deducted from the amount paid.

***Note on 2000 proof-of-concept round applicants --***

Participants in ICANN's proof-of-concept application process in 2000 may be eligible for a credit toward the evaluation fee. The credit is in the amount of USD 86,000 and is subject to:

- submission of documentary proof by the applicant that it is the same entity, a successor in interest to the same entity, or an affiliate of the same entity that applied previously;
- a confirmation that the applicant was not awarded any TLD string pursuant to the 2000 proof-of-concept application round and that the applicant has no legal claims arising from the 2000 proof-of-concept process; and
- submission of an application, which may be modified from the application originally submitted in 2000, for the same TLD string

that such entity applied for in the 2000 proof-of-concept application round.

Each participant in the 2000 proof-of-concept application process is eligible for at most one credit. A maximum of one credit may be claimed for any new gTLD application submitted according to the process in this guidebook. Eligibility for this credit is determined by ICANN.

### ***1.5.2 Fees Required in Some Cases***

---

Applicants may be required to pay additional fees in certain cases where specialized process steps are applicable. Those possible additional fees<sup>13</sup> include:

- ***Registry Services Review Fee*** – If applicable, this fee is payable for additional costs incurred in referring an application to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review. Applicants will be notified if such a fee is due. The fee for a three-member RSTEP review team is anticipated to be USD 50,000. In some cases, five-member panels might be required, or there might be increased scrutiny at a greater cost. The amount of the fee will cover the cost of the RSTEP review. In the event that reviews of proposed registry services can be consolidated across multiple applications or applicants, ICANN will apportion the fees in an equitable manner. In every case, the applicant will be advised of the cost before initiation of the review. Refer to subsection 2.2.3 of Module 2 on Registry Services review.
- ***Dispute Resolution Filing Fee*** – This amount must accompany any filing of a formal objection and any response that an applicant files to an objection. This fee is payable directly to the applicable dispute resolution service provider in accordance with the provider's payment instructions. ICANN estimates that filing fees could range from approximately USD 1,000 to USD 5,000 (or more) per party per proceeding. Refer to the appropriate provider for the relevant amount. Refer to Module 3 for dispute resolution procedures.
- ***Advance Payment of Costs*** – In the event of a formal objection, this amount is payable directly to the applicable dispute resolution service provider in

---

<sup>13</sup> The estimated fee amounts provided in this section 1.5.2 will be updated upon engagement of panel service providers and establishment of fees.

accordance with that provider's procedures and schedule of costs. Ordinarily, both parties in the dispute resolution proceeding will be required to submit an advance payment of costs in an estimated amount to cover the entire cost of the proceeding. This may be either an hourly fee based on the estimated number of hours the panelists will spend on the case (including review of submissions, facilitation of a hearing, if allowed, and preparation of a decision), or a fixed amount. In cases where disputes are consolidated and there are more than two parties involved, the advance payment will occur according to the dispute resolution service provider's rules.

The prevailing party in a dispute resolution proceeding will have its advance payment refunded, while the non-prevailing party will not receive a refund and thus will bear the cost of the proceeding. In cases where disputes are consolidated and there are more than two parties involved, the refund of fees will occur according to the dispute resolution service provider's rules.

ICANN estimates that adjudication fees for a proceeding involving a fixed amount could range from USD 2,000 to USD 8,000 (or more) per proceeding. ICANN further estimates that an hourly rate based proceeding with a one-member panel could range from USD 32,000 to USD 56,000 (or more) and with a three-member panel it could range from USD 70,000 to USD 122,000 (or more). These estimates may be lower if the panel does not call for written submissions beyond the objection and response, and does not allow a hearing. Please refer to the appropriate provider for the relevant amounts or fee structures.

- **Community Priority Evaluation Fee** – In the event that the applicant participates in a community priority evaluation, this fee is payable as a deposit in an amount to cover the cost of the panel's review of that application (currently estimated at USD 10,000). The deposit is payable to the provider appointed to handle community priority evaluations. Applicants will be notified if such a fee is due. Refer to Section 4.2 of Module 4 for circumstances in which a community priority evaluation may take place. An applicant who

scores at or above the threshold for the community priority evaluation will have its deposit refunded.

ICANN will notify the applicants of due dates for payment in respect of additional fees (if applicable). This list does not include fees (annual registry fees) that will be payable to ICANN following execution of a registry agreement.

### *1.5.3 Payment Methods*

---

Payments to ICANN should be submitted by **wire transfer**. Instructions for making a payment by wire transfer will be available in TAS.<sup>14</sup>

Payments to Dispute Resolution Service Providers should be submitted in accordance with the provider's instructions.

### *1.5.4 Requesting a Remittance Form*

---

The TAS interface allows applicants to request issuance of a remittance form for any of the fees payable to ICANN. This service is for the convenience of applicants that require an invoice to process payments.

## *1.6 Questions about this Applicant Guidebook*

---

For assistance and questions an applicant may have in the process of completing the application form, applicants should use the customer support resources available via the ASC. Applicants who are unsure of the information being sought in a question or the parameters for acceptable documentation are encouraged to communicate these questions through the appropriate support channels before the application is submitted. This helps avoid the need for exchanges with evaluators to clarify information, which extends the timeframe associated with processing the application.

Currently, questions may be submitted via <newgtld@icann.org>. To provide all applicants equitable access to information, ICANN will make all questions and answers publicly available.

All requests to ICANN for information about the process or issues surrounding preparation of an application must be submitted to the ASC. ICANN will not grant requests from applicants for personal or telephone consultations

---

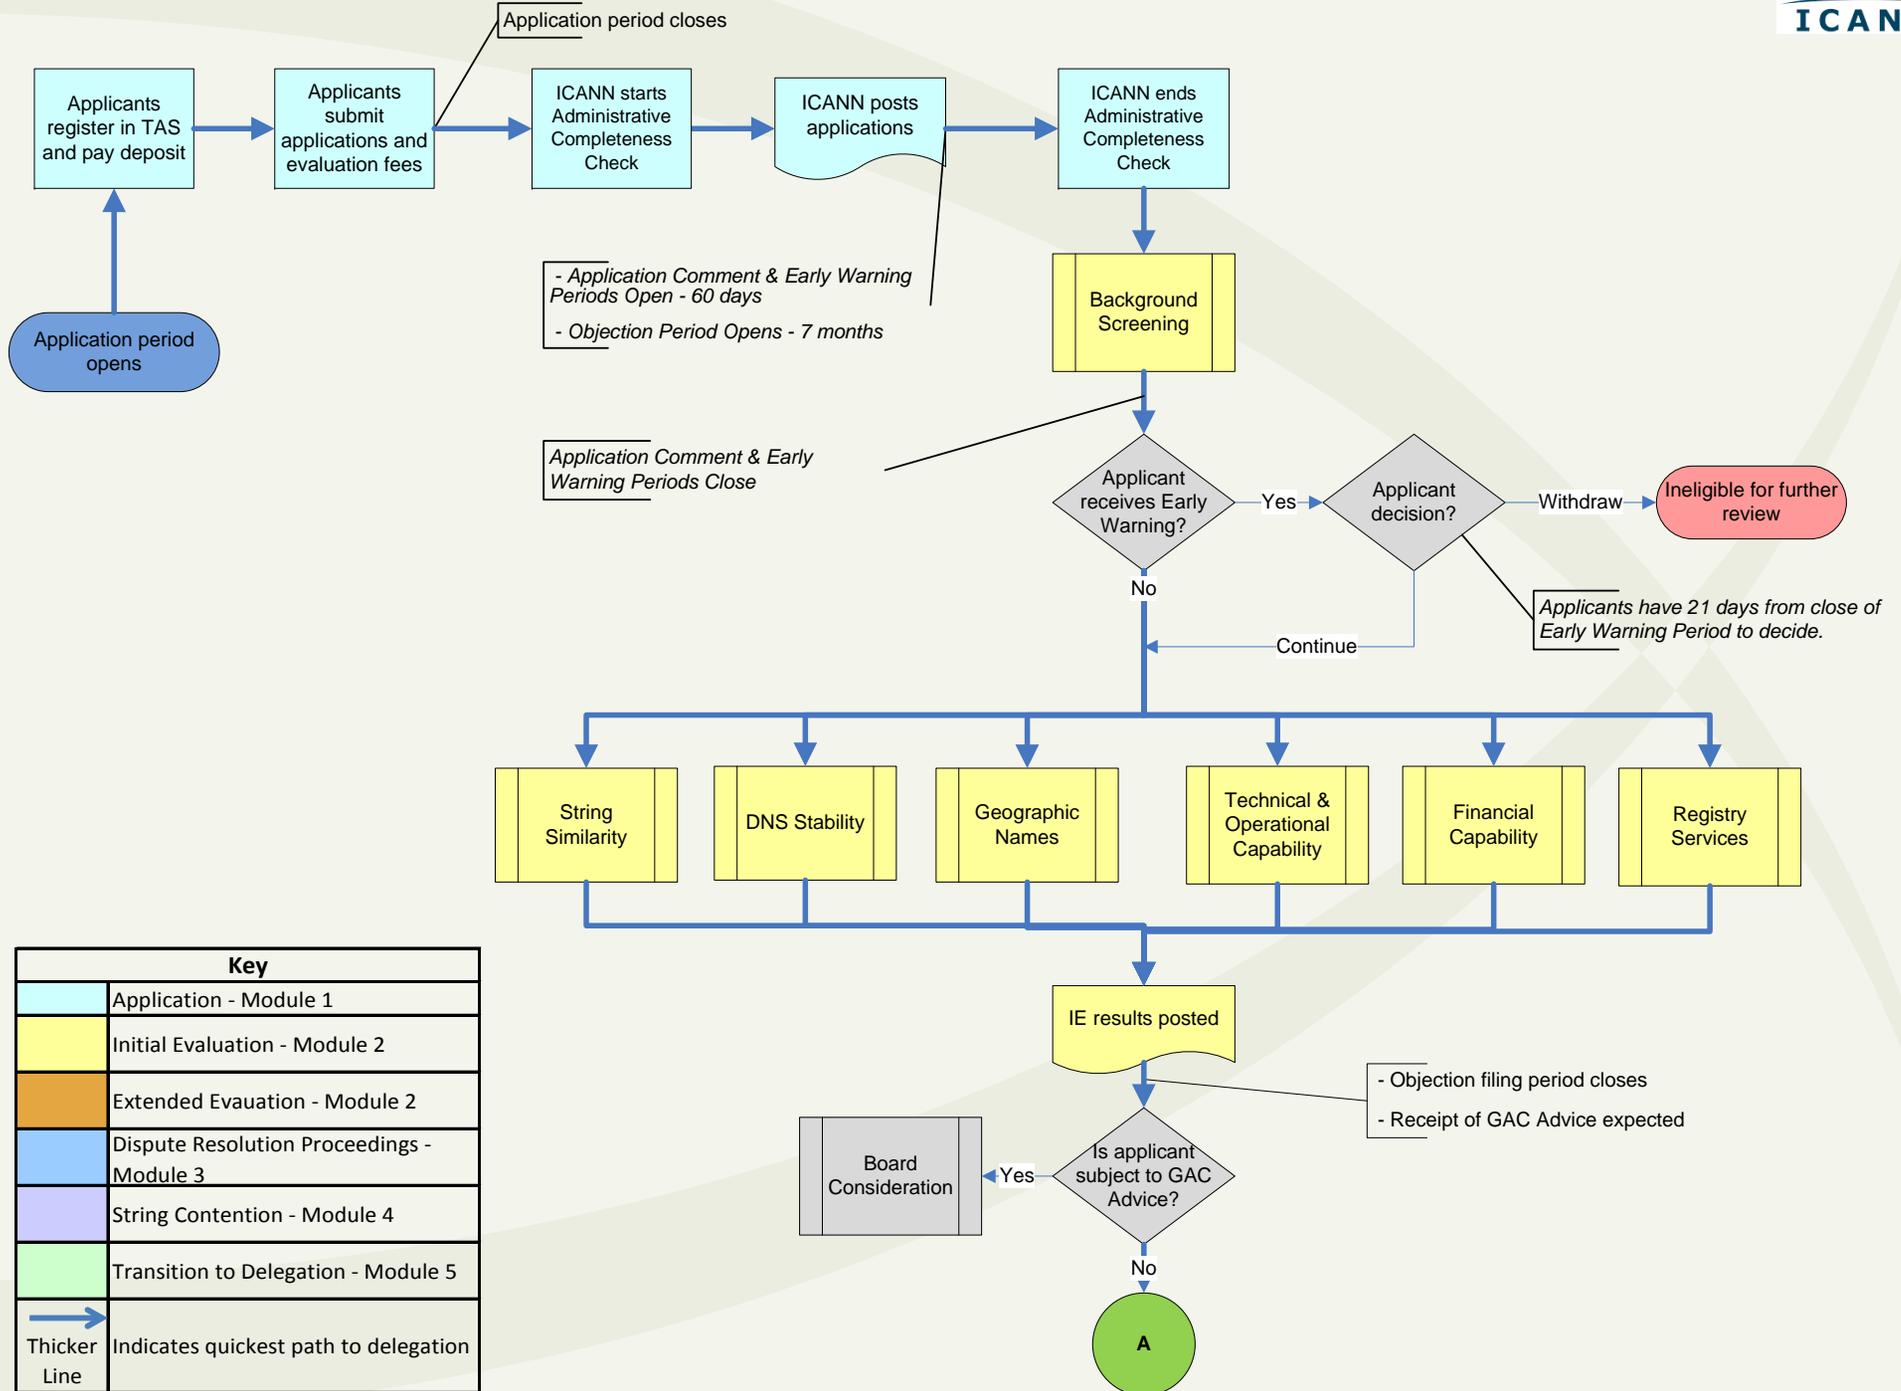

<sup>14</sup> Wire transfer is the preferred method of payment as it offers a globally accessible and dependable means for international transfer of funds. This enables ICANN to receive the fee and begin processing applications as quickly as possible.

regarding the preparation of an application. Applicants that contact ICANN for clarification about aspects of the application will be referred to the ASC.

Answers to inquiries will only provide clarification about the application forms and procedures. ICANN will not provide consulting, financial, or legal advice.

DRAFT - New gTLD Program - Evaluation Process, Page 2

# Applicant Guidebook

(30 May 2011)

## Module 2

Potential applicants should be aware that this version of the Guidebook is for consideration and not yet approved. The proposed details of the New gTLD Program remain subject to further consultation and revision.

30 May 2011

---

# Module 2

---

## *Evaluation Procedures*

This module describes the evaluation procedures and criteria used to determine whether applied-for gTLDs are approved for delegation. All applicants will undergo an Initial Evaluation and those that do not pass all elements may request Extended Evaluation.

The first, required evaluation is the **Initial Evaluation**, during which ICANN assesses an applied-for gTLD string, an applicant's qualifications, and its proposed registry services.

The following assessments are performed in the **Initial Evaluation**:

- String Reviews
  - String similarity
  - Reserved names
  - DNS stability
  - Geographic names
- Applicant Reviews
  - Demonstration of technical and operational capability
  - Demonstration of financial capability
  - Registry services reviews for DNS stability issues

An application must pass all these reviews to pass the Initial Evaluation. Failure to pass any one of these reviews will result in a failure to pass the Initial Evaluation.

**Extended Evaluation** may be applicable in cases in which an applicant does not pass the Initial Evaluation. See Section 2.3 below.

### *2.1 Background Screening*

---

Background screening will be conducted in two areas:

- (a) General business diligence and criminal history; and
- (b) History of cybersquatting behavior.

The application must pass both background screening areas to be eligible to proceed. Background screening results are evaluated according to the criteria described in section 1.2.1. Due to the potential sensitive nature of the material, applicant background screening reports will not be published.

The following sections describe the process ICANN will use to perform background screening.

### *2.1.1 General business diligence and criminal history*

---

Applying entities that are publicly traded corporations listed and in good standing on any of the world's largest 25 stock exchanges (as listed by the World Federation of Exchanges) will be deemed to have passed the general business diligence and criminal history screening. The largest 25 will be based on the domestic market capitalization reported at the end of the most recent calendar year prior to launching each round.<sup>1</sup>

Before an entity is listed on an exchange, it must undergo significant due diligence including an investigation by the exchange, regulators, and investment banks. As a publicly listed corporation, an entity is subject to ongoing scrutiny from shareholders, analysts, regulators, and exchanges. All exchanges require monitoring and disclosure of material information about directors, officers, and other key personnel, including criminal behavior. In totality, these requirements meet or exceed the screening ICANN will perform.

For applicants not listed on one of these exchanges, ICANN will submit identifying information for the entity, officers, directors, and major shareholders to an international background screening service. The service provider(s) will use the criteria listed in section 1.2.1 and return results that match these criteria. Only publicly available information will be used in this inquiry.

Note that the applicant is expected to disclose potential problems in meeting the criteria in the application, and provide any clarification or explanation at the time of application submission. Results returned from the background screening process will be matched with the disclosures provided by the applicant and those cases will be followed up to resolve issues of discrepancies or potential false positives.

---

<sup>1</sup> See <http://www.world-exchanges.org/statistics/annual/2010/equity-markets/domestic-market-capitalization>

If no hits are returned, the application will generally pass this portion of the background screening.

### *2.1.2 History of cybersquatting*

---

ICANN will screen applicants against UDRP cases and legal databases as financially feasible for data that may indicate a pattern of cybersquatting behavior pursuant to the criteria listed in section 1.2.1.

The applicant is required to make specific declarations regarding these activities in the application. Results returned during the screening process will be matched with the disclosures provided by the applicant and those instances will be followed up to resolve issues of discrepancies or potential false positives.

If no hits are returned, the application will generally pass this portion of the background screening.

## *2.2 Initial Evaluation*

---

The Initial Evaluation consists of two types of review. Each type is composed of several elements.

String review: The first review focuses on the applied-for gTLD string to test:

- Whether the applied-for gTLD string is so similar to other strings that it would create a probability of user confusion;
- Whether the applied-for gTLD string might adversely affect DNS security or stability; and
- Whether evidence of requisite government approval is provided in the case of certain geographic names.

Applicant review: The second review focuses on the applicant to test:

- Whether the applicant has the requisite technical, operational, and financial capability to operate a registry; and
- Whether the registry services offered by the applicant might adversely affect DNS security or stability.

## 2.2.1 *String Reviews*

---

In the Initial Evaluation, ICANN reviews every applied-for gTLD string. Those reviews are described in greater detail in the following subsections.

### 2.2.1.1 *String Similarity Review*

This review involves a preliminary comparison of each applied-for gTLD string against existing TLDs, Reserved Names (see subsection 2.2.1.2), and other applied-for strings. The objective of this review is to prevent user confusion and loss of confidence in the DNS resulting from delegation of many similar strings.

Note: In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.

The visual similarity check that occurs during Initial Evaluation is intended to augment the objection and dispute resolution process (see Module 3, Dispute Resolution Procedures) that addresses all types of similarity.

This similarity review will be conducted by an independent String Similarity Panel.

#### 2.2.1.1.1 *Reviews Performed*

The String Similarity Panel’s task is to identify visual string similarities that would create a probability of user confusion.

The panel performs this task of assessing similarities that would lead to user confusion in four sets of circumstances, when comparing:

- Applied-for gTLD strings against existing TLDs and reserved names;
- Applied-for gTLD strings against other applied-for gTLD strings;
- Applied-for gTLD strings against strings requested as IDN ccTLDs; and
- Applied-for 2-character IDN gTLD strings against:
  - Every other single character.
  - Any other 2-character ASCII string (to protect possible future ccTLD delegations).

***Similarity to Existing TLDs or Reserved Names*** – This review involves cross-checking between each applied-for string and the lists of existing TLD strings and Reserved Names to determine whether two strings are so similar to one another that they create a probability of user confusion.

In the simple case in which an applied-for gTLD string is identical to an existing TLD or reserved name, the online application system will not allow the application to be submitted.

Testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. For example, protocols treat equivalent labels as alternative forms of the same label, just as “foo” and “Foo” are treated as alternative forms of the same label (RFC 3490).

All TLDs currently in the root zone can be found at <http://iana.org/domains/root/db/>.

IDN tables that have been submitted to ICANN are available at <http://www.iana.org/domains/idn-tables/>.

***Similarity to Other Applied-for gTLD Strings (String Contention Sets)*** – All applied-for gTLD strings will be reviewed against one another to identify any similar strings. In performing this review, the String Similarity Panel will create contention sets that may be used in later stages of evaluation.

A contention set contains at least two applied-for strings identical or similar to one another. Refer to Module 4, String Contention Procedures, for more information on contention sets and contention resolution.

ICANN will notify applicants who are part of a contention set as soon as the String Similarity review is completed. (This provides a longer period for contending applicants to reach their own resolution before reaching the contention resolution stage.) These contention sets will also be published on ICANN’s website.

***Similarity to TLD strings requested as IDN ccTLDs*** -- Applied-for gTLD strings will also be reviewed for similarity to TLD strings requested in the IDN ccTLD Fast Track process (see <http://www.icann.org/en/topics/idn/fast-track/>). Should a conflict with a prospective fast-track IDN ccTLD be identified, ICANN will take the following approach to resolving the conflict.

If one of the applications has completed its respective process before the other is lodged, that TLD will be delegated. A gTLD application that has successfully completed all relevant evaluation stages, including dispute resolution and string contention, if applicable, and is eligible for entry into a registry agreement will be considered complete, and therefore would not be disqualified by a newly-filed IDN ccTLD request. Similarly, an IDN ccTLD request that has completed evaluation (i.e., is validated) will be considered complete and therefore would not be disqualified by a newly-filed gTLD application.

In the case where neither application has completed its respective process, where the gTLD application does not have the required approval from the relevant government or public authority, a validated request for an IDN ccTLD will prevail and the gTLD application will not be approved. The term “validated” is defined in the IDN ccTLD Fast Track Process Implementation, which can be found at <http://www.icann.org/en/topics/idn>.

In the case where a gTLD applicant has obtained the support or non-objection of the relevant government or public authority, but is eliminated due to contention with a string requested in the IDN ccTLD Fast Track process, a full refund of the evaluation fee is available to the applicant if the gTLD application was submitted prior to the publication of the ccTLD request.

**Review of 2-character IDN strings** — In addition to the above reviews, an applied-for gTLD string that is a 2-character IDN string is reviewed by the String Similarity Panel for visual similarity to:

- a) Any one-character label (in any script), and
- b) Any possible two-character ASCII combination.

An applied-for gTLD string that is found to be too similar to a) or b) above will not pass this review.

#### **2.2.1.1.2 Review Methodology**

The String Similarity Panel is informed in part by an algorithmic score for the visual similarity between each applied-for string and each of other existing and applied-for TLDs and reserved names. The score will provide one objective measure for consideration by the panel, as part of the process of identifying strings likely to result in user confusion. In general, applicants should expect that a higher visual similarity score suggests a higher probability

that the application will not pass the String Similarity review. However, it should be noted that the score is only indicative and that the final determination of similarity is entirely up to the Panel's judgment.

The algorithm, user guidelines, and additional background information are available to applicants for testing and informational purposes.<sup>2</sup> Applicants will have the ability to test their strings and obtain algorithmic results through the application system prior to submission of an application.

The algorithm supports the common characters in Arabic, Chinese, Cyrillic, Devanagari, Greek, Japanese, Korean, and Latin scripts. It can also compare strings in different scripts to each other.

The panel will also take into account variant characters, as defined in any relevant language table, in its determinations. For example, strings that are not visually similar but are determined to be variant TLD strings based on an IDN table would be placed in a contention set. Variant TLD strings that are listed as part of the application will also be subject to the string similarity analysis.<sup>3</sup>

The panel will examine all the algorithm data and perform its own review of similarities between strings and whether they rise to the level of string confusion. In cases of strings in scripts not yet supported by the algorithm, the panel's assessment process is entirely manual.

The panel will use a common standard to test for whether string confusion exists, as follows:

***Standard for String Confusion*** – String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

#### ***2.2.1.1.3 Outcomes of the String Similarity Review***

An application that fails the String Similarity review due to similarity to an existing TLD will not pass the Initial Evaluation,

---

<sup>2</sup> See <http://icann.sword-group.com/algorithm/>

<sup>3</sup> In the case where an applicant has listed Declared Variants in its application (see subsection 1.3.3), the panel will perform an analysis of the listed strings to confirm that the strings are variants according to the applicant's IDN table. This analysis may include comparison of applicant IDN tables with other existing tables for the same language or script, and forwarding any questions to the applicant.

and no further reviews will be available. Where an application does not pass the String Similarity review, the applicant will be notified as soon as the review is completed.

An application for a string that is found too similar to another applied-for gTLD string will be placed in a contention set.

An application that passes the String Similarity review is still subject to objection by an existing TLD operator or by another gTLD applicant in the current application round. That process requires that a string confusion objection be filed by an objector having the standing to make such an objection. Such category of objection is not limited to visual similarity. Rather, confusion based on any type of similarity (including visual, aural, or similarity of meaning) may be claimed by an objector. Refer to Module 3, Dispute Resolution Procedures, for more information about the objection process.

An applicant may file a formal objection against another gTLD application on string confusion grounds. Such an objection may, if successful, change the configuration of the preliminary contention sets in that the two applied-for gTLD strings will be considered in direct contention with one another (see Module 4, String Contention Procedures). The objection process will not result in removal of an application from a contention set.

**2.2.1.2 Reserved Names**

All applied-for gTLD strings are compared with the list of top-level Reserved Names to ensure that the applied-for gTLD string does not appear on that list.

**Top-Level Reserved Names List**

<i>AFRINIC</i>	<i>IANA-SERVERS</i>	<i>NRO</i>
<i>ALAC</i>	<i>ICANN</i>	<i>RFC-EDITOR</i>
<i>APNIC</i>	<i>IESG</i>	<i>RIPE</i>
<i>ARIN</i>	<i>IETF</i>	<i>ROOT-SERVERS</i>
<i>ASO</i>	<i>INTERNIC</i>	<i>RSSAC</i>
<i>CCNSO</i>	<i>INVALID</i>	<i>SSAC</i>
<i>EXAMPLE*</i>	<i>IRTF</i>	<i>TEST*</i>
<i>GAC</i>	<i>ISTF</i>	<i>TLD</i>
<i>GNSO</i>	<i>LACNIC</i>	<i>WHOIS</i>
<i>GTLD-SERVERS</i>	<i>LOCAL</i>	<i>WWW</i>
<i>IAB</i>	<i>LOCALHOST</i>	
<i>IANA</i>	<i>NIC</i>	

\*Note that in addition to the above strings, ICANN will reserve translations of the terms "test" and "example" in multiple languages. The remainder of the strings are reserved only in the form included above.

If an applicant enters a Reserved Name as its applied-for gTLD string, the application system will recognize the Reserved Name and will not allow the application to be submitted.

In addition, applied-for gTLD strings are reviewed during the String Similarity review to determine whether they are similar to a Reserved Name. An application for a gTLD string that is identified as too similar to a Reserved Name will not pass this review.

Names appearing on the Declared Variants List (see section 1.3.3) will be posted on ICANN's website and will be treated essentially the same as Reserved Names, until such time as variant management solutions are developed and variant TLDs are delegated. That is, an application for a gTLD string that is identical or similar to a string on the Declared Variants List will not pass this review.

### *2.2.1.3 DNS Stability Review*

This review determines whether an applied-for gTLD string might cause instability to the DNS. In all cases, this will involve a review for conformance with technical and other requirements for gTLD strings (labels). In some exceptional cases, an extended review may be necessary to investigate possible technical stability problems with the applied-for gTLD string.

Note: All applicants should recognize issues surrounding invalid TLD queries at the root level of the DNS.

Any new TLD registry operator may experience unanticipated queries, and some TLDs may experience a non-trivial load of unanticipated queries. For more information, see the Security and Stability Advisory Committee (SSAC)'s report on this topic at <http://www.icann.org/en/committees/security/sac045.pdf>. Some publicly available statistics are also available at <http://stats.l.root-servers.org/>.

ICANN will take steps to alert applicants of the issues raised in SAC045, and encourage the applicant to prepare to minimize the possibility of operational difficulties that would pose a stability or availability problem for its registrants and users. However, this notice is merely an advisory to applicants and is not part of the evaluation, unless the

string raises significant security or stability issues as described in the following section.

#### **2.2.1.3.1 DNS Stability: String Review Procedure**

New gTLD labels must not adversely affect the security or stability of the DNS. During the Initial Evaluation period, ICANN will conduct a preliminary review on the set of applied-for gTLD strings to:

- ensure that applied-for gTLD strings comply with the requirements provided in section 2.2.1.3.2, and
- determine whether any strings raise significant security or stability issues that may require further review.

There is a very low probability that extended analysis will be necessary for a string that fully complies with the string requirements in subsection 2.2.1.3.2 of this module. However, the string review process provides an additional safeguard if unanticipated security or stability issues arise concerning an applied-for gTLD string.

In such a case, the DNS Stability Panel will perform an extended review of the applied-for gTLD string during the Initial Evaluation period. The panel will determine whether the string fails to comply with relevant standards or creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, and will report on its findings.

If the panel determines that the string complies with relevant standards and does not create the conditions described above, the application will pass the DNS Stability review.

If the panel determines that the string does not comply with relevant technical standards, or that it creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, the application will not pass the Initial Evaluation, and no further reviews are available. In the case where a string is determined likely to cause security or stability problems in the DNS, the applicant will be notified as soon as the DNS Stability review is completed.

#### **2.2.1.3.2 String Requirements**

ICANN will review each applied-for gTLD string to ensure that it complies with the requirements outlined in the following paragraphs.

If an applied-for gTLD string is found to violate any of these rules, the application will not pass the DNS Stability review. No further reviews are available.

**Part I -- Technical Requirements for all Labels (Strings)** – The technical requirements for top-level domain labels follow.

- 1.1 The ASCII label (i.e., the label as transmitted on the wire) must be valid as specified in technical standards *Domain Names: Implementation and Specification* (RFC 1035), and *Clarifications to the DNS Specification* (RFC 2181) and any updates thereto. This includes the following:
  - 1.1.1 The label must have no more than 63 characters.
  - 1.1.2 Upper and lower case characters are treated as identical.
- 1.2 The ASCII label must be a valid host name, as specified in the technical standards *DOD Internet Host Table Specification* (RFC 952), *Requirements for Internet Hosts — Application and Support* (RFC 1123), and *Application Techniques for Checking and Transformation of Names* (RFC 3696), *Internationalized Domain Names in Applications (IDNA)* (RFCs 5890-5894), and any updates thereto. This includes the following:
  - 1.2.1 The ASCII label must consist entirely of letters (alphabetic characters a-z), or
  - 1.2.2 The label must be a valid IDNA A-label (further restricted as described in Part II below).

**Part II -- Requirements for Internationalized Domain Names**

– These requirements apply only to prospective top-level domains that contain non-ASCII characters. Applicants for these internationalized top-level domain labels are expected to be familiar with the Internet Engineering Task Force (IETF) IDNA standards, Unicode standards, and the terminology associated with Internationalized Domain Names.

- 2.1 The label must be an A-label as defined in IDNA, converted from (and convertible to) a U-label that is consistent with the definition in IDNA, and further restricted by the following, non-exhaustive, list of limitations:

- 2.1.1 Must be a valid A-label according to IDNA.
  - 2.1.2 The derived property value of all codepoints used in the U-label, as defined by IDNA, must be PVALID or CONTEXT (accompanied by unambiguous contextual rules).<sup>4</sup>
  - 2.1.3 The general category of all codepoints, as defined by IDNA, must be one of (Li, Lo, Lm, Mn).
  - 2.1.4 The U-label must be fully compliant with Normalization Form C, as described in *Unicode Standard Annex #15: Unicode Normalization Forms*. See also examples in <http://unicode.org/faq/normalization.html>.
  - 2.1.5 The U-label must consist entirely of characters with the same directional property, or fulfill the requirements of the Bidi rule per RFC 5893.
- 2.2 The label must meet the relevant criteria of the ICANN *Guidelines for the Implementation of Internationalised Domain Names*. See <http://www.icann.org/en/topics/idn/implementation-guidelines.htm>. This includes the following, non-exhaustive, list of limitations:
- 2.2.1 All code points in a single label must be taken from the same script as determined by the Unicode Standard Annex #24: Unicode Script Property.
  - 2.2.2 Exceptions to 2.2.1 are permissible for languages with established orthographies and conventions that require the commingled use of multiple scripts. However, even with this exception, visually confusable characters from different scripts will not be allowed to co-exist in a single set of permissible code points unless a corresponding policy and character table are clearly defined.

---

<sup>4</sup> It is expected that conversion tools for IDNA will be available before the Application Submission period begins, and that labels will be checked for validity under IDNA. In this case, labels valid under the previous version of the protocol (IDNA2003) but not under IDNA will not meet this element of the requirements. Labels that are valid under both versions of the protocol will meet this element of the requirements. Labels valid under IDNA but not under IDNA2003 may meet the requirements; however, applicants are strongly advised to note that the duration of the transition period between the two protocols cannot presently be estimated nor guaranteed in any specific timeframe. The development of support for IDNA in the broader software applications environment will occur gradually. During that time, TLD labels that are valid under IDNA, but not under IDNA2003, will have limited functionality.

**Part III - Policy Requirements for Generic Top-Level Domains** – These requirements apply to all prospective top-level domain strings applied for as gTLDs.

- 3.1 Applied-for gTLD strings in ASCII must be composed of three or more visually distinct characters. Two-character ASCII strings are not permitted, to avoid conflicting with current and future country codes based on the ISO 3166-1 standard.
- 3.2 Applied-for gTLD strings in IDN scripts must be composed of two or more visually distinct characters in the script, as appropriate.<sup>5</sup> Note, however, that a two-character IDN string will not be approved if:
  - 3.2.1 It is visually similar to any one-character label (in any script); or
  - 3.2.2 It is visually similar to any possible two-character ASCII combination.

See the String Similarity review in subsection 2.2.1.1 for additional information on this requirement.

#### **2.2.1.4 Geographic Names Review**

Applications for gTLD strings must ensure that appropriate consideration is given to the interests of governments or public authorities in geographic names. The requirements and procedure ICANN will follow in the evaluation process are described in the following paragraphs. Applicants should review these requirements even if they do not believe their intended gTLD string is a geographic name. All applied-for gTLD strings will be reviewed according to the requirements in this section, regardless of whether the application indicates it is for a geographic name.

##### **2.2.1.4.1 Treatment of Country or Territory Names<sup>6</sup>**

Applications for strings that are country or territory names will not be approved, as they are not available under the

---

<sup>5</sup> Note that the Joint ccNSO-GNSO IDN Working Group (JIG) has made recommendations that this section be revised to allow for single-character IDN gTLD labels. See the JIG Final Report at <http://gns0.icann.org/drafts/jig-final-report-30mar11-en.pdf>. Implementation models for these recommendations are being developed for community discussion.

<sup>6</sup> Country and territory names are excluded from the process based on advice from the Governmental Advisory Committee in recent communiqués providing interpretation of Principle 2.2 of the GAC Principles regarding New gTLDs to indicate that strings which are a meaningful representation or abbreviation of a country or territory name should be handled through the forthcoming ccPDP, and other geographic strings could be allowed in the gTLD space if in agreement with the relevant government or public authority.

New gTLD Program in this application round. A string shall be considered to be a country or territory name if:

- i. it is an alpha-3 code listed in the ISO 3166-1 standard.
- ii. it is a long-form name listed in the ISO 3166-1 standard, or a translation of the long-form name in any language.
- iii. it is a short-form name listed in the ISO 3166-1 standard, or a translation of the short-form name in any language.
- iv. it is the short- or long-form name association with a code that has been designated as “exceptionally reserved” by the ISO 3166 Maintenance Agency.
- v. it is a separable component of a country name designated on the “Separable Country Names List,” or is a translation of a name appearing on the list, in any language. See the Annex at the end of this module.
- vi. it is a permutation or transposition of any of the names included in items (i) through (v). Permutations include removal of spaces, insertion of punctuation, and addition or removal of grammatical articles like “the.” A transposition is considered a change in the sequence of the long or short-form name, for example, “RepublicCzech” or “IslandsCayman.”
- vii. it is a name by which a country is commonly known, as demonstrated by evidence that the country is recognized by that name by an intergovernmental or treaty organization.

#### 2.2.1.4.2 *Geographic Names Requiring Government Support*

The following types of applied-for strings are considered geographic names and must be accompanied by documentation of support or non-objection from the relevant governments or public authorities:

1. An application for any string that is a representation, in any language, of the capital city

name of any country or territory listed in the ISO 3166-1 standard.

2. An application for a city name, where the applicant declares that it intends to use the gTLD for purposes associated with the city name.

City names present challenges because city names may also be generic terms or brand names, and in many cases city names are not unique. Unlike other types of geographic names, there are no established lists that can be used as objective references in the evaluation process. Thus, city names are not universally protected. However, the process does provide a means for cities and applicants to work together where desired.

An application for a city name will be subject to the geographic names requirements (i.e., will require documentation of support or non-objection from the relevant governments or public authorities) if:

- (a) It is clear from applicant statements within the application that the applicant will use the TLD primarily for purposes associated with the city name; and
  - (b) The applied-for string is a city name as listed on official city documents.<sup>7</sup>
3. An application for any string that is an exact match of a sub-national place name, such as a county, province, or state, listed in the ISO 3166-2 standard.
  4. An application for a string listed as a UNESCO region<sup>8</sup> or appearing on the “Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings” list.<sup>9</sup>

In the case of an application for a string appearing on either of the lists above, documentation of support will be required from at least 60% of the respective national governments in the region, and

---

<sup>7</sup> City governments with concerns about strings that are duplicates, nicknames or close renderings of a city name should not rely on the evaluation process as the primary means of protecting their interests in a string. Rather, a government may elect to file a formal objection to an application that is opposed by the relevant community, or may submit its own application for the string.

<sup>8</sup> See <http://www.unesco.org/new/en/unesco/worldwide/>.

<sup>9</sup> See <http://unstats.un.org/unsd/methods/m49/m49regin.htm>.

there may be no more than one written statement of objection to the application from relevant governments in the region and/or public authorities associated with the continent or the region.

Where the 60% rule is applied, and there are common regions on both lists, the regional composition contained in the "Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings" takes precedence.

An applied-for gTLD string that falls into any of 1 through 4 listed above is considered to represent a geographic name. In the event of any doubt, it is in the applicant's interest to consult with relevant governments and public authorities and enlist their support or non-objection prior to submission of the application, in order to preclude possible objections and pre-address any ambiguities concerning the string and applicable requirements.

Strings that include but do not match a geographic name (as defined in this section) will not be considered geographic names as defined by section 2.2.1.4.2, and therefore will not require documentation of government support in the evaluation process.

For each application, the Geographic Names Panel will determine which governments are relevant based on the inputs of the applicant, governments, and its own research and analysis. In the event that there is more than one relevant government or public authority for the applied-for gTLD string, the applicant must provide documentation of support or non-objection from all the relevant governments or public authorities. It is anticipated that this may apply to the case of a sub-national place name.

It is the applicant's responsibility to:

- identify whether its applied-for gTLD string falls into any of the above categories; and
- identify and consult with the relevant governments or public authorities; and
- identify which level of government support is required.

Note: the level of government and which administrative agency is responsible for the filing of letters of support or non-objection is a matter for each national administration

to determine. Applicants should consult within the relevant jurisdiction to determine the appropriate level of support.

The requirement to include documentation of support for certain applications does not preclude or exempt applications from being the subject of objections on community grounds (refer to subsection 3.1.1 of Module 3), under which applications may be rejected based on objections showing substantial opposition from the targeted community.

#### **2.2.1.4.3 Documentation Requirements**

The documentation of support or non-objection should include a signed letter from the relevant government or public authority. Understanding that this will differ across the respective jurisdictions, the letter could be signed by the minister with the portfolio responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister or President of the relevant jurisdiction; or a senior representative of the agency or department responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister. To assist the applicant in determining who the relevant government or public authority may be for a potential geographic name, the applicant may wish to consult with the relevant Governmental Advisory Committee (GAC) representative.<sup>10</sup>

The letter must clearly express the government's or public authority's support for or non-objection to the applicant's application and demonstrate the government's or public authority's understanding of the string being requested and its intended use.

The letter should also demonstrate the government's or public authority's understanding that the string is being sought through the gTLD application process and that the applicant is willing to accept the conditions under which the string will be available, i.e., entry into a registry agreement with ICANN requiring compliance with consensus policies and payment of fees. (See Module 5 for a discussion of the obligations of a gTLD registry operator.)

A sample letter of support is available as an attachment to this module.

Applicants and governments may conduct discussions concerning government support for an application at any time. Applicants are encouraged to begin such discussions

---

<sup>10</sup> See <http://gac.icann.org/gac-members>

at the earliest possible stage, and enable governments to follow the processes that may be necessary to consider, approve, and generate a letter of support or non-objection.

It is important to note that a government or public authority is under no obligation to provide documentation of support or non-objection in response to a request by an applicant.

It is also possible that a government may withdraw its support for an application at a later time, including after the new gTLD has been delegated, if the registry operator has deviated from the conditions of original support or non-objection. Applicants should be aware that ICANN has committed to governments that, in the event of a dispute between a government (or public authority) and a registry operator that submitted documentation of support from that government or public authority, **ICANN will comply with a legally binding order** from a court in the jurisdiction of the government or public authority that has given support to an application.

#### *2.2.1.4.4 Review Procedure for Geographic Names*

A Geographic Names Panel (GNP) will determine whether each applied-for gTLD string represents a geographic name, and verify the relevance and authenticity of the supporting documentation where necessary.

The GNP will review all applications received, not only those where the applicant has noted its applied-for gTLD string as a geographic name. For any application where the GNP determines that the applied-for gTLD string is a country or territory name (as defined in this module), the application will not pass the Geographic Names review and will be denied. No additional reviews will be available.

For any application where the GNP determines that the applied-for gTLD string is not a geographic name requiring government support (as described in this module), the application will pass the Geographic Names review with no additional steps required.

For any application where the GNP determines that the applied-for gTLD string is a geographic name requiring government support, the GNP will confirm that the applicant has provided the required documentation from the relevant governments or public authorities, and that the communication from the government or public authority is legitimate and contains the required content. ICANN may confirm the authenticity of the communication by consulting with the relevant diplomatic authorities or

members of ICANN's Governmental Advisory Committee for the government or public authority concerned on the competent authority and appropriate point of contact within their administration for communications.

The GNP may communicate with the signing entity of the letter to confirm their intent and their understanding of the terms on which the support for an application is given.

In cases where an applicant has not provided the required documentation, the applicant will be contacted and notified of the requirement, and given a limited time frame to provide the documentation. If the applicant is able to provide the documentation before the close of the Initial Evaluation period, and the documentation is found to meet the requirements, the applicant will pass the Geographic Names review. If not, the applicant will have additional time to obtain the required documentation; however, if the applicant has not produced the required documentation by the required date (at least 90 days from the date of notice), the application will be considered incomplete and will be ineligible for further review. The applicant may reapply in subsequent application rounds, if desired, subject to the fees and requirements of the specific application rounds.

If there is more than one application for a string representing a certain geographic name as described in this section, and the applications have requisite government approvals, the applications will be suspended pending resolution by the applicants. If the applicants have not reached a resolution by either the date of the end of the application round (as announced by ICANN), or the date on which ICANN opens a subsequent application round, whichever comes first, the applications will be rejected and applicable refunds will be available to applicants according to the conditions described in section 1.5.

However, in the event that a contention set is composed of multiple applications with documentation of support from the same government or public authority, the applications will proceed through the contention resolution procedures described in Module 4 when requested by the government or public authority providing the documentation.

If an application for a string representing a geographic name is in a contention set with applications for similar strings that have not been identified as geographical names, the string contention will be resolved using the string contention procedures described in Module 4.

## 2.2.2 *Applicant Reviews*

---

Concurrent with the applied-for gTLD string reviews described in subsection 2.2.1, ICANN will review the applicant's technical and operational capability, its financial capability, and its proposed registry services. Those reviews are described in greater detail in the following subsections.

### 2.2.2.1 *Technical/Operational Review*

In its application, the applicant will respond to a set of questions (see questions 24 – 44 in the Application Form) intended to gather information about the applicant's technical capabilities and its plans for operation of the proposed gTLD.

Applicants are not required to have deployed an actual gTLD registry to pass the Technical/Operational review. It will be necessary, however, for an applicant to demonstrate a clear understanding and accomplishment of some groundwork toward the key technical and operational aspects of a gTLD registry operation. Subsequently, each applicant that passes the technical evaluation and all other steps will be required to complete a pre-delegation technical test prior to delegation of the new gTLD. Refer to Module 5, Transition to Delegation, for additional information.

### 2.2.2.2 *Financial Review*

In its application, the applicant will respond to a set of questions (see questions 45-50 in the Application Form) intended to gather information about the applicant's financial capabilities for operation of a gTLD registry and its financial planning in preparation for long-term stability of the new gTLD.

Because different registry types and purposes may justify different responses to individual questions, evaluators will pay particular attention to the consistency of an application across all criteria. For example, an applicant's scaling plans identifying system hardware to ensure its capacity to operate at a particular volume level should be consistent with its financial plans to secure the necessary equipment. That is, the evaluation criteria scale with the applicant plans to provide flexibility.

### 2.2.2.3 *Evaluation Methodology*

Dedicated technical and financial evaluation panels will conduct the technical/operational and financial reviews,

according to the established criteria and scoring mechanism included as an attachment to this module. These reviews are conducted on the basis of the information each applicant makes available to ICANN in its response to the questions in the Application Form.

The evaluators may request clarification or additional information during the Initial Evaluation period. For each application, clarifying questions will be consolidated and sent to the applicant from each of the panels. The applicant will thus have an opportunity to clarify or supplement the application in those areas where a request is made by the evaluators. These communications will occur via TAS. Unless otherwise noted, such communications will include a 2-week deadline for the applicant to respond. Any supplemental information provided by the applicant will become part of the application.

It is the applicant's responsibility to ensure that the questions have been fully answered and the required documentation is attached. Evaluators are entitled, but not obliged, to request further information or evidence from an applicant, and are not obliged to take into account any information or evidence that is not made available in the application and submitted by the due date, unless explicitly requested by the evaluators.

### *2.2.3 Registry Services Review*

---

Concurrent with the other reviews that occur during the Initial Evaluation period, ICANN will review the applicant's proposed registry services for any possible adverse impact on security or stability. The applicant will be required to provide a list of proposed registry services in its application.

#### *2.2.3.1 Definitions*

**Registry services** are defined as:

1. operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry zone servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by the registry agreement;

2. other products or services that the registry operator is required to provide because of the establishment of a consensus policy; and
3. any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator.

Proposed registry services will be examined to determine if they might raise significant stability or security issues. Examples of services proposed by existing registries can be found at <http://www.icann.org/en/registries/rsep/>. In most cases, these proposed services successfully pass this inquiry.

Registry services currently provided by gTLD registries can be found in registry agreement appendices. See <http://www.icann.org/en/registries/agreements.htm>.

A full definition of registry services can be found at <http://www.icann.org/en/registries/rsep/rsep.html>.

For purposes of this review, security and stability are defined as follows:

**Security** – an effect on security by the proposed registry service means (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

**Stability** – an effect on stability means that the proposed registry service (1) does not comply with applicable relevant standards that are authoritative and published by a well-established, recognized, and authoritative standards body, such as relevant standards-track or best current practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant standards-track or best current practice RFCs and relying on registry operator's delegation information or provisioning services.

#### 2.2.3.2 Customary Services

The following registry services are customary services offered by a registry operator:

- Receipt of data from registrars concerning registration of domain names and name servers

- Dissemination of TLD zone files
- Dissemination of contact or other information concerning domain name registrations
- DNS Security Extensions

The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.

Any additional registry services that are unique to the proposed gTLD registry should be described in detail. Directions for describing the registry services are provided at [http://www.icann.org/en/registries/rsep/rrs\\_sample.html](http://www.icann.org/en/registries/rsep/rrs_sample.html).

### 2.2.3.3 TLD Zone Contents

ICANN receives a number of inquiries about use of various record types in a registry zone, as entities contemplate different business and technical models. Permissible zone contents for a TLD zone are:

- Apex SOA record.
- Apex NS records and in-bailiwick glue for the TLD's DNS servers.
- NS records and in-bailiwick glue for DNS servers of registered names in the TLD.
- DS records for registered names in the TLD.
- Records associated with signing the TLD zone (i.e., RRSIG, DNSKEY, NSEC, and NSEC3).

An applicant wishing to place any other record types into its TLD zone should describe in detail its proposal in the registry services section of the application. This will be evaluated and could result in an extended evaluation to determine whether the service would create a risk of a meaningful adverse impact on security or stability of the DNS. Applicants should be aware that a service based on use of less-common DNS resource records in the TLD zone, even if approved in the registry services review, might not work as intended for all users due to lack of application support.

### 2.2.3.4 Methodology

Review of the applicant's proposed registry services will include a preliminary determination of whether any of the proposed registry services could raise significant security or stability issues and require additional consideration.

If the preliminary determination reveals that there may be significant security or stability issues (as defined in subsection 2.2.3.1) surrounding a proposed service, the application will be flagged for an extended review by the Registry Services Technical Evaluation Panel (RSTEP), see <http://www.icann.org/en/registries/rsep/rstep.html>). This review, if applicable, will occur during the Extended Evaluation period (refer to Section 2.3).

In the event that an application is flagged for extended review of one or more registry services, an additional fee to cover the cost of the extended review will be due from the applicant. Applicants will be advised of any additional fees due, which must be received before the additional review begins.

#### ***2.2.4 Applicant's Withdrawal of an Application***

---

An applicant who does not pass the Initial Evaluation may withdraw its application at this stage and request a partial refund (refer to subsection 1.5 of Module 1).

### ***2.3 Extended Evaluation***

---

An applicant may request an Extended Evaluation if the application has failed to pass the Initial Evaluation elements concerning:

- Geographic names (refer to subsection 2.2.1.4). There is no additional fee for an extended evaluation in this instance.
- Demonstration of technical and operational capability (refer to subsection 2.2.2.1). There is no additional fee for an extended evaluation in this instance.
- Demonstration of financial capability (refer to subsection 2.2.2.2). There is no additional fee for an extended evaluation in this instance.
- Registry services (refer to subsection 2.2.3). Note that this investigation incurs an additional fee (the Registry Services Review Fee) if the applicant wishes to proceed. See Section 1.5 of Module 1 for fee and payment information.

An Extended Evaluation does not imply any change of the evaluation criteria. The same criteria used in the Initial Evaluation will be used to review the application in light of clarifications provided by the applicant.

From the time an applicant receives notice of failure to pass the Initial Evaluation, eligible applicants will have 15 calendar days to submit to ICANN the Notice of Request for Extended Evaluation. If the applicant does not explicitly request the Extended Evaluation (and pay an additional fee in the case of a Registry Services inquiry) the application will not proceed.

### ***2.3.1 Geographic Names Extended Evaluation***

---

In the case of an application that has been identified as a geographic name requiring government support, but where the applicant has not provided sufficient evidence of support or non-objection from all relevant governments or public authorities by the end of the Initial Evaluation period, the applicant has additional time in the Extended Evaluation period to obtain and submit this documentation.

If the applicant submits the documentation to the Geographic Names Panel by the required date, the GNP will perform its review of the documentation as detailed in section 2.2.1.4. If the applicant has not provided the documentation by the required date (at least 90 days from the date of the notice), the application will not pass the Extended Evaluation, and no further reviews are available.

### ***2.3.2 Technical/Operational or Financial Extended Evaluation***

---

The following applies to an Extended Evaluation of an applicant's technical and operational capability or financial capability, as described in subsection 2.2.2.

An applicant who has requested Extended Evaluation will again access the online application system (TAS) and clarify its answers to those questions or sections on which it received a non-passing score (or, in the case of an application where individual questions were passed but the total score was insufficient to pass Initial Evaluation, those questions or sections on which additional points are possible). The answers should be responsive to the evaluator report that indicates the reasons for failure, or provide any amplification that is not a material change to the application. Applicants may not use the Extended Evaluation period to substitute portions of new information for the information submitted in their original applications, i.e., to materially change the application.

An applicant participating in an Extended Evaluation on the Technical / Operational or Financial reviews will have the option to have its application reviewed by the same

evaluation panelists who performed the review during the Initial Evaluation period, or to have a different set of panelists perform the review during Extended Evaluation.

The Extended Evaluation allows an additional exchange of information between the evaluators and the applicant to further clarify information contained in the application. This supplemental information will become part of the application record. Such communications will include a deadline for the applicant to respond.

ICANN will notify applicants at the end of the Extended Evaluation period as to whether they have passed. If an application passes Extended Evaluation, it continues to the next stage in the process. If an application does not pass Extended Evaluation, it will proceed no further. No further reviews are available.

### *2.3.3 Registry Services Extended Evaluation*

---

This section applies to Extended Evaluation of registry services, as described in subsection 2.2.3.

If a proposed registry service has been referred to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review, the RSTEP will form a review team of members with the appropriate qualifications.

The review team will generally consist of three members, depending on the complexity of the registry service proposed. In a 3-member panel, the review could be conducted within 30 to 45 days. In cases where a 5-member panel is needed, this will be identified before the extended evaluation starts. In a 5-member panel, the review could be conducted in 45 days or fewer.

The cost of an RSTEP review will be covered by the applicant through payment of the Registry Services Review Fee. Refer to payment procedures in section 1.5 of Module 1. The RSTEP review will not commence until payment has been received.

If the RSTEP finds that one or more of the applicant's proposed registry services may be introduced without risk of a meaningful adverse effect on security or stability, these services will be included in the applicant's registry agreement with ICANN. If the RSTEP finds that the proposed service would create a risk of a meaningful adverse effect on security or stability, the applicant may elect to proceed with its application without the proposed service, or withdraw its application for the gTLD. In this instance, an applicant has 15 calendar days to notify ICANN of its intent

to proceed with the application. If an applicant does not explicitly provide such notice within this time frame, the application will proceed no further.

## **2.4 Parties Involved in Evaluation**

---

A number of independent experts and groups play a part in performing the various reviews in the evaluation process. A brief description of the various panels, their evaluation roles, and the circumstances under which they work is included in this section.

### **2.4.1 Panels and Roles**

---

The **String Similarity Panel** will assess whether a proposed gTLD string creates a probability of user confusion due to similarity with any reserved name, any existing TLD, any requested IDN ccTLD, or any new gTLD string applied for in the current application round. This occurs during the String Similarity review in Initial Evaluation. The panel may also review IDN tables submitted by applicants as part of its work.

The **DNS Stability Panel** will determine whether a proposed string might adversely affect the security or stability of the DNS. This occurs during the DNS Stability String review in Initial Evaluation.

The **Geographic Names Panel** will review each application to determine whether the applied-for gTLD represents a geographic name, as defined in this guidebook. In the event that the string is a geographic name requiring government support, the panel will ensure that the required documentation is provided with the application and verify that the documentation is from the relevant governments or public authorities and is authentic.

The **Technical Evaluation Panel** will review the technical components of each application against the criteria in the Applicant Guidebook, along with proposed registry operations, in order to determine whether the applicant is technically and operationally capable of operating a gTLD registry as proposed in the application. This occurs during the Technical/Operational reviews in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Financial Evaluation Panel** will review each application against the relevant business, financial and organizational criteria contained in the Applicant Guidebook, to determine whether the applicant is financially capable of maintaining a gTLD registry as proposed in the application.

This occurs during the Financial review in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Registry Services Technical Evaluation Panel (RSTEP)** will review proposed registry services in the application to determine if they pose a risk of a meaningful adverse impact on security or stability. This occurs, if applicable, during the Extended Evaluation period.

Members of all panels are required to abide by the established Code of Conduct and Conflict of Interest guidelines included in this module.

#### **2.4.2 Panel Selection Process**

---

ICANN is in the process of selecting qualified third-party providers to perform the various reviews.<sup>11</sup> In addition to the specific subject matter expertise required for each panel, specified qualifications are required, including:

- The provider must be able to convene – or have the capacity to convene - globally diverse panels and be able to evaluate applications from all regions of the world, including applications for IDN gTLDs.
- The provider should be familiar with the IETF IDNA standards, Unicode standards, relevant RFCs and the terminology associated with IDNs.
- The provider must be able to scale quickly to meet the demands of the evaluation of an unknown number of applications. At present it is not known how many applications will be received, how complex they will be, and whether they will be predominantly for ASCII or non-ASCII gTLDs.
- The provider must be able to evaluate the applications within the required timeframes of Initial and Extended Evaluation.

The providers will be formally engaged and announced on ICANN's website prior to the opening of the Application Submission period.

---

<sup>11</sup> See <http://icann.org/en/topics/new-gtlds/open-tenders-eoi-en.htm>.

### 2.4.3 Code of Conduct Guidelines for Panelists

The purpose of the New gTLD Program ("Program") Code of Conduct ("Code") is to prevent real and apparent conflicts of interest and unethical behavior by any Evaluation Panelist ("Panelist").

Panelists shall conduct themselves as thoughtful, competent, well prepared, and impartial professionals throughout the application process. Panelists are expected to comply with equity and high ethical standards while assuring the Internet community, its constituents, and the public of objectivity, integrity, confidentiality, and credibility. Unethical actions, or even the appearance of compromise, are not acceptable. Panelists are expected to be guided by the following principles in carrying out their respective responsibilities. This Code is intended to summarize the principles and nothing in this Code should be considered as limiting duties, obligations or legal requirements with which Panelists must comply.

***Bias*** -- Panelists shall:

- not advance personal agendas or non-ICANN approved agendas in the evaluation of applications;
- examine facts as they exist and not be influenced by past reputation, media accounts, or unverified statements about the applications being evaluated;
- exclude themselves from participating in the evaluation of an application if, to their knowledge, there is some predisposing factor that could prejudice them with respect to such evaluation; and
- exclude themselves from evaluation activities if they are philosophically opposed to or are on record as having made generic criticism about a specific type of applicant or application.

***Compensation/Gifts*** -- Panelists shall not request or accept any compensation whatsoever or any gifts of substance from the Applicant being reviewed or anyone affiliated with the Applicant. (Gifts of substance would include any gift greater than USD 25 in value).

If the giving of small tokens is important to the Applicant's culture, Panelists may accept these tokens; however, the total of such tokens must not exceed USD 25 in value. If in doubt, the Panelist should err on the side of caution by declining gifts of any kind.

**Conflicts of Interest** -- Panelists shall act in accordance with the "New gTLD Program Conflicts of Interest Guidelines" (see subsection 2.4.3.1).

**Confidentiality** -- Confidentiality is an integral part of the evaluation process. Panelists must have access to sensitive information in order to conduct evaluations. Panelists must maintain confidentiality of information entrusted to them by ICANN and the Applicant and any other confidential information provided to them from whatever source, except when disclosure is legally mandated or has been authorized by ICANN. "Confidential information" includes all elements of the Program and information gathered as part of the process – which includes but is not limited to: documents, interviews, discussions, interpretations, and analyses – related to the review of any new gTLD application.

**Affirmation** -- All Panelists shall read this Code prior to commencing evaluation services and shall certify in writing that they have done so and understand the Code.

#### **2.4.3.1 Conflict of Interest Guidelines for Panelists**

It is recognized that third-party providers may have a large number of employees in several countries serving numerous clients. In fact, it is possible that a number of Panelists may be very well known within the registry / registrar community and have provided professional services to a number of potential applicants.

To safeguard against the potential for inappropriate influence and ensure applications are evaluated in an objective and independent manner, ICANN has established detailed Conflict of Interest guidelines and procedures that will be followed by the Evaluation Panelists. To help ensure that the guidelines are appropriately followed ICANN will:

- Require each Evaluation Panelist (provider and individual) to acknowledge and document understanding of the Conflict of Interest guidelines.

- Require each Evaluation Panelist to disclose all business relationships engaged in at any time during the past six months.
- Where possible, identify and secure primary and backup providers for evaluation panels.
- In conjunction with the Evaluation Panelists, develop and implement a process to identify conflicts and re-assign applications as appropriate to secondary or contingent third party providers to perform the reviews.

***Compliance Period*** -- All Evaluation Panelists must comply with the Conflict of Interest guidelines beginning with the opening date of the Application Submission period and ending with the public announcement by ICANN of the final outcomes of all the applications from the Applicant in question.

***Guidelines*** -- The following guidelines are the minimum standards with which all Evaluation Panelists must comply. It is recognized that it is impossible to foresee and cover all circumstances in which a potential conflict of interest might arise. In these cases the Evaluation Panelist should evaluate whether the existing facts and circumstances would lead a reasonable person to conclude that there is an actual conflict of interest.

Evaluation Panelists and Immediate Family Members:

- Must not be under contract, have or be included in a current proposal to provide Professional Services for or on behalf of the Applicant during the Compliance Period.
- Must not currently hold or be committed to acquire any interest in a privately-held Applicant.
- Must not currently hold or be committed to acquire more than 1% of any publicly listed Applicant's outstanding equity securities or other ownership interests.
- Must not be involved or have an interest in a joint venture, partnership or other business arrangement with the Applicant.
- Must not have been named in a lawsuit with or against the Applicant.

- Must not be a:
  - Director, officer, or employee, or in any capacity equivalent to that of a member of management of the Applicant;
  - Promoter, underwriter, or voting trustee of the Applicant; or
  - Trustee for any pension or profit-sharing trust of the Applicant.

***Definitions--***

Evaluation Panelist: An Evaluation Panelist is any individual associated with the review of an application. This includes any primary, secondary, and contingent third party Panelists engaged by ICANN to review new gTLD applications.

Immediate Family Member: Immediate Family Member is a spouse, spousal equivalent, or dependent (whether or not related) of an Evaluation Panelist.

Professional Services: include, but are not limited to legal services, financial audit, financial planning / investment, outsourced services, consulting services such as business / management / internal audit, tax, information technology, registry / registrar services.

***2.4.3.2 Code of Conduct Violations***

Evaluation panelist breaches of the Code of Conduct, whether intentional or not, shall be reviewed by ICANN, which may make recommendations for corrective action, if deemed necessary. Serious breaches of the Code may be cause for dismissal of the person, persons or provider committing the infraction.

In a case where ICANN determines that a Panelist has failed to comply with the Code of Conduct, the results of that Panelist's review for all assigned applications will be discarded and the affected applications will undergo a review by new panelists.

Complaints about violations of the Code of Conduct by a Panelist may be brought to the attention of ICANN via the public comment and applicant support mechanisms, throughout the evaluation period. Concerns of applicants regarding panels should be communicated via the defined support channels (see subsection 1.4.2). Concerns

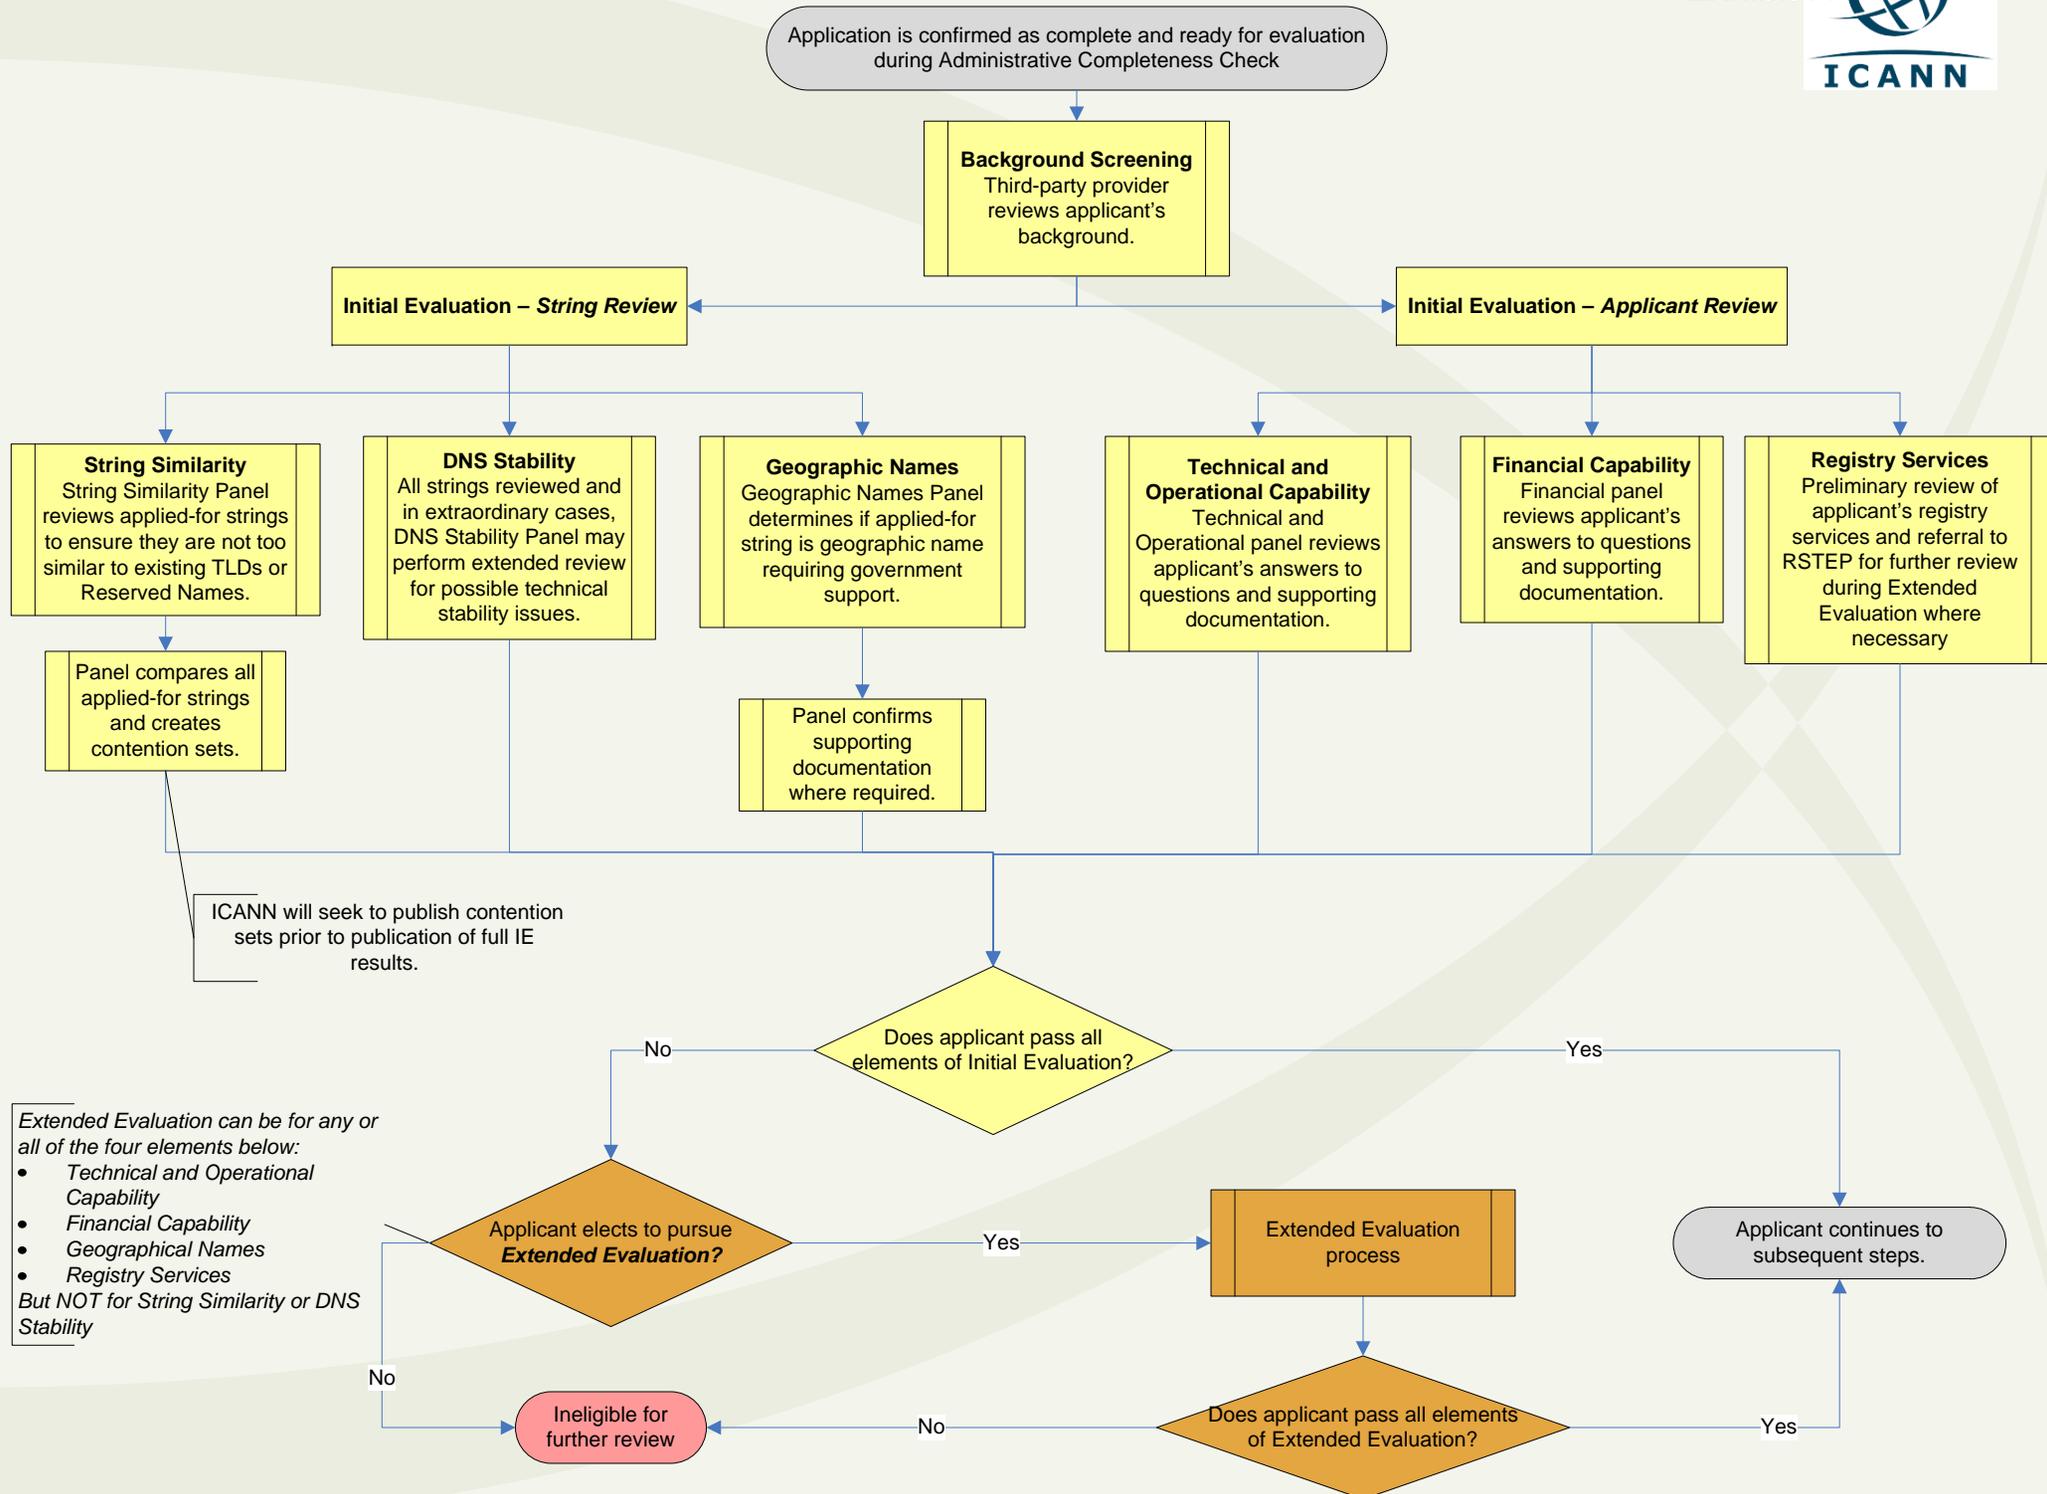

of the general public (i.e., non-applicants) can be raised via the public comment forum, as described in Module 1.

#### **2.4.4 Communication Channels**

---

Defined channels for technical support or exchanges of information with ICANN and with evaluation panels are available to applicants during the Initial Evaluation and Extended Evaluation periods. Contacting individual ICANN staff members, Board members, or individuals engaged by ICANN to perform an evaluation role in order to lobby for a particular outcome or to obtain confidential information about applications under review is not appropriate. In the interests of fairness and equivalent treatment for all applicants, any such individual contacts will be referred to the appropriate communication channels.

# DRAFT - New gTLD Program – Initial Evaluation and Extended Evaluation

Extended Evaluation can be for any or all of the four elements below:

- Technical and Operational Capability
- Financial Capability
- Geographical Names
- Registry Services

But NOT for String Similarity or DNS Stability

## Annex: Separable Country Names List

Under various proposed ICANN policies, gTLD application restrictions on country or territory names are tied to listing in property fields of the ISO 3166-1 standard. Notionally, the ISO 3166-1 standard has an “English short name” field which is the common name for a country and can be used for such protections; however, in some cases this does not represent the common name. This registry seeks to add additional protected elements which are derived from definitions in the ISO 3166-1 standard. An explanation of the various classes is included below.

Separable Country Names List

Code	English Short Name	Cl.	Separable Name

## Maintenance

A Separable Country Names Registry will be maintained and published by ICANN Staff.

Each time the ISO 3166-1 standard is updated with a new entry, this registry will be reappraised to identify if the changes to the standard warrant changes to the entries in this registry. Appraisal will be based on the criteria listing in the "Eligibility" section of this document.

Codes reserved by the ISO 3166 Maintenance Agency do not have any implication on this registry, only entries derived from normally assigned codes appearing in ISO 3166-1 are eligible.

If an ISO code is struck off the ISO 3166-1 standard, any entries in this registry deriving from that code must be struck.

## **Eligibility**

Each record in this registry is derived from the following possible properties:

- Class A:** The ISO 3166-1 English Short Name is comprised of multiple, separable parts whereby the country is comprised of distinct sub-entities. Each of these separable parts is eligible in its own right for consideration as a country name. For example, "Antigua and Barbuda" is comprised of "Antigua" and "Barbuda."
- Class B:** The ISO 3166-1 English Short Name (1) or the ISO 3166-1 English Full Name (2) contains additional language as to the type of country the entity is, which is often not used in common usage when referencing the country. For example, one such short name is "The Bolivarian Republic of Venezuela" for a country in common usage referred to as "Venezuela."
- \*\* Macedonia is a separable name in the context of this list; however, due to the ongoing dispute listed in UN documents between the Hellenic Republic (Greece) and the Former Yugoslav Republic of Macedonia over the name, no country will be afforded attribution or rights to the name "Macedonia" until the dispute over the name has been resolved. See <http://daccess-dds-ny.un.org/doc/UNDOC/GEN/N93/240/37/IMG/N9324037.pdf>.
- Class C:** The ISO 3166-1 Remarks column containing synonyms of the country name, or sub-national entities, as denoted by "often referred to as," "includes", "comprises", "variant" or "principal islands".

In the first two cases, the registry listing must be directly derivative from the English Short Name by excising words and articles. These registry listings do not include vernacular or other non-official terms used to denote the country.

Eligibility is calculated in class order. For example, if a term can be derived both from Class A and Class C, it is only listed as Class A.

## *Sample Letter of Government Support*

**[This letter should be provided on official letterhead]**

ICANN  
Suite 330, 4676 Admiralty Way  
Marina del Rey, CA 90292

Attention: New gTLD Evaluation Process

Subject: Letter for support for [TLD requested]

This letter is to confirm that [government entity] fully supports the application for [TLD] submitted to ICANN by [applicant] in the New gTLD Program. As the [Minister/Secretary/position] I confirm that I have the authority of the [x government/public authority] to be writing to you on this matter. [Explanation of government entity, relevant department, division, office, or agency, and what its functions and responsibilities are]

The gTLD will be used to [explain your understanding of how the name will be used by the applicant. This could include policies developed regarding who can register a name, pricing regime and management structures.] [Government/public authority/department] has worked closely with the applicant in the development of this proposal.

The [x government/public authority] supports this application, and in doing so, understands that in the event that the application is successful, [applicant] will be required to enter into a Registry Agreement with ICANN. In doing so, they will be required to pay fees to ICANN and comply with consensus policies developed through the ICANN multi-stakeholder policy processes.

[Government / public authority] further understands that, in the event of a dispute between [government/public authority] and the applicant, ICANN will comply with a legally binding order from a court in the jurisdiction of [government/public authority].

**[Optional]** This application is being submitted as a community-based application, and as such it is understood that the Registry Agreement will reflect the community restrictions proposed in the application. In the event that we believe the registry is not complying with these restrictions, possible avenues of recourse include the Registry Restrictions Dispute Resolution Procedure.

**[Optional]** I can advise that in the event that this application is successful [government/public authority] will enter into a separate agreement with the applicant. This agreement will outline the conditions under which we support them in the operation of the TLD, and circumstances under which we would withdraw that support. ICANN will not be a party to this agreement, and enforcement of this agreement lies fully with [government/public authority].

[Government / public authority] understands that the Geographic Names Panel engaged by ICANN will, among other things, conduct due diligence on the authenticity of this documentation. I would request that if additional information is required during this process, that [name and contact details] be contacted in the first instance.

Thank you for the opportunity to support this application.

Yours sincerely

Signature from relevant government/public authority

## *Evaluation Questions and Criteria*

Since ICANN was founded in 1998 as a not-for-profit, multi-stakeholder organization, one of its key mandates has been to promote competition in the domain name market. ICANN's mission specifically calls for the corporation to maintain and build on processes that will ensure competition and consumer interests – without compromising Internet security and stability. This includes the consideration and implementation of new gTLDs. It is ICANN's goal to make the criteria and evaluation as objective as possible.

While new gTLDs are viewed by ICANN as important to fostering choice, innovation and competition in domain registration services, the decision to launch these coming new gTLD application rounds followed a detailed and lengthy consultation process with all constituencies of the global Internet community.

Any public or private sector organization can apply to create and operate a new gTLD. However the process is not like simply registering or buying a second-level domain name. Instead, the application process is to evaluate and select candidates capable of running a registry, a business that manages top level domains such as, for example, .COM or .INFO. Any successful applicant will need to meet published operational and technical criteria in order to preserve Internet stability and interoperability.

### *I. Principles of the Technical and Financial New gTLD Evaluation Criteria*

- Principles of conservatism. This is the first round of what is to be an ongoing process for the introduction of new TLDs, including Internationalized Domain Names. Therefore, the criteria in this round require applicants to provide a thorough and thoughtful analysis of the technical requirements to operate a registry and the proposed business model.
- The criteria and evaluation should be as objective as possible.
  - With that goal in mind, an important objective of the new TLD process is to diversify the namespace, with different registry business models and target audiences. In some cases, criteria that are objective, but that ignore the differences in business models and target audiences of new registries, will tend to make the process exclusionary. For example, the business model for a registry targeted to a small community need not possess the same robustness in funding and technical infrastructure as a registry intending to compete with large gTLDs. Therefore purely objective criteria such as a requirement for a certain amount of cash on hand will not provide for the flexibility to consider different business models. The process must provide for an objective evaluation framework, but allow for adaptation according to the differing models applicants will present. Within that framework, applicant responses will be evaluated against the criteria in light of the proposed model.
  - Therefore the criteria should be flexible: able to scale with the overall business approach, providing that the planned approach is consistent and coherent, and can withstand highs and lows.

- Criteria can be objective in areas of registrant protection, for example:
  - Providing for funds to continue operations in the event of a registry failure.
  - Adherence to data escrow, registry failover, and continuity planning requirements.
- The evaluation must strike the correct balance between establishing the business and technical competence of the applicant to operate a registry (to serve the interests of registrants), while not asking for the detailed sort of information or making the judgment that a venture capitalist would. ICANN is not seeking to certify business success but instead seeks to encourage innovation while providing certain safeguards for registrants.
- New registries must be added in a way that maintains DNS stability and security. Therefore, ICANN asks several questions so that the applicant can demonstrate an understanding of the technical requirements to operate a registry. ICANN will ask the applicant to demonstrate actual operational technical compliance prior to delegation. This is in line with current prerequisites for the delegation of a TLD.
- Registrant protection is emphasized in both the criteria and the scoring. Examples of this include asking the applicant to:
  - Plan for the occurrence of contingencies and registry failure by putting in place financial resources to fund the ongoing resolution of names while a replacement operator is found or extended notice can be given to registrants,
  - Demonstrate a capability to understand and plan for business contingencies to afford some protections through the marketplace,
  - Adhere to DNS stability and security requirements as described in the technical section, and
  - Provide access to the widest variety of services.

## *II. Aspects of the Questions Asked in the Application and Evaluation Criteria*

The technical and financial questions are intended to inform and guide the applicant in aspects of registry start-up and operation. The established registry operator should find the questions straightforward while inexperienced applicants should find them a natural part of planning.

Evaluation and scoring (detailed below) will emphasize:

- How thorough are the answers? Are they well thought through and do they provide a sufficient basis for evaluation?
- Demonstration of the ability to operate and fund the registry on an ongoing basis:
  - Funding sources to support technical operations in a manner that ensures stability and security and supports planned expenses,
  - Resilience and sustainability in the face of ups and downs, anticipation of contingencies,
  - Funding to carry on operations in the event of failure.

- Demonstration that the technical plan will likely deliver on best practices for a registry and identification of aspects that might raise DNS stability and security issues.
- Ensures plan integration, consistency and compatibility (responses to questions are not evaluated individually but in comparison to others):
  - Funding adequately covers technical requirements,
  - Funding covers costs,
  - Risks are identified and addressed, in comparison to other aspects of the plan.

### *III. Scoring*

#### Evaluation

- The questions, criteria, scoring and evaluation methodology are to be conducted in accordance with the principles described earlier in section I. With that in mind, globally diverse evaluation panelists will staff evaluation panels. The diversity of evaluators and access to experts in all regions of the world will ensure application evaluations take into account cultural, technical and business norms in the regions from which applications originate.
- Evaluation teams will consist of two independent panels. One will evaluate the applications against the financial criteria. The other will evaluate the applications against the technical & operational criteria. Given the requirement that technical and financial planning be well integrated, the panels will work together and coordinate information transfer where necessary. Other relevant experts (e.g., technical, audit, legal, insurance, finance) in pertinent regions will provide advice as required.
- Precautions will be taken to ensure that no member of the Evaluation Teams will have any interest or association that may be viewed as a real or potential conflict of interest with an applicant or application. All members must adhere to the Code of Conduct and Conflict of Interest guidelines that are found in Module 2.
- Communications between the evaluation teams and the applicants will be through an online interface. During the evaluation, evaluators may pose a set of clarifying questions to an applicant, to which the applicant may respond through the interface.

Confidentiality: ICANN will post applications after the close of the application submission period. The application form notes which parts of the application will be posted.

#### Scoring

- Responses will be evaluated against each criterion. A score will be assigned according to the scoring schedule linked to each question or set of questions. In several questions, 1 point is the maximum score that may be awarded. In several other questions, 2 points are awarded for a response that exceeds requirements, 1 point is awarded for a response that meets requirements and 0 points are awarded for a response that fails to meet requirements. Each question must receive at least a score of "1," making each a "pass/fail" question.
- In the Continuity question in the financial section(see Question #50), up to 3 points are awarded if an applicant provides, at the application stage, a financial instrument that will guarantee ongoing registry operations in the event of a business failure. This extra

point can serve to guarantee passing the financial criteria for applicants who score the minimum passing score for each of the individual criteria. The purpose of this weighting is to reward applicants who make early arrangements for the protection of registrants and to accept relatively riskier business plans where registrants are protected.

- There are 21 Technical & Operational questions. Each question has a criterion and scoring associated with it. The scoring for each is 0, 1, or 2 points as described above. One of the questions (IDN implementation) is optional. Other than the optional questions, all Technical & Operational criteria must be scored a 1 or more or the application will fail the evaluation.
- The total technical score must be equal to or greater than 22 for the application to pass. That means the applicant can pass by:
  - Receiving a 1 on all questions, including the optional question, and a 2 on at least one mandatory question; or
  - Receiving a 1 on all questions, excluding the optional question and a 2 on at least two mandatory questions.

This scoring methodology requires a minimum passing score for each question and a slightly higher average score than the per question minimum to pass.

- There are six Financial questions and six sets of criteria that are scored by rating the answers to one or more of the questions. For example, the question concerning registry operation costs requires consistency between the technical plans (described in the answers to the Technical & Operational questions) and the costs (described in the answers to the costs question).
- The scoring for each of the Financial criteria is 0, 1 or 2 points as described above with the exception of the Continuity question, for which up to 3 points are possible. All questions must receive at least a 1 or the application will fail the evaluation.
- The total financial score on the six criteria must be 8 or greater for the application to pass. That means the applicant can pass by:
  - Scoring a 3 on the continuity criteria, or
  - Scoring a 2 on any two financial criteria.
- Applications that do not pass Initial Evaluation can enter into an extended evaluation process as described in Module 2. The scoring is the same.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Applicant Information	1	Full legal name of the Applicant (the established entity that would enter into a Registry Agreement with ICANN)	Y	Responses to Questions 1 - 12 are required for a complete application. Responses are not scored.			
	2	Address of the principal place of business of the Applicant. This address will be used for contractual purposes. No Post Office boxes are allowed.	Y				
	3	Phone number for the Applicant's principal place of business.	Y				
	4	Fax number for the Applicant's principal place of business.	Y				
	5	Website or URL, if applicable.	Y				
Primary Contact for this Application	6	Name	Y	The primary contact will receive all communications regarding the application. Either the primary or the secondary contact may respond. In the event of a conflict, the communication received from the primary contact will be taken as authoritative. Both contacts listed should also be prepared to receive inquiries from the public.			
		Title	Y				
		Address	Y				
		Phone number	Y				
		Fax number	Y				
		Email address	Y				
Secondary Contact for this Application	7	Name	Y	The secondary contact will be copied on all communications regarding the application. Either the primary or the secondary contact may respond.			
		Title	Y				
		Address	Y				
		Phone number	Y				
		Fax number	Y				
		Email address	Y				
Proof of Legal Establishment	8	(a) Legal form of the Applicant. (e.g., partnership, corporation, non-profit institution).	Y				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(b) State the specific national or other jurisdiction that defines the type of entity identified in 8(a).	Y	In the event of questions regarding proof of establishment, the applicant may be asked for additional details, such as the specific national or other law applying to this type of entity			
		(c) Attach evidence of the applicant's establishment as the type of entity identified in Question 8(a) above, in accordance with the applicable laws identified in Question 8(b).	Y	Applications without valid proof of legal establishment will not be evaluated further.			
	9	(a) If the applying entity is publicly traded, provide the exchange and symbol.	Y				
		(b) If the applying entity is a subsidiary, provide the parent company.	Y				
		(c) If the applying entity is a joint venture, list all joint venture partners.	Y				
	10	Business ID, Tax ID, VAT registration number, or equivalent of the Applicant.	N				
<b>Applicant Background</b>	11	(a) Enter the full name, contact information (permanent residence), and position of all directors (i.e., members of the applicant's Board of Directors, if applicable).	Partial	<p>Applicants should be aware that the names and positions of the individuals listed in response to this question will be published as part of the application. The contact information listed for individuals is for identification purposes only and will not be published as part of the application.</p> <p>Background checks may be conducted on individuals named in the applicant's response to question 11. Any material misstatement or misrepresentation (or omission of material information) may cause the application to be rejected.</p> <p>The applicant certifies that it has obtained permission for the posting of the names and positions of individuals included in this application.</p>			
		(b) Enter the full name, contact information (permanent residence), and position of all officers and partners. Officers are high-level management officials of a corporation or business, for example, a CEO, vice president, secretary, chief financial officer. Partners would be listed in the context of a partnership or other such form of legal entity.	Partial				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(c) Enter the full name, contact information (permanent residence of individual or principal place of business of entity) and position of all shareholders holding at least 15% of shares, and percentage held by each.	Partial				
		(d) For an applying entity that does not have directors, officers, partners, or shareholders, enter the full name, contact information (permanent residence of individual or principal place of business of entity) and position of all individuals having overall legal or executive responsibility for the applying entity.	Partial				
		<p>(e) Indicate whether the applicant or any of the individuals named above:</p> <ul style="list-style-type: none"> <li>i. within the past ten years, has been convicted of any crime related to financial or corporate governance activities, or has been judged by a court to have committed fraud or breach of fiduciary duty, or has been the subject of a judicial determination that is the substantive equivalent of any of these;</li> <li>ii. within the past ten years, has been disciplined by any government or industry regulatory body for conduct involving dishonesty or misuse of funds of others;</li> <li>iii. within the past ten years has been convicted of any willful tax-related fraud or willful evasion of tax liabilities;</li> <li>iv. within the past ten years has been convicted of perjury, forswearing, failing to cooperate with a law enforcement investigation, or making false statements to a law enforcement agency or representative;</li> <li>v. has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications or the Internet to facilitate the commission of crimes;</li> <li>vi. has ever been convicted of any crime involving the use of a weapon, force, or the threat of force;</li> <li>vii. has ever been convicted of any violent or sexual offense victimizing children, the elderly, or</li> </ul>	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>individuals with disabilities;</p> <p>viii. has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988;</p> <p>ix. has ever been convicted or successfully extradited for any offense described in the United Nations Convention against Transnational Organized Crime (all Protocols);</p> <p>x. has been convicted of aiding, abetting, facilitating, enabling, conspiring to commit, or failing to report any of the listed crimes within the respective timeframes specified above;</p> <p>xi. has entered a guilty plea as part of a plea agreement or has a court case in any jurisdiction with a disposition of Adjudicated Guilty or Adjudication Withheld (or regional equivalents) for any of the listed crimes within the respective timeframes listed above;</p> <p>xii. is the subject of a disqualification imposed by ICANN and in effect at the time of this application.</p> <p>If any of the above events have occurred, please provide details.</p>					
		<p>(f) Indicate whether the applicant or any of the individuals named above have been involved in any decisions indicating that the applicant or individual named in the application was engaged in cybersquatting, as defined in the Uniform Domain Name Dispute Resolution Policy (UDRP), Anti-cybersquatting Consumer Protection Act (ACPA), or other equivalent legislation, or was engaged in reverse domain name hijacking under the UDRP or bad faith or reckless disregard under the ACPA or equivalent legislation.</p>	N	<p>ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook for details.</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(g) Disclose whether the applicant or any of the individuals named above has been involved in any administrative or other legal proceeding in which allegations of intellectual property infringement relating to registration or use of a domain name have been made. Provide an explanation related to each such instance.	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook for details.			
		(h) Provide an explanation for any additional background information that may be found concerning the applicant or any individual named in the application, which may affect eligibility, including any criminal convictions not identified above.	N				
<b>Evaluation Fee</b>	12	(a) Enter the confirmation information for payment of the evaluation fee (e.g., wire transfer confirmation number).	N	The evaluation fee is paid in the form of a deposit at the time of user registration, and submission of the remaining amount at the time the full application is submitted. The information in question 12 is required for each payment.			
		(b) Payer name	N				
		(c) Payer address	N				
		(d) Wiring bank	N				
		(e) Bank address	N				
		(f) Wire date	N				
<b>Applied-for gTLD string</b>	13	Provide the applied-for gTLD string. If applying for an IDN, provide the U-label.	Y	Responses to Questions 13-17 are not scored, but are used for database and validation purposes.  The U-label is an IDNA-valid string of Unicode characters, including at least one non-ASCII character.			
	14	(a) If applying for an IDN, provide the A-label (beginning with "xn--").	Y				
		(b) If an IDN, provide the meaning, or restatement of the string in English, that is, a description of the literal meaning of the string in the opinion of the applicant.	Y				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(c) If an IDN, provide the language of the label (both in English and as referenced by ISO-639-1).	Y				
		(d) If an IDN, provide the script of the label (both in English and as referenced by ISO 15924).	Y				
		(e) If an IDN, list all code points contained in the U-label according to Unicode form.	Y	For example, the string "HELLO" would be listed as U+0048 U+0065 U+006C U+006C U+006F.			
	15	(a) If an IDN, upload IDN tables for the proposed registry. An IDN table must include: <ol style="list-style-type: none"> <li>1. the applied-for gTLD string relevant to the tables,</li> <li>2. the script or language designator (as defined in BCP 47),</li> <li>3. table version number,</li> <li>4. effective date (DD Month YYYY), and</li> <li>5. contact name, email address, and phone number.</li> </ol> <p>Submission of IDN tables in a standards-based format is encouraged.</p>	Y	In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string. IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second level.			
		(b) Describe the process used for development of the IDN tables submitted, including consultations and sources used.	Y				
		(c) List any variants to the applied-for gTLD string according to the relevant IDN tables.	Y	Variant TLD strings will not be delegated as a result of this application. Variant strings will be checked for consistency and, if the application is approved, will be entered on a Declared IDN Variants List to allow for future allocation once a variant management mechanism is established for the top level. Inclusion of variant TLD strings in this application is for information only and confers no right or claim to these strings upon the applicant.			
	16	Describe the applicant's efforts to ensure that there are no known operational or rendering problems concerning the applied-for gTLD string. If such issues are known, describe steps that will be taken to mitigate these issues in software and other applications.	Y				
	17	<b>OPTIONAL.</b> Provide a representation of the label according to the International Phonetic Alphabet ( <a href="http://www.langsci.ucl.ac.uk/ipa/">http://www.langsci.ucl.ac.uk/ipa/</a> ).	Y	If provided, this information will be used as a guide to ICANN in communications regarding the application.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Mission/Purpose	18	(a) Describe the mission/purpose of your proposed gTLD.	Y	<p>The information gathered in response to Question 18 is intended to inform the post-launch review of the New gTLD Program, from the perspective of assessing the relative costs and benefits achieved in the expanded gTLD space.</p> <p>For the application to be considered complete, answers to this section must be fulsome and sufficiently quantitative and detailed to inform future study on plans vs. results.</p> <p>The New gTLD Program will be reviewed, as specified in section 9.3 of the Affirmation of Commitments. This will include consideration of the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion.</p> <p>The information gathered in this section will be one source of input to help inform this review. This information is not used as part of the evaluation or scoring of the application, except to the extent that the information may overlap with questions or evaluation areas that are scored.</p> <p>An applicant wishing to designate this application as community-based should ensure that these responses are consistent with its responses for question 20 below.</p>			
		<p>(b) How do you expect that your proposed gTLD will benefit registrants, Internet users, and others? Answers should address the following points:</p> <ul style="list-style-type: none"> <li>i. What is the goal of your proposed gTLD in terms of areas of specialty, service levels, or reputation?</li> <li>ii. What do you anticipate your proposed gTLD will add to the current space, in terms of</li> </ul>	Y				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>competition, differentiation, or innovation?</p> <p>iii. What goals does your proposed gTLD have in terms of user experience?</p> <p>iv. Provide a complete description of the applicant's intended registration policies in support of the goals listed above.</p> <p>v. Will your proposed gTLD impose any measures for protecting the privacy or confidential information of registrants or users? If so, please describe any such measures.</p> <p>vi. Describe whether and in what ways outreach and communications will help to achieve your projected benefits.</p>					
	18	<p>(c) What operating rules will you adopt to eliminate or minimize social costs (e.g., time or financial resource costs, as well as various types of consumer vulnerabilities)? What other steps will you take to minimize negative consequences/costs imposed upon consumers? Answers should address the following points:</p> <p>i. How will multiple applications for a particular domain name be resolved, for example, by auction or on a first-come/first-serve basis?</p> <p>ii. Explain any cost benefits for registrants you intend to implement (e.g., advantageous pricing, introductory discounts, bulk registration discounts).</p> <p>iii. Note that the Registry Agreement requires that registrars be offered the option to obtain initial domain name registrations for periods of one to ten years at the discretion of the registrar, but no greater than ten years. Additionally, the Registry</p>	Y				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		Agreement requires advance written notice of price increases. Do you intend to make contractual commitments to registrants regarding the magnitude of price escalation? If so, please describe your plans.					
Community-based Designation	19	Is the application for a community-based TLD?	Y	<p>There is a presumption that the application is a standard application (as defined in the Applicant Guidebook) if this question is left unanswered.</p> <p>The applicant's designation as standard or community-based cannot be changed once the application is submitted.</p>			
	20	(a) Provide the name and full description of the community that the applicant is committing to serve. In the event that this application is included in a community priority evaluation, it will be scored based on the community identified in response to this question. The name of the community does not have to be formally adopted for the application to be designated as community-based.	Y	<p>Descriptions should include:</p> <ul style="list-style-type: none"> <li>• How the community is delineated from Internet users generally. Such descriptions may include, but are not limited to, the following: membership, registration, or licensing processes, operation in a particular industry, use of a language.</li> <li>• How the community is structured and organized. For a community consisting of an alliance of groups, details about the constituent parts are required.</li> <li>• When the community was established, including the date(s) of formal organization, if any, as well as a description of community activities to date.</li> <li>• The current estimated size of the community, both as to membership and geographic extent.</li> </ul>		<p>Responses to Question 20 will be regarded as firm commitments to the specified community and reflected in the Registry Agreement, provided the application is successful.</p> <p>Responses are not scored in the Initial Evaluation. Responses may be scored in a community priority evaluation, if applicable. Criteria and scoring methodology for the community priority evaluation are described in Module 4 of the Applicant Guidebook.</p>	
		(b) Explain the applicant's relationship to the community identified in 20(a).	Y	<p>Explanations should clearly state:</p> <ul style="list-style-type: none"> <li>• Relations to any community organizations.</li> <li>• Relations to the community and its constituent parts/groups.</li> <li>• Accountability mechanisms of the applicant to the community.</li> </ul>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(c) Provide a description of the community-based purpose of the applied-for gTLD.	Y	Descriptions should include: <ul style="list-style-type: none"> <li>• Intended registrants in the TLD.</li> <li>• Intended end-users of the TLD.</li> <li>• Related activities the applicant has carried out or intends to carry out in service of this purpose.</li> <li>• Explanation of how the purpose is of a lasting nature.</li> </ul>			
		(d) Explain the relationship between the applied-for gTLD string and the community identified in 20(a).	Y	Explanations should clearly state: <ul style="list-style-type: none"> <li>• relationship to the established name, if any, of the community.</li> <li>• relationship to the identification of community members.</li> <li>• any connotations the string may have beyond the community.</li> </ul>			
		(e) Provide a complete description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD. Policies and enforcement mechanisms are expected to constitute a coherent set.	Y	Descriptions should include proposed policies, if any, on the following: <ul style="list-style-type: none"> <li>• Eligibility: who is eligible to register a second-level name in the gTLD, and how will eligibility be determined.</li> <li>• Name selection: what types of second-level names may be registered in the gTLD.</li> <li>• Content/Use: what restrictions, if any, the registry operator will impose on how a registrant may use its registered name.</li> <li>• Enforcement: what investigation practices and mechanisms exist to enforce the policies above, what resources are allocated for enforcement, and what appeal mechanisms are available to registrants.</li> </ul>			
		(f) Attach any written endorsements for the application from established institutions representative of the community identified in 20(a). An applicant may submit written endorsements by multiple institutions, if relevant to the community.	Y	At least one such endorsement is required for a complete application. The form and content of the endorsement are at the discretion of the party providing the endorsement; however, the letter must identify the applied-for gTLD string and the applying entity, include an express statement support for the application, and the supply the contact information of the entity providing the endorsement.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				Endorsements from institutions not mentioned in the response to 20(b) should be accompanied by a clear description of each such institution's relationship to the community.			
Geographic Names	21	(a) Is the application for a geographic name?	Y	<p>An applied-for gTLD string is considered a geographic name requiring government support if it is: (a) the capital city name of a country or territory listed in the ISO 3166-1 standard; (b) a city name, where it is clear from statements in the application that the applicant intends to use the gTLD for purposes associated with the city name; (c) a sub-national place name listed in the ISO 3166-2 standard; or (d) a name listed as a UNESCO region or appearing on the "Composition of macro geographic (continental) or regions, geographic sub-regions, and selected economic and other groupings" list. See Module 2 for complete definitions and criteria.</p> <p>An application for a country or territory name, as defined in the Applicant Guidebook, will not be approved.</p>			
		(b) If a geographic name, attach documentation of support or non-objection from all relevant governments or public authorities.	N	See the documentation requirements in Module 2 of the Applicant Guidebook.			
Protection of Geographic Names	22	Describe proposed measures for protection of geographic names at the second and other levels in the applied-for gTLD. This should include any applicable rules and procedures for reservation and/or release of such names.	Y	<p>Applicants should consider and describe how they will incorporate Governmental Advisory Committee (GAC) advice in their management of second-level domain name registrations. See "Principles regarding New gTLDs" at <a href="http://gac.icann.org/important-documents">http://gac.icann.org/important-documents</a>.</p> <p>For reference, applicants may draw on existing methodology developed for the reservation and release of country names in the .INFO top-level domain. See <a href="http://gac.icann.org/system/files/dotinfocircular_0.pdf">http://gac.icann.org/system/files/dotinfocircular_0.pdf</a>.</p> <p>Proposed measures will be posted for public comment as part of the application. However, note that procedures for release of geographic names at the second level</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				must be separately approved according to Specification 5 of the Registry Agreement.			
Registry Services	23	<p>Provide name and full description of all the Registry Services to be provided. Descriptions should include both technical and business components of each proposed service, and address any potential security or stability concerns.</p> <p>The following registry services are customary services offered by a registry operator:</p> <ul style="list-style-type: none"> <li>A. Receipt of data from registrars concerning registration of domain names and name servers.</li> <li>B. Dissemination of TLD zone files.</li> <li>C. Dissemination of contact or other information concerning domain name registrations (Whois service).</li> <li>D. Internationalized Domain Names, where offered.</li> <li>E. DNS Security Extensions (DNSSEC).</li> </ul> <p>The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.</p> <p>Additional proposed registry services that are unique to the registry must also be described.</p>	Y	<p>Registry Services are defined as the following: (1) operations of the Registry critical to the following tasks: (i) the receipt of data from registrars concerning registrations of domain names and name servers; (ii) provision to registrars of status information relating to the zone servers for the TLD; (iii) dissemination of TLD zone files; (iv) operation of the Registry zone servers; and (v) dissemination of contact and other information concerning domain name server registrations in the TLD as required by the Registry Agreement; and (2) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy; (3) any other products or services that only a Registry Operator is capable of providing, by reason of its designation as the Registry Operator. A full definition of Registry Services can be found at <a href="http://www.icann.org/en/registries/rsep/rsep.html">http://www.icann.org/en/registries/rsep/rsep.html</a>.</p> <p>Security: For purposes of this Applicant Guidebook, an effect on security by the proposed Registry Service means (1) the unauthorized disclosure, alteration, insertion or destruction of Registry Data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with applicable standards.</p> <p>Stability: For purposes of this Applicant Guidebook, an effect on stability shall mean that the proposed Registry Service (1) is not compliant with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant Standards-Track or Best Current Practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects</p>		<p>Responses are not scored. A preliminary assessment will be made to determine if there are potential security or stability issues with any of the applicant's proposed Registry Services. If any such issues are identified, the application will be referred for an extended review. See the description of the Registry Services review process in Module 2 of the Applicant Guidebook. Any information contained in the application may be considered as part of the Registry Services review. If its application is approved, applicant may engage in only those registry services defined in the application, unless a new request is submitted to ICANN in accordance with the Registry Agreement.</p>	

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				the throughput, response time, consistency or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant Standards-Track or Best Current Practice RFCs and relying on Registry Operator's delegation information or provisioning.			
Demonstration of Technical & Operational Capability (External)	24	<p>Shared Registration System (SRS) Performance: describe</p> <ul style="list-style-type: none"> <li>the plan for operation of a robust and reliable SRS. SRS is a critical registry function for enabling multiple registrars to provide domain name registration services in the TLD. SRS must include the EPP interface to the registry, as well as any other interfaces intended to be provided, if they are critical to the functioning of the registry. Please refer to the requirements in Specification 6 (section 1.2) and Specification 10 (SLA Matrix) attached to the Registry Agreement; and</li> <li>resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>A complete answer should include, but is not limited to:</p> <ul style="list-style-type: none"> <li>A high-level SRS system description;</li> <li>Representative network diagram(s);</li> </ul>	Y	<p>The questions in this section (24-44) are intended to give applicants an opportunity to demonstrate their technical and operational capabilities to run a registry. In the event that an applicant chooses to outsource one or more parts of its registry operations, the applicant should still provide the full details of the technical arrangements.</p> <p>Note that the resource plans provided in this section assist in validating the technical and operational plans as well as informing the cost estimates in the Financial section below.</p> <p>Questions 24-30(a) are designed to provide a description of the applicant's intended technical and operational approach for those registry functions that are outward-facing, i.e., interactions with registrars, registrants, and various DNS users. Responses to these questions will be published to allow review by affected parties.</p>	0-1	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> <li>a plan for operating a robust and reliable SRS, one of the five critical registry functions;</li> <li>scalability and performance consistent with the overall business approach, and planned size of the registry;</li> <li>a technical plan that is adequately resourced in the planned costs detailed in the financial section; and</li> <li>evidence of compliance with Specification 6 (section 1.2) to the Registry Agreement.</li> </ol>	<p><b>1 - meets requirements:</b> Response includes</p> <ol style="list-style-type: none"> <li>An adequate description of SRS that substantially demonstrates the applicant's capabilities and knowledge required to meet this element;</li> <li>Details of a well-developed plan to operate a robust and reliable SRS;</li> <li>SRS plans are sufficient to result in compliance with Specification 6 and Specification 10 to the Registry Agreement;</li> <li>SRS is consistent with the technical, operational and financial approach described in the application; and</li> <li>Demonstrates that adequate technical resources are already on hand, or committed or readily available to carry out this function.</li> </ol> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<ul style="list-style-type: none"> <li>• Number of servers;</li> <li>• Description of interconnectivity with other registry systems;</li> <li>• Frequency of synchronization between servers; and</li> <li>• Synchronization scheme (e.g., hot standby, cold standby).</li> </ul> <p>A complete answer is expected to be approximately 2-5 pages.</p>					
	25	<p>Extensible Provisioning Protocol (EPP): provide a detailed description of the interface with registrars, including how the applicant will comply with EPP in RFCs 3735 (if applicable), and 5730-5734.</p> <p>If intending to provide proprietary EPP extensions, provide documentation consistent with RFC 3735, including the EPP templates and schemas that will be used.</p> <p>Describe resourcing plans (number and description of personnel roles allocated to this area).</p> <p>A complete answer is expected to be approximately 2 to 5 pages. If there are proprietary EPP extensions, a complete answer is also expected to be 2 to 5 pages per EPP extension.</p>	Y		0-1	<p>Complete answer demonstrates:</p> <ul style="list-style-type: none"> <li>(1) complete knowledge and understanding of this aspect of registry technical requirements;</li> <li>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry; and</li> <li>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section;</li> <li>(4) ability to comply with relevant RFCs;</li> <li>(5) if applicable, a well-documented implementation of any proprietary EPP extensions; and</li> <li>(6) if applicable, how proprietary EPP extensions are consistent with the registration lifecycle as described in Question 27.</li> </ul>	<p><b>1 - meets requirements:</b> Response includes</p> <ul style="list-style-type: none"> <li>(1) Adequate description of EPP that substantially demonstrates the applicant's capability and knowledge required to meet this element;</li> <li>(2) Sufficient evidence that any proprietary EPP extensions are compliant with RFCs and provide all necessary functionalities for the provision of registry services;</li> <li>(3) EPP interface is consistent with the technical, operational, and financial approach as described in the application; and</li> <li>(4) Demonstrates that technical resources are already on hand, or committed or readily available.</li> </ul> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
	26	<p>Whois: describe</p> <ul style="list-style-type: none"> <li>• how the applicant will comply with Whois specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement;</li> <li>• how the Applicant's Whois service will comply with RFC 3912; and</li> <li>• resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>A complete answer should include, but is not limited to:</p> <ul style="list-style-type: none"> <li>• A high-level Whois system description;</li> <li>• Relevant network diagram(s);</li> <li>• IT and infrastructure resources (e.g., servers, switches, routers and other components);</li> <li>• Description of interconnectivity with other registry systems; and</li> <li>• Frequency of synchronization between servers.</li> </ul> <p>To be eligible for a score of 2, answers must also include:</p> <ul style="list-style-type: none"> <li>• Provision for Searchable Whois capabilities; and</li> <li>• A description of potential forms of abuse of this feature, how these risks will be mitigated, and the basis for these descriptions.</li> </ul> <p>A complete answer is expected to be approximately 2 to 5 pages.</p>	Y	<p>The Registry Agreement (Specification 4) requires provision of Whois lookup services for all names registered in the TLD. This is a minimum requirement. Provision for Searchable Whois as defined in the scoring column is a requirement for achieving a score of 2 points.</p>	0-2	<p>Complete answer demonstrates:</p> <p>(1) complete knowledge and understanding of this aspect of registry technical requirements, (one of the five critical registry functions);</p> <p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry;</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section;</p> <p>(4) ability to comply with relevant RFCs;</p> <p>(5) evidence of compliance with Specifications 4 and 10 to the Registry Agreement; and</p> <p>(6) if applicable, a well-documented implementation of Searchable Whois.</p>	<p><b>2 – exceeds requirements:</b> Response meets all the attributes for a score of 1 and includes:</p> <p>(1) A Searchable Whois service: Whois service includes web-based search capabilities by domain name, registrant name, postal address, contact names, registrar IDs, and Internet Protocol addresses without arbitrary limit. Boolean search capabilities may be offered. The service shall include appropriate precautions to avoid abuse of this feature (e.g., limiting access to legitimate authorized users), and the application demonstrates compliance with any applicable privacy laws or policies.</p> <p><b>1 - meets requirements:</b> Response includes</p> <p>(1) adequate description of Whois service that substantially demonstrates the applicant's capability and knowledge required to meet this element;</p> <p>(2) Evidence that Whois services are compliant with RFCs, Specifications 4 and 10 to the Registry Agreement, and any other contractual requirements including all necessary functionalities for user interface;</p> <p>(3) Whois capabilities consistent with the technical, operational, and financial approach as described in the application; and</p> <p>(4) demonstrates an adequate level of resources that are already on hand or readily available to carry out this function.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
	27	<p>Registration Life Cycle: provide a detailed description of the proposed registration lifecycle for domain names in the proposed gTLD. The description must:</p> <ul style="list-style-type: none"> <li>explain the various registration states as well as the criteria and procedures that are used to change state;</li> <li>describe the typical registration lifecycle of create/update/delete and all intervening steps such as pending, locked, expired, and transferred that may apply;</li> <li>clearly explain any time elements that are involved - for instance details of add-grace or redemption grace periods, or notice periods for renewals or transfers; and</li> <li>describe resourcing plans for this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>The description of the registration lifecycle should be supplemented by the inclusion of a state diagram, which captures definitions, explanations of trigger points, and transitions from state to state.</p> <p>If applicable, provide definitions for aspects of the registration lifecycle that are not covered by standard EPP RFCs.</p> <p>A complete answer is expected to be approximately 3 to 5 pages.</p>	Y		0-1	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> <li>complete knowledge and understanding of registration lifecycles and states;</li> <li>consistency with any specific commitments made to registrants as adapted to the overall business approach for the proposed gTLD; and</li> <li>the ability to comply with relevant RFCs.</li> </ol>	<p><b>1 - meets requirements:</b> Response includes</p> <ol style="list-style-type: none"> <li>An adequate description of the registration lifecycle that substantially demonstrates the applicant's capabilities and knowledge required to meet this element;</li> <li>Details of a fully developed registration life cycle with definition of various registration states, transition between the states, and trigger points;</li> <li>A registration lifecycle that is consistent with any commitments to registrants and with technical, operational, and financial plans described in the application; and</li> <li>Demonstrates an adequate level of resources that are already on hand or committed or readily available to carry out this function.</li> </ol> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score 1.</p>
	28	<p>Abuse Prevention and Mitigation: Applicants should describe the proposed policies and procedures to minimize abusive registrations and other activities that have a negative impact on Internet users. A complete answer should include, but is not limited to:</p> <ul style="list-style-type: none"> <li>An implementation plan to establish and publish on its website a single abuse point of contact responsible for addressing matters requiring expedited attention and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller;</li> </ul>	Y	<p>Note that, while orphan glue often supports correct and ordinary operation of the DNS, registry operators will be required to take action to remove orphan glue records (as defined at <a href="http://www.icann.org/en/committees/security/sac048.pdf">http://www.icann.org/en/committees/security/sac048.pdf</a>) when provided with evidence in written form that such records are present in connection with malicious conduct.</p>	0-2	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> <li>Comprehensive abuse policies, which include clear definitions of what constitutes abuse in the TLD, and procedures that will effectively minimize potential for abuse in the TLD;</li> <li>Plans are adequately resourced in the planned costs detailed in the financial section;</li> </ol>	<p><b>2 - exceeds requirements:</b> Response meets all the attributes for a score of 1 and includes:</p> <ol style="list-style-type: none"> <li>Details of measures to promote Whois accuracy, using measures specified here or other measures commensurate in their effectiveness; and</li> <li>Measures from at least one additional area to be eligible for 2 points as described in the question.</li> </ol> <p><b>1 - meets requirements</b> Response includes:</p> <ol style="list-style-type: none"> <li>An adequate description of abuse prevention and mitigation policies</li> </ol>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<ul style="list-style-type: none"> <li>• Policies for handling complaints regarding abuse;</li> <li>• Proposed measures for removal of orphan glue records for names removed from the zone when provided with evidence in written form that the glue is present in connection with malicious conduct (see Specification 6); and</li> <li>• Resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>To be eligible for a score of 2, answers must include measures to promote Whois accuracy as well as measures from one other area as described below.</p> <ul style="list-style-type: none"> <li>• Measures to promote Whois accuracy (can be undertaken by the registry directly or by registrars via requirements in the Registry-Registrar Agreement (RRA)) may include, but are not limited to:               <ul style="list-style-type: none"> <li>○ Authentication of registrant information as complete and accurate at time of registration. Measures to accomplish this could include performing background checks, verifying all contact information of principals mentioned in registration data, reviewing proof of establishment documentation, and other means.</li> <li>○ Regular monitoring of registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete Whois data; and</li> <li>○ If relying on registrars to enforce measures, establishing policies and procedures to ensure compliance, which may include audits, financial incentives, penalties, or other means. Note that the requirements of the RAA</li> </ul> </li> </ul>				(3) Policies and procedures identify and address the abusive use of registered names at startup and on an ongoing basis; and (4) When executed in accordance with the Registry Agreement, plans will result in compliance with contractual requirements.	and procedures that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; (2) Details of well-developed abuse policies and procedures; (3) Plans are sufficient to result in compliance with contractual requirements; (4) Plans are consistent with the technical, operational, and financial approach described in the application, and any commitments made to registrants; and (5) Demonstrates an adequate level of resources that are on hand, committed, or readily available to carry out this function. <b>0 – fails requirements</b> Does not meet all the requirements to score 1.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>will continue to apply to all ICANN-accredited registrars.</p> <ul style="list-style-type: none"> <li>• A description of policies and procedures that define malicious or abusive behavior, capture metrics, and establish Service Level Requirements for resolution, including service levels for responding to law enforcement requests. This may include rapid takedown or suspension systems and sharing information regarding malicious or abusive behavior with industry partners;</li> <li>• Adequate controls to ensure proper access to domain functions (can be undertaken by the registry directly or by registrars via requirements in the Registry-Registrar Agreement (RRA)) may include, but are not limited to:               <ul style="list-style-type: none"> <li>○ Requiring multi-factor authentication (i.e., strong passwords, tokens, one-time passwords) from registrants to process update, transfers, and deletion requests;</li> <li>○ Requiring multiple, unique points of contact to request and/or approve update, transfer, and deletion requests; and</li> <li>○ Requiring the notification of multiple, unique points of contact when a domain has been updated, transferred, or deleted.</li> </ul> </li> </ul> <p>A complete answer is expected to be approximately 10 to 20 pages.</p>					
	29	<p>Rights Protection Mechanisms: Applicants must describe how their registry will comply with policies and practices that minimize abusive registrations and other activities that affect the legal rights of others, such as the Uniform Domain Name Dispute Resolution Policy (UDRP), Uniform Rapid Suspension (URS) system, and Trademark Claims and Sunrise services at startup.</p> <p>A complete answer should include:</p> <ul style="list-style-type: none"> <li>• A description of how the registry operator will implement safeguards</li> </ul>	Y		0-2	<p>Complete answer describes mechanisms designed to:</p> <p>(1) prevent abusive registrations, and            (2) identify and address the abusive use of registered names on an ongoing basis.</p>	<p><b>2 - exceeds requirements:</b> Response meets all attributes for a score of 1 and includes:</p> <p>(1) Identification of rights protection as a core objective, supported by a well-developed plan for rights protection; and            (2) Mechanisms for providing effective protections that exceed minimum requirements (e.g., RPMs in addition to those required in the registry agreement).</p> <p><b>1 - meets requirements:</b> Response includes</p>

	37	<p>Data Backup Policies &amp; Procedures: provide</p> <ul style="list-style-type: none"> <li>• details of frequency and procedures for backup of data,</li> <li>• hardware, and systems used for backup,</li> <li>• data format,</li> <li>• data backup features,</li> <li>• backup testing procedures,</li> <li>• procedures for retrieval of data/rebuild of database,</li> <li>• storage controls and procedures, and</li> <li>• resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>A complete answer is expected to be approximately 3 to 5 pages.</p>	N		0-1	<p>Complete answer demonstrates:</p> <p>(1) detailed backup and retrieval processes deployed;</p> <p>(2) backup and retrieval process and frequency are consistent with the overall business approach and planned size of the registry; and</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section.</p>	<p><b>1 - meets requirements:</b> Response includes</p> <p>(1) Adequate description of backup policies and procedures that substantially demonstrate the applicant's capabilities and knowledge required to meet this element;</p> <p>(2) A description of leading practices being or to be followed;</p> <p>(3) Backup procedures consistent with the technical, operational, and financial approach as described in the application; and</p> <p>(4) Demonstrates an adequate level of resources that are on hand, or committed or readily available to carry out this function.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score a 1.</p>
	38	<p>Data Escrow: describe</p> <ul style="list-style-type: none"> <li>• how the applicant will comply with the data escrow requirements documented in the Registry Data Escrow Specification (Specification 2 of the Registry Agreement); and</li> <li>• resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>A complete answer is expected to be approximately 3 to 5 pages</p>	N		0-1	<p>Complete answer demonstrates:</p> <p>(1) complete knowledge and understanding of data escrow, one of the five critical registry functions;</p> <p>(2) compliance with Specification 2 of the Registry Agreement;</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and</p> <p>(4) the escrow arrangement is consistent with the overall business approach and size/scope of the registry.</p>	<p><b>1 – meets requirements:</b> Response includes</p> <p>(1) Adequate description of a Data Escrow process that substantially demonstrates the applicant's capability and knowledge required to meet this element;</p> <p>(2) Data escrow plans are sufficient to result in compliance with the Data Escrow Specification (Specification 2 to the Registry Agreement);</p> <p>(3) Escrow capabilities are consistent with the technical, operational, and financial approach as described in the application; and</p> <p>(4) Demonstrates an adequate level of resources that are on hand, committed, or readily available to carry out this function.</p> <p><b>0 – fails requirements:</b> Does not meet all the requirements to score a 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
	39	<p>Registry Continuity: describe how the applicant will comply with registry continuity obligations as described in Specification 6 (section 1.3) to the registry agreement. This includes conducting registry operations using diverse, redundant servers to ensure continued operation of critical functions in the case of technical failure.</p> <p>Describe resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</p> <p>The response should include, but is not limited to, the following elements of the business continuity plan:</p> <ul style="list-style-type: none"> <li>• Identification of risks and threats to compliance with registry continuity obligations;</li> <li>• Identification and definitions of vital business functions (which may include registry services beyond the five critical registry functions) versus other registry functions and supporting operations and technology;</li> <li>• Definitions of Recovery Point Objectives and Recovery Time Objective; and</li> <li>• Descriptions of testing plans to promote compliance with relevant obligations.</li> </ul> <p>To be eligible for a score of 2, answers must also include:</p> <ul style="list-style-type: none"> <li>• A highly detailed plan that provides for leading practice levels of availability; and</li> <li>• Evidence of concrete steps such as a contract with a backup provider (in addition to any currently designated service operator) or a maintained hot site.</li> </ul> <p>A complete answer is expected to be approximately 10 to 15 pages.</p>	N	<p>For reference, applicants should review the ICANN gTLD Registry Continuity Plan at <a href="http://www.icann.org/en/registries/continuity/gtld-registry-continuity-plan-25apr09-en.pdf">http://www.icann.org/en/registries/continuity/gtld-registry-continuity-plan-25apr09-en.pdf</a>.</p> <p>A Recovery Point Objective (RPO) refers to the point in time to which data should be recovered following a business disruption or disaster. The RPO allows an organization to define a window of time before a disruption or disaster during which data may be lost and is independent of the time it takes to get a system back on-line. If the RPO of a company is two hours, then when a system is brought back on-line after a disruption/disaster, all data must be restored to a point within two hours before the disaster.</p> <p>A Recovery Time Objective (RTO) is the duration of time within which a process must be restored after a business disruption or disaster to avoid what the entity may deem as unacceptable consequences. For example, pursuant to the draft Registry Agreement DNS service must not be down for longer than 4 hours. At 4 hours ICANN may invoke the use of an Emergency Back End Registry Operator to take over this function. The entity may deem this to be an unacceptable consequence therefore they may set their RTO to be something less than 4 hours and would build continuity plans accordingly.</p> <p>Vital business functions are functions that are critical to the success of the operation. For example, if a registry operator provides an additional service beyond the five critical registry functions, that it deems as central to its TLD, or supports an operation that is central to the TLD, this might be identified as a vital business function.</p>	0-2	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> <li>(1) detailed description showing plans for compliance with registry continuity obligations;</li> <li>(2) a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry;</li> <li>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and</li> <li>(4) evidence of compliance with Specification 6 to the Registry Agreement.</li> </ol>	<p><b>2 - exceeds requirements:</b> Response meets all attributes for a score of 1 and includes:</p> <ol style="list-style-type: none"> <li>(1) Highly developed and detailed processes for maintaining registry continuity; and</li> <li>(2) Evidence of concrete steps, such as a contract with a backup service provider or a maintained hot site.</li> </ol> <p><b>1 - meets requirements:</b> Response includes:</p> <ol style="list-style-type: none"> <li>(1) Adequate description of a Registry Continuity plan that substantially demonstrates capability and knowledge required to meet this element;</li> <li>(2) Continuity plans are sufficient to result in compliance with requirements (Specification 6);</li> <li>(3) Continuity plans are consistent with the technical, operational, and financial approach as described in the application; and</li> <li>(4) Demonstrates an adequate level of resources that are on hand, committed readily available to carry out this function.</li> </ol> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score a 1.</p>
	40	<p>Registry Transition: provide a Service Migration plan (as described in the Registry Transition Processes) that could be followed in the event that it becomes necessary to permanently transition the proposed gTLD to a new operator. The plan must take into account, and be</p>	N		0-1	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> <li>(1) complete knowledge and understanding of the Registry Transition Processes; and</li> </ol>	<p><b>1 - meets requirements:</b> Response includes</p> <ol style="list-style-type: none"> <li>(1) Adequate description of a registry transition plan that substantially demonstrates the applicant's capability and knowledge required</li> </ol>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>consistent with the vital business functions identified in the previous question.</p> <p>Elements of the plan may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• Preparatory steps needed for the transition of critical registry functions;</li> <li>• Monitoring during registry transition and efforts to minimize any interruption to critical registry functions during this time; and</li> <li>• Contingency plans in the event that any part of the registry transition is unable to move forward according to the plan.</li> </ul> <p>A complete answer is expected to be approximately 5 to 10 pages.</p>				<p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry.</p>	<p>to meet this element;</p> <p>(2) A description of an adequate registry transition plan with appropriate monitoring during registry transition; and</p> <p>(3) Transition plan is consistent with the technical, operational, and financial approach as described in the application.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score a 1.</p>
	41	<p>Failover Testing: provide</p> <ul style="list-style-type: none"> <li>• a description of the failover testing plan, including mandatory annual testing of the plan. Examples may include a description of plans to test failover of data centers or operations to alternate sites, from a hot to a cold facility, registry data escrow testing, or other mechanisms. The plan must take into account and be consistent with the vital business functions identified in Question 39; and</li> <li>• resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>The failover testing plan should include, but is not limited to, the following elements:</p> <ul style="list-style-type: none"> <li>• Types of testing (e.g., walkthroughs, takedown of sites) and the frequency of testing;</li> <li>• How results are captured, what is done with the results, and with whom results are shared;</li> <li>• How test plans are updated (e.g., what triggers an update, change management</li> </ul>	N		0-1	<p>Complete answer demonstrates:</p> <p>(1) complete knowledge and understanding of this aspect of registry technical requirements;</p> <p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry; and</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section.</p>	<p><b>1 - meets requirements:</b> Response includes</p> <p>(1) An adequate description of a failover testing plan that substantially demonstrates the applicant's capability and knowledge required to meet this element;</p> <p>(2) A description of an adequate failover testing plan with an appropriate level of review and analysis of failover testing results;</p> <p>(3) Failover testing plan is consistent with the technical, operational, and financial approach as described in the application; and</p> <p>(4) Demonstrates an adequate level of resources that are on hand, committed or readily available to carry out this function.</p> <p><b>0 - fails requirements</b> Does not meet all the requirements to score a 1.</p>

		<p>processes for making updates);</p> <ul style="list-style-type: none"> <li>Length of time to restore critical registry functions;</li> <li>Length of time to restore all operations, inclusive of critical registry functions; and</li> <li>Length of time to migrate from one site to another.</li> </ul> <p>A complete answer is expected to be approximately 5 to 10 pages.</p>					
	42	<p>Monitoring and Fault Escalation Processes: provide</p> <ul style="list-style-type: none"> <li>a description of the proposed (or actual) arrangements for monitoring critical registry systems (including SRS, database systems, DNS servers, Whois service, network connectivity, routers and firewalls). This description should explain how these systems are monitored and the mechanisms that will be used for fault escalation and reporting, and should provide details of the proposed support arrangements for these registry systems.</li> <li>resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>To be eligible for a score of 2, answers must also include:</p> <ul style="list-style-type: none"> <li>Meeting the fault tolerance / monitoring guidelines described</li> <li>Evidence of commitment to provide a 24x7 fault response team.</li> </ul> <p>A complete answer is expected to be approximately 5 to 10 pages.</p>	N		0-2	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> <li>complete knowledge and understanding of this aspect of registry technical requirements;</li> <li>a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry;</li> <li>a technical plan that is adequately resourced in the planned costs detailed in the financial section; and</li> <li>consistency with the commitments made to registrants and registrars regarding system maintenance.</li> </ol>	<p><b>2 - exceeds requirements:</b> Response meets all attributes for a score of 1 and includes</p> <ol style="list-style-type: none"> <li>Evidence showing highly developed and detailed fault tolerance/monitoring and redundant systems deployed with real-time monitoring tools / dashboard (metrics) deployed and reviewed regularly;</li> <li>A high level of availability that allows for the ability to respond to faults through a 24x7 response team.</li> </ol> <p><b>1 - meets requirements:</b> Response includes</p> <ol style="list-style-type: none"> <li>Adequate description of monitoring and fault escalation processes that substantially demonstrates the applicant's capability and knowledge required to meet this element;</li> <li>Evidence showing adequate fault tolerance/monitoring systems planned with an appropriate level of monitoring and limited periodic review being performed;</li> <li>Plans are consistent with the technical, operational, and financial approach described in the application; and</li> <li>Demonstrates an adequate level of resources that are on hand, committed or readily available to carry out this function.</li> </ol> <p><b>0 - fails requirements:</b> Does not meet</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
							all the requirements to score 1.
	43	<p>DNSSEC: Provide</p> <ul style="list-style-type: none"> <li>The registry's DNSSEC policy statement (DPS), which should include the policies and procedures the proposed registry will follow, for example, for signing the zone file, for verifying and accepting DS records from child domains, and for generating, exchanging, and storing keying material;</li> <li>Describe how the DNSSEC implementation will comply with relevant RFCs, including but not limited to: RFCs 4033, 4034, 4035, 5910, 4509, 4641, and 5155 (the latter will only be required if Hashed Authenticated Denial of Existence will be offered); and</li> <li>resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>A complete answer is expected to be 3 to 5 pages. Note, the DPS is required to be submitted as part of the application</p>	N		0-1	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> <li>complete knowledge and understanding of this aspect of registry technical requirements, one of the five critical registry functions;</li> <li>a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry;</li> <li>a technical plan that is adequately resourced in the planned costs detailed in the financial section; and</li> <li>an ability to comply with relevant RFCs.</li> </ol>	<p><b>1 - meets requirements:</b> Response includes</p> <ol style="list-style-type: none"> <li>An adequate description of DNSSEC that substantially demonstrates the applicant's capability and knowledge required to meet this element;</li> <li>Evidence that TLD zone files will be signed at time of launch, in compliance with required RFCs, and registry offers provisioning capabilities to accept public key material from registrants through the SRS ;</li> <li>An adequate description of key management procedures in the <i>proposed</i> TLD, including providing secure encryption key management (generation, exchange, and storage);</li> <li>Technical plan is consistent with the technical, operational, and financial approach as described in the application; and</li> <li>Demonstrates an adequate level of resources that are already on hand, committed or readily available to carry out this function.</li> </ol> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score 1.</p>
	44	<p><b>OPTIONAL.</b> IDNs:</p> <ul style="list-style-type: none"> <li>State whether the proposed registry will support the registration of IDN labels in the TLD, and if so, how. For example, explain which characters will be supported, and provide the associated IDN Tables with variant characters identified, along with a corresponding registration policy. This includes public interfaces to the databases such as Whois and EPP.</li> <li>Describe how the IDN implementation</li> </ul>	N	IDNs are an optional service at time of launch. Absence of IDN implementation or plans will not detract from an applicant's score. Applicants who respond to this question with plans for implementation of IDNs at time of launch will be scored according to the criteria indicated here.	0-1	<p>IDNs are an optional service. Complete answer demonstrates:</p> <ol style="list-style-type: none"> <li>complete knowledge and understanding of this aspect of registry technical requirements;</li> <li>a technical plan that is adequately resourced in the planned costs detailed in the financial section;</li> <li>consistency with the commitments made to</li> </ol>	<p><b>1 - meets requirements for this optional element:</b> Response includes</p> <ol style="list-style-type: none"> <li>Adequate description of IDN implementation that substantially demonstrates the applicant's capability and knowledge required to meet this element;</li> <li>An adequate description of the IDN procedures, including complete IDN tables, compliance with IDNA/IDN guidelines and RFCs, and periodic monitoring of IDN operations;</li> <li>Evidence of ability to resolve</li> </ol>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>will comply with RFCs 5809-5893 as well as the ICANN IDN Guidelines at <a href="http://www.icann.org/en/topics/idn/implementation-guidelines.htm">http://www.icann.org/en/topics/idn/implementation-guidelines.htm</a>.</p> <ul style="list-style-type: none"> <li>Describe resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</li> </ul> <p>A complete answer is expected to be approximately 5 to 10 pages plus attachments.</p>				<p>registrants and the technical, operational, and financial approach described in the application;</p> <p>(4) issues regarding use of scripts are settled and IDN tables are complete and publicly available; and</p> <p>(5) ability to comply with relevant RFCs.</p>	<p>rendering and known IDN issues or spoofing attacks;</p> <p>(4) IDN plans are consistent with the technical, operational, and financial approach as described in the application; and</p> <p>(5) Demonstrates an adequate level of resources that are on hand, committed readily available to carry out this function.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score a 1.</p>
Demonstration of Financial Capability	45	<p>Financial Statements: provide</p> <ul style="list-style-type: none"> <li>audited or independently certified financial statements for the most recently completed fiscal year for the applicant, and</li> <li>audited or unaudited financial statements for the most recently ended interim financial period for the applicant for which this information may be released.</li> </ul> <p>For newly-formed applicants, or where financial statements are not audited, provide:</p> <ul style="list-style-type: none"> <li>the latest available unaudited financial statements; and</li> <li>an explanation as to why audited or independently certified financial statements are not available.</li> </ul> <p>At a minimum, the financial statements should be provided for the legal entity listed as the applicant.</p> <p>Financial statements are used in the analysis of projections and costs.</p> <p>A complete answer should include:</p> <ul style="list-style-type: none"> <li>balance sheet;</li> <li>income statement;</li> <li>statement of shareholders equity/partner capital;</li> <li>cash flow statement, and</li> <li>letter of auditor or independent certification, if applicable.</li> </ul>	N	The questions in this section (45-50) are intended to give applicants an opportunity to demonstrate their financial capabilities to run a registry.	0-1	<p>Audited or independently certified financial statements are prepared in accordance with International Financial Reporting Standards (IFRS) adopted by the International Accounting Standards Board (IASB) or nationally recognized accounting standards (e.g., GAAP). This will include a balance sheet and income statement reflecting the applicant's financial position and results of operations, a statement of shareholders equity/partner capital, and a cash flow statement. In the event the applicant is an entity newly formed for the purpose of applying for a gTLD and with little to no operating history (less than one year), the applicant must submit, at a minimum, pro forma financial statements including all components listed in the question. Where audited or independently certified financial statements are not available, applicant has provided an adequate explanation as to the accounting practices in its jurisdiction and has provided, at a minimum, unaudited financial statements.</p>	<p><b>1 - meets requirements:</b> Complete audited or independently certified financial statements are provided, at the highest level available in the applicant's jurisdiction. Where such audited or independently certified financial statements are not available, such as for newly-formed entities, the applicant has provided an explanation and has provided, at a minimum, unaudited financial statements.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score 1. For example, entity with an operating history fails to provide audited or independently certified statements.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
	46	<p>Projections Template: provide financial projections for costs and funding using Template 1, Most Likely Scenario (attached).</p> <p>Note, if certain services are outsourced, reflect this in the relevant cost section of the template.</p> <p>The template is intended to provide commonality among TLD applications and thereby facilitate the evaluation process.</p> <p>A complete answer is expected to be 5-10 pages in addition to the template.</p>	N		0-1	<p>Applicant has provided a thorough model that demonstrates a sustainable business (even if break-even is not achieved through the first three years of operation).</p> <p>Applicant's description of projections development is sufficient to show due diligence.</p>	<p><b>1 - meets requirements:</b></p> <ol style="list-style-type: none"> <li>(1) Financial projections adequately describe the cost, funding and risks for the application</li> <li>(2) Demonstrates resources and plan for sustainable operations; and</li> <li>(3) Financial assumptions about the registry operations, funding and market are identified, explained, and supported.</li> </ol> <p><b>0 - fails requirements:</b> Does not meet all of the requirements to score a 1.</p>
	47	<p>Costs and capital expenditures: in conjunction with the financial projections template, describe and explain:</p> <ul style="list-style-type: none"> <li>• the expected operating costs and capital expenditures of setting up and operating the proposed registry;</li> <li>• any functions to be outsourced, as indicated in the cost section of the template, and the reasons for outsourcing;</li> <li>• any significant variances between years in any category of expected costs; and</li> <li>• a description of the basis / key assumptions including rationale for the costs provided in the projections template. This may include an executive summary or summary outcome of studies, reference data, or other steps taken to develop the responses and validate any assumptions made.</li> </ul> <p>As described in the Applicant Guidebook, the information provided will be considered in light of the entire application and the evaluation criteria. Therefore, this answer should agree with the information provided in Template 1 to: 1) maintain registry operations, 2) provide registry services described above, and 3) satisfy the technical requirements described in the Demonstration of Technical &amp; Operational Capability section. Costs should include both fixed and variable costs.</p>	N	This question is based on the template submitted in question 46.	0-2	<p>Costs identified are consistent with the proposed registry services, adequately fund technical requirements, and are consistent with proposed mission/purpose of the registry. Costs projected are reasonable for a registry of size and scope described in the application. Costs identified include the funding costs (interest expenses and fees) related to the continued operations instrument described in Question 50 below.</p> <p>Key assumptions and their rationale are clearly described and may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• Key components of capital expenditures;</li> <li>• Key components of operating costs, unit operating costs, headcount, number of technical/operating/equipment units, marketing, and other costs; and</li> <li>• Costs of outsourcing,</li> </ul>	<p><b>2 - exceeds requirements:</b> Response meets all of the attributes for a score of 1 and:</p> <ol style="list-style-type: none"> <li>(1) Estimated costs and assumptions are conservative and consistent with an operation of the registry volume/scope/size as described by the applicant;</li> <li>(2) Estimates are derived from actual examples of previous or existing registry operations or equivalent; and</li> <li>(3) Conservative estimates are based on those experiences and describe a range of anticipated costs and use the high end of those estimates.</li> </ol> <p><b>1 - meets requirements:</b></p> <ol style="list-style-type: none"> <li>(1) Cost elements are reasonable and complete (i.e., cover all of the aspects of registry operations: registry services, technical requirements and other aspects as described by the applicant);</li> <li>(2) Estimated costs and assumptions are consistent and defensible with an operation of the registry volume/scope/size as described by the applicant; and</li> <li>(3) Projections are reasonably aligned with the historical financial statements provided in Question 45.</li> </ol> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score a 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>To be eligible for a score of two points, answers must demonstrate a conservative estimate of costs based on actual examples of previous or existing registry operations with similar approach and projections for growth and costs or equivalent. Attach reference material for such examples.</p> <p>A complete answer is expected to be approximately 5-10 pages.</p>				if any.	
		<p>(b) Describe anticipated ranges in projected costs. Describe factors that affect those ranges.</p> <p>A complete answer is expected to be approximately 5-10 pages.</p>	N				
	48	<p>(a) Funding and Revenue: Funding can be derived from several sources (e.g., existing capital or proceeds/revenue from operation of the proposed registry).</p> <p>Describe:</p> <p>I) How existing funds will provide resources for both: a) start-up of operations, and b) ongoing operations;</p> <p>II) the revenue model including projections for transaction volumes and price (if the applicant does not intend to rely on registration revenue in order to cover the costs of the registry's operation, it must clarify how the funding for the operation will be developed and maintained in a stable and sustainable manner);</p> <p>III) outside sources of funding (the applicant must, where applicable, provide evidence of the commitment by the party committing the funds). Secured vs unsecured funding should be clearly identified, including associated sources of funding (i.e., different types of funding, level and type of security/collateral, and key items) for each type of funding;</p> <p>IV) Any significant variances between years in any category of funding and revenue; and</p> <p>V) A description of the basis / key assumptions</p>	N		0-2	<p>Funding resources are clearly identified and adequately provide for registry cost projections. Sources of capital funding are clearly identified, held apart from other potential uses of those funds and available. The plan for transition of funding sources from available capital to revenue from operations (if applicable) is described. Outside sources of funding are documented and verified. Examples of evidence for funding sources include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• Executed funding agreements;</li> <li>• A letter of credit;</li> <li>• A commitment letter; or</li> <li>• A bank statement.</li> </ul> <p>Funding commitments may</p>	<p><b>2 - exceeds requirements:</b> Response meets all the attributes for a score of 1 and</p> <ol style="list-style-type: none"> <li>(1) Existing funds (specifically all funds required for start-up) are quantified, on hand, segregated in an account available only to the applicant for purposes of the application only, ;</li> <li>(2) If on-going operations are to be at least partially resourced from existing funds (rather than revenue from on-going operations) that funding is segregated and earmarked for this purpose only in an amount adequate for three years operation;</li> <li>(3) If ongoing operations are to be at least partially resourced from revenues, assumptions made are conservative and take into consideration studies, reference data, or other steps taken to develop the response and validate any assumptions made; and</li> <li>(4) Cash flow models are prepared which link funding and revenue assumptions to projected actual</li> </ol>

		<p>key risks as described in this question.</p> <p>A complete answer should include, for each contingency, a clear description of the impact to projected revenue, funding, and costs for the 3-year period presented in Template 1 (Most Likely Scenario).</p> <p>To be eligible for a score of 2 points, answers must demonstrate that action plans and operations are adequately resourced in the existing funding and revenue plan even if contingencies occur.</p> <p>A complete answer is expected to be approximately 5-10 pages.</p>					<p>contingencies identified; and</p> <p>(3) If resources are not available to fund contingencies in the existing plan, funding sources and a plan for obtaining them are identified.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score a 1.</p>
		<p>(b) Describe your contingency planning where funding sources are so significantly reduced that material deviations from the implementation model are required. In particular, describe:</p> <ul style="list-style-type: none"> <li>• how on-going technical requirements will be met; and</li> <li>• what alternative funding can be reasonably raised at a later time.</li> </ul> <p>Provide an explanation if you do not believe there is any chance of reduced funding.</p> <p>Complete a financial projections template (Template 2, Worst Case Scenario)</p> <p>A complete answer is expected to be approximately 5-10 pages, in addition to the template.</p>	N				
		<p>(c) Describe your contingency planning where activity volumes so significantly exceed the high projections that material deviation from the implementation model are required. In particular, how will on-going technical requirements be met?</p> <p>A complete answer is expected to be approximately 5-10 pages.</p>	N				
	50	<p>(a) Provide a cost estimate for funding critical registry functions on an annual basis, and a rationale for these cost estimates commensurate with the technical, operational, and financial approach</p>	N	<p>Registrant protection is critical and thus new gTLD applicants are requested to provide evidence indicating that the critical functions will continue to be performed even if the registry fails. Registrant needs are best</p>	0-3	<p>Figures provided are based on an accurate estimate of costs. Documented evidence or detailed plan for ability to fund on-going critical registry</p>	<p><b>3 - exceeds requirements:</b> Response meets all the attributes for a score of 1 and:</p> <p>(1) Financial instrument is secured and in place to provide for on-going</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>described in the application.</p> <p>The critical functions of a registry which must be supported even if an applicant's business and/or funding fails are:</p> <p>(1) DNS resolution for registered domain names</p> <p>Applicants should consider ranges of volume of daily DNS queries (e.g., 0-100M, 100M-1B, 1B+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</p> <p>(2) Operation of the Shared Registration System</p> <p>Applicants should consider ranges of volume of daily EPP transactions (e.g., 0-200K, 200K-2M, 2M+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</p> <p>(3) Provision of Whois service</p> <p>Applicants should consider ranges of volume of daily Whois queries (e.g., 0-100K, 100k-1M, 1M+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics for both web-based and port-43 services.</p> <p>(4) Registry data escrow deposits</p> <p>Applicants should consider administration, retention, and transfer fees as well as daily deposit (e.g., full or incremental) handling. Costs may vary depending on the size of the files in escrow (i.e., the size of the registry database).</p>		<p>protected by a clear demonstration that the basic registry functions are sustained for an extended period even in the face of registry failure. Therefore, this section is weighted heavily as a clear, objective measure to protect and serve registrants.</p> <p>The applicant has two tasks associated with adequately making this demonstration of continuity for critical registry functions. First, costs for maintaining critical registrant protection functions are to be estimated (Part a). In evaluating the application, the evaluators will adjudge whether the estimate is reasonable given the systems architecture and overall business approach described elsewhere in the application.</p> <p>The Continuing Operations Instrument (COI) is invoked by ICANN if necessary to pay for an Emergency Back End Registry Operator (EBERO) to maintain the five critical registry functions for a period of three to five years. Thus, the cost estimates are tied to the cost for a third party to provide the functions, not to the applicant's actual in-house or subcontracting costs for provision of these functions.</p> <p>Note that ICANN is building a model for these costs in conjunction with potential EBERO service providers. Thus, guidelines for determining the appropriate amount for the COI will be available to the applicant. However, the applicant will still be required to provide its own estimates and explanation in response to this question.</p>		<p>functions for registrants for a period of three years in the event of registry failure, default or until a successor operator can be designated. Evidence of financial wherewithal to fund this requirement prior to delegation. This requirement must be met prior to or concurrent with the execution of the Registry Agreement.</p>	<p>operations for at least three years in the event of failure.</p> <p><b>1 - meets requirements:</b></p> <p>(1) Costs are commensurate with technical, operational, and financial approach as described in the application; and</p> <p>(2) Funding is identified and instrument is described to provide for on-going operations of at least three years in the event of failure.</p> <p><b>0 - fails requirements:</b> Does not meet all the requirements to score a 1.</p>
